The gloomy and threatening manner in which he muttered the last words, can never be effaced from my remembrance. My blood ran cold.

I asked of myself, what was it that this desperate Being was resolved to grow? My breast made no response.

I ventured to implore him to explain his

meaning. With a scornful laugh, he uttered this dark prophecy :

"I'LL GROW ONE. AND, MARK MY WORDS, IT SHALL HAUNT YOU !"

We parted in the storm, after I had forced half-a-crown on his acceptance, with a trembling hand. I conclude that something supernatural happened to the steam-boat, as it bore his reeking figure down the river, but it never got into the papers.

Two years elapsed, during which I followed my profession without any vicissitudes, never holding so much as a notion, of course. At the expiration of that period, I found myself making my way home to the Temple, one night, in precisely such another storm of thunder and lightning as that by which I had been overtaken on board the steam-boat—except that this storm, bursting over the town at midnight, was rendered much more awful by the darkness and the hour.

As I turned into my court, I really thought a thunderbolt would fall, and plough the pavement up. Every brick and stone in the place seemed to have in cho of its own for the thunder. The water-pipes were overcharged, and the rain came tearing down from the house tops as if they had been mountain tops.

Mrs. Parkins, my landlady—wife of Parkins the porter, then newly dead of a dropsy—had particular instructions to place a bedroom candle and a match under the staircase lamp, on my landing, in order that I might light my candle there, whenever I came home. Mrs. Parkins invariably discharging all instructions, they were never there. Thus it happened that on this occasion I groped my way into my sitting room to find the candle, and came out to light it.

What were my emotions when, underneath the staircase lamp, shining with wet as if he had never been dry since our last meeting, stood the mysterious being whom I had encountered on the steam boat in a thunder-storm, two years before ! His prediction rushed upon my mind, and I turned faint.

"I said I'd do it," he observed, in a hollow voice, "and I have done it. May I come in ?"

"Misguided creature, what have you done ?" I returned.

"I'll let you know," was his reply, "if you'll let me in."

Could it be murder that he had done ? And had he been so successful that he wanted to do it again, at my expense ?

I hesitated.

"May I come in ?" said he.

I inclined my head, with as much presence of mind as I could command, and he followed me into my chambers. There, I saw that the lower part of his face was tied up, in what is commonly called a Belcher handkerchief. He slowly removed this bandage, and exposed to view a long dark beard, curling over his upper lip, twisting about the corners

of his mouth, and hanging down upon his breast.

"What is this ?" I exclaimed involuntarily, "and what have you become ?"

"I am the Ghost of Art !" said he.

The effect of these words, slowly uttered in the thunderstorm at midnight, was appalling in the last degree. More dead than alive, I surveyed him in silence.

"The German taste came up," said he, "and threw me out of bread. I am ready for the taste now."

He made his beard a little jagged with his hands, folded his arms, and said, "Severity."

"I shuddered. It was so severe.

He made his beard flowing on his breast, and, leaning both hands on the staff of a carpet-broom which Mrs. Parkins had left among my belongings, said :

"Benevolence"

I stood transfixed. The change of sentiment was entirely in the beard. The man might have left his face alone, or had no face. The beard did everything.

He laid down, on his back, on my table, and with that action of his head threw up his beard at the chin.

"That's death !" said he.

He got off my table and, looking up at the ceiling, cocked his beard a little ~~away~~, at the same time making it stick out before him.

"Adoration, or a vow of vengeance," he observed.

He turned his profile to me, making his upper lip very bulky with the upper part of his beard.

"Romantic character," said he.

He looked sideways out of his beard, as if it were an ivy-bush. "Jealousy," said he. He gave it an ingenious twist in the air, and informed me that he was envious. He made it shaggy with his fingers—and it was Despair ; link—and it was avarice ; tossed it all kinds of ways—and it was rage. The beard did everything.

"I am the Ghost of Art," said he. "Two bob a-day now, and more when its longer ! Han's the true expression. There is no other." I SAID I'D GROW IT, AND I'VE GROWN IT, AND IT SHALL HAUNT YOU !"

He may have tumbled down stairs in the dark, but he never walked down or ran down. I looked over the bannisters, and I was alone with the thunder.

Need I add more of my terrific fate ? It has haunted me ever since. It glares upon me from the walls of the Royal Academy, (except when Maculise subdues it to his genius,) it fills my soul with terror at the British Institution, it turns young artists on to their destructions. Go where I will, the Ghost of Art, eternally working the passions in hair, and expressing everything by beard, pursues me. The prediction is accomplished, and the Victim has no rest.

THE WONDERS OF 1851.

A CERTAIN Government office having a more than usual need of some new ideas, and wishing to obtain them from the collective mind of the country, consulted Mr. Trappem, the official solicitor—a gentleman of great experience—on the subject. “A new idea,” said he, “is not the only thing you will want; these new ideas, to be worth anything, must be reduced to practical demonstration, by models, plans, or experiments. This will cost much time, labour, and money, and be attended through its progress with many disappointments. The rule, therefore, is to *throw it open* to the public. Let the inventive spirits of the whole public be set to work; let them make the calculations, designs, models, plans; let them try all the experiments at their own expense; let them all be encouraged to proceed by those suggestions which are *sure* to excite the greatest hopes, and the utmost emulation, without committing the Honourable Board to anything. When at length two or three succeed, then the Honourable Board steps in, and taking a bit from one, and a bit from another, but the whole, or chief part, from no one in a direct way, rejects them all individually and collectively, and escapes all claims and contingencies. A few compliments, enough to keep alive hope, and at the same time keep the best men quiet, should finally be held out, and the competitors may then be safely left to long delays and the course of events. That’s the way.”

Too true, Mr. Trappem—that is the way; and many a Government office, or other imposing array of Committee-men, and Honourable Boards, have practised this same expedient upon the inventive genius and collective knowledge and talent of the public. The last instances which deserve to be recorded, not merely because they are the most recent, but rather on account of their magnitude and completeness, are the invitations to competitors for models and plans, issued by the Metropolitan Commissioners of Sewers,—and by the Commissioners of the Exhibition of Industry of all Nations.

In order to supersede prevaricating denials and evasions of what we have to say concerning the Metropolitan Commissioners of Sewers, it may be as well to premise that they have for some time adopted the cunning “fence” of a “Committee of Commissioners,” behind which the Commissioners make a dodge on all difficult, alarming, and responsible occasions. When all is safe, and clear, and sunshiny, it is the Commissioners who have done the thing; directly matters look awkward, and a bad business, the diplomatic bo-peeps leap away from the bursting clouds,—and the Committee of Commissioners have done it all, for which the main body of the Right Honourable Board is by no means responsible. A similar manœuvre has been adopted by the Commissioners of the Exhibition of Industry, who have got two Committees to screen them.

Now, in the name of all worthily striving spirits,—of all those who have devoted their talents, time, and money to the production of models, designs, or plans,—of all those who have laboured hard by day or by night, perhaps, amidst other arduous and necessary avocations,—in the name of all those, who, possessing real knowledge and skill, have naturally and inevitably been led to indulge in high hopes, if not of entire success, at least of fair play and of some advantage to themselves in reward, remuneration for reasonable and necessary expenses incurred, or, at any rate, in receiving honourable mention,—and, finally, in the name of common justice, we do most loudly and earnestly protest against all these and similar appeals to the collective intellect of the public, unless conducted upon some liberal and definite method of compensation for all eminently meritorious labours.

That one great prize—either as a substantial tribute, or in the exclusive adoption of an entire plan—should be awarded to one man, and that the half-dozen next to him in merit, perhaps equal or superior, should derive no benefit at all, is manifestly a most clumsy and unjust arrangement. But when we find great appeals to the public, nobly answered, and yet *no one* work selected as the work desired,—no one rewarded—but every one *used* and got rid of—then, indeed, we see an abuse of that kind which ought to be most fully exposed, so that it may serve as a warning in future “to all whom it may concern.”

It is curious to observe how much more quickly some nations, as well as individuals, take a hint than others. Among the models and plans sent in answer to the public invitation of the Commissioners of the Exhibition of Industry, there are a great many, and of a most excellent kind, from our sprightly and sanguine friends, the French—while, notwithstanding the chief originator and patron is from the *Federland*, not one of those who are more especially distinguished as entitled to the highest honours, is from Germany! Out of the eighteen names thus selected, no less than twelve are Frenchmen; four are English; one Austrian; and a solitary Dutchman. In all Prussia, there was not found one man to venture. It would seem as though they were aware of these tricks. But how is it that so few of our own countrymen are thus distinguished and complimented? Is it because they are deficient in the requisite talent, or do they not take sufficient interest in the matter? Surely neither of these reasons will be satisfactory to account for the fact of our native architects and designers having been so palpably beaten at this first trial of skill. We shall probably be told that the best men of France have entered the lists in this competition; whereas our best men have stood aloof. Why is this? May it not be that “old birds are not caught with chaff?” Our best men are generally well employed, and it is not worth their while to waste their time

in competitions which almost invariably end in so unsatisfactory a manner. The same thing occurred, and may be answered in the same way, with regard to the hundred and sixty or seventy Plans sent in for the Drainage of London. Our most eminent civil engineers stood aloof. A few very able men, it is true, entered into the contest with enthusiasm, at great expense of time, labour, and money, (one of them, Mr. J. B. Mc'Clean, spent nearly 500*l.* in surveys, &c.) but very few of them will ever do this again. Out of the two hundred and forty-five competitors who have sent designs and plans, in reply to the equally vague and formal invitation of the Commissioners of the Exhibition of 1851, not a single name of the hundred and sixty or seventy engineers, surveyors, architects, builders, &c., who sent in designs for the Drainage of London, is to be found either in List A, or List B, of those whom the Commissioners of the Exhibition have mentioned as entitled to honorary distinction. They were, no doubt, very thoroughly sickened by the previous affair.

We have said that, at the very least, those who have sent in excellent designs should receive honourable mention. This is liberally bestowed by the Commissioners of the Exhibition on eighteen individuals; but that is not sufficient. Neither is the longer list of names, thus honoured, perfectly just, inasmuch as it excludes many whose plans display very great merit. As for the Commissioners of Sewers, the report they issued concerning the plans sent to them, was meagre and mean to the last degree. Its timidity at a just and decent compliment, absolutely amounted to the ludicrous. If they thanked anybody at all, the thanks seemed warily pushed towards the parties by the Solicitor of the Commission at the end of a long pole. They had not even a word of commendation to offer to two or three men who had sent in designs of the most comprehensive and original character,—designs which were, at least, as practicable as any of the “tunnel schemes,” or others which they ventured, in their caustic way, to applaud. We would more especially mention the plans of Mr. Richard Dover, Mr. John Martin, Mr. John Sutton (*The Margin Sewer*), Mr. Jasper Rogers, Mr. William H. Smith (*Second Series*), and the one signed “*Nunc aut Nunquam*,” which latter, for grandeur of conception, equals the very greatest works of ancient and modern times. Placed beside such unmannerly treatment as this, and comparing the two reports, that of the Commissioners of the Exhibition reads like the production of gentlemen and scholars, beside the penurious reservations and dryness of the Commissioners of Sewers.

With regard, however, to the great superiority of foreign artists over our own in the present matter of competition, and our utter defeat in the first trial of the respective strength of Nations, some very excellent

remarks have been put forth by the “Athenæum.” “Let us see,” says the writer, “if the men who did come up to this architectural battle have been fairly dealt with. It is essential to the integrity of a combat that it should be fought with the weapon prescribed. If one of two combatants bring a sword double the length of his adversary’s, or a rifle to his rival’s pistol, we should scarcely hold that the defeat of the latter is proof that he is inferior in fence or in aim.” This is closely and fairly put. The answer must be, that our artists have *not* been fairly beaten. The advertisement of the Committee requested “information and suggestions” on the general form of the building in plan, &c., and they laid down rules and regulations to which “they earnestly requested the contributors to conform,” declaring that they would not recognise any plans which were “sent in a form inconsistent with these rules.” They were clearly defined. For instance—they directed that the communications must consist of a single sheet of paper of given dimensions; that the drawing should be a simple ground-plan, also of limited dimensions; and that it should *only* contain “such elevations and sections of the building, on the same sheet, as might be necessary to elucidate the system proposed.” Surely all this is clear enough.

Let us now see how some of the most successful of the competitors have attended to these conditions on which they were to enter the arena.

What extensive pleasure-grounds are those?—and adorned with such architectural displays? They are the work of Monsieur Cailhonn. But, a little further on, we behold pleasure-grounds and architectural structures yet more ornate and refined. They are from the hand of Monsieur Charpentier. Further on, another, by Monsieur Cleemputte; and another by Monsieur Gaulle—a complicated work of thoughtful elaboration. Yet even these are destined to be surpassed by the luxurious fancies of other artists.

So far from denying or doubting that many of these designs are beautiful, we close our eyes, and see in imagination the exquisite magnificence of the structures, into which no coarse and profane hands should dare to wheel or carry rude raw materials of any kind; there, everything must be finished to the highest degree of polished art and refined taste. Also, no lumbering pieces of machinery or mechanism must risk doing injury to the walls, and pillars, and profusion of glass—no uncouth agricultural implements, or other tools of horny-handed Industry. Hitler, let no enthusiasts in smoke-jacks, patent cupstans, door-hinges, dock-gates, double-barred gridirons, humane chimney-sweeping apparatuses, peat-charcoal, bachelor’s broilers, fire-annihilators, patent filters, portable kitchens, or electric telegraphs, dare to send their uncouth machinery and compounds; but only such things as are delicate of texture, rainbow-

coloured, and exquisite to the smell, while the visitors (none of whom will be admitted except in full dress, and great numbers of whom will always appear in court dresses) perambulate about, gazing now on this side, and now on that, to the sound of the seraphine and Moorish flutes.

Let us awake from this charming vision; but it was natural to fall into it on such suggestions. Again we are in danger. For who can contemplate the elegant originality of Monsieur Jacquet (No. 25) without emotion, or a "wish to be there?" His ground-plan resembles a section of some enormous fan-light of painted glass, or like part of a gigantic Oriental fan, made of the plumes of some fabulous peacock. Nor must we pass over the suggestion of our countrymen, Messrs. Felix and White (No. 72), because they are not equally imaginative, for they certainly manifest very much and excellent thought in their architectural display; though, like our foreign friends, no thought at all of the cost of such a work. The same may be said of the beautiful pleasure-grounds designed by Mr. Reilly (No. 102), with circular, oval, and serpentine garden-plots, flower-beds, and shrubberies, and labyrinthine walks or covered ways of glass.

But there are more—yet more of these delightful and deliberate violations of the terms on which competitors were to enter the lists—one vying with another, not in producing the most excellently useful and economical structure for the purpose required, but the most perfect exhibition of the artist's especial taste, "regardless of expense." Yes, there are more of these deserving notice. One competitor—nay, three of them—propose that the entire building should be made of iron, domes and towers inclusive; another, that it shall be all made of glass, such as we might find in an Arabian Nights' Tale. Monsieur Soyer, the mighty cook (No. 165), begins the synopsis of his design by proposing "to take up, and remove the great marble arch from Buckingham Palace, as though it were a trifle," and serge it up for a grand entrance opposite the Prince of Wales's Gate. Here, also, is a structure which arrests the attention even amidst the surrounding wonders, and appears to be several conservatories and libraries on a colossal scale of glass framework, delightfully intermingled with domes and turrets, and observatories, with here and there minarets and pagodas, of the delicious character presented by those fragile structures which make such a tempting figure on the festive board, standing erect among the dessert-plates. Yet, once more, behold the prodigal, laying out of palace-gardens, not to speak of the ante-industrial palace itself (which reminds one of Thomson's "Castle of Indolence"), gardens with alcoves and aviaries, and fountains, glass temples, green labyrinths, flower-beds and flower-stands, vases and *jets-d'eau*, sculpture, shrubberies, shaded lovers'

walks, public promenades, with lords and ladies and princes and princesses, of all nations, sauntering about, and the clouds and sky of an Italian sunset lighting up and colouring the whole. For this, and similar *chateaux*, we are quite at a loss to conjecture the principle on which they present themselves on this occasion; but we have no doubt that they all belong to that munificent patron of art, and great landed proprietor, the Marquis of Curragh.

Now, that our own architects are able to compete successfully with the best of our foreign friends in works of imaginative design, we do not affirm; neither, for the reasons previously adduced by the "Athenæum," do we consider ourselves justified in denying it, from the result of the present struggle. But for our own artists and others, who have confined themselves to the terms and preliminaries announced by the Commissioners, have they succeeded?—that is the question. Not satisfactorily, we think. Our architects are, for the most part, impracticable, from the expense required, and the wilful forgetfulness that the building is to be of a temporary character; while our surveyors and builders have been thinking too much of railway-stations, not of that sober, simple, and sufficient kind which the occasion requires, but (according to the error in these stations) of that large, ornate, and redundant kind which is meant to be admired as much as used, and also to last for ages. This latter mistake is very characteristic of our countrymen. They do not feel, nor comprehend, the art of knocking up a temporary structure; they are always for something that will endure.

In certain matters requiring great skill and many forethoughts, most of these plans are not very successful. For instance the prevention of terrible confusion and danger in the constant arrivals and departures of visitors—carriages, vehicles of all sorts, horsemen, and shoals of pedestrians. This relates to the approaches and entrances outside; and the position and approaches of the exit-doors inside; also, the best means of directing and managing the currents of visitors within. It seems pretty clear that everybody must not be allowed to follow his "own sweet will" in all respects, or there will be many a deadlock, and perhaps a deadly struggle, with all the usual disastrous consequences. Many of the plans seek to direct the current of visitors (indicated by shoals of little arrows with their heads pointing the same way) not so much for the convenience and freedom of the public, as in accordance with the architectural points to be displayed. Others appear to intend that the direction of the current shall be forced by the pressure from the column constantly advancing behind. This might be dangerous. The current might surely be managed so as to combine direction on a large scale with a considerable amount of individual freedom; and, in any case, the amount of pressure

from the masses behind should be regulated by sectional barriers.

How to find your way out? This may be a question well worth consideration. Of course there will be a sufficient number of exit-doors; but if you have to walk and struggle through several miles of bazaar-counters or winding ways, amidst dense crowds, before you can discover a means of egress, your amount of pleasure is not likely to induce a second visit. Mr. Brandon for instance (No. 207), has beautiful domed temples and libraries (so they appear) or other "glass cases," while the ground-plan presents a series of circuitous batches of stalls, or bazaar-counters, not unlike large circles of sheep-pens, except that there is a free passage between them. Hence, the currents, or rather, the "rapids," of visitors must inevitably be going and coming, and jostling, and conflicting; and others arriving at a dead stand, and having no chance of progression, or retreat, without a "trial of strength"—the whole producing of necessity an inextricable maze and confusion, with an impossibility for a long time of finding a way out, even when able to move.

This question of the current of visitors, and of movement in general, is ingeniously settled by one gentleman, who proposes to have a railway along the grand central line, for the conveyance up and down of all sorts of goods and articles, heavy or light. We presume that the progress of the carriages and trucks would be very slow, so that the visitors, when fatigued, might, at their pleasure, step up to a seat, and be quietly conveyed along to any part of the line. This notion has, of course, been laughed at, and we confess to having amused ourselves considerably with the "train" of thought induced by it; but we are not sure, in the present state of mechanical science, whether something very commodious might not result from a modification of the idea. The fares, if any (and we think there should be a trifle paid to check reckless crowding), should not exceed a penny. The inventor will thus perceive that, if we have laughed, we have also sympathised, and are quite ready to get up and have a ride. One gentleman (Mr. C. H. Smith) proposes to erect three octagonal vestibules, communicating with all principal compartments; the roof to be upheld by suspension chains. Cast-iron frames are to hold rough glass, laid in plates lapping over each other, like tiles. This is certainly a sensible provision against a hail-storm, which has occurred to no one else, amidst their prodigalities in glass.

But, amidst all these wonders of 1851, are there no plain, simple, practical plans sent in? There are a good many. Some of these are certainly not very attractive, presenting, as they do, the appearance of a superior kind of barracks, hospitals, alms-houses, nursery-grounds; and one of these plans is laid out entirely like a series of cucumber-frames, with

shifting lights at top. There are, however, several of these sober designs which possess great practical merit, and have preserved a due consideration of the terms on which the competition was proposed. Of these, the Commissioners and Committees have availed themselves in all respects suited to their own views and wishes; and out of all these, combined with their own especial fancies, they seem likely to produce an interminable range of cast-iron cow-sheds, having (as a specimen of the present high state of constructive genius) an enormous slop-basin, of iron frame-work, inverted in the centre, as an attraction for the admiring eyes of all the nations.

But other problems have to be solved. The classification and arrangement of the raw materials, the manufactured articles, the machinery, and the works of plastic art, is a question of very great importance. It not only involves the things themselves, but their respective countries. Should the productions of each country be kept separate? This appears the natural arrangement, or how should any one make a study of the powers of any special country. Prince Albert, it seems, wishes otherwise. He thinks that a fusion of the productions of all nations will be more in accordance with the broad general principle of the Exhibition—more tending to amalgamate and fraternise one country with another. This feeling is excellent; but we fear it would cause an utter confusion, and amidst the heterogeneous masses, nobody would be able to make a study of the productions of any particular nation. An eminent civil engineer suggests that the productions of the respective countries should be ranged together from side to side of the entire width of the edifice—thus you can at once see the works of industry of England, France, Germany, America, Switzerland, &c., &c., by walking up and down from one side to the other; and you can obtain a collective view of the works of all these countries by walking longitudinally, or from end to end of the building. To some such classification and arrangement as this, we think, the Committee will be compelled to have recourse at last.

The other problem to which we adverted, is one which is not so liable to be solved as saturated with hot water, and then dragged from one quarter of the metropolis to another before it is settled by some arbitrary decision. We allude to the spot on which the buildings of the Exhibition are to be erected. Hyde Park is not unlikely to be a subject of much contest. The latent idea of preserving the most important part of the "temporary" structure has alarmed all the drivers and riders in Hyde Park, and all those whose windows overlook it. And no wonder;—to say nothing of the crowds and stoppages outside the park, and the slough within, produced by the enormous traffic of heavy wheels, long before the Exhibition opens. Battersea Fields was next

mentioned, and thought advantageous, not only from the open space they present, but the facilities of water-conveyance for goods and passengers. Still, the distance is rather against such a choice. It would probably reduce the number of times each visitor would go to the Exhibition, and, consequently, be a check upon the money taken at the doors. Hundreds of thousands flock daily to Greenwich during the Fair; but the argument will not hold good, in all respects, as regards the present question. Regent's Park has been named as more appropriate; but there is a strong and manifest objection to any interference with that much-used place of public recreation. To cut up its green turf and gravelled roads, would be even more monstrous than any spoliation of Hyde Park. No locality could be selected, perhaps, for such a purpose that would be perfectly free from all objections. Still we are so convinced of the multitude of inconveniences inevitably attendant on such an Exhibition in the midst of the metropolis—and we feel so strongly the cool, high-handed injustice of parcelling out the public property at Court, and stopping up the public breathing-places, for any purpose—that we urge its removal to some spot out of the town, easily accessible both by railway and river.

"I WOULD NOT HAVE THEE YOUNG AGAIN."

I WOULD not have thee young again
 Since I myself am old:
 Not that thy youth was ever vain,
 Or that my age is cold;
 But when upon thy gentle face
 I see the shades of time,
 A thousand memories replace
 The beauties of thy prime.

Though from thine eyes of softest blue
 Some light hath passed away,
 Love looketh forth as warm and true
 As on our bridal day.
 I hear thy song, and though in part
 'Tis fainter in its tone,
 I heed it not, for still thy heart
 Seems singing to my own.

LITTLE MARY.

A TALE OF THE BLACK YEAR.

THAT was a pleasant place where I was born, though 'twas only a thatched cabin by the side of a mountain stream, where the country was so lonely, that in summer time the wild ducks used to bring their young ones to feed on the bog, within a hundred yards of our door; and you could not stoop over the bank to raise a pitcher full of water, without frightening a shoal of beautiful speckled trout. Well, 'tis long ago since my brother Richard, that's now grown a fine clever man, God bless him!—and myself, used to set off together up the mountain to pick bunches of the cotton plant and the bog myrtle, and to look for

birds' and wild bees' nests. 'Tis long ago—and though I'm happy and well off now, living in the big house as own maid to the young ladies, who, on account of my being foster-sister to poor darling Miss Ellen, that died of decline, treat me more like their equal than their servant, and give me the means to improve myself; still at times, especially when James Sweeney, a dacent boy of the neighbours, and myself are taking a walk together through the fields in the cool and quiet of a summer's evening, I can't help thinking of the times that are passed, and talking about them to James with a sort of peaceful sadness, more happy maybe than if we were laughing aloud.

Every evening, before I say my prayers, I read a chapter in the Bible that Miss Ellen gave me; and last night I felt my tears dropping for ever so long over one verse,—
 "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain; for the former things are passed away." The words made me think of them that are gone—of my father, and his wife that was a true fond mother to me; and, above all, of my little sister Mary, the *durcen bawn** that nestled in her bosom.

I was a wild slip of a girl, ten years of age, and my brother Richard about two years older, when my father brought home his second wife. She was the daughter of a farmer up at Lackabawn, and was reared with care and dacency; but her father held his ground at a rack-rent, and the middleman that was between him and the head landlord did not pay his own rent, so the place was ejected, and the farmer collected every penny he had, and set off with his family to America. My father had a liking for the youngest daughter, and well become him to have it, for a sweeter creature never drew the breath of life; but while her father passed for a *strong*† farmer, he was timorous-like about asking her to share his little cabin; however, when he found how matters stood, he didn't lose much time in finding out that she was willing to be his wife, and a mother to his boy and girl. That she was, a patient loving one. Oh! it often sticks me like a knife, when I think how many times I fretted her with my foolishness and my idle ways, and how 'twas a long time before I'd call her "mother." Often, when my father would be going to chastise Richard and myself for our provoking doings, especially the day that we took half-a-dozen eggs from under the hatching hen, to play "Blind Tom" with them, she'd interfere for us, and say,—*"Tim, alceagh, don't touch them this time; sure 'tis only arch they are: they'll get more sense in time."* And then, after he was gone out, she'd advise us for our good so pleasantly, that a thundercloud itself couldn't look black at her. She did wonders too about the house and garden. They were both dirty

* White dove.

† Rich.

and neglected enough when she first came over them; for I was too young and foolish, and my father too busy with his out-door work, and the old woman that lived with us in service too feeble and too blind to keep the place either clean or decent; but my mother got the floor raised, and the green pool in front drained, and a parcel of roses and honeysuckles planted there instead. The neighbours' wives used to say 'Twas all pride and upsetting folly, to keep the kitchen-floor swept clean, and to put the potatoes on a dish, instead of emptying them out of the pot into the middle of the table; and, besides, 'twas a cruel unnatural thing, they said, to take away the pool from the ducks, that they were always used to paddle in so handy. But my mother was always too busy and too happy to heed what they said; and, besides, she was always so ready to do a kind turn for any of them, that, out of pure shame, they had at last to leave off abusing her "fine English ways."

West of our house there was a straggling, stony piece of ground, where, within the memory of man, nothing ever grew but nettles, docks, and thistles. One Monday, when Richard and myself came in from school, my mother told us to set about weeding it, and to bring in some basketsful of good clay from the banks of the river: she said that if we worked well at it until Saturday, she'd bring me a new frock, and Dick a jacket, from the next market town: and encouraged by this, we set to work with right good will, and didn't leave off till supper time. The next day we did the same; and by degrees, when we saw the heap of weeds and stones that we got out, growing big, and the ground looking nice and smooth and red and rich, we got quite anxious about it ourselves, and we built a nice little fence round it to keep out the pigs. When it was manured, my mother planted cabbages, parsnips, and onions in it; and, to be sure, she got a fine crop out of it, enough to make us many a nice supper of vegetables stewed with pepper, and a small taste of bacon or a red herring. Besides, she sold in the market as much as bought a Sunday coat for my father, a gown for herself, a fine pair of shoes for Dick, and as pretty a shawl for myself, as e'er a colleen in the country could show at mass. Through means of my father's industry and my mother's good management, we were, with the blessing of God, as snug and comfortable a poor family as any in Munster. We paid but a small rent, and we had always plenty of potatoes to eat, good clothes to wear, and cleanliness and decency in and about our little cabin.

Five years passed on in this way, and at last little Mary was born. She was a delicate fairy thing, with that look, even from the first, in her blue eyes, which is seldom seen, except where the shadow of the grave darkens the cradle. She was fond of her father, and of Richard, and of myself, and would laugh and crow when she saw us, but *the love in the core*

of her heart was for her mother. No matter how tired, or sleepy, or cross the baby might be, the word from her would set the bright eyes dancing, and the little rosy mouth smiling, and the tiny limbs quivering, as if walking or running couldn't content her, but she must fly to her mother's arms. And how that mother clotted on the very ground she trod! I often thought that the Queen in her state carriage, with her son, God bless him! alongside of her, dressed out in gold and jewels, was not one bit happier than my mother, when she sat under the shade of the mountain ash near the door, in the bush of the summer's evening, singing and *crouching* her only one to sleep in her arms. In the month of October, 1845, Mary was four years old. That was the bitter time, when first the food of the earth was turned to poison: when the gardens that used to be so bright and sweet, covered with the purple and white potato blossoms, became in one night black and offensive, as if fire had come down from heaven to burn them up. 'Twas a heart-breaking thing to see the labouring men, the crathurs! that had only the one half-acre to feed their little families, going out, after work, in the evenings to dig their suppers from under the black stalks. Spadeful after spadeful would be turned up, and a long piece of a ridge dug through, before they'd get a small kish full of such withered *crohauneens*,* as other years would be hardly counted fit for the pigs.

It was some time before the distress reached us, for there was a trifle of money in the savings' bank, that held us in meal, while the neighbours were next door to starvation. As long as my father and mother had it, they shared it freely with them that were worse off than themselves; but at last the little penny of money was all spent, the price of flour was raised; and, to make matters worse, the farmer that my father worked for, at a poor eight-pence a day, was forced to send him and three more of his labourers away, as he couldn't afford to pay them even that any longer. Oh! 'twas a sorrowful night when my father brought home the news. I remember, as well as if I saw it yesterday, the desolate look in his face when he sat down by the ashes of the turf fire that had just baked a yellow meal cake for his supper. My mother was at the opposite side, giving little Mary a drink of sour milk out of her little wooden piggie, and the child didn't like it, being delicate and always used to sweet milk, so she said:

"Mammy, won't you give me some of the nice milk instead of that?"

"I haven't it *athore*, nor can't get it," said her mother, "so don't ye fret."

Not a word more out of the little one's mouth, only she turned her little cheek in towards her mother, and stayed quite quiet, as if she was hearkening to what was going on.

* Small potatoes.

"Judy," said my father, "God is good, and sure 'tis only in Him we must put our trust; for in the wide world I can see nothing but starvation before us."

"God is good, Tim," replied my mother; "He won't forsake us."

Just then Richard came in with a more joyful face than I had seen on him for many a day.

"Good news!" says he, "good news, father! there's work for us both on the Droumearra road. The government works are to begin there to-morrow; you'll get eight-pence a day, and I'll get six-pence."

If you saw our delight when we heard this, you'd think 'twas the free present of a thousand pounds that came to us, falling through the roof, instead of an offer of small wages for hard work.

To be sure the potatoes were gone, and the yellow meal was dear and dry and chippy—it hadn't the *nature* about it that a hot potato has for a poor man; but still 'twas a great thing to have the prospect of getting enough of even that same, and not to be obliged to follow the rest of the country into the poor-house, which was crowded to that degree that the crathurs there—God help them!—hadn't room even to die quietly in their beds, but were crowded together on the floor like so many dogs in a kennel. The next morning my father and Richard were off before day-break, for they had a long way to walk to Droumearra, and they should be there in time to begin work. They took an Indian meal cake with them to eat for their dinner, and poor dry food it was, with only a draught of cold water to wash it down. Still my father, who was knowledgeable about such things, always said it was mighty wholesome when it was well cooked; but some of the poor people took a great objection against it on account of the yellow colour, which they thought came from having sulphur mixed with it—and they said, indeed it was putting a great affront on the decent Irish to mix up their food as if 'twas for mangy dogs. Glad enough, poor creatures, they were to get it afterwards, when sea-weed and nettles, and the very grass by the roadside, was all that many of them had to put into their mouths.

When my father and brother came home in the evening, faint and tired from the two long walks and the day's work, my mother would always try to have something for them to eat with their porridge—a bit of butter, or a bowl of thick milk, or maybe a few eggs. She always gave me plenty as far as it would go; but 'twas little she took herself. She would often go entirely without a meal, and then she'd slip down to the huckster's, and buy a little white bun for Mary; and I'm sure it used to do her more good to see the child eat it, than if she got a meat-dinner for herself. No matter how hungry the poor little thing might be, she'd always break off a bit to put into her mother's mouth, and she would not

be satisfied until she saw her swallow it; then the child would take a drink of cold water out of her little tin porringer, as contented as if it was new milk.

As the winter advanced, the weather became wet and bitterly cold, and the poor men working on the roads began to suffer dreadfully from being all day in wet clothes, and, what was worse, not having any change to put on when they went home at night without a dry thread about them. Fever soon got amongst them, and my father took it. My mother brought the doctor to see him, and by selling all our decent clothes, she got for him whatever was wanting, but all to no use: 'twas the will of the Lord to take him to himself, and he died after a few days' illness.

It would be hard to tell the sorrow that his widow and orphans felt, when they saw the fresh soils planted on his grave. It was not grief altogether like the grand stately grief of the quality, although maybe the same sharp knife is sticking into the same sore bosom *inside* in both; but the *outside* differs in rich and poor. I saw the mistress a week after Miss Ellen died. She was in her drawing-room with the blinds pulled down, sitting in a low chair, with her elbow on the small work-table, and her cheek resting on her hand—not a speck of anything white about her but the cambric handkerchief, and the face that was paler than the marble chimney-piece.

When she saw me, (for the butler, being busy, sent me in with the luncheon-tray,) she covered her eyes with her handkerchief, and began to cry, but quietly, as if she did not want it to be noticed. As I was going out, I just heard her say to Miss Alice in a choking voice:—

"Keep Sally here always; our poor darling was fond of her." And as I closed the door, I heard her give one deep sob. The next time I saw her, she was quite composed: only for the white cheek and the black dress, you would not know that the burning feel of a child's last kiss had ever touched her lips.

My father's wife mourned for him after another fashion. She could not sit quiet, she must work hard to keep the life in them to whom he gave it; and it was only in the evenings when she sat down before the fire with Mary in her arms, that she used to sob and rock herself to and fro, and sing a low wailing keen for the father of the little one, whose innocent tears were always ready to fall when she saw her mother cry. About this time my mother got an offer from some of the hucksters in the neighbourhood, who knew her honesty, to go three times a week to the next market-town, ten miles off, with their little money, and bring them back supplies of bread, groceries, soap, and candles. This she used to do, walking the twenty miles—ten of them with a heavy load on her back—for the sake of earning enough to keep us alive. 'Twas very seldom that Richard could get a stroke of work to do: the boy wasn't

strong in himself, for he had the sickness too; though he recovered from it, and always did his best to earn an honest penny wherever he could. I often wanted my mother to let me go in her stead and bring back the load; but she never would hear of it, and kept me at home to mind the house and little Mary. My poor pet lamb! 'twas little minding she wanted. She would go after breakfast and sit at the door, and stop there all day, watching for her mother, and never heeding the neighbours' children that used to come wanting her to play. Through the live-long hours she would never stir, but just keep her eyes fixed on the lonesome *boreen*;^{*} and when the shadow of the mountain-ash grew long, and she caught a glimpse of her mother ever so far off, coming towards home, the joy that would flush on the small patient face, was brighter than the sunbeam on the river. And faint and weary as the poor woman used to be, before ever she sat down, she'd have Mary nestling in her bosom. No matter how little she might have eaten herself that day, she would always bring home a little white bun for Mary; and the child, that had tasted nothing since morning, would eat it so happily, and then fall quietly asleep in her mother's arms.

At the end of some months I got the sickness myself, but not so heavily as Richard did before. Any way, he and my mother tended me well through it. They sold almost every little stick of furniture that was left, to buy me drink and medicine. By degrees I recovered, and the first evening I was able to sit up, I noticed a strange wild brightness in my mother's eyes, and a hot flush on her thin cheeks—she had taken the fever.

Before she lay down on the wisp of straw that served her for a bed, she brought little Mary over to me: "Take her, Sally," she said—and between every word she gave the child a kiss—"Take her; she's safer with you than she'd be with me, for you're over the sickness, and 'tisn't long any way I'll be with you, my jewel," she said, as she gave the little creature one long close hug, and put her into my arms.

"'Twould take long to tell all about her sickness—how Richard and I, as good right we had, tended her night and day; and how, when every farthing and farthing's worth we had in the world was gone, the mistress herself came down from the big house, the very day after the family returned home from France, and brought wine, food, medicine, linen, and everything we could want.

Shortly after the kind lady was gone, my mother took the change for death; her senses came back, she grew quite strong-like, and sat up straight in the bed.

"Bring me the child, Sally dear," she said. And when I carried little Mary over to her, she looked into the tiny face, as if she was reading it like a book.

"You won't be long away from me, my own one," she said, while her tears fell down upon the child like summer-rain.

"Mother," said I, as well as I could speak for crying, "sure you know I'll do my best to tend her."

"I know you will, *acushla*; you were always a true and dutiful daughter to me and to him that's gone; but, Sally, there's that in my weeney one that won't let her thrive without the mother's hand over her, and the mother's heart for her's to lean against. And now —" It was all she could say; she just clasped the little child to her bosom, fell back on my arm, and in a few moments all was over. At first, Richard and I could not believe that she was dead; and it was very long before the orphan would loose her hold of the stiffening fingers; but when the neighbours came in to prepare for the wake, we contrived to flatter her away.

Days passed on; the child was very quiet; she used to go as usual to sit at the door, and watch hour after hour along the road that her mother always took coming home from market, waiting for her that could never come again. When the sun was near setting, her gaze used to be more fixed and eager; but when the darkness came on, her blue eyes used to droop like the flowers that shut up their leaves, and she would come in quietly without saying a word, and allow me to undress her and put her to bed.

It troubled us and the young ladies greatly that she would not eat. It was almost impossible to get her to taste a morsel; indeed the only thing she would let inside her lips was a bit of a little white bun, like those her poor mother used to bring her. There was nothing left untried to please her. I carried her up to the big house, thinking the change might do her good, and the ladies petted her, and talked to her, and gave her heaps of toys and cakes, and pretty frocks and coats; but she hardly noticed them, and was restless and uneasy until she got back to her own low sunny door-step.

Every day she grew paler and thinner, and her bright eyes had a sad fond look in them, so like her mother's. One evening she sat at the door later than usual.

"Come in, *alannah*," I said to her. "Won't you come in for your own Sally?"

She never stirred. I went over to her; she was quite still, with her little hands crossed on her lap, and her head drooping on her chest. I touched her—she was cold. I gave a loud scream, and Richard came running; he stopped and looked, and then burst out crying like an infant. Our little sister was dead!

Well, my Mary, the sorrow was bitter, but it was short. You're gone home to Him that comforts as a mother comforteth. *Agra machree*, your eyes are as blue, and your hair as golden, and your voice as sweet, as they were when you watched by the cabin-door;

* By-road

but your cheeks are not pale, *acushla*, nor your little hands thin, and the shade of sorrow has passed away from your forehead like a rain-cloud from the summer sky. She that loved you so on earth, has clasped you for ever to her bosom in heaven; and God himself has wiped away all tears from your eyes, and placed you both and our own dear father far beyond the touch of sorrow or the fear of death.

A GREAT MAN DEPARTED.

THERE was a festive hall with mirth resounding;
Beauty and wit, and friendliness surrounding;
With minstrelsy above, and dancing feet rebounding.

And at the height came news, that held suspended

The sparkling glass!—till slow the hand descended—

And cheeks grew pale and straight—and all the mirth was ended.

Beneath a sunny sky, 'twas heard with wonder,
A flash had cleft a lofty tree asunder,
Without a previous cloud—and with no rolling thunder.

Strong was the stem—its boughs above all thrilling—

And in its roots and sap no cankers galling—
Prosperity was perfect, while Death's hand was falling.

Man's body is less safe than any tree;

We build our ship in strong security—

A Finger, from the dark, points to the trembling sea.

Man, like his knowledge, and his soul's endeavour,

Is framed for no fixed altitude—but ever

Moves onward: the first pause, returns all to the Giver.

Riches and health, fine taste, all means of pleasure;

Success in highest efforts—fame's best treasure—

All these were thine,—o'erthrown—and overweighed the measure.

But in recording thus life's night-shade warning,

We hold the memory of thy kind heart's morning—

Man's intellect is not man's sole nor best adorning.

THE ADVENTURES OF THE PUBLIC RECORDS.

"Burn all the records of the realm! My mouth shall be the parliament." Thus spoke Jack Cade; and it would appear from the manner in which the public records are at the present time "bestowed," that those who have had the stowing of them, cordially echo the sentiment. The historical, legal, and territorial archives of this country—believed to be, when properly arranged and systematised, the most complete and valuable in existence—are spread and distributed over six depositories. Some little description of three of these only, will show the jeopardy in which

such records of the Wisdom of our ancestors, as we yet possess, are placed, and the adventures which have befallen many of them.

Many of the most valuable documents of the past—including the Chancery Records from the reign of John to Edward I.—are kept in the Tower of London. Some in the White and some in the Wakefield Tower, close to which is an hydraulic steam-engine in daily operation. The basement of the former contains tons of gunpowder, the explosion of which would destroy all Tower Hill, and change even the course of the Thames; while the fate of paper and parchment thrown up by such a volcano, it is not even possible to imagine. The White Tower is also replenished with highly inflammable ordnance stores, tarpaulins carefully pitched, soldiers' kits, and all kinds of wood-work, among which common labourers not imbued with extra-carefulness are constantly moving about. That no risk may be wanting, an eye-witness relates that he has seen boiling pitch actually in flames, quite close to this repository. When the fire of the Tower *did* take place, its flames leaped and darted their dangerous tongues within forty feet of it. So alarmed were the authorities on that occasion, that this tower underwent a constant nocturnal shower-bath during the time the small Armoury was burning. But when the danger was over, though fire-proof barrack-houses were built for the soldiers, the records were still left to be lodged over the gunpowder.

Among the treasures in these ill kept "keeps," are the logs and other Admiralty documents, state papers, and royal letters, many of which have never been consulted; because the manner in which they are stowed away rendered consultation impossible. They are, no doubt, silently waiting to clear up many of the disputed points, and to set right many of the false impressions and unmitigated untruths of history. Inquisitions—the antiquity of which may be guessed when we state that those up to the 14th of Richard II. have only yet been arranged in books—are also massed together ready for explosion or ignition. These are amongst the most curious of our ancient documents, being the notes of the oldest of our legal rituals—the "Crown's quest." The Chancery proceedings and privy seals piled in the White Tower, are endless.

In the Rolls' House, in Chancery Lane—which, with its chapel, was annexed by Edward III., in 1377, to the office of Custos Rotulorum, or Keeper of the Rolls—are located the Records of the Court of Chancery from that year to the present time. That every public document, wherever situated, may be rendered in as great jeopardy as possible, a temporary shed, like a navvy's hut, has been recently knocked up for the Treasury papers in the Rolls' Garden; other of the Records are quietly accommodated in the pews and behind the communion-table in the Rolls' Chapel—

a building which is heated by hot-air flues, in a manner similar to that which originated the burning of the Houses of Parliament.

Perhaps, however, our most valuable muniments repose in the Chapter-House of Westminster Abbey, a building still surrounded by the same facilities for fire as those which the late Charles Butler detailed to the House of Commons fourteen years ago. "Ever since 1732," he said, "it had been reported to the House of Commons that there was a brewhouse and a washhouse at the back of the Chapter-House, where the Records were kept, and by which the Chapter-House was endangered by fire. In 1800, this brewhouse and this washhouse were again reported as dangerous. In 1819, this brewhouse and washhouse again attracted the serious notice of the Commissioners. In 1831, it was thought expedient to send a deputation to the Dean and Chapter of Westminster, and to request His Majesty's Surveyor General to report upon the perils of this brewhouse and washhouse, and endeavour to get the Dean and Chapter to pull them down. But the Dean and Chapter asserted the vested rights of the Church, and no redress was obtained against the brewhouse and washhouse. In 1833, another expedition, headed by the Right Honourable Sir H. Inglis, was made to the Chapter-House; but the right honourable baronet, desiring not to come into collision with the Church, omitted all mention of the brewhouse and washhouse. And thus the attention of the Commissioners had been constantly directed to this eternal brewhouse and this eternal washhouse, without any avail. There they still remain, as a monument of the inefficiency of the Commissioners, and of the great power and pertinacity of the Church of this country." The newspaper reports of this speech end with "Loud laughter from all parts of the House."

In the Chapter-House of Westminster Abbey, the Conqueror's Domesday Book, an unequalled collection of treaties and state documents from the twelfth to the seventeenth centuries; others bearing upon the important events during the York and Lancastrian wars, and exuberant returns belonging to the English Crown, of the most minute and precise character, are still at the mercy of the brewhouse and washhouse. There is a little adventure connected with the proceedings of the Courts of Star Chamber which we must here introduce:—Their registries and records were kept in an apartment of the Royal Palace of Westminster from the time of the dissolution of the Courts. They were shifted from room to room at the mercy of the Officers of the Palace. Committees of the House of Commons from time to time examined them, and reported equally as to their value, and the dirt, confusion, and neglect in which they were set apart for the public use. But it was not till the fire in the Cottonian Library, in 1731,

frightened the custodian, that an order from the Privy Council was obtained for the removal of these documents to the Chapter-House. This house also possesses a unique collection of the disused dies for coining; and when the Nepaulese Minister and his suite visited the Office, they were particularly attracted by these primitive dies, which were at once recognised as being now used in the north-west of India. There are the washhouse and the brewhouse still.

But the most monstrous instance furnished to us of the disregard and contempt in which our civil, political, legal, or ecclesiastical authorities hold the very pedigrees of their professional avocations, is to be found in the ludicrously huge and unsuitable storehouse called Carlton Ride—a low, brick-slatted roof, workhouse-looking building, at the east end of Carlton Terrace. Mr. Braidwood, the superintendent of the London Fire-Brigade, has pithily said, that "The Public Records in the Tower of London and Carlton Ride are exposed to risks of fire to which no merchant of ordinary prudence would subject his books of accounts." The protective staff of this establishment, besides the clerks and workmen during the day, consists of two soldiers, two policemen, and two firemen, four thousand gallons of water—a sort of open air bath at the top of the building, three rows of buckets, ready-charged fire-mains, two tell-tale clocks, five dark lanterns, and a cat.

Carlton Ride was, originally, the Riding-House of the Prince of Wales's residence, Carlton House. Under it are arched storehouses for carriages and horse furniture; and these were used for the carriages and horses of the late good Queen Dowager. When a question was raised as to the capability of the structure to support the thousands of tons of records which were to be treasured therein, the district Clerk of the Works satisfied all enquiries by noticing the fact, that the strength of the building had been tested to the utmost during the Spa Fields riots, when it was occupied by the horses and ammunition-waggons of the Royal Artillery, packed together as close as they could stand.

To adapt the interior of this place for the public archives, the first process of building, and that only, was resorted to;—scaffolding was put up, so that, on entering this receptacle of the national records of Great Britain, the visitor finds himself in one of a series of gloomy, dimly-lighted, mouldy-smelling alleys, or stacks, of wooden scaffolding, the sides of which are faced with records, reaching to some thirty feet high. At first sight, it reminds him of an immense mediæval timber-yard, in which no business has been done since the time of the Tudors. Here two-thirds of our country's public and private history are huddled together; not with the systematic red tapery of a public office, but,

—to use an expressive vulgarism—“anyhow.” Whichever way the eye turns, it meets reams of portfolios, piles of boxes, stacks of wills—rolls of every imaginable shape, like those of a baker—square, round, flat, oblong, short, and squat; some plaited like twopenny twists, others upright as rolls of tobacco; a few in thick convolutions, jammed together as if they were double Gloucester cheeses; there are heaps laid lengthwise, like mouldering coffins; some stacked up on end, like bundles of firewood, and others laid down, like the bottles in a wine-bin. The hay-loft which extends over the riding-school is similarly occupied, and all the racks, presses, shelves, boxes, beams, and scaffolding, being of wood, Mr. Braidwood has good right for estimating that a fire would burn it up “like matches” in less than twenty minutes. That, however, there should be no accidental deficiency of combustibles, the riding-school was partitioned into two divisions, one side for the records of the Courts of Common Pleas and Exchequer, and the other for the domestic furniture, china, paintings, weapons of warfare of all kinds, books, prints, &c., belonging to Carlton House. It is evident that in the estimation of the powers that were, the records were classed with the other lumber. But this store of second-hand furniture could not take fire of itself; and that no chance might be lost, the functionary in charge of it, finding his half of the “ride” a dreary, comfortless, and cold place, even for a lumber store, warmed it by means of a large stove with a chimney-flue which perforated one side of the building. On several occasions he was observed during the winter months—particularly after meal-time—to be somnolently reposing by the stove, while the flue was judiciously emulating his example, by acquiring all the heat possible from the fire—and, indeed, once or twice its face was illumined by a red glow of satisfaction rather alarming to those in charge of the records, who witnessed it. Some five or six years ago, by the instigation of Lord Lincoln, who was then Chief Commissioner of Woods and Forests, Prince Albert paid a visit to Carlton Ride, and after examining the furniture, &c., directed that it should be all removed, and that the remainder of the building should be given up for the records; consequently, a variety of important parchments were removed into it—chiefly ecclesiastical records, touching the property belonging to the religious houses dissolved in King Henry VIII.’s time, together with a most valuable and minute series of documents, relating to the receipt and expenditure of the royal revenue, from Henry II. down to Charles II. To these were added various Exchequer and Common Pleas records.

The water as well as the fire test of destruction has been also applied to our national muniments. The Common Pleas records previous to the coronation of George IV. were

deposited in a long room, called “Queen Elizabeth’s Kitchen,” lying under the Old Court of Exchequer on the west side of Westminster Hall. This room was frequently flooded during the prevailing high tides of spring or autumn. Rats and vermin abounded, and neither tandle nor soap could be kept in the rooms, although mere public documents were deemed quite safe there. The consequence was, that before these could be removed, the authorities had to engage in a little sporting. The rats had to be hunted out by means of dogs. We believe this was about the time that the celebrated dog “Billy” was in the height of fame; and we are not quite sure that his services were not secured for this great Exchequer Hunt. After several fine “bursts” the rats allowed the documents to be removed, and turned into a temporary wooden building, which was so intensely cold during winter time, that those wishing to make searches prepared themselves with clothing as if they were going on an Arctic expedition. Here mice abounded in spite of the temperature; and the candles, which the darkness of this den rendered necessary, were gradually consumed by them. But this light sort of food wanted a more consolidating diet, and they found a relishing *piece de resistance* in the prayer-book of the Court, a great portion of which they nibbled away. Ten years afterwards the records were packed off to the King’s Mews, Charing Cross, into stables and harness lofts; and on the demolition of this building in 1835, Carlton Ride was selected as their resting-place. The records of the Queen’s Remembrancer of the Exchequer (an officer who was presumed to preserve “memoranda or remembrances” of the condition of the royal exchequer) kept company with the Common Pleas muniments in their trials and journeyings.

At present, we repeat, the whole of the records of the three Courts, Queen’s Bench, Exchequer, and Common Pleas, are located under the same roof at Carlton Ride. Such of the records as are in this building are reasonably accessible to the public. Many of them are of intense interest. Fees only nominal in amount are imposed, to restrain inquisitive, troublesome, or merely idle inquirers; a restriction highly necessary against pedigree-hunters and lady-searchers. One poor deluded female, who fancied herself Duchess of Cornwall, and claimed the hereditary fee-simple of the counties of Devon and Cornwall, caused the employment of more clerks and messengers to procure the documents for her extravagant humours than any legion of lawyers’ clerks hot with the business of term time. She begged, she implored, she raved, she commanded, she threatened, she cried aloud for “all the fines,” for “all the recoveries,” for “all the indentures of lease and release” touching the landed property of these two counties.

Pedigree-hunters abound. One of these

requested to be allowed to remain among these founts of antiquity day and night. In his unwearied and invincible zeal he brought his meals with him, and declared that rest was out of the question until he was satisfied which of his ancestors were "Roberts," and which "Johns," from the time of the Seventh Henry. A hair-brained quack doctor has seriously asserted his claim to a large quantity of these public documents.

On the other hand, persons really interested in these records take no heed of them. Messrs. Brown, Smith, and Tomkins buy and sell manors and advowsons, Waltons and Stokes, and Combes cum Tythings, without knowing or caring that there are records of the actual transfers of the same properties between the holders of them since the days of King John! There is no sympathy for these things, even with those who might fairly be presumed to have a direct interest in the preservation of them, or with the public at large. Out of many examples of this sort, we need only cite one from the "Westminster Review":—The Duke of Bedford inherits the Abbey of Woburn, and its monastic rights, privileges, and hereditaments; and there are public records, detailing with the utmost minuteness the value of this and all the church property which "Old Harry" seized, and all the stages of its seizure; the preliminary surveys to learn its value; perhaps the very surrender of the monks of Woburn; the annual value and detail of the possessions of the monastery whilst the Crown held it; the very particulars of the grant on which the letters patent to Lord John Russell were founded; the involvement of the letters patent themselves. But neither his Grace of Bedford, the duke and lay impropiator, nor his brother, the Prime Minister and the historian, have seemed to regard these important documents as worthy of safe keeping.

On public grounds, nothing was for a long time done, although, as Bishop Nicholson said in 1714, "Our stores of Public Records are justly reckoned to excel in age, beauty, correctness, and authority, whatever the choicest archives abroad can boast of the like sort."

We are happy to perceive by the "Eleventh Report of the Deputy Keeper of the Public Records" that the work of arranging, repairing, cleaning, cataloguing, and rendering accessible these documents, proceeds diligently. But we are more happy to discover that the disastrous adventures of our Public Records are nearly at an end. The Deputy Keeper acknowledges "with extreme satisfaction the receipt of communications made to Lord Langdale from the Lords Commissioners of Your Majesty's Treasury, intimating that their Lordships propose to commence the building of the Repository so emphatically urged by his Lordship the Master of the Rolls, and so long desired; the site thereof to be the Rolls Estate, and the Building to be comprehended within the boundaries of such

Estate, the said site being in all respects the best and most convenient which the metropolis affords."

A MIGHTIER HUNTER THAN NIMROD.

A GREAT deal has been said about the prowess of Nimrod, in connexion with the chase, from the days of him of Babylon to those of the late Mr. Apperley of Shropshire; but we question whether, amongst all the sporting characters mentioned in ancient or modern story, there ever was so mighty a hunter as the gentleman whose sporting calendar now lies before us.* The annals of the chase, so far as we are acquainted with them, supply no such instances of familiar intimacy with Lions, Elephants, Hippopotami, Rhinoceroses, Serpents, Crocodiles, and other furious animals, with which the human species in general is not very forward in cultivating an acquaintance.

Mr. Cumming had exhausted the Deer forests of his native Scotland; he had sighed for the rolling prairies and rocky mountains of the Far West, and was tied down to military routine as a Mounted Rifleman in the Cape Colony, when he determined to resign his commission into the hands of Government, and himself to the delights of hunting amidst the untrodden plains and forests of Southern Africa. Having provided himself with waggons to travel and live in, with bullocks to draw them, and with a host of attendants; a sufficiency of arms, horses, dogs, and ammunition, he set out from Graham's Town, in October 1843. From that period his hunting adventures extended over five years, during which time he penetrated from various points and in various directions from his starting-place in lat. 33 down to lat. 20, and passed through districts upon which no European foot ever before trod; regions where the wildest of wild animals abound—nothing less serving Mr. Cumming's ardent purpose.

A lion story in the early part of his book will introduce this fearless hunter-author to our readers better than the most elaborate dissection of his character. He is approaching Colesberg, the northernmost military station belonging to the Cape Colony. He is on a trusty steed, which he calls also "Colesberg." Two of his attendants on horseback are with him. "Suddenly," says the author, "I observed a number of vultures seated on the plain about a quarter of a mile ahead of us, and close beside them stood a huge lioness, consuming a blesblok which she had killed. She was assisted in her repast by about a dozen jackals, which were feasting along with her in the most friendly and confidential manner. Directing my followers' attention to the spot, I remarked, 'I see the lion;' to which

* A Hunter's Life in South Africa. By R. Gordon Cumming, Esq., of Altyre.

they replied, 'Whar? whar? Yah! Almagtig! dat is he;' and instantly reining in their steeds and wheeling about, they pressed their heels to their horses' sides, and were preparing to betake themselves to flight. I asked them, what they were going to do? To which they answered, 'We have not yet placed caps on our rides.' This was true; but while this short conversation was passing, the lioness, had observed us. Raising her full round face, she overhauled us for a few seconds and then set off at a smart canter towards a range of mountains some miles to the northward; the whole troop of jackals also, started off in another direction; there was, therefore, no time to think of caps. The first move was to bring her to bay, and not a second was to be lost. Spurring my good and lively steed, and shouting to my men to follow, I flew across the plain, and, being fortunately mounted on Colesberg, the flower of my stud, I gained upon her at every stride. This was to me a joyful moment, and I at once made up my mind that she or I must die. The lioness soon after suddenly pulled up, and sat on her haunches like a dog, with her back towards me, not even deigning to look round. She then appeared to say to herself, 'Does this fellow know who he is after?' Having thus sat for half a minute, as if involved in thought, she sprang to her feet, and facing about, stood looking at me for a few seconds, moving her tail slowly from side to side, showing her teeth, and growling fiercely. She next made a short run forwards, making a loud, rumbling noise like thunder. This she did to intimidate me; but, finding that I did not flinch an inch, nor seem to heed her hostile demonstrations, she quietly stretched out her massive arms, and lay down on the grass. My Hotteptots now coming up, we all three dismounted, and drawing our rifles from their holsters, we looked to see if the powder was up in the nipples, and put on our caps. While this was doing, the lioness sat up, and showed evident symptoms of uneasiness. She looked first at us, and then behind her, as if to see if the coast were clear; after which she made a short run towards us, uttering her deep-drawn murderous growls. Having secured the three horses to one another by their reins, we led them on as, if we intended to pass her, in the hope of obtaining a broadside; but this she carefully avoided to expose, presenting only her full front. I had given Stofolus my Moore rifle, with orders to shoot her if she should spring upon me, but on no account to fire before me. Kleinboy was to stand ready to hand me my Purdey rifle, in case the two-grooved Dixon should not prove sufficient. My men as yet had been steady, but they were in a precious stew, their faces having assumed a ghastly paleness; and I had a painful feeling that I could place no reliance on them. Now, then, for it, neck or nothing! She is within sixty yards of us, and she keeps advancing. We turned the horses' tails to

her. I felt on one side, and, taking a steady aim at her breast, let fly. The ball cracked loudly on her tawny hide, and crippled her in the shoulder; upon which she charged with an appalling roar, and in the twinkling of an eye she was in the midst of us. At this moment Stofolus's rifle exploded in his hand, and Kleinboy, whom I had ordered to stand ready by me, danced about like a duck in a gale of wind. The lioness sprang upon Colesberg, and fearfully lacerated his ribs and haunches with her horrid teeth and claws; the worst wound was on his haunch, which exhibited a sickening, yawning gash, more than twelve inches long, almost laying bare the very bone. I was very cool and steady, and did not feel in the least degree nervous, having fortunately great confidence in my own shooting; but I must confess, when the whole affair was over, I felt that it was a very awful situation, and attended with extreme peril, as I had no friend with me on whom I could rely. When the lioness sprang on Colesberg, I stood out from the horses, ready with my second barrel for the first chance she should give me of a clear shot. This she quickly did; for, seemingly satisfied with the revenge she had now taken, she quitted Colesberg, and, slewing her tail to one side, trotted sulkily past within a few paces of me, taking one step to the left. I pitched my rifle to my shoulder, and in another second the lioness was stretched on the plain a lifeless corpse."

This is, however, but a harmless adventure compared with a subsequent escapade—not with one, but with six lions. It was the hunter's habit to lay wait near the drinking-places of these animals, concealed in a hole dug for the purpose. In such a place on the occasion in question, Mr. Cumming—having left one of three rhinoceroses he had previously killed as a bait—ensconced himself. Such a savage festival as that which introduced the adventure, has never before, we believe, been introduced through the medium of the softest English and the finest hot-pressed paper to the notice of the civilised public. "Soon after twilight," the author relates, "I went down to my hole with Kleinboy and two natives, who lay concealed in another hole, with Wolf and Boxer ready to slip, in the event of wounding a lion. On reaching the water I looked towards the carcass of the rhinoceros, and, to my astonishment, I beheld the ground alive with large creatures, as though a troop of zebras were approaching the fountain to drink. Kleinboy remarked to me that a troop of zebras were standing on the height. I answered, 'Yes;' but I knew very well that zebras would not be capering around the carcass of a rhinoceros. I quickly arranged my blankets, pillow, and guns in the hole, and then lay down to feast my eyes on the interesting sight before me. It was bright moonlight, as clear as I need wish, and within one night of being full moon. There were six

large lions, about twelve or fifteen hyenas, and from twenty to thirty jackals, feasting on and around the carcasses of the three rhinoceroses. The lions feasted peacefully, but the hyenas and jackals fought over every mouthful, and chased one another round and round the carcasses, growling, laughing, screeching, chattering, and howling without any intermission. The hyenas did not seem afraid of the lions, although they always gave way before them; for I observed that they followed them in the most disrespectful manner, and stood laughing, one or two on either side, when any lions came after their comrades to examine pieces of skin or bones which they were dragging away. I had lain watching this banquet for about three hours, in the strong hope that, when the lions had feasted, they would come and drink. Two black and two white rhinoceroses had made their appearance, but, scared by the smell of the blood, they had made off. At length the lions seemed satisfied. They all walked about with their heads up, and seemed to be thinking about the water; and in two minutes one of them turned his face towards me, and came on; he was immediately followed by a second lion, and in half a minute by the remaining four. It was a decided and general move, they were all coming to drink right bang in my face, within fifteen yards of me."

The hunters were presently discovered. "An old lioness, who seemed to take the lead, had detected me, and, with her head high and her eyes fixed full upon me, she was coming slowly round the corner of the little vley to cultivate further my acquaintance! This unfortunate coincidence put a stop at once to all further contemplation. I thought, in my haste, that it was perhaps most prudent to shoot this lioness, especially as none of the others had noticed me. I accordingly moved my arm and covered her; she saw me move and halted, exposing a full broadside. I fired; the ball entered one shoulder, and passed out behind the other. She bounded forward with repeated growls, and was followed by her five comrades all enveloped in a cloud of dust; nor did they stop until they had reached the cover behind me, except one old gentleman, who halted and looked back for a few seconds, when I fired, but the ball went high. I listened anxiously for some sound to denote the approaching end of the lioness; nor listened in vain. I heard her growling and stationary, as if dying. In one minute her comrades crossed the vley a little below me, and made towards the rhinoceros. I then slipped Wolf and Boxer on her scent, and, following them into the cover, I found her lying dead."

Mr. Cumming's adventures with elephants are no less thrilling. He had selected for the aim of his murderous rifle two huge female elephants from a herd. "Two of the troop had walked slowly past at about sixty yards, and the one which I had selected was feeding

with two others on a thorny tree before me. My hand was now as steady as the rock on which it rested, so, taking a deliberate aim, I let fly at her head, a little behind the eye. She got it hard and sharp, just where I aimed, but it did not seem to affect her much. Uttering a loud cry, she wheeled about, when I gave her the second ball, close behind the shoulder. All the elephants uttered a strange rumbling noise, and made off in a line to the northward at a brisk ambling pace, their huge fanlike ears flapping in the ratio of their speed. I did not wait to load, but ran back to the hillock to obtain a view. On gaining its summit, the guides pointed out the elephants; they were standing in a grove of shady trees, but the wounded one was some distance behind with another elephant, doubtless its particular friend, who was endeavouring to assist it. These elephants had probably never before heard the report of a gun; and having neither seen nor smelt me, they were unaware of the presence of man, and did not seem inclined to go any further. Presently my men hove in sight, bringing the dogs; and when these came up, I waited some time before commencing the attack, that the dogs and horses might recover their wind. We then rode slowly towards the elephants, and had advanced within two hundred yards of them, when, the ground being open, they observed us, and made off in an easterly direction; but the wounded one immediately dropped astern, and next moment she was surrounded by the dogs, which, barking angrily, seemed to engross her attention. Having placed myself between her and the retreating troop, I dismounted, to fire within forty yards of her, in open ground. Colesberg was extremely afraid of the elephants, and gave me much trouble, jerking my arm when I tried to fire. At length I let fly; but, on endeavouring to regain my saddle, Colesberg declined to allow me to mount; and when I tried to lead him, and run for it, he only backed towards the wounded elephant. At this moment I heard another elephant close behind; and on looking about I beheld the 'friend,' with uplifted trunk, charging down upon me at top speed, shrilly trumpeting, and following an old black pointer named Schwartz, that was perfectly deaf, and trotted along before the enraged elephant quite unaware of what was behind him. I felt certain that she would have either me or my horse. I, however, determined not to relinquish my steed, but to hold on by the bridle. My men, who of course kept at a safe distance, stood aghast with their mouths open, and for a few seconds my position was certainly not an enviable one. Fortunately, however, the dogs took off the attention of the elephants; and just as they were upon me I managed to spring into the saddle, where I was safe. As I turned my back to mount, the elephants were so very near, that I really expected to feel one of their trunks lay hold of me. I rode

up to Kleinboy for my double-barrelled two-grooved rifle: he and Isaac were pale and almost speechless with fright. Returning to the charge, I was soon once more alongside, and, firing from the saddle, I sent another brace of bullets into the wounded elephant. Colesberg was extremely unsteady, and destroyed the correctness of my aim. The 'friend' now seemed resolved to do some mischief, and charged me furiously, pursuing me to a distance of several hundred yards. I therefore deemed it proper to give her a gentle hint to act less officiously, and accordingly, having loaded, I approached within thirty yards and gave it her sharp, right and left, behind the shoulder; upon which she at once made off with drooping trunk, evidently with a mortal wound. Two more shots finished her: on receiving them she tossed her trunk up and down two or three times, and falling on her broadside against a thorny tree, which yielded like grass before her enormous weight, she uttered a deep hoarse cry and expired."

Mr. Cumming's exploits in the water are no less exciting than his land adventures. Here is an account of his victory over a hippopotamus, on the banks of the Limpopo river, near the northernmost extremity of his journeyings.

"There were four of them, three cows and an old bull; they stood in the middle of the river, and, though alarmed, did not appear aware of the extent of the impending danger. I took the sea-cow next me, and with my first ball I gave her a mortal wound, knocking loose a great plate on the top of her skull. She at once commenced plunging round and round, and then occasionally remained still, sitting for a few minutes on the same spot. On hearing the report of my rifle two of the others took up stream, and the fourth dashed down the river; they trotted along, like oxen, at a smart pace as long as the water was shallow. I was now in a state of very great anxiety about my wounded sea-cow, for I feared that she would get down into deep water, and be lost like the last one; her struggles were still carrying her down stream, and the water was becoming deeper. To settle the matter I accordingly fired a second shot from the bank, which, entering the roof of her skull, passed out through her eye; she then kept continually splashing round and round in a circle in the middle of the river. I had great fears of the crocodiles, and I did not know that the sea-cow might not attack me. My anxiety to secure her, however, overcame all hesitation; so, divesting myself of my leathers, and armed with a sharp knife, I dashed into the water, which at first took me up to my arm-pits, but in the middle was shallower. As I approached Behemoth her eye looked very wicked. I halted for a moment, ready to dive under the water if she attacked me, but she was stunned, and did not know what she was doing; so, running

in upon her, and seizing her short tail, I attempted to incline her course to land. It was extraordinary what enormous strength she still had in the water. I could not guide her in the slightest, and she continued to splash, and plunge, and blow, and make her circular course, carrying me along with her as if I was a fly on her tail. Finding her tail gave me but a poor hold, as the only means of securing my prey, I took out my knife, and cutting two deep parallel incisions through the skin on her rump, and lifting this skin from the flesh, so that I could get in my two hands, I made use of this as a handle, and after some desperate hard work, sometimes pushing and sometimes pulling, the sea-cow continuing her circular course all the time and I holding on at her rump like grim Death, eventually I succeeded in bringing this gigantic and most powerful animal to the bank. Here the Bushman quickly brought me a stout buffalo-rhein from my horse's neck, which I passed through the opening in the thick skin, and moored Behemoth to a tree. I then took my rifle, and sent a ball through the centre of her head, and she was numbered with the dead."

There is nothing in "Waterton's Wanderings," or in the "Adventures of Baron Munchausen" more startling than this "Waltz with a Hippopotamus!"

In the all-wise disposition of events, it is perhaps ordained that wild animals should be subdued by man to his use at the expense of such tortures as those described in the work before us. Mere amusement, therefore, is too light a motive for dealing such wounds and death Mr. Cumming owes to; but he had other motives,—besides a considerable profit he has reaped in trophies, ivory, fur, &c., he has made in his book some valuable contributions to the natural history of the animals he wounded and slew.

CHIPS.

A MARRIAGE IN ST. PETERSBURG.

A FAIR Correspondent supplies us with the following "Chip" from St. Petersburg:—

In England we used to think the marriage ceremony, with all its solemn adjuncts, an impressive affair; but it is child's play when compared with the elaborate formalities of a Russian wedding. In England, the bride, though a principal, is a passive object; but in Russia she has, before and at the ceremony, to undergo as much physical fatigue and exertion as a prima donna who has to tear through a violent opera, making every demonstration of the most passionate grief. But you shall hear how they manage on these occasions.

The housekeeper of Mons. A., who has been in his service for eighteen years, and consequently no very youthful bride, took it into her head to marry a shoemaker, who.

like his intended, is not remarkable for his personal beauty. Friday was fixed for the happy day, and about two in the afternoon I caught sight of the bride, weeping and wailing in a most doleful manner. I saw or heard no more of her till six in the evening, when she appeared in Mad. A.'s room, attired for the ceremony. Her dress was of dark silk, (she not being allowed to wear white, in consequence of some early indiscretions,) with a wreath of white roses round her head, and a long white veil, which almost enveloped her. She sobbed, howled, went off into hysterics, and fainted; I felt excessively sorry for her, but did all my soothing in vain, for she refused to be comforted. As soon as she became calm, we all assembled in the drawing-room, and Mons. A.'s godson, a little fellow of five years old, entered the room first, bearing the patron saint, St. Nicholas, then came the bride, followed by her train of female friends. She knelt down before Mons. and Mad. A., and they each in turn held the image over her head, saying they blessed her, and hoped she would "go to her happiness." She kissed their feet frantically; and they then assisted her up, kissed her, and she was conducted weeping to the carriage.

On arriving at the church about half-past seven we were met by friends of the bridegroom, who stood at one end of the church, surrounded by his family, and every now and then casting anxious and tender looks at the beloved one, who was again howling and sobbing like a mad woman. I thought how painful it must be for him, poor man, to witness such distress, and wondered why she should marry any one for whom she manifested so much dislike. After administering restoratives, she became calmer, and the priests appeared—when off she went again into a fit of hysterics more sudden, though not so violent as her previous performances; but, this time, was soon restored, and the ceremony commenced.

One priest stood at the altar, and two others at a kind of table or reading-desk at some distance. The un-happy couple were placed beside each other, behind the priests, who commenced chanting the service in beautiful style. The bride and bridegroom held each a lighted wax taper in their hand; a little more chanting, and rings were exchanged; more chanting, and then a small piece of carpet was brought, upon which they both stood; two crowns were then presented to them, and after they had kissed the saint upon them, these were held over their heads by the bridesmen. More chanting; then there was wine brought, which they were obliged to drink, first he and then she; they made three sips of it, though, at first, there appeared only about a wine-glassful; after this the Priest took hold of them and walked them round the church three times, the bridegroom's man, following holding the crowns over their heads to the best of his ability; but he fell short of his

duty, for the bridegroom was rather tall and his man, rather short: hence there was some difficulty and slight awkwardness in this part of the proceedings; then followed a kind of exhortation, delivered in a very impressive manner by the senior Priest. After this, they proceeded to the altar, prostrated themselves before it, kissing the ground with great apparent fervour; then all the saints on the wall were kissed, and lastly the whole of the party assembled. We then adjourned to the carriages, and after a quick ride soon found ourselves at home.

Here Monsieur and Madame A. performed the part of *Père et Mère*, met the bridal party, carrying the black bread and salt which is always given on such occasions. This was, with some words—a blessing, of course—waved over the heads of the newly married couple, who were on their knees kissing most vehemently the feet of their *Père et Mère*. After this ceremony, which means "May you never want the good here offered you," they arose, and again the kissing mania came upon the whole party with greater vehemence than ever. Nothing was heard for some time but the sound of lips; at length a calm came, and with it champagne, in which every one of them drank "Long life and happiness to the newly-wed pair," all striking their glasses till I thought there would be a universal smash, so violently were they carried away by their enthusiasm; then came chocolate, and lastly fruit.

As soon as the feasting was over, the dancing commenced with a Polonaise; the steward, a great man in the house, leading off the bride, who by this time had forgotten all her sorrows. About twenty couple followed, and away they went, through one room, out at another, until they had made the whole circuit of the apartments.

We left them at half-past eleven, but they kept up the fun till five in the morning, when they conducted the happy pair to their dwelling.

Upon my expressing pity for the bride, and also my astonishment why she married a man who appeared so very repugnant to her, I learnt that she would not be considered either a good wife or a good woman unless she was led to the altar in a shower-bath of tears; in fact, in Russia, the more tears a woman sheds, the better her husband likes her!

A NEW JOINT-STOCK PANDEMONIUM COMPANY.

GAMING without risk, certainty in chance, Fortune showering her favours out of the dice-box, are promised by the promoters of a New Joint-Stock Company just set on foot in Paris, the prospectus of which now lies before us. This is nothing less than a society for the propagation of gambling in San Francisco; "capital, one hundred and fifty thousand francs, in three hundred shares of five

hundred francs each, provisionally registered on May 10, 1850. Chief Office, No. 17, Rue Vivienne."

The promoters of this precious CERCLE DE SAN FRANCISCO declare that certainty will be the issue of this notable scheme, the essence of which is hazard. "There never was," they say, "an enterprise more sure, of gain. Three years, with twelve dividends, paid once a quarter, will produce enormous results. These have been accurately tested by the most conscientious (?) calculations, based on the produce of the German gaming houses, and we have ascertained that each share of five hundred francs will yield an annual dividend of three thousand francs over and above interest at six per cent!"

The future House itself is thus painted in bright perspective:—"A fine house of wood, of two stories, with a magnificent coffee-room on the ground-floor; a vast saloon on the first-floor, for two roulette-tables; on the second, apartments for the manager, the servants, and the officers; the whole completely furnished, with all necessary appurtenances for warming and lighting. Tables, implements, counters, iron coffers for the specie, &c., are to be immediately exported by a sailing vessel. M. Mauduit, the manager, will accompany these immense munitions, together with subordinates of known probity. M. Charles, chief-of-the-play at Aix, in Savoy, is to follow, as director of the expedition, at the end of October, by steamer. It is expected that preparations will be complete, so as to open the Cercle in San Francisco on the 31st December of this year."

Of all the bare-faced schemes that was ever presented to a French public, this is surely the most extravagant. There is nothing in *Jerome Paturot* that equals it in impudence.

YOUTH AND SUMMER.

It is Summer. Day is now at its longest, the season at its brightest; and the heat comes down through the glowing heavens—broiling the sons of labour, but whitening the fields for the harvest. Like hapless Semele, consumed by the splendours of her divine lover, Earth seems about to perish beneath the ardent glances of the God of Day. The sun comes bowling from the Tropics to visit the Hyperboreans. The strange phenomenon of the Polar day—when, for six months he keeps, careering through the sky, without a single rising or setting, rolling like a fiery ball along the edge of the horizon, glittering like a thousand diamonds on the fields of ice—is now melting the snows that hide the lichens, the rein-deer's food; and, quivering down through the azure shallows of the Greenland coast, infuses the fire of love and the lust for roaming into the "scaly myriads" of the herring tribe.

On ourselves, the Summer sun is shining,

glowing—obeying in gold the declining days of July, and taking her starry jewels from the crown of Night—nay, lifting the diadem from her sable brow, and invading the skies of midnight with his lingering beams. Oh, what a glory in those evening skies! The sun, just set, brings out the summits of the far-off hills sharp and black against his amber light: Nature is dreaming; yonder sea is calm as if it had never known a storm. It is the hour of Reverie: old memories, half-forgotten poetry, come floating like dreams into the soul. We wander in thought to the lonely Greek Isle, where Juan and Haidee are roaming, with encircling arms upon the silvery sands, or gaze in love's reverie from the deserted banquet-room upon the slumbering waters of the *Ægean*. We see the mariner resting on his oars within the shadow of *Ætna*, and hear the "*Ave Sanctissima*" rising in solemn cadence from the waveless sea. We stand beneath the lovely skies of Italy—we rest on the woody slopes of the *Apennines*, where the bell of some distant convent is proclaiming sundown, and the vesper hymn floats on the rosy stillness, a vocal prayer.

"*Ave Maria!* blessed be the hour,
The time, the clime, the spot where I so oft
Have felt that moment in its fullest power
Sink o'er the earth so beautiful and soft;
While swung the deep bell in the distant tower,
And the faint dying day-hymn stole aloft;
While not a breath stole through the rosy air,
And yet the forest leaves seem'd stirr'd with prayer!"

Study is impossible in the Summer evenings—those long, clear, mellow nights, when the Evening Star hangs like a diamond lump in the amber skies of the West, and the hushed air seems waiting for serenades. The very charm of our Study is then our ruin. Whenever we lift our eyes from the page, we look clear away, as from a lofty turret, upon the ever-shifting glories of sunset, where far-off mountains form the magic horizon, and a wide arm of the sea sleeps calmly between, reflecting the skyey splendours. Our heart is not in our task. There is a vague yearning within us, for happiness more ethereal than any we have yet beheld, a happiness which the eye cannot figure, which only the soul can feel—it is the Spirit dreaming of its immortal home. Now and then we pause—the beauty without, half-unconsciously fixes upon itself our dreamy gaze.

"Oh, Summer night!
So soft and bright!"

That air, that lovely serenade of Donizetti's, seems floating in the room. A sweet voice is singing it in my ear, in my heart. Ah, those old times! I think of the hour when first I heard that strain, and of the fair creature singing it—with the twilight shadows around us, and her lip, that might have tempted an Angel, curling, half-proudly, half-kindly, as "upon entreaty" she resumed the strain. I fall into deeper reverie as I recollect it

all—those evenings of entrancement, those days of boyish pain and jealousy. And every melody comes floating in through my brain, yet without attracting my thoughts—a strain of sweetest sounds accompanying the dissolving views which are dreamily, perpetually, forming and changing, gathering and dispersing, before my mind's eye, like the rose-clouds of sunset. Those shapes are too ethereal for the mind to grasp them. Is it a Juno-like form, beneath the skies and amid the flowers of Summer—with Zephyr playing among her golden curls, as she lifts from her neck a hair-chain to yield it to the suit of love! Or is it a zigzag path on a hill-side—a steed backing on a precipice—a lovely girl on the green bank, clinging to her preserver—sinking, swooning, quivering from that vision of sudden death! Who shall daguerreotype those airy shapes? We feel their presence rather than know their form, and the instant we try to see what we are seeing, they are gone!

We are no bad risers in the morning, but we never saw the sun rise on Midsummer-day but once. It is many years ago, yet we remember it as vividly as if it had been this morning. It was from the summit of the Calton Hill, the unfinished Acropolis, the still-born ruin of Modern Athens. The whole sky in the south and west, opposite to where the sun was about to appear, was suffused from the horizon to the zenith with a deep pink or rose hue; and in the midst, spanning the heavens, stood a magnificent Rainbow! A symbol of peace in a sea of blood! There lay the palatial edifices of the New Town, white and still in the hush of early morning, and high above them and around them rose that strange emblem of mercy amid judgment. Such an apparition might fitly have filled the skies of the Cities of the Plain on that woeful morn, the last the blessed sun ever rose upon them;—ere amid mutterings in the earth and thunders in the clouds, the volcano awoke from its sleep, and the red lava poured from its sources of fire—when clouds of stones and ashes, falling, falling, gathered deeper and deeper above the Plain, and the descending lightnings set fire to the thousand founts of naphtha bubbling up from their subterranean reservoirs—when a whirlwind of flame shot up against the face of the sky, like the last blasphemy of a godless world; and with a hollow groaning, the sinking, convulsed earth hid the scene of pollution and wrath beneath the ever mournful-looking waters of the Dead Sea. The skies of night and morning are familiar to me as those of day, but never but that once did that Heavenly Spectre meet my eyes.

As I reached the northern brow of the hill, it wanted but a minute or two of sunrise; in a few seconds a new Day would dawn—a flake would separate itself from the infinite Future, and be born into the world. I stood

awaiting the Incarnation of Time. A flapping wing broke on the solemn stillness. Two rooks rose slowly from the ground, where they had been preying upon the tenants of the turf. Below me, to the east and north, spread out the waters of the Firth of Forth—not a billow breaking against its rocky islets—its broad expanse of the colour of lead, sombre and waveless, like the lifeless waters of the Asphaltite Sea; while, toiling like an imp of darkness, a small steamboat tore up its leaden-like surface, disappearing behind the house-tops of Leith. The spirits of night seemed hurrying to their dens, to escape the golden arrows of the God of Day. In the Bowery gardens below me, the birds began an overture as the curtain of the Dawn was lifting. At length the sun shot up into the sky; then seemed to pause for some time, his lower limb resting on the dark sea, his upper almost touching a bank of overhanging cloud. Pale tremulous rays, like those of the aurora borealis, darted laterally from the orb, shooting quivering along the sky, and returning: the waves of light were ebbing and flowing on the sands of Night. The sea and the slopes of the Calton still lay in the dull hues of dawn; but a strange cold sun-gleam which one felt instinctively would be short-lived, glittered around me on the crest of the hill, and on the white stone monuments that crown it as with a diadem. Foremost and loftiest rose the noble columns of the National Monument, even in their imperfection the most Grecian of British edifices, standing aloft like the ruins of Minerva's temple on the bluff Cape of Sunium, visible from afar to mariners entering the romantic Bay of the Forth. The glitter which now tinged them with gold was bright and brief as the national fervour which gave them birth. In a few minutes the sun passed up behind the bank of cloud, and nothing remained of his beams but a golden streak on the far edge of the waters.

Fair Summer has come, and the ocean wooes us. Breaking her ward, she has leapt like a lovely Bacchant to our arms; while men who have been "sighing like furnace" for her, and chiding the dull delay of her coming, now fly from her embraces into the sea—plunge into the haunts of the Nereids. In what "infernal machines" do they go a-wooing! And yet, they appear to have every confidence in their natural powers of attraction; the Nereids run no danger of being deceived as to the *physique* of their human admirers. Queer fishes some of them are, certainly! Only look at yon big fat old fellow, for all the world like a skinned porpoise, floundering and blowing in the shallows like a stranded whale! while another more modest animal, of like dimensions, floats like cork or blubber in deep water, thumping energetically with leg and arm, and hides obesity in a cataract of foam. Yonder, over

the clear blue depths, breasting at his ease the flood, goes the long steady stroke of the practised swimmer—an animal half-amphibious, seen at times afar off, lifting on the crest of a wave a mile at sea. With laugh and splutter a band of juveniles rub their heads with water in the most approved manner, as if they were a set of old tapers afraid of apoplexy; or with whoop and hollo engaged in a water combat, or in a race in bunting that resembles one of running in sacks; while a summer member of the human family paddles hastily as he clings to his pitiless wooden neck, or emerges half-suffocated from the prescriptive thrice-repeated dip. Yet there is something gladsome in the flash of the waters around the sportive bathers, and in the glancing glitter of the sun-beams on the ivory-like arms that are swaying to and fro upon the blue waters. It speaks of Summer; and that of itself awakens gladness.

As we look upon the earth in a glorious summer-day, we feel as if all nature loved us, and that a spirit within is answering to the loving call of the outer world. We feel as if *caressed* by the beauty floating around—as if the mission of nature were to delight us. And it is so. It was to be a joy for Man that this glorious world sprang out of Chaos, and it was to enjoy it that we were gifted with our many senses of beauty. How narrow the enjoyment of the body to the domain of the spirit! The possessions and enjoyments of man consist less in the acres we can win from our fellows, than in the wide universe around us. Creature-comforts are unequally divided, but the charm of existence, the joy that rays from all nature, are the property of all. Who can set a price upon the colours of the rose or the hues of sunset? Yet, would the Vernon Gallery be an adequate exchange? Water and air, prime necessities of physical life, are not more free to all, than is its best and highest food everywhere accessible to the spirit. What we want is, to rub the dust of the earth off our souls, and let them mirror the beauty of the universe. What we want is, to open the nature within to the nature without—to clear the mind from ignorance, the heart from prejudice. We must learn to see things as they are—to find beauty in nature, love in man, good everywhere; not to shut our eyes or look through a distorting medium. We scramble for the crumbs of worldly success, and too often have neglected the higher delights that are free to our taking. Like the groveller in the Pilgrim's Progress, we take amid straws on the ground, when a crown of joy is ready to descend upon us if we will only look up. We turn aside the river from its bed, and toil in the sand for golden dust, destroying happiness in the search for its symbol, and forget that the world itself may be made golden, that the art of the Alchemist may be ours. The true sunshine of life is in the heart. It is there that the smile is born that makes the light

of life, the rosy smile that makes the world of beauty, and keeps life sweet—the smile that “makes a summer where darkness else would be.”

We are in one of the pretty lanes of England. The smoke of a great city is beginning to curl up into the morning skies, but the sounds of that wakening Babylon cannot reach us in our green seclusion. As we step along lightly, cheerily, in the cool sunlight, hark to the glad voices of children; and to a cottage-home, sweeter-looking than any we have yet passed. Honeysuckles and jessamines wreath the wooden trellis of the porch with verdure and flowers. In those flowers the early bee is hanging and humming, birds are chirping aloft, and cherubs are singing below. An urchin, with his yellow curls half-blinding his big blue eyes, sits on the sunny gravel-walk, playing with a frisky, red-collared kitten. On the steps of the door, beneath the shade of the trellis-work, sit two girls, a lapful of white roses before them, which they are gathering into a bouquet, or sticking into each other's hair. What are they singing?

Come, come, come! Oh, the merry Summer morn!
From dewy slumbers braving,
Birds and flowers are waking.

Come, come, come! and leave our beds forlorn!

Hark, hark, hark! I hear our playmates call!
Hurrah! for merry rambles!
Morn is the time for gambols.

Yes, yes, yes! Let's go a-roving all!

Haste, haste, haste! To woodland dells away!

There flowers for us are springing,
And little birds are singing—

“Come, come, come! Good-morrow! come away!”

A wiseacre lately remarked, as a proof of the *sober sense* of the age, that no one now sang about the happiness of childhood! *Sombre* sense, he should have said,—if he misused the word “sense” at all. No happiness,—nay, no peculiar happiness in childhood! Does he mean to maintain that we get happier as we get older?—that life, at the age of Methuselah, is as joyous as at fifteen? Has novelty, which charms in all the details of existence, no charm in existence itself? Is suspicion—that infallible growth of years, that baneful result of knowledge of the world—no damper on happiness? Is innocence nothing? Is *ennui* known to the young? No, no!

Youth is the summer of life; it is the very heyday of joy,—the poetry of existence. Youth beholds everything through a golden medium,—through the prism of fancy, not in the glass of reason; in the rose-hue of idealism, not the naked forms that we call reality.

“All that's bright must fade,
The brightest still the fleetest!”

We have but to look around us and within us to see the sad truth exemplified. Summer is fading with its roses—Youth vanishes with its dreams. “Passing away” is written

on all things earthly. Yet "a thing of beauty is a joy for ever." We have a compensating faculty, which gives immortality to the mortal in the cells of memory; the joys of which Time has robbed us still live on in perennial youth. Nay, more, they live unmarred by the sorrows that in actual life grow up along with them. As the colours of fancy fade from the Present, they gather in brighter radiance around the Past. We conserve the roses of Summer—let us embalm the memories of Youth.

THE POWER OF SMALL BEGINNINGS.

A GRIM Lion obstructs the paths of ardent Benevolence in its desire to lessen the monster evils of society, and constantly roars "Impossible! Impossible!" Well-disposed Affluence surveys the encroaching waves of destitution and crime as they roll onwards, spreading their dark waters over the face of society, and folds its hands in powerless despair,—a despair created by a false notion of the inefficacy of individual or limited action. "Who can stem such a tide?" it exclaims; "we must have some great comprehensive system. Without that, single efforts are useless."

Upon this untrue and timid premise many a purse is closed, many a generous impulse checked. It is never remembered that all great facts, for evil or for good, are an aggregate of small details, and must be grappled with in detail. Every one who hath and to spare, has it in his power to do some good and to check some evil; and if all those to whom the ability is given were to do their part, the great "Comprehensive System" which is so much prayed for would arrange itself. The hand of Charity is nowhere so open as in this country; but is often paralysed for the want of being well directed.

Of what individual energy can accomplish in a very limited sphere, we can now afford a practical instance. What a single individual in energetic earnest has effected in the "Devil's Acre," described in a former number,* can be done by any other single individual in any other sink of vice and iniquity, in every other part of the globe.

In the spring of 1848 the attention of Mr. Walker, the Westminster Missionary of the City Mission, was called to the necessity of applying some remedy to the alarming vice and destitution that prevailed amongst a large section of a densely peopled community, whose future prospects seemed to be totally neglected. A vast mass of convicted felons, and vagrants, who had given themselves up as entirely lost to human society, and whose ambition was solely how they could attain the skill of being the most accomplished burglars, congregate upon the "Devil's Acre." Most of these degraded youths were strangers to all religious and moral impressions—destitute of

any ostensible means of obtaining an honest livelihood, and having no provision made for them when sent from prison. They had no alternative but again resorting to begging or stealing for a miserable existence; and not only they themselves being exposed to all the contaminating influences of bad example, and literally perishing for lack of knowledge, but also leading others astray—such as boys from nine to twelve years of age, whom, in a short time, they would train as slevier in vice as themselves, and make them useful in their daily avocations.

Nearly ten years' experience in visiting their haunts of misery and crime, and entering into friendly conversation with them, taught Mr. Walker that punishment acted with but little effect as a check upon criminal offenders; and it was thought more worthy of the Christian philanthropists to set on foot a system of improvement, which should change the habits and elevate the character of this degraded part of our population,—a system which should rescue them from the haunts of infamy, instil into their minds the principles of religion and morality, and train them to honest and industrious occupations. With these great objects in view, a scheme of training was commenced which has since flourished. One lad was selected from the Ragged School, fed, and lodged, as an experiment. The boy had been a thief and vagrant for several years, was driven from his home through the ill-usage of a step-grandfather: the only clothing he possessed was an old tattered coat, and part of a pair of trousers, and these one complete mass of filth. After five months' training, through the kindness of Lord Ashley, he was accepted as an emigrant to Australia. Finding he was successful, his joy and gratitude were unbounded. A short time before he embarked, he said, "If ever I should be possessed of a farm, it shall be called Lord Ashley's Farm. I shall never forget the Ragged Schools; for if it had not been for it, instead of going to Australia with a good character, I should have been sent to some other colony, loaded with chains." He has since been heard of as being in a respectable situation, conducting himself with the strictest propriety.

Being successful in reclaiming one, Mr. Walker was encouraged to select six more from the same Ragged School, varying from the age of fifteen to nineteen years; although at the time it was not known where a shilling could be obtained towards their support, he was encouraged to persevere. A small room was taken at two shillings per week; a truss of straw was purchased, and a poor woman was kind enough to give two old rugs, which was the only covering for the six. They were content to live on a small portion of bread and dripping per day, and attend the Ragged School; at last an old sack was bought for the straw, and a piece of carpet, in addition to the two rugs, to cover them. One of them

* At page 297.

was heard to say one night, while absolutely enjoying this wretched accommodation, "Now, are we not comfortable?—should we not be thankful? How many poor families there are who have not such good beds to lie on!" (One of those he addressed, aged nineteen years, had not known the comfort of such a bed for upwards of three years, having slept during that time in an empty cellar. Five of those lads are now in Australia, and the other—who had been the leader of a gang of thieves for several years—is now a consistent member and communicant in the Church, and fills a responsible situation in England.

When the experiment was in this condition, a benevolent lady not only contributed largely towards the support of the inmates, but also recommended her friends to follow her example. A larger room was taken; the lady ordered beds and bedding to be immediately purchased: the merits of the system became more publicly known; two additional rooms were taken, and ultimately the whole premises converted into a public institution, known as the Westminster Ragged Dormitory, and particularly alluded to in the article before mentioned.

Since its establishment, there have been one hundred and sixty-three applications. Seventy-six have been admitted from the streets; thirteen from various prisons, recommended by the Chaplains; twenty-three did not complete their probation; four were dismissed for misconduct; three absconded after completing their probation; five were dismissed for want of funds; two restored to their friends; two are filling situations in England; fifteen emigrated to Australia; five to the United States; and thirty are at present in the Institution.

The expense at which fifty-four young persons were thus, between April 1848 and May 1850, rescued from perdition, has been 376*l.* 16*s.* 3*d.*, which took two years to collect and disburse. More than double the number of cases presented themselves than could be admitted, and five were obliged to be hurled back into crime and want after admission, for want of funds. We mention this to show what might have been done, had Mr. Walker's efforts been seconded with anything like liberality.

As a specimen of the sort of stuff the promoters of this humble Institution had to work upon, we add the "case" of a couple of the inmates which was privately communicated to us. We shall call the boys Borley and Pole.

"R. Borley, 14 years of age, born in Kent Street, Borough; never knew his father; his mother died two years ago; she lived by hawking. Since her death he has lived by begging, sometimes got a parcel to carry at the Railway Station; also got jobs to carry baskets and hold horses at the Borough Market; when he had money, lodged in low lodging-houses, near the London Docks and

in the Min in the Borough. The most money he ever got in one day was 9*d.* He has been in the habit of attending the different markets in London. He has been weeks together without ever being in a bed; he generally slept about the markets, in passages, under arches, and in carts. He had no shirt for the last twelve months, no cap, no shoes; an old jacket and a pair of trousers were his only covering; sometimes two days without food, and when he had food, seldom anything but dry bread; sometimes in such a state of hunger, that he has been compelled to eat raw vegetables, this was the case when he took the fever; he had been lying out in the streets for some nights; he was in such a weak state that he dropped down in the streets. A gentleman lifted him up, took him to a shop and gave him some bread and cheese, afterwards took him to a magistrate, who sent him to the workhouse, where it was found the poor boy had fever, and was immediately sent to the fever hospital. When brought to Pear Street yesterday, he was not a little surprised to find the boy Pole in the school; he would not have known him but for his speech, so much had he improved in appearance. Pole had lived in the lodging-houses with him. He said he has cause to remember Pole. On one occasion he was Pole's bedfellow, they were both in a most destitute state for want of clothing; neither of them had a shirt, but of the two, Borley had the best trousers; when he rose in the morning Pole was off and had put on Borley's trousers, leaving behind him a pair that had but one leg, and that was in rags; although yesterday was their first meeting after this robbery, still it was a very happy one! They congratulated each other at the good fortune of being received into such an Institution. Borley tells me that Pole was a dreadful thief. He stole wherever he could; he brought the articles he stole to the lodging-house keepers, who bought them readily. So notorious did Pole become, that before morning he would have stolen the article he had sold or anything else, and sold it to another lodging-house keeper. Thus he went on until he could scarce get lodgings either in the Borough or Whitechapel. Since Pole has been in Pear Street, he has never shown anything but a desire to do what is right. Borley is an interesting lad, and will do well."

May 16, 1850.

One Mr. Walker, who would begin, as he did, with one wretched boy in each metropolitan district, and in each town throughout Great Britain, would do more to reduce poor's rates, county rates, police rates—to supersede "great penal experiments," and to diminish enormous judicial and penal expenditure, than all the political economists and "great system" doctors in the world. But the main thing is to begin at the cradle. It is many millions of times more hopeful to prevent, than to cure.

"Familiar in their Mouth as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 18.]

SATURDAY, JULY 27, 1850.

[PRICE 2d.]

A DETECTIVE POLICE PARTY.

IN pursuance of the intention mentioned at the close of a former paper on "The Modern Science of Thief-taking," we now proceed to endeavour to convey to our readers some faint idea of the extraordinary dexterity, patience, and ingenuity, exercised by the Detective Police. That our description may be as graphic as we can render it, and may be perfectly reliable, we will make it, so far as in us lies, a piece of plain truth. And first, we have to inform the reader how the anecdotes we are about to communicate, came to our knowledge.

We are not by any means devout believers in the Old Bow-Street Police. To say the truth, we think there was a vast amount of humbug about those worthies. Apart from many of them being men of very indifferent character, and far too much in the habit of consorting with thieves and the like, they never lost a public occasion of jobbing, and trading in mystery and making the most of themselves. Continually puffed besides by incompetent magistrates anxious to conceal their own deficiencies, and hand-in-glove with the penny-a-liners of that time, they became a sort of superstition. Although as a Preventive Police they were utterly ineffective, and as a Detective Police were very loose and uncertain in their operations, they remain with some people, a superstition to the present day.

On the other hand, the Detective Force organised since the establishment of the existing Police, is so well chosen and trained, proceeds so systematically and quietly, does its business in such a workman-like manner, and is always so calmly and steadily engaged in the service of the public, that the public really do not know enough of it, to know a tithe of its usefulness. Impressed with this conviction, and interested in the men themselves, we represented to the authorities at Scotland Yard, that we should be glad, if there were no official objection, to have some talk with the Detectives. A most obliging and ready permission being given, a certain evening was appointed with a certain Inspector for a social conference between ourselves and the Detectives, at our Office in Wellington Street, Strand, London. In consequence of

which appointment the party "came off," which we are about to describe. And we beg to repeat that, avoiding such topics as it might for obvious reasons be injurious to the public, or disagreeable to respectable individuals, to touch upon in print, our description is as exact as we can make it.

The reader will have the goodness to imagine the Sanctum Sanctorum of Household Words. Anything that best suits the reader's fancy, will best represent that magnificent chamber. We merely stipulate for a round table in the middle, with some glasses and cigars arranged upon it; and the editorial sofa elegantly hemmed in between that stately piece of furniture and the wall.

It is a sultry evening at dusk. The stones of Wellington Street are hot and gritty, and the watermen and hackney-coachmen at the Theatre opposite, are much flushed and aggravated. Carriages are constantly setting down the people who have come to Fairy-Land; and there is a mighty shouting and bellowing every now and then, deafening us for the moment, through the open windows.

Just at dusk, Inspectors Wield and Stalker are announced; but we do not undertake to warrant the orthography of any of the names here mentioned. Inspector Wield presents Inspector Stalker. Inspector Wield is a middle-aged man of a portly presence, with a large, moist, knowing eye, a husky voice, and a habit of emphasising his conversation by the aid of a scorpulent fore-finger, which is constantly in juxtaposition with his eyes or nose. Inspector Stalker is a shrewd, hard-headed Scotchman—in appearance not at all unlike a very acute, thoroughly-trained schoolmaster, from the Normal Establishment at Glasgow. Inspector Wield one might have known, perhaps, for what he is—Inspector Stalker, never.

The ceremonies of reception over, Inspectors Wield and Stalker observe that they have brought some sergeants with them. The sergeants are presented—five in number, Sergeant Dornon, Sergeant Witchem, Sergeant Mith, Sergeant Fendall, and Sergeant Straw. We have the whole Detective Force from Scotland Yard with one exception. They sit down in a semi-circle (the two Inspectors at the two ends) at a little distance from the round table, facing the editorial sofa. Every

man of them, in a glance, immediately takes an inventory of the furniture and an accurate sketch of the editorial presence. The Editor feels that any gentleman in company could take him up, if need should be, without the smallest hesitation, twenty years hence.

The whole party are in plain clothes. Sergeant Dornton, about fifty years of age, with a ruddy face and a high sun-burnt forehead, has the air of one who has been a Sergeant in the army—he might have sat to Wilkie for the Soldier in the Reading of the Will. He is famous for steadily pursuing the inductive process, and, from small beginnings, working on from clue to clue, until he bags his man. Sergeant Witchem, shorter and thicker-set, and marked with the small pox, has something of a reserved and thoughtful air, as if he were engaged in deep arithmetical calculations. He is renowned for his acquaintance with the swell mob. Sergeant Mith, a smooth-faced man with a fresh bright complexion, and a strange air of simplicity, is a dab at housebreakers. Sergeant Fendall, a light-haired, well-spoken, polite person, is a prodigious hand at pursuing private inquiries of a delicate nature. Straw, a little wiry Sergeant of meek demeanour and strong sense, would knock at a door and ask a series of questions in any mild character you chose to prescribe to him, from a charity-boy upstarts, and seem as innocent as an infant. They are, one and all, respectable-looking men; of perfectly good deportment and unusual intelligence; with nothing lounging or slinking in their manners; with an air of keen observation, and quick perception when addressed; and generally presenting in their faces, traces more or less marked of habitually leading lives of strong mental excitement. They have all good eyes; and they all can, and they all do, look full at whomsoever they speak to.

We light the cigars, and hand round the glasses (which are very temperately used indeed), and the conversation begins by a modest amateur reference on the Editorial part to the swell mob. Inspector Wield immediately removes his cigar from his lips, waves his right hand, and says, "Regarding the Swell Mob, Sir, I can't do better than call upon Sergeant Witchem. Because the reason why? I'll tell you. Sergeant Witchem is better acquainted with the Swell Mob than any officer in London."

Our heart leaping up when we beheld this rainbow in the sky, we turn to Sergeant Witchem, who very concisely, and in well-chosen language, goes into the subject forthwith. Meantime, the whole of his brother officers are closely interested in attending to what he says, and observing its effect. Presently they begin to strike in, one or two together, when an opportunity offers, and the conversation becomes general. But these brother officers only come in to the assistance of each other—not to the contradiction—and

a more amicable brotherhood there could not be. From the swell mob, we diverge to the kindred topics of cracksmen, fences, public-house dancers, area-sneaks, designing young people who go out "gonophing," and other "schools," to which our readers have already been introduced. It is observable throughout these revelations, that Inspector Stalker, the Scotchman, is always exact and statistical, and that when any question of figures arises, everybody as by one consent pauses, and looks to him.

When we have exhausted the various schools of Art—during which discussion the whole body have remained profoundly attentive, except when some unusual noise at the Theatre over the way, has induced some gentleman to glance inquiringly towards the window in that direction, behind his next neighbour's back—we burrow for information on such points as the following. Whether there really are any highway robberies in London, or whether some circumstances not convenient to be mentioned by the aggrieved party, usually precede the robberies complained of, under that head, which quite change their character? Certainly the latter, almost always. Whether in the case of robberies in houses, where servants are necessarily exposed to doubt, innocence under suspicion ever becomes so like guilt in appearance, that a good officer need be cautious how he judges it? Undoubtedly. Nothing is so common or deceptive as such appearances at first. Whether in a place of public amusement, a thief knows an officer, and an officer knows a thief,—supposing them, beforehand, strangers to each other—because each recognises in the other, under all disguise, an inattention to what is going on, and a purpose that is not the purpose of being entertained? Yes. That's the way exactly. Whether it is reasonable or ridiculous to trust to the alleged experiences of thieves as narrated by themselves, in prisons, or penitentiaries, or anywhere? In general, nothing more absurd. Lying is their habit and their trade; and they would rather lie—even if they hadn't an interest in it, and didn't want to make themselves agreeable—than tell the truth.

From these topics, we glide into a review of the most celebrated and horrible of the great crimes that have been committed within the last fifteen or twenty years. The men engaged in the discovery of almost all of them, and in the pursuit or apprehension of the murderers, are here, down to the very last instance. One of our guests gave chase to and boarded the Emigrant Ship, in which the murderers last hanged in London was supposed to have embarked. We learn from him that his errand was not announced to the passengers, who may have no idea of it to this hour. That he went below, with the captain, lamp in hand—it being dark, and the whole steering abed and seasick—and engaged the Mrs. Manning who was on board, in a

conversation about her luggage, until she was, with no small pains, induced to raise her head, and turn her face towards the light. Satisfied that she was not the object of his search, he quietly re-embarked in the Government steamer alongside, and steamed home again with the intelligence.

When we have exhausted these subjects, too, which occupy a considerable time in the discussion, two or three leave their chairs, whisper Sergeant Witechem, and resume their seats. Sergeant Witechem, leaning forward a little, and placing a hand on each of his legs, then modestly speaks as follows:

"My brother-officers wish me to relate a little account of my taking Tally-ho Thompson. A man oughtn't to tell what he has done himself; but still, as nobody was with me, and, consequently, as nobody but myself can tell it, I'll do it in the best way I can, if it should meet your approval."

We assure Sergeant Witechem that he will oblige us very much, and we all compose ourselves to listen with great interest and attention.

"Tally-ho Thompson," says Sergeant Witechem, after merely wetting his lips with his brandy-and-water, "Tally-ho Thompson was a famous horse-stealer, couper, and magnum. Thompson, in conjunction with a pal that occasionally worked with him, gammoned a countryman out of a good round sum of money, under pretence of getting him a situation—the regular old dodge—and was afterwards in the 'Hue and Cry' for a horse—a horse that he stole, down in Hertfordshire. I had to look after Thompson, and I applied myself, of course, in the first instance, to discovering where he was. Now, Thompson's wife lived, along with a little daughter, at Chelsea. Knowing that Thompson was somewhere in the country, I watched the house—especially at post-time in the morning—thinking Thompson was pretty likely to write to her. Sure enough, one morning the postman comes up, and delivers a letter at Mrs. Thompson's door. Little girl opens the door, and takes it in. 'We're not always sure of postmen, though the people at the post-offices are always very obliging. A postman may help us, or he may not,—just as it happens. However, I go across the road, and I say to the postman, after he has left the letter, 'Good morning! how are you?' 'How are you?' says he. 'You've just delivered a letter for Mrs. Thompson.' 'Yes, I have.' 'You didn't happen to remark what the post-mark was, perhaps?' 'No,' says he, 'I didn't.' 'Come,' says I, 'I'll be plain with you. I'm in a small way of business, and I have given Thompson credit, and I can't afford to lose what he owes me. I know he's got money, and I know he's in the country, and if you could tell me what the post-mark was, I should be very much obliged to you, and you'd do a service to a tradesman in a small way of business that can't afford a loss.' 'Well,' he said, 'I do assure you that I did not

observe what the post-mark was; all I know is, that there was money in the letter—I should say a sovereign.' This was enough for me, because of course I knew that Thompson having sent his wife money, it was probable she'd write to Thompson, by return of post, to acknowledge the receipt. So I said 'Thankee' to the postman, and I kept on the watch. In the afternoon I saw the little girl come out. Of course I followed her. She went into a stationer's shop, and I needn't say to you that I looked in at the window. She bought some writing-paper and envelopes, and a pen. I think to myself, 'That'll do!'—watch her home again—and don't go away, you may be sure, knowing that Mrs. Thompson was writing her letter to Tally-ho, and that the letter would be posted presently. In about an hour or so, out came the little girl again, with the letter in her hand. I went up, and said something to the child, whatever it might have been; but I couldn't see the direction of the letter, because she held it with the seal upwards. However, I observed that on the back of the letter there was what we call a kiss—a drop of wax by the side of the seal—and again, you understand, that was enough for me. I saw her post the letter, waited till she was gone, then went into the shop, and asked to see the Master. When he came out, I told him, 'Now, I'm an Officer in the Detective Force; there's a letter with a Miss Teen posted here just now, for a man that I'm in search of; and what I have to ask of you, is, that you will let me look at the direction of that letter.' He was very civil—took a lot of letters from the box in the window—shook 'em out on the counter with the faces downwards—and there among 'em was the identical letter with the kiss. It was directed, Mr. Thomas Pigeon, Post-Office, B———, to be left 'till called for. Down I went to B——— (a hundred and twenty miles or so) that night. Early next morning I went to the Post-Office; saw the gentleman in charge of that department; told him who I was; and that my object was to see, and track, the party that should come for the letter for Mr. Thomas Pigeon. He was very polite, and said, 'You shall have every assistance we can give you; you can wait inside the office; and we'll take care to let you know when anybody comes for the letter.' Well, I waited there, three days, and began to think that nobody ever would come. At last the clerk whispered to me, 'Here! Detective! Somebody's come for the letter!' 'Keep him a minute,' said I, and I ran round to the outside of the office. There I saw a young chap with the appearance of an Ostler, holding a horse by the bridle—stretching the bridle across the pavement, while he waited at the Post-Office Window for the letter. I began to pat the horse, and that; and I said to the boy, 'Why, this is Mr. Jones's Mare!' 'No, It an't.' 'No?' said I. 'She's very like Mr. Jones's Mare!' 'She an't Mr. Jones's Mare,

anyhow,' says he. 'It's Mr. So-and-So's, of the Warwick Arms.' And up he jumped, and off he went—letter and all. I got a cab, followed on the box, and was so quick after him that I came into the stable-yard of the Warwick Arms, by one gate, just as he came, in by another. I went into the bar, where there was a young woman serving, and called for a glass of brandy-and-water. He came in directly, and handed her the letter. She casually looked at it, without saying anything, and stuck it up behind the glass over the chimney-piece. What was to be done next?

"I turned it over in my mind while I drank my brandy-and-water (looking pretty sharp at the letter the while), but I couldn't see my way out of it at all. I tried to get lodgings in the house, but there had been a horse-fair, or something of that sort, and it was full. I was obliged to put up somewhere else, but I came backwards and forwards to the bar for a couple of days, and there was the letter, always behind the glass. At last I thought I'd write a letter to Mr. Pigeon myself, and see what that would do. So I wrote one, and posted it, but I purposely addressed it, Mr. John Pigeon, instead of Mr. Thomas Pigeon, to see what *that* would do. In the morning (a very wet morning it was) I watched the postman down the street, and cut into the bar, just before he reached the Warwick Arms. In he came presently with my letter. 'Is there a Mr. John Pigeon staying here?' 'No!—stop a bit though,' says the barmaid; and she took down the letter behind the glass. 'No,' says she, 'it's Thomas, and he is not staying here. Would you do me a favor, and post this for me, as it is so wet?' The postman said Yes; she folded it in another envelope, directed it, and gave it him. He put it in his hat, and away he went.

"I had no difficulty in finding out the direction of that letter. It was addressed, Mr. Thomas Pigeon, Post-Office, R—, Northamptonshire, to be left till called for. Off I started directly for R—; I said the same at the Post-Office there, as I had said at B—; and again I waited three days before anybody came. At last another chap on horseback came. 'Any letters for Mr. Thomas Pigeon?' 'Where do you come from?' 'New Inn, near R—.' He got the letter, and away he went—at a canter.

"I made my enquiries about the New Inn, near R—, and hearing it was a solitary sort of house, a little in the horse line, about a couple of miles from the station, I thought I'd go and have a look at it. I found it what it had been described, and sauntered in, to look about me. The landlady was in the bar, and I was trying to get into conversation with her; asked her how business was, and spoke about the wet weather, and so on; when I saw, through an open door, three men sitting by the fire in a sort of parlor, or kitchen; and one of those men, according to the description I had of him, was Tally-ho Thompson!

"I went and sat down among 'em, and tried to make things agreeable; but they were very shy—wouldn't talk at all—looked at me, and at one another, in a way quite the reverse of sociable. I reckoned 'em up, and finding that they were all three bigger men than me, and considering that their looks were ugly—that it was a lonely place—railroad station two miles off—and night coming on—thought I couldn't do better than have a drop of brandy-and-water to keep my courage up. So I called for my brandy-and-water; and as I was sitting drinking it by the fire, Thompson got up and went out.

"Now the difficulty of it was, that I wasn't sure it *was* Thompson, because I had never set eyes on him before; and what I had wanted was to be quite certain of him. However, there was nothing for it now, but to follow, and put a bold face upon it. I found him talking, outside in the yard, with the landlady. It turned out afterwards, that he was wanted by a Northampton officer for something else, and that, knowing that officer to be pock-marked (as I am myself), he mistook me for him. As I have observed, I found him talking to the landlady, outside. I put my hand upon his shoulder—this way—and said, 'Tally-ho Thompson, it's no use. I know you. I'm an officer from London, and I take you into custody for felony!' 'That be d—d!' says Tally-ho Thompson.

"We went back into the house, and the two friends began to cut up rough, and their looks didn't please me at all, I assure you. 'Let the man go. What are you going to do with him?' 'I'll tell you what I'm going to do with him. I'm going to take him to London to-night, as sure as I'm alive. I'm not alone here, whatever you may think. You mind your own business, and keep yourselves to yourselves. It'll be better for you, for I know you both very well.' I'd never seen or heard of 'em in all my life, but my bouncing cowed 'em a bit, and they kept off, while Thompson was making ready to go. I thought to myself, however, that they might be coming after me on the dark road, to rescue Thompson; so I said to the landlady, 'What men have you got in the house, Missis?' 'We haven't got no men here,' she says, sulkily. 'You have got an ostler, I suppose?' 'Yes, we've got an ostler.' 'Let me see him.' Presently he came, and a shaggy-headed young fellow he was. 'Now attend to me, young man,' says I; 'I'm a Detective Officer from London. This man's name is Thompson. I have taken him into custody for felony. I'm going to take him to the railroad station. I call upon you in the Queen's name to assist me; and mind you, my friend, you'll get yourself into more trouble than you know of, if you don't!' You never saw a person open his eyes so wide. 'Now, Thompson, come along!' says I. But when I took out the handcuffs, Thompson cries, 'No! None of that! I won't stand *them*! I'll go along with you quiet, but I won't

bear none of that!' 'Tally-ho Thompson,' I said, 'I'm willing to behave as a man to you, if you are willing to behave as a man to me. Give me your word that you'll come peaceably along, and I don't want to handcuff you.' 'I will,' says Thompson, 'but I'll have a glass of brandy first.' 'I don't care if I've another,' said I. 'We'll have two more,' Missis, said the friends; 'and con-found you, Constable, you'll give your man a drap, won't you?' I was agreeable to that, so we had it all round, and then my man and I took Tally-ho Thompson safe to the railroad, and I carried him to London that night. He was afterwards acquitted, on account of a defect in the evidence; and I understand he always praises me up to the skies, and says I'm one of the best of men."

This story coming to a termination amidst general applause, Inspector Wield, after a little grave smoking, fixes his eye on his host, and thus delivers himself:

"It wasn't a bad plant that of mine, on Fikey, the man accused of forging the Sou' Western Railway debentures—it was only t'other day—because the reason why? I'll tell you.

"I had information that Fikey and his brother kept a factory over yonder there," indicating any region on the Surrey side of the river, "where he bought second-hand carriages; so after I'd tried in vain to get hold of him by other means, I wrote him a letter in an assumed name, saying that I'd got a horse and shay to dispose of, and would drive down next day, that he might view the lot, and make an offer—very reasonable it was, I said—a reg'lar bargain. Straw and me then went off to a friend of mine that's in the livery and job business, and hired a turn-out for the day, a precious smart turn-out, it was—quite a slap-up thing! Down we drove, accordingly, with a friend (who's not in the Force himself); and leaving my friend in the shay near a public-house, to take care of the horse, we went to the factory, which was some little way off. In the factory, there was a number of strong fellows at work, and after reckoning 'em up, it was clear to me that it wouldn't do to try it on there. They were too many for us. We must get our man out of doors. 'Mr. Fikey at home?' 'No, he ain't.' 'Expected home soon?' 'Why, no, not soon.' 'Ah! is his brother here?' 'I'm his brother.' 'Oh! well, this is an ill-convenience, this is. I wrote him a letter yesterday, saying I'd got a little turn-out to dispose of, and I've took the trouble to bring the turn-out down, a' purpose, and now he ain't in the way.' 'No, he an't in the way. You couldn't make it convenient to call again, could you?' 'Why, no, I couldn't. I want to sell; that's the fact; and I can't put it off. Could you find him anywheres?' At first he said No, he couldn't, and then he wasn't sure about it, and then he'd go and try. So, at last he went up-stairs, where there was a sort

of loft, and presently down comes my man himself, in his shirt sleeves.

"Well," he says, 'this seems to be rayther a pressing matter of yours.' 'Yes,' I says, 'it is rayther a pressing matter, and you'll find it a bargain—dirt-cheap.' 'I ain't in partickler want of a bargain just now,' he says, 'but where is it?' 'Why,' I says, 'the turn-out's just outside. Come and look at it.' He hasn't any suspicions, and away we go. And the first thing that happens is, that the horse runs away with my friend (who knows no more of driving than a child) when he takes a little trot along the road to show his paces. You never saw such a game in your life!"

"When the bolt is over, and the turn-out has come to a standstill again, Fikey walks round and round it, as grave as a judge—me too. 'There, Sir!' I says. 'There's a neat thing!' 'It an't a bad style of thing,' he says. 'I believe you,' says I. 'And there's a horse!'—for I saw him looking at it. 'Rising eight!' I says, rubbing his fore-legs. (Bless you, there an't a man in the world knows less of horses than I do, but I'd heard my friend at the Livery Stables say he was eight year old, so I says, as knowing as possible, 'Rising Eight.') 'Rising eight, is he?' says he. 'Rising eight,' says I. 'Well,' he says, 'what do you want for it?' 'Why, the first and last figure for the whole concern is five-and-twenty pound!' 'That's very cheap!' he says, looking at me. 'An't it?' I says. 'I told you it was a bargain! Now, without any higgling and haggling about it, what I want is to sell, and that's my price. Further, I'll make it easy to you, and take half the money down, and you can do a bit of stiff* for the balance.' 'Well,' he says again, 'that's very cheap.' 'I believe you,' says I; 'get in and try it, and you'll buy it. Come! take a trial!'

"Ecod, he gets in, and we get in, and we drive along the road, to show him to one of the railway clerks that was hid in the public-house window to identify him. But the clerk was bothered, and didn't know whether it was him, or wasn't—because the reason why? I'll tell you,—on account of his having shaved his whiskers. 'It's a clever little horse,' he says, 'and trots well; and the shay runs light.' 'Not a doubt about it,' I says. 'And now, Mr. Fikey, I may as well make it all right, without wasting any more of your time. The fact is, I'm Inspector Wield, and you're my prisoner.' 'You don't mean that?' he says. 'I do, indeed.' 'Then burn my body,' says Fikey, 'if this ain't too bad!'

"Perhaps you never saw a man so knocked over with surprise. 'I hope you'll let me have my coat!' he says. 'By all means.' 'Well, then, let's drive to the factory.' 'Why, not exactly that, I think,' said I; 'I've been there, once before, to-day. Suppose we send for it.' He saw it was no go,

so he sent for it, and put it on, and he drove him up to London, comfortable."

This reminiscence is in the height of its success, when a general proposal is made to the fresh-complexioned, smooth-faced officer, with the strange air of simplicity, to tell the "Butcher's story." But we must reserve the Butcher's story, together with another, not less curious in its way, for a concluding paper.

"SWINGING THE SHIP."

A VISIT TO THE COMPASS OBSERVATORY.

THE noble ship with her floating battery of heavy guns, her hundreds of seamen, smart and brave, her powder, shot, and shell for destroying an enemy, and her tons of provender to supply her crew; with her anxious captain and aspiring lieutenants, mates, middeys, warrant officers, and her pipeclayed marines are on board. The long pennon whips the winds; the hurry, bustle, and noise of preparation has subsided into the quietude of everything in its place; when the word passes that she is "Ready for Sea."

Next morning the newspapers find just a line and a half in their naval corner for the announcement,—"Her Majesty's ship Unutterable, 120 guns, went out of harbour yesterday. After she has been swung, and had her compasses adjusted, she will sail for the Pacific."

"Swing a hundred and twenty gun ship?" says the good citizen interrogatively to himself, as he devours his coffee and his newspaper at breakfast. He pays his taxes and is proud of Britannia and the British navy, but his admiration of the nautical does not help him to a solution. "After she has been swung!" he repeats, and then more immediate affairs draw off his attention, and he leaves the Unutterable to undergo the mysterious. He turns to the debates.

Naval officers are of course more wise on the point, and some of them have more knowledge of the operation than liking for it. It's apt to spoil the paint now and then, and gives trouble, and upsets some of their arrangements. Many, it must be confessed, have more experience than science in their composition, and when they let out their true feeling, indulge, perhaps, in a half growl, in which the words "new-fangled" and "deal of trouble" might be heard. But the operation goes on nevertheless, and little doubt but the toil is forgotten and the growl repented when—far, far at sea, a murky sky shuts out the sun and the stars, and forbids heaven to tell the navigator where he is—with a waste of waters, hundreds, perhaps thousands of miles around him, he has nought but his figures and his little trembling needles of magnetised iron to guide him on his way; to direct him wide of the sunken rock and the sandy shoal as he nears the wished-for coast.

The loss of British ships by wreck has been

stated at between five and six hundred in a year—or about "a ship and a half-a-day." This terrible loss has been ascribed to many causes—to the tides and currents of the ocean; to imperfect logs; inaccurate charts; unsteady steerage; inattention to the load; stress of weather; defective ships, and defective management; but last, if not greatest, says Captain Johnson, who gives this catalogue of sources of disaster, we have the errors of the compass. These errors were noticed—now nearly a couple of centuries ago, and from those days to the present time careful mariners have often called attention to the subject. "Officers in charge of convoys during the war," continues Captain Johnson, "will probably remember the care with which the general signal was displayed at sunset, to steer a given course during the night," with what alacrity that signal was repeated by the ships of war in their stations, and answered by every merchant-vessel in the fleet; and they will also possibly remember with what surprise,—nay, indignation,—they observed when daylight came, almost the entire convoy dispersed over the ocean as far as the eye could reach, and mayhap a suspicious looking stranger or two escorting those farthest away, further astray, in despite of all the shots fired during a morning watch to recall them. That such dispersements were in part attributable to the differences of the compasses in each ship, there can be no doubt; but the greatest delinquents in this particular, in all probability, were not the merchant vessels, but rather the ships of war; the attractive power of their guns upon the compasses being now a well-known and constantly proved fact."

The Apollo frigate, and forty merchantmen of her convoy, in 1803 were wrecked together on the coast of Portugal, when they believed themselves to be two hundred miles to the westward. The error of the frigate's compasses is believed to have been the cause of the disaster; and a similar belief exists with respect to the dreadful wrecks of our line-of-battle ships on the coasts of Jutland and Holland in 1811. The wreck of the Reliance, Indiaman, on the coast of France, when one hundred and nine lives were lost, in 1842, is another painful accident ascribed to errors of the compasses induced by the presence on board of a large iron tank forty-six feet long, the attraction of which had been overlooked—for a hollow tank has a magnetic influence as great as a solid mass of the same external dimensions—and such a mass would weigh four hundred and sixty-eight tons.

These errors in the needle that guides the ship, so dangerous in their results, at last attracted official attention in England. Inquiries were extended in various directions, and it was found that "in some ships the deviation was small; in others it was large enough to cause the loss of a ship, even during a short run; whilst in others, again, from the position of some iron stanchion, bolt or bar, or stand

of arms, the error might be changed in the opposite direction ; so that the deviation in one vessel was not a guide to its amount or direction in another ; and that there was no other remedy but ascertaining the fact by direct experiment in each ship." These facts were recognised by a committee of English officers, appointed to investigate the matter, one of whom was the Captain Johnson whom we have already quoted, and of whose subsequent labours we shall have further presently to speak.

With these words of explanatory preface, let us set out on a visit to the establishment where the dangers of those aloft are sought to be lessened by scientific investigations on shore.

About two miles and a half eastwards from the Greenwich Observatory, in the picturesque parish of Charlton, and on the extreme corner of the high land that runs from Blackheath, till it juts out close upon the banks of the Thames—stands the building we are in search of. Those who may try to discover it will probably find some little difficulty in the task, for the place is unpretending in outward aspect, and is little known in the neighbourhood ; has never before been publicly described—except, perhaps, in those unread publications called Blue Books, and in the technical volume of the naval officer who has charge of this sanctum of science.

It is called the Compass Observatory ; and its locality may probably be more completely indicated by saying that it is not very distant from, though on a far higher level than that corner of the Woolwich Dockyard whence the great chimney soars up like a rival monument to that on Fish Street Hill, and where the engine that sets the Dockyard Machines in motion hums like a bee of forty-horse power. When the place is reached, those who expect to see "a public building," will be disappointed ; those who like to find that Science may abide in small and humble places, will be pleased. A long strip of newly-reclaimed land, a detached brick house, and in its rear, an octagonal wooden structure of little greater outward pretensions than a citizen's "summer house," make up the whole establishment.

Passing under the pleasant shade of two fine oak trees, and then between a collection of very promising roses, we enter the house. Once inside, we see that the spirit of order, regularity, and neatness, is there paramount. The exactitude requisite for scientific observation, gives a habit of exactness in other things. In one room we perceive a galvanic battery ready for experiments ; a disc of iron for showing a now defunct mode of steadying the vibrations of the compass ; a specimen of the mixed iron and wood braced together as they are now employed in the construction of first-class ships of the Royal Navy, like the Queen's Yacht ; and more interesting than all the rest, a copper bowl,

contrived by Arago, for stilling the irritability (so to speak) of the magnetic needle.

The French astronomer and ex-minister of the Provisional Government here claims our admiration of his scientific skill, and his work suggests the reflexion how much more pleasant the calm pursuit of nature's laws must be to such a man, than the turbulent effort to enact rules and constitutions for an impetuous and changeable people. Passing from this room to another, we find books, and charts, and maps, on which are laid down the magnetic currents over the great oceans, and amongst its instrumental relics, a magnetic needle that belonged to poor Captain Cook. It is a plain small bar of steel in a rough wooden case, but to the mariner who loves his craft and his heroes, this morsel of iron has an interest greater than the most perfect of nautical inventions—for Cook was a seaman who achieved great ends with humble means and from humble beginnings. A third room is full of compasses of all sorts, sizes, and kinds, from China, from Denmark, from France ; from the most rude and simple, to the most complex and finished. All the schemes and plans ever proposed for improving this useful invention are here preserved. Many of the contrivances have been discovered more than once. A sanguine theorist completes what to him is perfectly new. Certain that he is to be immortalised and enriched, he sets off to the Observatory with his treasure, to reveal his grand secret, and receive the anticipated reward. He is shown into the compass-room, and there,—horror of horrors,—upon the table, amidst a host of others, there is an old discarded instrument the very counterpart of his own ! It was made, and tried, and discarded, years ago.

From the main brick building we pass through another line of roses, and under a bower, boasting some fifty different varieties of that charming flower, to the wooden structure in the rear, which is, in fact, the Observatory.

This building is entirely free from iron. It is approached by stone steps ; the door has a pure copper lock, which being opened by a copper key, swings on copper hinges to admit the visitor after he has first cleared the dirt from his shoes upon a copper scraper. Nearly facing the door is a stove to keep up the temperature in cold weather. It looks black enough, and has a black funnel. When the visitor is told that Captain Johnson has his coat-buttons carefully made without any iron shank concealed under their silken cover ; and that his assistant, Mr. Brunton, repudiates buttons to his jacket altogether, and has pockets guiltless of a knife ; he is apt to turn to the stove, and hint the presence there of the forbidden metal.

"Ah, ah !" is the reply, it looks like iron sure enough ; but the fireplace, the chimney, the poker, the shovel, are all alike. Nothing

but copper, copper, pure copper. This suggests an anecdote. When the operations in this Compass Observatory were first commenced, there was found to be a small variation in the magnet. The instruments were re-adjusted; their character was investigated, their construction re-examined; other observations were made—but still the variation continued. Pockets were searched for knives; the garden looked over to see that no stray spade or rake had been left outside the building, yet near enough for mischief. Nothing could be discovered. At length the brass bolt on the window was suspected; and though brass had a good character, not being thought capable of coaxing the magnet from its truth, it was, in despair of finding any other delinquent, unscrewed from its position. No sooner was this done, than the wayward needle returned to its true position; the brass bolt was ejected in disgrace, and no morsel of the brazen metal has since been allowed to show itself within the precincts of the building sacred to the mysterious fluid that draws the iron needle to the North.

Once inside the Observatory, the first impression is one of isolation and quietude. Look up to the wooden roof, and you see two shutters, to be opened when an observation is to be made upon a star. Through the floor rise three pedestals of masonry, built solidly from the earth, and isolated from the Observatory floor, so that no vibration may be communicated to them. All three stand in a row, running north and south. The object of two of them is to support with complete steadiness and truth two instruments for determining, at any moment of time, the exact magnetic north, whilst the third pedestal holds one by one the compasses brought there to be tested. The most northern of these three narrow stone tables is, in fact, a bed of trial—a place of ordeal—whilst the other two support the instrumental judges, who are to pass sentence upon the fluttering needles brought under their unyielding gaze. The test is a severe one. It is easy, with proper means, to get the true magnetic north with a fixed instrument on shore, but to make something that shall tell it with equal truth upon the deck of a ship, as it heaves and tosses, and plunges on the sea, is a very different thing. Yet, instruments equal to such triumphs of skill are obtained, and in this place it is that their qualities are first investigated. The south pedestal has upon it a tall tube of glass, within which there hang some long fibres of untwisted silk, supporting a magnetic tube so beautifully poised, that it obeys without let or hindrance its natural tendency towards the magnetic north. This tubular magnet has at one end a glass on which a scale and figures are engraved, but so fine and small as to be with difficulty seen by the naked eye. The second pedestal supports a telescope, with which the observer looks down the tubular throat of the magnet towards this

tiny scale on the glass at its extremity. Our friends, the "spiders," have contributed some lines to the telescope, and the centre one of these crosses the exact figure showing the magnetic position at the moment.

With this figure in his mind, the telescope and the observer's eye are poised in the opposite direction, through the window of the Observatory, towards a spot some half mile to the north, called Cox's Mount; an eminence on which a wall has been raised to bear a numbered scale similar to that on the magnet—with this difference—that the one is very minute, and the other very large. To the corresponding figure on the distant wall the instrument is directed, and being thus pointed towards the true magnetic north, it is brought to bear upon the pivot of the compass—which by this time occupies a place on the top of the third pedestal to be tested. Without a complex description, and the free use of scientific terms, it would be perhaps impossible to convey a thoroughly exact conception of the steps of the whole process. Such a detail would be not only too technical, but unnecessary, here. It will be enough in general terms to say, therefore, that the indication obtained from a star, or from the instrument on the south pedestal, called the collimator, is, by means of the instrument in the centre, combined with a mark upon a distant object, and then brought down to prove the true powers of the compass placed on the third pedestal. It is a beautifully exact operation. The silence of isolation, the steadiness of stone tables and practised operators, the most beautifully constructed instruments, are combined to ensure accurate realities as a result. The tests are so varied, and so often repeated, that no error can escape, and the compass, when it leaves the building to begin its adventures afloat, commences its career with an irreproachable character as a Standard Compass of the Royal Navy—to be, on board the ship of war to which it is sent, a kind of master instrument of reference, by which ruder and cheaper compasses may be checked and regulated.

Just as the history of the stars and of the variations of the magnet is registered and posted up at the Greenwich Observatory, so is that of the compasses entered up here. Every compass that passes its examination may be said to receive its commission, and be appointed to a ship. Its number is taken; its vessel and destination are noted, and, subsequently, its length of service. On its return home from successive trips, it comes back to this place, when its character is again investigated and note made of any loss of magnetic power, of any deviations it may have exhibited, how it may have lost and how gained, and of any other circumstances showing either improvement or deterioration. Now and then one is blacklisted, but this seldom happens; the greatest loss yet noted being 30 minutes. The Standard Compasses cost, when made new,

with tripod and all complete, 25*l.* each. After they have been some years in service afloat, they are sent into hospital for overhaul and repair. This costs generally 4*l.* or 5*l.*, and they are then again as good as ever, and ready to guide another ship on her way over the mighty waters. The scientific part of the fittings of a ship of war, though of greatest value, are thus of lowest cost. A Standard Compass is, indeed, a beautiful result of human ingenuity. Generations of seamen and men of science have discussed the best form and materials, and the best mode of suspending the needle, that it may most freely and truly follow its mysterious love for the north. From the days of the old adventurers round the globe, to the date of the last voyages to the Arctic regions, successive sea captains have thought, and watched, and suggested, and the Standard Compass of the English Navy combines, it is believed, all that is best in all their thinking. After the Observatory was established, and one of its duties had been defined to be to pursue investigations on the deviation of the needle, it was thought desirable to have specimens of the instruments used in the war-ships of other naval nations. With the open liberality that unites in brotherhood the scientific men of all countries, France and Denmark sent specimens of what their best men had succeeded in perfecting for the use of their navies. These instruments are very good, and attract deserved attention in the observatory-collection of specimens. The Frenchman is scientific, simple, and with an excellent contrivance for a moveable agate plane to avoid friction in the motion of the needle. The Dane is a good substantial instrument, even more excellently finished than the compasses issued to our navy.

The English Compass is, however, believed with good reason to be the best yet contrived. It has grown up to its present excellence by slow degrees. Human ingenuity has been taxed to its utmost, and it has passed to its present perfection through the various trials of needles of all sorts of shapes swung in all sorts of ways, and by springs, and floating cards, modifying the instrument to the varying conditions of a small boat tossing on waves, or a line of battle ship jarring under the recoil of a broadside. And now we find our Compass-needle made of iron that, being got from the Swedish mines, has travelled to Strasbourg to be prepared for clock springs; thence to Paris, to be still more highly wrought by the watchmaker; and then to London, to take its sea-going shape. Four bars of this choice metal, or of shear-steel of equally fine quality, are ranged edgewise under a card, thickened and stiffened yet kept transparent by a sheet of mica, brought from the Russian mines; this card moves upon a point made of a metal harder than steel, and incapable of corrosion; and which sometimes, under the name of Iridium, but more correctly under that of "native alloy,"

is found by the refiners as they smelt the platinum and silver gained from the Ural Mountains or the mines of Spain. The Iridium or alloy comes to the workshop in the tiniest of glass bottles—bottles as small round as a goose-quill, and about an inch long—in morsels not much bigger than a pin's head, and weighing each less than half a grain. Some of these prove too soft, some too spongy, some too brittle, but at last one is found hard and good, and it is soldered upon the pivot, that, when sharpened and polished, is to work upon a cap, formed of a ruby, brought from the East. A bowl of the metal suggested by the French philosopher being prepared, from the produce of the mines of Cornwall; and the science of the English philosopher, and the skill of the English workman, having brought all these things into their proper shape and places; we have, as the result, the Standard Compass, whose fitness to guide her Majesty's ship the Unutterable, we have just seen tested by Captain Johnson at the Woolwich Compass Observatory.

Our favourite newspaper has just stated that that gallant ship "is now at Greenhithe waiting to have her compasses adjusted." So, then, the instruments so accurate at the Observatory a few days ago, are all wrong again on shipboard. Just so. The moment they get to their places afloat, their fidelity to the north wavers,—in one ship more, in another less; but in all in a greater or smaller degree in proportion to the quantity of iron used in the construction of the vessel, and the nearness of that metal to the compasses; in proportion to the number of the iron guns and the total weight of metal carried; to the length of the funnel in steamships, and to the condition of that funnel whether upright or haddled down. All this is both new and strange enough. We have learnt already what loss of ships convoyed and ships wrecked has arisen from these deviations: deviations long neglected on board all vessels and to this hour unrecognised or unattended to in our mercantile marine! Since the Royal Navy, however, has a scientific officer, Captain Johnson, especially employed in attending to the important duty of adjusting the compasses: let us go with him and his assistant, Mr. Brunton, from the Compass Observatory to the anchorage at Greenhithe, and see how he will "swing" the gallant line of battle ship, the Unutterable.

The trip occupies a very short time, for we have steam at command. Arrived in the Reach, we find five floating buoys anchored in the stream, one forming a centre, and four being disposed at equal distances about it, just as the five pips are placed upon a card—say the five of spades. The good ship to be operated upon is already fast by the head to the centre buoy, and Captain Johnson having mounted her deck, and his assistant, Mr.

Brunton, having been rowed ashore, a rope is run out from the ship's stern and made fast to one of the corner buoys. The Standard Compass being fixed in the proper position which it is to occupy in the ship, neither too high nor too low, and the guns and other iron being round about it, as they are to remain during the voyage, the mooring ropes are adjusted, and the ship's head is put due north. Meanwhile, Mr. Brunton has set up a compass ashore, and all being ready, Captain Johnson, at a given moment, observes the bearing of a distant object—the Tower at Shooter's Hill—noting the bearing of the needle on board. At that instant the pennant that floated at the mast-head is hauled down from the truck. This being the concerted signal, at the same second of time the assistant ashore observed the needle of his compass. The two instruments vary, and the deviation of that on board, compared with that ashore, is due to the iron of the ship. The stern ropes are hauled from one buoy to another, and again made fast, the ship's head now pointing in another direction. The observations and the signals are repeated. Each deviation of the ship's compass is carefully noted upon a card previously prepared for the purpose. The ship's stern is then hauled round to the third outside buoy, and the compasses being again examined, she is next hauled round to the fourth buoy. Her head by this time has been north, east, south, west; on each point the deviations of her compasses have been tested, noted, and the card shows their character and proper adjustment. *The ship has been swung.* Science has done its best for her, and the word is given to heave anchor, for she is now truly "Ready for Sea."

AN EXPLORING ADVENTURE.

THE Litany of a Bushman on the Borders might well run, "From native dogs, from scabby sheep, from blacks, from droughts, from governors' proclamations, good Lord, deliver us."

The droughts come in their appointed season, and the day will be, when wells and tanks and aqueducts will redeem many a part from the curse of perigical barrenness: the blacks soon tame or fade before the white man's face; unfortunately the "seat of the native dogs, and home-bred or town-bred governing crochets are more plentiful in long settled than new found countries. At any rate, I have experienced them all, and now give the following passage of my life for the benefit of the gentlemen "who live at home at ease," hatching theories for our good—Heaven help their silliness!

I had been two years comfortably settled with a nice lot of cattle and sheep, part my own, part on "thirds," when the people south of me began to complain of drought. I had enough feed and water; the question was, whether it would last.

I called my bullock-driver, Bald-faced Dick, into consultation. He was laid up at the time with a broken leg. Dick strongly advised looking for a new station "to the northward."

The sheep would do for months, but he thought we were overstocked with cattle. I had a good deal of confidence in Dick's judgment; for he was a "first fletcher," that is, came over with Governor Phillips in the first fleet; had seen everything in the colony, both good and bad; had, it was whispered, in early years fled from a flogging master, and lived, some said, with the blacks; others averred with a party of Gully-rakers (cattle-stealers): he swore horribly, was dangerous when he had drunk too much rum, but was a thorough Bushman; by the stars, or by sun, and the fall of the land, could find his way anywhere by day or night, understood all kinds of stock, and could make bullocks understand him. He knew every roving character in the colony, the quality of every station, and more about the far interior than he chose to tell to every one. With all his coarseness, he was generous and good-natured, and when well paid, and fairly and strictly treated, stood upon "Bush honour," and could be thoroughly depended on.

Having had an opportunity of serving him in a rather serious matter previous to his entering my service, I was pretty sure of his best advice.

The end of it was, for a promise of five pounds he obtained from a friend of his a description of a country hitherto unsettled, and first-rate for cattle. These men, who can neither read nor write, have often a talent for description, which is astonishing.

Having heard a minute detail of the "pack," and studied a sort of map drawn on the lid of a tea-chest with a burned stick, I decided on exploring with my overseer, Jem Carden, and, if successful, returning for the cattle and drags, all loaded for founding a station.

We only took our guns and tomahawks, with tea, sugar, a salt tongue, and small damper ready baked, being determined to make long marches, starting early, camping at mid day, and marching again in the evening as long as it was light.

Our first stage was only twenty-five miles to young Marson's cattle-station. Marson was a cadet, of a noble family, and having been too fast at home and in India as a cavalry subaltern, had been sent out with a fair capital to Australia, under the idea that a fortune was to be had for asking, and no means of expense open in the Bush. What money he did not leave in the bars and billiard-rooms of Sydney, he invested in a herd of six hundred cattle; to look after these, he had four men, whom he engaged, one because he could fight, another because he could sing, and all because they flattered him. With these fellows he lived upon terms of perfect equality, with a

keg of rum continually on the tap. Then, for want of better society, he made his hut the rendezvous of a tribe of tame blacks:

We found him sitting on the floor in a pair of trowsers and ragged shirt, unwashed, uncombed, pale-faced and red-eyed, surrounded by half-a-dozen black gins (his sultanas), a lot of dogs, poultry, a tame kangaroo, and two of his men. The floor was littered with quart pots, lumps of fat, and damper outside the hut; the relations of the black ladies had made a fire, and were cooking a piece of a fine young heifer. What with the jabbering of the gins, the singing and swearing of the men, and the yelping of the dogs, it was no place for a quiet meal, so we only stayed long enough to drink a pot of tea, so as not to offend, and passed on to camp an hour under the shade of a thicket near the river.

Marson having, with the assistance of his black friends, consumed all his stock, has returned home; and, I hear, asserts everywhere that Australia is not a country a gentleman can live in.

Our course next, after crossing the dividing range, lay over a very flat country, all burned up as far as the eye could reach,—a perfect desert of sand. The chain of pools which formed the river after rain, were nearly choked up by the putrifying carcases of cattle, smothered in fighting for water. The air was poisonous; the horses sank fetlock-deep at every stride; the blazing sun was reflected back from the hot sand with an intensity that almost blinded our half-shut eyes. After three hours of this misery, we struck into a better country, and soon after came up to the camp of a squatter, who had been forced forward by the drought. He had marked out about twenty miles along the river for his run,—a pretty good slice, I thought, when, before turning back, he said, "That is all I want." It was no business of ours, as we had views further a-field. For three days we pushed on, making from thirty to forty miles a day, without seeing anything exactly to our mind. We rode over arid plains, dotted with scrubby brushwood, then up precipitous hills; now leaping, now clambering down and up, and now riding round to avoid dry gullies and ravines; passing occasionally breaks of green pasture, but insufficiently watered for my purpose. Sometimes our way lay along mountain sides, sometimes in the dry bed of a torrent. Sometimes huge boulders interrupted our course, sometimes the gigantic trunks of fallen trees. More than once we had to steer through a forest of the monotonous, shadeless gum, with its lofty, dazzlingly white trunks festooned with the brown, curly bark of the previous year, and its parasol-like but shadeless branches, where crimson, green, and snowy parrot tribes shrieked and whistled among the evergreen leaves. It is impossible to conceive anything more gorgeous than these birds as they fluttered in the sun; but I confess that, "on serious thoughts

intent," during this journey, they were more often associated with my ideas of supper than anything else.

The evening of the third day, we found ourselves obliged to camp down with a scanty supply of brackish water, and no signs of any living thing. The next day was worse; a land of silence and desolation, where it seemed as if mountains had been crumbled up and scattered about in hills and lumps. The dry earth cracked and yawned in all directions. Failing to find water, we camped down, parched, weary, silent, but not despairing.

The next morning the horses were gone. I cannot find words to describe what we suffered in the subsequent twelve hours. I had walked until my feet were one mass of blisters, and was ready to lie down and die ten times in the day; but somehow I found strength to walk, always chewing a bullet. At length, at nightfall, we found our horses; and, nearly at the same time, to crown our delight—water. At the sight of this, we both involuntarily sank down on our knees to return thanks for life saved.

The next morning, after a scanty breakfast, we set to work, and by dint of cutting away with axe and jack-knife, at the expense of clothes and skin, through a brigalow scrub for half a mile, found our way into a gap through which our track lay, and which we had missed. It led straight to the dividing range.

After crossing five miles from the foot of the range, through a barren tract, our eyes and hearts were suddenly rejoiced by the sight of the wished-for land.

A plain, covered with fine green barley-grass, as high as our horses' heads, and sprinkled over with the myal shrub, which cattle and sheep will eat and thrive on, even without grass. Such was the delicious prospect before us. A flood had evidently but lately subsided, for lagoons full of water were scattered all about; a river running at the rate of five miles an hour, serpentine as the eye could see, from which the water flew fluted up as we passed; the eagle hawks were sweeping along after flocks of quail, and mobs of kangaroos hopping about like huge rabbits. There was not a sign of horn or hoof anywhere, but it was evident the aborigines were numerous, for there were paths worn down where they had been in the habit of travelling, from one angle of the river to another; we could trace their footmarks and of all sizes, and thereupon we unslung our guns and looked at the priming. Altogether I thought I had discovered the finest place for a cattle-station in the colony; I found out afterwards that the first appearance of a new country before it has been stocked is not to be depended on.

We formed a camp in an angle of the river, so as to have protection on three sides, ventured, in spite of the danger, to light a fire and cook some game. Oh, how delicious was that meal! As I lay near the river's

edge, peeping through the tall grass; I saw the horrid emus, that rare and soot to be extinct bird, come down the slopes on the opposite side to drink in numbers; a sure sign that white men were as yet strangers to these plains.

We spent some days in examination, and during the exploration met with adventures with the aborigines, I will not now relate. Having marked a station with my initials, and in returning made out a route practicable for drays, by which I afterwards made my way with a large herd of cattle, although not without enduring more than I could tell in a few lines.

Our horses having picked up their flesh in a fortnight's spell on the green plains, we got back at a rattling pace, but, before arriving home, met with an adventure I shall not soon forget. It was at the first station we reached after crossing the "barrens" that divided our newly discovered country. A hut had just been built for the Stockman, a big strong Irishman, more than six feet high, a regular specimen of a Tipperary chicken. He had been entertaining us with characteristic hospitality; and we were smoking our pipes round the fire, when the hut-keeper rushed in without his hat, crying—

"Tom! Tom! the blacks are coming down on us, all armed, as hard as they can run. Shut the door! for Heaven's sake shut the door!" Tom banged it to, and put his shoulder against it, while the keeper was pulling up the bar, and Carden and I were getting the lock-cases off our fire-arms. Unfortunately the door was made roughly of green wood, and had shrunk, leaving gaps between the slabs.

In the mean time about thirty blacks hurled a volley of spears that made the walls ring again; and then advancing boldly up, one of them thrust a double-jagged spear through the door, slap into Tom's throat. My back was turned towards him, being busy putting a fresh cap on my carbine. I heard his cry, and, turning, saw him fall into the arms of the hut-keeper. I thrust the barrel of my piece through a hole against a black devil, and fired at the same moment that my man did. The two dropped; the rest retreated, but turned back, and caught up their dead friends. Carden flung open the door again, and gave them the contents of his other barrel. My black put the hut-keeper's musket into my hand; I gave them a charge of buck-shot. Three more fell, and the rest, dropping their friends, disappeared across the river. All this was the work of a moment. We then turned our attention to the stock-keeper. The spear had entered at the chin, and come out on the other side three or four inches. There was not a great flow of blood, but he was evidently bleeding inwardly. He was perfectly collected, and said he was quite sure he should die.

We cut the end of the spear short off, but

did not dare to take it out. The hut-keeper got on a horse, leading another, and rode for a doctor who lived one hundred and fifty miles off; he never stopped except to give the horses a feed two or three times in the whole distance, but when he reached his journey's end, the doctor was out. In the mean time poor Tom made his will, disposing of a few head of cattle, mare and foal, and also signed a sort of dying testament to the effect that he had never wronged any of the blacks in any way. The weather was very hot, mortification came on, and he died in agony two days after receiving his wound.

The outrage was reported to the Commissioner, but no notice was taken of it although we were paying a tax for Border Police at the time.

Not many years have elapsed since we fought for our lives—since I read the burial service over the poor murdered Stockman. A handsome verandah'd villa now stands in the place of the slab hut; yellow corn waves over the Irishman's grave, and while cattle and sheep abound, as well white men, women, and children, there is not a wild black within two hundred miles.

THE BIRTH OF MORNING.

PURE, calm, diffused, the twilight of the morn
Is in the glen, among the dewy leaves.
Its gentle radiance, more heavenly-born
Than the half-loving sunbeam, never grieves
A nook, unvisited. This Earth receives
The light which makes no shade, as the caress
Of God on his creation, and upheaves
Her soft face, innocent with peace, to bless,
Babe-like, his watchful eye with waking tenderness.

A gate admits us to the Hill we seek;
Through woods a track upon the turf we find;
The trees are dripping dew, their tall stems creak
And rub together when the morning wind
Lightly caresses them. We pause to mind
The note of one awakened bird, whose cry,
Quaint and repeated, is not like its kind.
Our ears are ignorant. Now up the high
And mossy slope we climb, beneath an open sky.

We reach the summit. Earth is in a dream
Of misty seas, and islands strangely born—
The unreal, from reality. The stream
Of wraith-like sights which, ere he can be torn
From peaceful sleep, delights the travel-worn
At slumber's painted gate, is not more wild
Than the imagining of Earth when Morn
Bids her awaken. So a dreaming child
Looks through white angel wings, and sees all
undefiled.

The blessed dream-land fancy of the young,
More truthful than the reasoning of age,
Is like this vision of the morning, sprung
Of earth and air. These lines upon the page
Of Nature have life in them. They assuage
The fevers of the world, they are the dew
Of calm,—and God is calm. How mortals wage
Their wars of weakness Light reveals to view;
Reason fights through the false, but Fancy feels
the true.

AN EXCELLENT OPPORTUNITY.

IN one of the dirtiest and most gloomy streets leading to the Rue Saint Denis, in Paris there stands a tall and ancient house, the lower portion of which is a large mercer's shop. This establishment is held to be one of the very best in the neighbourhood, and has for many years belonged to an individual on whom we will bestow the name of Ramin.

About ten years ago, Monsieur Ramin was a jovial red-faced man of forty, who joked his customers into purchasing his goods, flattered the pretty *grisettes* outrageously, and now and then gave them a Sunday treat at the barrier, as the cheapest way of securing their custom. Some people thought him a careless, good-natured fellow, and wondered how, with his off-hand ways, he contrived to make money so fast, but those who knew him well saw that he was one of those who "never lost an opportunity." Others declared that Monsieur Ramin's own definition of his character was, that he was a "*bon enfant*," and that "it was all luck." He shrugged his shoulders and laughed when people hinted at his deep scheming in making, and his skill in taking advantage of Excellent Opportunities.

He was sitting in his gloomy parlour one fine morning in Spring, breakfasting from a dark liquid honoured with the name of onion soup, glancing at the newspaper, and keeping a vigilant look on the shop through the open door, when his old servant Catherine suddenly observed:

"I suppose you know Monsieur Bonelle has come to live in the vacant apartment on the fourth floor?"

"What!" exclaimed Monsieur Ramin in a loud key.

Catherine repeated her statement, to which her master listened in total silence.

"Well!" he said, at length, in his most careless tones; "what about the old fellow?" and he once more resumed his triple occupation of reading, eating, and watching.

"Why," continued Catherine, "they say he is nearly dying, and that his housekeeper, Marguerite, vowed he could never get up stairs alive. It took two men to carry him up; and when he was at length quiet in bed, Marguerite went down to the porter's lodge and sobbed there a whole hour, saying, 'Her poor master, had the gout, the rheumatics, and a bad asthma; that though he had been got up stairs, he would never come down again alive; that if she could only get him to confess his sins and make his will, she would not mind it so much; but that when she spoke of the lawyer or the priest, he blasphemed at her like a heathen, and declared he would live to bury her and every body else.'"

Monsieur Ramin heard Catherine with great attention, forgot to finish his soup, and remained for five minutes in profound rumi-

nation, without so much as perceiving two customers who had entered the shop and were waiting to be served. When aroused, he was heard to exclaim:

"What an excellent opportunity!"

Monsieur Bonelle had been Ramin's predecessor. The succession of the latter to the shop was a mystery. No one ever knew how it was that this young and poor assistant managed to replace his patron. Some said that he had detected Monsieur Bonelle in frauds which he threatened to expose, unless the business were given up to him as the price of his silence; others averred that, having drawn a prize in the lottery, he had resolved to set up a fierce opposition over the way, and that Monsieur Bonelle, having obtained a hint of his intentions, had thought it most prudent to accept the trifling sum his clerk offered, and avoid a ruinous competition. Some charitable souls—moved no doubt, by Monsieur Bonelle's misfortune—endeavoured to console and pump him; but all they could get from him was the bitter exclamation, "To think I should have been duped by him!" For Ramin had the art, though then a mere youth, to pass himself off on his master as an innocent provincial lad. Those who sought an explanation from the new mercer, were still more unsuccessful. "My good old master," he said, in his jovial way, "felt in need of repose, and so I obligingly relieved him of all business and botheration."

Years passed away; Ramin prospered, and neither thought nor heard of his "good old master." The house, of which he tenanted the lower portion, was offered for sale; he had long coveted it, and had almost concluded an agreement with the actual owner, when Monsieur Bonelle unexpectedly stepped in at the eleventh hour, and by offering a trifle more secured the bargain. The rage and mortification of Monsieur Ramin were extreme. He could not understand how Bonelle, whom he had thought ruined, had scraped up so large a sum; his lease was out, and he now felt himself at the mercy of the man he had so much injured. But either Monsieur Bonelle was free from vindictive feelings, or those feelings did not blind him to the expediency of keeping a good tenant; for though he raised the rent, until Monsieur Ramin groaned inwardly, he did not refuse to renew the lease. They had met at that period; but never since.

"Well, Catherine," observed Monsieur Ramin to his old servant, on the following morning, "How is that good Monsieur Bonelle getting on?"

"I dare say you feel very uneasy about him," she replied with a sneer.

Monsieur Ramin looked up and frowned.

"Catherine," said he, dryly, "you will have the goodness, in the first place, not to make impertinent remarks; in the second place, you will oblige me by going up stairs to

inquire after the health of Monsieur Bonelle, and say that I sent you."

Catherine grumbled, and obeyed. Her master was in the shop, when she returned in a few minutes, and delivered with evident satisfaction the following gracious message:

"Monsieur Bonelle desires his compliments to you, and declines to state how he is; he will also thank you to attend to your own shop, and not to trouble yourself about his health."

"How does he look?" asked Monsieur Ramin with perfect composure.

"I caught a glimpse of him, and he appears to me to be rapidly preparing for the good offices of the undertaker."

Monsieur Ramin smiled, rubbed his hands, and joked merrily with a dark-eyed grisette, who was cheapening some ribbon for her cap. That girl made an excellent bargain that day.

Towards dusk the mercer left the shop to the care of his attendant, and softly stole up to the fourth story. In answer to his gentle ring, a little old woman opened the door, and, giving him a rapid look, said briefly,

"Monsieur is inexorable; he won't see any doctor whatever."

She was going to shut the door in his face, when Ramin quickly interposed, under his breath, with "I am not a doctor."

She looked at him from head to foot.

"Are you a lawyer?"

"Nothing of the sort, my good lady."

"Well then, are you a priest?"

"I may almost say, quite the reverse."

"Indeed you must go away, Master sees no one."

Once more she would have shut the door; but Ramin prevented her.

"My good lady," said he in his most insinuating tones, "it is true I am neither a lawyer, a doctor, nor a priest. I am an old friend, a very old friend of your excellent master; I have come to see good Monsieur Bonelle in his present affliction."

Marguerite did not answer, but allowed him to enter, and closed the door behind him. He was going to pass from the narrow and gloomy ante-chamber into an inner room—whence now proceeded a sound of loud coughing—when the old woman laid her hand on his arm, and raising herself on tiptoe, to reach his ear whispered:

"For Heaven's sake, Sir, since you are his friend, do talk to him; do tell him to make his will, and hint something about a soul to be saved, and all that sort of thing: do, Sir!"

Monsieur Ramin nodded and winked in a way that said "I will." He proved however his prudence by not speaking aloud; for a voice from within sharply exclaimed,

"Marguerite, you are talking to some one. Marguerite, I will see neither doctor nor lawyer; and if any meddling priest dare—"

"It is only an old friend, Sir," interrupted Marguerite, opening the inner door.

Her master, on looking up, perceived the

red face of Monsieur Ramin peeping over the old woman's shoulder, and irefully cried out,

"How dare you bring that fellow here? And you, Sir, how dare you come?"

"My good old friend, there are feelings," said Ramin, spreading his fingers over the left pocket of his waistcoat—"there are feelings," he repeated, "that cannot be subdued. One such feeling brought me here. The fact is, I am a good-natured easy fellow, and I never bear malice. I never forget an old friend, but love to forget old differences when I find one party in affliction."

He drew a chair forward as he spoke, and composedly seated himself opposite to his late master.

Monsieur Bonelle was a thin old man with a pale sharp face and keen features. At first he eyed his visitor from the depths of his vast arm-chair; but, as if not satisfied with this distant view, he bent forward, and laying both hands on his thin knees, he looked up into Ramin's face with a fixed and piercing gaze. He had not, however, the power of disconcerting his guest.

"What did you come here for?" he at length asked.

"Merely to have the extreme satisfaction of seeing how you are, my good old friend. Nothing more."

"Well, look at me—and then go."

"Nothing could be so discouraging: but this was an Excellent Opportunity, and when Monsieur Ramin had an excellent opportunity in view, his pertinacity was invincible. Being now resolved to stay, it was not in Monsieur Bonelle's power to banish him. At the same time, he had tact enough to render his presence agreeable. He knew that his coarse and boisterous wit had often delighted Monsieur Bonelle of old, and he now exerted himself so successfully as to betray the old man two or three times into hearty laughter.

"Ramin," said he, at length, laying his thin hand on the arm of his guest, and peering with his keen glance into the mercer's purple face, "you are a funny fellow, but I know you; you cannot make me believe you have called just to see how I am, and to amuse me. Come, be candid for once; what do you want?"

Ramin threw himself back in his chair, and laughed blandly, as much as to say, "Can you suspect me?"

"I have no shop now out of which you can wheedle me," continued the old man; "and surely you are not such a fool as to come to me for money."

"Money?" repeated the draper, as if his host had mentioned something he never dreamt of. "Oh, no!"

Ramin saw it would not do to broach the subject he had really come about, too abruptly, now that suspicion seemed so wide awake—the opportunity had not arrived.

"There is something up, Ramin, I know;

I see it in the twinkle of your eye: but you can't deceive me again."

"Deceive *you*?" said the jolly schemer, shaking his head reverentially. "Deceive a man of your penetration and depth? Impossible! The bare supposition is flattery. My dear friend," he continued, soothingly, "I did not dream of such a thing. The fact is, Bonelle, though they call me a jovial, careless, rattling dog, I have a conscience; and, somehow, I have never felt quite easy about the way in which I became your successor down-stairs. It was rather sharp practice, I admit."

Bonelle seemed to relent.

"Now for it," said the Opportunity-hunter to himself.—"By-the-by," (speaking aloud,) "this house must be a great trouble to you in your present weak state? Two of your lodgers have lately gone away without paying—a great nuisance, especially to an invalid."

"I tell you I'm as sound as a colt."

"At all events, the whole concern must be a great bother to you. If I were you, I would sell the house."

"And if I were *you*," returned the landlord, dryly, "I would buy it —"

"Precisely," interrupted the tenant, eagerly.

"That is, if you could get it. Phoo! I knew you were after something. Will you give eighty thousand francs for it?" abruptly asked Monsieur Bonelle.

"Eighty thousand francs!" echoed Ramin.

"Do you take me for Louis Philippe or the Bank of France?"

"Then, we'll say no more about it—are you not afraid of leaving your shop so long?"

Ramin returned to the charge, heedless of the hint to depart. "The fact is, my good old friend, ready money is not my strong point just now. But if you wish very much to be relieved of the concern, what say you to a life annuity? I could manage that."

Monsieur Bonelle gave a short, dry, church-yard cough, and looked as if his life were not worth an hour's purchase. "You think yourself immensely clever, I dare say," he said. "They have persuaded you that I am dying. Stuff! I shall bury you yet."

The mercer glanced at the thin fragile frame, and exclaimed to himself, "Deluded old gentleman!" "My dear Bonelle," he continued, aloud, "I know well the strength of your admirable constitution; but allow me to observe that you neglect yourself too much. Now, suppose a good sensible doctor—"

"Will you pay him?" interrogated Bonelle sharply.

"Most willingly," replied Ramin, with an eagerness that made the old man smile. "As to the annuity, since the subject annoys you, we will talk of it some other time."

"After you have heard the doctor's report," sneered Bonelle.

The mercer gave him a stealthy glance, which the old man's keen look immediately detected. Neither could repress a smile:

these good souls understood one another perfectly, and Ramin saw that this was not the Excellent Opportunity he desired, and departed.

The next day Ramin sent a neighbouring medical man, and heard it was his opinion that if Bonelle held out for three months longer, it would be a miracle. Delightful news!

Several days elapsed, and although very anxious, Ramin assumed a careless air, and did not call upon his landlord, or take any notice of him. At the end of the week old Marguerite entered the shop to make a trifling purchase.

"And how are we getting on up-stairs?" negligently asked Monsieur Ramin.

"Worse and worse, my good Sir," she sighed. "We have rheumatic pains, which make us often use expressions the reverse of Christian-like, and yet nothing can induce us to see either the lawyer or the priest; the gout is getting nearer to our stomach every day, and still we go on talking about the strength of our constitution. Oh, Sir, if you have any influence with us, do, pray do, tell us how wicked it is to die without making one's will or confessing one's sins."

"I shall go up this very evening," ambiguously replied Monsieur Ramin.

He kept his promise, and found Monsieur Bonelle in bed, groaning with pain, and in the worst of temper.

"What poisoning doctor did you send?" he asked, with an irritable glance; "I want no doctor, I am not ill; I will not follow his prescription; he forbade me to eat; I *will* eat."

"He is a very clever man," said the visitor. "He told me that never in the whole course of his experience has he met with what he called so much 'resisting power' as exists in your frame. He asked me if you were not of a long-lived race."

"That is as people may judge," replied Monsieur Bonelle. "All I can say is, that my grandfather died at ninety, and my father at eighty-six."

"The doctor owned that you had a wonderfully strong constitution."

"Who said I hadn't?" exclaimed the invalid feebly.

"You may rely on it, you would preserve your health better if you had not the trouble of these vexatious lodgers. Have you thought about the life annuity?" said Ramin as carelessly as he could, considering how near the matter was to his hopes and wishes.

"Why, I have scruples," returned Bonelle, coughing. "I do not wish to take you in. My longevity would be the ruin of you."

"To meet that difficulty," quickly replied the mercer, "we can reduce the interest."

"But I must have high interest," placidly returned Monsieur Bonelle.

Ramin, on hearing this, burst into a loud fit of laughter, called Monsieur Bonelle a sly old fox, gave him a poke in the ribs, which made the old man cough for five minutes, and

then proposed that they should talk it over some other day. The mercer left Monsieur Bonelle in the act of protesting that he felt as strong as a man of forty.

Monsieur Ramin felt in no hurry to conclude the proposed agreement. "The later one begins to pay, the better," he said, as he descended the stairs.

Days passed on, and the negotiation made no way. It struck the observant tradesman that all was not right. Old Marguerite several times refused to admit him, declaring her master was asleep: there was something mysterious and forbidding in her manner that seemed to Monsieur Ramin very ominous. At length a sudden thought occurred to him: the housekeeper—wishing to become her master's heir—had heard his scheme and opposed it. On the very day that he arrived at this conclusion, he met a lawyer, with whom he had formerly had some transactions, coming down the staircase. The sight sent a chill through the mercer's commercial heart, and a presentiment—one of those presentiments that seldom deceive—told him it was too late. He had, however, the fortitude to abstain from visiting Monsieur Bonelle until evening came; when he went up, resolved to see him in spite of all Marguerite might urge. The door was half-open, and the old housekeeper stood talking on the landing to a middle-aged man in a dark cassock.

"It is all over! The old witch has got the priests at him," thought Ramin, inwardly groaning at his own folly in allowing himself to be forestalled.

"You cannot see Monsieur to-night," sharply said Marguerite, as he attempted to pass her.

"Alas! is my excellent friend so very ill?" asked Ramin, in a mournful tone.

"Sir," eagerly said the clergyman, catching him by the button of his coat, "if you are indeed the friend of that unhappy man, do seek to bring him into a more suitable frame of mind. I have seen many dying men, but never so much obstinacy, never such infatuated belief in the duration of life."

"Then you think he really is dying?" asked Ramin; and, in spite of the melancholy accent he endeavoured to assume, there was something so peculiar in his tone, that the priest looked at him very fixedly as he slowly replied,

"Yes, Sir, I think he is."

"Ah!" was all Monsieur Ramin said; and as the clergyman had now relaxed his hold of the button, Ramin passed in spite of the remonstrances of Marguerite, who rushed after the priest. He found Monsieur Bonelle still in bed and in a towering rage.

"Oh! Ramin, my friend," he groaned, "never take a housekeeper, and never let her know you have any property. They are harpies, Ramin,—harpies! such a day as I have had; first, the lawyer, who comes to write down my last testamentary dispo-

sitions, as he calls them; then the priest, who gently hints that I am a dying man. Oh, what a day!"

"And did you make your will, my excellent friend?" softly asked Monsieur Ramin, with a keen look.

"Make my will?" indignantly exclaimed the old man; "make my will? what do you mean, Sir? do you mean to say I am dying?"

"Heaven forbid!" piously ejaculated Ramin.

"Then why do you ask me if I have been making my will?" angrily resumed the old man. He then began to be extremely abusive.

When money was in the way, Monsieur Ramin, though otherwise of a violent temper, had the meekness of a lamb. He bore the treatment of his host with the meekest patience, and having first locked the door so as to make sure that Marguerite would not interrupt them, he watched Monsieur Bonelle attentively, and satisfied himself that the Excellent Opportunity he had been ardently longing for had arrived. "He is going fast," he thought; "and unless I settle the agreement to-night, and get it drawn up and signed to-morrow, it will be too late."

"My dear friend," he at length said aloud, on perceiving that the old gentleman had fairly exhausted himself and was lying panting on his back, "you are indeed a lamentable instance of the lengths to which the greedy lust of lucre will carry our poor human nature. It is really distressing to see Marguerite, a faithful, attached servant, suddenly converted into a tormenting harpy by the prospect of a legacy! Lawyers and priests flock around you like birds of prey, drawn hither by the scent of gold! Oh, the miseries of having delicate health combined with a sound constitution and large property!"

"Ramin," groaned the old man, looking inquiringly into his visitor's face, "you are again going to talk to me about that annuity—I know you are!"

"My excellent friend, it is merely to deliver you from a painful position."

"I am sure, Ramin, you think in your soul I am dying," whimpered Monsieur Bonelle.

"Absurd, my dear Sir. Dying? I will prove to you that you have never been in better health. In the first place you feel no pain."

"Excepting from rheumatism," groaned Monsieur Bonelle.

"Rheumatism! who ever died of rheumatism? and if that be all——"

"No, it is not all," interrupted the old man with great irritability; "what would you say to the gout getting higher and higher up every day?"

"The gout is rather disagreeable, but if there is nothing else——"

"Yes, there is something else," sharply said Monsieur Bonelle. "There is an asthma that will scarcely let me breathe, and a racking pain in my head that does not allow me a

moment's ease. But if you think I am dying, Ramin, you are quite mistaken!"

"No doubt, my dear friend, no doubt; but in the meanwhile, suppose we talk of this annuity. Shall we say one thousand francs a year?"

"What?" asked Bonelle, looking at him very fixedly.

"My dear friend, I mistook; I meant two thousand francs per annum," hurriedly rejoined Ramin.

Monsieur Bonelle closed his eyes, and appeared to fall into a gentle slumber. The mercer coughed; the sick man never moved.

"Monsieur Bonelle."

No reply.

"My excellent friend."

Utter silence.

"Are you asleep?"

A long pause.

"Well, then, what do you say to three thousand?"

Monsieur Bonelle opened his eyes.

"Ramin," said he, sententiously, "you are a fool; the house brings me in four thousand as it is."

This was quite false, and the mercer knew it; but he had his own reasons for wishing to seem to believe it true.

"Good Heavens!" said he, with an air of great innocence, "who could have thought it, and the lodgers constantly running away. Four thousand? Well, then, you shall have four thousand."

Monsieur Bonelle shut his eyes once more, and murmured "The mere rental—nonsense!" He then folded his hands on his breast, and appeared to compose himself to sleep.

"Oh, what a sharp man of business he is!" Ramin said, admiringly; but for once omnipotent flattery failed in its effect: "So acute!" continued he, with a stealthy glance at the old man, who remained perfectly unmoved. "I see you will insist upon making it the other five hundred francs."

Monsieur Ramin said this as if five thousand five hundred francs had already been mentioned, and was the very summit of Monsieur Bonelle's ambition. But the ruse failed in its effect; the sick man never so much as stirred.

"But, my dear friend," urged Monsieur Ramin in a tone of feeling remonstrance, "there is such a thing as being too sharp, too acute. How can you expect that I shall give you more when your constitution is so good, and you are to be such a long liver?"

"Yes, but I may be carried off one of those days," quietly observed the old man, evidently wishing to turn the chance of his own death to account.

"Indeed, and I hope so," muttered the mercer, who was getting very ill-tempered.

"You see," soothingly continued Bonelle, "you are so good a man of business, Ramin, that you will double the actual value of the house in no time. I am a quiet, easy person,

indifferent to money; otherwise this house would now bring me in eight thousand at the very least."

"Eight thousand!" indignantly exclaimed the mercer. "Monsieur Bonelle, you have no conscience. Come now, my dear friend, do be reasonable. Six thousand francs a year (I don't mind saying six) is really a very handsome income for a man of your quiet habits. Come, be reasonable." But Monsieur Bonelle turned a deaf ear to reason, and closed his eyes once more. What between opening and shutting them for the next quarter of an hour, he at length induced Monsieur Ramin to offer him seven thousand francs.

"Very well, Ramin, agreed," he quietly said; "you have made an unconscionable bargain." To this succeeded a violent fit of coughing.

As Ramin unlocked the door to leave, he found old Marguerite, who had been listening all the time, ready to assail him with a torrent of whispered abuse for duping her "poor dear innocent old master into such a bargain." The mercer bore it all very patiently; he could make allowances for her excited feelings, and only rubbed his hands and bade her a jovial good evening.

The agreement was signed on the following day, to the indignation of old Marguerite, and the mutual satisfaction of the parties concerned.

Every one admired the luck and shrewdness of Ramin, for the old man every day was reported worse; and it was clear to all that the first quarter of the annuity would never be paid. Marguerite, in her wrath, told the story as a grievance to every one: people listened, shook their heads, and pronounced Monsieur Ramin to be a deuced clever fellow.

A month elapsed. As Ramin was coming down one morning from the attics, where he had been giving notice to a poor widow who had failed in paying her rent, he heard a light step on the stairs. Presently a sprightly gentleman, in buoyant health and spirits, wearing the form of Monsieur Bonelle, appeared. Ramin stood aghast.

"Well, Ramin," gaily said the old man, "how are you getting on? Have you been tormenting the poor widow up-stairs? Why, man, we must live and let live!"

"Monsieur Bonelle," said the mercer, in a hollow tone; "may I ask where are your rheumatics?"

"Gone, my dear friend,—gone."

"And the goit that was creeping higher and higher every day," exclaimed Monsieur Ramin, in a voice of anguish.

"It went lower and lower, till it disappeared altogether," composedly replied Bonelle.

"And your asthma——"

"The asthma remains, but asthmatic people are proverbially long-lived. It is, I have been told, the only complaint that Methuselah was

troubled with." With this Bonelle opened his door, shut it, and disappeared.

Ramin was transfixed on the stairs; petrified with intense disappointment; and a powerful sense of having been duped. When he was discovered, he stared vacantly, and raved about an Excellent Opportunity of taking his revenge.

The wonderful cure was the talk of the neighbourhood, whenever Monsieur Bonelle appeared in the streets, jauntily flourishing his cane. In the first frenzy of his despair, Ramin refused to pay; he accused every one of having been in a plot to deceive him; he turned off Catherine and expelled his porter; he publicly accused the lawyer and priest of conspiracy; brought an action against the doctor, and lost it. He had another brought against him for violently assaulting Marguerite in which he was cast in heavy damages. Monsieur Bonelle did not trouble himself with useless remonstrances, but, when his annuity was refused, employed such good legal arguments, as the exasperated mercer could not possibly resist.

Ten years have elapsed, and M. Ramin and Bonelle still live on. For a house which would have been dear at fifty thousand francs, the draper has already handed over seventy thousand.

The once red-faced, jovial Ramin is now a pale, haggard man, of sour temper and aspect. To add to his anguish, he sees the old man thrive on that money which it breaks his heart to give. Old Marguerite takes a malicious pleasure in giving him an exact account of their good cheer, and in asking him if he does not think Monsieur looks better and better every day. Of one part of this torment Ramin might get rid, by giving his old master notice to quit, and no longer having him in his house. But this he cannot do; he has a secret fear that Bonelle would take some Excellent Opportunity of dying without his knowledge, and giving some other person an Excellent Opportunity of personating him, and receiving the money in his stead.

The last accounts of the victim of Excellent Opportunities represent him as being gradually worn down with disappointment. There seems every probability of his being the first to leave the world; for Bonelle is heartier than ever.

REVIEW OF A POPULAR PUBLICATION. IN THE SEARCHING STYLE.

THE BANK NOTE. *Oblong Octavo.* London, 1850. *The Governor and Company of the Bank of England.* Price, from Five to One Thousand Pounds.

THE object of this popular but expensive pocket companion, is not wholly dissimilar from that of its clever and cheaper contemporary "Notes and Queries." As the latter is a "medium of intercommunication for literary

men," so the former is a medium of intercommunication for commercial men; and surely there is no work with which so many queries are constantly connected as the Bank Note. Nothing in existence is so assiduously inquired for; nothing in nature so perseveringly sought.

This is not to be wondered at; for in whatever light we view it, to whatever test we bring it, whether we read it backwards or forwards, from left to right, or from right to left; or whether we make it a transparency to prove its substantial genuineness and worth, who can deny that the Bank Note is a most valuable work?—a publication, in short, without which no gentleman's pocket can be complete?

Few can rise from a critical examination of the literary contents of this narrow sheet, without being forcibly struck with the power, combined with the exquisite fineness of the writing. It strikes conviction at once. It dispels all doubts, and relieves all objections. There is a pithy terseness in the construction of the sentences; a downright, direct, straightforward, coming to the point, which would be wisely imitated in much of the contemporaneous literature that constantly obtains currency (though not as much). Here we have no circumlocution, no discursive pedantry, no smell of the lamp; the figures, though wholly derived from the East (being Arabic numerals), are distinct and full of purpose; and if the writing abounds in flourishes, which it does, these are not rhetorical, but boldly graphic: struck with a nervous decision of style, which, instead of obscuring the text and meaning, convinces the reader that he who traced them when promising to pay the sum of five, ten, twenty, thirty, forty, fifty, one hundred, or a thousand pounds, means honestly and instantly to keep his word: that he *will* pay it to bearer on demand, without one moment's hesitation.

Strictly adapted for utility, yet the dulcet is not wholly overlooked; for, besides figures and flourishes, the graces of art are shed over this much-prized publication. The figure of Britannia is no slavish reproduction of any particular school whatever. She sits upon her scroll of state utterly inimitable and alone. She is hung up in one corner of the page, the sole representative of the P. R. F. P., or pre-*issue-of-the-fourpenny-piece*, school. Neither, if judged by the golden rule of our greatest bard, is the work wholly deficient in another charm. As we have just explained, its words are few: brevity is the soul of wit. And we fearlessly put it to the keenest appreciator of good things, whether a Bank Note (say for a hundred) is not the best joke conceivable—except, indeed, a Bank Note for a thousand.

A critical analysis of a work of this importance cannot be complete without going deeply into the subject. Reviewing is, alas, too often mere surface-work; for seldom do we find the critic going below the superficies,

or extending his scrutiny beyond the letter-press. We shall, however, set a bright example of profundity, and having discharged our duty to the face of the Bank Note, shall proceed to penetrate below it: having analysed the print, we shall now speak of the paper.

The late Mr. Cobbett, to express his idea of the intrinsic worthlessness of these sheets, in comparison with the prices at which they pass current, was wont to designate Bank Notes as "Rags." It may, indeed, be said of them that, "Rags they were, and to tinder they return;" for they are born of shreds of linen, and, ten years after death, are converted in bonfires into the finest of known tinder. It may be considered a curious fact by those who wear shirts, and a painful, because hopeless one, by those who make them, that the refuse or cuttings of linen forms, with a slight admixture of cotton, the pabulum or pulp of Bank Note Paper. Machinery has made no inroads on this branch of paper-making. The pulp is kept so well mixed in a large vat, that the fibrous material presents the appearance of a huge cauldron of milk. Into this the paper-maker dips his mould, which is a fine wire sieve, having round its edge, a slight mahogany frame, called the "Deckel," which confines the pulp to the dimensions of the mould. This dip is quite a feat of dexterity, for on it depends the thickness and evenness of the sheet of paper. The water-mark, or, more properly, the wire-mark, is obtained by twisting wires to the desired form or design, and stitching them on the face of the mould; therefore the design is above the level face of the mould, by the thickness of the wires it is composed of. Hence, the pulp in settling down on the mould, must of necessity be thinner on the wire design than on other parts of the sheet. When the water has run off through the sieve-like face of the mould, the new-born sheet of paper is transferred to a blanket; this operation is called "couching," and is effected by pressing the mould gently but firmly on the blanket, when the spongy sheet clings to the cloth. Sizing is a subsequent process, and, when dry, the water-mark is plainly discernible, being, of course, transparent where the substance is thinnest. The paper is then made up into reams of five hundred sheets each, ready for press. The water-mark in the notes of the Bank of England is secured to that Establishment by a special Act of Parliament. Indeed, imitation of anything whatever connected with a Bank Note is an extremely hazardous feat.

A scrupulous examination of this curious piece of paper, implants a thorough conviction that it is a very superior article—in short, unique. There is nothing like it in the world of sheets. Tested by the touch, it gives out a crisp, crackling, sharp, sound—a note essentially its own—a music, which resounds from no other quires. To the eye it shows a colour belonging neither to blue-wove

nor yellow-wove, nor to cream-laid, but a white, like no other white, either in paper and pulp. The rough fringiness of three of its edges are called the "deckled" edges, being the natural boundary of the pulp when first moulded; the fourth is left smooth by the knife, which eventually cuts the two notes in twain. It is so thin that, when printed, there is much difficulty in making erasures; yet it is so strong that a "water-leaf" (a leaf before the application of size) will support thirty-six pounds; and, with the addition of one grain of size, half a hundred weight, without tearing; yet the quantity of fibre of which it consists, is no more than eighteen grains and a half.

The process of engraving the Bank Note is peculiar. Its general design is remarkably plain—steel plates are used, and are engraved in a manner somewhat analogous to that employed in the Mint for the production of the coin, except that heavy pressure is used instead of a blow. The form of the Note is divided into four or five sections, each engraved on steel dies which are hardened. Steel rollers, or mills, are obtained from these dies, and each portion of the Note is impressed on a steel plate to be printed from by the mills until the whole form is complete.

By means of a very ingenious machine, the engraving on the plates when worn by long printing is repaired by the same mills, and thus perfect identity of form is permanently secured. The merits of this system are due to the late Mr. Oldham, and the many improvements introduced not only into this, but into the printing department, are the work of his son and successor, Mr. Thomas Oldham, the present chief engraver to the Bank of England. The plate—always with a pair of notes upon it—is now ready for the press; for it contains all the literary part of the work, except the date, the number, and the cashier's signature.

We must now review the manner of printing. Before passing through the press, all paper must be damped that it may readily absorb ink; and Bank Note paper is not exempt from this law; but the process by which it is complied with is an ingenious exception to the ordinary modes. The sheets are put into an iron chamber which is exhausted of air; water is then admitted, and forces itself through every pore at the rate of thirty thousand sheets, or double notes, per minute!

In a long gallery that looks like a chamber of the Inquisition with self-acting racks, stands a row of plate-printing presses worked by steam. Every time a sheet passes through them they emit a soft "click" like a ship's capstan creaking in a whisper. By this sound they announce to all whom it may concern that they have printed two Bank Notes. They are tell-tales, and keep no secrets; for, not content with stating the fact aloud, each press moves, by means of a chain, an index of numerals at the end of the room; so that the chief of the department can see at any hour of the day

how many each press has printed. To take an impression of a note plate "on the sly," is therefore impossible. By a clever invention of Mr. Oldham the impression returns to the printer when made, instead of remaining on the opposite side of the press, after it has passed through the rollers, as of old. The plates are heated, for inking, over steam boxes instead of charcoal fires.

When a ream, consisting of five hundred sheets or one thousand notes, have been printed, they are placed in a tray which is inserted in a sort of shelf-trap that shuts up with a spring. No after-abstraction can, therefore, take place. One such repository is over the index appertaining to each press, and at the end of the day it can at once be seen whether the number of sheets corresponds with the numerals of the tell-tale. Any sort of mistake can thus be readily detected. The average number of "promises to pay" printed per diem, is thirty thousand.

As we cannot allow the dot over an *i*, or the cross of a *t* to escape the focus of our critical microscope, we now proceed to apply it to the Bank Ink. Like the liquid of Messrs. Day and Martin, this inestimable composition, with half the usual labour, produces the most brilliant jet-black, fully equal to the highest Japan varnish, and is warranted to keep in any climate. It is made from the charred husks of ~~the~~ ^{Port} grapes after their juice has been expressed and bottled for exportation to the dinner-tables of half the world. When mixed with pure linseed oil, carefully prepared by boiling and burning, the vinous refuse produces a species of blacks so tenacious that they obstinately refuse to be emancipated from the paper when once enslaved to it by the press. It is so intensely nigritious that, compared with it, all other blacks are misty browns; and pale beside it. If the word of a printer's devil may be taken, it is many degrees darker than the streams of Erebus. Can deeper praise be awarded?

The note is, when plate-printed, two processes distant from negotiable; the first being the numbering and dating—and here we must point out the grand distinction which exists between the publication which we have the satisfaction of stating, now lies before us (but it is only a "Five") and ordinary prints. When the types for this miscellany, for instance, are once set up, every copy struck off from them by the press is precisely similar. On the contrary, of those emitted from the Bank presses no two are alike. They differ either in date, in number, or in denomination. This difference constitutes a grand system of check, extending over every stage of every Bank Note's career—a system which records its completion and issue, tracks it through its public adventures, recognises it when it returns to the Bank, from among hundreds of thousands of companions, and finally enables the proper officers to pounce upon it, in case of inquiry, at any official half-hour for ten

years after it has returned in fulfilment of its "promise to pay." To promise an explanation of what must appear so complicated a plan, may seem to the reader like a threat of prolixity. But he may read on in security; the system is as simple as the alphabet.

Understand then, that the dates of Bank Notes are arbitrary, and bear no reference to the day of issue. At the beginning of the official year (February) the Directors settle what dates each of the eleven denominations of Bank Notes shall bear during the ensuing twelve months, taking care to apportion to each sort of note a separate date. The table of dates is then handed to the proper officer, who prints accordingly. The five-pound Note which now rejoices our eyes is, for example, dated February the 2nd, 1850; we therefore know that there is no genuine note in existence, for any other sum, which bears that date; and if a note for ten, twenty, fifty, hundred, &c., having "2nd Feb., 1850," upon it were to be offered to us or to a Bank Clerk, we or he would, without a shadow of further evidence, impound it as a forgery.

Now, as to the numbering:—It is a rule that of every date and denomination, one hundred thousand Notes—no more and no less—shall be completed and issued at one time. We know, therefore, that our solitary five is one of a hundred thousand other fives, each bearing a different number—from 1* to 100,000—but all dated 2nd Feb., 1850. The numbers are printed on each Note by means of a letter-press, the types of which change with each pull of the press. For the first Note, the press is set at "00001," and when that is printed, the "1," by the mere act of impression, retires to make room for "2," which impresses itself on the next Note, and so on up to "100,000." The system has been applied to the stamping of railway tickets. The date, being required for the whole series, is of course immovable. After this has been done, the autograph of a cashier is only requisite to render the Note worth the value inscribed on it, in gold.

While the printers are at work, manufacturing each series of Notes, the account-book makers are getting-up a series of ledgers so exactly to correspond, that the books of themselves, without the stroke of a pen, are a record of the existence of the Note. The book in which the birth of our own especial and particular "Five" is registered, is legibly inscribed,

"Fives, Feb. 2, 1850."

* When you open a page, you find it to consist of a series of horizontal and perpendicular lines, like the pattern of a pair of shepherd's plaid inexpressibles, variegated with columns of numerals; these figures running on regularly from No. 1, on the top of the first page, to No. 100,000 at the bottom of the last. It

* To prevent fraudulent additions of numerals, less than five figures are never used. When units, tens, &c., are required, they are preceded by cyphers. "One" is therefore expressed on a Bank Note thus:—"00001."

must therefore be obvious to the meanest capacity that the mere existence of that book, with its arbitrary date and series of numbers, corresponding to the like series of Notes, is a sufficient record of the existence and issue of the latter. The return of each Note after its public travels, is recorded in the square opposite to its number. Each page of the book contains two hundred squares and numbers; consequently, whatever number a Note may bear, the Clerk who has to register its safe return from a long round of public circulation, knows at once on which page of the book to pounce for its own proper and particular square. In that he inserts the date of its return—not at full length, but in cypher. "S" in red ink means 1850, and the months are indicated by one of the letters of the word **AMBIDEXTROUS**, with the date in numerals. Our only, and therefore favourite, five is numbered 31177. Should it chance to finish its travels in the Accountant's Office on the 6th of August next, it will be narrowly inspected (for fear of forgery) and defaced—a Clerk will then turn at once to the book lettered "Fives, Feb. 2," and so exactly will he know which page to open, and where the square numbered 31177 is situated, that he could point to it blindfold. He will write in it "6 t," which means 6th August; that being the eighth month in the year, and "t" the eighth letter in the chosen word.

The intermediate history of a Bank Note is soon told. Nineteen-twentieths are issued to Bankers or known houses of business. If Glynn's, or Smith's, or any other banking firm, require a hundred ten-pound Notes, the Clerk who issues them makes a memorandum showing the number of the Notes so issued, and the name of the party to whom they have been handed—an easy process, because Notes being new,* are always given out in regular series, and the first and last Note that makes the sum required need only be recorded. Most Bankers make similar memoranda when notes pass out of their hands; and the public, as each Note circulates among them, frequently sign the name of the last holder. When an unknown person presents a Note for gold at the Bank of England, he is required to write his name and address on it, and if the sum be very large, it is not paid without inquiry. By these expedients, a stolen, lost, or forged note can often be traced from hand to hand up to its advent.

The average periods which each denomination of London Notes remain in circulation has been calculated, and is shown by the following

ACCOUNT OF THE NUMBER OF DAYS A BANK NOTE ISSUED IN LONDON REMAINS IN CIRCULATION:—

£5	72·7 days	£50	38·8 days
10	77·0 "	100	29·4 "
20	57·4 "	200	12·7 "
30	18·9 "	300	10·6 "
40	13·7 "	500	11·8 "
£1000		11·1	

The Bank ceased to re-issue its Notes since 1835.

The exceptions to these averages are few, and, therefore, remarkable. The time during which some Notes remain unrepresented are reckoned by the century. On the 27th of September, 1845, a fifty pound Note was presented bearing date 20th January, 1743. Another for ten pounds, issued on the 19th November, 1762, was not paid till the 20th April, 1843. There is a legend extant, of the eccentric possessor of a thousand pound Note, who kept it framed and glazed for a series of years, preferring to feast his eyes on it, to putting the amount it represented out at interest. It was converted into gold, however, without a day's loss of time by his heirs, on his demise. Stolen and lost Notes are generally long absentees. The former usually make their appearance soon after some great horse-race, or other sporting event, altered or disguised so as to deceive Bankers, to whom the Bank of England furnishes a list of the numbers and dates of stolen Notes. In a Chapter on Forgery, which we are preparing, the reader will see some singular facts on this point.

Mr. Francis, in his "History of the Bank of England," tells a curious story about a bank-post bill, which was detained during thirty years from presentation and payment. It happened in the year 1740:—"One of the Directors, a very rich man, had occasion for 30,000*l.*, which he was to pay as the price of an estate he had just bought; to facilitate the matter, he carried the sum with him to the Bank and obtained for it a Bank bill. On his return home, he was suddenly called out upon particular business; he threw the Note carelessly on the chimney, but when he came back a few minutes afterwards to lock it up, it was not to be found. No one had entered the room; he could not therefore suspect any person. At last, after much ineffectual search, he was persuaded that it had fallen from the chimney into the fire. The Director went to acquaint his colleagues with the misfortune that had happened to him; and as he was known to be a perfectly honourable man he was readily believed. It was only about four-and-twenty hours from the time that he had deposited his money; they thought, therefore, that it would be hard to refuse his request for a second bill. He received it upon giving an obligation to restore the first bill, if it should ever be found, or to pay the money himself, if it should be presented by any stranger. About thirty years afterwards (the Director having been long dead, and his heirs in possession of his fortune), an unknown person presented the lost bill at the Bank, and demanded payment. It was in vain that they mentioned to this person the transaction by which that bill was annulled; he would not listen to it; he maintained that it had come to him from abroad, and insisted upon immediate payment. The Note was payable to bearer; and the thirty thousand pounds were paid him. The heirs of the Director would not listen to any de-

mands of restitution; and the Bank was obliged to sustain the loss. It was discovered afterwards that an architect having purchased the Director's house, had taken it down, in order to build another upon the same spot, had found the Note in a crevice of the chimney, and made his discovery an engine for robbing the Bank."

Carelessness, equal to that recorded above, is not at all uncommon, and gives the Bank enormous profit, against which the loss of a mere thirty thousand pound is but a trifle. Bank-Notes have been known to light pipes, to wrap up snuff, to be used as curl-papers; and British tars, mad with rum and prize-money, have not unfrequently, in time of war, made sandwiches of them, and eaten them between bread-and-butter. In the forty years between the years 1792 and 1812 there were out-standing Notes (presumed to have been lost or destroyed) amounting to one million, three hundred and thirty odd thousand pounds; every shilling of which was clear profit to the Bank.

The superannuation, death, and burial of a Bank of England Note is a story soon told. The returned Notes, or promises performed, are kept in "The Library" for ten years, and then burnt in an iron cage in one of the Bank yards.

A few words on the history and general appearance of the Bank of England Note will conclude our criticism.

The strong principle to insure the detection of forgery is uniformity; hence, from the very first Note issued by the Bank, to that, the merits of which we are now discussing, the same general design has been preserved,—only that the execution has been from time to time improved; except, we are bound to add, that of the signatures, some of which are still as illegible as ever. Originally, Notes were granted more in the form of Bank post-bills,—that is, not nominally to a member of the establishment, but really to the party applying for them, and for any sum he might require. If it suited his convenience, he presented his Note several times, drawing such lesser sums as he might require; precisely as if it were a letter of credit, after the manner of the Sailor mentioned in the latest edition of Joe Miller. Jack, somehow or other, got possession of a fifty-pound Note; the sum was so dazzlingly enormous that he had not the heart, on presenting it for payment, to demand the whole sum at once, for fear of breaking the Bank. So, leaning confidentially over the counter, he whispered to the cashier, that he wouldn't be hard upon 'em. He knew times were bad,—so, as it was all the same to him, he would take five sovereigns now, and the rest at so much a week. In like manner, the fac-simile on the opposite page, while it presents a specimen of one of the earliest Bank Notes in existence, shows that the holder took the amount as Jack proposed;—by instalments. It was granted to Mr. Thomas

Powell, on the 19th of December, 1699, for five hundred and fifty-five pounds. His first draft was one hundred and thirty-one pounds, ten shillings, and one penny; the second "in gold," three hundred and sixty; the third, sixty-three pounds, nine shillings, and eleven-pence, when the note was retained by the Bank as having been fully honoured.

With this curious specimen of the ancient Bank of England Note, we take leave of the modern ones—only, however, for a short time. In a week or two, we shall change the topic (as we have previously intimated) to one closely bearing upon it. Circumstances, however, demand that we should change the subject of it at a much earlier date.

INNOCENCE AND CRIME.

AN ANECDOTE.

A BENEVOLENT old gentleman—the late Mr. Harcourt Brown of Beech Hall—was plodding his way home to his hotel from a ramble in the suburbs of London; and having made a bold attempt at "a short cut," soon found himself lost in a maze of squalid streets, leading one into the other, and apparently leading nowhere else. He inquired his way in vain. From the first person, he received a coarse jest; from another, a look of vacant stupidity; a third eyed him in dogged silence. He stepped with one foot into several wretched little shops; but the people really seemed to know nothing beyond the next street or alley, except one man, a dealer in tripe, of a strange, earthy colour, who called over his shoulder, "Oh, you're miles out o' your way!" The only exception to the general indifference, rudeness and stupidity, was a thin sallow-checked man, who had a fixed smile on his face, and spoke in rather an abject cringing tone of obsequiousness, and even walked up one street and down a second to show Mr. Brown the way. But it soon became evident that he knew nothing about the matter, and he slunk away with the same fixed unmeaning smile.

In this state of affairs Mr. Brown buttoned up his coat, and manfully resolved to work his way out of this filthy locality by walking straight forward.

Trudging onward at a smart pace, the worthy gentleman presently heard the sound of sobbing and crying, and behind the boards of a shed at the side of a ruined hotel he saw a girl of some nine or ten years of age, clasping and unclasping her hands in a paroxysm of grief and apprehension. "Oh, what shall I do!—what shall I do!" sobbed the child.

She started with terror as Mr. Brown approached, and hid her head in the folds of her little apron; but on being assured by the mild voice of Mr. Brown that he had no thought of hurting her, she ventured to look up. She had soft blue eyes, flaxen hair of silvery glossiness, pretty features; and, notwithstanding the stain of tears down a

cheek which had a smear of brickdust upon it, had a most innocent and prepossessing face.

"What is the matter, my little girl?" inquired Mr. Brown.

The child turned one shoulder half round, and displayed the red and purple marks of blows from a whip or stick.

"What cruel wretch has done this?" asked Mr. Brown. "Tell me, child; tell me directly."

"It was mother," sobbed the child.

"Ah—I'm sorry to hear this. Perhaps you have been naughty?"

"Yes, Sir;" answered the child.

"Poor child," ejaculated Mr. Brown; "but you will not be naughty again. What was your offence. Come, tell me?"

"I shook it, Sir; oh, yes, it's quite true; I did shake it very much."

"What did you shake?" inquired Mr. Brown.

"I shook the doll, Sir."

"The doll! Oh, you mean you shook the baby; that, certainly, was naughty of you;" said Mr. Brown.

"No, Sir; it was not the baby I shook—it was the doll; and I'm afraid to go home—mother will be sure to beat me again."

An impulse of benevolence led Mr. Brown's hand to search for his purse. Had he tried the wrong pocket? His purse was on the other side. No, it was not—it must be in this "inner" pocket. Where is Mr. Brown's purse? It is not in any of his pockets! He tries them all over again. And his pocket-book!—chiefly of memorandums, but also having a few bank-notes. This is gone too—and his silk handkerchief—both his handkerchiefs!—also his silver-gilt snuff-box, filled with rappee only five minutes before he left the hotel this morning—he is certain he had it when he came out—but it is certainly gone! Every single thing he had in his pockets is gone.

The child also—now *she* is gone! Mr. Brown looks around him, and yonder he sees the poor child flying with frequent looks behind of terror,—and now a shrill and frightful voice causes him to start. Turning in that direction, the sudden flight of the little girl is immediately explained. Over the rubbish and refuse, at a swift, wild pace, courses a fiendish woman, with a savage eye and open mouth, her cheeks hollow, her teeth projecting, her thin hair flying like a bit of diseased mane over her half-naked shoulder; she has a stick in her hand, with which she constantly threatens the flying child, whom her execrations follow yet more swiftly than her feet.

Mr. Brown remained watching them till they were out of sight. He once more searched all his pockets, but they were all empty. He called to mind the man with the fixed smile on his hollow cadaverous cheek, and several other faces of men whom he had casually noticed in the course of the last half hour, thinking what a pity it was that some-

thing could not be done for them. He now began to think it was a very great pity that something had not *already* been done for them or with them, for they had certainly "done" him. Poor Mr. Brown!

Some six or seven months after this most disagreeable adventure, it chanced that Mr. Brown was going over the prison at Coldbath Fields, accompanied by the Governor. As they entered one of the wards, the voice of a child sobbing, attracted the ears of our philanthropist. In answer to his inquiries, the Governor informed him that it was a child of about eleven years of age, who had been detected in the act of picking a lady's pocket in one of the most crowded thoroughfares.

On a few kind words being spoken to her, she looked up; and in the blue eye, glossy flaxen hair, and pretty features, Mr. Brown at once recognised the little girl who had "shaken the doll."

"This child is an innocent creature!" cried he, turning to the Governor, "the victim of ignorance and cruel treatment at home. I recollect her well. Her mother had beaten her most shamefully; and the last glimpse I had of her was in her flight from a still more savage assault. And for what crime do you suppose?"

"For not picking pockets expertly, I dare say," replied the Governor.

"Nothing of the sort!" exclaimed Mr. Brown. "Would you believe it, Sir; it was for nothing more than a childish bit of pretence-anger with her doll, on which occasion she gave the doll a good shaking. Mere pretence, you know."

"My dear Sir," said the Governor, smiling, "I fancy I am right, after all. She was beaten for not being expert in the study and practice of pocket-picking at home. You are not, perhaps, aware that the lesson consists in picking the pockets of a figure which is hung up in the room, in such a way that the least awkwardness of touch makes it shake, and rings a little bell attached to it. This figure is called the 'doll.' Those who ring the bell, shake it in emptying its pockets, are punished according to the mind and temper of the instructor."

"Good heavens!" ejaculated Mr. Brown, "to what perfection must the art be brought! Then it is all accounted for. The sallow gentleman with the fixed smile must have been master of the craft of not shaking the doll, when he took my purse, pocket-book, snuff-box, and both handkerchiefs from me, without my feeling so much as the motion of the air!"

THE LAST OF A LONG LINE.

IN TWO CHAPTERS.—CHAPTER I.

SIR ROGER ROCKVILLE of Rockville was the last of a very long line. It extended from the Norman Conquest to the present century. His first known ancestor came over with William, and must have been a man of some mark, either of bone and sinew, or of brain, for he obtained what the Americans would call a prime location. As his name does not occur in the Roll of Battle Abbey, he was, of course, not of a very high Norman extraction; but he had done enough, it seems, in the way of knocking down Saxons, to place himself on a considerable eminence in this kingdom. The centre of his domains was conspicuous far over the country, through a high range of rock overhanging one of the sweetest rivers in England. On one hand lay a vast tract of rich marsh land, capable, as society advanced, of being converted into meadows; and on the other, as extensive moorlands, finely undulating, and abounding with woods and deer.

Here the original Sir Roger built his castle on the summit of the range of rock, with huts for his followers; and became known directly all over the country of Sir Roger de Rockville, or Sir Roger of the hamlet on the Rock. Sir Roger, no doubt, was a mighty hunter before the lord of the feudal district: it is certain that his descendants were. For generations they led a jolly life at Rockville, and were always ready to exchange the excitement of the chase for a bit of civil war. Without that the country would have grown dull, and ale and venison lost their flavour. There was no gay London in those days, and a good brisk skirmish with their neighbours in helm and hauberk was the way of spending their season. It was their parliamentary debate, and was necessary to thin their woods. Protection and Free Trade were as much the great topics of interest as they are now, only they did not trouble themselves so much about Corn bills. Their bills were of good steel, and their protective measures were arrows a cloth-yard long. Protection meant a good suit of mail; and a castle with its duly prescribed moats, bastions, portcullises, and donjon keep. Free Trade was a lively inroad into the neighbouring

baron's lands, and the importation thence of goodly herds and flocks. Foreign cattle for home consumption was as *sticking an article* in their markets as in ours, only the blows were expended on one another's heads, instead of the heads of foreign bullocks—that is, bullocks from over the Welch or Scotch Marches, as from beyond the next brook.

Thus lived the Rockvilles for ages. In all the iron combats of those iron times they took care to have their quota. Whether it were Stephen against Matilda, or Richard against his father, or John against the barons; whether it were York or Lancaster, or Tudor or Stuart. The Rockvilles were to be found in the *mêlée*, and winning power and lands. So long as it required only *stout frames* and stout blows, no family cut a more conspicuous figure. The Rockvilles were at Bosworth Field. The Rockvilles fought in Ireland under Elizabeth. The Rockvilles were staunch defenders of the cause in the war of Charles I. with his Parliament. The Rockvilles even fought for James II. at the Boyne, when three-fourths of the most loyal of the English nobility and gentry had deserted him in disgust and indignation. But from that hour they had been less conspicuous.

The opposition to the successful party, that of William of Orange, of course brought them into disgrace: and though they were never molested on that account, they retired to their estate, and found it convenient to be as unobtrusive as possible. Thenceforward you heard no more of the Rockvilles in the national annals. They became only of consequence in their own district. They acted as magistrates. They served as high sheriffs. They were a substantial county family, and nothing more. Education and civilisation advanced; a wider and very different field of action and ambition opened upon the aristocracy of England. Our fleets and armies abroad, our legislature at home, law and the church, presented brilliant paths to the ambition of those thirsting for distinction, and the good things that follow it. But somehow the Rockvilles did not expand with this expansion. So long as it required only a figure of six feet high, broad shoulders, and a strong arm, they were a great and conspicuous race. But when the head became the member most in request, they ceased to go

a-head. Younger sons, it is true, served in army and in navy, and filled the family pulpit, but they produced no generals, no admirals, no archbishops. The Rockvilles of Rockville were very conservative, very exclusive, and very stereotype. Other families grew poor, and enriched themselves again by marrying plebeian heiresses. New families grew up out of plebeian blood into greatness, and intermingled the vigour of their fresh earth with the attenuated aristocratic soil. Men of family became great lawyers, great statesmen, great prelates, and even great poets and philosophers. The Rockvilles remained high, proud, bigotted, and *borné*.

The Rockvilles married Rockvilles, or their first cousins, the Cessvilles, simply to prevent property going out of the family. They kept the property together. They did not lose an acre, and they were a fine, tall, solemn race—and nothing more. What ailed them?

If you saw Sir Roger Rockville,—for there was an eternal Sir Roger filling his office of high sheriff,—he had a very fine carriage, and a very fine retinue in the most approved and splendid of antique costumes;—if you saw him sitting on the bench at quarter sessions, he was a tall, stately, and solemn man. If you saw Lady Rockville shopping in her handsome carriage, with very handsomely attired servants; saw her at the county ball, or on the stage-mound, she was a tall, aristocratic, and stately lady. That was in the last generation—the present could boast of no Lady Rockville.

Great outward respect was shown to the Rockvilles on account of the length of their descent, and the breadth of their acres. They were always, when any stranger asked about them, declared, with a serious and important air, to be a very ancient, honourable, and substantial family. "Oh! a great family are the Rockvilles, a very great family."

But if you came to close quarters with the members of this great and highly distinguished family, you soon found yourself fundamentally astonished; you had a sensation come over you, as if you were trying, like Moses, to draw water from a rock, without his delegated power. There was a goodly outside of things before you, but nothing came of it. You talked, hoping to get talking in return, but you got little more than "noes" and "yesses" and "oh! indeeds!" and "reallys," and sometimes not even that, but a certain look of aristocratic dignity or dignification, that was meant to serve for all answers. There was a sort of resting on aristocratic oars or "meulla," that were not to be too vulgarly handled. There was a feeling impressed on you, that eight hundred years of descent, and ten thousand a-year in landed income did not trouble themselves with the trifling things that gave distinction to lesser people—such as literature, fine arts, politics, and general knowledge. These were very well for those who had nothing else to pride

themselves on, but for the Rockvilles—oh! certainly they were by no means requisite.

In fact, you found yourself, with a little variation, in the predicament of Cowper's people,

—who spent their lives
In dropping buckets into empty wells,
And growing tired of drawing nothing up.

Who hasn't often come across these "dry wells" of society; solemn gulphs out of which you can pump nothing up? You know them; they are at your elbow every day in large and brilliant companies, and defy the best sucking-buckets ever invented to extract anything from them. But the Rockvilles were each and all of this adust description. It was a family feature, and they seemed, if either, rather proud of it. They must be so; for proud they were, amazingly proud; and they had nothing besides to be proud of, except their acres, and their ancestors.

But the fact was, they could not help it. It was become organic. They had acted the justice of peace, maintained the constitution against upstarts and manufacturers, signed warrants, supported the church and the house of correction, committed poachers, and then rested on the dignity of their ancestors for so many generations, that their skulls, brains, constitutions, and nervous systems, were all so completely moulded into that shape and baked into that mould, that a Rockville would be a Rockville to the end of time, if God and Nature would have allowed it! But such things wear out. The American, Indians and the Australian nations wear out; they are not progressive, and as Nature abhors a vacuum, she does not forget the vacuum wherever it may be, whether in a hot desert, or in a cold and stately Rockville;—a very ancient, honourable, and substantial family that lies fallow till the thinking faculty literally dies out.

For several generations there had been symptoms of decay about the Rockville family. Not in its property, that was as large as ever; not in their personal stature and physical aspect. The Rockvilles continued, as they always had been, a tall and not bad-looking family. But they grew gradually less prolific. For a hundred and fifty years past there had seldom been more than two, or at most three, children. There had generally been an heir to the estate, and another to the family pulpit, and sometimes a daughter married to some neighbouring squire. But Sir Roger's father had been an only child, and Sir Roger himself was an only child. The danger of extinction to the family, apparent as it was, had never induced Sir Roger to marry. At the time that we are turning our attention upon him, he had reached the mature age of sixty. Nobody believed that Sir Roger now would marry; he was the last, and likely to be, of his line.

It is worth while here to take a glance at

Sir Roger and his estate. They were a strange contrast. The one bore all the signs of progress, the other of a stereotyped feudalism. The estate, which in the days of the first Sir Roger de Rockville had been half morass and half wilderness, was now cultivated to the pitch of British agricultural science. The marshlands beyond the river were one splendid expanse of richest meadows, yielding a rental of four solid pounds per acre. Over hill and dale on this side for miles, where formerly ran wild deer, and grew wild woodlands or furze-bushes, now lay excellent farms and hamlets, and along the ridge of the ancient cliffs rose the most magnificent woods. Woods, too, clothed the steep hill-sides, and swept down to the noble river, their very boughs hanging far out over its clear and rapid waters. In the midst of these fine woods stood Rockville Hall, the family seat of the Rockvilles. It reared its old brick walls above the towering mass of elms, and travellers at a distance recognised it for what it was, the mansion of an ancient and wealthy family.

The progress of England in arts, science, commerce, and manufacture, had carried Sir Roger's estate along with it. It was full of active and moneyed farmers, and flourished under modern influences. How lucky it would have been for the Rockville family had it done the same!

But amid this estate there was Sir Roger solitary, and the last of the line. He had grown well enough—there was nothing stunted about him, so far as you could see on the surface. In stature, he exceeded six feet. His colossal elms could not boast of a proper relative growth. He was as large a landlord, and as tall a justice of the peace, as you could desire; but, unfortunately, he was, after all, only the shell of a man. Like many of his veteran elms, there was a very fine stem, only it was hollow. There was a man, just with the rather awkward deficiency of a soul.

And it were no difficult task to explain, either, how this had come about. The Rockvilles saw plainly enough the necessity of manuring their lands, but they scorned the very idea of manuring their family. What! that most ancient, honourable, and substantial family, suffer any of the common earth of humanity to gather about its roots! The Rockvilles were so careful of their good blood, that they never allied it to any but blood as pure and inane as their own. Their elms flourished in the rotten earth of plebeian accumulations, and their acres produced large crops of corn from the sewage of towns and fat sinks, but the Rockvilles themselves took especial care that no vulgar vigour from the real heap of ordinary human nature should infuse a new force of intellect into their race. The Rockvilles needed nothing; they had all that an ancient, honourable, and substantial family could need. The Rockvilles had no need to study at school—why should they? They did not want to get on. The Rockvilles

did not aspire to distinction for talent in the world—why should they? They had a large estate. So the Rockville soil, untaught from generation to generation, grew—

Fine by degrees, and *spiritually less*.

It tapered off into nothing.

Look at the last of a long line in the midst of his fine estate. Tall he was, with a stoop in his shoulders, and a bowing of his head on one side, as if he had been accustomed to stand under the low boughs of his woods, and peer after intruders. And that was precisely the fact. His features were thin and sharp; his nose prominent and keen in its character; his eyes small, black, and peering like a mole's, or a hungry swine's. Sir Roger was still oracular on the bench, after consulting his clerk, a good lawyer,—and looked up to by the neighbouring squires in election matters, for he was an unswerving Tory. You never heard of a rational thing that he had said in the whole course of his life; but that mattered little, he was a gentleman of solemn aspect, of stately gait, and of a very ancient family.

With ten thousand a-year, and his rental rising, he was still, however, a man of overwhelming cares. What mattered a fine estate if all the world was against him? And Sir Roger firmly believed that he stood in that predicament. He had grown up to regard the world as full of little besides upstarts, radicals, manufacturers, and poachers. All were banded, in his belief, against the landed interest. It demanded all the energy of his very small faculties to defend himself and the world against them.

Unfortunately for his peace, a large manufacturing town had sprung up within a couple of miles of him. He could see its red-brick walls, and its red-tiled roofs, and its tall smoke-vomiting chimneys, growing and extending over the slopes beyond the river. It was to him the most irritating sight in the world; for what were all those swarming weavers and spinners but arrant radicals, upstarts, sworn foes of the ancient institutions and the landed interests of England? Sir Roger had passed through many a desperate conflict with them for the return of members to parliament. They brought forward men that were utter wormwood to all his feelings, and they paid no more respect to him and his friends on such occasions than they did to the meanest creature living. Reverence for ancient blood did not exist in that plebeian and rapidly multiplying tribe. There were master manufacturers there actually that looked and talked as big as himself, and *entre nous*, a vast deal more cleverly. The people talked of rights and franchises, and freedom of speech, and of conscience, in a way that was really frightful. Then they were given most inveterately to running out in whole and everlasting crowds on Sundays and holidays into the fields and woods; and as there was no

part of the neighbourhood half so pleasant as the groves and river banks of Rockville, they came swarming up there in crowds that were enough to drive any man of acres frantic.

Unluckily, there were roads all about Rockville; foot roads, and high roads, and bridle roads. There was a road up the river side, all the way to Rockville woods, and when it reached them, it divided like a fork, and one pony or foot-path led straight up a magnificent grove of a mile long, ending close to the hall; and another ran all along the river side, under the hills and branches of the wood.

Oh, delicious were these woods! In the river there were islands, which were covered in summer with the greenest grass, and the freshest of willows, and the clear waters rushed around them in the most inviting manner imaginable. And there were numbers of people extremely ready to accept this delectable invitation of these waters. There they came in fine weather, and as these islands were only separated from the mainland by a little and very shallow stream, it was delightful for lovers to get across—with laughter, and treading on stepping-stones, and slipping off the stepping-stones up to the ankles into the cool brook, and pretty screams, and fresh laughter, and then landing on those sunny, and to them really enchanted, islands. And then came fishermen, solitary fishermen, and fishmen in rows; fishermen lying in the flowery grass, with fragrant meadow-sweet and honey-breathing clover all about their ears; and fishermen standing in file, as if they were determined to clear all the river of fish in one day. And there were other lovers, and troops of loiterers, and shouting roysterers, going along under the boughs of the wood, and following the turns of that most companionable of rivers. And there were boats going up and down; boats full of young people, all holiday finery and mirth, and boats with duck-hunters and other, to Sir Roger, detestable marauders, with guns and dogs, and great bottles of beer. In the fine grove, on summer days, there might be found hundreds of people. There were pic-nic parties, fathers and mothers with whole families of children, and a grand promenade of the delighted artisans and their wives or sweethearts.

In the times prior to the sudden growth of the neighbouring town, Great Stockington, and to the simultaneous development of the love-of-nature principle in the Stockingtonians, nothing had been thought of all these roads. The roads were well enough till they led to these inroads. Then Sir Roger aroused himself. This must be changed. The roads must be stopped. Nothing was easier to his fancy. His fellow-justices, Sir Benjamin Bullockshed and Squire Sheepshank, had asked his aid to stop the like nuisances, and it had been done at once. So Sir Roger put up notices all about, that the roads were to be stopped by an Order of Session, and these

notices were signed, as required by law, by their worships of Bullockshed and Sheepshank. But Sir Roger soon found that it was one thing to stop a road leading from One-man-Town to Lonely Lodge, and another to attempt to stop those from Great Stockington to Rockville.

On the very first Sunday after the exhibition of those notice-boards, there was a ferment in the grove of Rockville, as if all the bees in the county were swarming there, with all the wasps and hornets to boot. Great crowds were collected before each of these obnoxious placards, and the amount of curses vomited forth against them was really shocking for any day, but more especially for a Sunday. Presently there was a rush at them; they were torn down, and simultaneously pitched into the river. There were great crowds swarming all about Rockville all that day, and with looks so defiant that Sir Roger more than once contemplated sending off for the Yeoman Cavalry to defend his house, which he seriously thought in danger.

But so far from being intimidated from proceeding, this demonstration only made Sir Roger the more determined. To have so desperate and irreverent a population coming about his house and woods, now presented itself in a much more formidable aspect than ever. So, next day, not only were the placards once more hoisted, but rewards offered for the discovery of the offenders, attended with all the maledictions of the insulted majesty of the law. No notice was taken of this, but the whole of Great Stockington was in a buzz and an agitation. There were posters plastered all over the walls of the town, four times as large as Sir Roger's notices, in this style:—

"Englishmen! your dearest rights are menaced! The Woods of Rockville, your ancient, rightful, and enchanting resorts, are to be closed to you. Stockingtonians! the eyes of the world are upon you. 'Awake! arise! or be for ever fallen!' England expects every man to do his duty! And your duty is to resist and defy the grasping soil-lords, to seize on your ancient Patrimony!"

"Patrimony! Ancient and rightful resort of Rockville!" Sir Roger was astounded at the audacity of this upstart, plebeian race. What! they actually claimed Rockville, the heritage of a hundred successive Rockvilles, as their own. Sir Roger determined to carry it to the Sessions; and at the Sessions was a magnificent muster of all his friends. There was Sir Roger himself in the chair; and on either hand, a prodigious row of county squirearchy. There was Sir Benjamin Bullockshed, and Sir Thomas Tenterhook, and all the squires,—Sheepshank, Ramsbottom, Turnbull, Otterbrook, and Swagsides. The Clerk of Session read the notice for the closing of all the footpaths through the woods of Rockville, and declared that this notice had been

duly, and for the required period publicly, posted. The Stockingtonians protested by their able lawyer Daredeville, against any order for the closing of these ancient woods—the inestimable property of the public.

"Property of the public!" exclaimed Sir Roger. "Property of the public!" echoed the multitudinous voices of indignant Bullocksheds, Tenterhooks, and Ramsbottoms. "Why, Sir, do you dispute the right of Sir Roger Rockville to his own estate?"

"By no means;" replied the undaunted Daredeville; "the estate of Rockville is unquestionably the property of the honourable baronet, Sir Roger Rockville; but the roads through it are the as unquestionable property of the public."

The whole bench looked at itself; that is, at each other, in wrathful astonishment. The swelling in the diaphragms of the squires Otterbrook, Turnbull, and Swagsides, and all the rest of the worshipful row, was too big to admit of utterance. Only Sir Roger himself burst forth with an abrupt—

"Impudent fellows! But I'll see them first!"

"Grant the order!" said Sir Benjamin Bullockshed; and the whole bench nodded assent. The able lawyer Daredeville retired with a pleasant smile. He saw an agreeable prospect of plenty of grist to his mill. Sir Roger was rich, and so was Great Stockington. He rubbed his hands, not in the least like a man defeated, and thought to himself, "Let them go at it—all right."

The next day the placards on the Rockville estate were changed for others bearing "STOPPED BY ORDER OF SESSIONS!" and alongside of them were huge carefully painted boards, denouncing on all trespassers prosecutions according to law. The same evening came a prodigious invasion of Stockingtonians—tore all the boards and placards down, and carried them on their shoulders to Great Stockington, singing as they went, "See, the Conquering Heroes come!" They set them up in the centre of the Stockington market-place, and burnt them, along with an effigy of Sir Roger Rockville.

That was grist at once to the mill of the able lawyer Daredeville. He looked on, and rubbed his hands. Warrants were speedily issued by the Baronets of Bullockshed and Tenterhook, for the apprehension of the individuals who had been seen carrying off the notice-boards, for larceny, and against a number of others for trespass. There was plenty of work for Daredeville and his brethren of the robe; but it all ended, after the flying about of sundry mandamuses and assize trials, in Sir Roger finding that though Rockville was his, the roads through it were the public's.

As Sir Roger drove homeward from the assize, which finally settled the question of these footpaths, he heard the bells in all the steeples of Great Stockington burst forth with a grand peal of triumph. He closed first the

windows of his fine old carriage, and sunk into a corner; but he could not drown the intolerable sound. "But," said he, "I'll stop their pic-nic-ing. I'll stop their fishing. I'll have hold of them for trespassing and poaching!" There was war henceforth between Rockville and Great Stockington.

On the very next Sunday there came literally thousands of the jubilant Stockingtonians to Rockville. They had brought baskets, and were for dining, and drinking success to all footpaths. But in the great grove there were keepers, and watchers, who warned them to keep the path, that narrow well-worn line up the middle of the grove. "What! were they not to sit on the grass?"—"No!"—"What! were they not to pic-nic?"—"No! not there!"

The Stockingtonians felt a sudden damp on their spirits. But the river bank! The cry was "To the river bank! There they would pic-nic." The crowd rushed away down the wood, but on the river bank they found a whole regiment of watchers, who pointed again to the narrow line of footpath, and told them not to trespass beyond it. But the islands! they went over to the islands. But there too were Sir Roger's forces, who warned them back! There was no road there—all found there would be trespassers, and be duly punished."

The Stockingtonians discovered that their triumph was not quite so complete as they had flattered themselves. The footpaths were theirs, but that was all. Their ancient license was at an end. If they came there, there was no more fishing; if they came in crowds, there was no more pic-nic-ing; if they walked through the woods in numbers, they must keep to Indian file, or they were summoned before the county magistrates for trespass, and were soundly fined; and not even the able Daredeville would undertake to defend them.

The Stockingtonians were chop-fallen, but they were angry and dogged; and they thronged up to the village and the front of the hall. They filled the little inn in the hamlet—they went by scores, and roving all over the churchyard, read epitaphs

That teach the rustic moralists to die,

but don't teach them to give up their old indulgences very good-humouredly. They went and sat in rows on the old churchyard wall, opposite to the very windows of the irate Sir Roger. They felt themselves beaten, and Sir Roger felt himself beaten. True, he could coerce them to the keeping of the footpaths—but, then, they had the footpaths! True, thought the Stockingtonians, we have the footpaths, but then the pic-nic-ing, and the fishing, and the islands! The Stockingtonians were full of sullen wrath, and Sir Roger was—oh, most expressive old Saxon phrase—HAIRSORE! Yes, he was one universal round of vexation and jealousy of his hair. Every hair in his body was like a pin sticking into him. Come within a dozen yards of him; nay, at the most, blow on him, and he was

excruciated—you rubbed his sensitive hairs at a furlong's distance.

The next Sunday the people found the churchyard locked up, except during service, when beadies walked there, and desired them not to loiter and disturb the congregation, closing the gates, and shoving them out like a flock of sheep the moment the service was over. This was fuel to the already boiling blood of Stockington. The week following, what was their astonishment to find a much frequented ruin gone! it was actually gone! not a trace of it; but the spot where it had stood for ages, turfed, planted, with young spruce trees, and fenced off with post and rail! The exasperated people now launched forth an immensity of fulminations against the churl Sir Roger, and a certain number of them resolved to come and seat themselves in the street of the hamlet and there dine; but a terrific thunderstorm, which seemed in league with Sir Roger, soon routed them, drenched them through, and on attempting to seek shelter in the cottages, the poor people said they were very sorry, but it was as much as their holdings were worth, and they dare not admit them.

Sir Roger had triumphed! It was all over with the old delightful days at Rockville. There was an end of pic-nic-ing, of fishing, and of roving in the islands. One sturdy disciple of Izaak Walton, indeed, dared to fling a line from the banks of Rockville grove, but Sir Roger came upon him and endeavoured to seize him. The man coolly walked into the middle of the river, and, without a word, continued his fishing.

"Get out there!" exclaimed Sir Roger, "that is still on my property." The man walked through the river to the other bank, where he knew that the land was rented by a farmer. "Give over," shouted Sir Roger, "I tell you the water is mine."

"Then," said the fellow, "bottle it up, and be hanged to you! Don't you see it is running away to Stockington?"

There was bad blood between Rockville and Stockington-grove. Stockington was incensed, and Sir Roger was hairsore.

A new misadventure sprung up. The people of Stockington looked on the cottagers of Rockville as sunk in deepest darkness under such a man as Sir Roger and his cousin the vicar. They could not pic-nic, but they thought they could hold a camp-meeting; they could not fish for roach, but they thought they might for salmon. Accordingly there assembled crowds of Stockingtonians on the green of Rockville, with a chair and a table, and a preacher with his head bound in a red handkerchief; and soon there was a sound of hymns, and a zealous call to come out of the darkness of the spiritual Babylon. But this was more than Sir Roger could bear; he rushed forth with all his servants, keepers, and cottagers, overthrew the table, and routing the assembly, chased them to the boundary of his estate.

The discomfited Stockingtonians now fulminated awful judgments on the unhappy Sir Roger, as a persecutor and a malignant. They dared not enter again on his park, but they came to the very verge of it, and held weekly meetings on the highway, in which they sang and declaimed as loudly as possible, that the winds might bear their voices to Sir Roger's ears.

To such a position was now reduced the last of the long line of Rockville. The spirit of a policeman had taken possession of him. He had keepers and watchers out on all sides, but that did not satisfy him. He was perpetually haunted with the idea that poachers were after his game, that trespassers were in his woods. His whole life was now spent in strolling to and fro in his fields and plantations, and prowling along his river side. He looked under hedges, and watched for long hours under the forest trees. If any one had a curiosity to see Sir Roger, they had only to enter his fields by the wood side, and wander a few yards from the path, and he was almost sure to spring out over the hedge, and in angry tones demand their name and address. The descendant of the chivalrous and steel-clad De Rockvilles was sunk into a restless spy on his own ample property. There was but one idea in his mind—encroachment. It was destitute of all other furniture but the musty technicalities of warrants and commitments. There was a stealthy and skulking manner in everything that he did. He went to church on Sundays, but it was no longer by the grand iron gate opposite to his house, that stood generally with a large spider's web woven over the lock, and several others in different corners of the fine iron tracery, bearing evidence of the long period since it had been opened. How different to the time when the Sir Roger, and Lady of Rockville had had these gates thrown wide on a Sunday morning, and, with all their train of household servants after their back, with true antique dignity, marched with much proud humility into the house of God. Now, Sir Roger—the solitary, suspicious, undignified Sir Roger, the keeper and policeman of his own property—stole in at a little side gate from his paddock, and back the same way, wondering all the time whether there was not somebody in his pheasant preserves, or Sunday trespassers in his grove.

If you entered his house, it gave you as cheerless a feeling as its owner. There was the conservatory, so splendid with rich plants and flowers in his mother's time—now a dusty receptacle of hampers, broken hand-glasses, and garden tools. These tools could never be used, for the gardens were grown wild. Tall grass grew in the walks, and the huge unpruned shrubs disputed the passage with you. In the wood above the gardens, reached by several flights of fine, but now moss-grown, steps, there stood a pavilion, once clearly very beautiful. It was now

damp and ruinous—its walls covered with greenness and crawling insects. It was a great lurking-place of Sir Roger when on the watch for poachers.

The line of the Rockvilles was evidently running fast out. It had reached the extremity of imbecility and contempt—it must soon reach its close.

Sir Roger used to make his regular annual visit to town; but of late, when there, he had wandered restlessly about the streets, peeping into the shop-windows; and if it rained, standing under entries for hours after, till it was gone over. The habit of lurking and peering about, was upon him; and his feet bore him instinctively into those narrow and crowded alleys where swarm the poachers of the city—the trespassers and anglers in the game preserves and streams of humanity. He had lost all pleasure in his club; the most exciting themes of political life retained no piquancy for him. His old friends ceased to find any pleasure in him. He was become the driest of all dry wolls. Poachers, and anglers, and Methodists, haunted the wretched purloins of his lost fading-out mind, and he resolved to go to town no more. His whole nature was centred in his woods. He was for ever on the watch; and when at Rockville again, if he heard a door clap when in bed, he thought it a gun in his woods, and started up, and was out with his keepers.

Of what value was that magnificent estate to him?—those superb woods; those finely-hanging cliffs; that clear and riant river coming travelling on, and taking a noble sweep below his windows,—that glorious expanse of neat verdant meadows stretching almost to Stockington, and enlivened by numerous herds of the most beautiful cattle—those old farms and shady lanes overhung with hazel and wild rose; the glittering brook, and the songs of woodland birds—what were they to that worn-out old man, that victim of the delusive doctrine of blood, of the man-trap of an hereditary name?

There the poet could come, and feel the presence of divinity in that noble scene, and hear sublime whispers in the trees, and create new heavens and earths from the glorious chaos of nature around him, and in one short hour live an empyrean of celestial life and love. There could come the very humblest children of the plebeian town, and feel a throb of exquisite delight pervade their bosoms at the sight of the very flowers on the sod, and see heaven in the infinite blue above them. And poor Sir Roger, the holder, but not the possessor of all, walked only in a region of sterility, with no sublimer ideas than poachers and trespassers—no more rational enjoyment than the brute indulgence of hunting like a ferret, and seizing his fellow-men like a bulldog. He was a specimen of human nature degenerated, retrograded from the divine to the bestial, through the long-operating influences of false notions and in-

stitutions, continued beyond their time. He had only the soul of a keeper. Had he been only a keeper, he had been a much happier man.

His time was at hand. The severity which he had long dealt out towards all sorts of offenders made him the object of the deepest vengeance. In a lonely hollow of his woods, watching at midnight with two of his men, there came a sturdy knot of poachers. An affray ensued. The men perceived that their old enemy, Sir Roger, was there: and the blow of a hedge-stake stretched him on the earth. His keepers fled—and thus ignominiously terminated the long line of the Rockvilles. Sir Roger was the last of his line, but not of his class. There is a feudal art of sinking, which requires no study; and the Rockvilles are but one family amongst thousands who have perished in its practice.

THE CHEMISTRY OF A CANDLE.

THE WILKINSONS were having a small party,—it consisted of themselves and Uncle Bagges—at which the younger members of the family, home for the holidays, had been just admitted to assist after dinner. Uncle Bagges was a gentleman from whom his affectionate relatives cherished expectations of a testamentary nature. Hence the greatest attention was paid by them to the wishes of Mr. Bagges, as well as to every observation which he might be pleased to make.

"Eh! what? you sir," said Mr. Bagges, facetiously addressing himself to his eldest nephew, Harry,—“Eh! what? I am glad to hear, sir, that you are doing well at school. Now—eh? now, are you clever enough to tell me where was Moses when he put the candle out?”

“That depends, uncle,” answered the young gentleman, “on whether he had lighted the candle to see with at night, or by daylight, to seal a letter.”

“Eh! Very good, now! ‘Pon my word, very good,” exclaimed Uncle Bagges. “You must be Lord Chancellor, sir—Lord Chancellor, one of these days.”

“And now, uncle,” asked Harry, who was a favourite with the old gentleman, “can you tell me what you do when you put a candle out?”

“Clap a! extinguisher on it, you young rogue, to be sure.”

“Oh! but I mean, you cut off its supply of oxygen,” said Master Harry.

“Cut off its ox’s—eh? what? I shall cut off your nose, you young dog, one of these fine days.”

“He means something he heard at the Royal Institution,” observed Mrs. Wilkinson. “He reads a great deal about chemistry, and he attended Professor Faraday’s lectures there on the chemical history of a candle, and has been full of it ever since.”

“Now, you sir,” said Uncle Bagges, “come

you here to me, and tell me what you have to say about this chemical, eh?—or comical; which?—this comical chemical history of a candle."

"He'll bore you, Bagges," said Mr. Wilkinson. "Harry, don't be troublesome to your uncle."

"Troublesome! Oh, not at all. He amuses me. I like to hear him. So let him teach his old uncle the comicality and chemicality of a farthing rushlight."

"A wax candle will be nicer and cleaner, uncle, and answer the same purpose. There's one on the mantel-shelf. Let me light it."

"Take care you don't burn your fingers, or set anything on fire," said Mrs. Wilkinson.

"Now, uncle," commenced Harry, having drawn his chair to the side of Mr. Bagges, "we have got our candle burning. What do you see?"

"Let me put on my spectacles," answered the uncle.

"Look down on the top of the candle around the wick. See, it is a little cup full of melted wax. The heat of the flame has melted the wax just round the wick. The cold air keeps the outside of it hard, so as to make the rim of it. The melted wax in the little cup goes up through the wick to be burnt, just as oil does in the wick of a lamp. What do you think makes it go up, uncle?"

"Why—why, the flame draws it up, doesn't it?"

"Not exactly, uncle. It goes up through little tiny passages in the cotton wick, because very, very small channels, or pipes, or pores, have the power in themselves of sucking up liquids. What they do it by is called cap—something."

"Capillary attraction, Harry," suggested Mr. Wilkinson.

"Yes, that's it; just as a sponge sucks up water, or a bit of lump-sugar the little drop of tea or coffee left in the bottom of a cup. But I mustn't say much more about this, or else you will tell me I am doing something very much like teaching my grandmother to—you know what."

"Your grandmother, eh, young sharpshins?"

"No—I mean my uncle. Now, I'll blow the candle out, like Moses; not to be in the dark, though, but to see into what it is. Look at the smoke rising from the wick. I'll hold a bit of lighted paper in the smoke, so as not to touch the wick. But see, for all that, the candle lights again. So this shows that the melted wax sucked up through the wick is turned into vapour; and the vapour burns. The heat of the burning vapour keeps on melting more wax, and that is sucked up too within the flame, and turned into vapour, and burnt, and so on till the wax is all used up, and the candle is gone. So the flame, uncle, you see, is the last of the candle, and the candle seems to go through the flame into nothing—although it doesn't, but goes into several things, and isn't it curious, as Pro-

fessor Faraday said, that the candle should look so splendid and glorious in going away?"

"How well he remembers, doesn't he?" observed Mrs. Wilkinson.

"I dare say," proceeded Harry, "that the flame of the candle looks flat to you; but if we were to put a lamp glass over it, so as to shelter it from the draught, you would see it is round,—round sideways, and running up to a peak. It is drawn up by the hot air; you know that hot air always rises, and that is the way smoke is taken up the chimney. What should you think was in the middle of the flame?"

"I should say, fire," replied Uncle Bagges.

"Oh, no! The flame is hollow. The bright flame we see is something no thicker than a thin peel, or skin; and it doesn't touch the wick. Inside of it is the vapour I told you of just now. If you put one end of a bent pipe into the middle of the flame, and let the other end of the pipe dip into a bottle, the vapour or gas from the candle will mix with the air there; and if you set fire to the mixture of gas from the candle and air in the bottle, it would go off with a bang."

"I wish you'd do that, Harry," said Master Tom, the younger brother of the juvenile lecturer.

"I want the proper things," answered Harry. "Well, uncle, the flame of the candle is a little shining case, with gas in the inside of it, and air on the outside, so that the case of flame is between the air and the gas. The gas keeps going into the flame to burn, and when the candle burns properly, none of it ever passes out through the flame; and none of the air ever gets in through the flame to the gas. The greatest heat of the candle is in this skin, or peel, or case of flame."

"Case of flame!" repeated Mr. Bagges. "Live and learn. I should have thought a candle-flame was as thick as my poor old noodle."

"I can show you the contrary," said Harry. "I take this piece of white paper, look, and hold it a second or two down upon the candle-flame, keeping the flame very steady. Now I'll rub off the black of the smoke, and—there—you find that the paper is scorched in the shape of a ring; but inside the ring it is only dirtied, and not singed at all."

"Seeing is believing," remarked the uncle.

"But," proceeded Harry, "there is more in the candle-flame than the gas that comes out of the candle. You know a candle won't burn without air. There must be always air around the gas, and touching it like, to make it burn. If a candle hasn't got enough air, it goes out, or burns badly, so that some of the vapour inside of the flame comes out through it in the form of smoke, and this is the reason of a candle smoking. So now you know why a great clumsy dip smokes more than a neat wax candle; it is because the thick wick of the dip makes too much fuel in proportion to the air that can get to it."

"Dear me! Well, I suppose there is a reason for everything," exclaimed the young philosopher's mamma.

"What should you say, now?" continued Harry, "if I told you that the smoke that comes out of a candle is the very thing that makes a candle light? Yes; a candle shines by consuming its own smoke. The smoke of a candle is a cloud of small dust, and the little grains of the dust are bits of charcoal, or carbon, as chemists call it. They are made in the flame, and burnt in the flame, and, while burning, make the flame bright. They are burnt the moment they are made; but the flame goes on making more of them as fast as it burns them; and that is how it keeps bright. The place they are made in, is in the case of flame itself, where the strongest heat is. The great heat separates them from the gas which comes from the melted wax, and, as soon as they touch the air on the outside of the thin case of flame, they burn."

"Can you tell how it is that the little bits of carbon cause the brightness of the flame?" asked Mr. Wilkinson.

"Because they are pieces of solid matter," answered Harry. "To make a flame shine, there must always be some solid—or at least liquid—matter in it."

"Very good," said Mr. Bagges,—"solid stuff necessary to brightness."

"Some gases and other things," resumed Harry, "that burn with a flame you can hardly see, burn splendidly when something solid is put into them. Oxygen and hydrogen—tell me if I use too hard words, uncle—oxygen and hydrogen gases, if mixed together and blown through a pipe, burn with plenty of heat but with very little light. But if their flame is blown upon a piece of quicklime, it gets so bright as to be quite dazzling. Make the smoke of oil of turpentine pass through the same flame, and it gives the flame a beautiful brightness directly."

"I wonder," observed Uncle Bagges, "what has made you such a bright youth."

"Taking after uncle, perhaps," retorted his nephew. "Don't put my candle and me out. Well, carbon or charcoal is what causes the brightness of all lamps, and candles, and other common lights; so, of course, there is carbon in what they are all made of."

"So carbon is smoke, eh? and light is owing to your carbon. Giving light out of smoke, eh? as they say in the classics," observed Mr. Bagges.

"But what becomes of the candle," pursued Harry, "as it burns away? where does it go?"

"Nowhere," said his mamma, "I should think. It burns to nothing."

"Oh, dear, no!" said Harry, "everything—everybody goes somewhere."

"Eh!—rather an important consideration that," Mr. Bagges moralised.

"You can see it goes into smoke, which makes soot for one thing," pursued Harry. "There are other things it goes into, not to be seen by

only looking, but you can get to see them by taking the right means,—just put your hand over the candle, uncle."

"Thank you, young gentleman, I had rather be excused."

"Not close enough down to burn you, uncle; higher up. There,—you feel a stream of hot air; so something seems to rise from the candle. Suppose you were to put a very long slender gas-burner over the flame, and let the flame burn just within the end of it, as if it were a chimney,—some of the hot steam would go up and come out at the top, but a sort of dew would be left behind in the glass chimney, if the chimney was cold enough when you put it on. There are ways of collecting this sort of dew, and when it is collected it turns out to be really water. I am not joking, uncle. Water is one of the things which the candle turns into in burning,—water coming out of fire. A jet of oil gives above a pint of water in burning. In some lighthouses they burn, Professor Faraday says, up to two gallons of oil in a night, and if the windows are cold the steam from the oil clouds the inside of the windows, and, in frosty weather, freezes into ice."

"Water out of a candle, eh?" exclaimed Mr. Bagges. "As hard to get, I should have thought, as blood out of a post. Where does it come from?"

"Part from the wax, and part from the air, and yet not a drop of it comes either from the air or the wax. What do you make of that, uncle?"

"Eh! Oh! I'm no hand at riddles. Give it up."

"No riddle at all, uncle. The part that comes from the wax isn't water, and the part that comes from the air isn't water, but when put together they become water. Water is a mixture of two things, then. This can be shown. Put some iron wire or turnings into a gun-barrel open at both ends. Heat the middle of the barrel red-hot in a little furnace. Keep the heat up, and send the steam of boiling water through the red-hot gun-barrel. What will come out at the other end of the barrel won't be steam; it will be gas, which doesn't turn to water again when it gets cold, and which burns if you put a light to it. Take the turnings out of the gun-barrel, and you will find them changed to rust, and heavier than when they were put in. Part of the water is the gas that comes out of the barrel, the other part is what mixes with the iron turnings, and changes them to rust, and makes them heavier. You can fill a bladder with the gas that comes out of the gun-barrel, or you can pass bubbles of it up into a jar of water turned upside down in a trough, and, as I said, you can make this part of the water burn."

"Eh?" cried Mr. Bagges. "Upon my word! One of these days, we shall have you setting the Thames on fire."

"Nothing more easy," said Harry, "than

to burn part of the Thames, or of any other water; I mean the gas that I have just told you about, which is called hydrogen. In burning, hydrogen produces water again, like the flame of the candle. Indeed, hydrogen is that part of the water, formed by a candle burning, that comes from the wax. All things that have hydrogen in them produce water in burning, and the more there is in them the more they produce. When pure hydrogen burns, nothing comes from it but water, no smoke or soot at all. If you were to burn one ounce of it, the water you would get would be just nine ounces. There are many ways of making hydrogen, besides out of steam by the hot gun-barrel. I could show it you in a moment by pouring a little sulphuric acid mixed with water into a bottle upon a few zinc or steel filings, and putting a cork in the bottle with a little pipe through it, and setting fire to the gas that would come from the mouth of the pipe. We should find the flame very hot, but having scarcely any brightness. I should like you to see the curious qualities of hydrogen, particularly how light it is, so as to carry things up in the air; and I wish I had a small balloon to fill with it and make go up to the ceiling, or a bag-pipe full of it to blow soap-bubbles with, and show how much faster they rise than common ones, blown with the breath."

"So do I," interposed Master Tom.

"And so," resumed Harry, "hydrogen, you know, uncle, is part of water, and just one-ninth part."

"As hydrogen is to water, so is a tailor to an ordinary individual, eh?" Mr. Bagges remarked.

"Well, now then, uncle, if hydrogen is the tailor's part of the water, what are the other eight parts? The iron turnings used to make hydrogen in the gun-barrel, and rusted, take just those eight parts from the water in the shape of steam, and are so much the heavier. Burn iron turnings in the air, and they make the same rust, and gain just the same in weight. So the other eight parts must be found in the air for one thing, and in the rusted iron turnings for another, and they must also be in the water; and now the question is, how to get at them?"

"Out of the water? Fish for them, I should say," suggested Mr. Bagges.

"Why, so we can," said Harry. "Only, instead of hooks and lines, we must use wires—two wires, one from one end, the other from the other, of a galvanic battery. Put the points of these wires into water, a little distance apart, and they instantly take the water in pieces. If they are of copper, or a metal that will rust easily, one of them begins to rust, and air-bubbles come up from the other. These bubbles are hydrogen. The other part of the water mixes with the end of the wire and makes rust. But if the wires are of gold, or a metal that does not rust easily, air-bubbles rise from the ends of both wires.

Collect the bubbles from both wires in a tube, and fire them, and they turn to water again; and this water is exactly the same weight as the quantity that has been changed into the two gases. Now then, uncle, what should you think water was composed of?"

"Eh? well—I suppose of those very identical two gases, young gentleman."

"Right, uncle. Recollect that the gas from one of the wires was hydrogen, the one-ninth of water. What should you guess the gas from the other wire to be?"

"Stop—eh?—wait a bit—eh?—oh!—why, the other eight-ninths, to be sure."

"Good again, uncle. Now this gas that is eight-ninths of water is the gas called oxygen that I mentioned just now. This is a very curious gas. It won't burn in air at all itself, like gas from a lamp, but it has a wonderful power of making things burn that are lighted and put into it. If you fill a jar with it—"

"How do you manage that?" Mr. Bagges inquired.

"You fill the jar with water," answered Harry, "and you stand it upside down in a vessel full of water too. Then you let bubbles of the gas up into the jar and they turn out the water and take its place. Put a stopper in the neck of the jar, or hold a glass plate against the mouth of it, and you can take it out of the water and so have bottled oxygen. A lighted candle put into a jar of oxygen blazes up directly and is consumed before you can say Jack Robinson. Charcoal burns away in it as fast, with beautiful bright sparks—phosphorus with a light that dazzles you to look at—and a piece of iron or steel just made red-hot at the end first, is burnt in oxygen quicker than a stick would be in common air. The experiment of burning things in oxygen beats any fire-works."

"Oh, how jolly!" exclaimed Tom.

"Now we see, uncle," Harry continued, "that water is hydrogen and oxygen united together, that water is got wherever hydrogen is burnt in common air, that a candle won't burn without air, and that when a candle burns there is hydrogen in it burning, and forming water. Now, then, where does the hydrogen of the candle get the oxygen from, to turn into water with it?"

"From the air, eh?"

"Just so. I can't stop to tell you of the other things which there is oxygen in, and the many beautiful and amusing ways of getting it. But as there is oxygen in the air, and as oxygen makes things burn at such a rate, perhaps you wonder why air does not make things burn as fast as oxygen. The reason is, that there is something else in the air that mixes with the oxygen and weakens it."

"Makes a sort of gaseous grog of it, eh?" said Mr. Bagges. "But how is that proved?"

"Why, there is a gas, called nitrous gas, which, if you mix it with oxygen, takes all the

oxygen into itself, and the mixture of the nitrous gas and oxygen, if you put water with it, goes into the water. Mix nitrous gas and air together in a jar over water, and the nitrous gas takes away the oxygen, and then the water sucks up the mixed oxygen and nitrous gas, and that part of the air which weakens the oxygen is left behind. Burning phosphorus in confined air will also take all the oxygen from it, and there are other ways of doing the same thing. The portion of the air left behind is called nitrogen. You wouldn't know it from common air by the look; it has no colour, taste, nor smell, and it won't burn. But things won't burn in it, either; and anything on fire put into it goes out directly. It isn't fit to breathe,—and a mouse, or any animal, shut up in it, dies. It isn't poisonous, though; creatures only die in it for want of oxygen. We breathe it with oxygen, and then it does no harm, but good; for if we breathed pure oxygen, we should breathe away so violently, that we should soon breathe our life out. In the same way, if the air were nothing but oxygen, a candle would not last above a minute."

"What a tallow-chandler's bill we should have!" remarked Mrs. Wilkinson.

"If a house were on fire in oxygen," as Professor Faraday said, "every iron bar, or rafter, or pillar, every nail and iron tool, and the fire-place itself; all the zinc and copper roofs, and leaden coverings, and gutters, and pipes, would consume and burn, increasing the combustion."

"That would be, indeed, burning 'like a house on fire,'" observed Mr. Bagges.

"Think," said Harry, continuing his quotation, "'of the Houses of Parliament, or a steam-engine manufactory. Think of an iron-proof chest—no proof against oxygen. Think of a locomotive and its train,—every engine, every carriage, and even every rail would be set on fire and burnt up.' So now, uncle, I think you see what the use of nitrogen is, and especially how it prevents a candle from burning out too fast."

"Eh?" said Mr. Bagges. "Well, I will say I do think we are under considerable obligations to nitrogen."

"I have explained to you, uncle," pursued Harry, "how a candle, in burning, turns into water. But it turns into something else besides that; there is a stream of hot air going up from it that won't condense into dew; some of that is the nitrogen of the air which the candle has taken all the oxygen from. But there is more in it than nitrogen. Hold a long glass tube over a candle, so that the stream of hot air from it may go up through the tube. Hold a jar over the end of the tube to collect some of the stream of hot air. Put some lime-water, which looks quite clear, into the jar; stop the jar, and shake it up. The lime-water, which was quite clear before, turns milky. Then there is something made by the burning of the candle that changes the colour

of the lime-water. That is a gas, too, and you can collect it, and examine it. It is to be got from several things, and is a part of all chalk, marble, and the shells of eggs or of shell-fish. The easiest way to make it is by pouring muriatic or sulphuric acid on chalk or marble. The marble or chalk begins to hiss or bubble, and you can collect the bubbles in the same way that you can oxygen. The gas made by the candle in burning, and which also is got out of the chalk and marble, is called carbonic acid. It puts out a light in a moment; it kills any animal that breathes it, and it is really poisonous to breathe, because it destroys life even when mixed with a pretty large quantity of common air. The bubbles made by beer when it ferments, are carbonic acid, so is the air that fizzes out of soda-water,—and it is good to swallow though it is deadly to breathe. It is got from chalk by burning the chalk as well as by putting acid to it, and burning the carbonic acid out of chalk makes the chalk lime. This is why people are killed sometimes by getting in the way of the wind that blows from lime-kilns."

"Of which it is advisable carefully to keep to the windward," Mr. Wilkinson observed.

"The most curious thing about carbonic acid gas," proceeded Harry, "is its weight. Although it is only a sort of air, it is so heavy that you can pour it from one vessel into another. You may dip a cup of it and pour it down upon a candle, and it will put the candle out, which would astonish an ignorant person; because carbonic acid gas is as invisible as the air, and the candle seems to be put out by nothing. A soap-bubble or common air floats on it like wood on water. Its weight is what makes it collect in brewers' vats; and also in wells, where it is produced naturally; and owing to its collecting in such places it causes the deaths we so often hear about of those who go down into them without proper care. It is found in many springs of water, more or less; and a great deal of it comes out of the earth in some places. Carbonic acid gas is what stupifies the dogs in the Grotto del Cane. Well, but how is carbonic acid gas made by the candle?"

"I hope with your candle you'll throw some light upon the subject," said Uncle Bagges.

"I hope so," answered Harry. "Recollect it is the burning of the smoke, or soot, or carbon, of the candle that makes the candle-flame bright. Also that the candle won't burn without air. Likewise that it will not burn in nitrogen, or air that has been deprived of oxygen. So the carbon of the candle mingles with oxygen, in burning, to make carbonic acid gas, just as the hydrogen does to form water. Carbonic acid gas, then, is carbon or charcoal dissolved in oxygen. Here is black soot getting invisible and changing into air; and this seems strange, uncle, doesn't it?"

"Ahem! Strange, if true," answered Mr

Bagges. "Eh?—well! I suppose it's all right."

"Quite so, uncle. Burn carbon or charcoal either in the air or in oxygen, and it is sure always to make carbonic acid, and nothing else, if it is dry. No dew or mist gathers in a cold glass jar if you burn dry charcoal in it. The charcoal goes entirely into carbonic acid gas, and leaves nothing behind but ashes, which are only earthy stuff that was in the charcoal, but not part of the charcoal itself. And now, shall I tell you something about carbon?"

"With all my heart," assented Mr. Bagges.

"I said that there was carbon or charcoal in all common lights,—so there is in every common kind of fuel. If you heat coal or wood away from the air, some gas comes away, and leaves behind coke from coal, and charcoal from wood; both carbon, though not pure. Heat carbon as much as you will in a close vessel, and it does not change in the least; but let the air get to it, and then it burns and flies off in carbonic acid gas. This makes carbon so convenient for fuel. But it is ornamental as well as useful, uncle. The diamond is nothing else than carbon."

"The diamond, eh? You mean the black diamond."

"No; the diamond, really and truly. The diamond is only carbon in the shape of a crystal."

"Eh? and can't some of your clever chemists crystallise a little bit of carbon, and make a Koh-i-noor?"

"Ah, uncle, perhaps we shall, some day. In the meantime I suppose we must be content with making carbon so brilliant as it is in the flame of a candle. Well; now you see that a candle-flame is vapour burning, and the vapour, in burning, turns into water and carbonic acid gas. The oxygen of both the carbonic acid gas and the water comes from the air, and the hydrogen and carbon together are the vapour. They are distilled out of the melted wax by the heat. But, you know, carbon alone can't be distilled by any heat. It can be distilled, though, when it is joined with hydrogen, as it is in the wax, and then the mixed hydrogen and carbon rise in gas of the same kind as the gas in the streets, and that also is distilled by heat from coal. So a candle is a little gas manufactory in itself, that burns the gas as fast as it makes it."

"Haven't you pretty nearly come to your candle's end?" said Mr. Wilkinson.

"Nearly. I only want to tell uncle, that the burning of a candle is almost exactly like our breathing. Breathing is consuming oxygen, only not so fast as burning. In breathing we throw out water in vapour and carbonic acid from our lungs, and take oxygen in. Oxygen is as necessary to support the life of the body, as it is to keep up the flame of a candle."

"So," said Mr. Bagges, "man is a candle,

eh? and Shakespeare knew that, I suppose, (as he did most things,) when he wrote—

"Out, out, brief candle!"

Well, well; we old ones are moulds, and you young squires are dips and rushlights, eh? Any more to tell us about the candle?"

"I could tell you a great deal more about oxygen, and hydrogen, and carbon, and water, and breathing, that Professor Faraday said, if I had time; but you should go and hear him yourself, uncle."

"Eh? well! I think I will. Some of us seniors may learn something from a juvenile lecture, at any rate, if given by a Faraday. And now, my boy, I will tell you what," added Mr. Bagges, "I am very glad to find you so fond of study and science; and you deserve to be encouraged: and so I'll give you a what-d'-ye-call-it?—a Galvanic Battery on your next birth-day; and so much for your teaching your old uncle the chemistry of a candle."

AN OLD HAUNT.

The rippling water, with its drowsy tone,—
The tall elms, tow'ring in their stately pride,—
And—sorrow's type—the willow sad and lone,
Kissing in graceful woe the murmuring tide;—

The grey church-tower,—and dimly seen beyond,
The faint hills gilded by the parting sun,—
All were the same, and seem'd with greeting foud
To welcome me as they of old had done.

And for a while I stood as in a trance,
On that loved spot, forgetting toil and pain;—
Beguapt my limbs, and keen and bright my glance,
For that brief space I was a boy again!

Again with giddy mates I careless play'd,
Or plied the quiv'ring oar, on conquest bent;—
Again, beneath the tall elms' silent shade,
I woo'd the fair, and won the sweet consent.

But brief, alas! the spell,—for suddenly
Peal'd from the tower the old familiar chimes,
And with their clear, heart-thrilling melody,
Awaked the spectral forms of darker times.

And I remember'd all that years had wrought—
How bow'd my care-worn frame, how dimm'd
my eye,
How poor the gauds by Youth so keenly sought,
How quench'd and dull Youth's aspirations high!

And in half mournful, half upbraiding host,
Duties neglected—high resolves unkept—
And many a heart by death or falsehood lost,
In lightning current o'er my bosom swept.

Then bow'd the stubborn knees, as backward sped

The self-accusing thoughts in dread array,
And slowly, from their long-congeal'd bed,
Forced the remorseful tears their silent way.

Bitter, yet healing drops! in mercy sent,
Like soft dews falling on a thirsty plain,—
And 'ere those chimes their last faint note but
spent,
Strengthen'd and calm'd, I stood erect again.

Strength'd, the tasks allotted to fulfil ;—

Calm'd, the thick-coming sorrows to endure ;
Fearsful of nought but of my own frail will,—
In His Almighty strength and aid secure.

For a sweet voice had whisper'd hope to me,—
Had through my darkness shed a kindly ray ;—
It said : "The past is fix'd immutably,
Yet is there comfort in the coming day !"

THE HIPPOPOTAMUS.

BEFORE we give a more exclusive attention to the "illustrious stranger," we think it will be advisable to present the reader with a brief authentic account of the circumstances which led to the honour conferred upon England by the visit of this extraordinary personage. These circumstances are little known to the world ; indeed, we have reason to believe they have never before been published.

The British Consul at Cairo had frequently intimated to His Highness the Pasha of Egypt, that a live hippopotamus would be regarded as a very interesting and valuable present in England. Now, there were sundry difficulties of a serious nature involved in this business. In the first place, the favourite resort of the hippopotami is a thousand or fifteen hundred miles distant from Cairo ; in the second place, the hippopotamus being amphibious, is not easily come-at-able ; when he is environed, he is a tremendous antagonist, by reason of his great strength, enormous weight, his wrathfulness when excited, and we may add his prodigious mouth with its huge tusks. We are speaking of the *male* hippopotamus. He is often slain by a number of rifle-balls (he only makes a comic grin of scorn at a few) and laid low from a distance : but as to being taken alive, that is a triumph which has scarcely ever been permitted to mortal man of modern times. It is quite a different matter in respect of the elephant. He cannot take to the water, and neither dive clean away, nor upset your boat with a plunge of his forehead ; besides which you cannot get two tame renegade hippopotami to assist in the capture and subjugation of a relative, as is the case with elephants. Accordingly, His Highness the Pasha, not liking to compromise the dignity of despotism, and his own position as sovereign of Egypt, by promising anything which he might, perhaps, be unable to perform, turned a deaf ear to the repeated overtures of the British Consul. He never refused his request ; he simply did not hear what he said, or could not be made to have a clear understanding as to what the Consul really wanted. His Highness had already given him the skin and bones of hippopotami, and many other animals alive and dead. If he wished for any birds, he was welcome to as many as he pleased !

It so chanced, however, that Abbas Pasha took it into his head, or somebody told him, that we had in England several extraordinary breeds of dogs, horses, and cows,—hounds

that could catch a gazelle by sheer fleetness, small fighting-dogs that would master a bull,—horses that could compete with his finest Arabian steeds, and beat them in a hard day's hunt over rough ground. He bethought himself, therefore, of the hippopotamus. One good turn of this kind might deserve another of a different kind.

"So, Consul," said the Pasha abruptly one day, when Mr. Murray was dining with him, "so, you want a hippopotamus ?"

"Very much, your Highness."

"And you think that such an animal would be an acceptable present to your Queen and country ?"

"He would be accounted a great rarity," said the Consul ; "our naturalists would receive him, with open arms—figuratively speaking,—and the public would crowd to pay their respects to him."

Abbas Pasha laughed at this pleasantry of the Consul. "Well," said he, "we will inquire about this matter." He half-turned his head over one shoulder to his attendants : "Send here the Governor of Nubia !" The attendants thus ordered made their salam, and retired.

Anybody, not previously aware of the easy habits of a despotic sovereign, would naturally conclude that the Governor of Nubia was, at this time, in Cairo, and at no great distance from the royal abode. But it was not so. The Governor of Nubia was *simply there*—at home—smoking his pipe in Nubia. This brief and unadorned order, therefore, involved a post-haste messenger on a dromedary across the Desert, with a boat up the Nile, and then more dromedaries, and then another boat, and again a dromedary, till the Pasha's mandate was delivered. We next behold the Governor of Nubia, in full official trim, proceeding post-haste with his suite across the Desert, and down the Nile, travelling day and night, until finally he is announced to the Pasha, and admitted to his most serene and fumigatious presence. The Governor makes his grand salam.

"Governor," says the Pasha—and we have this unique dialogue on the best authority—"Governor, have you hippopotami in your country ?"

"We have, your Highness."

Abbas Pasha reflected a moment ; then said—"Send to me the Commander of the Nubian army. Now, go !"

This was the whole dialogue. The Governor made his salam, and retired. With the same haste and ceremony, so far as the two things can be combined, he returned to Nubia by boat, and dromedary, and horse, and covered litter ; and the same hour found the Commander of the army of Nubia galloping across the Desert with his attendants, in obedience to the royal mandate.

The Pasha, knowing that all means of speed will be used, and what those means will be, together with the nature of the route, is able to calculate to a day when the Commander ought to arrive—and therefore

must arrive,—at his peril, otherwise. The British Consul is invited to dine with his Highness on this day.

Duly, as expected, the Commander of the Nubian army arrives, and is announced, just as the repast is concluded. He is forthwith ushered into the presence of the sublime beard and turban. Coffee and pipes are being served. The Commander makes his grand salam, shutting his eyes before the royal pipe.

"Commander," says the Pasha, without taking his pipe from his mouth, "I hear that you have hippopotami in your country."

"It is true, your Highness; but—"

"Bring me a live hippopotamus—a young one. Now, go!"

This was actually the dialogue which took place on the occasion—and the whole of it. The Commander of the Nubian forces made his grand salam—retired—and returned as he came,—"big" with the importance of his errand,—but also not without considerable anxiety for its result.

Arriving at Dongola, the Commander summoned his chief officers and captains of the Nubian hosts to a council of war on the subject of the hippopotamus hunt, on the result of which—he intimated—several heads were at stake, besides his own. A similar communication was speedily forwarded to the chief officers of the right wing of the army, quartered in their tents at Sennaar. The picked men of all the forces having been selected, the two parties met in boats at an appointed village on the banks of the Nile, and there concerted their measures for the expedition.

The Commander divided the chosen body into several parties, and away they sped up the Nile. They followed the course of the river, beyond the point where it branches off into the Blue Nile, and the White Nile. Good fortune at length befel one of the parties; but this cost much time, and many unsuccessful efforts—now pursuing a huge savage river-horse, with rifle-balls and flying darts; now pursued by him in turn with foaming jaws and gnashing tusks—all of which may readily be conjectured, from the fact that they did not fall in with their prize till they had reached a distance, up the White Nile, of one thousand five hundred miles above Cairo. In the doublings and re-doublings of attack and retreat, of pursuit and flight, and renewed assault, they must of course have traversed in all, at least two thousand miles.

Something pathetic attaches to the death of the mother of "our hero,"—something which touches our common nature, but which such painters as Mr. Gordon Cumming would not be at all able to understand. A large female hippopotamus being wounded, was in full flight up the river; but presently a ball or two reached a mortal part, and then the maternal instinct made the animal pause. She fled no more, but turned aside, and made towards a heap of brushwood and water-bushes that grew on the banks of the river, in order (as the event

showed) to die beside her young one. She was unable to proceed so far, and sank dying beneath the water. The action, however, had been so evidently caused by some strong impulse and attraction in that direction, that the party instantly proceeded to the clump of water-bushes. Nobody moved—not a green flag stirred; not a sprig trampled; but directly they entered, out burst a burly young hippopotamus-calf, and plunged head foremost down the river-banks. He had all but escaped, when amidst the excitement and confusion of the picked men, one of them who had "more character" than the rest, made a blow at the slippery prize with his boat-hook, and literally brought him up by burying the hook in his fat black flank. Two other hunters—next to him in presence of mind and energy—threw their arms round the great barrel-bellied infant, and hoisted him into the boat, which nearly capsized with the weight and struggle.

In this one circumstance of a hippopotamus being ordered by his Highness Abbas Pasha, has been pleasantly shown the ease and brevity with which matters are managed by a despotic government. We complain at home—and with how much reason, everybody knows too well—of the injurious and provoking slowness of all good legislative acts; but here we have a beautiful little instance, or series of little instances, of going rather too fast. Things are settled off-hand in the East by a royal mandate—from the strangling of a whole seraglio, to the suckling of a young hippopotamus.

Returning down the Nile with their unwieldy prize, for whose wounded flank the best surgical attendance the country afforded, was of course procured, it soon became a matter of immense importance and profound consultation as to how and on what the innocent young monster should be fed. He would not touch flesh of any kind; he did not seem to relish fruit; and he evidently did not, at present, understand grass. A live fish was put into his mouth, but he instantly gave a great gape and allowed it to flap its way out again and fall into the water. Before long, however, the party reached a village. The Commander of the army saw what to do. He ordered his men to seize all the cows in the village, and milk them. This was found very acceptable to their interesting charge, who presently despatched a quantity that alarmed them, lest they should be unable to keep up the due balance of supply and demand. The surplus milk, however, they carried away in gourds and earthen vessels. But they found it would not keep: it became sour butter, and melted into oil. They were, therefore, compelled, after a milking, to carry off with them one of the best cows. In this way they returned fifteen hundred miles down the Nile, stopping at every village on their way—seizing all the cows and milking them dry. By these means they managed to supply the

"table" of the illustrious captive, whose capacities in disposing of the beverage appeared to increase daily.

The hunting-division of the army, headed by the Commander-in-Chief, arrived at Cairo with their prize on the 14th of November, 1849. The journey down the Nile, from the place where he was captured, *viz.*, the White Nile, had occupied between five and six months. This, therefore, with a few additional days, may be regarded as the age of our hippopotamus on reaching Cairo. The colour of his skin, at that time, was for the most part of a dull, reddish tone, very like that (to compare great things with small) of a naked new-born mouse. The Commander hastened to the palace to report his arrival with the prize to his royal master, into the charge of whose officers he most gladly resigned it. His Highness, having been informed of the little affair of the succession of "cows," determined to place the vivacious un-weaned "infant prodigy" in the hands of the British Consul without a moment's delay.

The announcement was accordingly made with oriental formality by the chief officer of Abbas Pasha's palace, to whom the Honorable Mr. Murray made a suitable present in return for the good tidings. A lieutenant of the Nubian army, with a party of soldiers, arrived shortly after, bringing with them the animal, whose renown had already filled the whole city. He excited full as much curiosity in Cairo, as he has since done here, being quite as great a rarity. This will be easily intelligible when the difficulties of the capture, and the immense distance of the journey are taken into consideration, with all the contingencies of men, boats, provisions, cows, and other necessary expenses.

The overjoyed Consul had already made all his preparations for receiving the illustrious stranger. He had, in the first place, secured the services of Hamet Safi Canana, well known for his experience and skill in the care and management of animals. A commodious apartment had then been fitted up in the court-yard of the Consul's house, with one door leading out to a bath. As the winter would have to be passed in Cairo, proper means were employed for making this a warm, or tepid bath. Here then our hippopotamus lived, "the observed of all observers," drinking so many gallons of milk a day (never less than twenty or thirty quarts) that he soon produced a scarcity of that article in Cairo. Nor will this be so much a matter of surprise, when it is considered that they do not understand there the excellent methods of manufacturing enough milk to answer any demand, which obtains with us in London, where such an event as a scarcity of milk was never known by the oldest inhabitant.

Meanwhile active preparations were making for his arrival in Alexandria, to be shipped on board the Ripon steamer. The vessel was furnished with a house on the main-deck,

opening by steps down into a tank in the hold, containing four hundred gallons of water. It had been built and fitted up at Southampton from a plan furnished by Mr. Mitchell, Secretary of the Zoological Gardens in the Regent's Park, to whose energies and foresight we are indebted for the safe possession of this grotesque, good-tempered and unique monster. The tank, by various arrangements, they contrived to fill with fresh water every other day. A large quantity was taken on board in casks; a fresh supply at Malta; and, besides this, which was by no means enough, they made use of the condensed water of the engines, which amounted to upwards of three hundred gallons per day. As there are some hippopotami who enjoy the sea on certain coasts of the world, it is not improbable but our friend would soon have got used to sea-water; but Mr. Mitchell was determined to run no risks, prudently considering that, in the first place, the strength of the salt-water, to one whose mother had been accustomed, and her ancestors for generations, to the mild streams of Nilus, might disagree with "young pickle;" and secondly, if he chanced to take to it amazingly, how would he bear the change when he arrived at his mansion in the Regent's Park. Fresh water, therefore, was provided for his bath every other day throughout the voyage.

The British Consul began to prepare for the departure of his noble guest at the end of April; and in the early part of May, the Consul took an affectionate leave of him, and would have embraced him, but that the extraordinary girth of his body rendered such a demonstration impossible.

So, our hippopotamus departed from Grand Cairo in a large padded cart. He had refused a very nice horse-box which the Consul had provided for him. Some feeling about his dignity, we suppose; though Hamet Safi Canana considered the objection arose from a certain care of his skin, which might have got a little chafe or hard rub in the horse-box. It was a lesson to Mr. Murray for life. No effort, of course, was made to compel the great personage to enter this machine, because, it is one of Hamet's principles of management never to irritate an animal—always to keep him in good temper—never directly and immediately to thwart his will in anything that is not injurious, impracticable, or particularly unreasonable. Very delightful all this! Who would not be a hippopotamus? Who that was not Cæsar, would not wish to be Pompey?

On arriving at Alexandria, full ten thousand people rushed out into the streets to see our hippopotamus pass. If no one had ever seen the amphibious prodigy in Cairo, it is not to be wondered at that the mental condition of Alexandria was in the same lamentable degree of darkness.

The crowd was so great, that the British Consul (whose feelings had so mastered him

on taking leave of his guest, that he had been obliged to follow the carriage) was under the necessity of applying to the Governor of Alexandria for an escort of troops. This was forthwith granted, and down they came galloping along the streets of Alexandria, with waving scimitars! It was well the hippopotamus did not see them from his padded cart, where he lay asleep—it might have caused a little misunderstanding.

Order being restored, and a great lane made in the crowd, Hamet Safi Cannana commenced the gradual and delicate process of awaking the great personage. In the course of an hour or so, during which time the escort of soldiers all "stood attention," the excited feelings of the anxious lane of population were gratified by the sight of the Arab ceremoniously advancing, in gentleman-usher fashion, while close behind him slowly lounged the hippopotamus.

He embarked on board the Ripon, where he was soon joined by his Excellency General Jung Bahadoor Ranajee, and the Nepaulese princes, his brothers. These latter personages would have been great objects of attraction under any other circumstances; but what could stand against such a rival as the occupant of the great house and bath on the main-deck?

During the voyage, "our fat friend" attached himself yet more strongly to his attendant and interpreter, Hamet; indeed, the devotion to his person which this assiduous and thoughtful person had manifested from his first promotion to the office, had been of a kind to secure such a result from any one at all accessible to kindly affections. Hamet had commenced by sleeping side-by-side with his charge in the house at Cairo, and adopted the same arrangement for the night during the first week of the voyage to England. Finding, however, as the weather grew warmer, and the hippopotamus bigger and bigger, that this was attended with some inconvenience, Hamet had a hammock slung from the beams immediately over the place where he used to sleep—in fact, just over his side of the bed—by which means he was raised two or three feet above his usual position. Into this hammock got Hamet, and having assured the hippopotamus, both by his voice, and by extending one arm over the side so as to touch him, that he was there as usual at his side, and "all was right," he presently fell asleep. How long he slept Hamet does not know, but he was awake by the sensation of a jerk and a hoist, and found himself lying on the bed in his old place, close beside our fat friend. Hamet tried the experiment once more; but the same thing again occurred. No sooner was he asleep than the hippopotamus got up—raised his broad nose beneath the heaviest part of the hammock that swung lowest, and by an easy and adroit toss, pitched Hamet clean out. After this, Hamet, acting on his rule of never thwarting

his charge in anything reasonable, abandoned the attempt of a separate bed, and took up his nightly quarters by his side as before.

As for the voyage, it was passed pleasantly enough by the most important of the illustrious strangers on board. His Excellency the Nepaulese ambassador, together with the prince his brother, were uncommonly seasick; but as for our fat friend, he enjoyed himself all the way. He liked his bath, for which there was no lack of fresh water supplies, and his provisions were equally satisfactory. Two cows and ten goats had been taken on board for his sole use and service; these, however, not being found sufficient for a "growing youth," the ship's cow was consecrated for the use of his table; and this addition, together with we forget how many dozen sacks of Indian corn meal, enabled him to reach our shores in excellent health and spirits.

A word as to the title of "river-horse," when taken in conjunction with his personal appearance, his habits, and his diet. The hippopotamus has nothing in common with the horse; he seems to us rather an aquatic pig, or a four-footed land porpoise. In fact, he appears to partake of the wild boar, the bull, and the porpoise—the latter predominating at present, but when he gets his tusks, we much fear there will be an alteration in his manners for the worse. As to his eventual size, the prospect is alarming. He is at present only seven months old, and he will continue growing till he is fifteen years of age. What news for the London cows!

Arrived at Southampton, our hippopotamus, house and all, with Hamet Safi Cannana at his side, was hoisted up at the vessel's yard-arm, and gradually lowered upon a great iron truck, which was then wheeled off to the railway station. The whole concern was deposited in the special carriage of a special train, and on this he travelled from Southampton to London. He arrived at the Zoological Gardens in the Regent's Park at ten o'clock at night, and found Lord Brougham, Professor Owen, Thomas Bell, and Mr. Mitchell all waiting (we believe they were not in court dresses) to receive him. They were presently joined by the learned Editor of the "Annals of Natural History," the learned Editor of the "Zoologist," in company with Mr. Van Voerst, and several artists who made sketches by the light of a lanthorn. Doyle, Wolff, Harrison Weir, Foster, (for the "Illustrated London News") and others, were all in assiduous attendance, watchful of every varying outline. The illustrious stranger descended from his carriage, and entered the gardens. First went the lanthorn; then Hamet Safi Cannana with a bag of dates slung over his shoulder; and after him slowly lounged our uncouth treasure, with a prodigy of a grin such as he alone can give, expressive of his humorous sense of all the honours and luxuries that awaited him.

We understand it is a cabinet secret, that

the Pasha has ordered a fresh party of hunting soldiers to proceed up the river, as far as the White Nile, to search for another young hippopotamus—a female! We may, therefore, look forward to the unrivalled fame of possessing a royal pair—“sure such a pair” as were never yet seen in any collection of Natural History—to say nothing of the chance of a progeny. These are national questions, —why should they be cabinet secrets?

We are certainly a strange people—we English. Our indefatigable energies and matchless wealth often exhibit themselves in eccentric fancies. No wonder, foreigners—philosophers and all—are so much puzzled what to make of us. They point to the unaided efforts of a Waghorn, and to his widow's pension-mite—and then they point to our hippopotamus! Truly, it is not easy to reply to the inference, and impossible to evade it. We have had a Chaucer and a Milton, a Hobbes, and a Newton, a Watt and a Winor; and we have had other great poets, and philosophers, and machinists, and men of learning and science, and have several of each now living among us: but any amount of a people's anxious interest, which the present state of popular education induces, is very limited indeed compared to that which is felt by all classes for a Tom Thumb, a Jim Crow, or our present Idol. Howbeit, as the last is really a great improvement on the two former fascinating exotics, it is to be hoped that we shall, in course of time, more habitually display some kind of discrimination in the objects of our devotion.

CHIPS.

RAILWAY COMFORT

In all the utilities of Railway travelling, England is supreme. Speed, represented by from thirty to sixty miles an hour, “just (to quote the words of Lubin Log) as the passenger pleases;” punctuality, that admits of the setting of watches by arrivals and departures; and safety, exemplified by the loss of no human life from any other cause than the carelessness of the sufferer, during the past two years, are proofs of British supremacy in locomotion. Yet—by a strange perversity not easily accounted for in a country known all over the rest of the world as the Kingdom of Comfort—the point apparently aimed at is to render the transit of the human frame as uncomfortable an operation as possible. Every elegance and luxury is bestowed upon waiting-rooms where extreme punctuality renders it unnecessary for people to wait; and upon refreshment-rooms in which travellers are allowed ten minutes to scald themselves with boiling coffee, or to choke themselves with impossible pork-pies; but carriages in which travellers have to be cramped up, often for hours, and sometimes for whole days, are apparently contrived to inflict as much torture as prac-

tically. In order to force those who cannot squeeze into the first-class, second and third-class carriages are only one and the same removed from cattle pens. And that these should not be too delicious, the humbler sort of passengers will not easily forget that a director once proposed to hire a number of chimney-sweeps to render—what, with the best company, are nothing better than locomotive hutches—perfectly untenable.

They manage these things better abroad. There is a detestable class-feeling—a contemptible purse-worship, which rigidly separates people according to their pecuniary circumstances; which metes out the smallest privilege or comfort at a price—does not exist to prevent the managers of railways from making the journeys of their customers and supporters as pleasant as possible. On the French railroads, (setting aside the question that the fares are much lower,) the second-class carriages are comfortably cushioned, having pretty silk blinds to keep out the sun; windows that really are capable of being pulled up and down, besides hooks for hats,—a great convenience on a journey. For the blinds, indeed, an enterprising blind-maker in France agreed to furnish them to one railway company, gratis, on condition that they used no other for a certain number of years, and allowed him to make them the medium of his advertisements. Talk of advertising vans—can they be compared to the brilliant notion of advertising railways—trains of puffs, wafting the genius of inventors faster than the wind! We throw out the hint to the “advertising world” in this country.

In winter, even in an English first-class carriage, there is no protection against frost and damp; but in nearly all the foreign railways, no sooner does the winter set in than the first-class traveller finds the bottom of his carriage provided with a long tin case full of hot water. In the cold months, masses of woollen cloth and railway wrappers, are seen shaking in the corners of first-class English carriages with shivering, comfortless, human beings inside them, despairing of any sort of warmth whatever.

Comfort in railway travelling is, however, brought to the highest perfection in Germany. An esteemed correspondent at Vienna writes to us on this subject in the following terms:—On the “*Wiener-Neustädter Eisenbahn*,” (the Vienna and Neustadt Railway), the carriages of the first, second, and third-class may each be said to resemble a spacious room, furnished with seats, something like a concert-room, and having a broad passage down the middle. Thus one may get up, walk towards a friend a dozen seats off; or, if you require more air or a change of position, you will find the backs of the seats shift so as to enable you to turn round, and sit down the other way without inconvenience to any one. I need not say that on this railway there is no struggle for “that corner place with your back

to the engine," which is a desirable object throughout our three kingdoms,—for every place is a corner place, having light and air, and you may sit which way you please.

Attached to each carriage, and going the whole length of the train, is a broad wooden plank, along which the guards are constantly walking, so that the slightest thing amiss could scarcely occur without their perceiving it immediately. Just before the arrival of the train at any station, one of these functionaries—for there are several—quietly opens the door, and, instead of calling out "I say, you sir!" or "Come, marm, your ticket, I can't be a waitin' here all day," as we have heard in England, walks without any hurry or bustle down the division from one end to the other, repeating, in a clear and ordinary tone of voice the name of the station which is being approached, and requiring the tickets of such passengers as are going to alight there. With such an arrangement—giving ample time for the gathering together of coats, canes, umbrellas, reticules, and so forth—even Martha Struggles herself might have got through a journey unscathed and "unflustered."

The admirable arrangement displayed in America, as well as in Germany, for receiving tickets without that delay which has been so much complained of in England, cannot be sufficiently applauded. When however delay is unavoidable, to receive the mails, or from some other cause, no sooner does the train stop, than a waiter, or sometimes a pretty waitress—who is more likely to find customers—trips up the steps with a tray laden with iced water and lemonade, glasses of light wine or *maistrank*. (a kind of Burridge-cup,) biscuits, cakes, and other edible nick-nacks, so that the passenger may take some slight refreshment without getting down.

In the railway from Bonn to Cologne, on the Rhine, they have pushed convenience yet farther, having provided the first-class carriages with tables, so that during the journey, one pressed for time may write letters with the greatest ease; pens and a portable inkstand being all that is necessary for that purpose. Paper may be had at the station.

It has been also suggested on several of the continental railways, that such travellers as chose to pay for the space, might have a regular bed; a great convenience for ladies or invalids, unable to bear the fatigue of a journey of many hours by night.

These hints might be followed with very great advantage to the shareholders in particular and to the public in general, by the directors of British lines.

IMPROVING A BULL.

THE highly respectable old lady who addressed us on a former occasion, has obliged us with another communication, on a most important subject:—

HAME.—You would have heard before, but was a mad bull, which being tossed

might at my age be very ill-convenient. But that's nothing to what I'm going to tell you. Only to think of the power of horns! Bulls tosses very high, I've heard, but did you ever hear, Mr. Conductor, of a mad bull tossing a widow and six children across the sea, half over the side of the round world, from our Borough to Australia? Well you may stare, but it's a fact!

"The bull run right at me, full butt, and so I grasped my umbrella with both hands and ran to where the shops was—drat the boys, how they did screech about one!—and it was cold water, which I doesn't often drink, by which means I came to in a pastry-cook's. The name was Bezzle, I see it on a bag while she was putting in gingerbread nuts for Mrs. Jenks's baby, which I bought not to be under obligation for stepping in.

"Gracious mussy, Mrs. Bezzle," says I, 'why wasn't I killed? What ever is the reason of them bulls?'

"Says she, 'It's market day.'

"Smithfield!" says I.

"Says Mrs. Bezzle, 'Mum, all the abuse and outcry against Smithfield is very narrow-minded.'

"Says I, 'How so?'

"Says she, 'It don't consider shop-keepers. When a bull takes a line of street, it drives the people into the shops on either side, and they make purchases for fear of being gored.'

"'Heighty teighty, mum,' I says, 'you are alluding to my ginger-bread.'

"Says she, 'I scorn allusions. It's a rule. Whether it's bulls or thunderstorms, or what it is we look to, we respects whatever sends us customers.'

"Says I, 'Mrs. Bezzle, you astonish me. Where's your family trade?'

"Says she, 'There are too many traders. Where one of us earns meat, three of us only earn potatoes.'

"'Emigrate,' says I.

"Says she, 'That's very well, but then,' says she, 'in such a move it's hard to know which way to put one's foot, and when a step's made, if it's a wrong one, it's not easy to retrace it.'

"'Spirited trading—' says I.

"'Ah!' says she, cutting me short rudely; but I forgive her, owing to her feelings. 'Take Chandlery, within seven minutes of this door, mum. One man sells soap under cost price, and other things at profit, hoping to bring people to his shop for soap, and then get them to buy other articles. But his neighbour sells cheap herrings in the same way; another sacrifices pickles, and another makes light of the candle business. What's the result? Folks buy in the cheapest market; go for soap to the man who sells that at the ruin prices, go for herrings to his neighbour, go down the other street for pickles, and get candles over the way.'

"Well," says I, 'that's an illustration of

"Cheapness, but," says I, "it's dishonest. A fair trader has no right to sell an article at less than its first cost."

"No right!" says she. "And I dessay he thinks he has no right to starve. It's very hard to judge. The young tradesman, with his little capital and knowledge of a trade, has got his sweetheart and his ambition. He must wedge into society somehow, and he begins with the sharp end."

"But," says I, "it isn't sharp, Mrs. Bezzle."

"So she shakes her head; says she, 'I'll give you an example which is true, and one out of a many.'"

"I once knew an excellent young man who died of cholera. He left a widow and three little children. After deducting all expenses for her husband's burial, the widow found that she possessed a hundred pounds. With fear and trembling, she embarked this money, in an effort to support herself. With it she fitted up a little shop, and had begun to earn a livelihood, when—"

"Well, Mrs. Bezzle, what prevented her?"

"—"An empty house close by was taken by another person following her trade. Immediately her receipts diminished. One cannot live except by bread that can be got out of a neighbour's cupboard. The widow and the children have already lost eighty pounds, have only twenty left; their house is taken by the year, and so they still are in it; and the poor lost woman cannot be comforted. Her hope is gone."

"Heigh, dear," says I, "it wasn't so in my young days. I believe this is owing to over-population," says I.

"Well," says Mrs. Bezzle, perking up. "It's cruel to blame us for our struggles. What if I have got nine, and six on 'em dependant on penny tarts and gingerbread for meat, drink, washing, and lodging, are they to be thrown in my teeth?"

"Emigrate," says I, six times more pointedly than before.

"Where to?" says she, "and how? Who can tell me that?"

"Go and lay your case before Parson Pullaway; he knows our M.P., and he knows all about colonial places. Hasn't his brother's wife's first cousin got one of them? He is Sub-under-Secretary to Lord Oxfordmixture, who has all the emigration settlements under his thumb."

"I'll think about it," says Mrs. Bezzle, quite struck-like,—for down came the scales on the counter like a shot, and the whole ounce of sugar-candy jumped into the little boy's apron of its own accord. He had come for two penn'orth on pretence of a cough. Besides, didn't Mr. Pullaway christen seven out of my nine children, and not a penny of the fees owing for?"

"The last word as ever I spoke to Mrs. Bezzle was, 'Emigrate!'"

"Well, who would have thought it? Next week Mrs. Bezzle's business was to sell. The week after, it was sold. The week after that, Mrs. Bezzle and her son Tom, and Tom's wife, and Tom's brother Sam, and Mrs. Bezzle's eldest daughter, and little James, and Sarah, and Mary Ann, and the two little urchins, were on board a ship, at Liverpool, bound for Port Philip. That's a year, come Michaelmas, ago."

"But, drat 'em, why didn't they pay the postage? Two-and-two is a consideration when butter (best fresh) is a rising a penny a pound every week. Not but what I was glad to hear from Mrs. Bezzle. Tom and his wife, and his brother Sam, are settled in a 'run,' and though there was some words I couldn't make out, I dare say they didn't explain how a 'run' could be a settlement. 'Quite the reverse!' as Mrs. Jenks said—(I have made it up with her, though she did insinuate the gingerbread-nuts the mad bull made me buy gave her baby the cholera; and, bless it! it was only the teeth after all). Mrs. Bezzle has settled herself in the mutton-pie and cheese-cake line, and has no fear of opposition; and as in Port Philip there is good digestions and plenty of 'em, pies is popular. Prices, too, is better,—penny pies being tuppence. James is on the 'run,' along with his eldest brother. Sarah an't married yet,—for out of six offers, a young gal of seventeen has a right to be puzzled for six months or so, and more dropping in every week. Mary Anne is family governess to a rich copper-man, with plenty of stock—I suppose by that he is in the soup line. However, all is doing well."

"Well, Mr. Conductor, it was all owing to that bull, wasn't it? If I hadn't improved that solemn occasion, where would Mrs. Bezzle, and four out of six of her helpless offspring have been by this time?—why, in the workhouse."

LUNGS FOR LONDON.

TRAVELLERS describe nothing to be so much dreaded by the people of the East as a flight of locusts, except indeed a settlement of locusts. When those devouring insects alight on the fields and pastures, they begin from a centre composed of myriads, and eat up everything green within radii extending over not acres, but miles. They fall upon gardens and leave them deserts; and upon a field they do not permit so much as a blade of grass to indicate where grass was.

Although, in fact, these little devastators do not trouble us; in effect, Londoners are the victims of equally efficient destroyers of their green places.

Bricklayers are spreading the webs and meshes of houses with such fearful rapidity in every direction, that the people are being gradually confined within narrow prisons, only open at the top for the admission of what would be air if it were not smothered. Suburban open spaces are being entombed in

brick-and-mortar mausoleums for the suffocation as well as for the accommodation of an increasing populace; who, if they wish to get breath, can find nowhere to draw it from, short of a long journey. The Lungs of London have undergone congestion, and even their cells are underground.

Of all the neighbourhoods of which London is a collection, Finsbury and Islington have suffered most. Within the recollection of middle-aged memories, Clerkenwell Green was of the right colour; Moorfields, Spasfields, and the East India Company's Fields, were adorned with grass; and he must be young indeed who cannot remember cricket-playing in White Conduit, Canonbury, Shepherd and Shepherdess, Rhodes, and Laycock's, besides countless acres of other "Fields," which are now blotted out from the face of the Country to become Town, in the densest sense of the word. Thanks to the window tax and the bricklayer, fresh air will be thoroughly bricked out, unless a vigorous effort be made to stop the invasion of burnt clay and water.

Mr. Lloyd, a gentleman of Islington who dreamt a few years since that he lived in the country, but has recently awoke to the conviction that his once suburban residence has been completely incorporated with the town, determined, if possible, to arrest the invasion of habitations. His plan is to dam out the flood of encroachment by emparking a large space at Islington for the behoof of the Borough of Finsbury, which contains a population of three hundred thousand panting souls. This space is, according to his plan, that which surrounds the village of Highbury, one of the highest and airiest suburbs of London. It is within two miles of the City, and might be rendered accessible to Victoria Park in the east, and to Regent's Park in the west. The proposed enclosure will take in a good portion of the course of the New River, and a large quantity of ground so well and picturesquely wooded, that a paling and a name are only requisite to convert it at once into a park. In shape the enclosure would be a triangle, the base of which is the Holloway Road and Hopping Lane, and the apex, a point at which the Seven Sisters' Road joins the Green Lanes. The extent of these grounds is about three hundred acres, and the total cost of securing them to the public is not more than one hundred and fifty thousand pounds.

Mr. Lloyd has been vigorously agitating this matter for more than nine years, and yet—such is the pace at which the public are apt to move in affairs in which the public alone is itself concerned—it is only lately that he has obtained an attentive hearing for his plan.

A prospect of success appears now, however, to dawn. Public meetings have been lately held in every district concerned, in which every sort of co-operation has been promised.

A single difficulty seems to stand in the way; one little thing needful is only required to turn the project into an accomplished fact, and that is, the money,—one hundred and fifty thousand pounds merely. Mr. Lloyd and his coadjutors have, we believe, mentioned their little difficulty at the Treasury, and are awaiting an answer. This state of things would form a curious problem for De Morgan, Quetelet, or others learned in the doctrine of probabilities: given, official routine multiplied by systematic delay, what are the chances of the cash required within the present generation?

A park for Finsbury is too urgent a demand for a dense population to allow of much time being wasted in knocking at the door of the Treasury. The public must bestir themselves in the scheme, and it will soon be accomplished and carried out.

THE LOVE OF NATURE.

WHERE the green banners of the forest float,
Where, from the Sun's imperial domain,
Armour'd in gold, attentive to the note
Of piping birds, the sturdy trees remain,
Those never-angered armies; where the plain
Boasts to the day its bosom ornaments
Of corn and fruitage; where the low refrain
Of seaside music song on song invents,
Laden with placid thought, whereto the heart
assents,
Often I wander. Nor does the light Noon,
Garrulous to man's eye, declaring all
That Morning pale (watched by her spectre moon,
Or solemn Vesper, seated near the pall
Of Day) holds unrevealed; nor does the fall
Of curtain on our human pantomime,
The sweeping by of Day's black funeral
Through Night's awe-stricken realms, with tread
sublime,
Chiefly delight my heart; beauty pervades all time.
Morning: the Day is innocent, and weeps;
Noon: she is wedded and enjoys the Earth;
Evening: wearied of the world she sleeps.
Night watches till another Day has birth.
The innocence of Morning, and the mirth
Of Noon, the holy calm of Eventide,
The watching while Day is not, there is dearth
Of joy within his soul who hath not cried:
"I welcome all, O God,—share all Thou wilt
provide!"

THE PRESERVATION OF LIFE FROM SHIPWRECK.

It is a difficult matter to reconcile with the sympathy, which it is well-known the sufferings of the unfortunate always receive in England, the apparent apathy which exists among the public, on a subject so important as the preservation of Life from Shipwreck. Several pleas in extenuation have been urged by those most interested. In the first place, there is that natural hardihood and contempt of danger in the English sailor, which it is, occasionally, impossible to tame down to any—

thing like prudence and forethought. This indomitable spirit of emulation and daring, is found to be the greatest enemy to the adoption of any of those appliances which science has rendered available. The Deal boatman trusts his life in precisely the same sort of craft that his father, and his father's father, did before him. Confident in, and proud of, the skill which he has inherited from them, he scorns to tarnish, as he falsely reasons, his name by the habitual use of buoy or belt, lest those of his comrades who are firmly entrenched behind their ancient prejudices, should set him down as faint-hearted, and unworthy the honourable name of a "Deal boatman."

The still more inaccessible Scotch fisherman, with his four thousand piscatory brethren, "shoots his nets" on the exposed coast of Caithness, in the open boat used by his ancestors, notwithstanding the evil consequences which have often ensued. The latest example of the ill effects of this tenacity of opinion occurred two years since, when a fearful gale, which did more or less damage along the whole eastern face of England and Scotland, wrecked and damaged a hundred and twenty-four of their boats, drowned a hundred men, and occasioned a loss to the fishing community of above seven thousand pounds, which, although a large sum, will not bear any comparison with the misery and destitution thus entailed upon the widows and orphans of the lost.

It is impossible to say how many of these unfortunate men might have been saved, had they had proper harbours to run for, with lights and beacons to warn, and life-boats to afford assistance; proper boats to keep the sea, and buoys and belts, as a last resource; but surely we are warranted in thinking that fully one half would have been left among us.

In both these examples, it must be acknowledged that it would be a useless effort to attempt any sudden innovations on these deeply-seated prejudices; the only thing that can be done, in either case, is to let the new principle quietly work of itself. Let us find a life-belt for the Deal boatman, which he can wear and work in, until in it he recognises his best friend; let the Scotch fisherman have ocular demonstration that the "model" boat prosecutes the fishery with equal success, and far greater safety and comfort in bad weather, and we shall soon have a different system of things.

In the course of each year an average of something like six hundred ship disasters occur on the shores of this kingdom alone,—some wrecked through stress of weather; some by carelessness, and other disgraceful causes; some through mistaking lights, or having been lured to destruction by useless eyes; some through actual rottenness of timber; some dashed to pieces on the very rock for which they were anxiously looking half a mile

further a-head, where it ought to have been, according to the chart; and some from other causes, more or less easily averted. These losses are attended by the almost incredible destruction of a thousand lives, and the value of tens of thousands of pounds sterling.

The shocking wreck of the Orion—not, we say with sorrow, the last occurrence of the kind—startled, for a moment, the public from their culpable apathy. But the shock passed away; and attention to this subject is gradually subsiding into the usual indifference. The details of this catastrophe ought to have had a more permanent effect on the public mind. In the moment of danger, the gear of the boats was so imperfect, that these could only be released from their davits by capsizing their human cargoes into the deep. Even when they righted, they immediately filled, for the plug-holes were actually unstopped. The most ordinary precautions for saving life were not at hand, as precautions. The hen-coops, barrels, seats, combings, and other means of escape, by which many were saved, were purely accidental life-preservers.

Every English ship, before leaving port, should be submitted to a supervising power similar to the inspection that emigrant ships undergo, in order that it should be certified that means, both simple and efficacious, for the safety of the passengers and crew, exist on board—boats, belts, mattresses, rafts; everything, in short, that can add to the security of those about to "go down to the sea in ships."

That this sort of supervision is effectual, is proved by the few disasters which happen to the vessels of the Royal Navy. In these ships, everything is not only kept in its proper place, to be ready when wanted, but each man is constantly exercised in what he is to do with it when no danger is apprehended, that he may be in a state of prompt efficiency when it is. The Commander-in-Chief of the Mediterranean squadron, can step on board any one of his ships in the middle of the night; and although three-fourths of its crew are asleep in their hammocks, he can, by ordering the "beat to quarters," make sure of every man being at his post in seven minutes, ready for action or for any sudden disaster. This sort of discipline it is which is so much required in the merchant navy. In case of a ship striking, a dozen men rush to do one thing,—perhaps to release a boat from one of her davits,—and, consequently, swamp the boat, by leaving the stern rope untouched. Captain Basil Hall, in his "Fragments of Voyages and Travels," describes the vigilant precaution daily made even against the loss of one life. To each life-buoy there is as regular a "service" as to any other part or apparatus of the ship. He says:—

"On the top of the mast is fixed a port-fire, calculated to burn, I think, twenty minutes

of half-an-hour; this is ignited most ingeniously by the same process which lets the buoy down into the water. So that a man falling overboard at night, is directed to the buoy by the blaze on the top of its pole or mast, and the boat sent to rescue him also knows in what direction to pull. Even supposing, however, the man not to have gained the life-buoy, it is clear that, if above the surface at all, he must be somewhere in that neighbourhood; and if he shall have gone down, it is still some satisfaction, by recovering the buoy, to ascertain that the poor wretch is not left to perish by inches. The method by which this excellent invention is attached to the ship, and dropped into the water in a single instant, is perhaps not the least ingenious part of the contrivance. The buoy is generally fixed amidships over the stern, where it is held securely in its place by being strung, or threaded, as it were, on two strong perpendicular iron rods fixed to the taffail, and inserted in holes piercing the framework of the buoy. The apparatus is kept in its place by what is called a slip-stopper, a sort of catch-bolt or detent, which can be unlocked at pleasure, by merely pulling a trigger. Upon withdrawing the stopper, the whole machine slips along the rods, and falls at once into the ship's wake. The trigger which unlocks the slip-stopper is furnished with a lanyard, passing through a hole in the stern, and having at its inner end a large knob, marked 'Life-Buoy'; this alone is used in the day-time. Close at hand is another wooden knob, marked 'Lock,' fastened to the end of a line fixed to the trigger of a gun-lock primed with powder: and so arranged, that when the line is pulled, the port-fire is instantly ignited, while, at the same moment, the life-buoy descends, and floats merrily away, blazing like a light-house. It would surely be an improvement to have both these operations always performed simultaneously, that is, by one pull of the string. The port-fire would thus be lighted in every case of letting go the buoy; and I suspect, the smoke in the day-time would often be as useful in guiding the boat, as the blaze always is at night. The gunner who has charge of the life-buoy lock sees it freshly and carefully primed every evening at quarters, of which he makes a report to the captain. In the morning the priming is taken out, and the lock uncocked. During the night a man is always stationed at this part of the ship, and every half-hour, when the bell strikes, he calls out 'Life-buoy!' to show that he is awake and at his post, exactly in the same manner as the lookout-men abaft, on the beam, and forward, call out 'Starboard quarter!' 'Starboard gangway!' 'Starboard bow!' and so on, completely round the ship, to prove that they are not napping."

We should like to hear of Government experimenting with rockets and mortars, with a

view to their improvement. Often the safety of a whole ship's company has depended upon the strength of a light cord, attached to a rocket, which has been lying in store for years; often it has happened that this very cord has been just a few feet too short! or has snapped, or has got entangled, or something else equally simple, but equally fatal. Let us look also to our quasi life-boats, some so heavy that they cannot be launched, or so dangerous as to drown their own crews—some constructed one way, some another—none on any recognised and universal principle. We are very proud of our name of Englishmen, and lay the flattering unction to our soul, that we are a highly civilised and reasonable community; but whilst we grow magniloquent in praises of our country and her commerce, we forget that we owe it all to the poor Jack Tar, for whose life and comfort we don't seem to care a fig. Else why have these inquiries not been before instituted? What is the use of our Trinity Boards, and Ballast Boards, and Light-house Boards, and all other Boards, if the seaman is not to know one light from another when he sees it, or if it is to be placed so that he cannot see it? What is the use of our keeping up a Hydrographic department, at an expense little short of thirty thousand a-year, if the surveys and charts, and valuable data, the result of its labours, are to be so little appreciated? The truth is, that the masters of many of the mercantile marine are incapable of taking advantage of them, and of other improvements in nautical science, from incompetence. We trust, however, that the bill intended to remedy that defect, lately introduced by the Ministry into the House of Commons, will, if passed, have the desired object. Although it has been abandoned "at this late period of the session" out of respect to the approaching 12th of August and 1st of September, we trust it will be taken up again soon after the next meeting of Parliament.

WINGED TELEGRAPHS.

MAGNETIC Electricity for telegraphic purposes has nearly superseded pigeons. Till very recently a regular "service" of Carrier Pigeons existed between London and Paris, for the quick conveyance of such intelligence as was likely to affect the funds. The French capital was the focus of the system, in exemplification of the adage that "all roads lead to Paris," and pigeon expresses branched off in all directions from that city even to St. Petersburg. Relays of them are still kept up between Paris and Madrid, besides a few other places. The most celebrated relays of winged messengers were those which bore intelligence between Antwerp, Brussels, and Paris. In the former city a society of pigeon-fanciers, for amusement and emulation, keeps up an establishment of them. Their doings are amusingly chronicled in Kohl's last book of *Travels, Reisen in den Niederlanden*.

Having been invited to join some members of the Society of Antwerp Pigeon Fanciers, he wended his way about five o'clock one morning through the silent streets of the ancient city. A few members of the association, he says, who directed the expedition, were followed by servants carrying two flat baskets, in which the pigeons, about to be dispatched, were carefully deposited. As we proceeded along, my companions related to me some particulars concerning the carrier pigeons, or "*pigeons voyageurs*," as these winged messengers are designated. The carriers are a peculiar race of pigeons endowed with powers of memory and observation which enable them to find their way to any place by a course along which they have once flown. Every kind of pigeon is not capable of being taught to do this. Of the methods adopted by the Antwerp association for training and teaching these carriers, I learnt the following particulars.

Supposing a dispatch of pigeons is to be sent off from Antwerp to Brussels or Paris, the birds are kept for some time at the place of arrival or terminus, and during that interval are plentifully fed and carefully tended. By little excursive flights, taken day by day, they are gradually familiarised with different parts of the town in which they have been nurtured, and with places in its vicinity. When sufficiently practised in finding their way to short distances, the pigeons are conveyed to a station some leagues from their dove-cote. Here they are kept for a time without food, and then set to flight. On taking wing, they rapidly soar to a vast height, scanning the line of the horizon to discern the church spires, or other lofty points which enable them to distinguish their home. Some of the less intelligent birds lose their way, and are seen no more. Those who return home (to Paris, or wherever else it may be), are again plentifully fed. Then after a little space of time they are carried in baskets some miles further in the direction of Antwerp; again they are put on a short allowance of food and negligently tended. When the pigeons depart on their next flight, the Parisian church spires have sunk far beneath the horizon; however, they soon succeed in combining that portion of the route with which they are acquainted with the part as yet unknown to them. They hover round and round in the air, seeking to catch one or other thread that is to guide them through the labyrinth. Some find it; others do not.

In this manner the carrier pigeons are practised bit by bit along the whole distance between Paris and Antwerp. They attentively observe, or study, and learn by heart, each conspicuous object which serves them as a land-mark on the way. It is usual to exercise particular pigeons between the two cities, which it is wished to connect by this sort of postal communication; and it is neces-

sary to have a certain number for going, and others for returning. After the birds have been accustomed to inhabit a certain district, and to travel by a particular route, it is not found easy to divert them from their wonted course, and to make them available in any other direction.

My friends, the members of the Antwerp Society, assured me that their pigeons had frequently flown from Paris to Antwerp in six or seven hours; consequently in a much shorter time than that in which the same journey is performed by the railway train. By bird's flight, the distance between the two cities is forty miles (German*), and therefore it follows that these carrier pigeons must travel at the rate of from twenty to thirty English miles an hour. It is scarcely conceivable that they should possess the strength of wing and vigour of lungs requisite for such a flight; and it is no uninfrequent occurrence for several of them to die on arriving at their journey's end. In stormy weather the loss of two-thirds of the birds dispatched on such a long flight, is a disaster always to be counted on. It is, therefore, usual to send off a whole flock, all bearing the same intelligence, so as to ensure the chance of one at least reaching its destination.

The pigeon expedition which I saw dispatched from Antwerp, consisted of about thirty birds. The point of departure was a somewhat elevated site in the outskirts of the city. A spot like this is always made choice of, lest the pigeons, on first taking flight, should lose themselves amidst the house-tops and church-spires of the city with which they are unacquainted; and by having the open country before them, they are enabled to trace out their own land-marks. When the pigeons are to be sent off on lengthened journeys, it is usual to convey them to the point of departure at a very early hour in the morning:—by this means they are dispatched in quietude, unmolested by an assemblage of curious gazers, and they have the light of a whole day before them for their journey. Carrier pigeons do not pursue their flight after night-fall, being then precluded by the darkness from seeing the surrounding country with sufficient distinctness to enable them to discern their resting-places, or stations. In the obscurity of night the whole flock might light on strange dove-cotes, and be captured; an accident which would occasion the total failure of a postal expedition, for the few pigeons who might escape capture, would, on the return of morning, be bewildered, and unable to recombine their plan of route.

Pigeons are not suited for postal communication between places so remote one from another that the journey cannot be completed in a single day. If it can be accomplished in one flight, so much the better. Antwerp and Paris are, I believe,

* The German mile includes nearly three and a half English miles.

the extreme points of distance within which carrier pigeons are capable of journeying with certainty.

Herr Kohl gives no account of these stations or stages. We once saw one at Montrieul, the first station beyond Dover, towards Paris. The town stands on a high eminence, and is well adapted for the purpose. The cote was on the roof of a *café*. It was a square apartment with a flat ceiling, in which was cut a small door or trap: on the inside of this was fixed a small bell. If a Doyer pigeon had alighted on the trap, the bell would have rung, and called the attention of an attendant always in waiting. The pigeon would have been secured, the dispatch taken from under its wing, and the messenger put into its cage. In a twinkling the cyphered paper would be fastened under the wing of the Beauvais or Amiens pigeon, and it would be sent off. On arriving at its destination, the same formula would be gone through, and the Paris pigeon would take the dispatch to its destination. Although several pigeons, even in fine weather, are entrusted with the same message, two seldom arrive at the common destination at the same time, so that at each place the operation we have described is frequently repeated, in order that at least one of many dispatches may be certain of arriving at the destination.

These establishments were costly. Besides the great number of pigeons necessary to be kept at each station, some of the single birds were valuable. Fifty and sixty pounds was sometimes given for a clever pigeon. Those between Dover and Montrieul, and *vice versa*, were among the most valuable, for none but sharp-sighted messengers could find their way across the Channel; few flights were sent away without some members of it being lost.

But to return to the Antwerp pigeons—and to Mr. Kohl. Having, he continues, reached the open, elevated spot before-mentioned, the flat baskets carried by the servants were uncovered, and the little *voyageurs* rapidly winged their way upwards. The intelligence they were to convey to Paris was written in little billets, fastened under their wings. The pigeons I saw sent off had been brought in covered baskets from Paris, and were as yet totally unacquainted with Antwerp and its environs. Their ignorance of the locality was manifest in the wavering uncertainty of their movements when they first took wing. On rising into the air, they gathered closely together, like foreigners in a strange country, and presently they steered their course along the confines of the city, in a direction quite contrary to that of Paris. They then soared upwards, spirally, and after several irregular movements (during which they seemed to be looking for the right way, and hesitating which course to take), they all suddenly darted off to south-west, directing their rapid flight straight to Paris, as if

gladly quitting inhospitable Antwerp, where they had been scantily fed and carelessly tended.

As soon as the birds were fairly out of sight, the pigeon-trainers proceeded homeward, not a little gratified by the conviction that their fleet messengers, with the intelligence they bore under their wings, would outstrip the speed of a railway train which had started some time before them.

To me the most interesting point in the whole scene was the interval (about the space of a quarter of an hour) during which the pigeons wavered to and fro, seeking their way in a state of uncertainty. That appeared to me to be a wonderful manifestation of intelligence on the part of the birds. It is frequently affirmed that the carrier pigeon finds its way without the exercise of intelligence or observation, and merely by the aid of some incomprehensible instinct; but, from my own observations of the Antwerp pigeons, I am convinced that this is a mistake. Another circumstance tending to show that the birds are guided by something more than mere instinct, is, that during foggy weather the employment of carrier pigeons is found to be almost as impracticable as the use of the optical telegraph. But though it is not the practice to dispatch carrier pigeons at times when the atmosphere is very thickly obscured by fog, yet, owing to the keenness and accuracy of the visual power of these birds, which is much more perfect than that of man, they have an advantage over the telegraph. The latter is wholly useless when the atmosphere is only slightly obscured; but carrier pigeons frequently soar quite above the region of mist, and are thus enabled to trace their course without interruption. Stations of carrier pigeons are established in most of the principal towns of Belgium.

The members of the Antwerp pigeon-training society, whom I accompanied on the occasion above described, were citizens of the middle class of society. But in Belgium, pigeon-training has its attractions even for persons of rank and wealth, many of whom are enthusiastic pigeon fanciers; indeed, pigeon-flying is as fashionable an amusement in Belgium as horse racing in England. Prizes, consisting of sums of money as high as sixty thousand francs, are frequently won in matches of pigeons—to say nothing of the betting to which those matches give occasion.

Monthly Supplement of "HOUSEHOLD WORDS,"
Conducted by CHARLES DICKENS.

THE HOUSEHOLD NARRATIVE OF CURRENT EVENTS.

The Number, containing a History of the past month, was
issued with the Magazine.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 20.]

SATURDAY, AUGUST 10, 1850.

[PRICE 2d.]

A DETECTIVE POLICE PARTY.

THE fresh-complexioned, smooth-faced officer, with the strange air of simplicity, began, with a rustic smile, and in a soft, wheedling tone of voice, to relate the Butcher's Story, thus:

"It's just about six years ago, now, since information was given at Scotland Yard of there being extensive robberies of lawns and walks going on, at some wholesale houses in the City. Directions were given for the business being looked into; and Straw, and Fendall, and me, we were all in it."

"When you received your instructions," said we, "you went away, and held a sort of Cabinet Council together?"

The smooth-faced officer coaxingly replied, "Ye-es. Just so. We turned it over among ourselves a good deal. It appeared, when we went into it, that the goods were sold by the receiver extraordinarily cheap—much cheaper than they could have been if they had been honestly come by. The receivers were in the trade, and kept capital shops—establishments of the first respectability—one of 'em at the West End, one down in Westminster. After a lot of watching and inquiry, and this and that among ourselves, we found that the job was managed, and the purchases of the stolen goods made, at a little public-house near Smithfield, down by Saint Bartholomew's; where the Warehouse Porters, who were the thieves, took 'em for that purpose, don't you see? and made appointments to meet the people that went between themselves and the receivers. This public-house was principally used by journeymen butchers from the country, out of place, and in want of situations; so, what did we do, but—ha, ha, ha!—we agreed that I should be dressed up like a butcher myself, and go and live there!"

Never, surely, was a faculty of observation better brought to bear upon a purpose, than that which picked out this officer for the part. Nothing in all creation, could have suited him better. Even while he spoke, he became a greasy, sleepy, shy, good-natured, chuckle-headed, unsuspicious, and confiding young butcher. His very hair seemed to have suet in it, as he made it smooth upon his head, and his fresh complexion to be lubricated by large quantities of animal food.

—"So P—ha, ha, ha!" (always with the confiding snigger of the foolish young butcher) "so, I dressed myself in the regular way, made up a little bundle of clothes, and went to the public-house, and asked if I could have a lodging there? They says, 'yes, you can have a lodging here,' and I got a bedroom, and settled myself down in the tap. There was a number of people about the place, and coming backwards and forwards to the house; and first one says, and then another says, 'Are you from the country, young man?' 'Yes,' I says, 'I am. I'm come out of Northamptonshire, and I'm quite lonely here, for I don't know London at all, and it's such a mighty big town!' 'It is a big town,' they says. 'Oh, it's a very big town!' I says. 'Really and truly, I never was in such a town. It quite confuses of me!'—and all that, you know."

"When some of the Journeymen Butchers that used the house, found that I wanted a place, they says, 'Oh, we'll get you a place!' And they actually took me to a sight of places, in Newgate Market, Newport Market, Clare, Carnaby—I don't know where all. But the wages was—ha, ha, ha!—was not sufficient, and I never could suit myself, don't you see? Some of the queer frequenters of the house, were a little suspicious of me at first, and I was obliged to be very cautious indeed, how I communicated with Straw or Fendall. Sometimes, when I went out, pretending to stop and look into the shop-windows, and just casting my eye round, I used to see some of 'em following me; but, being perhaps better accustomed than they thought for, to that sort of thing, I used to lead 'em on as far as I thought necessary or convenient—sometimes a long way—and then turn sharp round, and meet 'em, and say, 'Oh, dear, how glad I am to come upon you so fortunate! This London's such a place, I'm blowed if I an't lost again!' And then we'd go back all together, to the public-house, and—ha, ha, ha! and smoke our pipes, don't you see?"

"They were very attentive to me, I am sure. It was a common thing, while I was living there, for some of 'em to take me out, and show me London. They showed me the Prisons—showed me Newgate—and when they showed me Newgate, I stops at the place

where the Porters pitch their loads, and says, 'Oh dear,' 'is this where they hang the men! Oh Lor!' 'That!' they says, 'what a simple cove he is! *That* an' it!' And then, they pointed out which *was* it, and I says 'Lor!' and they says, 'Now you'll know it agen, won't you?' And I said I thought I should if I tried hard—and I assure you I kept a sharp look out for the City Police when we were out in this way, for if any of 'em had happened to know me, and had spoke to me, it would have been all up in a minute. However, by good luck such a thing never happened, and all went on quiet: though the difficulties I had in communicating with my brother officers were quite extraordinary.

"The stolen goods that were brought to the public-house, by the Warehouse Porters, were always disposed of in a back parlor. For a long time, I never could get into this parlor, or see what was done there. As I sat smoking my pipe, like an innocent young chap, by the tap-room fire, I'd hear some of the parties to the robbery, as they came in and out, say softly to the landlord, 'Who's that? What does *he* do here?' 'Bless your soul,' says the landlord, 'He's only a'—ha, ha, ha!—'he's only a green young fellow from the country, as is looking for a butcher's situation. Don't mind *him*!' So, in course of time, they were so convinced of my being green, and got to be so accustomed to me, that I was as free of the parlor as any of 'em, and I have seen as much as Seventy Pounds worth of fine lawn sold there, in one night, that was stolen from a warehouse in Friday Street. After the sale, the buyers always stood treat—hot supper, or dinner, or what not—and they'd say on those occasions 'Come on, Butcher! Put your best leg foremost, young'un, and walk into it!' Which I used to do—and hear, at table, all manner of particulars that it was very important for us Detectives to know.

"This went on for ten weeks. I lived in the public-house all the time, and never was out of the Butcher's dress—except in bed. At last, when I had followed seven of the thieves, and set 'em to rights—that's an expression of ours, don't you see, by which I mean to say that I traced 'em, and found out where the robberies were done, and all about 'em—Straw, and Fendall, and I, gave one another the office, and at a time agreed upon, a descent was made upon the public-house, and the apprehensions effected. One of the first things the officers did, was to collar me—for the parties to the robbery weren't to suppose yet, that I was anything but a Butcher—on which the landlord cries out, 'Don't take *him*,' he says, 'whatever you do! He's only a poor young chap from the country, and *but*ter wouldn't melt in his mouth!' However, they—ha, ha, ha!—they took me, and pretended to search my bedroom, where nothing was found but an old fiddle belonging to the landlord, that had got there somehow

or another. But, it entirely changed the landlord's opinion, for when it was produced, he says 'My fiddle! The Butcher's a pur-loiner! I give *him* into custody for the robbery of a musical instrument!'

"The man that had stolen the goods in Friday Street was not taken yet. He had told me, in confidence, that he had his suspicions there was something wrong (on account of the City Police having captured one of the party), and that he was going to make himself scarce. I asked him, 'Where do you mean to go, Mr. Shepherdson?' 'Why, Butcher,' says he, 'the Setting Moon, in the Commercial Road, is a snug house, and I shall hang out there for a time. I shall call myself Simpson, which appears to me to be a modest sort of a name. Perhaps you'll give us a look in, Butcher?' 'Well,' says I, 'I think I *will* give you a call'—which I fully intended, don't you see, because, of course, he was to be taken! I went over to the Setting Moon next day, with a brother officer, and asked at the bar for Simpson. They pointed out his room, upstairs. As we were going up, he looks down over the banisters, and calls out, 'Halloa, Butcher! is that you?' 'Yes, it's me. How do you find yourself?' 'Bobbish,' he says; 'but who's that with you?' 'It's only a young man, that's a friend of mine,' I says. 'Come along, then,' says he; 'any friend of the Butcher's is as welcome as the Butcher!' So, I made my friend acquainted with him, and we took him into custody.

"You have no idea, Sir, what a sight it was, in Court, when they first knew that I wasn't a Butcher, after all! I wasn't produced at the first examination, when there was a remand; but I was, at the second. And when I stepped into the box, in full police uniform, and the whole party saw how they had been done, actually a groan of horror and dismay proceeded from 'em in the dock!

"At the Old Bailey, when their trials came on, Mr. Clarkson was engaged for the defence, and he *couldn't* make out how it was, about the Butcher. He thought, all along, it was a real Butcher. When the counsel for the prosecution said, 'I will now call before you, gentlemen, the Police-officer,' meaning myself, Mr. Clarkson says, 'Why Police-officer? Why more Police-officers? I don't want Police. We have had a great deal too much of the Police. I want the Butcher! However, Sir, he had the Butcher and the Police-officer, both in one. Out of seven prisoners committed for trial, five were found guilty, and some of 'em were transported. The respectable firm at the West End got a term of imprisonment; and that's the Butcher's Story!'

The story done, the chuckle-headed Butcher again resolved himself into the smooth-faced Detective. But, he was so extremely tickled by their having taken him about, when he

was that Dragon in disguise, to show him London, that he could not help reverting to that point in his narrative; and gently repeating, with the Butcher snigger, "Oh, dear! I says, 'is that where they hang the men? Oh, Lor!' 'That!' says they. 'What a simple cove he is!'"

It being now late, and the party very modest in their fear of being too diffuse, there were some tokens of separation; when Serjeant Dornton, the soldierly-looking man, said, looking round him with a smile:

"Before we break up, Sir, perhaps you might have some amusement in hearing of the Adventures of a Carpet Bag. They are very short; and, I think, curious."

We welcomed the Carpet Bag, as cordially as Mr. Shepherdson welcomed the false Butcher at the Setting Moon. Serjeant Dornton proceeded:

"In 1847, I was dispatched to Chatham, in search of one Mesheck, a Jew. He had been carrying on, pretty heavily, in the bill-stealing way, getting acceptances from young men of good connexions (in the army chiefly), on pretence of discount, and bolting with the same.

"Mesheck was off, before I got to Chatham. All I could learn about him was, that he had gone, probably to London, and had with him—a Carpet Bag.

"I came back to town, by the last train from Blackwall, and made inquiries concerning a Jew passenger with—a Carpet Bag.

"The office was shut up, it being the last train. There were only two or three porters left. Looking after a Jew with a Carpet Bag, on the Blackwall Railway, which was then the high road to a great Military Depot, was worse than looking after a needle in a haystack. But it happened that one of these porters had carried, for a certain Jew, to a certain public-house, a certain—Carpet Bag.

"I went to the public-house, but the Jew had only left his luggage there for a few hours, and had called for it in a cab, and taken it away. I put such questions there, and to the porter, as I thought prudent, and got at this description of—the Carpet Bag.

"It was a bag which had, on one side of it, worked in worsted, a green parrot on a stand. A green parrot on a stand was the means by which to identify that—Carpet Bag.

"I traced Mesheck, by means of this green parrot on a stand, to Cheltenham, to Birmingham, to Liverpool, to the Atlantic Ocean. At Liverpool he was too many for me. He had gone to the United States, and I gave up all thoughts of Mesheck, and likewise of his—Carpet Bag.

"Many months afterwards—near a year afterwards—there was a Bank in Ireland robbed of seven thousand pounds, by a person of the name of Doctor Dundey, who escaped to America; from which country some of the stolen notes came home. He was supposed to have bought a farm in New Jersey. Under

proper management, that estate could be seized and sold, for the benefit of the parties he had defrauded. I was sent off to America for this purpose.

"I landed at Boston. I went on to New York. I found that he had lately changed New York paper-money for New Jersey paper-money, and had banked cash in New Brunswick. To take this Doctor Dundey, it was necessary to entrap him into the State of New York, which required a deal of artifice and trouble. At one time, he couldn't be drawn into an appointment. At another time, he appointed to come to meet me, and a New York officer, on a pretext I made; and then his children had the measles. At last, he came, per steamboat, and I took him, and lodged him in a New York Prison called the Tombs; which I dare say you know, Sir?"

Editorial acknowledgment to that effect.

"I went to the Tombs, on the morning after his capture, to attend the examination before the magistrate. I was passing through the magistrate's private room, when, happening to look round me to take notice of the place, as we generally have a habit of doing, I clapped my eyes, in one corner, on a—Carpet Bag.

"What did I see upon that Carpet Bag, if you'll believe me, but a green parrot on a stand, as large as life!

"That Carpet Bag, with the representation of a green parrot on a stand," said I, "belongs to an English Jew, named Aaron Mesheck, and to no other man, alive or dead!"

"I give you my word the New York Police officers were doubled up with surprise.

"How do you ever come to know that?" said they.

"I think I ought to know that green parrot by this time," said I; "for I have had as pretty a dance after that bird, at home, as ever I had, in all my life!"

"And was it Mesheck's?" we submissively inquired.

"Was it, Sir? Of course it was! He was in custody for another offence, in that very identical Tombs, at that very identical time. And, more than that! Some memoranda, relating to the fraud for which I had vainly endeavoured to take him, were found to be, at that moment, lying in that very same individual—Carpet Bag!"

Such are the curious coincidences and such is the peculiar ability, always sharpening and being improved by practice, and always adapting itself to every variety of circumstances, and opposing itself to every new device that perverted ingenuity can invent, for which this important social branch of the public service is remarkable! For ever on the watch, with their wits stretched to the utmost, these officers have, from day to day and year to year, to set themselves against every novelty of trickery and dexterity that the combined imaginations of all the lawless

rascals in England can devise, and to keep pace with every such invention that comes out. In the Courts of Justice, the materials of thousands of such stories as we have narrated—often elevated into the marvellous and romantic, by the circumstances of the case—are dryly compressed into the set phrase, “in consequence of information I received, I did so and so.” Suspicion was to be directed, by careful inference and deduction, upon the right person; the right person was to be taken, wherever he had gone, or whatever he was doing to avoid detection: he is taken; there he is at the bar; that is enough. From information I, the officer, received, I did it; and, according to the custom in these cases, I say no more.

These games of chess, played with live pieces, are played before small audiences, and are chronicled nowhere. The interest of the game supports the player. Its results are enough for Justice. To compare great things with small, suppose LEVERIER or ADAMS informing the public that from information he had received he had discovered a new planet; or COLUMBUS informing the public of his day that from information he had received, he had discovered a new continent; so the Detectives inform it that they have discovered a new fraud or an old offender, and the process is unknown.

Thus, at midnight, closed the proceedings of our curious and interesting party. But one other circumstance finally wound up the evening, after our Detective guests had left us. One of the sharpest among them, and the officer best acquainted with the Swell Mob, had his pocket picked, going home!

HEALTH BY ACT OF PARLIAMENT.

THERE was a story current in the city of Mosul, about the time that the first edition of “The Hundred and One Nights” began to be popular in Oriental society, of a certain Prince who was taken ill of the plague. Though his retinue was large, he was the only person who was in imminent danger. The Court physician was also at death’s door, and a strange doctor was sent for, who pronounced the Great Man to be in a fearful state of debility, but retired without prescribing. The Prince waited long and anxiously for remedies, but in vain. He clapped his hands to summon a slave.

“What,” he exclaimed, “is the physick?”

“Sun of the Earth,” exclaimed the Nubian, “it is all taken!”

“And who has dared to swallow the medicine designed for the anointed of Allah?”

“As it is written by the Prophet,” returned Hassan, “when the sheik sickens, his slaves droop.” Thy whole household was sick, and clamoured for medicine; and, lo, the man of drugs straightway drenched them therewith, ordering us all, on pain of the Prophet’s curse, not to give thee so much as a single grain of barb.”

“Breath of Mahomet,” ejaculated his Mightiness; “am I then to die, and are my slaves to live?”

When a Mussulman is puzzled what to say, he invariably exclaims, “Allah is merciful;” which was Hassan’s consolation.

“Let the wretched mediciner appear!” commanded the Prince.

The doctor came. “Illustrious father of a hundred generations!” said the general practitioner, “thine own physician only could cure thee, and he lies on his pallet a helpless being. I may not so much as look at thy transcendent tongue, or feel thine omnipotent pulse.”

“Wherefore? O licenciate of the Destroyer!”

“Inasmuch as I may not infringe the vested rights of thine own special and appointed physician. The law—even that of the Medes and Persians, which never altereth—forbids me. Thy slaves I may heal, seeing that no vested rights in them exist; but—”

Here the Prince interrupted the speaker with a hollow groan, and sank on his pillow in despair.

The Arabic manuscript, from which this affecting incident was translated, ends with these words—“and the Prince died.”

This story is evidently a foreshadowing of what has recently happened in reference to the metropolis of this country and the Public Health Act. London was in *extremis* from the effects of density of population, filth, bad air, bad water, the window-tax, and deficient drainage. It called in certain sanitary doctors—the regular consulting body, namely, the Government, being too weak to afford the slightest assistance. The result was, that a prescription, in the form of the Public Health Act, was concocted,—but was made applicable to every other member of the great retinue of towns, *except* to the Imperial City; which was exempted in consequence of the existing Vested Rights in crowded houses, deadly stenches, putrid water, foggy courts, and cesspools. “Although,” in the words of a resolution, passed at the meeting which formed the Metropolitan Sanitary Association, “the strenuous efforts made in the metropolitan districts to procure a sanitary enactment mainly contributed to the passing of the Public Health Act; yet these districts were the only parts excluded from the benefits of that enactment. This exclusion has led to much misery and a great sacrifice of life.”

This exception was so monstrous, that even the Corporation of the City of London took powers under their own Sewers’ Act for the preservation of the health of the people dwelling within the City boundary,—who number no more than one hundred and twenty-five thousand out of the two millions of us who are congregated in civic and suburban London. The remaining one million eight hundred thousand are left to be stifled or diseased at the good pleasure of Vested Interests. Indeed, it is ascertained that a quarter of a million of

individuals absolutely *do* die every year from the want of such a sanitary police as the Public Health Act, amended by some few additional powers, would establish. What number of persons are really sent out of the world from preventable causes. It is also true that those causes can be efficiently removed for about a halfpenny per head a-week; or threepence per week per house; or about eight times less than those who die unnecessarily cost the public in hospitals, poor's rates, and burial. In the "Journal of Public Health" for November, 1848, and August, 1849, it is shown by elaborate tables, that the direct cost of, and estimated money loss through, typhus fever alone in the metropolis, amounted during the four years, 1843—1847, to one million three hundred and twenty-eight thousand pounds, or two hundred and sixty-five thousand six hundred pounds annually. This sum is exclusive of the amounts contributed for the purchase and maintenance of fever hospitals. For 1848, when the mortality from typhus had increased to three thousand five hundred and sixty-nine, the direct cost and money loss was estimated at four hundred and forty thousand pounds.

This cold-blooded way of putting the really appalling state of the case is, alas! the only successful mode of appealing to that hard-headed, though sometimes soft-hearted, periphrasis, John Bull, when he is under no special exciting cause of dread. His heart is only reached through his pocket, except when put in a state of alarm. Cry "Cholera!" or any other frightful conjuration, and he bestirs himself. To cholera we owe the few sanitary measures now in force; but which were passed by the House—as a coward may seem courageous—in its agonies of fright. The moment, however, Cholera bulletins ceased to be issued, John buttoned up his pockets tighter than ever, and Parliament was dumb regarding public health, except to undo one or two good things it had done. The inflated promises of the legislature collapsed into thin air, on the very day the danger was withdrawn. It was the legend over again of the nameless gentleman who, when he was sick, swore he would turn a monk; but when he got well "the devil a monk was he." Ever since, sanitary legislation has been as much a dead letter in the Metropolis, as if the deadly condition of some of its districts had never been whispered between the wind and the nobility of Westminster, in Parliament assembled.

It has no effect upon unreasoning John Bull to tell him that, on an average, cholera does not devour a tithe of the victims which fever, consumption, and other preventible diseases make away with. Cholera comes upon him like an ogre, eating its victims all at once, and he quakes with terror; the daily, deadly destruction of human beings by "every-day" diseases, he takes no heed of. Take him, however, a slate and pencil; count costs to him; show that cholera costs so much; that

ordinary, contagious, but preventible diseases, cost so much more; and that prevention is so many hundred per cent. cheaper than the cheapest cures, he begins to be amenable to reason. Nothing but pocket arithmetic, terror, or melo-dramatic appeals to his soft-hearted sympathy, moves John Bull.

In order to supply the best of these exertations by the accumulation of carefully sifted, and well authenticated facts, and sound reasonings; the results of scientific investigations, and of a large range of pathological statistics, the Metropolitan Sanitary Association has been for some months—like another "Ole Joe"—knocking at the door of Old John. Whether the heavy old gentleman will soon open it to conviction and improvement depends, we think, very much upon the energy and liberality with which that society is supported and seconded by the public; for whose sole benefit it was called into existence. To the exertions of many of its leading members, if not to the collective body itself, John Bull has responded, by admitting into his premises the Extra-Mural Interment Bill, and we think he is just now holding his door ajar to catch the Water Supply Bill, which it is hoped he will admit, and pass through That House next session. Meantime we, in common with the association aforesaid, beg his attention to a few other points of improvement:—

The adage "as free as air," has become obsolete by Act of Parliament. Neither air nor light have been free since the imposition of the window-tax. We are obliged to pay for what nature supplies lavishly to all, at so much per window per year; and the poor who cannot afford the expense, are stinted in two of the most urgent necessities of life. The effects produced by a deprivation of them are not immediate, and are therefore unheeded. When a poor man or woman in a dark, close, smoky house is laid up with scrofula, consumption, water in the head, wasting, or a complication of epidemic diseases, nobody thinks of attributing the illness to the right cause;—which may be a want of light and air. If he or she were struck down by a flash of lightning, there would be an immediate outcry against the authorities, whoever they may be, for not providing proper lightning conductors; but because the poison—generated by the absence of light and air—is not seen at work, the victim dies unheeded, and the window tax, which shuts out the remedies, is continued without a murmur. In illustration of these facts, we may quote a little information respecting the tadpole, an humble animal, which—if the author of "Vestiges of Creation" be any authority and the theory of development be more than a childish dream—was the progenitor of man himself. The passage is from the report of the Half-fledged Health of Towns' Commission:—

"If the young of some of the lower tribes of creatures are supplied with their proper

food, and if all the other conditions necessary for their nourishment are maintained, while at the same time light is wholly excluded from them, their development is stopped; they no longer undergo the metamorphosis through which they pass from imperfect into perfect beings; the tadpole, for example, is unable to change its water-breathing apparatus, fitted for its first stage of existence, into the air-breathing apparatus, with the rudiment of which it is furnished, and which is intended to adapt it for a higher life, namely, for respiration in air. In this imperfect state it continues to live; it even attains an enormous bulk, for such a creature in its state of transition, but it is unable to pass out of its transitional state; it remains permanently an imperfect being, and is doomed to pass a perpetual life in water, instead of attaining maturity and passing its mature life in air."

It may give some support to the theory of tadpole development above mentioned, to add, that the same cause produces the very same effects upon human beings; upon human mothers, and upon human children. Human mothers living in dark cellars produce an unusual proportion of defective children. Go into the narrow streets, and the dark lanes, courts, and alleys of our splendid cities, there you will see an unusual number of deformed people, men, women, and children, but particularly children. In some cells under the fortifications of Lisle, a number of poor people took up their abode; the proportion of defective infants produced by them became so great, that it was deemed necessary to issue an order commanding these cells to be shut up. The window duties multiply cells like those of the fortifications of Lisle, in London, in Liverpool, in Manchester, in Bristol, and in every city and town in England by hundreds and by thousands, and with the same result; but the cells here are not shut up, nor is the cause that produces them removed. Even in cases in which the absence of light is not so complete as to produce a result thus definite and striking, the effects of the privation are still abundantly manifest in the pale and sickly complexion, and the enfeebled and stunted frame; for can it be otherwise, since, from the essential constitution of organised beings, light is as necessary to the development of the animal as it is to the growth of the plant. The diseases the want of it produces, are of long continuance, and waste the means of life before death results; they may therefore be characterised as pauperising diseases. As to death itself, it has been calculated that nearly ten thousand persons perish annually in London alone from diseases solely produced by an impeded circulation of air and admission of light.

This prodigal waste of health, strength, and of life itself, falls much more heavily on the poor, than the mere fiscal burden, imposed by the tax, falls on the richer classes.

Inasmuch, then, as health is the capital of the working man, whatever be the necessities of the state, *nothing* can justify a tax affecting the health of the people, and especially the health of the labouring community, whose bodily strength constitutes their wealth, and oftentimes their only possession. In conclusion we may say, without wishing to libel any respectable Act of Parliament, that the Window-Tax kills countless human beings in tens of thousands every year.

The next improvement which must speedily be pushed under John Bull's very nose, is the removal of the nuisances which abound in crowded neighbourhoods from Land's End to John o'Groats. The back-yards of houses in poor neighbourhoods are so many gardens, sown broadcast with the seeds of disease, and put too plentifully manured for abundant and continual crops. When rain falls on the surface of these parterres of poison, and is afterwards evaporated by the heat of the sun, there rises a malaria, intensified by decomposing refuse, which, inhaled into human lungs, engenders consumption, ending in the pestilish workhouse and death. It is a fact that the surfaces of some of the back-yards in London have been raised six feet by successive accumulations of vegetable and animal refuse. We must have no more such accumulations; offal of every kind must be removed daily by Act of Parliament.

Ill-kept stables, which cause horses to become blind, and men to die of typhus, must be reformed; cow-feeding sheds, which produce diseased milk and offensive refuse, must be abolished, and milk supplied per railway from the country; disgusting and noxious manufactures, such as are carried on a few yards west of Lambeth Palace, on the river's bank, must be removed to consort with knackers' yards, in places remote from human habitations.

The strong bar which John Bull opposes to such improvements is the dread of the Centralisation, which, he says, carrying them into effect would occasion. Local Government, he insists, is the great bulwark of the British Constitution. No bill is ever brought into Parliament for the good of the people,—that is well known,—but is passed for the sake of the places it creates, and the patronage it gives. Now, if we allow a practicable bill for the removal of these nuisances to pass, a swarm of commissioners, secretaries, clerks, inspectors, inquisitors, dustmen, and scavengers will be let loose upon the contented public, to supersede snug, comfortable, local boards, and to ruin innocent contractors. "Is," John asks vehemently, "this to be borne?" and answers himself with equal emphasis, "Decidedly not. We prefer the nuisances." But common sense steps in to reply, that as nuisances are a matter of taste, if every board could confine its own nuisances to its own parish so as not to take its neighbour's by the nose, there would, perhaps, be no harm in letting it dose

and wallow in its own filth as long as its taste would dictate. But as this is impossible, centralisation or no centralisation, Government, or somebody else, *must* interfere to protect the extra-parochial lieges from destruction, by upsetting the Board and removing the rest of the nuisances.

A practical example of the impossibility of confining noxious nuisances to the boundaries whence they originate, is afforded in the immediate neighbourhood of one of the most beautiful parts of the metropolis. In a neighbourhood studded thickly with elegant villas and mansions—namely, Bayswater and Notting Hill, in the parish of Kensington—is a plague spot scarcely equalled for its insalubrity by any other in London: it is called the Potteries. It comprises some seven or eight acres, with about two hundred and sixty houses (if the term can be applied to such hovels), and a population of nine hundred or one thousand. The occupation of the inhabitants is principally pig-fattening; many hundreds of pigs, ducks, and fowls are kept in an incredible state of filth. Dogs abound for the purpose of guarding the swine. The atmosphere is still further polluted by the process of fat-boiling. In these hovels discontent, dirt, filth, and misery, are unsurpassed by anything known even in Ireland. Water is supplied to only a small proportion of the houses. There are foul ditches, open sewers, and defective drains, smelling most offensively, and generating large quantities of poisonous gases; stagnant water is found at every turn, not a drop of *clean* water can be obtained,—all is charged to saturation with putrescent matter. Wells have been sunk on some of the premises, but they have become, in many instances, useless from organic matter soaking into them; in some of the wells the water is perfectly black and fetid. The paint on the window frames has become black from the action of sulphuretted hydrogen gas. Nearly all the inhabitants look unhealthily, the women especially complain of sickness, and want of appetite; their eyes are shrunk, and their skin shrivelled.

The poisonous influence of this pestilential locality extends far and wide. Some twelve or thirteen hundred feet off there is a row of clean houses, called Crafter Terrace; the situation, though rather low, is open and airy. On Saturday and Sunday, the 8th and 9th of September, 1849, the inhabitants complained of an intolerable stench, the wind then blowing directly upon the Terrace from the Potteries. Up to this time, there had been no case of cholera among the inhabitants; but the next day the disease broke out virulently, and on the following day, the 11th of September, a child died of cholera at No. 1. By the 22nd of the same month, no less than seven persons in the Terrace lost their lives by this fatal malady.

It would be thought, that such a state of

things could not have been permitted to remain undisturbed, but merely required to be brought to light to be remedied. The medical officers have, time after time, reported the condition of the place to the Board of Guardians. Fifteen medical men have testified to the unhealthy state of the Potteries. The inspector of nuisances has done the same. The magistrates have repeatedly granted orders for the removal of the pigs. The General Board of Health have given directions that all the nuisances should be removed, yet nothing, or next to nothing, has been done. The inspector of nuisances has been dismissed, the guardians have signified their intention to inspect the districts themselves, yet things remain *in statu quo*.

Is there then no possibility of cleansing this more than Augean stable? None: the single but insurmountable difficulty being that some of the worst parts of the district are the property of one of the guardians!

Surely the force of self-government can no farther go. Another word in defence of centralisation—the great bugbear of the self-conceited parish orator—would be wasted.

In conclusion, we earnestly call on the public to second and support the efforts of the Metropolitan Sanitary Association to get the evils we have adverted to lessened or wholly removed. The rapid increase of the population demands additional exertion and additional arrangements for their well-being. At present, retrogression instead of improvement assails us. It is an appalling fact, that the number of persons dying of the class of diseases called preventible has been steadily increasing. Mr. Farr, of the Registrar-General's office, has declared there could be no question that the health of London is becoming worse every year. In 1846, the number of persons dying of zymotic or epidemic diseases was about nineteen per cent. of the total mortality; in 1847, it was twenty-eight per cent.; in 1848, thirty-four per cent.; and last year it increased to forty-one per cent.; thus showing that nearly one-half of the mortality of London was more or less owing to preventible causes.

To reverse this state of things the people of this country must not wait for another great and fatal fright. We know that typhus fever and consumption, like open drains and stinking water, are mean, commonplace, unexciting instruments of death, which do not get invested with dramatic interest; yet they kill as unerringly as the knife or the bullet of the assassin; only they murder great multitudes instead of single individuals. If, therefore, he will only fix his eyes on the victims of the diseases which can be easily prevented, it is well worth John Bull's while to consider whether substantially it is not as sound a policy to save a million or two of lives per annum, as to hang the hero and heroine of a Bermondsey murder.

WHAT THERE IS IN THE ROOF OF THE COLLEGE OF SURGEONS.

PERHAPS no one of the London Squares is more full of interesting associations, and certainly no one of them is more fresh and pleasant to look upon, than Lincoln's Inn Fields. In the centre of its green Lord William Russell was beheaded; upon the old wall that used to run along its eastern side Ben Jonson, it is said, worked as a brick-layer; amongst its north range of buildings stands the thin sandwich of a house that holds the manifold artistic gems of the Soane Museum; its west side was the scene of some of Lord George Gordon's riotings; whilst on its south side stands the noble-looking Grecian fronted building dedicated to the purposes of the English College of Surgeons.

This building has many uses, and many points challenging general admiration and approval, the chief of them being its possession of the museum made by John Hunter; afterwards purchased, and now supported, by the nation; and open freely, not only to medical men of all countries, but to the public at large. The visitor who passes under its handsome portico, up the steps and enters its heavy mahogany and plate-glass doors, finds himself in a large hall. On his right is a staid-looking, black-robed porter, who requires him to enter his name in the visitor's book—a preliminary which members equally with strangers have to go through. On his left are the doors leading to the secretary's office, where students may, from time to time, be seen going in to register their attendance upon the prescribed lectures, and, later in their career, passing through the same portals big with the desperate announcement that they are ready to submit to the examinations that must be passed before they can get a diploma. Facing the entrance door is a second enclosed hall, with a roof supported by fluted columns, and on the left of this a broad stately architectural stone staircase leading to the library and the council-chamber—the scene of those dreadful ordeals, the examinations, where Hospital Surgeons sit surrounded by crimson and gold, and marble busts, and noble pictures, to operate upon sweating, and stuttering and hesitating students who, two by two, are seated in large chairs to be passed or plucked.

The library is a noble, large room, of excellent proportions, occupying the whole length of the building in front, having tall plate-glass embayed windows, each with its table chair; and in each of which the passers-by in Lincoln's Inn Fields, may generally see a live surgeon framed and glazed, busily occupied with his books, or still more busily helping to keep up the tide of gossip for which the place is celebrated. For some twenty feet from the floor on all sides, the walls are lined with books, telling in various languages about all kinds of maladies and all

sorts of plans for cure. Above this, and just under the handsomely panelled roof, hang portraits of old surgeons, each famous in his time, and now enjoying a sort of quiet renown amongst their successors in the art and science of chirurgery. All we have seen thus far, betokens the quiet repose of wealth, dignity, and learned leisure and ease. No bustle, no noise, no trace of urgent labour is heard or seen. Such of the officers of the place as may be encountered, have a look of somnolent if not sleek sufficiency, and seem to claim a share of the consideration which all are ready to concede, as due to the character of the spot. Returning to the hall, another door, facing that of the secretary, leads to the great attraction and pride of the place—the Hunterian Museum—a collection of skeletons and glittering rows of bottles full of evidences how "fearfully and wonderfully" all living creatures are made. On all sides we see the bony relics of defunct men and animals—giants, dwarfs, both human and quadruped, challenging attention. The huge megatherium, the bones of poor Chuny, the elephant shot in Exeter 'Change, the skeleton of O'Brien the Irish giant, who walked about the world eight feet high, and near him all that remains of the form of the Sicilian dwarf, who when alive was not taller than O'Brien's knee. On the walls tier after tier of bottles are ranged, till the eye following them up towards the top of the building, fatigued by their innumerable abundance, and the variety of their contents, again seeks the ground and its tables, there to encounter an almost equal crowd of curious things collected from the earth, the air, and the sea, to show how infinite the varieties in which Nature indulges, and how almost more than infinite the curious ways in which life varies the tenement it inhabits. But with this multiplicity of things we see no confusion, or trace of carelessness or poverty. All is neatness, order, and repose. Not a particle of dirt offends the eye; not a film of dust dims the brilliancy of the regiments of bottles drawn up in long files upon the shelves, to salute the visitor. The place is a very drawing-room of science, all polished and set forth in trim order for the reception of the public. It is the best room in the house kept for the display of the results of the labours of the physiologist,—a spot devoted to the revelations of anatomy, without the horrifying accompaniments of the dissecting-room.

Thus far we have passed through what are in truth the public portions of the College of Surgeons, just glancing at its museum, unequalled as a physiological collection by any other in the world. In their surprise at the curious things it contains, there are many, no doubt, who wonder also where the things all came from; and what patient men have gone on since John Hunter's time, adding to his museum where it was deficient and keeping all its parts in their present admirable state.

Such a question, if put to the officials, would most likely obtain a very vague and misty reply; but a glance behind the scenes at the College will afford an ample and curious explanation, and show how one section of the Searchers for Facts, silently and unheeded, work on in their self-chosen, quiet, scientific path—undisturbed by the noises and the bustle, the excitements and the strife of the modern Babylon, that heaves and throbs around them.

Leave the handsome rooms, with their clear light, and polish, and air of neatness, and come with us up the side stair that leads to the unshown recesses, where, high up in the roof, the workers in anatomy carry on their strange duties. As we open the side door that leads towards these secret chambers, we should go from daylight to darkness, were it not for the gas that is kept burning there. Up the stairs we go, and as we ascend, the way becomes lighter and lighter as we rise, but the stone steps soon change for wooden ones, and at length bring us from the silent stairs to a silent and gloomy-looking passage, having three doors opening into it, and some contrivances overhead for letting in a little light, and letting out certain odours that here abound,—greatly to the discomfort of the novice who first inhales them. We are now in the roof of the building, and on getting a glimpse through a window, we may see the housetops are below us, the only companions of our elevation being a number of neighbouring church-spires.

The feeling of the spot is one of almost complete isolation from the world below, and a neighbourhood to something startling, if not almost terrible. Like Fatima in Bluebeard's Tower, impelled by an overbearing curiosity, we turn the lock of the centre door, and enter the chamber. A strange sight is presented. The room is large, with the sloping roof-beams above, and a stained and uncovered floor below. The walls all round are crowded with shelves, covered with bottles of various sizes full of the queerest-looking of all queer things. Many are of a bright vermilion colour; others yellow; others brown; others black; whilst others again display the opaque whiteness of bloodless death. Three tables are in the room, but these are as crowded as the walls. Cases of instruments, microscopes, tall jars, cans, a large glass globe full of water-newts, hydras, and mosses; small cases of drawers filled with microscopic objects, and a thousand other odds and ends. Here is a long coil of snake's eggs, just brought from a country stable-yard; there some ears of diseased wheat, sent by a noble landlord who studies farming; beside them lies part of a leaf of the gigantic water-lily, the Victoria Regia, and near that a portion of a vegetable marrow is macerating in a saucer to separate some peculiar vessels for exhibition under the microscope. There are two windows to the room, besides some ventilators in the roof; and before one of these, where the light is best, are ranged microscopes complete and

ready for use, and round about them all sorts of scraps of glass and glaziers' diamonds, and watch-glasses, and forceps, and scissors, and bottles of marine glue, and of gold-size,—these being the means and appliances of the microscopic observer. Before the second window is a sink, in which stand jars of frogs and newts, and other small creatures. A lathe, a desk, and, writing utensils, the model of a whale cast ashore in the Thames, an old stiff-backed wooden chair, once the seat of the Master of the Worshipful Company of Surgeons, a few cases of stuffed birds and animals, and some tall glass-stoppered bottles that went twice round the world with Captain Cook and Dr. Solander, make up the catalogue of the chief contents of an apartment, which, at first glance, has the look of an auctioneer's room filled with the sold-off stock of a broken down anatomical teacher. A closer inspection, however, shows that though there is so great a crowd of objects, there is little or no confusion, and the real meaning of the place, its intention, and labours, reveal themselves.

We are in a storeroom of the strange productions of all corners of the earth, from the air above and from the waters below. Every particle in every bottle that looks perhaps to the uninitiated eye only a mass of bad fish preserved in worse pickle, has its value. A thin slice of it taken out and placed under the microscope, illustrates some law of the animal economy, or displays, perhaps, some long undiscovered fact, or shows to the surprise of the gazer, a series of lines beautifully arranged, or perhaps curiously mingled, and rich in their figured combinations as the frozen moisture of a window-frame on a winter's morning. To this room as to a general centre come contributions from all corners of the earth; the donors being chiefly medical men employed on expeditions, or in the public service, though other medicos, who go to seek fortune in strange lands, often remember their alma mater, and pack up a bottle of curious things "to send to the College." Doctors on shipboard, doctors with armies, doctors in Arctic ships, or on Niger expeditions; in the far regions of Hindustan, and in the fogs and storms of Labrador, think now and then of their "dissecting days," and of the noble collection in Lincoln's Inn Fields, which every true student feels bound to honour, and to help to make complete. Many, when going forth into distant countries, are supplied from this place with bottles specially adapted to receive objects in request, and receive also a volume of instructions, how the specimens may be best preserved. "When a quadruped is too large to be secured whole, cut off the portion of the head containing the teeth," says one direction. "If no more can be done," says another, "preserve the heart and great blood-vessels." "Of a full-grown whale," says a third of these notes, "send home the eyes with the surrounding skin, their muscles and fat in an entire mass." "When many specimens of a

rare and curious bird are procured, the heads of a few should be taken off and preserved in spirit." "When alligators and crocodiles are too large to be preserved whole, secure some part. The bones of such things are especially desirable. Secure also the eggs in different stages." "Snakes may be preserved whole, or in part, especially the heads, for the examination of their teeth and fangs." "Eyes of fishes are proper objects of preservation." Such are a few of the hints sent forth to their medical disciples by the College; and the fruits of the system are a bountiful supply. Never a week passes but something rare or curious makes its appearance in Lincoln's Inn Fields; sometimes from one quarter, sometimes from another, but there is always something coming, either by messenger or parcel-cart. Apart from these foreign sources, there are other contributors to the general stock. Country doctors and hospital surgeons, from time to time, send in their quota; the Zoological Society likewise contribute all their dead animals. When the elephant died at the Regent's Park Gardens, a College student and an assistant were busily occupied for days dissecting the huge animal. When the rhinoceros expired at the same place, a portion of its viscera was hailed as a prize; and when the whale was cast, not long ago, upon the shores of the Thames, the watermen who claimed it as their booty, steamed off to the College to find a customer for portions of the unwieldy monster; nor were they disappointed. Beyond all these, there still remains another searcher out of materials for the scalpel and the microscope. He is a character in his way. By trade, half cattle-slaughterer half-oysterman, he is by choice a sort of dilettante anatomist. One day he is killing oxen and sheep in Clare Market, and the next is scouring the same market for morbid specimens "for Mr. Quekett, at the College." He knows an unhealthy sheep by its looks, and watches its post mortem with the eye of a savant. Many a choice specimen has he caught up in his time from amongst the offal and garbage of that fustiest of markets in the fustiest of neighbourhoods. Indeed, through him, all that is unusual in ox, calf, sheep, fish, or fowl, found within the confines of Clare Market, finds its way to the "work shop" of the College to be investigated by scalpel and microscope. When a butcher is known to have any diseased sheep, our collector hovers about his slaughter-house, and that which is bad food for the public, often affords him and his patron a prize. He is a sort of jackal for the anatomists—a kind of cudger in the service of science—a veritable snatcher-up of ill-conditioned trifles.

Returning to the room in the College roof, where the general cornucopia of strange things is stored, we find its presiding genius in Mr. Quekett, a quiet enthusiast in his way, who goes on from month to month and year to year, watching, working, and chronicling

such facts as can be made out. When a novelty comes in, it is examined, described, investigated by the microscope; and, if worthy, is sketched on stone for printing. It is then catalogued, and placed in spirit for preservation—minute portions, perhaps, being mounted on glass as objects for the microscope. Thus disposed of, it becomes a "store preparation." From this store the lectures at the College are illustrated by examples; and from it also are the bright bottles in the Hunterian Museum kept complete. From time to time something very rare comes to hand, and then there is quite an excitement in the place. It is turned about, examined, and discussed, with as much zest as a lady would display when first opening a present of jewels, or first criticising a new ball-dress. If the new acquisition be an animal but recently dead, a drop of its blood is sought and placed under the microscope to see the diameter of its globules; if it has a coat of fur, perhaps one of the hairs are next submitted to the same test; and then a fine section of its bone passes a similar ordeal. Its brain is investigated, weighed, and placed in spirit for preservation. Its general characteristics are then gone over, and a description of them written down. If worthy of a place in the Museum, this description goes to make a paragraph in the catalogues of the Collection—fine quarto volumes, of which there are many now complete, containing more exact anatomical and physiological descriptions of objects, than perhaps any other work extant.

The last contribution to the series of Catalogues was made in the room we have been examining. Its production was the constant labour of two years; and the volume contains exact particulars of many facts never before noticed. Amongst other things, for instance, made out with certainty in this place by Mr. Quekett, after months of patient investigation, was the elementary differences in the character of bone. To the common eye and common idea, all bone is simply bone; and for common purposes the word indicates closely enough what the speaker would describe. Not so to the naturalist and the physiologist; and so scalpel and microscope went to work: the sea, the land, and the air, lent each their creatures peculiar to itself, and the labour of the search was at length rewarded by a discovery that each great class of living things has an elementary difference in the bones upon which its structure is built up. Hence, when a particle of bony matter is now placed under the microscope, come whence it may—from a geological strata, or from the depths of the sea, or from within the cerecloth of a mummy—the observer, guided by Mr. Quekett's observations, knows whether it belonged in life to bird, beast, or fish.

Glancing round this anatomical workshop, we find, amongst other things, some preparations showing the nature of pearls. Examine them, and we find that there are dark and

dingy pearls, just as there are handsome and ugly men; the dark pearl being found on the dark shell of the fish, the white brilliant one upon the smooth inside shell. Going further in the search, we find that the smooth glittering lining upon which the fish moves, is known as the *nacre*, and that it is produced by a portion of the animal called the *mantle*: and for explanation sake we may add, that gourmands practically know the mantle as the *beard* of the oyster. When living in its glossy house, should any foreign substance find its way through the shell to disturb the smoothness so essential to its ease, the fish coats the offending substance with nacre, and a pearl is thus formed. The pearl is, in fact, a little globe of the smooth glossy substance yielded by the oyster's beard; yielded ordinarily to smooth the narrow home to which his nature binds him, but yielded in round drops—real pearly tears—if he is hurt. When a beauty glides proudly among a throng of admirers, her hair clustering with pearls, she little thinks that her ornaments are products of pain and diseased action, endured by the most unpoetical of shell-fish.

Leaving the centre-room of the three in the College roof, let us just glance at the other two apartments. Upon entering one we see the walls lined with boxes, something like those in a milliner's shop, but, instead of holding laces and ribands, we find them labelled "Wolf," "Raccoon," "Penguin," "Lion," "Albatross," and so on with names of birds, and beasts, and fishes. On lifting a lid, we find the boxes filled with the bones of the different creatures named; not a complete skeleton of any one, perhaps, but portions of half-a-dozen. In this room, the two students attached to the College carry on dissections, under the directions of the superior authorities. What they do is entered in a book kept posted up, and this affords another source for reference as to anatomical facts. When they have laboured here for three years, they have the option of a commission as Assistant Surgeon in the Army, Navy, or East India Company's service, as a reward for their College work.

If the atmosphere of the two apartments we have investigated was bad, that of the third room was infinitely worse, though windows and ventilators are constantly open. In this place large preparations are kept, and all the specimens are here put into the bottles required for exhibition in the Museum. This third room, like the first, has a curiously characteristic look. It would make a fine original for a picture of an alchemist's study. On one side is a large structure of brickwork with pipes and taps, conveying the idea of a furnace and still, or of an oven. Alongside it is a bath and a table, and the purpose of the whole is for injecting large animals. This is a very difficult operation, the object being to drive a kind of hot liquid sealing-wax into every artery of the body, even the most minute.

All things brought here, and capable of it, are injected somewhat after this fashion before they pass under the scalpel. Besides this oven-looking structure there are pans, and tubs, and casks; one containing a small dromedary, another being "a cask of camel." A painter's easel stands there ready for use, and on the floor are some bones of a megatherium; the tables are covered with bottles and jars, and the walls are similarly decorated. Strings of bladders hang about, and under foot we see thin sheets of lead coated with tin-foil; these latter being used for tying down the preparation bottles so that they may for years remain air-tight; a tedious and somewhat difficult operation. In this place every year they use scores, sometimes hundreds of gallons of alcohol; one fact which helps to show that museums on a large scale are expensive establishments.

Here, as elsewhere, however, in our establishments, whatever may be expended on materials, the men who do the work of science are but indifferently paid. But lucre is not their sole reward. No mere money payment could compensate (for instance) a man for spending a lifetime in this College of Surgeons' roof. Forget the object in view; ignore the charm that science has for its votaries; and this place becomes a literal inferno, filled with pestilential fumes, and surrounded by horrible sights. But they who fix the salaries know how much the pursuit of science is a labour of love; and so they pay the man of science badly, not here alone, but in all the scientific branches of the public service. But the science-worker though he may feel the injustice, yet moves on his way rejoicing, pleased with his unceasing search into the secret workings of nature, and exhilarated from time to time by some discovery, or by the confirmation of some cherished notion. And though the glittering prizes of life be bestowed on strivers in far different walks, the student of nature holds on his cheerful and philosophic way, rewarded by the glimpses he gets of the power that made and sustains all terrestrial things, and rewarded, moreover, by the holy contact with that infinite wisdom seen at work in the construction, the adaptation, and the continuance of the marvellous and illimitably varied works it is the business of his life to investigate.

CHIPS.

NICE WHITE VEAL.

WE shudder at the cruelties practised upon Strasbourg geese to produce the celebrated *pâtés de foie gras*; but remorse would assuredly afflict the amateurs of veal with indigestion, if they reflected on the tortures to which calves are subjected to cause the very unnatural colour of the meat which they so much prize. The natural and wholesome tint of veal is not white, but pink. An ancient French traveller in England (1690)

says that the English veal has not the "beautiful red colour of the French." Dr. Smollett, in "Peregrine Pickle," upbraids epicures, on the scores both of cruelty and unwholesomeness, saying that our best veal is like a "fricassee of kid gloves," and the sauce of "melted butter" is rendered necessary only by the absence of the juices drained out of the unfortunate animal before death.

The process of killing a calf is a refinement of cruelty worthy of a Grand Inquisitor. The beast is, while alive, bled several times; in summer, during several hours of the night, and frequently till it faints; when a plug is put into the orifice till "next time." But the lengthened punishment of the most unoffending of animals is at the actual "killing." It is tied together, neck and heels, much as a dead animal when packed in a basket and slung up by a rope, with the head downwards. A vein is then opened, till it lingeringly bleeds to death. Two or three "knocks" are given to it with the pole-axe whilst it hangs loose in the air, and the flesh is beaten with sticks, technically termed "dressing" it, some time before feeling has ceased to exist. All this may be verified by those who insist on seeing the penitential of the slaughter-houses; or the poor animal may be seen moaning and writhing—by a mere glance—on many days of the week, in Warwick Lane, Newgate Street.

This mode of bleaching veal is not only a crime, but a blunder. The flesh would be more palatable and nutritious killed speedily and mercifully. But were it otherwise, and had it been twenty times more a luxury, who, professing to honour the common Creator, would, for the sensual gratification of the palate, cause the calf to be thus tortured?

"ALL THINGS IN THE WORLD MUST CHANGE."

Would'st thou have it always Spring,
Though she cometh flower-laden?
Though sweet-throated birds do sing?
Thou would'st weary of it, Maiden.
Dost thou never feel desire
That thy womanhood were nearer?
Dost thy loving heart ne'er tire,
Longing yet for something dearer?
Would'st thou have Summer ever stay—
Droughty Summer—bright and burning?
Dost thou not, oft in the day,
Long for still, cool, night's returning?
Dost thou not grow weary, Youth,
Of thy pleasures, vain though pleasant—
Thinking Life has more of Truth
Than the satiating present?

Would'st thou have Autumn never go?
(Autumn, Winter's wealthy neighbour),
Stacks would rise, and wine-press flow
Vainly, did'st thou always labour.
When thy child is on thy knee
And thy heart with love's overflow,
Dost thou never long to see
What is in the future's showing?

When old Winter, cold and hoar,
Cometh, blowing his ten fingers,
Hanging ice-drops on the door
Whilst he at the threshold lingers,
Would'st thou over vigil keep
With a mate so full of sorrow?
Better to thy bed and sleep,
Nor wake till th' Eternal morrow!

THE LAST OF A LONG LINE.

IN TWO CHAPTERS.—CHAPTER II.

IN Great Stockington there lived a race of paupers. From the year of the 42nd of Elizabeth, or 1601, down to the present generation, this race maintained an uninterrupted descent. They were a steady and unbroken line of paupers, as the parish books testify. From generation to generation their demands on the parish funds stand recorded. There were no *lacune* in their career; there never failed an heir to these families; fed on the bread of idleness and legal provision, these people flourished, increased, and multiplied. Sometimes compelled to work for the weekly dole which they received, they never acquired a taste for labour, or lost the taste for the bread for which they did not labour. These paupers regarded this maintenance by no means as a disgrace. They claimed it as a right,—as their patrimony. They contended that one-third of the property of the Church had been given by benevolent individuals for the support of the poor, and that what the Reformation wrongfully deprived them of, the great enactment of Elizabeth rightfully—and only rightfully—restored.

Those who imagine that all paupers merely claimed parish relief because the law ordained it, commit a great error. There were numbers who were hereditary paupers, and that on a tradition carefully handed down, that they were only manfully claiming their own. They traced their claims from the most ancient feudal times, when the lord was as much bound to maintain his vassal in gross, as the vassal was to work for the lord. These paupers were, in fact, or claimed to be, the original *adscripti glebe*, and to have as much a claim to parish support as the landed proprietor had to his land. For this reason, in the old Catholic times, after they had escaped from villenage by running away and remaining absent from their hundred for a year and a day, dwelling for that period in a walled town, these people were amongst the most diligent attendants at the Abbey doors, and when the Abbeys were dissolved, were, no doubt, amongst the most daring of these thieves, vagabonds, and sturdy rogues, who, after the Robin Hood fashion, beset the highways and solitary farms of England, and claimed their black mail in a very unceremonious style. It was out of this class that Henry VIII. hanged his seventy-two thousand during his reign, and, as it is said, with-

out appearing materially to diminish their number.

That they continued to "increase, multiply, and replenish the earth," overflowing all bounds, overpowering by mere populousness all the severe laws against them of whipping, burning in the hand, in the forehead or the breast, and hanging, and filling the whole country with alarm, is evident by the very act itself of Elizabeth.

Amongst these hereditary paupers who, as we have said, were found in Stockington, there was a family of the name of Deg. This family had never failed to demand and enjoy what it held to be its share of its ancient inheritance. It appeared from the parish records, that they had practised in different periods the crafts of shoemaking, tailoring, and chimney-sweeping; but since the invention of the stocking-frame, they had, one and all of them, followed the profession of stocking weavers, or as they were there called, stockingers. This was a trade which required no extreme exertion of the physical or intellectual powers. To sit in a frame, and throw the arms to and fro, was a thing that might either be carried to a degree of extreme diligence, or be let down into a mere apology for idleness. An "idle stockinger" was there no very uncommon phrase, and the Degr were always classed under that head. Nothing could be more admirably adapted than this trade for building a plan of parish relief upon. The Degr did not pretend to be absolutely without work, or the parish authorities would soon have set them to some real labour,—a thing that they particularly recoiled from, having a very old adage in the family, that "hard work was enough to kill a man." The Degr were seldom, therefore, out of work, but they did not get enough to meet and tie. They had but little work if times were bad, and if they were good, they had large families, and sickly wives or children. Be times what they would, therefore, the Degr were due and successful attendants at the parish pay-table. Nay, so much was this a matter of course, that they came at length not even to trouble themselves to receive their pay, but sent their young children for it; and it was duly paid. Did any parish officer, indeed, turn restive, and decline to pay a Deg, he soon found himself summoned before a magistrate, and such pleas of sickness, want of work, and poor earnings brought up, that he most likely got a sharp rebuke from the benevolent but uninquiring magistrate, and acquired a character for hardness that stuck to him.

So parish overseers learnt to let the Degr alone; and their children regularly brought up to receive the parish money for their parents, were impatient as they grew up to receive it for themselves. Marriages in the Deg family were consequently very early, and there were plenty of instances of married Degr claiming parish relief under the age of twenty, on the plea of being the parent of

two children. One such precocious individual being asked by a rather verdant officer why he had married before he was able to maintain a family, replied, in much astonishment, that he had married in order to maintain himself by parish assistance. That he never had been able to maintain himself by his labour, nor ever expected to do it; his only hope, therefore, lay in marrying, and becoming the father of two children, to which patriarchal rank he had now attained, and demanded his "pay."

Thus had lived and flourished the Degr on their ancient patrimony, the parish, for upwards of two hundred years. Nay, we have no doubt whatever that, if it could have been traced, they had enjoyed an ancestry of paupers as long as the pedigree of Sir Roger Rookville himself. In the days of the most perfect villenage, they had, doubtless, eaten the bread of idleness, and claimed it as a right. They were numerous, improvident, ragged in dress, and fond of an alehouse and of gossip. Like the blood of Sir Roger, their blood had become peculiar through a long persistence of the same circumstances. It was become pure pauper blood. The Degr married, if not entirely among Degr, yet amongst the same class. None but a pauper would dream of marrying a Deg. The Degr, therefore, were in constitution, in mind, in habit, and in inclination, paupers. But a pure and unmixed class of this kind does not die out like an aristocratic stereotype. It increases and multiplies. The lower the grade, the more prolific, as is sometimes seen on a large and even national scale. The Degr threatened, therefore, to become a most formidable clan in the lower purlieus of Stockington, but luckily there is so much virtue even in evils, that one, not rarely cures another. War, the great evil, cleared the town of Degr.

Fond of idleness, of indulgence, of money easily got, and as easily spent, the Degr were rapidly drained off by recruiting parties during the last war. The young men enlisted, and were marched away; the young women married soldiers that were quartered in the town from time to time, and marched away with them. There were, eventually, none of the once numerous Degr left except a few old people, whom death was sure to draft off at no distant period with his regiment of the line which has, I op'd. Parish overseers, magistrates, and master manufacturers, felicitated themselves at this unhop'd-for deliverance from the ancient family of the Degr.

But one cold, clear, winter evening, the east wind piping its sharp sibilant ditty in the bare shorn hedges, and poking his sharp fingers into the sides of well broad-clothed men by way of passing jest, Mr. Spires, a great manufacturer of Stockington, driving in his gig some seven miles from the town, passed a poor woman with a stout child on her back. The large ruddy-looking man in the prime of

to the engine," which is a desirable object throughout our three kingdoms,—for every place is a corner place, having light and air, and you may sit which way you please.

Attached to each carriage, and going the whole length of the train, is a broad wooden plank, along which the guards are constantly walking, so that the slightest thing amiss could scarcely occur without their perceiving it immediately. Just before the arrival of the train at any station, one of these functionaries—for there are several—quietly opens the door, and, instead of calling out "I say, you sir!" or "Come, marm, your ticket, I can't be a waitin' here all day," as we have heard in England, walks without any hurry or bustle down the division from one end to the other, repeating, in a clear and ordinary tone of voice the name of the station which is being approached, and requiring the tickets of such passengers as are going to alight there. With such an arrangement—giving ample time for the gathering together of coats, canes, umbrellas, reticules, and so forth—even Martha Struggles herself might have got through a journey unscathed and "unflustered."

The admirable arrangement displayed in America, as well as in Germany, for receiving tickets without that delay which has been so much complained of in England, cannot be sufficiently applauded. When however delay is unavoidable, to receive the mails, or from some other cause, no sooner does the train stop, than a waiter, or sometimes a pretty waitress—who is more likely to find customers—trips up the steps with a tray laden with iced water and lemonade, glasses of light wine or *mail-trunk*, (a kind of Burridge-cup,) biscuits, cakes, and other edible nick-nacks, so that the passenger may take some slight refreshment without getting down.

In the railway from Bonn to Cologne, on the Rhine, they have pushed convenience yet farther, having provided the first-class carriages with tables, so that during the journey, one pressed for time may write letters with the greatest ease; pens and a portable inkstand being all that is necessary for that purpose. Paper may be had at the station.

It has been also suggested on several of the continental railways, that such travellers as chose to pay for the space, might have a regular bed; a great convenience for ladies or invalids, unable to bear the fatigue of a journey of many hours by night.

These hints might be followed with very great advantage to the shareholders in particular and to the public in general, by the directors of British lines.

IMPROVING A BULL.

THE highly respectable old lady who addressed us on a former occasion, has obliged us with another communication, on a most important subject:—

Harriet.—You would have heard before, but was a mad bull, which being tossed

might at my age be very ill-convenient. But that's nothing to what I'm going to tell you. Only to think of the power of horns! Bulls tosses very high, I've heard, but did you ever hear, Mr. Conductor, of a mad bull tossing a widow and six children across the sea, half over the side of the round world, from our Borough to Australia? Well you may stare, but it's a fact!

"The bull run right at me, full butt, and so I grasped my umbrella with both hands and ran to where the shops was—drat the boys, how they did screech about one!—and it was cold water, which I doesn't often drink, by which means I came to in a pastry-cook's. The name was Bezzle, I see it on a bag while she was putting in gingerbread nuts for Mrs. Jenks's baby, which I bought not to be under obligation for stepping in.

"Gracious mussy, Mrs. Bezzle," says I, 'why wasn't I killed? What ever is the reason of them bulls?'

"Says she, 'It's market day.'

"Smithfield!" says I.

"Says Mrs. Bezzle, 'Mum, all the abuse and outcry against Smithfield is very narrow-minded.'

"Says I, 'How so?'

"Says she, 'It don't consider shop-keepers.

When a bull takes a line of street, it drives the people into the shops on either side, and they make purchases for fear of being gored.'

"'Heighy teighy, num,' I says, 'you are alluding to my ginger-bread.'

"Says she, 'I scorn allusions. It's a rule. Whether it's bulls or thunderstorms, or what it is we look to, we respects whatever sends us customers.'

"Says I, 'Mrs. Bezzle, you astonish me. Where's your family trade?'

"Says she, 'There are too many traders. Where one of us earns meat, three of us only earn potatoes.'

"Emigrate," says I.

"Says she, 'That's very well, but then,' says she, 'in such a move it's hard to know which way to put one's foot, and when a step's made, if it's a wrong one, it's not easy to retrace it.'

"Spirited trading—" says I.

"'Al!' says she, cutting me short rudely; but I forgive her, owing to her feelings. 'Take Chandlery, within seven minutes of this door, mum. One man sells soap under cost price, and other things at profit, hoping to bring people to his shop for soap, and then get them to buy other articles. But his neighbour sells cheap herrings in the same way; another sacrifices pickles, and another makes light of the candle business. What's the result? Folks buy in the cheapest market; go for soap to the man who sells that at the ruin prices, go for herrings to his neighbour, go down the other street for pickles, and get candles over the way.'

"Well," says I, 'that's an illustration of

'Cheapness, but,' says I, 'it's dishonest. A fair trader has no right to sell an article at less than its first cost.'

'No right!' says she. 'And I dessay he thinks he has no right to starve. It's very hard to judge. The young tradesman, with his little capital and knowledge of a trade, has got his sweetheart and his ambition. He must wedge into society somehow, and he begins with the sharp end.'

'But,' says I, 'it isn't sharp, Mrs. Bezzle.'

'So she shakes her head; says she, 'I'll give you an example which is true, and one out of a many.'

'I once knew an excellent young man who died of cholera. He left a widow and three little children. After deducting all expenses for her husband's burial, the widow found that she possessed a hundred pounds. With fear and trembling, she embarked this money, in an effort to support herself. With it she fitted up a little shop, and had begun to earn a livelihood, when—'

'Well, Mrs. Bezzle, what prevented her?'

'—"An empty house close by was taken by another person following her trade. Immediately her receipts diminished. One cannot live except by bread that can be got out of a neighbour's cupboard. The widow and the children have already lost eighty pounds, have only twenty left; their house is taken by the year, and so they still are in it; and the poor lost woman cannot be comforted. Her hope is gone.'

'Heigh, dear,' says I, 'it wasn't so in my young days. I believe this is owing to over-population,' says I.

'Well,' says Mrs. Bezzle, perking up. 'It's cruel to blame us for our struggles. What if I have got nine, and six on 'em dependant on penny tarts and gingerbread for meat, drink, washing, and lodging, are they to be thrown in my teeth?'

'Emigrate,' says I, six times more pointedly than before.

'Where to?' says she, 'and how? Who can tell me that?'

'Go and lay your case before Parson Pullaway; he knows our M.P., and he knows all about colonial places. Hasn't his brother's wife's first cousin got one of them? He is Sub-under-Secretary to Lord Oxfordmixture, who has all the emigration settlements under his thumb.'

'I'll think about it,' says Mrs. Bezzle, quite struck-like,—for down came the scales on the counter like a shot, and the whole ounce of sugar-candy jumped into the little boy's apron of its own accord. He had come for two penn'orth on pretence of a cough. 'Besides, didn't Mr. Pullaway christen seven out of my nine children, and not a penny of the fees owing for?'

'The last word as ever I spoke to Mrs. Bezzle was, "Emigrate!"

'Well, who would have thought it? Next week Mrs. Bezzle's business was to sell. The week after, it was sold. The week after that, Mrs. Bezzle and her son Tom, and Tom's wife, and Tom's brother Sam, and Mrs. Bezzle's eldest daughter, and little James, and Sarah, and Mary Ann, and the two little urchins, were on board a ship, at Liverpool, bound for Port Philip. That's a year, come Michaelmas, ago.

'But, drat 'em, why didn't they pay the postage? Two-and-two is a consideration when butter (best fresh) is a rising a penny a pound every week. Not but what I was glad to hear from Mrs. Bezzle. Tom and his wife, and his brother Sam, are settled in a 'run'; and though there was some words I couldn't make out, I dare say they didn't explain how a 'run' could be a settlement. 'Quite the reverse!' as Mrs. Jenks said—(I have made it up with her, though she did insinuate the gingerbread-nuts the mad bull made me buy gave her babby the cholera; and, bless it! it was only the teeth after all). Mrs. Bezzle has settled herself in the mutton-pie and cheese-cake line, and has no fear of opposition; and as in Port Philip there is good digestions and plenty of 'em, pies is popular. Prices, too, is better,—penny pies being tuppence. James is on the 'run,' along with his eldest brother. Sarah ain't married yet,—for out of six offers, a young gal of seventeen has a right to be puzzled for six months or so, and more dropping in every week. Mary Anne is family governess to a rich copper-man, with plenty of stock—I suppose by that he is in the soup line. However, all is doing well.

'Well, Mr. Conductor, it was all owing to that bull, wasn't it? If I hadn't improved that solemn occasion, where would Mrs. Bezzle, and four out of six of her helpless offspring have been by this time?—why, in the workhus.'

LUNGS FOR LONDON.

TRAVELLERS describe nothing to be so much dreaded by the people of the East as a flight of locusts, except indeed a settlement of locusts. When those devouring insects alight on the fields and pastures, they begin from a centre composed of myriads, and eat up everything green within radii extending over not acres, but miles. They fall upon gardens and leave them deserts; and upon a field they do not permit so much as a blade of grass to indicate where grass was.

Although, in fact, these little devastators do not trouble us; in effect, Londoners are the victims of equally efficient destroyers of their green places.

Bricklayers are spreading the webs and meshes of houses with such fearful rapidity in every direction, that the people are being gradually confined within narrow prisons, only open at the top for the admission of what would be air if it were not another. Suburban open spaces are being entombed in

brick-and-mortar mausoleums for the suffocation as well as for the accommodation of an increasing populace; who, if they wish to get breath, can find nowhere to draw it from, short of a long journey. The Laings of London have undergone congestion, and even their cells are underground.

Of all the neighbourhoods of which London is a collection, Finsbury and Islington have suffered most. Within the recollection of middle-aged memories, Clerkenwell Green was of the right colour; Moorfields, Spafields, and the East India Company's Fields, were adorned with grass; and he must be young indeed who cannot remember cricket-playing in White Conduit, Canonbury, Shepherd and Shepherdess, Rhodes, and Laycock's, besides countless acres of other "Fields," which are now blotted out from the face of the Country to become Town, in the densest sense of the word. Thanks to the window tax and the bricklayer, fresh air will be thoroughly bricked out, unless a vigorous effort be made to stop the invasion of burnt clay and water.

Mr. Lloyd, a gentleman of Islington who dreamt a few years since that he lived in the country, but has recently awoke to the conviction that his once suburban residence has been completely incorporated with the town, determined, if possible, to arrest the invasion of habitations. His plan is to dam out the flood of encroachment by emparking a large space at Islington for the behoof of the Borough of Finsbury, which contains a population of three hundred thousand panting souls. This space is, according to his plan, that which surrounds the village of Highbury, one of the highest and airiest suburbs of London. It is within two miles of the City, and might be rendered accessible to Victoria Park in the east, and to Regent's Park in the west. The proposed enclosure will take in a good portion of the course of the New River, and a large quantity of ground so well and picturesquely wooded, that a paling and a name are only requisite to convert it at once into a park. In shape the enclosure would be a triangle, the base of which is the Holloway Road and Hopping Lane, and the apex, a point at which the Seven Sisters' Road joins the Green Lanes. The extent of these grounds is about three hundred acres, and the total cost of securing them to the public is not more than one hundred and fifty thousand pounds.

Mr. Lloyd has been vigorously agitating this matter for more than nine years, and yet—such is the pace at which the public are apt to move in affairs in which the public alone is itself concerned—it is only lately that he has obtained an attentive hearing for his

A prospect of success appears now, however, to dawn. Public meetings have been lately held in every district concerned, in which every sort of co-operation has been promised.

A single difficulty seems to stand in the way; one little thing needful is only required to turn the project into an accomplished fact, and that is, the money,—one hundred and fifty thousand pounds merely. Mr. Lloyd and his coadjutors have, we believe, mentioned their little difficulty at the Treasury, and are awaiting an answer. This state of things would form a curious problem for De Morgan, Quetelet, or others learned in the doctrine of probabilities: given, official routine multiplied by systematic delay, what are the chances of the cash required within the present generation?

A park for Finsbury is too urgent a demand for a dense population to allow of much time being wasted in knocking at the door of the Treasury. The public must beatir themselves in the scheme, and it will soon be accomplished and carried out.

THE LOVE OF NATURE.

WHERE the green banners of the forest float,
Where, from the Sun's imperial domain,
Armour'd in gold, attentive to the note
Of piping birds, the sturdy trees remain,
Those never-angered armies; where the plain
Boasts to the day its bosom ornaments
Of corn and fruitage; where the low refrain
Of seaside music song on song invents,
Laden with placid thought, whereto the heart
assents,
Often I wander. Nor does the light Noon,
Garrulous to man's eye, declaring all
That Morning pale (watched by her spectre moon,
Or solemn Vesper, seated near the pall
Of Day) holds unrevealed; nor does the fall
Of curtain on our human pantomime,
The sweeping by of Day's black funeral
Through Night's awe-stricken realms, with tread
sublime,
Chiefly delight my heart; beauty pervades all time.
Morning: the Day is innocent, and weeps;
Noon: she is wedded and enjoys the Earth;
Evening: wearied of the world she sleeps.
Night watches till another Day has birth.
The innocence of Morning, and the mirth
Of Noon, the holy calm of Eventide,
The watching while Day is not, there is dearth
Of joy within his soul who hath not cried:
"I welcome all, O God,—share all Thou wilt
provide!"

THE PRESERVATION OF LIFE FROM SHIPWRECK.

It is a difficult matter to reconcile with the sympathy, which it is well-known the sufferings of the unfortunate always receive in England, the apparent apathy which exists among the public, on a subject so important as the preservation of Life from Shipwreck. Several pleas in extenuation have been urged by those most interested. In the first place, there is that natural hardihood and contempt of danger in the English sailor, which it is, occasionally, impossible to tame down to any-

thing like prudence and forethought. This indomitable spirit of emulation and daring, is found to be the greatest enemy to the adoption of any of those appliances which science has rendered available. The Deal boatman trusts his life in precisely the same sort of craft that his father, and his father's father, did before him. Confident in, and proud of, the skill which he has inherited from them, he scorns to tarnish, as he falsely reasons, his name by the habitual use of buoy or belt, lest those of his comrades who are firmly entrenched behind their ancient prejudices, should set him down as faint-hearted, and unworthy the honourable name of a "Deal boatman."

The still more inaccessible Scotch fisherman, with his four thousand piscatory brethren, "shoots his nets" on the exposed coast of Caithness, in the open boat used by his ancestors, notwithstanding the evil consequences which have often ensued. The latest example of the ill effects of this tenacity of opinion occurred two years since, when a fearful gale, which did more or less damage along the whole eastern face of England and Scotland, wrecked and damaged a hundred and twenty-four of their boats, drowned a hundred men, and occasioned a loss to the fishing community of above seven thousand pounds, which, although a large sum, will not bear any comparison with the misery and destitution thus entailed upon the widows and orphans of the lost.

It is impossible to say how many of these unfortunate men might have been saved, had they had proper harbours to run for, with lights and beacons to warn, and life-boats to afford assistance; proper boats to keep the sea, and buoys and belts, as a last resource; but surely we are warranted in thinking that fully one half would have been left among us.

In both these examples, it must be acknowledged that it would be a useless effort to attempt any sudden innovations on these deeply-seated prejudices; the only thing that can be done, in either case, is to let the new principle quietly work of itself. Let us find a life-belt for the Deal boatman, which he can wear and work in, until in it he recognises his best friend; let the Scotch fisherman have ocular demonstration that the "model" boat prosecutes the fishery with equal success, and far greater safety and comfort in bad weather, and we shall soon have a different system of things.

In the course of each year an average of something like six hundred ship disasters occur on the shores of this kingdom alone,—some wrecked through stress of weather; some by carelessness, and other disgraceful causes; some through mistaking lights, or having been lured to destruction by useless ones; some through actual rottenness of timber; some dashed to pieces on the very rock for which they were anxiously looking half a mile

further a-head, where it ought to have been, according to the chart; and some from other causes, more or less easily averted. These losses are attended by the almost incredible destruction of a thousand lives, and the value of tens of thousands of pounds sterling.

The shocking wreck of the *Orion*—not, we say with sorrow, the last occurrence of the kind—startled, for a moment, the public from their culpable apathy. But the shock passed away; and attention to this subject is gradually subsiding into the usual indifference. The details of this catastrophe ought to have had a more permanent effect on the public mind. In the moment of danger, the gear of the boats was so imperfect, that these could only be released from their davits by capsizing their human cargoes into the deep. Even when they righted, they immediately filled, for the plug-holes were actually unstoppered. The most ordinary precautions for saving life were not at hand, as precautions. The hen-coops, barrels, seats, combings, and other means of escape, by which many were saved, were purely accidental life-preservers.

Every English ship, before leaving port, should be submitted to a supervising power similar to the inspection that emigrant ships undergo, in order that it should be certified that means, both simple and efficacious, for the safety of the passengers and crew, exist on board—boats, belts, mattresses, rafts; everything, in short, that can add to the security of those about to "go down to the sea in ships."

That this sort of supervision is effectual, is proved by the few disasters which happen to the vessels of the Royal Navy. In these ships, everything is not only kept in its proper place, to be ready when wanted, but each man is constantly exercised in what he is to do with it when no danger is apprehended, that he may be in a state of prompt efficiency when it is. The Commander-in-Chief of the Mediterranean squadron can step on board any one of his ships in the middle of the night; and although three-fourths of its crew are asleep in their hammocks, he can, by ordering the "beat to quarters," make sure of every man being at his post in seven minutes, ready for action or for any sudden disaster. This sort of discipline it is which is so much required in the merchant navy. In case of a ship striking, a dozen men rush to do one thing,—perhaps to release a boat from one of her davits,—and, consequently, swamp the boat, by leaving the stern rope untouched. Captain Basil Hall, in his "Fragments of Voyages and Travels," describes the vigilant precaution daily made even against the loss of one life. To each life-buoy there is as regular a "service" as to any other part or apparatus of the ship. He says:—

"On the top of the mast is fixed a port-fire, calculated to burn, I think, twenty minutes

or half-an-hour; this is ignited most ingeniously by the same process which lets the buoy down into the water. So that a man falling overboard at night, is directed to the buoy by the blaze on the top of its pole or mast, and the boat sent to rescue him also knows in what direction to pull. Even supposing, however, the man not to have gained the life-buoy, it is clear that, if above the surface at all, he must be somewhere in that neighbourhood; and if he shall have gone down, it is still some satisfaction, by recovering the buoy, to ascertain that the poor wretch is not left to perish by inches. The method by which this excellent invention is attached to the ship, and dropped into the water in a single instant, is perhaps not the least ingenious part of the contrivance. The buoy is generally fixed amidships over the stern, where it is held securely in its place by being strung, or threaded, as it were, on two strong perpendicular iron rods fixed to the taffrail, and inserted in holes piercing the framework of the buoy. The apparatus is kept in its place by what is called a slip-stopper, a sort of catch-bolt or detent, which can be unlocked at pleasure, by merely pulling a trigger. Upon withdrawing the stopper, the whole machine slips along the rods, and falls at once into the ship's wake. The trigger which unlocks the slip-stopper is furnished with a lanyard, passing through a hole in the stern, and having at its inner end a large knob, marked 'Life-Buoy'; this alone is used in the day-time. Close at hand is another wooden knob, marked 'Lock,' fastened to the end of a line fixed to the trigger of a gun-lock primed with powder: and so arranged, that when the line is pulled, the port-fire is instantly ignited, while, at the same moment, the life-buoy descends, and floats merrily away, blazing like a light-house. It would surely be an improvement to have both these operations always performed simultaneously, that is, by one pull of the string. The port-fire would thus be lighted in every case of letting go the buoy; and I suspect, the smoke if the day-time would often be as useful in guiding the boat, as the blaze always is at night. The gunner who has charge of the life-buoy lock sees it freshly and carefully primed every evening at quarters, of which he makes a report to the captain. In the morning the priming is taken out, and the lock uncocked. During the night a man is always stationed at this part of the ship, and every half-hour, when the bell strikes, he calls out 'Life-buoy!' to show that he is awake and at his post, exactly in the same manner as the look-out-men abaft, on the beam, and forward, call out 'Starboard quarter!' 'Starboard gangway!' 'Starboard bow!' and so on, completely round the ship, to prove that they are not napping."

We should like to hear of Government experimenting with rockets and mortars, with a

view to their improvement. Often the safety of a whole ship's company has depended upon the strength of a light cord, attached to a rocket, which has been lying in store for years; often it has happened that this very cord has been just a few feet too short! or has snapped, or has got entangled, or something else equally simple, but equally fatal. Let us look also to our quasi life-boats, some so heavy that they cannot be launched, or so dangerous as to drown their own crews—some constructed one way, some another—none on any recognised and universal principle. We are very proud of our name of Englishmen, and lay the flattering unction to our soul, that we are a highly civilised and reasonable community; but whilst we grow magniloquent in praises of our country and her commerce, we forget that we owe it all to the poor Jack Tar, for whose life and comfort we don't seem to care a fig. Else why have these inquiries not been before instituted? What is the use of our Trinity Boards, and Ballast Boards, and Light-house Boards, and all other Boards, if the seaman is not to know one light from another when he sees it, or if it is to be placed so that he cannot see it? What is the use of our keeping up a Hydrographic department, at an expense little short of thirty thousand a-year, if the surveys, and charts, and valuable data, the result of its labours, are to be so little appreciated? The truth is, that the masters of many of the mercantile marine are incapable of taking advantage of them, and of other improvements in nautical science, from incompetence. We trust, however, that the bill intended to remedy that defect, lately introduced by the Ministry into the House of Commons, will, if passed, have the desired object. Although it has been abandoned "at this late period of the session" out of respect to the approaching 12th of August and 1st of September, we trust it will be taken up again soon after the next meeting of Parliament.

WINGED TELEGRAPHS.

MAGNETIC Electricity for telegraphic purposes has nearly superseded pigeons. Till very recently a regular "service" of Carrier Pigeons existed between London and Paris, for the quick conveyance of such intelligence as was likely to affect the funds. The French capital was the focus of the system, in exemplification of the adage that "all roads lead to Paris," and pigeon expresses branched off in all directions from that city even to St. Petersburg. Relays of them are still kept up between Paris and Madrid, besides a few other places. The most celebrated relays of winged messengers were those which bore intelligence between Antwerp, Brussels, and Paris. In the former city a society of pigeon-fanciers, for amusement and emulation, keeps up an establishment of them. Their doings are amusingly chronicled in Kohl's last book of *Travels, Reisen in den Niederlanden*.

Having been invited to join some members of the Society of Antwerp Pigeon Fanciers, he wended his way about five o'clock one morning through the silent streets of the ancient city. A few members of the association, he says, who directed the expedition, were followed by servants carrying two flat baskets, in which the pigeons, about to be dispatched, were carefully deposited. As we proceeded along, my companions related to me some particulars concerning the carrier pigeons, or "*pigeons voyageurs*," as these winged messengers are designated. The carriers are a peculiar race of pigeons endowed with powers of memory and observation which enable them to find their way to any place by a course along which they have once flown. Every kind of pigeon is not capable of being taught to do this. Of the methods adopted by the Antwerp association for training and teaching these carriers, I learnt the following particulars.

Supposing a dispatch of pigeons is to be sent off from Antwerp to Brussels or Paris, the birds are kept for some time at the place of arrival or terminus, and during that interval are plentifully fed and carefully tended. By little excursive flights, taken day by day, they are gradually familiarised with different parts of the town in which they have been nurtured, and with places in its vicinity. When sufficiently practised in finding their way to short distances, the pigeons are conveyed to a station some leagues from their dove-cote. Here they are kept for a time without food, and then set to flight. On taking wing, they rapidly soar to a vast height, scanning the line of the horizon to discern the church spires, or other lofty points which enable them to distinguish their home. Some of the less intelligent birds lose their way, and are seen no more. Those who return home (to Paris, or wherever else it may be), are again plentifully fed. Then after a little space of time they are carried in baskets some miles further in the direction of Antwerp; again they are put on a short allowance of food and negligently tended. When the pigeons depart on their next flight, the Parisian church spires have sunk far beneath the horizon; however, they soon succeed in combining that portion of the route with which they are acquainted with the part as yet unknown to them. They hover round and round in the air, seeking to catch one or other thread that is to guide them through the labyrinth. Some find it; others do not.

In this manner the carrier pigeons are practised bit by bit along the whole distance between Paris and Antwerp. They attentively observe, or study, and learn by heart, each conspicuous object which serves them as a land-mark on the way. It is usual to exercise particular pigeons between the two cities, which it is wished to connect by this sort of postal communication; and it is neces-

sary to have a certain number for going, and others for returning. After the birds have been accustomed to inhabit a certain district, and to travel by a particular route, it is not found easy to divert them from their wonted course, and to make them available in any other direction.

My friends, the members of the Antwerp Society, assured me that their pigeons had frequently flown from Paris to Antwerp in six or seven hours; consequently in a much shorter time than that in which the same journey is performed by the railway train. By bird's flight, the distance between the two cities is forty miles (German*), and therefore it follows that these carrier pigeons must travel at the rate of from twenty to thirty English miles an hour. It is scarcely conceivable that they should possess the strength of wing and vigour of lungs requisite for such a flight; and it is no unfrequent occurrence for several of them to die on arriving at their journey's end. In stormy weather the loss of two-thirds of the birds dispatched on such a long flight, is a disaster always to be counted on. It is, therefore, usual to send off a whole flock, all bearing the same intelligence, so as to ensure the chance of one at least reaching its destination.

The pigeon expedition which I saw dispatched from Antwerp, consisted of about thirty birds. The point of departure was a somewhat elevated site in the outskirts of the city. A spot like this is always made choice of, lest the pigeons, on first taking flight, should lose themselves amidst the house-tops and church-spires of the city with which they are unacquainted; and by having the open country before them, they are enabled to trace out their own land-marks. When the pigeons are to be sent off on lengthened journeys, it is usual to convey them to the point of departure at a very early hour in the morning:—by this means they are dispatched in quietude, unmolested by an assemblage of curious gazers, and they have the light of a whole day before them for their journey. Carrier pigeons do not pursue their flight after night-fall, being then precluded by the darkness from seeing the surrounding country with sufficient distinctness, to enable them to discern their resting-places, or stations. In the obscurity of night the whole flock might light on strange dove-cotes, and be captured; an accident which would occasion the total failure of a postal expedition, for the few pigeons who might escape capture, would, on the return of morning, be bewildered, and unable to recombine their plan of route.

Pigeons are not suited for postal communication between places so remote one from another that the journey cannot be completed in a single day. If it can be accomplished in one flight, so much the better. Antwerp and Paris are, I believe,

* The German mile includes nearly three and a half English miles.

the extreme points of distance within which carrier pigeons are capable of journeying with certainty.

Herr Kohl gives no account of these stations or stages. We once saw one at Montrieul, the first station beyond Dover, towards Paris. The town stands on a high eminence, and is well adapted for the purpose. The cote was on the roof of a *café*. It was a square apartment with a flat ceiling, in which was cut a small door or trap: on the inside of this was fixed a small bell. If a Doyer pigeon had alighted on the trap, the bell would have rung, and called the attention of an attendant always in waiting. The pigeon would have been secured, the dispatch taken from under its wing, and the messenger put into its cage. In a twinkling the cyphered paper would be fastened under the wing of the Beauvais or Amiens pigeon, and it would be sent off. On arriving at its destination, the same formula would be gone through, and the Paris pigeon would take the dispatch to its destination. Although several pigeons, even in fine weather, are entrusted with the same message, two seldom arrive at the common destination at the same time, so that at each place the operation we have described is frequently repeated, in order that at least one of many dispatches may be certain of arriving at the destination.

These establishments were costly. Besides the great number of pigeons necessary to be kept at each station, some of the single birds were valuable. Fifty and sixty pounds was sometimes given for a clever pigeon. Those between Dover and Montrieul, and *vice versa*, were among the most valuable, for none but sharp-sighted messengers could find their way across the Channel; few flights were sent away without some members of it being lost.

But to return to the Antwerp pigeons—and to Mr. Kohl. Having, he continues, reached the open, elevated spot before-mentioned, the flat baskets carried by the servants were uncovered, and the little *voyageurs* rapidly winged their way upwards. The intelligence they were to convey to Paris was written in little billets, fastened under their wings. The pigeons I saw sent off had been brought in covered baskets from Paris, and were as yet totally unacquainted with Antwerp and its environs. Their ignorance of the locality was manifest in the wavering uncertainty of their movements when they first took wing. On rising into the air, they gathered closely together, like foreigners in a strange country, and presently they steered their course along the confines of the city, in a direction quite contrary to that of Paris. They then soared upwards, spirally, and after several irregular movements (during which they seemed to be looking for the right way, and hesitating which course to take), they all suddenly darted off to south-west, directing their rapid flight straight to Paris, as if

gladly quitting inhospitable Antwerp, where they had been scantily fed and carelessly tended.

As soon as the birds were fairly out of sight, the pigeon-trainers proceeded homeward, not a little gratified by the conviction that their fleet messengers, with the intelligence they bore under their wings, would outstrip the speed of a railway train which had started some time before them.

To me the most interesting point in the whole scene was the interval (about the space of a quarter of an hour) during which the pigeons wavered to and fro, seeking their way in a state of uncertainty. That appeared to me to be a wonderful manifestation of intelligence on the part of the birds. It is frequently affirmed that the carrier pigeon finds its way without the exercise of intelligence or observation, and merely by the aid of some incomprehensible instinct; but, from my own observations of the Antwerp pigeons, I am convinced that this is a mistake. Another circumstance tending to show that the birds are guided by something more than mere instinct, is, that during foggy weather the employment of carrier pigeons is found to be almost as impracticable as the use of the optical telegraph. But though it is not the practice to dispatch carrier pigeons at times when the atmosphere is very thickly obscured by fog, yet, owing to the keenness and accuracy of the visual power of these birds, which is much more perfect than that of man, they have an advantage over the telegraph. The latter is wholly useless when the atmosphere is only slightly obscured; but carrier pigeons frequently soar quite above the region of mist, and are thus enabled to trace their course without interruption. Stations of carrier pigeons are established in most of the principal towns of Belgium.

The members of the Antwerp pigeon-training society, whom I accompanied on the occasion above described, were citizens of the middle class of society. But in Belgium, pigeon-training has its attractions even for persons of rank and wealth, many of whom are enthusiastic pigeon fanciers; indeed, pigeon-flying is as fashionable an amusement in Belgium as horse racing in England. Prizes, consisting of sums of money as high as sixty thousand francs, are frequently won in matches of pigeons—to say nothing of the betting to which those matches give occasion.

Monthly Supplement of "HOUSEHOLD WORDS,"

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 20.]

SATURDAY, AUGUST 10, 1850.

[PRICE 2d.]

A DETECTIVE POLICE PARTY.

THE fresh-complexioned, smooth-faced officer, with the strange air of simplicity, began, with a rustic smile, and in a soft, wheedling tone of voice, to relate the Butcher's Story, thus:

"It's just about six years ago, now, since information was given at Scotland Yard of there being extensive robberies of lawns and silks going on, at some wholesale houses in the City. Directions were given for the business being looked into; and Straw, and Fendall, and me, we were all in it."

"When you received your instructions," said we, "you went away, and held a sort of Cabinet Council together?"

The smooth-faced officer coaxingly replied, "Ye-es. Just so. We turned it over among ourselves a good deal. It appeared, when we went into it, that the goods were sold by the receiver extraordinarily cheap—much cheaper than they could have been if they had been honestly come by. The receivers were in the trade, and kept capital shops—establishments of the first respectability—one of 'em at the West End, one down in Westminster. After a lot of watching and inquiry, and this and that among ourselves, we found that the job was managed, and the purchases of the stolen goods made, at a little public-house near Smithfield, down by Saint Bartholomew's; where the Warehouse Porters, who were the thieves, took 'em for that purpose, don't you see? and made appointments to meet the people that went between themselves and the receivers. This public-house was principally used by journeymen butchers from the country, out of place, and in want of situations; so, what did we do, but—ha, ha, ha!—we agreed that I should be dressed up like a butcher myself, and go and live there!"

Never, surely, was a faculty of observation better brought to bear upon a purpose, than that which picked out this officer for the part. Nothing in all creation, could have suited him better. Even while he spoke, he became a greasy, sleepy, shy, good-natured, chuckle-headed, unassuming, and confiding young butcher. His very hair seemed to have suet in it, as he made it smooth upon his head, and his fresh complexion to be lubricated by large quantities of animal food.

—"So I—ha, ha, ha!" (always with the confiding snigger of the foolish young butcher) "so, I dressed myself in the regular way, made up a little bundle of clothes, and went to the public-house, and asked if I could have a lodging there? They says, 'yes, you can have a lodging here,' and I got a bedroom, and settled myself down in the tap. There was a number of people about the place, and coming backwards and forwards to the house; and first one says, and then another says, 'Are you from the country, young man?' 'Yes,' I says, 'I am. I'm come out of Northamptonshire, and I'm quite lonely here, for I don't know London at all, and it's such a mighty big town?' 'It is a big town,' they says. 'Oh, it's a very big town!' I says. 'Really and truly I never was in such a town. It quite confuses of me!'—and all that, you know."

"When some of the Journeymen Butchers that used the house, found that I wanted a place, they says, 'Oh, we'll get you a place!' And they actually took me to a sight of places, in Newgate Market, Newport Market, Clare, Carnaby—I don't know where all. But the wages was—ha, ha, ha!—was not sufficient, and I never could suit myself, don't you see? Some of the queer frequenters of the house, were a little suspicious of me at first, and I was obliged to be very cautious indeed, how I communicated with Straw or Fendall. Sometimes, when I went out, pretending to stop and look into the shop-windows, and just casting my eye round, I used to see some of 'em following me; but, being perhaps better accustomed than they thought for, to that sort of thing, I used to lead 'em on as far as I thought necessary or convenient—sometimes a long way—and then turn sharp round, and meet 'em, and say, 'Oh, dear, how glad I am to come upon you so fortunate! This London's such a place, I'm blowed if I an't lost again!' And then we'd go back all together, to the public-house, and—ha, ha, ha! and smoke our pipes, don't you see?"

"They were very attentive to me, I am sure. It was a common thing, while I was living there, for some of 'em to take me out, and show me London. They showed me the Prisons—showed me Newgate—and when they showed me Newgate, I stops at the place

where the Porters pitch their loads, and says, 'Oh dear,' 'is this where they hang the men! Oh Lor!' 'That!' they says, 'what a simple cove he is! That an't it!' And then, they pointed out which was it, and I says 'Lor!' and they says, 'Now you'll know it agen, won't you?' And I said I thought I should if I tried hard—and I assure you I kept a sharp look out for the City Police when we were out in this way, for if any of 'em had happened to know me, and had spoke to me, it would have been all up in a minute. However, by good luck such a thing never happened, and all went on quiet: though the difficulties I had in communicating with my brother officers were quite extraordinary.

"The stolen goods that were brought to the public-house, by the Warehouse Porters, were always disposed of in a back parlor. For a long time, I never could get into this parlor, or see what was done there. As I sat smoking my pipe, like an innocent young chap, by the tap-room fire, I'd hear some of the parties to the robbery, as they came in and out, say softly to the landlord, 'Who's that? What does he do here?' 'Bless your soul,' says the landlord, 'He's only a'—ha, ha, ha!—he's only a green young fellow from the country, as is looking for a butcher's situation. Don't mind him!' So, in course of time, they were so convinced of my being green, and got to be so accustomed to me, that I was as free of the parlor as any of 'em, and I have seen as much as Seventy Pounds worth of fine lawn sold there, in one night, that was stolen from a warehouse in Friday Street. After the sale, the buyers always stood treat—hot supper, or dinner, or what not—and they'd say on those occasions 'Come on, Butcher! Put your best leg foremost, young 'un, and walk into it!' Which I used to do—and hear, at table, all manner of particulars that it was very important for us Detectives to know.

"This went on for ten weeks. I lived in the public-house all the time, and never was out of the Butcher's dress—except in bed. At last, when I had followed seven of the thieves, and set 'em to rights—that's an expression, of ours, don't you see, by which I mean to say that I traced 'em, and found out where the robberies were done, and all about 'em—Straw, and Fendall, and I, gave one another the office, and at a time agreed upon, a descent was made upon the public-house, and the apprehensions effected. One of the first things the officers did, was to collar me—for the parties to the robbery weren't to suppose, yet, that I was anything but a Butcher—on which the landlord cries out, 'Don't take him,' he says, 'whatever you do! He's only a poor young chap from the country, and butter wouldn't melt in his mouth!' However, they—ha, ha, ha!—they took me, and pretended to search my bedroom, where nothing was found but an old fiddle belonging to the landlord, that had got there somehow

or another. But, it entirely changed the landlord's opinion, for when it was produced, he says 'My fiddle! The Butcher's a pur-loiner! I give him into custody for the robbery of a musical instrument!'

"The man that had stolen the goods in Friday Street was not taken yet. He had told me, in confidence, that he had his suspicions there was something wrong (on account of the City Police having captured one of the party), and that he was going to make himself scarce. I asked him, 'Where do you mean to go, Mr. Shepherdson?' 'Why, Butcher,' says he, 'the Setting Moon, in the Commercial Road, is a snug house, and I shall hang out there for a time. I shall call myself Simpson, which appears to me to be a modest sort of a name. Perhaps you'll give us a look in, Butcher?' 'Well,' says I, 'I think I will give you a call'—which I fully intended, don't you see, because, of course, he was to be taken! I went over to the Setting Moon next day, with a brother officer, and asked at the bar for Simpson. They pointed out his room, upstairs. As we were going up, he looks down over the banisters, and calls out, 'Halloa, Butcher! is that you?' 'Yes, it's me. How do you find yourself?' 'Bobblish,' he says; 'but who's that with you?' 'It's only a young man, that's a friend of mine,' I says. 'Come along, then,' says he; 'any friend of the Butcher's is as welcome as the Butcher!' So, I made my friend acquainted with him, and we took him into custody.

"You have no idea, Sir, what a sight it was, in Court, when they first knew that I wasn't a Butcher, after all! I wasn't produced at the first examination, when there was a remand; but I was, at the second. And when I stepped into the box, in full police uniform, and the whole party saw how they had been done, actually a groan of horror and dismay proceeded from 'em in the dock!

"At the Old Bailey, when their trials came on, Mr. Clarkson was engaged for the defence, and he couldn't make out how it was, about the Butcher. He thought, all along, it was a real Butcher. When the counsel for the prosecution said, 'I will now call before you, gentlemen, the Police-officer,' meaning myself, Mr. Clarkson says, 'Why Police-officer? Why more Police-officers? I don't want Police. We have had a great deal too much of the Police. I want the Butcher! However, Sir, he had the Butcher and the Police-officer, both in one. Out of seven prisoners committed for trial, five were found guilty, and some of 'em were transported. The respectable firm at the West End got a term of imprisonment; and that's the Butcher's Story!'

The story done, the chuckle-headed Butcher again resolved himself into the smooth-faced Detective. But, he was so extremely tickled by their having taken him about, when he

was that Dragon in disguise, to show him London, that he could not help reverting to that point in his narrative; and gently repeating, with the Butcher snigger, "Oh, dear! I says, 'is that where they hang the men? Oh, Lor!' 'That!' says they. 'What a simple cove he is!'"

It being now late, and the party very modest in their fear of being too diffuse, there were some tokens of separation; when Serjeant Dorn-ton, the soldierly-looking man, said, looking round him with a smile:

"Before we break up, Sir, perhaps you might have some amusement in hearing of the Adventures of a Carpet Bag. They are very short; and, I think, curious."

We welcomed the Carpet Bag, as cordially as Mr. Shepherdson welcomed the false Butcher at the Setting Moon. Serjeant Dorn-ton proceeded:

"In 1847, I was dispatched to Chatham, in search of one Mesheck, a Jew. He had been carrying on, pretty heavily, in the bill-stealing way, getting acceptances from young men of good connexions (in the army chiefly), on pretence of discount, and bolting with the same.

"Mesheck was off, before I got to Chatham. All I could learn about him was, that he had gone, probably to London, and had with him—a Carpet Bag.

"I came back to town, by the last train from Blackwall, and made inquiries concerning a Jew passenger with—a Carpet Bag.

"The office was shut up, it being the last train. There were only two or three porters left. Looking after a Jew with a Carpet Bag, on the Blackwall Railway, which was then the high road to a great Military Depôt, was worse than looking after a needle in a haystack. But it happened that one of these porters had carried, for a certain Jew, to a certain public-house, a certain—Carpet Bag.

"I went to the public-house, but the Jew had only left his luggage there for a few hours, and had called for it in a cab, and taken it away. I put such questions there, and to the porter, as I thought prudent, and got at this description of—the Carpet Bag.

"It was a bag which had, on one side of it, worked in worsted, a green parrot on a stand. A green parrot on a stand was the means by which to identify that—Carpet Bag.

"I traced Mesheck, by means of this green parrot on a stand, to Cheltenham, to Birmingham, to Liverpool, to the Atlantic Ocean. At Liverpool he was too many for me. He had gone to the United States, and I gave up all thoughts of Mesheck, and likewise of his—Carpet Bag.

"Many months afterwards—near a year afterwards—there was a Bank in Ireland robbed of seven thousand pounds, by a person of the name of Doctor Dundey, who escaped to America; from which country some of the stolen notes came home. He was supposed to have bought a farm in New Jersey. Under

proper management, that estate could be seized and sold, for the benefit of the parties he had defrauded. I was sent off to America for this purpose.

"I landed at Boston. I went on to New York. I found that he had lately changed New York paper-money for New Jersey paper-money, and had banked cash in New Brunswick. To take this Doctor Dundey, it was necessary to entrap him into the State of New York, which required a deal of artifice and trouble. At one time, he couldn't be drawn into an appointment. At another time, he appointed to come to meet me, and a New York officer, on a pretext I made; and then his children had the measles. At last, he came, per steamboat, and I took him, and lodged him in a New York Prison called the Tombs; which I dare say you know, Sir?"

Editorial acknowledgment to that effect.

"I went to the Tombs, on the morning after his capture, to attend the examination before the magistrate. I was passing through the magistrate's private room, when, happening to look round me to take notice of the place, as we generally have a habit of doing, I clapped my eyes, in one corner, on a—Carpet Bag.

"What did I see upon that Carpet Bag, if you'll believe me, but a green parrot on a stand, as large as life!

"That Carpet Bag, with the representation of a green parrot on a stand, said I, 'belongs to an English Jew, named Aaron Mesheck, and to no other man, alive or dead!'

"I give you my word the New York Police officers were doubled up with surprise.

"How do you ever come to know that?" said they.

"I think I ought to know that green parrot by this time," said I; 'for I have had as pretty a dance after that bird, at home, as ever I had, in all my life!'"

"And was it Mesheck's?" we submissively inquired.

"Was it, Sir? Of course it was! He was in custody for another offence, in that very identical Tombs, at that very identical time. And, more than that! Some memoranda, relating to the fraud for which I had vainly endeavoured to take him, were found to be, at that moment, lying in that very same individual—Carpet Bag!"

Such are the curious coincidences and such is the peculiar ability, always sharpening and being improved by practice, and always adapting itself to every variety of circumstances, and opposing itself to every new device that perverted ingenuity can invent, for which this important social branch of the public service is remarkable! For ever on the watch, with their wits stretched to the utmost, these officers have, from day to day and year to year, to set themselves against every novelty of trickery and dexterity that the combined imaginations of all the lawless

rascals in England can devise, and to keep pace with every such invention that comes out. In the Courts of Justice, the materials of thousands of such stories as we have narrated—often elevated into the marvellous and romantic, by the circumstances of the case—are dryly compressed into the set phrase, "in consequence of information I received, I did so and so." Suspicion was to be directed, by careful inference and deduction, upon the right person; the right person was to be taken, wherever he had gone, or whatever he was doing to avoid detection: he is taken; there he is at the bar; that is enough. From information I, the officer, received, I did it; and, according to the custom in these cases, I say no more.

These games of chess, played with live pieces, are played before small audiences, and are chronicled nowhere. The interest of the game supports the player. Its results are enough for Justice. To compare great things with small, suppose LEVERRIER or ADAMS informing the public that from information he had received he had discovered a new planet; or COLUMBUS informing the public of his day that from information he had received, he had discovered a new continent; so the Detectives inform it that they have discovered a new fraud or an old offender, and the process is unknown.

Thus, at midnight, closed the proceedings of our curious and interesting party. But one other circumstance finally wound up the evening, after our Detective guests had left us. One of the sharpest among them, and the officer best acquainted with the Swell Mob, had his pocket picked, going home!

HEALTH BY ACT OF PARLIAMENT.

THERE was a story current in the city of Mosul, about the time that the first edition of "The Hundred and One Nights" began to be popular in Oriental society, of a certain Prince who was taken ill of the plague. Though his retinue was large, he was the only person who was in imminent danger. The Court physician was also at death's door, and a strange doctor was sent for, who pronounced the Great Man to be in a fearful state of debility, but retired without prescribing. The Prince waited long and anxiously for remedies, but in vain. He clapped his hands to summon a slave. "Where," he exclaimed, "is the physic?" "Son of the Earth," exclaimed the Nubian, "it is all taken!"

"And who has dared to swallow the medicine designed for the anointed of Allah?"

"As it is written by the Prophet," returned Hassan, "when the sheik sickens, his slaves droop." Thy whole household was sick, and clamoured for medicine; and, lo, the man of things straightway drenched them therewith, ordering us all, on pain of the Prophet's curse, not to give thee so much as a single grain of rhubarb."

"Breath of Mahomet," ejaculated his Mightiness; "am I then to die, and are my slaves to live?"

When a Mussulman is puzzled what to say, he invariably exclaims, "Allah is merciful;" which was Hassan's consolation.

"Let the wretched mediciner appear!" commanded the Prince.

The doctor came. "Illustrious father of a hundred generations!" said the general practitioner, "thine own physician only could cure thee, and he lies on his pallet a helpless being. I may not so much as look at thy transcendent tongue, or feel thine omnipotent pulse."

"Wherefore? O licenciate of the Destroyer!"

"Inasmuch as I may not infringe the vested rights of thine own special and appointed physician. The law—even that of the Medes and Persians, which never altereth—forbids me. Thy slaves I may heal, seeing that no vested rights in them exist; but——"

Here the Prince interrupted the speaker with a hollow groan, and sank on his pillow in despair.

The Arabic manuscript, from which this affecting incident was translated, ends with these words—"and the Prince died."

This story is evidently a foreshadowing of what has recently happened in reference to the metropolis of this country and the Public Health Act. London was in *extremis* from the effects of density of population, filth, bad air, bad water, the window-tax, and deficient drainage. It called in certain sanitary doctors—the regular consulting body, namely, the Government, being too weak to afford the slightest assistance. The result was, that a prescription, in the form of the Public Health Act, was concocted,—but was made applicable to every other member of the great retinue of towns, except to the Imperial City; which was exempted in consequence of the existing Vested Rights in crowded houses, deadly stenches, putrid water, foggy courts, and cesspools. "Although," in the words of a resolution, passed at the meeting which formed the Metropolitan Sanitary Association, "the strenuous efforts made in the metropolitan districts to procure a sanitary enactment mainly contributed to the passing of the Public Health Act; yet these districts were the only parts excluded from the benefits of that enactment. This exclusion has led to much misery and a great sacrifice of life."

This exception was so monstrous, that even the Corporation of the City of London took powers under their own Sewers' Act for the preservation of the health of the people dwelling within the City boundary,—who number no more than one hundred and twenty-five thousand out of the two millions of us who are congregated in civic and suburban London. The remaining one million eight hundred thousand are left to be stifled or diseased at the good pleasure of Vested Interests. Indeed, it is ascertained that a quarter of a million of

individuals absolutely *do* die every year from the want of such a sanitary police as the Public Health Act, amended by some few additional powers, would establish. What number of persons are really sent out of the world from preventible causes. It is also true that those causes can be efficiently removed for about a halfpenny per head a-week; or threepence per week per house; or about eight times less than those who die unnecessarily cost the public in hospitals, poor's rates, and burial. In the "Journal of Public Health" for November, 1848, and August, 1849, it is shown by elaborate tables, that the direct cost of, and estimated money loss through, typhus fever alone in the metropolis, amounted during the four years, 1843—1847, to one million three hundred and twenty-eight thousand pounds, or two hundred and sixty-five thousand, six hundred pounds annually. This sum is exclusive of the amounts contributed for the purchase and maintenance of fever hospitals. For 1848, when the mortality from typhus had increased to three thousand five hundred and sixty-nine, the direct cost and money loss was estimated at four hundred and forty thousand pounds.

This cold-blooded way of putting the really appalling state of the case is, alas! the only successful mode of appealing to that hard-headed, though sometimes soft-hearted, periphrasis, John Bull, when he is under no special exciting cause of dread. His heart is only reached through his pocket, except when put in a state of alarm. Cry "Cholera!" or any other frightful conjuration, and he bestirs himself. To cholera we owe the few sanitary measures now in force; but which were passed by the House—as a coward may seem courageous—in its agonies of fright. The moment, however, Cholera bulletins ceased to be issued, John buttoned up his pockets tighter than ever, and Parliament was dumb regarding public health, except to undo one or two good things it had done. The inflated promises of the legislature collapsed into thin air, on the very day the danger was withdrawn. It was the legend over again of the nameless gentleman who, when he was sick, swore he would turn a monk; but when he got well "the devil a monk was he." Ever since, sanitary legislation has been as much a dead letter in the Metropolis, as if the deadly condition of some of its districts had never been whispered between the wind and the nobility of Westminster, in Parliament assembled.

It has no effect upon unreasoning John Bull to tell him that, on an average, cholera does not devour a tithe of the victims which fever, consumption, and other preventible diseases make away with. Cholera comes upon him like an ogre, eating its victims all at once, and he quakes with terror; the daily, deadly destruction of human beings by "every-day" diseases, he takes no heed of. Take him, however, a slate and pencil; count costs to him; show that cholera costs so much; that

ordinary, contagious, but preventible diseases, cost so much more; and that prevention is so many hundred per cent. cheaper than the cheapest cures, he begins to be amenable to reason. Nothing but pocket arithmetic, terror, or melo-dramatic appeals to his soft-hearted sympathy, moves John Bull.

In order to supply the best of these exertations by the accumulation of carefully sifted, and well authenticated facts, and sound reasonings; the results of scientific investigations, and of a large range of pathological statistics, the Metropolitan Sanitary Association has been for some months—like another "Ole Joe"—knocking at the door of Old John. Whether the heavy old gentleman will soon open it to conviction and improvement depends, we think, very much upon the energy and liberality with which that society is supported and seconded by the public; for whose sole benefit it was called into existence. To the exertions of many of its leading members, if not to the collective body itself, John Bull has responded, by admitting into his premises the Extra-Mural Interment Bill, and we think he is just now holding his door ajar to catch the Water Supply Bill, which it is hoped he will admit, and pass through That House next session. Meantime we, in common with the association aforesaid, beg his attention to a few other points of improvement:—

The adage "as free as air," has become obsolete by Act of Parliament. Neither air nor light have been free since the imposition of the window-tax. We are obliged to pay for what nature supplies lavishly to all, at so much per window per year; and the poor who cannot afford the expense, are stinted in two of the most urgent necessities of life. The effects produced by a deprivation of them are not immediate, and are therefore unheeded. When a poor man or woman in a dark, close, smoky house is laid up with scrofula, consumption, water in the head, wasting, or a complication of epidemic diseases, nobody thinks of attributing the illness to the right cause;—which may be a want of light and air. If he or she were struck down by a flash of lightning, there would be an immediate outcry against the authorities, whoever they may be, for not providing proper lightning conductors; but because the poison, generated by the absence of light and air—is not seen at work, the victim dies unheeded, and the window tax, which shuts out the remedies, is continued without a murmur. In illustration of these facts, we may quote a little information respecting the tadpole, an humble animal, which—if the author of "Vestiges of Creation" be any authority and the theory of development be more than a childish dream—was the progenitor of man himself. The passage is from the report of the half-fledged Health of Towns' Commission:—

"If the young of some of the lower tribes of creatures are supplied with their proper

food, and if all the other conditions necessary for their nourishment are maintained, while at the same time light is wholly excluded from them, their development is stopped; they no longer undergo the metamorphosis through which they pass from imperfect into perfect beings; the tadpole, for example, is unable to change its water-breathing apparatus, fitted for its first stage of existence, into the air-breathing apparatus, with the rudiment of which it is furnished, and which is intended to adapt it for a higher life, namely, for respiration in air. In this imperfect state it continues to live; it even attains an enormous bulk, for such a creature in its state of transition, but it is unable to pass out of its transitional state; it remains permanently an imperfect being, and is doomed to pass a perpetual life in water, instead of attaining maturity and passing its mature life in air."

It may give some support to the theory of tadpole development above mentioned, to add, that the same cause produces the very same effects upon human beings; upon human mothers, and upon human children. Human mothers living in dark cellars produce an unusual proportion of defective children. Go into the narrow streets, and the dark lanes, courts, and alleys of our splendid cities, there you will see an unusual number of deformed people, men, women, and children, but particularly children. In some cells under the fortifications of Lisle, a number of poor people took up their abode; the proportion of defective infants produced by them became so great, that it was deemed necessary to issue an order commanding these cells to be shut up. The window duties multiply cells like those of the fortifications of Lisle, in London, in Liverpool, in Manchester, in Bristol, and in every city and town in England by hundreds and by thousands, and with the same result; but the cells here are not shut up, nor is the cause that produces them removed. Even if cases in which the absence of light is not so complete as to produce a result thus definite and striking, the effects of the privation are still abundantly manifest in the pale and sickly complexion, and the enfeebled and stunted frame; nor can it be otherwise, since, from the essential constitution of organised beings, light is as necessary to the development of the animal as it is to the growth of the plant. The diseases the want of it produces, are of long continuance, and waste the means of life before death results; they may therefore be characterised as pauperising diseases. As to death itself, it has been calculated that nearly ten thousand persons perish annually in London alone from diseases solely produced by an impeded circulation of air and admission of light.

This prodigal waste of health, strength, and of life itself, falls much more heavily on the poor, than the mere fiscal burden, imposed by the tax, falls on the richer classes.

Inasmuch, then, as health is the capital of the working man, whatever be the necessities of the state, *nothing* can justify a tax affecting the health of the people, and especially the health of the labouring community, whose bodily strength constitutes their wealth, and oftentimes their only possession. In conclusion we may say, without wishing to libel any respectable Act of Parliament, that the Window-Tax kills countless human beings in tens of thousands every year.

The next improvement which must speedily be pushed under John Bull's very nose, is the removal of the nuisances which abound in crowded neighbourhoods from Land's End to John o'Groats. The back-yards of houses in poor neighbourhoods are so many gardens, sown broadcast with the seeds of disease, and but too plentifully manured for abundant and continual crops. When rain falls on the surface of these parterres of poison, and is afterwards evaporated by the heat of the sun, there rises a malaria, intensified by decomposing refuse, which, inhaled into human lungs, engenders consumption, ending in the parish workhouse and death. It is a fact that the surfaces of some of the back-yards in London have been raised six feet by successive accumulations of vegetable and animal refuse. We must have no more such accumulations; offal of every kind must be removed daily by Act of Parliament.

Ill-kept stables, which cause horses to become blind, and men to die of typhus, must be reformed; cow-feeding sheds, which produce diseased milk and offensive refuse, must be abolished, and milk supplied per railway from the country; disgusting and noxious manufactures, such as are carried on a few yards west of Lambeth Palace, on the river's bank, must be removed to consort with knackers' yards, in places remote from human habitations.

The strong bar which John Bull opposes to such improvements is the dread of the Centralisation, which, he says, carrying them into effect would occasion. Local Government, he insists, is the great bulwark of the British Constitution. No bill is ever brought into Parliament for the good of the people,—that is well known,—but is passed for the sake of the places it creates, and the patronage it gives. Now, if we allow a practicable bill for the removal of these nuisances to pass, a swarm of commissioners, secretaries, clerks, inspectors, inquisitors, dustmen, and scavengers will be let loose upon the contented public, to supersede snug, comfortable, local boards, and to ruin innocent contractors. "Is," John asks vehemently, "this to be borne?" and answers himself with equal emphasis, "Decidedly not. We prefer the nuisances." But common sense steps in to reply, that as nuisances are a matter of taste, if every board could confine its own nuisances to its own parish so as not to take its neighbours by the nose, there would, perhaps, be no harm in letting it doze

and wallow in its own filth as long as its taste would dictate. But as this is impossible, centralisation or no centralisation, Government, or somebody else, *must* interfere to protect the extra-parochial lieges from destruction, by up-setting the Board and removing the rest of the nuisances.

A practical example of the impossibility of confining noxious nuisances to the boundaries whence they originate, is afforded in the immediate neighbourhood of one of the most beautiful parts of the metropolis. In a neighbourhood studded thickly with elegant villas and mansions—namely, Bayswater and Notting Hill, in the parish of Kensington—is a plague spot scarcely equalled for its insalubrity by any other in London: it is called the Potteries. It comprises some seven or eight acres, with about two hundred and sixty houses (if the term can be applied to such hovels), and a population of nine hundred or one thousand. The occupation of the inhabitants is principally pig-fattening; many hundreds of pigs, ducks, and fowls are kept in an incredible state of filth. Dogs abound for the purpose of guarding the swine. The atmosphere is still further polluted by the process of fat-boiling. In these hovels discontent, dirt, filth, and misery, are unsurpassed by anything known even in Ireland. Water is supplied to only a small proportion of the houses. There are foul ditches, open sewers, and defective drains, smelling most offensively, and generating large quantities of poisonous gases; stagnant water is found at every turn, not a drop of *clean* water can be obtained,—all is charged to saturation with putrescent matter. Wells have been sunk on some of the premises, but they have become, in many instances, useless from organic matter soaking into them; in some of the wells the water is perfectly black and fetid. The paint on the window frames has become black from the action of sulphuretted hydrogen gas. Nearly all the inhabitants look unhealthily, the women especially complain of sickness, and want of appetite; their eyes are shrunk, and their skin shrivelled.

The poisonous influence of this pestilential locality extends far and wide. Some twelve or thirteen hundred feet off there is a row of clean houses, called Crafter Terrace; the situation, though rather low, is open and airy. On Saturday and Sunday, the 8th and 9th of September, 1849, the inhabitants complained of an intolerable stench, the wind then blowing directly upon the Terrace from the Potteries. Up to this time, there had been no case of cholera among the inhabitants; but the next day the disease broke out virulently, and on the following day, the 11th of September, a child died of cholera at No. 1. By the 22nd of the same month, no less than seven persons in the Terrace lost their lives by this fatal malady.

It would be thought, that such a state of

things could not have been permitted to remain undisturbed, but merely required to be brought to light to be remedied. The medical officers have, time after time, reported the condition of the place to the Board of Guardians. Fifteen medical men have testified to the unhealthy state of the Potteries. The inspector of nuisances has done the same. The magistrates have repeatedly granted orders for the removal of the pigs. The General Board of Health have given directions that all the nuisances should be removed, yet nothing, or next to nothing, has been done. The inspector of nuisances has been dismissed, the guardians have signified their intention to inspect the districts themselves, yet things remain *in statu quo*.

Is there then no possibility of cleansing this more than Aſcan stable? None: the single but insurmountable difficulty being that some of the worst parts of the district are the property of one of the guardians!

Surely the force of self-government can no farther go. Another word in defence of centralisation—the great bugbear of the self-conceited parish orator—would be wasted.

In conclusion, we earnestly call on the public to second and support the efforts of the Metropolitan Sanitary Association to get the evils we have adverted to lessened or wholly removed. The rapid increase of the population demands additional exertion and additional arrangements for their well-being. At present, retrogression instead of improvement assails us. It is an appalling fact, that the number of persons dying of the class of diseases called preventible has been steadily increasing. Mr. Farr, of the Registrar-General's office, has declared there could be no question that the health of London is becoming worse every year. In 1846, the number of persons dying of zymotic or epidemic diseases was about nineteen per cent. of the total mortality; in 1847, it was twenty-eight per cent.; in 1848, thirty-four per cent.; and last year it increased to forty-one per cent.; thus showing that nearly one-half of the mortality of London was more or less owing to preventible causes.

To reverse this state of things the people of this country must not wait for another great and fatal fright. We know that typhus fever and consumption, like open drains and stinking water, are mean, commonplace, unexciting instruments of death, which do not get invested with dramatic interest; yet they kill as unerringly as the knife or the bullet of the assassin; only they murder great multitudes instead of single individuals. If, therefore, he will only fix his eyes on the victims of the diseases which can be easily prevented, it is well worth John Bull's while to consider, whether substantially it is not as sound a policy to save a million or two of lives per annum, as to hang the hero and heroine of a Bermondsey murder.

WHAT THERE IS IN THE ROOF OF THE COLLEGE OF SURGEONS.

PERHAPS no one of the London Squares is more full of interesting associations, and certainly no one of them is more fresh and pleasant to look upon, than Lincoln's Inn Fields. In the centre of its green Lord William Russell was beheaded; upon the old wall that used to run along its eastern side Ben Jonson it is said, worked as a brick-layer; amongst its north range of buildings stands the thin sandwich of a house that holds the manifold artistic genius of the Soane Museum; its west side was the scene of some of Lord George Gordon's riotings; whilst on its south side stands the noble-looking Grecian fronted building dedicated to the purposes of the English College of Surgeons.

This building has many uses, and many points challenging general admiration and approval, the chief of them being its possession of the museum made by John Hunter; afterwards purchased, and now supported, by the nation; and open freely, not only to medical men of all countries, but to the public at large. The visitor who passes under its handsome portico, up the steps and enters its heavy mahogany and plate-glass doors, finds himself in a large hall. On his right is a staid-looking, black-robed porter, who requires him to enter his name in the visitor's book—a preliminary which members equally with strangers have to go through. On his left are the doors leading to the secretary's office, where students may, from time to time, be seen going in to register their attendance upon the prescribed lectures, and, later in their career, passing through the same portals big with the desperate announcement that they are ready to submit to the examinations that must be passed before they can get a diploma. Facing the entrance door is a second enclosed hall, with a roof supported by fluted columns, and on the left of this a broad stately architectural stone staircase leading to the library and the council-chamber—the scene of those dreadful ordeals, the examinations, where Hospital Surgeons sit surrounded by crimson and gold, and marble busts, and noble pictures, to operate upon sweating and stuttering and hesitating students who, two by two, are seated in large chairs to be passed or plucked.

The library is a noble, large room, of excellent proportions, occupying the whole length of the building in front, having tall plate-glass embayed windows, each with its table and chair; and in each of which the passers-by in Lincoln's Inn Fields, may generally see a fine surgeon framed and glazed, busily occupied with his books, or still more busily helping to keep up the tide of gossip for which the place is celebrated. For some twenty feet from the floor on all sides, the walls are lined with books, telling in various languages about all kinds of maladies and all

sorts of plans for cure. Above this, and just under the handsomely panelled roof, hang portraits of old surgeons, each famous in his time, and now enjoying a sort of quiet renown amongst their successors in the art and science of chirurgery. All we have seen thus far, betokens the quiet repose of wealth, dignity, and learned leisure and ease. No bustle, no noise, no trace of urgent labour is heard or seen. Such of the officers of the place as may be encountered, have a look of somnolent if not sleek sufficiency, and seem to claim a share of the consideration which all are ready to concede, as due to the character of the spot. Returning to the hall, another door, facing that of the secretary, leads to the great attraction and pride of the place—the Hunterian Museum—a collection of skeletons and glittering rows of bottles full of evidences how "fearfully and wonderfully" all living creatures are made. On all sides we see the bony relics of defunct men and animals—giants, dwarfs, both human and quadruped, challenging attention. The huge megatherium, the bones of poor Chuny, the elephant shot in Exeter Change, the skeleton of O'Brien the Irish giant, who walked about the world eight feet high, and near him all that remains of the form of the Sicilian dwarf, who when alive was not taller than O'Brien's knee. On the walls tier after tier of bottles are ranged, till the eye following them up towards the top of the building, fatigued by their innumerable abundance, and the variety of their contents, again seeks the ground and its tables, there to encounter an almost equal crowd of curious things collected from the earth, the air, and the sea, to show how infinite the varieties in which Nature indulges, and how almost more than infinite the curious ways in which life varies the tenement it inhabits. But with this multiplicity of things we see no confusion, or trace of carelessness or poverty. All is neatness, order, and repose. Not a particle of dirt offends the eye; not a film of dust dims the brilliancy of the regiments of bottles drawn up in long files upon the shelves, to salute the visitor. The place is a very drawing-room of science, all polished and set forth in trim order for the reception of the public. It is the best room in the house kept for the display of the results of the labours of the physiologist,—a spot devoted to the revelations of anatomy, without the horrifying accompaniments of the dissecting-room.

Thus far we have passed through what are in truth the public portions of the College of Surgeons, just glancing at its museum, unequalled as a physiological collection by any other in the world. In their surprise at the curious things it contains, there are many, no doubt, who wonder also where the things all came from; and what patient men have gone on since John Hunter's time, adding to his museum where it was deficient and keeping all its parts in their present admirable state.

Such a question, if put to the officials, would most likely obtain a very vague and misty reply; but a glance behind the scenes at the College will afford an ample and curious explanation, and show how one section of the Searchers for Facts, silently and unheeded, work on in their self-chosen, quiet, scientific path—undisturbed by the noises and the bustle, the excitements and the strife of the modern Babylon, that heaves and throbs around them.

Leave the handsome rooms, with their clear light, and polish, and air of neatness, and come with us up the side stair that leads to the unshown recesses, where, high up in the roof, the workers in anatomy carry on their strange duties. As we open the side door that leads towards these secret chambers, we should go from daylight to darkness, were it not for the gas that is kept burning there. Up the stairs we go, and as we ascend, the way becomes lighter and lighter as we rise, but the stone steps soon change for wooden ones, and at length bring us from the silent stairs to a silent and gloomy-looking passage, having three doors opening into it, and some contrivances overhead for letting in a little light, and letting out certain odours that here abound,—greatly to the discomfort of the novice who first inhales them. We are now in the roof of the building, and on getting a glimpse through a window, we may see the housetops are below us, the only companions of our elevation being a number of neighbouring church-spires.

The feeling of the spot is one of almost complete isolation from the world below, and a neighbourhood to something startling, if not almost terrible. Like Fatima in Bluebeard's Tower, impelled by an overbearing curiosity, we turn the lock of the centre door, and enter the chamber. A strange sight is presented. The room is large, with the sloping roof-beams above, and a stained and uncovered floor below. The walls all round are crowded with shelves, covered with bottles of various sizes full of the queerest-looking of all queer things. Many are of a bright vermilion colour; others yellow; others brown; others black; whilst others again display the opaque whiteness of bloodless death. Three tables are in the room, but these are as crowded as the walls. Cases of instruments, microscopes, tall jars, cans, a large glass globe full of water-newts, hydras, and mosses; small cases of drawers filled with microscopic objects, and a thousand other odds and ends. Here is a long coil of snake's eggs, just brought from a country stable-yard; there some ears of diseased wheat, sent by a noble landlord who studies farming; beside them lies part of a leaf of the gigantic water-lily, the Victoria Regia, and near that a portion of a vegetable marrow is macerating in a saucer to separate some peculiar vessels for exhibition under the microscope. There are two windows to the room, besides some ventilators in the roof; and before one of these, where the light is best, are ranged microscopes complete and

ready for use, and round about them all sorts of scraps of glass and glaziers' diamonds, and watch-glasses, and forceps, and scissors, and bottles of marine-glue, and of gold-size,—these being the means and appliances of the microscopic observer. Before the second window is a sink, in which stand jars of frogs and newts, and other small creatures. A lathe, a desk, and writing utensils, the model of a whale cast ashore in the Thames, an old stiff-backed wooden chair, once the seat of the Master of the Worshipful Company of Surgeons, a few cases of stuffed birds and animals, and some tall glass-stoppered bottles that went twice round the world with Captain Cook and Dr. Solander, make up the catalogue of the chief contents of an apartment, which, at first glance, has the look of an auctioneer's room filled with the sold-off stock of a broken down anatomical teacher. A closer inspection, however, shows that though there is so great a crowd of objects, there is little or no confusion, and the real meaning of the place, its intention, and labours, reveal themselves.

We are in a storeroom of the strange productions of all corners of the earth, from the air above and from the waters below. Every particle in every bottle that looks perhaps to the uninitiated eye only a mass of bad fish preserved in worse pickle, has its value. A thin slice of it taken out and placed under the microscope, illustrates some law of the animal economy, or displays, perhaps, some long undiscovered fact, or shows to the surprise of the gazer, a series of lines beautifully arranged, or perhaps curiously mingled, and rich in their figured combinations as the frozen moisture of a window-frame on a winter's morning. To this room as to a general centre come contributions from all corners of the earth; the donors being chiefly medical men employed on expeditions, or in the public service, though other medicos, who go to seek fortune in strange lands, often remember their alma mater, and pack up a bottle of curious things "to send to the College." Doctors on shipboard, doctors with armies, doctors in Arctic ships, or on Niger expeditions; in the far regions of Hindûstan, and in the fogs and storms of Labrador, think now and then of their "dissecting days," and of the noble collection in Lincoln's Inn Fields, which every true student feels bound to honour, and to help to make complete. Many, when going forth into distant countries, are supplied from this place with bottles specially adapted to receive objects in request, and receive also a volume of instructions, how the specimens may be best preserved. "When a quadruped is too large to be secured whole, cut off the portion of the head containing the teeth," says one direction. "If no more can be done," says another, "preserve the heart and great blood-vessels." "Of a full-grown whale," says a third of these notes, "send home the eyes with the surrounding skin, their muscles and fat in an entire mass." "When many specimens of a

rare and curious bird are procured, the heads of a few should be taken off and preserved in spirit." "When alligators and crocodiles are too large to be preserved whole, secure some part. The bones of such things are especially desirable. Secure also the eggs in different stages." "Snakes may be preserved whole, or in part; especially the heads, for the examination of their teeth and fangs." "Eyes of fishes are proper objects of preservation." Such are a few of the hints sent forth to their medical disciples by the College; and the fruits of the system are a bountiful supply. Never a week passes but something rare or curious makes its appearance in Lincoln's Inn Fields; sometimes from one quarter, sometimes from another, but there is always something coming, either by messenger or parcel-cart. Apart from these foreign sources, there are other contributaries to the general stock. Country doctors and hospital surgeons, from time to time, send in their quota; the Zoological Society likewise contribute all their dead animals. When the elephant died at the Regent's Park Gardens, a College student and an assistant were busily occupied for days dissecting the huge animal. When the rhinoceros expired at the same place, a portion of its viscera was hailed as a prize; and when the whale was cast, not long ago, upon the shores of the Thames, the watermen who claimed it as their booty, steamed off to the College to find a customer for portions of the unwieldy monster; nor were they disappointed. Beyond all these, there still remains another searcher out of materials for the scalpel and the microscope. He is a character in his way. By trade, half cattle-slaughterer half-oysterman, he is by choice a sort of dilettante anatomist. One day he is killing oxen and sheep in Clare Market, and the next is scouring the same market for morbid specimens "for Mr. Quekett, at the College." He knows an unhealthy sheep by its looks, and watches its post mortem with the eye of a servant. Many a choice specimen has he caught up in his time from amongst the offal and garbage of that fustiest of markets in the fustiest of neighbourhoods. Indeed, through him, all that is unusual in ox, calf, sheep, fish, or fowl, found within the confines of Clare Market, finds its way to the "work shop" of the College to be investigated by scalpel and microscope. When a butcher is known to have any diseased sheep, our collector hovers about his slaughter-house, and that which is bad food for the public, often affords him and his patron a prize. He is a sort of jackal for the anatomists—a kind of cadger in the service of science—a veritable snatcher-up of ill-conditioned trifles.

Returning to the room in the College roof, where the general cornucopia of strange things is stored, we find its presiding genius in Mr. Quekett, a quiet enthusiast in his way, who goes on from month to month and year to year, watching, working, and chronicling

such facts as can be made out. When a novelty comes in, it is examined, described, investigated by the microscope; and, if worthy, is sketched on stone for printing. It is then catalogued, and placed in spirit for preservation—minute portions, perhaps, being mounted on glass as objects for the microscope. Thus disposed of, it becomes a "store preparation." From this store the lectures at the College are illustrated by examples; and from it also are the bright bottles in the Hunterian Museum kept complete. From time to time something very rare comes to hand, and then there is quite an excitement in the place. It is turned about, examined, and discussed, with as much zest as a lady would display when first opening a present of jewels, or first criticising a new ball-dress. If the new acquisition be an animal but recently dead, a drop of its blood is sought and placed under the microscope to see the diameter of its globules; if it has a coat of fur, perhaps one of the hairs are next submitted to the same test; and then a fine section of its bone passes a similar ordeal. Its brain is investigated, weighed, and placed in spirit for preservation. Its general characteristics are then gone over, and a description of them written down. If worthy of a place in the Museum, this description goes to make a paragraph in the catalogues of the Collection—fine quarto volumes, of which there are many now complete, containing more exact anatomical and physiological descriptions of objects, than perhaps any other work extant.

The last contribution to the series of Catalogues was made in the room we have been examining. Its production was the constant labour of two years; and the volume contains exact particulars of many facts never before noticed. Amongst other things, for instance, made out with certainty in this place by Mr. Quekett, after months of patient investigation, was the elementary differences in the character of bone. To the common eye and common idea, all bone is simply bone; and for common purposes the word indicates closely enough what the speaker would describe. Not so to the naturalist and the physiologist; and so scalpel and microscope went to work: the sea, the land, and the air, lent each their creatures peculiar to itself, and the labour of the search was at length rewarded by a discovery that each great class of living things has an elementary difference in the bones upon which its structure is built up. Hence, when a particle of bony matter is now placed under the microscope, come whence it may—from a geological strata, or from the depths of the sea, or from within the cerecloth of a mummy—the observer, guided by Mr. Quekett's observations, knows whether it belonged in life to bird, beast, or fish.

Glancing round this anatomical workshop, we find, amongst other things, some preparations showing the nature of pearls. Examine them, and we find that there are dark and

dingy pearls, just as there are handsome and ugly men; the dark pearl being found on the dark shell of the fish, the white brilliant one upon the smooth inside shell. Going further in the search, we find that the smooth glittering lining upon which the fish moves, is known as the *nacre*, and that it is produced by a portion of the animal called the *mantle*; and for explanation sake we may add, that gourmands practically know the mantle as the *beard* of the oyster. When living in its glossy house, should any foreign substance find its way through the shell to disturb the smoothness so essential to its ease, the fish coats the offending substance with nacre, and a pearl is thus formed. The pearl is, in fact, a little globe of the smooth glossy substance yielded by the oyster's beard; yielded ordinarily to smooth the narrow home to which his nature binds him, but yielded in round drops—real pearly tears—if he is hurt. When a beauty glides proudly among a throng of admirers, her hair clustering with pearls, she little thinks that her ornaments are products of pain and diseased action, endured by the most unpoetical of shell-fish.

Leaving the centre-room of the three in the College roof, let us just glance at the other two apartments. Upon entering one we see the walls lined with boxes, something like those in a milliner's shop, but, instead of holding laces and ribands, we find them labelled "Wolf," "Raccoon," "Penguin," "Lion," "Albatross," and so on with names of birds, and beasts, and fishes. On lifting a lid, we find the boxes filled with the bones of the different creatures named; not a complete skeleton of any one, perhaps, but portions of half-a-dozen. In this room, the two students attached to the College carry on dissections, under the directions of the superior authorities. What they do is entered in a book kept posted up, and this affords another source for reference as to anatomical facts. When they have laboured here for three years, they have the option of a commission as Assistant Surgeon in the Army, Navy, or East India Company's service, as a reward for their College work.

If the atmosphere of the two apartments we have investigated was bad, that of the third room was infinitely worse, though windows and ventilators are constantly open. In this place large preparations are kept, and all the specimens are here put into the bottles required for exhibition in the Museum. This third room, like the first, has a curiously characteristic look. It would make a fine original for a picture of an alchemist's study. On one side is a large structure of brickwork with pipes and taps, conveying the idea of a furnace and still, or of an oven. Alongside it is a bath and a table, and the purpose of the whole is for injecting large animals. This is a very difficult operation, the object being to drive a kind of hot liquid sealing-wax into every artery of the body, even the most minute.

All things brought here, and capable of it, are injected somewhat after this fashion before they pass under the scalpel. Besides this oven-looking structure there are pans, and tubs, and casks; one containing a small dromedary, another being "a cask of camel." A painter's easel stands there ready for use, and on the floor are some bones of a megatherium; the tables are covered with bottles and jars, and the walls are similarly decorated. Strings of bladders hang about, and under foot we see thin sheets of lead coated with tin-foil; these latter being used for tying down the preparation bottles so that they may for years remain air-tight; a tedious and somewhat difficult operation. In this place every year they use scores, sometimes hundreds of gallons of alcohol; one fact which helps to show that museums on a large scale are expensive establishments.

Here, as elsewhere, however, in our establishments, whatever may be expended on materials, the men who do the work of science are but indifferently paid. But lucre is not their sole reward. No mere money payment could compensate (for instance) a man for spending a lifetime in this College of Surgeons' roof. Forget the object in view; ignore the charm that science has for its votaries; and this place becomes a literal inferno, filled with pestilential fumes, and surrounded by horrible sights. But they who fix the salaries know how much the pursuit of science is a labour of love; and so they pay the man of science badly, not here alone, but in all the scientific branches of the public service. But the science-worker though he may feel the injustice, yet moves on his way rejoicing, pleased with his unceasing search into the secret workings of nature, and exhilarated from time to time by some discovery, or by the confirmation of some cherished notion. And though the glittering prizes of life be bestowed on strivers in far different walks, the student of nature holds on his cheerful and philosophic way, rewarded by the glimpses he gets of the power that made and sustains all terrestrial things, and rewarded, moreover, by the holy contact with that infinite wisdom seen at work in the construction, the adaptation, and the continuance of the marvellous and illimitably varied works it is the business of his life to investigate.

CHIPS.

NICE WHITE VEAL.

We shudder at the cruelties practised upon Strasbourg geese to produce the celebrated *pâtés de foie gras*; but remorse would assuredly afflict the amateurs of veal with indigestion, if they reflected on the tortures to which calves are subjected to cause the very unnatural colour of the meat which they so much prize. The natural and wholesome tint of veal is not white, but pink. An ancient French traveller in England (1690)

says that the English veal has not the "beautiful red colour of the French." Dr. Smollett, in "Peregrine Pickle," upbraids epicures, on the scores both of cruelty and unwholesomeness, saying that our best veal is like a "fricassée of kid gloves," and the sauce of "melted butter" is rendered necessary only by the absence of the juices, drained out of the unfortunate animal before death.

The process of killing a calf is a refinement of cruelty worthy of a Grand Inquisitor. The beast is, while alive, bled several times; in summer, during several hours of the night, and frequently till it faints; when a plug is put into the orifice till "next time." But the lengthened punishment of the most unoffending of animals is at the actual "killing." It is tied together, neck and heels, much as a dead animal when packed in a basket and slung up by a rope, with the head downwards. A vein is then opened, till it lingeringly bleeds to death. Two or three "knocks" are given to it with the pole-axe whilst it hangs loose in the air, and the flesh is beaten with sticks, technically termed "dressing" it, some time before feeling has ceased to exist. All this may be verified by those who insist on seeing the penetralia of the slaughter-houses; or the poor animal may be seen moaning and writhing—by a mere glance—on many days of the week, in Warwick Lane, Newgate Street.

This mode of bleaching veal is not only a crime, but a blunder. The flesh would be more palatable and nutritious killed speedily and mercifully. But were it otherwise, and had it been twenty times more a luxury, who, professing to honour the common Creator, would, for the sensual gratification of the palate, cause the calf to be thus tortured?

"ALL THINGS IN THE WORLD MUST CHANGE."

Would'st thou have it always Spring,
Though she cometh flower-laden?
Though sweet-throated birds do sing?
Thou would'st weary of it, Maiden.
Dost thou never feel desire
That thy womanhood were nearer?
Dost thy loving heart ne'er tire,
Longing yet for something dearer?

Would'st have Summer ever stay—
Droughty Summer—bright and burning?
Dost thou not, oft in the day,
Long for still, cool, night's returning?
Dost thou not grow weary, Youth,
Of thy pleasures, vain though pleasant—
Thinking Life has more of Truth
Than the satiating present?

Would'st have Autumn never go?
(Autumn, Winter's wealthy neighbour),
Stacks would rise, and wine-press flow
Vainly, did'st thou always labour.
When thy child is on thy knee
And thy heart with love's o'erflowing,
Dost thou never long to see
What is in the future's showing?

When old Winter, cold and hoar,
Cometh, blowing his ten fingers,
Hanging ice-drops on the door
Whilst he at the threshold lingers,
Would'st thou ever vigil keep
With a mate so full of sorrow?
Better to thy bed and sleep,
Nor wake till th' Eternal morrow!

THE LAST OF A LONG LINE.

IN TWO CHAPTERS.—CHAPTER II.

IN Great Stockington there lived a race of paupers. From the year of the 42nd of Elizabeth, or 1601, down to the present generation, this race maintained an uninterrupted descent. They were a steady and unbroken line of paupers, as the parish books testify. From generation to generation their demands on the parish funds stand recorded. There were no *locum* in their career; there never failed an heir to these families; fed on the bread of idleness and legal provision, these people flourished, increased, and multiplied. Sometimes compelled to work for the weekly dole which they received, they never acquired a taste for labour, or lost the taste for the bread for which they did not labour. These paupers regarded this maintenance by no means as a disgrace. They claimed it as a right,—as their patrimony. They contended that one-third of the property of the Church had been given by benevolent individuals for the support of the poor, and that what the Reformation wrongfully deprived them of, the great enactment of Elizabeth rightfully—and only rightfully—restored.

Those who imagine that all paupers merely claimed parish relief because the law ordained it, commit a great error. There were numbers who were hereditary paupers, and that on a tradition carefully handed down, that they were only manfully claiming their own. They traced their claims from the most ancient feudal times, when the lord was as much bound to maintain his vassal in gross, as the villein was to work for the lord. These paupers were, in fact, or claimed to be, the original *adscripti glebe*, and to have as much a claim to parish support as the landed proprietor had to his land. For this reason, in the old Catholic times, after they had escaped from villenage by running away and remaining absent from their hundred for a year and a day, dwelling for that period in a walled town, these people were amongst the most diligent attendants at the Abbey doors, and when the Abbots were dissolved, were, no doubt, amongst the most daring of these thieves, vagabonds, and sturdy rogues, who, after the Robin Hood fashion, beset the highways and solitary farms of England, and claimed their black mail in a very unceremonious style. It was out of this class that Henry VIII. hanged his seventy-two thousand during his reign, and, as it is said, with-

out appearing materially to diminish their number.

That they continued to "increase, multiply, and replenish the earth," overflowing all bounds, overpowering by mere populousness all the severe laws against them of whipping, burning in the hand, in the forehead or the breast, and hanging, and filling the whole country with alarm, is evident by the very act itself of Elizabeth.

Amongst these hereditary paupers who, as we have said, were found in Stockington, there was a family of the name of Deg. This family had never failed to demand and enjoy what it held to be its share of its ancient inheritance. It appeared from the parish records, that they had practised in different periods the crafts of shoemaking, tailoring, and chimney-sweeping; but since the invention of the stocking-frame, they had, one and all of them, followed the profession of stocking weavers, or as they were there called, stockingers. This was a trade which required no extreme exertion of the physical or intellectual powers. To sit in a frame, and throw the arms to and fro, was a thing that might either be carried to a degree of extreme diligence, or be let down into a mere apology for idleness. An "idle stockinger" was there no very uncommon phrase, and the Degr were always classed under that head. Nothing could be more admirably adapted than this trade for building a plan of parish relief upon. The Degr did not pretend to be absolutely without work, or the parish authorities would soon have set them to some real labour,—a thing that they particularly recoiled from, having a very old adage in the family, that "hard work was enough to kill a man." The Degr were seldom, therefore, out of work, but they did not get enough to meet and tie. They had but little work if times were bad, and if they were good, they had large families, and sickly wives or children. Be times what they would, therefore, the Degr were due and successful attendants at the parish pay-table. Nay, so much was this a matter of course, that they came at length not even to trouble themselves to receive their pay, but sent their young children for it; and it was duly paid. Did any parish officer, indeed, turn restive, and decline to pay a Deg, he soon found himself summoned before a magistrate, and such pleas of sickness, want of work, and poor earnings brought up, that he most likely got a sharp rebuke from the benevolent but uninquiring magistrate, and acquired a character for hard-heartedness that stuck to him.

So parish overseers learnt to let the Degr alone; and their children regularly brought up to receive the parish money for their parents, were impatient as they grew up to receive it for themselves. Marriages in the Deg family were consequently very early, and there were plenty of instances of married Degr claiming parish relief under the age of twenty, on the plea of being the parent of

two children. One such precocious individual being asked by a rather verdant officer why he had married before he was able to maintain a family, replied, in much astonishment, that he had married in order to maintain himself by parish assistance. That he never had been able to maintain himself by his labour, nor ever expected to do it; his only hope, therefore, lay in marrying, and becoming the father of two children, to which patriarchal rank he had now attained, and demanded his "pay."

Thus had lived and flourished the Degr on their ancient patrimony, the parish, for upwards of two hundred years. Nay, we have no doubt whatever that, if it could have been traced, they had enjoyed an ancestry of paupers as long as the pedigree of Sir Roger Rochville himself. In the days of the most perfect villenage, they had, doubtless, eaten the bread of idleness, and claimed it as a right. They were numerous, improvident, ragged in dress, and fond of an alehouse and of gossip. Like the blood of Sir Roger, their blood had become peculiar through a long persistence of the same circumstances. It was become pure pauper blood. The Degr married, if not entirely among Degr, yet amongst the same class. None but a pauper would dream of marrying a Deg. The Degr, therefore, were in constitution, in mind, in habit, and in inclination, paupers. But a pure and unmixed class of this kind does not die out like an aristocratic stereotype. It increases and multiplies. The lower the grade, the more prolific, as is sometimes seen on a large and even national scale. The Degr threatened, therefore, to become a most formidable clan in the lower purlieus of Stockington, but luckily there is so much virtue even in evils, that one, not rarely cures another. War, the great evil, cleared the town of Degr.

Fond of idleness, of indulgence, of money easily got, and as easily spent, the Degr were rapidly drained off by recruiting parties during the last war. The young men enlisted, and were marched away; the young women married soldiers that were quartered in the town from time to time, and marched away with them. There were, eventually, none of the once numerous Degr left except a few old people, whom death was sure to draft off at no distant period with his regiment of the line which has, 1860. Parish overseers, magistrates, and master manufacturers, felicitated themselves at this unlooked-for deliverance from the ancient family of the Degr.

But one cold, clear, winter evening, the east wind piping its sharp sibilant ditty in the bare shorn hedges, and poking his sharp fingers into the sides of well broad-clothed men by way of passing jest, Mr. Spire, a great manufacturer of Stockington, driving in his gig some seven miles from the town, passed a poor woman with a stout child on her back. The large ruddy-looking man in the prime of

life, and in the great coat and thick worsted gloves of a wealthy traveller, cast a glance at the wretched creature trudging heavily on, expecting a pitiful appeal to his sensibilities, and thinking it a bore to have to pull off a glove and dive into his pocket for a copper; but to his surprise there was no demand, only a low curtsy, and the glimpse of a face of singular honesty of expression, and of excessive weariness.

Spire was a man of warm feelings; he looked earnestly at the woman, and thought he had never seen such a picture of fatigue in his life. He pulled up and said,

"You seem very tired, my good woman."

"Awfully tired, Sir."

"And are you going far to night?"

"To Great Stockington, Sir, if God give me strength."

"To Stockington!" exclaimed Mr. Spire. "Why you seem ready to drop. You'll never reach it. You'd better stop at the next village."

"Ay, Sir, it's easy stopping, for those that have money."

"And you've none, eh?"

"As God lives, Sir, I've a sixpence, and that's all."

Mr. Spire put his hand in his pocket, and held out to her the next instant, half-a-crown.

"There stop, poor thing—make yourself comfortable—it's quite out of the question to reach Stockington. But stay—are your friends living in Stockington—what are you?"

"A poor soldier's widow, Sir. And may God Almighty bless you!" said the poor woman, taking the money, the tears standing in her large brown eyes as she curtsied very low.

"A soldier's widow," said Mr. Spire. She had touched the softest place in the manufacturer's heart, for he was a very loyal man, and vehement champion of his country's honour in the war. "So young," said he, "how did you lose your husband?"

"He fell, Sir," said the poor woman; but she could get no further; she suddenly caught up the corner of her grey cloak, covered her face with it, and burst into an excess of grief.

The manufacturer felt as if he had hit the woman a blow by his careless question; he sat watching her for a moment in silence, and then said, "Come, get into the gig, my poor woman; come, I must see you to Stockington."

The poor woman dried her tears, and heavily climbed into the gig, expressing her gratitude in a very touching and modest manner. Spire buttoned the apron over her, and taking a look at the child, said in a cheerful tone to comfort her, "Bless me, but that is a fine tumbling fellow, though. I don't wonder you are tired, carrying such a load."

The poor woman pressed the stout child, apparently two years old, to her breast, as if she felt it a great blessing and no load: the gig drove rapidly on.

Presently Mr. Spire resumed his conversation.

"So you are from Stockington?"

"No Sir, my husband was."

"So: what was his name?"

"John Deg, Sir."

"Deg?" said Mr. Spire. "Deg, did you say?"

"Yes, Sir."

The manufacturer seemed to hitch himself off towards his own side of the gig, gave another look at her, and was silent. The poor woman was somewhat astonished at his look and movement, and was silent too.

After awhile Mr. Spire said again, "And do you hope to find friends in Stockington? Had you none where you came from?"

"None Sir, none in the world!" said the poor woman, and again her feelings seemed too strong for her. At length she added, "I was in service, Sir, at Poole, in Dorsetshire, when I married; my mother only was living, and while I was away with my husband, he died. When—when the news came from abroad—that—when I was a widow, Sir, I went back to my native place, and the parish officers said I must go to my husband's parish lest I and my child should become troublesome."

"You asked relief of them?"

"Never; Oh, God knows, no, never! My family have never asked a penny of a parish. They would die first, and so would I, Sir; but they said I might do it, and I had better go to my husband's parish at once—and they offered me money to go."

"And you took it, of course?"

"No, sir; I had a little money, which I had earned by washing and laundering, and I sold most of my things, as I could not carry them, and came off. I felt hurt, Sir; my heart rose against the treatment of the parish, and I thought I should be better amongst my husband's friends—and my child would, if anything happened to me; I had no friends of my own."

Mr. Spire looked at the woman in silence. "Did your husband tell you anything of his friends? What sort of a man was he?"

"Oh, he was a gay young fellow, rather, Sir; but not bad to me. He always said his friends were well off in Stockington."

"He did!" said the manufacturer, with a great stare, and as if bolting the words from his heart in a large gust of wonder.

The poor woman again looked at him with a strange look. The manufacturer whistled to himself, and giving his horse a smart cut with the whip, drove on faster than ever. The night was fast settling down; it was numbing cold; a grey fog rose from the river as they thundered over the old bridge; and tall engine chimneys, and black smoky houses loomed through the dusk before them. They were at Stockington.

As they slackened their pace up a hill at the entrance of the town, Mr. Spire again opened his mouth.

"I should be sorry to hurt your feelings, Mrs. Deg," he said, "but I have my fears that you are coming to this place with false expectations. I fear your husband did not give you the truest possible account of his family here."

"Oh, Sir! What—what is it?" exclaimed the poor woman; "in God's name, tell me!"

"Why, nothing more than this," said the manufacturer, "that there are very few of the Degrés left here. They are old, and on the parish, and can do nothing for you."

The poor woman gave a deep sigh, and was silent.

"But don't be cast down," said Mr. Spire. He would not tell her what a pauper family it really was, for he saw that she was a very feeling woman, and he thought she would learn that soon enough. He felt that her husband had from vanity given her a false account of his connections; and he was really sorry for her.

"Don't be cast down," he went on, "you can wash and iron, you say; you are young and strong: those are your friends. Depend on them, and they'll be better friends to you than any other."

The poor woman was silent, leaning her head down on her slumbering child, and crying to herself; and thus they drove on, through many long and narrow streets, with gas flaring from the shops, but with few people in the streets, and these hurrying shivering along the pavement, so intense was the cold. anon they stopped at a large pair of gates; the manufacturer rung a bell, which he could reach from his gig, and the gates presently were flung open, and they drove into a spacious yard, with a large handsome house, having a bright lamp burning before it, on one side of the yard, and tall warehouses on the other.

"Show this poor woman and her child to Mrs. Craddock's, James," said Mr. Spire, "and tell Mrs. Craddock to make them very comfortable; and if you will come to my warehouse to-morrow," added he, addressing the poor woman, "perhaps I can be of some use to you."

The poor woman poured out her heartfelt thanks, and, following the old man servant, soon disappeared, hobbling over the pebbly pavement with her living load, stiffened almost to stone by her fatigue and her cold ride.

We must not pursue too minutely our narrative. Mrs. Deg was engaged to do the washing and getting up of Mr. Spire's linen, and the manner in which she executed her task insured her recommendations to all their friends. Mrs. Deg was at once in full employ. She occupied a neat house in a yard near the meadows below the town, and in those meadows she might be seen spreading out her clothes to whiten on the grass, attended by her stout little boy. In the same yard lived a shoemaker, who had two or three children, of about the same age as Mrs. Deg's child.

The children, as time went on, became playfellows. Little Simon might be said to have the free run of the shoemaker's house, and he was the more attracted thither by the shoemaker's birds, and by his flute, on which he often played after his work was done.

Mrs. Deg took a great friendship for this shoemaker: and he and his wife, a quiet, kind-hearted woman, were almost all the acquaintances that she cultivated. She had found out her husband's parents, but they were not of a description that at all pleased her. They were old and infirm, but they were of the true pauper breed, a sort of person, whom Mrs. Deg had been taught to avoid and to despise. They looked on her as a sort of second parish, and insisted that she should come and live with them, and help to maintain them out of her earnings. But Mrs. Deg would rather her little boy had died than have been familiarised with the spirit and habits of those old people. Despise them she struggled hard not to do, and she agreed to allow them sufficient to maintain them on condition that they desisted from any further application to the parish. It would be a long and disgusting story to recount all the troubles, annoyance, and querulous complaints, and even bitter accusations that she received from these connections, whom she could never satisfy; but she considered it one of her crosses in her life, and patiently bore it, seeing that they suffered no real want, so long as they lived, which was for years; but she would never allow her little Simon to be with them alone.

The shoemaker neighbour was a stout protection to her against the greedy demands of these old people, and of others of the old Degrés, and also against another class of inconvenient visitors, namely, suitors, who saw in Mrs. Deg a neat and comely young woman with a flourishing business, and a neat and soon well-furnished house, a very desirable acquisition. But Mrs. Deg had resolved never again to marry; but to live for her boy, and she kept her resolve in firmness and gentleness.

The shoemaker often took walks in the extensive town meadows to gather groundsell and plantain for his canaries and gorse-linnets, and little Simon Deg delighted to accompany him with his own children. There William Watson, the shoemaker, used to point out to the children the beauty of the flowers, the insects, and other objects of nature; and while he sat on a stile and read in a little old book of poetry, as he often used to do, the children sat on the summer grass, and enjoyed themselves in a variety of plays.

The effect of these walks, and the shoemaker's conversation on little Simon Deg was such as never wore out of him through his whole life, and soon led him to astonish the shoemaker by his extraordinary conduct. He manifested the utmost uneasiness at their treading on the flowers in the grass; he would burst with tears if they persisted in it; and when asked why, he said they were so beau-

tiful, and that they must enjoy the sunshine, and be very unhappy to die. The shoemaker was amazed, but indulged the lad's fancy. One day he thought to give him a great treat, and when they were out in the meadows, he drew from under his coat a bow and arrow, and shot the arrow high up in the air. He expected to see him in an ecstasy of delight: his own children clapped their hands in transport, but Simon stood silent, and as if awe-struck. "Shall I send up another?" asked the shoemaker.

"No, no," exclaimed the child, imploringly. "You say God lives up there, and he mayn't like it."

The shoemaker laughed, but presently he said, as if to himself, "There is too much imagination there. There will be a poet, if we don't take care."

The shoemaker offered to teach Simon to read, and to solidify his mind, as he termed it, by arithmetic, and then to teach him to work at his trade. His mother was very glad, and thought shoemaking would be a good trade for the boy; and that with Mr. Watson she should have him always near her. He was growing now a great lad, and was especially strong, and of a frank and daring habit. He was especially indignant at any act of oppression of the weak by the strong, and not seldom got into trouble by his 'championship of the injured in such cases amongst the boys of the neighbourhood.

He was now about twelve years of age; when, going one day with a basket of clothes on his head to Mr. Spires's for his mother, he was noticed by Mr. Spires himself from his counting-house window. The great war was raging; there was much distress amongst the manufacturers; and the people were suffering and exasperated against their masters. Mr. Spires, as a staunch tory, and supporter of the war, was particularly obnoxious to the workpeople, who uttered violent threats against him. For this reason his premises were strictly guarded, and at the entrance of his yard, just within the gates, was chained a huge and fierce mastiff, his chain allowing him to approach near enough to intimidate any stranger, though not to reach him. The dog knew the people who came regularly about, and seemed not to notice them, but on the entrance of a stranger, he rose up, barked fiercely, and came to the length of his chain. This always drew the attention of the porter, if he were away from his box, and few persons dared to pass till he came.

Simon Deg was advancing with the basket of clean linen on his head, when the dog rushed out, and barking loudly, came exactly opposite to him, within a few feet. The boy, a good deal startled at first, reared himself with his back against the wall, but at a glance perceiving that the dog was at the length of his tether, he seemed to enjoy his situation, and stood smiling at the furious animal, and lifting his basket with both hands above his

head, nodded to him, as if to say, "Well, old boy, you'd like to eat me, wouldn't you?"

Mr. Spires, who sat near his counting-house window at his books, was struck with the bold and handsome bearing of the boy, and said to a clerk, "What boy is that?"

"It is Jenny Deg's," was the answer.

"Ha! that boy! Zounds! how boys do grow! Why that's the child that Jenny Deg was carrying when she came to Stockington: and what a strong, handsome, bright-looking fellow he is now!"

As the boy was returning, Mr. Spires called him to the counting-house door, and put some questions to him as to what he was doing and learning, and so on. Simon, taking off his cap with much respect, answered in such a clear and modest way, and with a voice that had so much feeling and natural music in it, that the worthy manufacturer was greatly taken with him.

"That's no Deg," said he, when he again entered the counting-house, "not a bit of it. He's all Goodrick, or whatever his mother's name was, every inch of him."

The consequence of that interview was, that Simon Deg was very soon after perched on a stool in Mr. Spires' counting-house, where he continued till he was twenty-two. Mr. Spires had no son, only a single daughter; and such were Simon Deg's talents, attention to business, and genial disposition, that at that age Mr. Spires gave him a share in the concern. He was himself now getting less fond of exertion than he had been, and placed the most implicit reliance on Simon's judgment and general management. Yet no two men could be more unlike in their opinions beyond the circle of trade. Mr. Spires was a staunch tory of the staunch old school. He was for Church and King, and for things remaining for ever as they had been. Simon, on the other hand, had liberal and reforming notions. He was for the improvement of the people, and their admission to many privileges. Mr. Spires was, therefore, liked by the leading men of the place, and disliked by the people. Simon's estimation was precisely in the opposite direction. But this did not disturb their friendship; it required another disturbing cause—and that came.

Simon Deg and the daughter of Mr. Spires, grew attached to each other; and, as the father had thought Simon worthy of becoming a partner in the business, neither of the young people deemed that he would object to a partnership of a more domestic description. But here they made a tremendous mistake. No sooner was such a proposal hinted at, than Mr. Spires burst forth with the fury of all the winds from the bag of Ulysses.

"What! a Deg aspire to the hand of the sole heiress of the enormously opulent Spires?"

The very thought almost cut the proud manufacturer off with an apoplexy. The ghosts of a thousand paupers rose up before

him, and he was black in the face. It was only by a prompt and bold application of leeches and lancet, that the life of the great man was saved. But there was an end of all further friendship between himself and the expectant Simon. He insisted that he should withdraw from the concern, and it was done. Simon, who felt his own dignity deeply wounded too, for dignity he had, though the last of a long line of paupers—his own dignity, not his ancestors—took silently, yet not unrespectfully, his share—a good, round sum, and entered another house of business.

For several years there appeared to be a feud and a bitterness between the former friends; yet it showed itself in no other manner than by a careful avoidance of each other. The continental war came to an end; the manufacturing distress increased exceedingly. There came troublous times, and a fierce warfare of politics. Great Stockington was torn asunder by rival parties. On one side stood pre-eminent, Mr. Spires; on the other towered conspicuously, Simon Deg. Simon was grown rich, and extremely popular. He was on all occasions the advocate of the people. He said that he had sprung from, and was one of them. He had bought a large tract of land on one side of the town; and intensely fond of the country and flowers himself, he had divided this into gardens, built little summer-houses in them, and let them to the artisans. In his factory he had introduced order, cleanliness, and ventilation. He had set up a school for the children in the evenings, with a reading-room and conversation-room for the workpeople, and encouraged them to bring their families there, and enjoy music, books, and lectures. Accordingly, he was the idol of the people, and the horror of the old school of the manufacturers.

"A pretty upstart and demagogue I've nurtured," said Mr. Spires often, to his wife and daughter, who only sighed, and were silent.

Then came a furious election. The town, for a fortnight, more resembled the worst corner of Tartarus than a Christian borough. Drunkenness, riot, pumping on one another, spencering one another, all sorts of violence and abuse ruled and raged till the blood of all Stockington was at boiling heat. In the midst of the tempest were everywhere seen, ranged on the opposite sides, Mr. Spires, now old and immensely corpulent, and Simon Deg, active, buoyant, zealous, and popular beyond measure. But popular though he still was, the other and old tory side triumphed. The people were exasperated to madness; and, when the chairing of the successful candidate commenced, there was a terrific attack made on the procession by the defeated party. Down went the chair, and the new member, glad to escape into an inn, saw his friends mercilessly assailed by the populace. There was a tremendous tempest of sticks, brick-bats, paving-stones, and rotten eggs. In the midst of this, Simon Deg, and a number of

his friends, standing at the upper window of an hotel, saw Mr. Spires knocked down, and trampled on by the crowd. In an instant, and, before his friends had missed him from amongst them, Simon Deg was seen darting through the raging mass, cleaving his way with a surprising vigour, and gesticulating, and no doubt shouting vehemently to the rioters, though his voice was lost in the din. In the next moment, his hat was knocked off, and himself appeared in imminent danger: but, another moment, and there was a pause, and a group of people were bearing somebody from the frantic mob into a neighbouring shop. It was Simon Deg, assisting in the rescue of his old friend and benefactor, Mr. Spires.

Mr. Spires was a good deal bruised, and wonderfully confounded and bewildered by his fall. His clothes were one mass of mud, and his face was bleeding copiously; but when he had had a good draught of water, and his face washed, and had time to recover himself, it was found that he had received no serious injury.

"They had like to have done for me though," said he.

"Yes, and who saved you?" asked a gentleman.

"Ay, who was it? who was it?" asked the really warm-hearted manufacturer; "let me know? I owe him my life."

"There he is!" said several gentlemen, at the same instant, pushing forward Simon Deg.

"What, Simon!" said Mr. Spires, starting to his feet. "Was it thee, my boy?" He did more, he stretched out his hand: the young man clasped it eagerly, and the two stood silent, and, with a heart-felt emotion, which blended all the past into forgetfulness, and the future into a union more sacred than esteem.

A week hence, and Simon Deg was the son-in-law of Mr. Spires. Though Mr. Spires had misunderstood Simon, and Simon had borne the aspect of opposition to his old friend, in defence of conscientious principle, the wife and daughter of the manufacturer had always understood him, and secretly looked forward to some day of recognition and re-union.

Simon Deg was now the richest man in Stockington. His mother was still living to enjoy his elevation. She had been his excellent and wise housekeeper, and she continued to occupy that post still.

Twenty-five years, afterwards, when the worthy old Spires was dead, and Simon Deg had himself two sons attained to manhood; when he had five times been Mayor of Stockington, and had been knighted on the presentation of a loyal address; still his mother was living to see it; and William Watson, the shoemaker, was acting as the sort of orderly at Sir Simon's chief manufactory. He occupied the Lodge, and walked about, and saw that all was safe, and moving on as it should do.

It was amazing how the most plebeian

name of Simon Deg had slid, under the hands of the Heralds, into the really aristocratical one of Sir Simon Degge. They had traced him up a collateral kinship, spite of his own consciousness, to a baronet of the same name of the county of Stafford, and had given him a coat of arms that was really astonishing.

It was some years before this, that Sir Roger Rockville had breathed his last. His title and estate had fallen into litigation. Owing to two generations having passed without any issue of the Rockville family except the one son and heir, the claims, though numerous, were so mingled with obscuring circumstances, and so equally balanced, that the lawyers raised quibbles and difficulties enough to keep the property in Chancery, till they had not only consumed all the ready money and rental, but had made frightful inroads into the estate itself. To save the remnant, the contending parties came to a compromise. A neighbouring squire, whose grandfather had married a Rockville, was allowed to secure the title, on condition that the rest carried off the residuum of the estate. The woods and lands of Rockville were announced for sale!

It was at this juncture that old William Watson reminded Sir Simon Degge of a conversation in the great grove of Rockville, which they had held at the time that Sir Roger was endeavouring to drive the people thence. "What a divine pleasure might this man enjoy," said Simon Deg to his humble friend, "if he had a heart capable of letting others enjoy themselves."

"But we talk without the estate," said William Watson, "what might we do if we were tried with it?"

Sir Simon was silent for a moment; then observed that there was sound philosophy in William Watson's remark. He said no more, but went away; and the next day announced to the astonished old man that he had purchased the groves and the whole ancient estate of Rockville!

Sir Simon Degge, the last of a long line of paupers, was become the possessor of the noble estate of Sir Roger Rockville of Rockville, the last of a long line of aristocrats!

The following summer when the hay was lying in fragrant cocks in the great meadows of Rockville, and on the little islands in the river, Sir Simon Degge, Baronet, of Rockville,—for such was now his title,—through the suggestion of a great lawyer, formerly Recorder of the Borough of Stockington, to the crown—held a grand fête on the occasion of his coming to reside at Rockville Hall, henceforth the family seat of the Degges. His house and gardens had all been restored to the most consummate order. For years Sir Simon had been a great purchaser of works of art and literature, paintings, statuary, books, and articles of antiquity, including rich armour and precious works in ivory and gold.

First and foremost he gave a great banquet

to his wealthy friends, and no man with a million and a half is without them—and in abundance. In the second place, he gave a substantial dinner to all his tenantry, from the wealthy farmer of five hundred acres to the tenant of a cottage. On this occasion he said, "Game is a subject of great heart-burning and of great injustice to the country. It was the bane of my predecessor: let us take care it is not ours. Let every man kill the game on the land that he rents—then he will not destroy it utterly, nor allow it to grow into a nuisance. I am fond of a gun myself, but I trust to find enough for my propensity to the chase in my own fields and woods—if I occasionally extend my pursuit across the lands of my tenants, it shall not be to carry off the first-fruits of their feeding, and I shall still hold the enjoyment as a favour."

We need not say that this speech was applauded most vociferously. Thirdly, and lastly, he gave a grand entertainment to all his workpeople, both of the town and the country. His house and gardens were thrown open to the inspection of the whole assembled company. The delighted crowd admired immensely the pictures and the pleasant gardens. On the lawn, lying between the great grove and the hall, an enormous tent was pitched, or rather a vast canvas canopy erected, open on all sides, in which was laid a charming banquet; a military band from Stockington barracks playing during the time. Here Sir Simon made a speech as rapturously received as that to the farmers. It was to the effect, that all the old privileges of wandering in the grove, and angling, and boating on the river were restored. The inn was already rebuilt in a handsome Elizabethan style, larger than before, and to prevent it ever becoming a scene of intemperance, he had there posted as landlord, he hoped for many years to come, his old friend and benefactor, William Watson. William Watson should protect the inn from riot, and they themselves the groves and river banks from injury.

Long and loud were the applauses which this announcement occasioned. The young people turned out upon the green for a dance, and in the evening, after an excellent tea—the whole company descended the river to Stockington in boats and barges decorated with boughs and flowers, and singing a song made by William Watson for the occasion, called "The Health of Sir Simon, last and first of his Line!"

Years have rolled on. The groves and river banks and islands of Rockville are still greatly frequented, but are never known to be injured: poachers are never known there, for four reasons.—First, nobody would like to annoy the good Sir Simon; secondly, game is not very numerous there; thirdly, there is no fun in killing it, where there is no resistance; and fourthly, it is vastly more abundant in other proprietors' demesnes, and it is fun to kill it there, where it is jealously watched, and

there is a chance of a good spree with the keepers.

And with what different feelings does the good Sir Simon look down from his lofty eyrie, over the princely expanse of meadows, and over the glittering river, and over the stately woods to where Great Stockington still stretches farther and farther its red brick walls, its red-tiled roofs, and its tall smoke-vomiting chimneys. There he sees no haunts of crowded enemies to himself or any man. No upstarts, nor envious opponents, but a vast family of human beings, all toiling for the good of their families and their country. All advancing, some faster, some slower, to a better education, a better social condition, a better conception of the principles of art and commerce, and a clearer recognition of their rights and their duties, and a more cheering faith in the upward tendency of humanity.

Looking on this interesting scene from his distant and quiet home, Sir Simon sees what blessings flow—and how deeply he feels them in his own case—from a free circulation, not only of trade, but of human relations. How this corrects the mischiefs, moral and physical, of false systems and rusty prejudices;—and he ponders on schemes of no ordinary beauty and beneficence yet to reach his beloved town through them. He sees lecture halls and academies, means of sanitary purification, and delicious recreation, in which baths, wash houses, and airy homes figure largely: while public walks extend all round the great industrial hive, including wood, hills, meadow, and river in their circuit of many miles. There he lived and laboured; there live and labour his sons: and there he trusts his family will continue to live and labour to all future generations: never retiring to the fatal indolence of wealth, but aiding onwards its active and ever-expanding beneficence.

Long may the good Sir Simon live and labour to realise these views. But already in a green corner of the pleasant churchyard of Rockville may be read this inscription on a marble headstone:—"Sacred to the Memory of Jane Degg, the mother of Sir Simon Degge, Bart., of Rockville. This stone is erected in honour of the best of Mothers by the most grateful of sons."

TWO LETTERS FROM AUSTRALIA.

CORRESPONDENTS, to whom emigration is a subject of vital importance—inasmuch as they appear to be resolved to leave kindred and home for "pastures new"—have written to us, with a hope that we will continue to give, as we have done hitherto, the dark as well as the light side of the Colonial picture. Not a few of the dangers and privations of Australian life we have already laid before them. We now are enabled to furnish some idea of how new localities are colonised, by such enterprising pioneers as the author of the letters from which we take the following extracts.

It must be remarked, that the perils he

describes were self-sought, and are by no means incidental to the career of an ordinary emigrant. His adventures occurred beyond the limits of the colony as defined by the British Government which, it would appear, he was in some degree instrumental in extending.

We give the "round unvarnished tale" precisely as we received it, and as it was communicated by the author, to a relative in Cheshire:—

When we separated from our partner, Mr. W., it became necessary to look for stations outside the limits of the colony, for the only station we then possessed was much too small for our stock. It and I first took the stock up to the station on the Murray, and having heard that a fine district of country had just been discovered on the Edward, we followed it down and discovered our present runs, and, I must say, they are equal—for grazing purposes, at least—to anything I have seen in the colony. It was necessary that one of us should remain at our station on the Murray, and R. very kindly gave me the option of either remaining or going down the Edward. I preferred going and forming new stations on the Edward, while he agreed to continue where he was, which indeed he preferred. I therefore lost no time in removing the stock before the winter rains should set in, and the waters rise to an unnatural height, which the rivers down here invariably do at this period of the year, overflowing their banks, in places, for miles. It was too late,—for just as we started it commenced raining, and continued, without ceasing, for a month. It was with the greatest difficulty we got down, as, from continued exposure to wet, and what with driving the cattle by day and watching them by night, we were, as you may suppose, so completely fagged, as to be almost "*hors de service*." But there is an end to everything,—in this world at least,—and so there was to my journey. It excited in me at the time, I well recollect, strange and indescribable sensations, as I rode over the runs, exploring the different nooks and crannies all so lonely and still, with not a sound to be heard, save now and then the wild shriek of the native Companion (a large bird), or the howl of the native dog, or the still more thrilling yell of the black native, announcing to others the arrival of white men.

We were new about fifty miles from any other white habitation, about six hundred from Sydney, and two hundred from Melbourne. The country down here is almost a dead level,—not a single hill to be seen, unless you choose to honour with the name a few miserable mounds of sand which rise to an elevation of some twenty or thirty feet. The plains are very extensive; there is one which extends from our door right across to the Murrumbidgee, a distance of sixty-five miles, with scarcely a tree on it.

The Murray—of which the Edward is a

branch—takes its rise in the Australian Alps, and is supplied by springs and snow from these. Some of the highest mountains of this range retain perpetual snow on their summits, but on the lesser ones it melts about the beginning of spring, causing great floods in the Murray and Edward, and our runs, being particularly low, are flooded from one to three miles on either side of the river. It is necessary to state this, to enable you to understand the “secrets I am about to unfold.” We had built one hut on the south side (ycleped Barratta), but before we could get one up on the south side (Wirrai), the floods came, and I was obliged to substitute a bark one instead. I divided the cattle into two herds, and put a steady stock-keeper, along with a hut-keeper, in charge of one herd on the Wirrai station, while I, with a hut-keeper and another man (we were only five altogether) looked after the other on this side. We were badly supplied with arms and ammunition, and by no means prepared to fight a strong battle should the Blacks be inclined for mischief. The natives did not show up at the huts for two or three weeks after our arrival, but kept reconnoitring at a distance, and we could sometimes see them gliding stealthily among the trees not far off us. By degrees, two or three of them came up and made friends, and then more and more, until we had seen from forty to fifty of them, but it was remarkable that only old men, boys, and women showed themselves, and none of the warriors. Although I had heard that kindness was of no avail, I never could be brought to believe it, and determined, therefore, to do all in my power to propitiate them by trifling gifts, kind treatment, and avoiding everything that could hurt their feelings. It was of no use; no kindness—nothing, in fact—will teach them the law of *meum* and *tuum* but the white man's gun and his superior courage. We had been down about three months, the waters were at their highest, and our huts on both sides of the river were surrounded by water, through which we had to wade every morning to look after the cattle. I was obliged to put the huts within hearing of gunshot, on account of mutual protection, for what, after all, are two or three men alone, without a chance of assistance, against a body of two or three hundred black warriors, painted and armed, as I have seen them, in all the panoply of savage warfare.

We had not seen a single Black for nearly six weeks, for, as I afterwards learned, they had all gone over to a station on the Murray, about fifty miles from us, where they succeeded in driving the whites out after killing one man, and from three to four hundred head of cattle, without the slightest check or resistance; and having brought their work to a conclusion there, and emboldened by the success of their expedition, they now turned their eyes towards us, and gathering both numbers and courage, came pouring down on our de-

voted station. We had heard nothing of these depredations then, and were therefore quite unprepared for them. One day about twenty Blacks came up to the huts for the purpose, I suppose, of reconnoitring the nakedness of the land, and we killed for them a bullock, thinking thereby to propitiate them. In this, however, I was most woefully mistaken, for before they had half finished it, they went among the cattle on both sides of the river, and by next morning there was not a single head left within forty miles, with the exception of a few they had killed at either station. The Wirrai stock-keeper went on the tracks of his herd, and I followed those of mine, and by a week's time we had recovered the greatest part of both, but there were spears sticking in the sides of many of them, which wanton piece of cruelty occasioned several deaths in a short time. Not being strong enough to punish the Blacks, and unwilling to begin a quarrel which might cause loss of life perhaps on both sides, and still hoping that they would cease their depredations, I contented myself with giving them to understand that, if they attempted in future to touch either man or beast among us, they should be severely punished; they said it was not them but some *Wild Blacks*, an excuse they always make when they steal. In a fortnight afterwards, however, they acted the same play over again; and again we had the same trouble in recovering the cattle. They did not show after this except at a respectable distance, when it would be with a flourish of spears, or a wave of their tomahawks, accompanied with gesticulations of anything but a friendly character. Still I did not believe that they would attempt our lives, until I very nearly paid with mine the forfeit of my incredulity. I should mention that the communication with the Wirrai station was, at this time, carried on by means of bark canoes, which we paddled with long poles; the distance by water was about three miles, and by land straight across, a mile and a half.

One day I had gone over to Wirrai in a canoe, to see how the stockman was getting on, and on my return was humming a tune and thinking of you, dear William (for I was humming your old favorite “Flow on, thou shining River”), when I fancied I heard a slight noise: I stopped and listened, but could hear nothing; I went a little further and heard it again; I stopped again and peered about the bank, when suddenly about twenty Blacks sprung up from behind trees, and reeds, and long grass, only one of whom I had ever seen before; I was about fifty yards from the nearest of them, and just at the entrance of a creek about ten yards wide, lined on both sides with thick reeds. When they first appeared they did not show any weapons, and spoke in a friendly strain; “Budgeri Master always gibit bullock along im Black fellow,” asked if I wanted any fish? As I had a good double-barrel gun on

my knees I did not so much care about them, but not exactly liking their appearance I stopped at about thirty yards. The Blacks by this time were jabbering to me, down the creek, and I could see that the one side was lined with them. Seeing that I would not come any nearer, they suddenly picked up their spears and altered their tone, and began calling all sorts of names, and threatened to break my head with their "Nella nellas" (clubs). Quick as lightning they shipped their spears, but not quicker than I levelled my gun; the instant they saw which (they have a great respect for powder,) they betook themselves behind trees, and, in truth, I thought it best to follow their example; so, keeping the gun to my shoulder the while, I began as well as I could to paddle the canoe with one hand; perceiving my object, they stood out to thwart it, and I knowing that if they sent their spears, though none of them should hit me, they must inevitably shiver the canoe to pieces, determined to get on terra firma as quickly as possible, the water being only knee deep. In stepping out I unfortunately got into a stump-hole, and the next moment was soused over head and ears in water! This was decidedly unpleasant, and for the first time a thrill of fear came over me; however, I jumped up again, and having been very particular in loading my gun, I thought it might still go off. By this time the Blacks had gathered in great numbers on the other side of the creek and were pressing on in a body; seeing this I now levelled my piece, and took as deliberate an aim as I could at the foremost of them (a huge brute, for whose capture a hundred pounds reward had been offered by Government for a murder committed by him on the Murrumbidgee), but the gun hung fire and the ball dropped into the water. Finding that there was no chance to be placed in the gun, the only course left me was to retreat, and to attempt this I now resolved; taking courage at this, a number of them jumped into the water, again I faced them, and again they took to trees—are they not rank cowards? I was beginning to think that my only chance was to take to my legs—which indeed would have been almost certain death—when at this crisis I was, as you may imagine, agreeably surprised by the welcome "Halloo" of the stockman and hutkeeper, who, having heard the report of the gun and the yells of the savages, knew that something was up, and arrived at the nick of time to my rescue. After giving me some dry ammunition we made a rush after them, but could not overtake the black legs which were now plying at a particularly nimble rate, and which they especially do when getting out of the reach of a gun. This was the first attempt they had made on any of our lives, and their manoeuvres showed that they were under the impression that, if they could "*do for*" the master, they might easily finish the men. But I made it a rule that never less than two were to go out

on foot or in canoes, and with never less than twenty rounds of ball cartridge. We did not see anything of the Blacks for a fortnight after this, during which interval, as they afterwards told us, they were preparing for a grand attack on the Wirral station.

About two hours before sundown the following day the stockman went out, as usual, to see that the cattle were safe. The Wirral hut, I should mention, was at this time on a kind of island about a mile and a half in diameter, formed by the Wirral Lagoon and a deep creek,—so that the cattle were feeding almost within sight of the hut. All was quiet; the cattle did not seem to betray any symptoms of fear, which they generally will do when the Blacks are near. He had not returned more than half an hour, when we saw the poor beasts coming rushing towards the hut—as if for protection—as hard as they could lay legs to the ground. On going among them, we found many with spears sticking in their bodies. We immediately mounted horses—(I bareback, as I had left my saddle at Barratta)—and galloped as hard as we could in the direction the cattle had come from for about a mile, when, not seeing anything, we stopped and listened. There was a small, dense shrub before us, and, as we approached it, the awful yell that greeted our ears I shall not forget in a hurry. You can have no idea of the effect it has on one unaccustomed to the sound, for it is like nothing earthly that I can compare it to, but more like what one might imagine a lot of fiends would set up while performing their jubilee over the soul of some defunct mortal lately arrived at the "prison-house." We galloped through the shrub. Before us was a space bounded by two creeks, forming at their junction an angle on the plain beyond. Arranged in a semicircle in this space were some two hundred warriors, painted and armed, and drawn up in battle array. Between us and them four or five bullocks were writhing in their death agony, while the other side of the creek, beyond the warriors, was black with old men, women, and children looking on, and yelling at a most fearful rate. We galloped within gunshot, and I then ordered the stockman to fire on them.—(I had no gun myself, and had enough to do to sit the young spirited horse I was on), but he refused, saying that my horse would be sure to throw me, and that nothing then could save me from certain death. By this time the Blacks were trying to surround us, so as to hem us in between themselves and the creek, and cut off our retreat to the hut where we had left the hutkeeper in charge, and we soon found it necessary to put our horses into a gallop—they following at our heels—in order to get there in time enough to prepare for a defence. It was their intention, as they afterwards kindly informed us, to have killed every man jack of us. We had just got everything ready, when on they came yelling like so many fiends. We stood out

from the hut awaiting their onset. Although the odds against us, as regarded numbers, was fearful, I was confident that if we could only make sure of three or four of the foremost of them, it would go far to intimidate the rest; so, as soon as they came within range of our guns, we gave them three rounds, which, however, only wounded one of them; still it made the others check their paces and hesitate awhile, seeing especially that we were determined to sell our lives dearly at this crisis; they betook themselves behind trees, protected by which they crept nearer and nearer to us, we taking every opportunity of firing, but with small effect. It being now nearly dark, we were obliged to take to the hut, and defend ourselves there as best we could. When inside, they threw a great many spears through the tarpaulin, very fortunately with no other effect than that of one of them just grazing my head. This kind of siege was carried on about four hours, we firing a shot now and then when we thought we could perceive the dim outline of one of them gliding through the dark, and they sending an occasional spear, and giving a yell. What we most feared was their making an attempt to set the hut on fire, for if successful in this (and the day having been very warm, our tarpaulin would have burned like so much paper) it would have been all up with us.

We had almost given up all hopes of life, and a sort of stubborn, dogged desperation seized me such as I never before felt, and such as I trust I never may again feel. We were reduced to nearly a dozen rounds of ammunition which we resolved to save for the rush. About midnight I was horribly startled by the stockkeeper announcing that on his side of the hut (we each of us guarded one side) he thought he could distinguish a fire-stick at some distance, and, on looking, we could plainly perceive it approaching nearer and nearer, until it came within what we considered safe gunshot, when I told the stockman, who was the best shot, to take good aim. He fired, and the fire-stick dropped on the ground. A good deal of yelling followed, but they did not again venture to show fire.

Everything after an hour remained quiet; the cattle had long since been rushed off the island, and the Blacks, we supposed, had gone to rest, preparatory to an attack at daybreak. Towards dawn, being faint and weak through anxiety and fasting,—for we had had nothing for twenty-four hours,—we determined on having some tea; but before it could be got ready we again heard the Blacks yelling most furiously. The stockman and hutkeeper thereupon gave it as their opinion, that our only hope of escape was in immediately quitting the hut, and attempting, if possible, to get across to Barratta; so, instantly decamping, we crossed the lagoon in a canoe, which we then dragged across a few hundred yards of land to the river. This we also quickly crossed. Just as we reached the Barratta bank, we heard a

most awful hullabaloo at Wirrai, in which noises our friends the Blacks were giving vent to their feelings of disgust and disappointment at not finding us at home. Before they could overtake us, we were safe at Barratta. "To be continued in our next," as the Editors of periodicals often say.

In a Second Letter the Narrative is resumed.

I could see plainly depicted in the faces of the two men who were in charge of the Barratta station, a considerable degree of suspicion as to the extent of our courage in the Wirrai affair. They were both plucky men, but their notions underwent a great change the next day. The day we escaped, we heard nothing more of the natives, except now and then their distant yells; so I sent up a man on horseback to the next station for assistance, to help us to find and recover the cattle. But the superintendent either would not or could not give us any, although all his servants, to a man, volunteered to go. I was obliged, therefore, to allow my four men to proceed alone. I think I mentioned that I had burned my foot very severely, and by this time, from the work I had had to undergo, I was in great agony from it. But I offered the men, if any one of them objected to it, he could remain in the hut, and I would go in his place. They all, however, readily agreed to go, for, in truth, remaining behind was by far the most dangerous post, inasmuch as the Blacks, from their numbers, could easily circumvent the men, or keep them at bay, while they attacked the hut, and I could have done little myself, in the way of defence, with only an old lockless piece, to discharge which it was necessary to use a fire-stick. Before they left, the stockman took me aside, and, with much kindness, implored me earnestly, for my own safety, to take a horse, and step out on the plain. He told me, at the same time, that he did not expect to come back alive; "but," said he, "it does not matter a straw what becomes of us, for not one of us would be missed." This disinterestedness struck me not a little, as showing a high trait of fine feeling, coming as it did from an old convict who had been transported for life, and had once been condemned to be hanged. However, I resolved to take my chance in the hut, and very glad I was that I did so afterwards, as I should have looked very foolish, when my men returned, seated on a horse, and ready to make a bolt. I had waited about an hour with my old gun and fire-stick in hand, without hearing a sound to break the horrid stillness which seemed at that particular time to reign paramount around me, when a distant volley of gunshot burst upon my ear, and then a faint volley of yells. In a short time the sounds were repeated; again and again, but nearer and nearer, and more and more distinct, a shot or two at a time, with horrible yells filling up the interlude until I could distinguish my men retreating with an immense

semicircle of natives trying to encompass them and cut them off from the hut. My men retreated to the water's edge in capital order, and then faced round to the enemy, for it would have been sure death to have attempted to cross in the face of so many of the foe. After a good deal of skirmishing at this point, a very old Black took a green bough, and standing a little out from the rest, made a long harangue to the white men in his own language, which of course was just so much Hebrew to them; but being anxious for a truce they ceased firing. Another Black who could talk a little English now came forward, and after a good deal of jabber, concluded a peace, one condition of which was that they were to give up everything they had taken from the Wirrai hut. Of course we well knew, or at least fully expected, that this treaty was all hollow on their side, and like lovers' vows, made only to be broken; but the truth was, we were glad enough to get a little respite even though for ever so short a time. After restoring most of the things they had stolen, the Blacks drew off in a body to the other side of the river.

The stockman informed me, that, when they started on their search, they first crossed the river, and then made away over to the Collegian, where they soon espied a few Blacks, apparently reconnoitring, who, when they perceived the white men, made signals to other Blacks beyond them, and who, in like manner, signalled others still further away: presently they saw slowly approaching them a dense black body which the two men who had not been at Wirrai the day before took to be the cattle they were in search of, but which the more experienced stockman at once declared to be a vast body of the Blacks. The two men at first laughed at this idea as a good joke, but were soon confirmed as to its correctness, when they changed their tone, and began to think it high time to return. On, however, they came in a dense body, and when nearly within gunshot, spread themselves out, or deployed—as our military brother would I suppose call it—and pressing on in a large semicircle, endeavoured so to manœuvre, as to cut off the escape of the retreating army in the direction of the hut as before related.

The truce, as we had anticipated, proved a very short one, as you will presently see. The day following the above incidents, I sent the stockman and another, to see after the surviving cattle which our black friends informed us had got out of the island and gone across the country to the Murray, which was true. The men had been gone about three hours, when about a hundred of the warriors came up to the hut—without their spears, but with plenty of tomahawks—pretending to be good friends. I told the two men who were working outside, to keep a sharp lookout, as I suspected their friendship was not of that description I most coveted or admired;

and being myself scarcely able to move, I sat down in a corner of the hut by a table, with a gun close by me, a brace of pistols in my belt, and another on the table. I told the Blacks to keep outside the hut; but they, gradually edging their way in, soon nearly filled it; and seeing that there was no chance of keeping them out, except by proceeding to extremities, I contented myself with watching their motions with all the coolness I could command. They began talking very quietly at first, and I noticed the gentleman I mentioned who could talk a little English, edging by little and little towards me, sometimes talking to his companions and sometimes addressing me. I pretended not to notice him particularly, though at the same time—without looking directly at him—I could see his eyes rolling from the direction of mine to the fir-arms like a revolving lamp. Soon the jabbering became louder and louder (they were talking themselves into a rage), and I thought I could hear the names of some of those who had fallen, made use of. All the while the above-mentioned black fellow was shuffling closer and closer to me, until I faith I thought it was high time to act my part in the scene, or give up all thoughts of life. With all the calmness I was master of, I took up a pistol from the table, and taking my English friend by the arm, pointed it at his head, and told him to order all his companions to quit the hut; he shook like an aspen leaf, and turned as white as a Black well can, and ordered them to go out, which they immediately did without a word; I then led him after them, and bade them leave the place, and return to their camp, which they likewise did.

I look upon that as about the narrowest escape I ever had; for the Blacks have since told me that they were on the point of making a rush upon us, when it was providentially stopped by the timely proceeding mentioned. Had they done so, nothing of course could have saved us. Next day three or four hundred of them passed the hut in dead silence; and not one of them called. They were all fully armed and painted with red ochre (their uniform for war), and I conjectured they were up to some mischief, but what I could not tell.

In about a week we again had the pleasure of seeing them coming in great numbers, and camping in an island about a mile off. From certain signs which experience had taught us, we were well assured that they intended making a grand attack upon our hut. I had no one living at Wirrai then; and as there were only four of us at Barratta, viz., H., (who had just arrived), myself and two men, (the two who had been sent after the cattle, were still away,) and wishing to give the Blacks a severe lesson, we sent to the next station for as many men as they could spare.

The man we sent had only just reached the station, when the Commissioner of the district chanced also to arrive there. Now the

Commissioner in those days was a man of great authority ; in fact, altogether more like a little king, than any less lordly personage : so, instead of coming down himself with his police to our assistance, he allowed the superintendant to send six of his men, while he himself remained where he was "otium cum." for in truth the old fellow—to say nothing of his love of ease, was of old Falstaff's opinion touching the advisable predominance of a certain quality in the exercise of valour. The men arrived in great silence at midnight, and the Blacks fortunately knew nothing of their arrival ; for if they had, they would have deferred their attack until a more seasonable opportunity when we were not so well prepared for their reception.

Daylight came, and in the distance we could see their dusky figures crossing the lagoon to one side. They had only three canoes, so that it was a considerable time before all were landed. They then gathered together in a clump in dead silence, and held a council of war, thinking themselves unobserved all the time. At sunrise they slowly approached, and only those of us whom they expected to see showed out to them, and without arms ; they appeared to have no other arms than their tomahawks ; but every man of them was dragging a large jagged spear with their toes through the long grass. When, by the way, one of these spears enters a man's body, it is impossible to get it out again, except by cutting the flesh all round it, or pushing it right through to the other side. As they advanced nearer, they spoke, and continued talking to us all the time in the most friendly strains, until within about twenty yards ; when just as they (at a signal given by one of them) were stooping to pick up their spears to make a rush, the men in the hut let drive through loopholes right among them ; and we all made a simultaneous rush, and put them to rout in a manner that would have given the Old Duke intense satisfaction had he been looking on. How many fell, I cannot say, as they always try to drag their dead from the field, and all around us, except on the water-side, was long grass and reeds ; two were left dead, and these we buried.

To detail all the skirmishes and the Parthian description of fighting with the Blacks for the eighteen months which ensued, would only weary you. Where, little more than three years ago, ours was the only station in this direction, being five miles beyond any other, there are now stations formed a hundred miles below us, and even ladies grace the river forty miles down, one of them married to an old school-fellow of ours, viz., Brougham, nephew of Lord Brougham. Among other diversions, I have been employing myself in making a flower-garden, for independently of my love of flowers, I think their contemplation, and engagement in their cultivation, has a humanising, or, if you will, a civilising effect on

the mind, such as I can assure you we require in the Bush.

SUPPOSING.

SUPPOSING a Royal Duke were to die, Which is not a great stretch of supposition,

For golden lads and lasses must,
Like chimney-sweepers, come to dust :

Supposing he had been a good old Duke with a thoroughly kind heart, and a generous nature, always influenced by a sincere desire to do right, and always doing it, like a man and a gentleman, to the best of his ability :

And supposing, this Royal Duke left a son, against whom there was no imputation or reproach, but of whom all men were disposed to think well, and had no right or reason to think otherwise :

And supposing, this Royal Duke, though possessed of a very handsome income in his life-time, had not made provision for his son ; and a rather accommodating Government (in such matters) were to make provision for him, at the expense of the public, on a scale wholly unsuited to the nature of the public burdens, past, present, and prospective, and bearing no proportion to any kind of public reward, for any sort of public service :

I wonder whether the country could then, with any justice, complain, that the Royal Duke had not himself provided for his son, instead of leaving his son a charge upon the people !

I should think the question would depend upon this :—Whether the country had ever given the good Duke to understand, that it, in the least degree, expected him to provide for his son. If it never did anything of the sort, but always conveyed to him, in every possible way, the rapturous assurance that there was a certain amount of troublesome Hotel business to be done, which nobody but a Royal Duke could by any possibility do, or the business would lose its grace and flavor, then, I should say, the good Duke aforesaid might reasonably suppose that he made sufficient provision for his son, in leaving him the Hotel business ; and that the country would be a very unreasonable country, if it made any complaint.

Supposing the country *did* complain, though, after all. I wonder what it would still say, in Committee, Sub Committee, Charitable Association, and List of Stewards, if any ungentle person were to propose ignoble chairmen !

Because I should like the country to be consistent.

SATURDAY, AUGUST 17, 1850.

[PRICE 2d.]

THE RAILWAY WONDERS OF LAST YEAR.

THE unblushing individual who inflated the first bubble prospectus in the early days of Railway scheming must regard, if he be still in existence (and we have good reason to believe that he lives, a prosperous gentleman), with superlative amazement the last Report of Her Majesty's Railway Commissioners.

When in his dazzling document the preposterous "promoter" certified the forthcoming goods transit at six times the amount his most sanguine "traffic-taker" could conscientiously compute; when he quadrupled the boldest calculations of the expected number of passengers—when, in short, he projected his prognostics beyond the widest bounds of probability, and then added a few cyphers at the end of each sum, to make "round numbers"—he was not so mad as to believe that he lied in the least like truth. Mad as he was *not*, he never could have supposed that an after-time would come when his lying prospectus would be pronounced as far short of, as his mendacious imagination endeavoured to make it exceed, the Truth. But that time has arrived.

Let us suppose a friend of his, a far-seeing prophet, reading a proof of the pet prospectus by the aid of magnifying glasses; let us figure the statistical foreteller of future events assuring its author that, twenty years thence, his immeasurable exaggerations would be out-exaggerated by what should actually come to pass; that his brazen bait to catch share-jobbers would shrink—when placed beside the Railway records of eighteen-hundred-and-forty-nine—into a puny, minimised, understatement. How he would have laughed! How immediately his mind would have reverted from the sanguine seer to the terminus of flighty intellects known as Bedlam. With what remarkable unction he would have said, "Phoo! Phoo! My good fellow, you must be lapsing into lunacy. What! Do you mean to say I have not laid it on thick enough? Why, look here!" and he turns to the latest of the Stamp Office stage-coach returns: "Do you mean to tell me—now that coach travelling has arrived at perfection, and that the wonderful average of coach passengers is six millions a year—that, instead

of quadrupling the number of travellers who are likely to use my line, I ought to multiply them by a hundred? Why, you may as well try to persuade me that I ought to promise for our locomotives twenty, instead of fifteen, miles an hour; which—Heaven forgive me—I have had the courage to set down. Stuff! If I were to romance at that rate, we should not sell a share."

And our would-be Major Longbow would have had reason for the faith that was in him. In his highest flights he dared not exceed too violently the statistics of G. R. Porter, or have added too high a premium on the expectations of George Stephenson. The former calculated that up to the end of 1834, when not a hundred miles of Railway were open, the annual average of persons who travelled by coach was about two millions, each going over one hundred and eighty miles of ground in the year.* Supposing each individual performed that distance in three journeys, the whole number of persons must have multiplied themselves into six millions of passengers. As to speed, Mr. George Stephenson said at a dinner-party given to him at Newcastle in 1844, that when he planned the Liverpool and Manchester line, the directors entreated him, when they went to Parliament, not to talk of going at a faster rate than ten miles an hour, or he "would put a cross upon the concern." Mr. George Stephenson *did* talk of fifteen miles an hour, and some of the Committee asked if he were not mad! Mr. Nicholas Wood delivered himself in a pamphlet as follows:—"It is far from my wish to promulgate to the world that the ridiculous expectations, or rather *professions*, of the *enthusiastic speculatist* will be realised, and that we shall see engines travelling at the rate of twelve, sixteen, eighteen, twenty miles an hour. Nothing could do more harm towards their general adoption and improvement than the promulgation of such NONSENSE!"

It would seem, then, that the Longbow of the aboriginal prospectuses was actually modest in his estimate as to passengers and speed. But only a few years must have made him utterly ashamed of his moderation and modesty. How disgusted he must have felt with his timid pronouncements, even when 1843 arrived. For that year revealed travellers' tales that exceeded

* "Porter's Progress of the Nation," vol. II. p. 22.

his early romances by what Major Longbow himself would have called "an everlasting long chalk." Within that year, seventy railroads, constructed at an outlay of sixty millions sterling, conveyed twenty-five millions of passengers three hundred and thirty millions of miles, at an average cost of one penny and three quarters per mile, and an average speed of twenty-four miles per hour, with but one fatal accident.

But if our parent of railway proprietors were astonished at what happened in 1843, with what inconceivable amazement he must peruse the details of 1849! We should like to see the expression of his countenance while conning the report of Her Majesty's Commissioners of Railways for last year. At the end of every sentence he would be sure to exclaim, "Who would have thought it?"

From this unimpeachable record of scarcely credible statistics, it appears that at the end of 1849 there were, in Great Britain and Ireland, five thousand five hundred and ninety-six miles of railway in active operation; upwards of four thousand five hundred and fifty-six of which are in England, eight hundred and forty-six in Scotland, and four hundred and ninety-four in Ireland. Besides this, the number of miles which have been authorised by Parliament, and still remain to be finished is six thousand and thirty; so that, if all the lines were completed, the three kingdoms would be intersected by a net-work of railroad measuring twelve thousand miles; but of this there is only a remote probability, the number of miles in course of active construction being no more than one thousand five hundred, so that by the end of the present year it is calculated that the length of finished and operative railway may be about seven thousand four hundred miles, or as many as lie between Great Britain and the Cape of Good Hope, with a thousand miles to spare. The number of persons employed on the 30th of June, 1849, in the operative railways was fifty-four thousand; on the unopened lines, one hundred and four thousand.

When the schemer of the infancy of the giant railway system turns to the passenger-account for the year 1849, he declares he is fairly "knocked over." He finds that the railway passengers are put down at *sixty-three million eight hundred thousand*; nearly three times the number returned for 1843, and a hundred times as many as took to the road in the days of stage-coaches. The passengers of 1849, actually double the sum of the entire population of the three kingdoms.

The statement of capital which the six thousand miles now being hourly travelled over represents, will require the reader to draw a long breath;—it is one hundred and ninety-seven and a-half millions of pounds sterling. Add to this the cash being disbursed for the lines in progress, the total rises to two hundred and twenty millions! The average cost of each mile of railway, including engines,

carriages, stations, &c., (technically called "plant,") is thirty-three thousand pounds.

Has this outlay proved remunerative? The Commissioners tell us, that the gross receipts from all the railways in 1849 amounted to eleven millions, eight hundred and six thousand pounds; from which, (if the working expenses be deducted at the rate of forty-three per cent. (being about an average taken from the published statements of a number of the principal companies), there remains a net available profit of about six millions seven hundred and twenty-nine thousand four hundred and twenty pounds to remunerate the holders of property to the amount of one hundred and ninety-seven millions and a-half; or at the rate, within a fraction, of three and a-half per cent. Here our parent of railway prospectuses chuckles. He promised twenty per cent. per annum.

In short, in everything except the dividends, our scheming friend finds that reality has outstripped his early fictions. He told the nervous old ladies and shaky "I pays" on his projected line, that Railways were quite as safe as stage-coaches. We say the grave records of 1849? The live five passengers were lost during that year and those by one accident—a cause, of course, beyond the control of the victims; eighteen more casualties took place, for which the sufferers had themselves alone to blame. Five lives lost by official mismanagement, out of sixty-four millions of risks, is a very outrageous proportion; especially when we reflect that, taking as a basis the calculation of 1843, the number of miles travelled over per rail during last year, may be set down at eight hundred and forty-five millions; or nine times the distance between the earth and the sun.

Such are the Railway wonders of the year of grace, one thousand eight hundred and forty-nine.

THE WATER DROPS.

A FAIRY TALE.

CHAPTER THE FIRST.

The Suitors of Cirra, and the young Lady; with a reference to her Papa.

FAR in the west there is a land mountainous, and bright of hue, wherein the rivers run with liquid light; the soil is all of yellow gold; the grass and foliage are of resplendent crimson; where the atmosphere is partly of a soft green tint, and partly azure. Sometimes on summer evenings we see this land, and then, because our ignorance must refer all things that we see, to something that we know, we say it is a mass of clouds made beautiful by sunset colours. We account for it by principles of Meteorology. The fact has been omitted from the works of Kaemtz or Daniell; but, notwithstanding this neglect, it is well known in many nurseries, that the bright land we speak of, is a world inhabited by fairies. Few among fairies take more interest in man's affairs than the good Cloud

Country People; this truth is established by the story I am now about to tell.

Not long ago there were great revels held one evening in the palace of King Cumulus, the monarch of the western country. Cirrha, the daughter of the king, was to elect her future husband from a multitude of suitors. Cirrha was a maiden delicate and pure, with a skin white as unfallen snow; but colder than the snow her heart had seemed to all who sought for her affections. When Cirrha danced gracefully and slowly through her father's hall, many a little cloud would start up presently to tread where she had trodden. The winds also pursued her; and even men looked up admiringly whenever she stepped into their sky. To be sure they called Mackerel and Cat's Tail, just as they call Father Ball of Cotton; for the race of men is a coarse race, and calling bad names appears to be a great part of its business here below.

Before the revels were concluded, the King sent a quiet little wind to run among the clouds, and bid them all come close to him and to his daughter. Then he spoke to them as follows:—

"Worthy friends! there are among you suitors to my daughter Cirrha, who is about this evening to choose a husband. I bid me tell you that she loves you all; and it is desirable that this our royal strength be united by a firm alliance with you. For power, she has resolved to take from one of those guests who have been chosen for the principality of Nimbus." "But," said that country, not seldom visited by the Rain Cloud, "The subjects of the Prince of Nimbus," Cumulus continued, "are a dark race, it is true, but they are the best for their beneficence."

The wind, at this point, raised between the assembly a great disturbance, so that there arose a universal cry that somebody should turn them out. With much trouble they were driven out from the assembly; thereupon, quite mad with jealousy and disappointment, they went howling off to sea, where they played pool-billiards with a fleet of ships, and so forgot their sorrow.

King Cumulus resumed his speech, and said that he was addressing himself, now, especially to those of his good friends who came from Nimbus. "To-night, let them retire to rest, and early the next morning let each of them go down to Earth; whichever of them should be found on their return to have been engaged below in the most useful service to the race of man, that son of Nimbus should be Cirrha's husband."

Cumulus, having said this, put a white nightcap on his head, which was the signal for a general retirement. The golden ground of his dominions was covered for the night, as well as the crimson trees, with cotton. So the whole kingdom was put properly to

bed. Late in the night the moon got up, and threw over King Cumulus a silver counterpane.

CHAPTER THE SECOND.

The Adventures of Nimbus and Nubis.

THE suitors of the Princess Cirrha, who returned to Nimbus, were a-foot quite early the next morning, and petitioned their good-natured Prince to waft them over London. They had agreed among themselves, that by descending there, where men were densely congregated, they should have a greater chance of doing service to the human race. Therefore the Rain-Cloud floated over the great City of the World, and, as it passed at sundry points, the suitors came down upon rain-drops to perform their destined labour. Where each might happen to alight depended almost wholly upon accident; so that their adventures were but little better than a lottery for Cirrha's hand. One, who had been the most magniloquent among them all, fell with his pride upon the patched umbrella of an early-breakfast woman, and from thence was shaken off into a puddle. He was splashed up presently, mingled with soil, upon the corduroys of a labourer, who stopped for breakfast on his way to work. He thence, evaporating, he returned crest-fallen to the Land of Clouds.

Among the suitors there were two kind-hearted fairies, Nebulus and Nubis, closely bound by friendship to each other. While they were in conversation, Nebulus, who suddenly observed that they were passing over some unhappy region, dropped, with a hope that he might bless it. Nubis passed on, and presently alighted on the surface of the Thames.

The district which had wounded the kind heart of Nebulus was in a part of Bermondsey, called Jacob's Island. The fairy fell into a ditch; out of this, however, he was taken by a woman, who carried him to her own home, among other ditch-water, within a pail. Nebulus abandoned himself to complete despair, for what claim could he now establish on the hand of Cirrha? The miserable plight of the poor fairy we may gather from a description given by a son of man of the sad place to which he had descended. "In this Island may be seen, at any time of the day, women dipping water, with pails attached by ropes to the backs of the houses, from a foul fetid ditch, its banks coated with a compound of mud and filth, and strewn with offal and carrion; the water to be used for every purpose, culinary ones not excepted; although close to the place whence it is drawn, filth and refuse of various kinds are plentifully showered into it from the outhouses of the wooden houses overhanging its current, or rather slow and sluggish stream; their posts or supporters rotten, decayed, and, in many instances broken and the filth dropping into the water, to be seen by any passer by. During the summer, crowds of boys bathe

in the putrid ditches, where they must come in contact with abominations highly injurious.*

So Nebulus was carried in a pail out of the ditch to a poor woman's home, and put into a battered saucepan with some other water. Thence, after boiling, he was poured into an earthen tea-pot over some stuff of wretched flavour, said, to be tea. Now, "thought the fairy, after all, I may give pleasure at the breakfast of these wretched people. He pictured to himself a scene of love as preface to a day of squalid toil, but he experienced a second disappointment. The woman took him to another room of which the atmosphere was noisome; there he saw that he was destined for the comfort of a man and his two children, prostrate upon the floor beneath a heap of rags. These three were sick; the woman swore at them, and Nebulus shrunk down into the bottom of the tea-pot. Even the thirst of fever could not tolerate too much of its contents, so Nebulus, after a little time, was carried out and thrown into a heap of filth upon the gutter.

Nubis, in the meantime, had commenced his day with hope of a more fortunate career. On falling first into the Thames he had been much annoyed by various pollutions, and been surprised to find, on kissing a few neighbour drops, that their lips tasted inky. This was caused, they said, by chalk pervading the whole river in the proportion of sixteen grains to the gallon. That was what made their water inky to the taste of those who were accustomed to much purer draughts. "It makes," they explained, "our river-water hard, according to man's phrase; so hard as to entail on multitudes who use it, some disease, with much expense and trouble."

"But all the mud and filth," said Nubis, "surely no man drinks that?"

"No," laughed the River-Drops, "not all of it. Much of the water used in London passes through filters, and a filter suffers no mud or any impurity to pass, except what is dissolved. The chalk is dissolved, and there is filth and putrid gas dissolved."

"That is a bad business," said Nubis, who already felt his own drops exercising that absorbent power for which water is so famous, and incorporating in their substance matters that the Rain-Cloud never knew.

Presently Nubis found himself entangled in a current, by which he was sucked through a long pipe into a meeting of Water-Drops, all summoned from the Thames. He himself passed through a filter, was received into a reservoir, and, having asked the way of friendly neighbours, worked for himself with small delay a passage through the mainpipe into London.

Bewildered by his long, dark journey underground, Nubis at length saw light, and presently dashed forth out of a tap into a pitcher. He saw

that there was fixed under the tap a water-butt, but into this he did not fall. A crowd of women holding pitchers, saucepans, pails, were chattering and screaming over him, and the anxiety of all appeared to be to catch the water as it ran out of the tap, before it came into the tub or cistern. Nubis rejoiced that his good fortune brought him to a district in which it might become his privilege to bless the poor, and his eye sparkled as his mistress, with many rests upon the way, carried her pitcher and a heavy pail upstairs. She placed both vessels, full of water, underneath her bed, and then went out again for more, carrying a basin and a fish-kettle. Nubis pitied the poor creature, heartily wishing that he could have poured out of a tap into the room itself to save the time and labour of his mistress.

The pitcher wherein the good fairy lurked, remained under the bed through the remainder of that day, and during the next night, the room being, for the whole time, closely tenanted. Long before morning, Nubis felt that his own drops and all the water near him had lost their delightful coolness, and had been busily absorbing smells and vapours from the close apartment. In the morning, when the husband dipped a teacup in the pitcher, Nubis readily ran into it, glad to escape from his unwholesome prison. The man putting the water to his lips, found it so warm and repulsive, that, in a pet, he flung it from the window, and it fell into the water-butt beneath.

The water-butt was of the common sort, described thus by a member of the human race:—"Generally speaking, the wood becomes decomposed and covered with fungi; and indeed, I can best describe their condition by terming them filthy." This water-butt was placed under the same shed with a neglected cesspool, from which the water—ever absorbing—had absorbed pollution. It contained a kitten among other trifles. "How many people have to drink out of this butt?" asked Nubis. "Really I cannot tell you," said a neighbour Drop. "Once I was in a butt in Bethnal Green, twenty-one inches across, and a foot deep, which was to supply forty-eight families.* People store for themselves, and when they know how dirty these tubs are, they should not use them." "But the labour of dragging water home, the impossibility of taking home abundance, the pollution of keeping it in dwelling-rooms and under beds." "Oh, yes," said the other Drop; "all very true. Besides, our water is not of a sort to keep. In this tub there is quite a microscopic vegetable garden, so I heard a doctor say who yesterday came hither with a party to inspect the district. One of them said he had a still used only for distilling water, and that one day, by chance, the bottoms of a series of distillations boiled to dryness. Thereupon, the dry mass

* Report of Mr. Bowie on the cause of Cholera in Bermondsey.

* Report of Dr. Gavin.

became heated to the decomposing point, and sent abroad a stench plain to the dullest nose as the peculiar stench of decomposed organic matter. It infected, he said, the produce of many distillations afterwards.* "I tell you what," said Nubis, "water may come down into this town innocent enough, but it's no easy matter for it to remain good among so many causes of corruption. Heigho!" Then he began to dream of Princess Cirrha and the worthy Prince of Nimbus, until he was aroused by a great tumult. It was an uproar caused by drunken men. "Why are those men so?" said Nubis to his friend. "I don't know," said the Water-Drop, "but I saw many people in that way last night, and I have seen them so at Bethnal Green." A woman pulled her husband by, with loud reproaches for his visits to the beer-shop. "Why," cried the man, with a great oath, "where would you have me go for drink?" Then, with another oath, he kicked the water-butt in passing—"You would not have me to go there!" All the bystanders laughed approvingly, and Nubis bade adieu to his ambition for the hand of Cirrha.

CHAPTER THE THIRD.

Nephelo goes into Polite Society, and then into a Dungeon.
—His Escape, Recapture, and his Perilous Ascent into the Sky, surrounded by a Blaze of Fire.

NEPHELO was a light-hearted subject of the Prince of Nimbus. It is he who often floats, when the whole cloud is dark, as a white vapour on the surface. For love of Cirrha, he came down behind a team of rain-drops and leapt into the cistern of a handsome house at the west end of London.

Nephelo found the water in the cistern greatly vexed at riotous behaviour on the part of a large number of animalcules. He was told that Water-Drops had been compelled to come into that place, after undergoing many hardships, and had unavoidably brought with them germs of these annoying creatures. Time and place favouring, nothing could hinder them from coming into life; the cistern was their cradle, although many of them were already anything but babes. Hereupon, Nephelo himself was dashed at by an ugly little fellow like a dragon, but an uglier fellow, who might be a small Saint George, pounced at the dragon, and the heart of the poor fairy was the scene of contest.

After a while, there was an arrival of fresh water from a pipe, the flow of which stirred up the anger of some decomposing growth which lined the sides and bottom of the cistern. So there was a good deal of confusion caused, and it was some time before all parties settled down into their proper places.

"The sun is very hot," said Nephelo. "We all seem to be getting very warm." "Yes, indeed," said a Lady-Drop; "it's not like the cool Cloud-Country. I have been poisoned in the Thames, half filtered, and made frowzy

by standing, this July weather, in an open reservoir. I've travelled in pipes laid too near the surface to be cool, and now am spoiling here. I know if water is not cold it can't be pleasant." "Ah," said an old Drop, with a shal eel in one of his eyes; "I don't wobble at hearing tell that men drink wine, and tea, and beer." "Talking of beer," said another, "is it a fact that we're of no use to the brewers? Our character's so bad, they can't rely on us for cooling the worts, and so sink wells, in order to brew all the year round with water cold enough to suit their purposes." "I know nothing of beer," said Nephelo; "but I know that if the gentlemen and ladies in this cistern were as cold as they could wish to be, there wouldn't be so much decomposition going on amongst them." "Your turn in, Sir," said a polite Drop, and Nephelo leapt nimbly through the place of exit into a china jug placed ready to receive him. He was conveyed across a handsome kitchen by a cook, who declared her opinion that the morning's rain had caused the drains to smell uncommonly. Nephelo then was thrown into a kettle.

Boiling is to an unclean Water-Drop, like scratching to a bear, a pleasant operation. It gets rid of the little animals by which it had been bitten, and throws down some of the impurity with which it had been soiled. So, after boiling, water becomes more pure, but it is, at the same time, more greedy than ever to absorb extraneous matter. Therefore, the sons of men who boil their vitiated water ought to keep it covered afterwards, and if they wish to drink it cold, should lose no time in doing so. Nephelo and his friends within the kettle danced with delight under the boiling process. Chattering pleasantly together, they compared notes of their adventures upon earth, discussed the politics of Cloud-Land, and although it took them nearly twice as long to boil as it would have done had there been no carbonate of lime about them, they were quite sorry when the time was come for them to part. Nephelo then, with many others, was poured out into an urn. So he was taken to the drawing-room, a hot iron having, in a friendly manner, been put down his back, to keep him boiling.

Out of the urn into the teapot; out of the teapot into the slop-basin; Nephelo had only time to remark a matron tea-maker, young ladies knitting, and a good-looking young gentleman upon his legs, laying the law down with a tea-spoon, before he (the fairy, not the gentleman) was smothered with a plate of muffins. From so much of the conversation as Nephelo could catch, filtered through muffin, it appeared that they were talking about tea.

"It's all very well for you to say, mother, that you're confident you make tea very good, but I ask—no, there I see you put six spoonfuls in for five of us. Mother, if this were not hard water—(here there was a noise as of a spoon hammering upon the iron)—two

* Evidence of Mr. J. T. Cooper, Practical Chemist.

spoonsful less would make tea of a better flavour and of equal strength. Now, there are three hundred and sixty-five times and a quarter tea-times in the year—"

"And how many spoonfuls, brother, to the quarter of a tea-time?"

"Maria, you've no head for figures. I say nothing of the tea consumed at breakfast. Multiply—"

"My dear boy, you have left school; no one asks you to multiply. Hand me the muffin."

Nephelo, released, was unable to look about him, owing to the high walls of the slop-basin which surrounded him on every side. The room was filled with pleasant sunset light, but Nephelo soon saw the coming shadow of the muffin-plate, and all was dark directly afterwards.

"Take cooking, mother. M. Soyer* says you can't boil many vegetables properly in London water. Greens won't be green; French beans are tinged with yellow, and peas shrivel. It don't open the pores of meat, and make it succulent, as softer water does. M. Soyer believes that the true flavour of meat cannot be extracted with hard water. Bread does not rise so well when made with it. Horses—"

"My dear boy, M. Soyer don't cook horses."

"Horses, Dr. Playfair tells us, sheep, and pigeons will refuse hard water if they can get it soft, though from the muddiest pool. Race-horses, when carried to a place where the water is notoriously hard, have a supply of softer water carried with them to preserve their good condition. Not to speak of gripes, hard water will assuredly produce what people call a staring coat."

"Ah, no doubt, then, it was London water that created Mr. Blossomley's blue swallow-tail."

"Maria, you make nonsense out of everything. When you are Mrs. Blossomley—"

"Now pass my cup."

There was a pause and a clatter. Presently the muffin-plate was lifted, and four times in succession there were black dregs thrown into the face of Nephelo. After the perpetration of these insults he was once again condemned to darkness.

"When you are Mrs. Blossomley, Maria," so the voice went on, "when you are Mrs. Blossomley, you will appreciate what I am now going to tell you about washerwomen."

"Couldn't you postpone it, dear, until I am able to appreciate it. You promised to take us to Rachel to-night."

"Ah!" said another girlish voice, "you'll not do. We dress at seven. Until then—before the next twelve minutes you may speak. Be on, we will endure."

"As for you, Catherine, Maria teaches you, I see, to chatter. But if Mrs. B. would object to the reception of a patent mangle as a wedding present from her brother, she had better hear him now. Washerwoman's work

is not a thing to overlook, I tell you. Before a shirt is worn out, there will have been spent upon it five times its intrinsic value in the washing-tub. The washing of clothes costs more, by a great deal, than the clothes themselves. The yearly cost of washing to a household of the middle class amounts, on the average, to about a third part of the rental, or a twelfth part of the total income. Among the poor, the average expense of washing will more probably be half the rental if they wash at home, but not more than a fourth of it if they employ the Model Wash-houses. The weekly cost of washing to a poor man averages certainly not less than fourpence halfpenny. Small tradesmen, driven to economise in linen, spend perhaps not more than ninepence; in the middle and the upper classes, the cost weekly varies from a shilling to five shillings for each person, and amounts very often to a larger sum. On these grounds Mr. Bullar, Honorary Secretary to the Association for Promoting Baths and Wash-houses, estimates the washing expenditure of London at a shilling a week for each inhabitant, or, for the whole, five millions of pounds yearly. Professor Clark—"

"My dear Professor Tom, you have consumed four of your twelve minutes."

"Professor Clark judges from such estimates as can be furnished by the trade, that the consumption of soap in London is fifteen pounds to each person per annum—twice as much as is employed in other parts of England. That quantity of soap costs six-and-eightpence; water, per head, costs half as much, or three-and-fourpence; or each man's soap and water costs, throughout London, on an average, ten shillings for twelve months. If the hardness of the water be diminished, there is a diminution in the want of soap. For every grain of carbonate of lime dissolved in each gallon of any water, Mr. Donaldson declares, two ounces of soap more for a hundred gallons of that water are required. Every such grain is called a degree of hardness. Water of five degrees of hardness requires, for example, two ounces of soap; water of eight degrees of hardness then will need fifteen; and water of sixteen degrees will demand thirty-two. Sixteen degrees, Maria, is the hardness of Thames Water—of the water, mother, which has pouched upon your tea-caddy. You see, then, that when we pay for the soap we use at the rate of six-and-eightpence each, since the unusual hardness of our water causes us to use a double quantity, every man in London pays at an average rate of three-and-fourpence a year his tax for a hard water, through the cost of soap alone."

"Now you must finish in five minutes, brother Tom."

"But soap is not the only matter that concerns the washerwoman and her customers. There is labour also, and the wear and tear; there is a double amount of destruction to our linen, involved in the double time of

* Evidence before the Board of Health.

rubbing and the double soaping, which hard water compels washerwomen to employ. So that, when all things have been duly reckoned up in our account, we find that the outlay caused by the necessities for washing linen in a town supplied like London with exceedingly hard water is four times greater than it would be if soft water were employed. The cost of washing, as I told you, has been estimated at five millions a-year. So that, if these calculations be correct, more than three millions of money, nearly four millions, is the amount filched yearly from the Londoners by their hard water through the wash-tub only. To that sum, Mrs. Blossomley, being of a respectable family and very partial to clean linen, will contribute of course much more than her average proportion."

"Well, Mr. Orator, I was not listening to all you said, but what I heard I do think much exaggerated."

"I take it, sister, from the Government Report; oblige me by believing half of it, and still the case is strong. It is quite time for people to be stirring."

"So it is, I declare. Your twelve minutes are spent, and we will always be ready for the play. If you talk there of water, I will shriek."

Here there arose a clatter which Nephelo found to be about matters that, unlike the water topic, did not at all interest himself. There was a rustle and a movement; and a creaking noise approached the drawing-room, which Nephelo discovered presently to be caused by Papa's boots as he marched upstairs after his post-prandial slumberings. There was more talk uninteresting to the fairy; Nephelo, therefore, became drowsy; his drowsiness might at the same time have been aggravated by the close confinement he experienced in an unwholesome atmosphere beneath the mullin-plate. He was aroused by a great clattering; this the maid caused who was carrying him down stairs upon a tray with all the other tea-things.

From a sweet dream of nuptials with Cirrha, Nephelo was awakened to the painful consciousness that he had not yet succeeded in effecting any great good for the human race; he had but rinsed a tea-pot. With a faint impulse of hope the desponding fairy noticed that the slop-basin in which he sat was lifted from the tray, in a few minutes after the tray had been deposited upon the kitchen-dresser. Pity poor Nephelo! By a remorseless scullery-maid he was dashed rudely from the basin into a trough of stone, from which he tumbled through a hole placed there on purpose to engulf him,—tumbled through into a horrible abyss.

This abyss was a long dungeon running from back to front beneath the house, built of bricks—rotten now, and saturated with moisture. Some of the bricks had fallen in, or crumbled into nothingness; and Nephelo saw that the soil without the dungeon was quite wet. The dungeon-floor was coated

with pollutions, travelled over by a sluggish shallow stream, with which the fairy floated. The whole dungeon's atmosphere was foul and poisonous. Nephelo found now what those exhalations were which rose through every opening in the house, through vent-holes and the burrowings of rats; for rats and other vermin tenanted this noisome den. This was the pestilential gallery called by the good people of the house, their drain. A trap-door at one end confined the fairy in this place with other Water-Drops, until there should be collected a sufficient body of them to negotiate successfully for egress.

The object of this door was to prevent the ingress of much more foul matter from without; and its misfortune was, that in so doing it necessarily pent up a concentrated putrid gas within. At length Nephelo escaped; but alas! it was from a Newgate to a Bastille—from the drain into the sewer. This was a long vaulted prison running near the surface underneath the street. Shaken by the passage overhead of carriages, not a few bricks had fallen in; and Nephelo hurrying forward, wholly possessed by the one thought—could he escape?—fell presently into a trap. An oyster-shell had fixed itself upright between two bricks unevenly jointed together; much solid filth had grown around it; and in this Nephelo was caught. Here he remained for a whole month, during which time he saw many floods of water pass him, leaving himself with a vast quantity of obstinate encrusted filth unmoved. At the month's end there came some men to scrape, and sweep, and cleanse; then with a sudden flow of water, Nephelo was forced along, and presently, with a large number of emancipated foulnesses, received his discharge from prison, and was let loose upon the River Thames.

Nephelo struck against a very dirty Drop. "Keep off, will you?" the Drop exclaimed. "You are not fit to touch a person, sewer-bird."

"Why, where are you from, my sweet gentleman?"

"Oh! I? I've had a turn through some Model Drains. Tubular drains they call 'em. Look at me; isn't that clear?"

"There's nothing clear about you," replied Nephelo. "What do you mean by Model Drains?"

"I mean I've come from Upper George Street through a twelve-inch pipe four or five times faster than one travels over an old sewer-bed; travelled express, no stoppage."

"Indeed!"

"Yes. Impermeable, earthenware, tubular pipes, accurately dove-tailed. I come from an experimental district. When it's all settled, there's to be water on at high pressure everywhere, and an earthenware drain pipe under every tap, a tube of no more than the necessary size. Then these little pipes are to run down the earth; and there's not to be a great brick drain running underneath

each house into the street; the pipes run into a larger tube of earthenware that is to be laid at the backs of all the houses; these tubes run into larger ones, but none of them very monstrous; and so that there is a constant flow, like circulation of the blood; and all the pipes are to run at last into one large conduit, which is to run out of town with all the sewage matter and discharge so far down the Thames, that no return tide ever can bring it back to London. Some is to go branching off into the fields to be manure."

"Humph!" said Nephelo. "You profess to be very clever. How do you know all this?"

"Know? Bless you, I'm a regular old Thames Drop. I've been in the cisterns, in the tumblers, down the sewers, in the river, up the pipes, in the reservoirs, in the cisterns, in the teapots, down the sewers, in the river, up the pipes, in the reservoirs, in the cisterns, in the saucepans, down the sewers, in the Thames—"

"Hold! Stop there now!" said Nephelo. "Well, so you have heard a great deal in your lifetime. You've had some adventures, doubtless?"

"I believe you," said the Cockney-Drop. "The worst was when I was pumped once as fresh water into Rotherhithe. That place is below high-water mark; so are Bermondsey and St. George's, Southwark. Newington, St. Olave's, Westminster, and Lambeth, are but little better. Well, you know, drains of the old sort always leak, and there's a great deal more water poured into London than the Londoners have stowage room for, so the water in low districts can't pass off at high water, and there's a precious flood. We sopped the ground at Rotherhithe, but I thought I never should escape again."

"Will the new pipes make any difference to that?"

"Yes; so I am led to understand. They are to be laid with a regular fall, to pass the water off, which, being constant, will be never in excess. The fall will be to a point of course below the water level, and at a convenient place the contents of these drains are to be pumped up into the main sewer. Horrible deal of death caused, Sir, by the damp in those low districts. One man in thirty-seven died of cholera in Rotherhithe last year, when in Clerkenwell, at sixty-three feet above high water, there died but one in five hundred and thirty. The proportion held throughout."

"Ah, by the bye, you have heard, of course, complainings of the quality of water. Will the Londoners sink wells for themselves?"

"Wells! What a child you are! Just from the clouds, I see. Wells in a large town get horribly polluted. They propose to consolidate and improve two of the best Thames Water Companies, the Grand Junction and Vauxhall, for the supply of London, until their great scheme can be introduced; and to maintain them afterwards

as a reserve guard in case their great scheme shouldn't prove so triumphant as they think it will be."

"What is this great scheme, I should like to know?"

"Why, they talk of fetching rain-water from a tract of heath between Bagshot and Farnham. The rain there soaks through a thin crust of growing herbage, which is the only perfect filter, chemical as well as mechanical—the living rootlets extract more than we can, where impurity exists. Then, Sir, the rain runs into a large bed of siliceous sand, placed over marl; below the marl there is siliceous sand again—Ah, I perceive you are not geological."

"Go on."

"The sand, washed by the rains of ages, holds the water without soiling it more than a glass tumbler would, and the Londoners say that in this way, by making artificial channels and a big reservoir, they can collect twenty-eight thousand gallons a day of water nearly pure. They require forty thousand gallons, and propose to get the rest in the same neighbourhood from tributaries of the River Wey, not quite so pure, but only half as hard, as Thames water, and unpolluted."

"How is it to get to London?"

"Through a covered aqueduct. Covered for coolness' sake, and cleanliness. Then it is to be distributed through earthenware pipes, laid rather deep, again for coolness' sake in the first instance, but for cleanliness as well. The water is to come in at high pressure, and run in iron or lead pipes up every house, scale every wall. There is to be a tap in every room, and under every tap there is to be the entrance to a drain-pipe. Where water supply ends, drainage begins. They are to be the two halves of a single system. Furthermore, there are to be numbers of plugs opening in every street, and streets and courts are to be washed out every morning, or every other morning, as the traffic may require, with hose and jet. The Great Metropolis mustn't be dirty, or be content with rubbing a finger here and there over its dirt. It is to have its face washed every morning, just before the hours of business. The water at high pressure is to set people's invention at work upon the introduction of hydraulic apparatus for cranes, et cætera, which now cause much hand labour and are scarcely worth steam-power. Furthermore—"

"My dear friend," cried Nephelo, "you are too clever. More than half of what you say is unintelligible to me."

"But the grand point," continued the garrulous Thames drop, "is the expense. The saving of cisterns, ball-cocks, plumbers' bills, expansive sewer-works, constant repairs, hand labour, street sweeping, soap, tea, linen, fuel, steam-boilers now damaged by incrustation, boards, salaries, doctors' bills, time, parish rates—"

The catalogue was never ended, for the busy Drop was suddenly entangled among hair upon the corpse of a dead cat, which fate also the fairy narrowly escaped, to be in the next minute sucked up as Nubis had been sucked, through pipes into a reservoir. Weary with the incessant chattering of his conceited friend, whose pride he trusted that a night with puss might humble, Nephelo now lurked silent in a corner. In a dreamy state he floated with the current underground, and was half sleeping in a pipe under some London street, when a great noise of trampling overhead, mingled with cries, awakened him.

"What is the matter now?" the fairy cried.

"A fire, no doubt, to judge by the noise," said a neighbour quietly. Nephelo panted now with triumph. Cirrha was before his eyes. Now he could benefit the race of man.

"Let us get out," cried Nephelo; "let us assist in running to the rescue."

"Don't be impatient," said a drowsy Drop. "We can't get out of here till they have found the Company's turncock, and then he must go to this plug and that plug in one street, and another, before we are turned off."

"In the meantime the fire——"

"Will burn the house down. Help in five minutes would save a house. Now the luckiest man will seldom have his premises attended to in less than twenty."

Nephelo thought here was another topic for his gossip in the Thames. The plugs talked of with a constant water-supply would take the sting out of the Fire-Fiend.

Presently, among confused movements, confused sounds, and a rush of water, Nephelo burst into the light—into the vivid light of a great fire that leapt and roared as Nephelo was dashed against it! Through the red flames and the black smoke in a burst of steam, the fairy reascended hopeless to the clouds.

CHAPTER THE FOURTH.

Rascally Conduct of the Prince of Nimbus.

THE Prince of Nimbus, whose goodnature we have celebrated, was not good for nothing. Having graciously permitted all the suitors of the Princess Cirrha to go down to earth and labour for her hand, he took advantage of their absence, and, having the coast clear, importuned the daughter of King Cumulus with his own addresses. Cirrha was not disposed to listen to them, but the rogue her father was ambitious. He desired to make a good alliance, and that object was better gained by intermarriage with a prince than with a subject. "There will be an uproar," said the old man, "when those fellows down below come back. They will look black and no doubt storm a little, but we'll have our royal marriage notwithstanding." So the Prince of Nimbus married Cirrha, and Nephelo arrived at the court of King Cumulus one evening during the celebration of the bridal feast. His wrath was seen on earth in many parts of England in the shape of a

great thunderstorm on the 16th of July. The adventures of the other suitors, they being thus cheated of their object, need not be detailed. As each returns he will be made acquainted with the scandalous fraud practised by the Prince of Nimbus, and this being the state of politics in Cloud-Land at the moment when we go to press, we may fairly expect to witness five or six more thunderstorms before next winter. Each suitor, as he returns and finds how shamefully he has been cheated, will create a great disturbance; and no wonder. Conduct so rascally as that of the Prince of Nimbus is enough to fill the clouds with uproar.

A CHRISTIAN BROTHERHOOD.

THERE is an establishment in Paris, for providing instruction for artisans of all ages and others employed during the day, which is well worthy of imitation in this country. It has occasioned the establishment, in all parts of France, of a number of evening schools, at which instruction is given without charge to the pupil. We are by no means clear that in this respect a sound principle is observed; holding it to be important that those who can pay anything for the great advantages of education should pay something, however little. But into this question we do not now propose to enter.

The institution was originated in 1680, by Dr. J. Baptiste de la Lullie, Canon of Rheims, lingered on till 1804, but was revived and brought to its present condition of efficacy in 1830. It consists of a parent or training establishment in Paris (Rue Plumet, 33) from which teachers are provided for any locality, in any part of France, or even Italy, for which an evening school may be petitioned by the residents. There are connected with it at present no fewer than five thousand teachers, who call themselves "Brothers of the Christian Schools" (*Frères des Ecoles Chrétiennes*). Four thousand are employed in France, and one thousand in Italy. They are not a Church, but a Lay Community (*Religieux laïques*). A certain number remain ready at the central establishment to obey any call that may be made for their services.

Before such a requisition is made, the municipal authorities, or any number of benevolent individuals who may choose to subscribe, must have provided a house and school-room, with all proper accommodations, and must certify that a certain number of pupils are willing to enrol themselves. On application to the central establishment three qualified Christian Brothers are sent down, at salaries not exceeding six hundred francs, or twenty-four pounds per annum in the provinces, or thirty pounds a year in Paris. Fewer than three *Frères* are not allowed to superintend each school; two for the classes, and a probationer to perform the household duties; but, when the schools

outgrow the management of that number a fourth is added, to take the management of the whole, and is called a *Frère-directeur*. The classes are limited to sixty for writing, and one hundred for other branches of education. This limitation is necessary, because the monitorial system is not followed, and the whole weight of the duties falls on the masters.

The schools thus established in the various quarters of Paris are very numerous; six thousand apprentices and artisans attend them after their hours of work—young boys, youths, and adults—the numbers having declined since the revolution of 1848. "I have," says Mr. Seymour Tremenheere, in a note to his Report on the state of the mining population, "at different times visited some of those evening schools in the Faubourgs St. Antoine and St. Martin, containing from four hundred to six hundred, in separate class-rooms of sixty to a hundred each, all well lighted, warmed, and ventilated. The gentle and affectionate manner of the Frères, and their skill in teaching, were very conspicuous, and sufficiently explained their success. The instruction consists, in addition to the doctrines of Christianity, which are the basis of the whole, of reading, writing, arithmetic, a little history, drawing (linear and perspective), and vocal music. In all the classes, many adults who had been at work all day were to be seen mixed with young men and boys, patiently learning to read, or to write and cypher. In the drawing-classes, some were copying ornamental designs, or heads, for their own amusement; others, to improve themselves as cabinet-makers, or workers in bronze, or in other trades for which some cultivation of taste is requisite."

The superiority of the system of teaching adopted by the Christian Brothers has been proved by a severe test. In Paris, as in London, it is the custom, once a year, to assemble all the parochial schools; not, however, as a mere show for the purpose of uniting in ill-executed psalmody, but with the better and more useful view of testing the improvement of the scholars, and of ascertaining the degrees of diligence and proficiency attained by the masters. The parochial scholars compete for prizes, given by the corporation of the city; not only among themselves, but with the other elementary schools—those of the Christian Brothers among the best. At these competitions, it has happened, of late years, that the pupils of the latter have been the victors. In one year, they gained seventeen prizes out of twenty; in another, twenty-three out of thirty-one; and, last year, they carried off the highest forty-two prizes; the fortunate candidates of all the other schools only claiming the inferior rewards. In addition to these evening schools for adults and young men who are already gaining their livelihood, the Frères Chrétiens have set on foot Sunday evening sermons at different churches, and

also meetings for lectures on religious and moral subjects adapted to the wants of, and calculated to influence, the same class. "I recently was present at one of these meetings in the Faubourg St. Antoine" (we quote our former authority), "where a series of eloquent and forcible addresses was delivered—one, by a Professor of History, on some of the leading points of Christian morals; another, by a gentleman of literary attainments, on Death and a future state; a third, by a gentleman of independent position, on the religious condition of some of the forgers at Toulon; a fourth, by a member of the university, on the displacement of labour by machinery, and its ultimate advantage to the labourer; all of whom had come forward to aid in the task of combating irreligion, and the various forms of error pervading the minds of so many of the working classes of Paris. These were followed by hymns, and by prayers. A deep sense of religion is, indeed, the animating spirit of all the endeavours of the Frères Chrétiens for the benefit of the lower classes, and the principle which sustains them in their self-denying and arduous career."

The lovers of "great comprehensive systems,"—to whom we adverted in a former page—might, by copying the plan of the French Christian Brothers, carry out a scheme which would be of the utmost use in this country. It would also have the advantage of encouraging small beginnings, and combining them into one great and efficacious whole. We can hardly wait until the present adult generation of ignorance shall die out to be succeeded by another which we are, after all, only half educating. Why not offer inducements, and form plans, for the instruction of grown-up persons, many of whom, having come to a sense of their deficiencies, pine for culture and enlightenment, which they cannot obtain? A central establishment in London—on a general plan somewhat similar to the Government Normal Schools already in existence, but with less cumbrous and costly machinery—could be formed at a small expense; and we doubt not that many a knot of benevolent well-wishers would, in their various localities, be eager to provide all the scholastic matériel for the less favoured artisans and day-workers around them, could they look with confidence to some central establishment for the formation of teachers, in which they could place implicit confidence.

The monitorial system, in a school consisting of all ages—in which a small boy, from his intellectual superiority, might be placed over the heads of pupils, greater, older than himself—is manifestly impracticable; and a larger number of teachers than is usual in schools for children only, would be necessary.

We will borrow from Mr. Tremenheere a comparison between the intellectual acquirements and moral conduct of French workmen and those of English workmen, in the mining districts of each country. We do not assume

that the superiority of the French workmen has been occasioned solely by the evening schools of the Christian Brothers, but, after what we have already shown, we consider it reasonable to infer that, since 1830, those establishments have had a large share in the formation of their character. In a former report,* Mr. Trempenheere described the habits and manners of the French colliers and miners, especially those at the iron and coal-works in the coalfield near Valenciennes. He was compelled, by the force of unexceptionable evidence, to show how superior they were in every respect, except that of mere animal power, to the generality of the mining population in this country. At the large iron-works at Denain, employing about four thousand people, there were thirty Englishmen from Staffordshire. These men were earning about one-third more wages than the French labourers; but, they spent all they earned in eating and drinking; were frequently drunk; and in their manners were coarse, quarrelsome, disrespectful, and insubordinate. The English manager—who had held for many years responsible situations under some of the leading iron-masters in Staffordshire—stated with regret, that so different and so superior were the intelligence, and the civilised habits and conduct, of the French, that, if any thirty Frenchmen from these works were to go to work in Staffordshire, “they would be so disgusted, they would not stay; they would think they had got among a savage race.”

There have been, lately, forty Frenchmen employed at one of the large manufactories in Staffordshire, by the Messrs. Chance, at their extensive and well-known glass-works at West Bromwich, in the immediate neighbourhood of some of the great iron-works. Mr. Chance gives the Commissioner the following account of these men:—“A few years ago, we brought over forty Frenchmen to teach our men a particular process in our manufacture. They have now nearly all returned. We found them very steady, quiet, temperate men. They earned good wages, and saved while they were with us a good deal of money. We have had as much as fifteen hundred pounds at a time in our hands belonging to these men, which we transmitted to France for them. One of them, who sometimes earns as much as seven pounds a-week, has saved in our service not much short of four thousand pounds. He is with us now. He is a glass-blower. We have about fourteen hundred men in our employ (in the glass-blowing and alkali works) when trade is in a good state. I am sorry to say that the contrast between them and the Frenchmen was very marked in many respects, especially in that of forethought and economy. I do not think that, while we had in our hands the large sum mentioned above as the savings of the Frenchmen at one time,

we have had at the same time five pounds belonging to our own people. They generally spend their money as fast as they can get it.”

In Scotland, evening schools abound, and come in effectually to aid the universal system of primary instruction existing over that part of our island. A Wesleyan local preacher told Mr. Trempenheere of the Scotchmen employed on the Northumberland and Durham collieries, “when you go into some of the Scotchmen’s houses, you would be surprised to see the books they have—not many, but all choice books. Some of their favourite authors in divinity are very common among them. Many of them read such books as Adam Smith’s *Wealth of Nations*, and are fond of discussing the subjects he treats of. They also read the lives of statesmen, and books of history; also works on logic; and, sometimes, mathematics. Such men can be reasoned with about anything appertaining to their calling, and they know very well why wages cannot be at particular times higher than a certain standard. They see at once, by the price current in the market, what is the fair portion to go to the workman as wages, according to the circumstances of the pit and the general state of the trade. Such men will have nothing to do with the union. They scorn to read such penny and twopenny publications as we have been talking about. They are fonder of sitting down after their work and reading a chapter of the *Wealth of Nations*. They will also talk with great zest of many of their great men—their own countrymen, who have raised themselves by their own industry. There are, undoubtedly, some men that come out of Scotland bad men, but these are not informed men. I am speaking of all this neighbourhood, where I have lived all my life. There are a great many Scotch at all the collieries here, and most of them very respectable men, exceedingly so. You may ask me why the union is so strong in parts of Scotland—as in Lanarkshire? It is because in Lanarkshire the pitmen are one-third Irish, and many of the worst Scotch from other counties. Those who come here are among the best in their own country, I should think, from the accounts they give me. When a Scotchman comes here he earns English wages; but he does not spend them as an Englishman does. A Scotchman often, rather than lose buying a good book, will lose his dinner. The Scotchwomen begin to keep their houses cleaner after they get into England, and by degrees they come to keep them as clean as the Englishwomen; and the first generation after their fathers come are equal to the English in their wish to keep everything clean about them. They are generally very saving, and lay out the overplus of their earnings in books and furniture or lay it by. They have a great disposition to have their children well taught. Indeed,

* “Report of Inspection of French and Belgian mines, 1846—Appendix.”

I have seen several lads that have been educated in the Scotch schools, and I find them very well taught; they can reason like men.

"I don't think I ever saw Adam Smith's works in more than one or two English pitmen's houses. They are backward to attempt anything that requires steady thinking, such as that book, or any work on logic or mathematics. The Scotch often study both. This makes one of the great differences between the best working-men of the two people. The English seldom attempt even English grammar or geometry; they always tell me they are obliged to give way when they have made a trial.* They had rather read any popular work, such as the 'Christian Philosopher,' the 'Pilgrim's Progress,' or Walter Scott's novels. They love to read their country's history, and they like to talk of its renown in the ancient French wars of Edward the Third and Henry the Fifth. They are also great readers of Napoleon's and the Duke of Wellington's wars, and their soul seems to take fire when they talk of their country's victories. They are fond of biography, and especially that of men who rose from being poor men to be great characters. They are very generous in their dispositions, and will share their loaf with the poor, as all the beggars and trampers from Newcastle and all the country know. They are greatly improved in my time as to drinking habits; there is much less of it, and their money is chiefly spent in living well and making a great show in furniture and dress. The women, too, are improving, and manage their families much better than they used to do. The English pit-boys are exceedingly quick at school—much more so than the Scotch, I think. What I most want to see is better descriptions of schools—schools under masters of ability, who can teach their boys to think and reason. You will find boys who have been at such schools as most of those we have now, that can write a good hand and do some cyphering; but when you come to ask them questions that exercise the mind, they have no idea what to answer. If there were such schools for the boys, the men would soon be a different race; for what the men want is to be taught to exercise their reason fairly, which would prevent their being led away as they are now."

With a little modification, this description of the pitman applies, in its more favourable characteristics, to the English operative generally. No one can read it without being convinced that there is sound and hopeful material in the generous English character to work upon. The natural ability, the deep feeling, the quickness of perception, the susceptibility to religious and moral impressions, the sound common sense where the rudest cultivation has been attained, and the heart-

* We doubt the general applicability of this description, without questioning its correctness in this case.

felt patriotism, of the humble orders of this country, are unequalled in the world. Surely this is a rich mine to work; surely it should not be left to unskilled workers, or to chance; but should be faithfully confided to the heads and hearts of men, trained up to its improvement, as to a noble calling, and a solemn duty! In all parts of this land, the people are willing and desirous to be taught. Open schools anywhere, and they will come—even, as the Ragged Schools have proved, out of the worst dens of vice and infamy, in the worst hiding-places, in the worst towns and cities. But, unless the art of teaching is pursued upon a system, as an art, thoroughly understood, and proceeding on sound principles, the best intentions and the most sincere devotion can do next to nothing. For want of competent teachers, there are opportunities being lost at this moment, we do not hesitate to say, in the Ragged Schools of London alone, the waste of which, is of more true importance to the community, than all the theological controversies that ever deafened its ears, and distracted its wits. Meanwhile, the sands of Time are running out remorselessly, and, with every grain, immortal souls are perishing. We want teachers, competent to educate the mind, to rouse the reason, to undo the heastly transformation that has been effected—to our guilt and shame—upon humanity, and to bring God's image out of the condition of the lower animals. What we have suffered to be beaten out of shape, we must remould, with pains, and care, and skill, and cannot hope to put into its rightful form hap-hazard. And such would be the glorious office and main usefulness of a comprehensive, unsectarian—in short, Christian—Brotherhood in England.

AN EVERY-DAY HERO.

"TELL us," the children to their grandsire said,
"Some wondrous story! tell us of the wars,
Or one of those old ballads that you know
About the seven famous champions,
St. George, St. Denis, and the rest of them.
We have delight in those heroic stories,
And often tell them over to ourselves
And wish that there were heroes now-a-days."

The old man smoked his pipe; the children urged

More eagerly their wish, at first to know
Something about the great men of old times,
Deploring still that these degenerate days
Produced no heroes, and that now no poets
Made ballads that were worth the listening to.

The old man smiled and laid aside his pipe;
Then, gazing tenderly into their faces,
Said he would tell them of as great a hero
As any which the ballads chronicled—
The good old ballads which they loved so well.
"Once on a time," said he, "there was a lad,
Whose name was John; his father was a gardener.
He had great skill in flowers even when a child;
And when his father died, he carried on
The gardener's trade. One autumn night he found
A young man hiding in his garden-shed,
Haggard and foot-sore, wanting bread to eat;

A fugitive who had escaped the law,
And being now discovered, prayed for mercy,
And told his tale so very touchingly
That the young gardener promised him a refuge,
And strictest secrecy. For weeks and months
The stranger worked with him, receiving wages
As a hired labourer. Both were fine young men,
Well-grown, broad-chested, full of strength and
mettle;

In outward seeming equal to each other,
But inwardly the two were different.

"The stranger, George, had not a gardening turn,
He was book-learned, and had a gift for figures;
And could talk well, which in itself was good;
But he was double-faced, and false as Judas,
Who did betray the Saviour with a kiss.
He had, in truth, been clerk to some great merchant,
Had wronged his trusting master, and had fled,
As I have said, from the pursuit of law.
Of this, however, John knew not a word,
Knew only that he had been in sore trouble,
And, for that cause, he strove to do him good;
And when he found him useless in his trade,
He introduced him to the Squire's bailiff,
Whose daughter he had courted many a year.
This bailiff was a simple, honest man,
Who not designing evil, none suspected.
He found the stranger, clever, quick at reckoning,
Smart with his pen; a likely man of business;
And, therefore, on a luckless day for him,
Brought him before the Squire. Ere long he had
A place appointed him which gave him access
To the Squire daily; principles of honour
Were all unknown to him: all means allowable
Which served his ends. He gained a great ascen-

dance
Over the Squire, and ere four years were passed,
He was appointed bailiff.

The old bailiff

Was sent adrift, and the kind, worthy, Squife,
His thirty years' employer, turned against him!
It was a villain's act, first, to traduce,
And then supplant—it was a Judas-trick!
The gardener John, who wooed the bailiff's
daughter,

Had married her before this plotter's work
Was come to light; and they, poor, simple folk,
Invited him among their wedding-company,
And he, with his black plots hatching within him,
Came, full of smiles, and ate and drunk with them;
The double-faced villain! The old bailiff
Was turned adrift, as I have said already,
And his dismissal looked like a disgrace,
Although the Squire brought not a charge against
him,

Except that he was old, and younger men
Could better carry out his modern plans!
And modern plans, God knows, they had enough!
Old tenants were removed; and soon a notice
Came to the gardener, John, that he must quit;
Must quit the little spot he loved so well,
And where the poor, heart-broken bailiff, found
A home in his distress. It mattered not
Their likings or convenience, go they must;
The Squire was laying out his place afresh—
Or the new bailiff, rather; and John's garden
Was wanted for the fine new pleasure-grounds!

"The man of work—the man who toils to live,
Must still be up and doing; 'tis his privilege
That he has little time to wring his hands,
And hang his head because his fate is cruel.
John was a man of action, so, to London

Came he, and, ere a twelvemonth had gone round,
Had taken service as a city fireman.

It was an arduous life; a different life
To that of gardening, of rearing pinks,
Budding the dainty rose, and giving heed
To the unclosing of the tulip's leaf.
But he was one of those who fear not hardship;
And when he saw his little fortunes wrecked
By the smooth villain whom he had befriended,
He left his native place with wife and children,
Mostly because it galled his soul to meet
The man who had so much abused his goodness,
And, in the wide and busy world of London,
Where, as 'tis said, is room for every man,
He came to try his luck. He was strong-limbed,
Active and agile as a mountain goat,
Fearless of danger, hardy, brave, and full
Of pity as is every noble nature.

"He was the boldest of the London firemen.
Clothed in his iron mail like an old warrior,
He rushed on danger, his true heart his shield;
Fear he had none whene'er his duty called.
Of oft he clomb to the roofs of burning houses;
Sprang hew and there, and bore off human
creatures,
Frantic with terror, or with terror dumb,
Saving their lives at peril of his own.
Such men as these are heroes!

"One dark night,

A stormy winter's night, a fire broke out
Somewhere by Rotherhithe—a dreadful fire—
In midst of parrow streets where the tall houses
Were habited by poor and squalid wretches,
Together packed like sheep within their pens,
And who, unlike the rich, had nought to offer
For their lives' rescue. Here the fire broke out,
And raged with fury; here the fireman, John,
Mid falling roofs, on dizzy walls aloft,
Through raging flames, and black, confounding
smoke,

And noise and tumult as of hell broke loose,
Rushed on, and ever saved some sinking wretch.
Many had thus been saved by his one arm,
When some one said, that in a certain chamber,
High up amid the burning roofs, still lay
A sick man and his child, who, yesternight,
Had hither come as strangers. They were left,
By all forgotten, and must perish there.
Whilst yet they spoke, upon a roof's high ridge,
Amid the eddying smoke and growing flame,
The miserable man was seen to stand,
Stretching his arms for aid in frantic terror.

"Without a moment's pause, amid the fire,
Six stories high, sprang John, who caught the word
That still a human being had been left.
Quick as a thought o'er red-hot floors he leapt,
Through what seemed gulfs of fire, on to the roof
Where stood the frantic man. The crowds below
Looked on and scarcely breathed. They saw him
reach

The yet unperished roof-tree—saw him pause—
Saw the two men start back, as from each other.
They raised a cry to urge him on. They knew not
That here he met his former enemy—
The man who had returned him evil for good!
And who had lost his place for breach of trust
Some twelvemonths past, and now had come to
want.

"The flames approached the roof. A cry burst
forth

Again from the great crowd, and women fainted.
And what did John, think you—this city fireman?

—He looked upon the abject wretch before him,
Who fell into a swoon at sight of him,
So sensitive is even an evil conscience,
And, speaking not a word, lifted him up
And bore him safely down into the street—
Then shook him from him like a noisome thing!
"Anon the man revived, and with quick terror
Asked for his child—his little four years' son—
But he had been forgotten—still was left
Within the house to perish. Who would save
him!

Groavelling before his feet the father lay,
Of all forgetful but of his dear child,
And prayed the injured man who had saved his life
To save the boy! "Why spake ye not of him?
He was more worthy saving of the two!"
Said John, abrupt and brief—and straight was
gone.

Once more he sealed the roof. The crowd was
hushed

Into deep silence: it had but one heart,
Had but one breath, intense anxiety
For that brave man who put again his life
In such dire jeopardy. None spoke,
But many a prayer was breathed. Along the roof
Anon they saw him hurrying with the child.
The red flames met him, hemmed him round about!
Escape was not! The women sobbed and moaned
Down in the crowd below; men gazed and
trembled,

And wild suggestions ran throughout the mass
Of how he might be saved. But all were vain,
Help was there none! Amid the roaring flames
His voice was heard; he spake, they knew not
what;

They hurried to and fro; the engines drenched
The burning pile. He made another sign!
Oh, God! could they but know what was his wish!
—They knew it not! The fierce flame mastered
all—

The roof fell in—the child—the man was lost!"

The grandsire paused a moment, then went on;
"Yes, in our common life of every day
There are true heroes, true, many a one,
Than they whose deeds are blazoned forth on brass!
—Now leave me to myself; give me my pipe—
You've had your will; I've told you of a hero,
One of God's making—and he was your own
father!"

THE LIFE AND LABOURS OF LIEUTENANT WAGHORN.

THE great benefactors of our species may be divided into two grand classes—the men of thought, and the men of action; the men whose genius was chiefly in the realm of mind, and those whose power lies in tangible things. Let no one set up the idle and invidious comparison as to which of the two is the nobler, since both are equally needful to the world's progress; all great thoughts and theories, dreams and visions (let us never fear the truth, but honor it even in using terms of vulgar and shortsighted opprobrium) of men of genius and knowledge, being the germ and origin of great actions, and all great actions being the practical working out of the former, without which no good to mankind at large can be accomplished. To set thought

and action, therefore, in opposition to each other, is like setting the arms and legs of Hercules to quarrel with his head while performing his labours. Nor can the distinction, thus broadly stated, be drawn at all times with any definite precision, since the man who conceives and develops a new principle, is sometimes able to carry it out himself. This combination of powers in the same individual is very rare, and is obviously one reason why, in most cases, the originator of a new thing is neglected as a visionary, and a madman. But the energy of thought to conceive and design displayed by Lieutenant Waghorn, was more than equalled by the energy of character and action required to carry out his stupendous plans. Sometimes with the best assistance—sometimes with none—sometimes in defiance of contest, opprobrium, and opposition—the vigour of mind and body of this man caused him to undertake and to succeed in projects which are among the most prominent of those which especially characterise the genius of the present age.

We have intimated that Mr. Waghorn was both a man of thought and action, but this must be understood with certain marked limitations. Mr. Waghorn's mind was of that peculiar construction, which appears never to think earnestly except with a view to action. Even that quality, which in other men is of the most ideal kind, and commonly exerts itself in matters of little or no substantiality of fact and purpose, with him partook of the physicality of his strong nature as much as the admixture was possible,—so that he may be said to have had a practical imagination. His objects and designs were welded into all the materials of his understanding and knowledge; his ambitions and hopes were fused with the generation of the mighty steam-forces that were to drive his ships across the ocean and inland seas; the elasticity of his spirit was identified with the flying speed of Arab horses, and dromedaries carrying the "mail" across the desert; and when he projected a wonderful shortening of time and space, he at the same moment beheld the broad massive arm of England stretched across to govern and make use of her enormous Indian territories, comprising a hundred million of souls. He never thought of himself; he was too much engaged with the vastness of his designs for his country. We shall see how that country rewarded his efforts.

Thomas Waghorn was born at Chatham, in 1800. At twelve years of age he became a midshipman in Her Majesty's Navy; and before he had reached seventeen, passed in "navigation" for Lieutenant, being the youngest midshipman that had ever done so—the examination requiring a great amount of both theoretical and practical knowledge, and being always conducted with severity. This made him eligible to the rank of lieutenant, but did not include it. At the close

of the year 1817, he was paid off, and went as third mate of a Free-trader to Calcutta. He returned home, and, in 1819, obtained an appointment in the Bengal Marine (Pilot-Service) of India, where he served till 1824. At the request of the Bengal Government, he now volunteered for the Arracan War, and received the command of the Honourable East India Company's cutter, *Matchless*, together with a division of gun-boats, and repaired to the scene of action in Arracan, with the south-eastern division of that army and flotilla. He was five times in action, saw much rough work by land and by sea, and escaped with only one wound in the right thigh. He remained two years and a half in this service, and after having received the thanks of all the authorities in that province, he returned to Calcutta in 1827, with a constitution already undermined from the baneful fever of Arracan, where so many thousands had died.

Weakened as he had been, Mr. Waghorn nevertheless rallied to the great project he had secretly at heart, namely, "A steam communication between our Eastern possessions and their mother-country, England." Even before his departure from Calcutta on furlough, in 1827, ill in health, and only imperfectly recovered from the Arracan fever, still, between its attacks, his energies returned. He communicated his plan to the officials, namely, the Marine Board at Calcutta, who forthwith advanced it to the notice of the then Chief Secretary to the Bengal Government, the present Mr. Charles Lushington, M.P. for Westminster; through whom he obtained letters of credence from Lord Combermere, then acting as Vice-President in Council (Earl Amherst, Governor-General, being on a tour in Upper India), to the Honourable Court of Directors of the East India Company in London, recommending him, in consequence of his meritorious conduct in the Arracan War, "as a fit and proper person to open Steam Navigation with India, *via* the Cape of Good Hope."

On his homeward voyage, Mr. Waghorn advocated this great object publicly by every means in his power (the numerous attestations of which lie open before us) at Madras, the Mauritius, the Cape, and St. Helena. Directly he arrived in England, he set about the same thing, and advocated the project at all points, particularly in London, Liverpool, Manchester, Glasgow, Birmingham. But the Post Office, at that time, was opposed to ocean steam-navigation; and so, unfortunately, were the East India Directors,—with the single exception of Mr. Loch. Two whole years were thus passed in fruitless efforts to make great men open their eyes. At length, in October, 1829, Mr. Waghorn was summoned by Lord Ellenborough, the then Chairman of the Court of Directors, to go to India, through Egypt, with despatches for Sir John Malcolm, Governor of Bombay, &c., and more especially,

to report upon the practicability of the Red Sea Navigation for the Overland Route.

On the 28th of October, having had only four days' previous notice from the India House, Waghorn started on the top of the Eagle stage-coach from the Spread Eagle, Gracechurch Street. All his luggage weighed about twenty pounds. The East India Company's steam-vessel *Enterprise* was expected to be at Suez, in the Red Sea, from India, off or about the 8th of December. It was much desired that despatches from England should reach her at this place, which Mr. Waghorn undertook they should do. He could not speak French nor Italian, both of which would have been very advantageous; but he had some knowledge of Hindostanee, and a little Arabic.

On this "trip," as Waghorn calls it, so extraordinarily rapid was the first part of his journey, *via* to Trieste (accomplished in nine days and a half, through five kingdoms) that an enquiry was instituted by the Foreign Office respecting it; for at this time our Post Office Letters occupied fourteen days in reaching that place. Yet Waghorn had been obliged to travel upwards of one hundred and thirty miles out of his direct way, in consequence of broken bridges, falling avalanches, and the disabling of a steamer.

Instantly enquiring for the quickest means of getting on to Alexandria, he was informed that an Austrian brig had sailed only the evening before, and having had calms and light airs all night, she was still in sight near the tops of the hills. Away he dashed in a fresh posting carriage, because if he could reach Pesano, through Capo D'Istria, twenty miles down the eastern side of the Gulf of Venice, before the Austrian vessel had passed, he might embark from this port as passenger for Alexandria. On reaching Pesano, he could still distinguish the vessel, and he accordingly strove to increase the rapidity of his chase to the utmost. He got within three miles of the vessel. At this juncture a strong northerly wind sprang up, and carrying her forward on her course, she was presently lost to sight. Exhausted in body, and "racked," as he says, by disappointment after the previous excitement, he returned to Trieste.

Ascertaining that the next opportunity of getting to Alexandria would be by a Spanish ship, which was now taking in her cargo in the quarantine ground, he instantly hastened there. The captain informed him that he could not possibly sail in less than three days, and required one hundred dollars for the passage. Waghorn directly offered him one hundred and fifty dollars if he would sail in eight-and-forty hours. Whereupon the captain found that it was just possible to do so, and he kept his word.

"After a tedious passage of sixteen days," says Waghorn, to whom every hour that did not fly was no doubt tedious, "I arrived at Alexandria, but hearing that Mr. Barker, who held the com-

hineff offices of Consul General in Egypt, and agent to the Honourable East India Company, was at his country-house at Rosetta, I hired donkeys, and was on my way for it after five hours' stay at Alexandria."

One ludicrous characteristic of the Alexandrian donkeys is worth recording. Never in future can we regard the epithet of "an ass," as being properly synonymous with stupidity. The creatures ambled and trotted along very well during the first day; but on the subsequent morning, when they clearly perceived that a long journey was before them, they fell down intentionally four or five times, with all the signs of fatigue and weakness. The drivers informed him that it was a common practice of the donkeys.

Embarking on the Nile, our traveller made it his business to navigate the boat himself, in order to take soundings, and to obtain as much knowledge as would promote both the immediate and future objects of his journey.

Mr. Waghorn rested at Rosetta, to recover from his fatigue, and then set out for Cairo on a *cangé*, a sort of boat of fifteen tons' burthen, with two large latteen-sails. The *rais*, or captain, agreed to land him at Cairo in three days and four nights, or receive nothing. This he failed to do, in consequence of the boat grounding on the shoal of Shallakun. Waghorn's notions of a reason for fatigue, may be curiously gathered from a remark he makes incidentally on this occasion. "The crew," says he, "were almost fatigued: we have been continually tacking for five days and nights." Being out of all patience, he left the boat, and again mounting donkeys, proceeded with his servant to Cairo. He left his luggage behind him, merely taking his despatches.

Having obtained camels, and a requisite passport from the Pasha, Mohammed Ali, to guarantee his safe passage across the Desert of Suez; Mr. Waghorn left Cairo on the 5th of December for Suez, and at sun-set had pitched his tent on the Desert at six miles distance.

At dawn of day, he was again on his journey, and managed to travel thirty-four miles beneath the burning sun before he halted. The next day he journeyed thirty miles, and in the evening pitched his tent only four miles short of Suez. The next day, he reached the appointed place, and there rested, the Enterprise not having yet arrived.

While waiting with the greatest impatience the arrival of this steamer, Mr. Waghorn appears to have endeavoured to calm himself by jotting down a few observations on the Desert he had just crossed. These observations, slight and few as they are, must be "made much of," as they are, of all things, the rarest with him. He always saw the end before him, and nearly all his observations were confined to the means of attaining it.

"The Desert of Suez, commencing from Cairo, is a gentle ascent, about thirty-five miles on the

way; then, the same gradual descent till you arrive at the plains of Suez. The soil of the first five miles from Cairo is fine sand; then, coarse sand, inclinable to gravel. Within twelve miles of Suez" (notice—he is tired already of description, and brings you within twelve miles of the place) "you meet many sand-hills between, till you arrive at the plains before mentioned, which form a perfect level for miles in extent, leading you to the gates of Suez.

"The antelopes I observed in parties of about a dozen each, and the camel-drivers informed me that they creep under the shrubs about eighteen inches high, to catch the drops of dew, which is the only means they have of relieving their thirst. I saw partridges in coveys of from six to seven, but nowhere on the wing: they were running about the Desert, and I was informed they were not eaten even by the Arabs."

"Considering the food they pick up in the Desert, perhaps this is no wonder.

Having informed us that camels are to be had very cheaply at Suez—say a dollar each camel for fifty miles' distance—and that the water is very brackish, he suddenly adds, with characteristic brevity, "To save recapitulation in describing Cosnier, it is the same as Suez, *viz.*, camels are to be had in abundance at a trifling expense, and the water is as bad."

He remained at Suez two days, waiting with feverish anxiety the expected arrival of the Enterprise. She still did not appear—a strong N.W. wind blowing directly down the sea. Being quite unable to endure the suspense any longer, he determined to embark on the Red Sea in an open boat, intending to sail down its centre, in hopes of meeting her between Suez and Cosnier.

All the seamen of the locality vigorously remonstrated with Mr. Waghorn against this attempt, and he well knew that the nautical authorities, both of the East India House and the British Government, were of opinion that the Red Sea was not navigable. But he had important Government despatches to deliver—had pledged himself to deliver them on board the Enterprise, and considering that his course of duty, as well as his reputation as a traveller, were at stake, he persisted in his determination. Accordingly, he embarked in an open boat, and without having any personal knowledge of the navigation of this sea, without chart, without compass, or even the encouragement of a single precedent for such an enterprise—his only guide the sun by day, and the North star by night—he sailed down the centre of the Red Sea.

Of this most interesting and unprecedented voyage, the narrative of which everybody would have read with such avidity, Mr. Waghorn gives no detailed account. He disappoints you of all the circumstances. All intermediate things are abruptly cut off with these very characteristic words:—"Suffice it to say, I arrived at Juddah, 620 miles, in six and a half days, in that boat!" You

get nothing more than the sum total. He kept a sailor's log-journal; but it is only meant for sailors to read, though now and then you obtain a glimpse of the sort of work he went through. Thus:—"Sunday, 13th, strong N.W. wind, half a gale, but scudding under storm-sail. Sunset, anchored for the night. Jaffateen islands out of sight to the N. Lost two anchors during the night," &c. The rest is equally nautical and technical. In one of the many scattered papers collected since the death of Mr. Waghorn, we find a very slight passing allusion to toils, perils, and privations, which, however, he calmly says, were "inseparable from such a voyage under such circumstances,"—but not one touch of description from first to last.

A more extraordinary instance of great practical experience and knowledge, resolutely and fully carrying out a project which must of necessity have appeared little short of madness to almost everybody else, was never recorded. He was perfectly successful, so far as the navigation was concerned, and in the course he adopted, notwithstanding that his crew of six Arabs mutinied. It appears (for he tells us only the bare fact) they were only subdued on the principle known to philosophers in theory, and to high-couraged men, accustomed to command, by experience, *viz.*, that the one man who is braver, stronger, and firmer than any individual of ten or twenty men, is more than a match for the ten or twenty put together. He touched at Cossier on the 14th, not having fallen in with the *Enterprise*. There he was told by the Governor that the steamer was expected every hour. Mr. Waghorn was in no state of mind to wait very long; so, finding she did not arrive, he again put to sea in his open boat, resolved, if he did not fall in with her, to proceed the entire distance to Juddah—a distance of four hundred miles further. Of this further voyage he does not leave any record, even in his log, beyond the simple declaration that he "embarked for Juddah—ran the distance in three days and twenty-one hours and a quarter—and on the 23rd anchored his boat close to one of the East India Company's cruisers, the *Benares*."

But, now comes the most trying part of his whole undertaking—the part which a man of his vigorously constituted impulses was least able to bear as the climax of his prolonged and arduous efforts, privations, anxieties, and fatigue. Repairing on board the *Benares*, to learn the news, the captain informed him, that in consequence of being found in a defective state on her arrival at Bombay, "the *Enterprise* was not coming at all." This intelligence seems to have felled him like a blow, and he was immediately seized with a delirious fever. The captain and officers of the *Benares* felt great sympathy and interest in this sad result of so many extraordinary efforts, and detaining him on board, bestowed every attention on his malady.

"Thus baffled," writes Mr. Waghorn, "I

was six weeks before I could proceed onward to Bombay by sailing vessel." On arriving at Bombay with his despatches, the thanks of the Government in Council, &c., were voted to him, "for having, when disappointed of a steamer, proceeded with these despatches in an open boat, down the Red Sea, &c." There was evidently much more said of a complimentary kind, but Waghorn cuts all short with the *et cætera*.

He reached Bombay on the 21st of March, having thus accomplished his journey from London in four months and twenty-one days—an extraordinary rapidity at this date, 1830. Of course, the time he was detained in Cairo, Suez, Cossier, and Juddah (where he lay ill with the fever six weeks), ought to be deducted, because he would have saved all this time, fever inclusive, if he had not expected the *Enterprise* from India.

He now turned his attention to a series of fresh exhortations to large public meetings which he convened at different places—Calcutta, Madras, the Isle of France, the Cape of Good Hope, St. Helena, &c., on the subject of shortening the route from England to India, and greatly lessening the time. He described the various points of the new route he proposed, and also the new kind of steam-vessel which it was advisable to have built and fitted up, for the sole purpose of a rapid transmission of the mail. In an "Address to His Majesty's Ministers and the Honourable East India Company," which we find among his papers, there occurs the following passage—simple in expression, noble in its quiet modesty, but pregnant with enormous results to his country, all of which have already, in a great degree, been accomplished.

"Of myself I trust I may be excused when I say that the highest object of my ambition has ever been an extensive usefulness; and my line of life—my turn of mind—my disposition long ago impelled me to give all my leisure, and all my opportunities of observation, to the introduction of steam-vessels, and permanently establishing them as the means of communication between India and England, including all the colonies on the route. The vast importance of three months' earlier information to His Majesty's Government and to the Honourable Company, whether relative to a war or a peace; to abundant or to short crops; to the sickness or convalescence of a colony or district, and oftentimes even, of an individual; the advantages to the merchant, by enabling him to regulate his supplies and orders according to circumstances and demands; the anxieties of the thousands of my countrymen in India for accounts, and further accounts, of their parents, children, and friends at home; the corresponding anxieties of those relatives and friends in this country; in a word, the speediest possible transit of letters to the tens of thousands who at all times in solicitude await them, was a service to my mind," (of the greatest general importance) "and it shall not be my fault if I do not, and for ever, establish it."

By his indefatigable efforts in India, having extensively made known his plans and me-

thods for accomplishing these great objects, and bringing home with him the testimonial of thanks he had received from the Governor in Council of Bombay, he returned to England. Let his own words—homely, earnest, straightforward, full of sailor-like simplicity, impulsive, and fraught with important results—relate his reception.

"Armed with the record of the Governor's thanks, I commenced an active agitation in India for the establishment of steam to Europe. In prosecution of this design, I returned to England, expecting, of course, to be received with open arms—at the India House especially. Judge of my surprise on being told by the successor of Mr. Loch (Chairman of the court), that the India Company required no steam to the East at all!

"I told him that the feeling in India was most ardent for it; that I had convened large public meetings at Bombay, Madras, and Calcutta, and, in fact, all over the Peninsula, which I had traversed by *dawk*; that the Governor-General, Lord William Bentinck, was enthusiastic in the same cause, and had done me the honour to preface (with what prescience need not now, in 1849, be stated), that if ever the object was accomplished, it would be by the man who had navigated the Red Sea in an open boat, under the circumstances already named.

"To all this the Chairman made answer that the Governor-General and people of India had nothing to do with the India House; and if I did not go back and join *their* pilot service, to which I belonged, I should receive such a communication from that House as would be by no means agreeable to me!

"On the instant I penned my resignation, and placing it in his hands, then gave utterance to the sentiment which actuated me from that moment till the moment I realised my aspiration—that I would establish the Overland Route, in spite of the India House."

How little must the public of the present day be prepared to find such a condition of affairs, or anything in the shape of antagonism in such a quarter, now that the Overland Route has become not only a practical thing for the "mail" but for ordinary travellers and tourists, and a matter of panorama and pantomime, of dramatic effects and burlesque songs—the sublime, and the ridiculous! But how did it fare with our enterprising sailor, after penning his resignation, and handing it in with such a declaration and defiance?

"This avowal," says Lieutenant Waghorn, "most impolitic on my part as regarded my individual interests, is perhaps the key to much of the otherwise inexplicable opposition I subsequently met with from those upon whose most energetic co-operation I had every apparent reason to rely. I proceeded to Egypt, not only without official recommendation, but with a sort of official stigma on my sanity!

"The Government nautical authorities reported that the Red Sea was not navigable; and the East India Company's naval officers declared, that, if it were navigable, the North-Westerns peculiar to those waters, and the South-West monsoons of the Indian Ocean, would swallow all steamers up!

And, as if there were not enough to crush me in the eyes of foreigners and my own countrymen, documents were actually laid before Parliament, showing that coals had cost the East India Company twenty pounds per ton, at Suez, and had taken *fifteen months* to get there."

Notwithstanding all these apparently overwhelming allegations, Mr. Waghorn succeeded in convincing the Pasha of the entire practicability of his plans; and having fully gained the confidence of that potentate, he obtained permission to proceed according to his own judgment. By means of his intimate knowledge of the whole route and all its contingencies, Mr. Waghorn saw that coals might be brought readily enough to Alexandria—then up the Nile—then across the Desert on camels—for not more than five pounds per ton. He immediately hastened back to England, and was "fortunate enough" to impress his conviction on this point on a very able public servant, Mr. Melville, Secretary to the East India House; and through his instrumentality one thousand tons of coals were conveyed by the route, and by the means above-mentioned, from the pit's mouth to the hold of the steamer at Suez, for four pounds three shillings and sixpence.

"From that hour to this (June, 1819), the same plan, at the same, and even a smaller cost, has been pursued in respect of all the coals of the East India Company:—the saving in ten years being *three quarters of a million sterling*, as between the estimated, and the actual cost of coal."

Having now most deservedly obtained the friendship of the Pasha, Mr. Waghorn was enabled to establish mails to India, and to keep that service in his own hands during five years. On one occasion he actually succeeded in getting letters from Bombay to England in *forty-seven days*; and immediately afterwards both the English Government and the Honourable East India Company, at the pressing solicitations of the London, East India, and China Associations (Mr. since Sir George Larpent, Chairman) started mails of their own—taking from Mr. Waghorn the conveyance of letters, without the least compensation for the loss, from that time to this (1849); these authorities having, till then, repeatedly declared that they had no intention of having mails by this route at all.

It should not be omitted, that, during these efforts, Mr. Waghorn feeling that his position in India would be much advantaged, and therefore his means of utility, if he could receive the rank of Lieutenant in the British Navy, made repeated applications to this effect, from 1832 to 1842. But in vain. He thought that his great services might have obtained this reward for him, especially as it would add to his means of usefulness. But no. Government, like the serpent, is a wonderful "wise beast," and the ways of Ministers are inscrutable. All spoke of his merits, but none rewarded them. At length, in 1842,

Lord Haddington, being Head of the Admiralty, did grant this scarce and astonishing honour! Egypt actually beheld the man, who had brought England within forty-seven days of her sands, before any steam system was in operation between the two countries, permitted to write the letters R. N. after his natural name!

In conjunction with others, partners in the undertaking, Lieutenant Waghorn now arranged for the carriage of passengers, the building of hotels at Alexandria, Cairo, and other places, and he soon familiarised the Desert with the novel spectacle of harnessed horses, vans, and all the usual adjuncts of English travelling, instead of the precarious Arab and his primeval camel. These, with packet-boats on the Nile, and the canal (and afterwards with steamers), duly provided with English superintendants, rendered Eastern travel as easy as a journey of the same length in the hot summer of any of the most civilised countries.

Lieutenant Waghorn had now every prospect of making this hitherto undreamed-of novelty as profitable to himself in remuneration of his many arduous labours, as it was serviceable and commodious to the vast numbers of all countries, especially his own, who availed themselves of it. But unfortunately, just when his enterprise, industry, capital, and his possession of Mehemet Ali's friendship were beginning to produce their natural results, the honourable English Government and the honourable East India Company "gave the monopoly of a chartered contract to an opulent and powerful Company!" Lieutenant Waghorn had coupled with his passenger system the carriage of overland parcels, which was a source of great profit, and through it there was a constant accession to the comforts of the passengers in transit. But it would seem as if the Government and the India House regarded this man only as an instrument to work out advantages for them, in especial, and the world at large, but the moment he had a prospect of obtaining some reward for himself, it was proper to stop him. Had he not been allowed to write Lieutenant before his name, and R. N. after it? What more would he have?

"This Company," says Waghorn, "already extensive carriers by water, gleaned from my firm the secret of conducting my business, with an alleged view to supply it on a much more comprehensive scale, and to employ us in so doing; but when nothing more remained to be learned from us, we were forthwith superseded, though with a useless and utterly unproductive expenditure, on the part of our successors, of six times the money we should have required to accomplish the same end. Overwhelmed by the competition of this giant association, I was entirely deprived of all advantages of this creation of my own energy, and left with it a ruin on my hands, though to have secured me at least the Egyptian transit would not only have been but the merest justice to an individual, but would have been a

material gain to the British public, politically and otherwise. In my hand the English traffic was English, and I venture to say that English it would have continued to this day, had I not been interfered with. But my successors gave it up to the Pasha."

The absence of all circumstantial descriptions and all graphic details in the papers, both printed and in manuscript, we have previously noticed. We had at first made sure of being able to present our readers with a picturesque and exciting narrative of the Life and Adventures of Lieutenant Waghorn—for adventures, in abundance, both on the sea and the Desert, he must assuredly have had; but he does not give us a single peg to hang an action or event upon, not a single suggestion for a romantic scene. Once we thought we had at last discovered among his papers a treasure of this kind. It was a manuscript bound in a strong cover, and having a patent lock. Inside was printed, in large letters, "Private: Daily Remembrancer: Mr. Waghorn." It contains absolutely nothing of the kind that was evidently at first intended. It is crammed full of newspaper-cuttings; and the only memoranda and remembrances are two or three melancholy affairs of bills and mortgages made to pay debts incurred in the public service. So much for his daily journal of events while travelling. He was manifestly so completely a man of action, that he could not afford a minute to note it down. Had it not been for the vexatious oppositions by which he was thwarted, and the painful memorials and petitions he was subsequently compelled, as we shall find, to present in various quarters, we verily believe he would have given us no written records at all of a single thing he did, and all that would have been left, in the course of a few years after his death, would have been the "Overland Route," and the name of "Waghorn."

We must now take a cursory view of his labours. To do this in any regular order is hardly possible, partly from the space they would occupy, but yet more from the desultory and unmanageable condition of the papers and documents before us.

During many years he sailed and travelled hundreds of thousands of miles between England and India, more particularly from the year 1827 to 1835, inclusive; passing up and down the Red Sea with mails, before the East India Company had any steam system on that sea. On one very special occasion, on this side the Isthmus, in October 1839, when the news arrived at Alexandria from Bombay, of Sir John (late Lord) Kenne's success at Ghuznee, he managed to obtain the use of the Pasha of Egypt's own steamer, the *Generoso*, the very next day after Her Majesty's steamer left Alexandria; and he personally commanded this vessel, and conveyed the mail to Malta, which was immediately sent on by the Admiral there, to England. Of such acts of special usefulness on occasions of

great emergency, numerous instances might be related of him. His services in Egypt are well known to all who dwell there, or have travelled in that country. For the information of such as may not have any personal knowledge of these things, we may mention a few of the most prominent. Lieutenant Waghorn and his partners, without any aid whatever, with the single exception of the Bombay Steam Committee, built the eight halting places on the Desert, between Cairo and Suez; also the three hotels established above them, in which every comfort and even some luxuries were provided and stored for the passing traveller—among which should be mentioned iron tanks with good water, ranged in cellars beneath;—and all this in a region which was previously a waste of arid sands and scorching gravel, beset with wandering robbers and their camels. These wandering robbers he converted into faithful guides, as they are now found to be by every traveller; and even ladies with their infants are enabled to cross and recross the Desert with as much security as if they were in Europe.

He neglected no means of making us acquainted with our position and line of policy in these countries. He wrote and published pamphlets in England to show the justice and sound policy of our having friendly relations with Egypt, in opposition to the undue position of Turkey (1837, 1838); also, to make his countrymen conversant with the character of Mehemet Ali, and with the countries of Egypt, Arabia, and Syria (1840); another on the acceleration of mails between England and the East (1843); and a letter to Earl Grey on emigration to Australia (1848). At this time, in conjunction with Mr. Wheatley, he had established an agency for the Overland Route to India, China, &c., and had offices in Cornhill, which are still in active operation. The enormous subsequent increase of letters to India by the mail, may be inferred from this fact—that in his first arrangement, Lieutenant Waghorn had all letters for India sent to Messrs. Smith and Elder of Cornhill, to be stamped, and then forwarded to him in Alexandria: the earliest despatches amounted to one hundred and eighty-four letters; this number is now more than doubled by the correspondence of Smith and Elder alone, on their own business. They were the first booksellers who rightly appreciated Mr. Waghorn's efforts; and they cordially co-operated with him.

"When he left Egypt, in 1841, he had established English carriages, vans, and horses, for the passengers' conveyance across the Desert (instead of camels); indeed, he placed small steamers (from England) on the Nile and the canal of Alexandria. Every fraction of his money was spent by him in getting more and more facilities; and, had the saving of money been one of the characteristics of his nature, the Overland Route would not be as useful if it were now is—and this is acknowledged by all those with whom he claimed for himself, and most justly, the Indian of this work: he claimed it without

fear of denial; and stated upon his honour, that no money or means were ever received by him from either Her Majesty's Government or the East India Company to aid it. It grew into life altogether from his having, by his own energy and private resources, worked the 'Overland Mails' to and from India for two years, (from 1831 to 1834) in his own individual person. 'Will it be believed?' says he, 'that up to that time Mr. Waghorn was thought and called by many, a Visionary, and by some a Madman!'"

It may very easily be believed that this was thought and said, as it is a common practice with the world when anything extraordinary is performed for the first time; and though it may be hard enough for the individual to bear, we may simply set it down as the first step to the admission of his success. But it is very clear the Pasha was wise enough to recognise the value of the man who had done so much, and not only accorded him his friendship and assistance on all occasions, but sent him on one occasion as his confidential messenger to Khosru Pasha, Grand Vizier to the Sultan at Constantinople, in 1839, as well as to Lord Ponsonby, who was there as Ambassador from England at this time.

Nor did his merit pass unrecognised in his own country; first by the public generally, though, perhaps, first of all by the "Times" newspaper, the proprietors of which were subsequently munificent in their pecuniary assistance of his efforts in the Trieste experiments, as indeed were the morning papers generally. In six successive months he accomplished the gain of thirteen days *via* Trieste over the Marseilles route. Lords Palmerston and Aberdeen, as foreign ministers of England; Lords Ellenborough, Glenelg, and Ripon, and Sir John Hobhouse, as presidents of the India Board, were also fully aware of his labours in bringing about the "Overland Route" through Egypt, and thus giving stability to English interests in our Eastern empire.

And now comes the melancholy end of all these so arduous and important labours. Embarrassed in his own private circumstances from the expenditure of all his own funds, and large debts contracted besides, solely in effecting these public objects, he was compelled, after vainly endeavouring to extricate himself by establishing in London an office of agency for the Overland Route, to apply to the India House and the Government for assistance. His constitution was by this time broken up by the sort of toil he had gone through in the last twenty years, and he merely asked to have his public debts paid, and enough allowed him as a pension to enable him to close his few remaining days in rest. He was still in the prime of life; but prematurely old from his hard work.

In consequence of various memorials and petitions the India House awarded Lieutenant Waghorn a pension of 200*l.* per annum; and the Government did the same. But they would not pay the debts he had contracted in their service. If he had made a bad bargain,

he must abide by it, and suffer for it. Both pensions, therefore, were compromised to his creditors, and he remained without any adequate means of support. The following extract, with which we must conclude, is from his last memorial:—

"The immediate origin and cause of my embarrassments was a forfeited promise on the part of the Treasury and the India House, whereby only four instead of six thousand pounds, relied on by me, were paid towards the Trieste Route experiments in the winter of 1846-7, when, single-handed, and despite unparalleled and wholly unforeseen difficulties, I eclipsed, on five trials out of six, the long organised arrangements of the French authorities, specially stimulated to all possible exertion, and supplied with unlimited means by M. Guizot. On the first of these six occasions, there arose the breaking down, on the Indian Ocean, of the steamer provided for me, thereby troubling the computed expenses through the delay; and when, startled by this excessive outlay, I hesitated to entail more, the Treasury and the India House told me to proceed, to do the service well, and make out my bill afterwards. I did proceed. I did the service not only well, not only to the satisfaction of my employers, but in a manner that elicited the admiration of Europe, as all the Continental and British journals of that period, besides heaps of private testimonials, demonstrated. My rivals, to whom the impediments in my path were best known, were loudest in their acknowledgments; and the only drawback to my just pride was the incredulity manifested in some quarters, that I could have actually accomplished what (it is notorious) I did at any time, much less among the all but impassable roads of the Alps, in the depth of a winter of far more than ordinary Alpine severity. I presented my bill. *It was dishonoured.* I had made myself an invalid, had sown the seeds of a broken constitution, in the performance of that duty. The disappointment occasioned by the non-payment of the two thousand pounds, has preyed incessantly upon me since; and now, a wreck alike almost in mind and body, I am sustained alone by the hope, that the annals of the Insolvent Court will not have inscribed upon them the Pioneer of the Overland Route, because of obligations he incurred for the public, by direction of the public authorities."

The date of this memorial is June 8th, 1849. High testimonials are appended to it from Lords Palmerston, Aberdeen, Ellenborough, Harrowby, Combermere, Ripon, Sir John Hobhouse, Sir Robert Gordon, and Mr. Joseph Hume. But it did not produce any effect; the debts and the harassing remained; and the pioneer of the Overland Route died very shortly afterwards;—we can not say of a broken heart, because his constitution had been previously shattered by his labours. Yet it looks sadly like this. He might have lived some years longer. He was only forty-seven. The pension awarded him by the India House he had only possessed eighteen months; and the pension from Government had been yet more tardily bestowed, so that he only lived to receive the first quarter.

At his death both pensions died with him,

his widow being left to starve. The India House, however, have lately granted her a pension of fifty pounds; and the Government, naively stating, as if in excuse for the extravagance, that it was in consequence of the "eminent services" performed by her late husband, awarded her the sum of twenty-five pounds per annum. This twenty-five pounds having been the subject of many comments from the press, both of loud indignation and cutting ridicule, the Government made a second grant, with the statement that "in consequence of the extreme destitution of Mrs. Waghorn," a further sum was awarded of fifteen pounds more! This is the fact, and such are the terms of the grant. Why, it reads like an act of clemency towards some criminal or other offender;—"You have been very wicked, you know; but as you are in extreme destitution, here are a few pounds more."

While these above-mentioned petitions, memorials, and struggles for life and honour were going on, great numbers of our wealthy countrymen were rushing with bags of money to pour out at the feet of Mr. Hudson, M.P., in reward for his having made the largest fortune in the shortest time ever known;—and soon after the Government munificence had been bestowed on the destitute widow of Lieutenant Waghorn, the Marquis of Lansdowne and the Marquis of Londonderry, in their places in the House of Lords, eulogised the splendid "military ability" of F. M. the late Duke of Cambridge, speaking in high terms of the great deeds he would have achieved, "if he had only had an opportunity," and voting a pension of twelve thousand pounds a year to his destitute son, and three thousand pounds a year to his destitute daughter.

We have now beheld the labours, and the reward, of the pioneer of the Overland Route; who, for the establishment of this route and for manifold services subsequently rendered, received the "thanks" of three quarters of the globe, that is to say, of Europe, Asia, and Africa, "besides numberless letters of 'thanks' from mercantile communities at every point where Eastern trade is concerned!" His public debts are not paid to this day.

• CHIPS. •

THE KNOCKING-UP BUSINESS.

NEW ways are being continually invented, and new trades are, consequently, daily springing up. A correspondent brings to light a novel branch of the manufacturing industry of this country, which was revealed to him in Manchester. Late, he observes, I was passing through a bye-street in Manchester, when my attention was attracted by a card placed conspicuously in the window of a decent-looking house, on which was inscribed, in good text,

"KNOCKING UP DONE HERE AT 2D. A WEEK."

I stopped a few moments to consider what it

could mean, and chose out of a hundred conjectures the most feasible, namely:—that it referred perhaps to the “getting up” of some portion of a lady’s dress, or knocking up some article of attire or convenience in a hurry. I asked persons connected with all sorts of handicrafts and small trades, and could get no satisfaction. I therefore determined to enquire at the “Knocking up” establishment itself. Thither, accordingly, I bent my steps. On asking for the master, a pale-faced asthmatic man came forward. I politely told him the object of my visit, adding, that from so small a return as 2d. a week, he ought to get at least half profit. “Why, to tell you the truth, Sir,” rejoined the honest fellow, “as my occupation requires no outlay or stock in trade, ‘tis *all* profit.” “Admirable profession!” I ejaculated. “If it is no secret, I should like to be initiated; for several friends of mine are very anxious to commence business on the same terms.”

Not having the fear of rivalry before his eyes, he solved the mystery without any stipulations as to secrecy or premium. He said that he was employed by a number of young men and women who worked in factories, to call them up by a certain early hour in the morning; for if they happened to oversleep themselves and to arrive at the mill after work had commenced, they were liable to the infliction of a fine, and therefore, to insure being up in good time, employed him to “knock them up” at two-pence a week.

On further enquiry, he told me that he himself earned fourteen shillings per week, and his son—only ten years old—awoke factory people enough to add four shillings more to his weekly income. He added, that a friend of his did a very extensive “knocking up” business, his connexion being worth thirty shillings per week; and one woman he knew had a circuit that brought her in twenty-four shillings weekly.

There is an old saying, that one half the world does not know how the other half live. I question whether ninety-nine hundredths of your readers will have known till you permit me to inform them how our Manchester friends, in the “Knocking up” line, get a livelihood.

STATISTICS OF FACTORY SUPERVISION.

THE Rev. Mr. Baker has recently issued a pamphlet, defending the moral tone of the factory system against the charges brought against it in the Rev. H. Worsley’s Prize Essay on Juvenile Depravity. We purposely abstain from discussing the merits of the controversy, believing that the truth lies between the two extremes advocated respectively by the reverend disputants. Mr. Henry, however, gives a table of statistics, an abstract of which we cannot withhold. It shows the number of spinning and power-loom weaving concerns in the principal manufacturing districts of Lancashire and Cheshire; also, the

number of partners, so far as they are known to the public.

It appears that in Ashton-under-Lyne, Dunkinfield, and Moseley, there are fifty-three mills in the hands of ninety-five partners; Blackburn, and its immediate neighbourhood, has fifty-seven mills and eighty partners; Bolton, forty-two mills and fifty-seven partners; Barnley, twenty-five spinning manufactories and forty-six proprietors; at Heywood there are twenty-eight mills in the hands of forty-six masters. Manchester, it would appear, is not so much the seat of manufacture as of merchandise. Though it abounds in warehouses for the sale of cotton goods, there are no more than seventy-eight cotton factories, having one hundred and thirty-nine masters. Oldham has the greatest number of mills; namely, one hundred and fifty-eight, with two hundred and fifty-two proprietors; Preston, thirty-eight mills, sixty-two partners; Stalybridge, twenty cotton concerns and forty-one proprietors; Stockport, forty-seven mills and seventy-six masters; while Warrington has no more than four mills, owned by ten gentlemen. The total number of cotton manufactories in these districts is five hundred and fifty, which belong to nine hundred and four “Cotton Lords.”

Mr. Baker’s “case” is that a proper moral supervision is exercised over the tens of thousands of operatives employed in these factories; and that such supervision is not delegated from principals to subordinates. It would seem, from his showing, that of the nine hundred and four proprietors, no more than twenty-nine do not reside where their concerns are situated; and that of the entire aggregate of mills, there are only four in or near to which no proprietor resides. Lancashire and Cheshire cotton factories, therefore, are as regards absenteeism, the direct antithesis of Irish estates. The consequence is, that while the former are in a state of average, though intermittent prosperity, the latter have gone to ruin.

COMIC LEAVES FROM THE STATUTE BOOK.

THE most manifest absurdities while remaining in fashion receive the greatest respect; for it is not till Time affords a retrospect that the full force of the absurdity is revealed. When men and women went about dressed like the characters in the farce of Tom Thumb, we of the present day wonder that they excited no mirth; nor can we now believe that Betterton drew tears as *Cato* in a full-bottomed wig. A beauty who a dozen years ago excited admiration in the balloon-like costume of that day, would now, if presenting herself in full-blown leg-of-mutton sleeves, excite a smile. The more intelligent natives of Mexico are now more disposed to grin than to shudder, as they once did, at their comical idols. Everybody has heard of the monkey-god of India. In our day, those who once adored and dreaded

him, would as readily worship *Punch*, and receive his squeakings for oracles, as to bow down before the Great Monkey.

Amongst the most prominent superstitions in which our forefathers believed, as a commercial opinion and rule of legislation, was "Protection;" and we have not awakened too recently from the delusion which descended from them not to perceive its absurdities, especially on looking over their voluminous legacy, the Statute Book. Before, however, we open some of its most comical pages, let us premise that the question of Protection is not a political one. Of the precise force and meaning of the term, there is a large class of "constant readers" who have no definite idea. The word "Protection" calls up in their minds a sort of phantasmagoria composed chiefly of Corn-law leagues, tedious debates in Parliament, Custom-houses, excisemen, smugglers, preventive-men and mounted coast-guards. They know it has to do with imports, exports, drawbacks, the balance of trade, and with being searched when they step ashore from a Boulogne steamer. Floating over this indefinite construction of the term, they have a general opinion that Protection must be a good thing, for they also associate it most intimately with the guardianship of the law, which protects them from the swindler, and with the policeman, who protects them from the thief. That powerful and patriotic sentiment, "Protection to British Industry," must, they think, be nearly the same sort of thing, except that it means protection from the tricks of foreigners instead of from those of compatriots. They confess that, believing the whole matter to be a complicated branch of politics, they have had neither time nor patience to "go into it."

In supposing the question of Free Trade or Protection to be a political one, they are, as we have before hinted, in error. It has no more to do with politics than their own transactions with the grocer and the coal-merchant; for it treats of the best mode of carrying on a nation's, instead of an individual's dealings with foreign marts and foreign customers. They are also wrong in supposing that protection to life and property is of the same character as that to which British industry is subjected. The difference can be easily explained; and although doubtless the majority of our readers are quite aware of it, yet for the benefit of the above-described, who are not, we will point it out:—Connected, as everybody knows, with whatever is protected, there must be two parties—A, in whose favour it is protected; and B, against whom it is protected. Legitimate and wholesome protection preserves the property we wish to guard against our enemies; impolitic and unwholesome protection too securely preserves property to us which we are most anxious to get rid of—by sale or barter,—against our best friends, our customers.

These elementary explanations are absolutely essential for the thorough enjoyment

of the broad comedy, which here and there lightens up that grave publication, the Statutes at Large.

When the laws had protected English manufacturers and producers from foreign produce and skill; they, by a natural sequence of blundering, set about protecting the British manufacturing population one against another, and the German jest of the wig-makers, who petitioned their Crown Prince "to make it felony for any gentleman to wear his own hair," is almost realised. In the palmy days of Protection, a British book-binder could not use paste, nor a British dandy, hair-powder, because the British farmer had been so tightly protected against foreign corn, that the British public could not get enough of it to make bread to eat.

These were perhaps the most expensive absurdities into which John Bull was driven by his mania for protection, but they were by no means the most ludicrous. Among his other dainty devices for promoting the woollen manufacture, was the law which compelled all dead bodies to be buried in woollen cloth. There may not be many who can sympathise with the agony of Pope's dying coquette:—

"Odious! In woollen! 'Twould a saint provoke;
Were the last words that poor Narcissa spoke."

But every one must be astounded at the folly of bribing men to invest ingenuity and industry, to bury that which above ground was the most useful and saleable, of all possible articles. The intention was to discourage the use of cotton, which has since proved one of the greatest sources of wealth ever brought into this country.

The strangest and most practical protest of national common sense, against laws enacting protective duties, was the impossibility of compelling people to obey them. To those laws the country has been indebted for the expensive coast-guards, who cannot, after all, prevent smuggling. The disproportionate penalties threatened by protective laws, show how difficult it was to ensure obedience. In 1765, so invincible was the desire of our ladies to do justice to their neat ankles, that a law had to be passed in the reign of George the Third, (chapter forty-eight,) decreeing that "if any foreign manufactured silk stockings, &c., be imported into any part of the British dominions, they shall be forfeited, and the importers, retailers, or vendors of the same, shall be subject, for every such offence, to a fine of two hundred pounds, with costs of suit." The wise legislators did not dare to extend the penalties to the fair wearers, who found means to make it worth the while of the vendors to brave and evade the law.

The complicated and contradictory legislation into which the *ignis fatuus* of Protection led men, made our nominally protective laws not unfrequently laws prohibitive of industry.

To protect the iron-masters of Staffordshire, the inhabitants of Pennsylvania (while yet a British colony) were forbidden, under heavy penalties, to avail themselves of their rich coal and iron mines. To protect the tobacco growers of Virginia (also in its colonial epoch) the agriculturists of Great Britain were forbidden to cultivate the plant—a prohibition which is still in force—even now, that the semblance of a reason or excuse for the restriction exists.

The petty details into which these prohibitions of industry, under the pretext of protecting it, descended, can only be conceived by those who have studied the Statutes at Large. An act was passed in the fourth of George the First (the seventh chapter) for the better employing the manufacturers, and encouraging the consumption of raw silk. This act provides "that no person shall make, sell, or set upon any clothes or wearing garments whatsoever, any buttons made of serge, cloth, druggat, frieze, camlet, or any other stuff of which clothes or wearing garments are made, or any buttons made of wool only, and turned in imitations of other buttons, on pain of forfeiting forty shillings per dozen for all such buttons." And again, in the seventh year of the same George, the twenty-second chapter of that year's statutes declared that "No tailors shall set on any buttons or button-holes of serge, druggat, &c., under penalty of forty shillings for every dozen of buttons or button-holes so made or set on. . . . No person shall use or wear on any clothes, garments, or apparel whatsoever, except velvet, any buttons or button-holes made of or bound with cloth, serge, druggat, frieze, camlet, or other stuffs whereof clothes or woollen garments are usually made, on penalty of forfeiting forty shillings per dozen under a similar penalty." These acts were insisted on by the ancient and important fraternity of metal button-makers, who thought they had a prescriptive right to supply the world with brass and other buttons "with shanks." Shankless fasteners, made of cloth, serge, &c., were therefore interdicted; and every man, woman, and child, down to the time when George the Third was king, was obliged to wear metal buttons whether they liked them or not, on pain of fine or imprisonment.

The shackles and pitfalls in which men involved themselves in their chase after the illusive idea of universal protection were as numerous, and more fatal than those with which Louis the Eleventh garnished his castle at Plessis-le-Tours. It was impossible to move without stumbling into some of them. British ship-builders were allowed to ply their trade exclusively for British ship-owners; but, in return, they were compelled to buy the dear timber of Canada, instead of that of the Baltic. British ship-owners had exclusive privilege of ocean carriage, but had to pay of which was to the monopoly of British ship-number of sail and Canadian lumberers. British concerns in there exclusively to be employed in triets of Lance

English ships, but in return they were at the mercy of the press-gangs. Dubious advantages were bought at a price unquestionably dear and ruinous.

The condition of our country while possessed by the fallacy of protection, can be compared to nothing so aptly, as to a man under the influence of a nightmare. One incongruity pursues another through the brain. There is a painful half-consciousness that all is delusion, and a fear that it may be reality—there is a choking sense of oppression. The victim of the unhealthy dream, tries to shake it off and awaken, but his faculties are spell-bound. By a great effort the country has awakened to the light of day, and a sense of realities.

The way in which the rural population, great and small, were protected against one another, may be well illustrated by an extract from the third of James the First, chapter fourteen. This act was in force so lately as 1827, for it was only repealed by the seventh and eighth of George the Fourth, chapter twenty-seven. The fifth clause of this precious enactment made a man who had not forty pounds a-year a "malefactor" if he shot a hare; while a neighbour who possessed a hundred a-year, and caught him in the fact, became in one moment his judge and executioner. After reciting that if any person who had not real property producing forty pounds a-year, or who had not two hundred pounds' worth of goods and chattels, shall presume to shoot game, the clause goes on to say—"Then any person, having lands, tenements, and hereditaments, of the clear value of one hundred pounds a-year, may take from the person or possession of such malefactor or malefactors, and to his own use for ever keep, such guns, bows, cross-bows, buckstalls, engine-traps, nets, ferrets, and coney dogs," &c. This is hardly a comic leaf from the statute-book. Indignation gives place to mirth on perusing it. Some portions of the game-laws still in force could be enumerated, equally unreasonable and summary.

Most of the statutes contain a comical set of rules of English Grammar, which are calculated to make the wig of Lindley Murray stiffen in his grave with horror; they run thus:—"Words importing the singular number shall include the plural number, and words importing the plural number shall include the singular number. Words importing the masculine gender shall include females. The word 'person' shall include a corporation, whether aggregate or sole. The word 'lands' shall include messuages, lands, tenements, and hereditaments of any tenure. The word 'street' shall extend to and include any road, square, court, alley, and thoroughfare, or public passage, within the limits of the special act. The expression 'two justices' shall be understood to mean two or more justices met and acting together."

Thus ends our chapter of only a few of the mirth provokers of the Statutes at Large.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 22.]

SATURDAY, AUGUST 24, 1850.

[PRICE 2d.]

FROM THE RAVEN IN THE HAPPY FAMILY.

I SUPPOSE you thought I was dead? No such thing. Don't flatter yourselves that I haven't got my eye upon you. I am wide awake, and you give me plenty to look at.

I have begun my great work about you. I have been collecting materials from the Horse, to begin with. You are glad to hear it, ain't you? Very likely. Oh, he gives you a nice character! He makes you out a charming set of fellows.

He informs me, by the bye, that he is a distant relation of the pony that was taken up in a balloon a few weeks ago; and that the pony's account of your going to see him at Vauxhall Gardens, is an amazing thing. The pony says, that when he looked round on the assembled crowd, come to see the realisation of the wood-cut in the bill, he found it impossible to discover which was the real Mister Green—there were so many Mister Greens—and they were all so very green!

But, that's the way with you. You know it is. Don't tell me! You'd go to see anything that other people went to see. And don't flatter yourselves that I am referring to "the vulgar curiosity," as you choose to call it, when you mean some curiosity in which you don't participate yourselves. The polite curiosity in this country, is as vulgar as any curiosity in the world.

Of course you'll tell me, no it isn't, but I say yes it is. What have you got to say for yourselves about the Nepaulese Princes, I should like to know? Why, there has been more crowding, and pressing, and pushing, and jostling, and struggling, and striving, in genteel houses this last season, on account of those Nepaulese Princes, than would take place in vulgar Cremorne Gardens and Greenwich Park, at Easter time and Whitsuntide! And what for? Do you know anything about 'em? Have you any idea why they came here? Can you put your finger on their country in the map? Have you ever asked yourselves a dozen common questions about its climate, natural history, government, productions, customs, religion, manners? Not you! Here are a couple of swarthy Princes very much out of their element, walking about in wide muslin trousers, and sprinkled all over with gems

(like the clock-work figure on the old round platform in the street, grown up), and they're fashionable outlandish monsters, and it's a new excitement for you to get a stare at 'em. As to asking 'em to dinner, and seeing 'em sit at table without eating in your company (unclean animals as you are!), you fall into raptures at that. Quite delicious, isn't it? Ugh, you dunder-headed boobies!

I wonder what there is, new and strange, that you *wouldn't* lionise, as you call it. Can you suggest anything? It's not a hippopotamus, I suppose. I hear from my brother-in-law in the Zoological Gardens, that you are always pelting away into the Regent's Park, by thousands, to see the hippopotamus. Oh, you're very fond of hippopotami, ain't you? You study one attentively, when you *do* see one, don't you? You come away, so much wiser than you went, reflecting so profoundly on the wonders of creation—eh?

Bah! You follow one another like wild geese, but you are not so good to eat!

These, however, are not the observations of my friend the Horse. He takes you, in another point of view. Would you like to read his contribution to my Natural History of you? No? You shall then.

He is a Cab-horse now. He wasn't always, but he is now, and his usual stand is close to our Proprietor's usual stand. That's the way we have come into communication, we "dumb animals." Ha, ha! Dumb, too! Oh, the conceit of you men, because you can bother the community out of their five wits, by making speeches!

Well, I mentioned to this Horse that I should be glad to have his opinions and experiences of you. Here they are:

"At the request of my honourable friend the Raven, I proceed to offer a few remarks in reference to the animal called Man. I have had varied experience of this strange creature for fifteen years, and am now driven by a Man, in the hackney cabriolet, numbertwelve thousand four hundred and fifty-two.

"The sense Man entertains of his own inferiority to the nobler animals—and I am now more particularly referring to the Horse—has impressed me forcibly, in the course of my career. If a Man knows a Horse well, he is prouder of it than of any knowledge of himself,

within the range of his limited capacity. He regards it, as the sum of all human acquisition. If he is learned in a Horse, he has nothing else to learn. And the same remark applies, with some little abatement, to his acquaintance with Dogs. I have seen a good deal of Man in my time, but I think I have never met a Man who didn't feel it necessary to his reputation to pretend, on occasion, that he knew something of Horses and Dogs, though he really knew nothing. As to making us a subject of conversation, my opinion is that we are more talked about, than history, philosophy, literature, art, and science, all put together. I have encountered innumerable gentlemen in the country, who were totally incapable of interest in anything but Horses and Dogs—except Cattle. And I have always been given to understand that they were the flower of the civilised world.

"It is very doubtful, to me, whether there is, upon the whole, anything Man is so ambitious to imitate, as an ostler, a jockey, a stage coachman, a horse-dealer, or a dog-fancier. There may be some other character which I do not immediately remember, that fires him with emulation; but, if there be, I am sure it is connected with Horses, or Dogs, or both. This is an unconscious compliment, on the part of the tyrant, to the nobler animals, which I consider to be very remarkable. I have known Lords, and Baronets, and Members of Parliament, out of number, who have deserted every other calling, to become but indifferent stablemen or kennelmen, and be cheated on all hands, by the real aristocracy of those pursuits who were regularly born to the business.

"All this, I say, is a tribute to our superiority which I consider to be very remarkable. Yet, still, I can't quite understand it. Man can hardly devote himself to us, in admiration of our virtues, because he never imitates them. We Horses are as honest, though I say it, as animals can be. If, under the pressure of circumstances, we submit to act at a Circus, for instance, we always show that we are acting. We never deceive anybody. We would scorn to do it. If we are called upon to do anything in earnest, we do our best. If we are required to run a race falsely, and to lose when we could win, we are not to be relied upon, to commit a fraud; Man must come in at that point, and force us to it. And the extraordinary circumstance to me, is, that Man (whom I take to be a powerful species of Monkey) is always making us nobler animals the instruments of his meanness and cupidity. The very name of our kind has become a byword for all sorts of trickery and cheating. We are as innocent as counters at a game—and yet this creature will play falsely with us!

"Man's opinion, good or bad, is not worth much, as any rational Horse knows. But, justice is justice; and what I complain of, is, that Mankind talks of us as if We had some-

thing to do with all this. They say that such a man was 'ruined by Horses.' Ruined by Horses! They can't be open, even in that, and say he was ruined by Men; but they lay it at our stable-door! As if we ever ruined anybody, or were ever doing anything but being ruined ourselves, in our generous desire to fulfil the useful purposes of our existence!

"In the same way, we get a bad name as if we were profligate company. 'So and so got among Horses, and it was all up with him.' Why, we would have reclaimed him—we would have made him temperate, industrious, punctual, steady, sensible—what harm would he ever have got from us, I should wish to ask?

"Upon the whole, speaking of him as I have found him, I should describe Man as an unmeaning and conceited creature, very seldom to be trusted, and not likely to make advances towards the honesty of the nobler animals. I should say that his power of warping the nobler animals to bad purposes, and damaging their reputation by his companionship, is, next to the art of growing oats, hay, carrots, and clover, one of his principal attributes. He is very unintelligible in his caprices; seldom expressing with distinctness what he wants of us; and relying greatly on our better judgment to find out. He is cruel, and fond of blood—particularly at a steeple-chase—and is very ungrateful.

"And yet, so far as I can understand, he worships us too. He sets up images of us (not particularly like, but meant to be) in the streets, and calls upon his fellows to admire them, and believe in them. As well as I can make out, it is not of the least importance what images of Men are put astride upon these images of Horses, for I don't find any famous personage among them—except one, and his image seems to have been contracted for, by the gross. The jockeys who ride our statues are very queer jockeys, it appears to me, but it is something to find Man even posthumously sensible of what he owes to us. I believe that when he has done any great wrong to any very distinguished Horse, deceased, he gets up a subscription to have an awkward likeness of him made, and erects it in a public place, to be generally venerated. I can find no other reason for the statues of us that abound.

"It must be regarded as a part of the inconsistency of Man, that he erects no statues to the Donkeys—who, though far inferior animals to ourselves, have great claims upon him. I should think a Donkey opposite the Horse at Hyde Park, another in Trafalgar Square, and a group of Donkeys, in brass, outside the Guildhall of the City of London (for I believe the Common Council Chamber is inside that building) would be pleasant and appropriate memorials."

"I am not aware that I can suggest anything more, to my honorable friend the Raven,

which will not already have occurred to his fine intellect. Like myself, he is the victim of brute force, and must bear it until the present state of things is changed—as it possibly may be in the good time which I understand is coming, if I wait a little longer."

There! How do you like that? That's the Horse! You shall have another animal's sentiments, soon. I have communicated with plenty of em, and they are all down upon you. It's not I alone who have found you out. You are generally detected, I am happy to say, and shall be covered with confusion.

Talking about the horse, are you going to set up any more horses? Eh? Think a bit. Come! You haven't got horses enough yet, surely? Couldn't you put somebody else on horseback, and set him up, at the cost of a few thousands? You have already statues to most of the "benefactors of mankind," (SEE ADVERTISEMENT) in your principal cities. You walk through groves of great inventors, instructors, discoverers, assuagers of pain, preventers of disease, suggesters of purifying thoughts, doers of noble deeds. Finish the list. Come!

Whom will you hoist into the saddle? Let's have a cardinal virtue! Shall it be Faith? Hope? Charity? Aye, Charity's the virtue to ride on horseback! Let's have Charity!

How shall we represent it? Eh? What do you think? Royal? Certainly. Duke? Of course. Charity always was typified in that way, from the time of a certain widow, downwards. And there's nothing less left to put up; all the commoners who were "benefactors of mankind" having had their statues in the public places, long ago.

How shall we dress it? Rags? Low. Drapery? Common-place. Field-Marshal's uniform! The very thing! Charity in a Field-Marshal's uniform (none the worse for wear) with thirty thousand pounds a-year, public money, in its pocket, and fifteen thousand more, public money, up behind, will be a piece of plain uncompromising truth in the highways, and an honor to the country and the time.

Ha, ha, ha! You can't leave the memory of an unassuming, honest, good-natured, amiable old Duke alone, without bespattering it with your flunkeyism, can't you? That's right—and like you! Here are three brass buttons in my crop. I'll subscribe 'em all. One, to the statue of Charity; one, to a statue of Hope; one, to a statue of Faith. For Faith, we'll have the Nepaulese Ambassador on horseback—being a prince. And for Hope, we'll put the Hippopotamus on horseback, and so make a group.

Let's have a meeting about it!

A SHILLING'S WORTH OF SCIENCE.

DR. PARIS has already shown, in a charming little book treating scientifically of children's toys, how easy even "philosophy in sport can be made science in earnest." An earlier genius cut out the whole alphabet into the figures of uncouth animals, and enclosed them in a toy-box representing Noah's Ark, for the purpose of teaching children their letters. Europe, Asia, Africa, and America have been decimated; "yea, the great globe itself," has been parcelled into little wooden sections, that their readjustment into a continuous map might teach the infant conqueror of the world the relative positions of distant countries. Archimedes might have discovered the principle of the lever and the fundamental principles of gravity upon a rocking-horse. In like manner he might have ascertained the laws of hydrostatics, by observing the impetus of many natural and artificial fountains, which must occasionally have come beneath his eye. So also the principles of acoustics might even now be taught by the aid of a penny whistle, and there is no knowing how much children's nursery games may yet be rendered subservient to the advancement of science. The famous Dr. Cornelius Scriblerus had excellent notions on these subjects. He determined that his son Martinus should be the most learned and universally well-informed man of his age, and had recourse to all sorts of devices in order to inspire him even unthinkingly with knowledge. He determined that everything should contribute to the improvement of his mind,—even his very dress. He therefore, his biographer informs us, invented for him a geographical suit of clothes, which might give him some hints of that science, and also of the commerce of different nations. His son's disposition to mathematics—for he was a remarkable child—was discovered very early by his drawing parallel lines on his bread and butter, and intersecting them at equal angles, so as to form the whole superficies into squares. His father also wisely resolved that he should acquire the learned languages, especially Greek,—and remarking, curiously enough, that young Martinus Scriblerus was remarkably fond of gingerbread, the happy idea came into his parental head that his pieces of gingerbread should be stamped with the letters of the Greek alphabet; and such was the child's avidity for knowledge, that the very first day he eat down to *iota*.

When Sir Isaac Newton changed his residence and went to live in Leicester Place, his next door neighbour was a widow lady, who was much puzzled by the little she observed of the habits of the philosopher. One of the Fellows of the Royal Society, called upon her one day, when among other domestic news, she mentioned that some one had come to reside in the adjoining house, who she felt certain was a poor mad gentleman. "And

why so?" asked her friend. "Because," said she, "he diverts himself in the oddest way imaginable. Every morning when the sun shines so brightly that we are obliged to draw down the window-blinds, he takes his seat on a little stool before a tub of soap-suds, and occupies himself for hours blowing soap-bubbles through a common clay-pipe, which he intently watches floating about until they burst. He is doubtless," she added, "now at his favourite diversion, for it is a fine day; do come and look at him." The gentleman smiled; and they went upstairs, when after looking through the staircase window into the adjoining court-yard, he turned round and said, "My dear lady, the person whom you suppose to be a poor lunatic, is no other than the great Sir Isaac Newton studying the refraction of light upon thin plates, a phenomenon which is beautifully exhibited upon the surface of a common soap-bubble."

The principle, illustrated by the examples we have given, has been efficiently followed by the Directors of the Royal Polytechnic Institution in Regent Street, London. Even the simplest models and objects they exhibit in their extensive halls and galleries, expound—like Sir Isaac Newton's soap-bubble—some important principle of Science or Art.

On entering the Hall of Manufactures (as we did the other day) it was impossible not to be impressed with the conviction that we are in an utilitarian age in which the science of Mechanics advances with marvellous rapidity. Here we observed steam-engines, hand-looms, and machines in active operation, surrounding us with that peculiar din which makes the air

"Murmur, as with the sound of summer flies."

Passing into the "Gallery in the Great Hall," we did not fail to derive a momentary amusement, from observing the very different objects which seemed most to excite the attention and interest of the different sight-seers. Here, stood obviously a country farmer examining the model of a steam-plough; there, a Manchester or Birmingham manufacturer looking into a curious and complicated weaving machine; here, we noticed a group of ladies admiring specimens of elaborate carving in ivory, and personal ornaments esteemed highly fashionable at the antipodes; and there, the smiling faces of youth watching with eager eyes the little boats and steamers paddling along the Water Reservoir in the central counter. But we had scarcely looked around us, when a bell rang to announce a lecture on Voltaic Electricity by Dr. Bachhoffner; and moving with the stream of people up a short staircase, we soon found ourselves in a very commodious and well arranged theatre. There are many universities and public institutions that have not better lecture rooms than this theatre in the Royal Polytechnic Institution. The lecture was elementary and exceedingly

instructive, pointing out and showing by experiments, the identity between Magnetism and Electricity—light and heat: but notwithstanding the extreme perspicuity of the Professor, it was our fate to sit next two old ladies who seemed to be very incredulous about the whole business.

"If heat and light are the same thing," asked one, "why don't a flame come out at the spout of a boiling tea-kettle?"

"The steam," answered the other, may account for that."

"Hush!" cried somebody behind them; and the ladies were silent: but it was plain they thought Voltaic Electricity had something to do with conjuring, and that the lecturer might be a professor of Magic. The lecture over, we returned to the Gallery, where we found the Diving Bell just about to be put in operation. It is made of cast iron, and weighs three tons; the interior being provided with seats, and lighted by openings in the crown, upon which a plate of thick glass is secured. The weighty instrument suspended by a massive chain to a large swing crane, was soon in motion, when we observed our sceptical lady-friends join a party and enter, in order, we presume, to make themselves more sure of the truth of the diving-bell than they could do of the identity between light and heat. The Bell was soon swung round and lowered into a tank, which holds nearly ten thousand gallons of water; but we confess our fears for the safety of its inmates were greatly appeased, when we learned that the whole of this reservoir of water could be emptied in less than one minute. Slowly and steadily was the bell drawn up again, and we had the satisfaction of seeing the enterprising ladies and their companions alight on *terra firma*, nothing injured excepting that they were greatly flushed in the face. A man, clad in a water-tight dress and surmounted with a diving helmet, next performed a variety of sub-aqueous feats; much to the amusement and astonishment of the younger part of the audience, one of whom shouted as he came up above the surface of the water, "Oh! Ma'a! Don't he look like an Ogre!" and certainly the shining brass helmet and staring large plate-glass eyes fairly warranted such a suggestion. The principles of the Diving Bell and of the Diving Helmet, are too well known to require explanation; but the practical utility of these machines is daily proved. Even while we now write, it has been ascertained that the foundations of Blackfriars Bridge are giving way. The bed of the river, owing to the constant ebb and flow of its waters, has sunk some six or seven feet below its level, since the bridge was built, thus undermining its foundation; and this effect, it is presumed, has been greatly augmented by the removal of the old London Bridge, the works surrounding which operated as a dam in checking the force of the current. These machines, also,

are constantly used in repairing the bottom of docks, landing-piers, and in the construction of breakwater works, such as those which are at present being raised at Dover Harbour.

Among other remarkable objects in the museum of natural history we recognised, swimming upon his shingly bed under a glass case, our old friend the *Gymnotus Electricus*, or Electrical Eel. Truly, he is a marvellous fish. The power which animals of every description possess in adapting themselves to external and adventitious circumstances, is here marvellously illustrated, for, notwithstanding this creature is surrounded by the greatest possible amount of artificial circumstances, inasmuch as instead of sporting in his own pellucid and sparkling waters of the River Amazon, he is here confined in a glass prison, in water artificially heated; instead of his natural food, he is here supplied with fish not indigenous to his native country, and denied access to fresh air, with sunlight sparkling upon the surface of the waves—he is here surrounded by an impure and obscure atmosphere, with crowds of people constantly moving to and fro and gazing upon him;—yet, notwithstanding all these disadvantageous circumstances, he has continued to thrive; nay, since we saw him, ten years ago, he has increased in size and is apparently very healthy, notwithstanding that he is obviously quite blind.

This specimen of the *Gymnotus Electricus* was caught in the River Amazon, and was brought over to this country by Mr. Potter, where it arrived on the 12th of August, 1838, when he displayed it to the proprietors of the Adelaide Gallery. In the first instance, there was some difficulty in keeping him alive, for, whether from sickness, or sulkiness, he refused food of every description, and is said to have eaten nothing from the day he was taken in March, 1838, to the 19th of the following October. He was confided upon his arrival to the care of Mr. Bradley, who placed him in an apartment the temperature of which could be maintained at about seventy-five degrees Fahrenheit, and acting upon the suggestions of Baron Humboldt, he endeavoured to feed him with bits of boiled meat, worms, frogs, fish, and bread, which were all tried in succession. But the animal would not touch these. The plan adopted by the London fishmongers for fattening the common Eel was then had recourse to;—a quantity of bullock's blood was put into the water, care being taken that it should be changed daily, and this was attended with some beneficial effects, as the animal gradually improved in health. In the month of October it occurred to Mr. Bradley to tempt him with some small fish, and the first gudgeon thrown into the water he darted at and swallowed with avidity. From that period the same diet has been continued, and he is now fed three times a day, and upon each occasion is given two or three carp, or perch, or gudgeon, each weighing from two to three ounces. In

watching his movements we observed, that in swimming about he seems to delight in rubbing himself against the gravel which forms the bed above which he floats, and the water immediately becomes clouded with the mucus from which he thus relieves the surface of his body.

When this species of fish was first discovered, marvellous accounts respecting them were transmitted to the Royal Society: it was even said that in the River Surinam, in the western province of Guiana, some existed twenty feet long. The present specimen is forty inches in length; and measures eighteen inches round the body; and his physiognomy justifies the description given by one of the early narrators, who remarked, that the *Gymnotus* "resembles one of our common eels, except that its head is flat, and its mouth wide, like that of a cat-fish, without teeth." It is certainly ugly enough. On its first arrival in England, the proprietors offered Professor Faraday (to whom this country may possibly discover, within the next five hundred years, that it owes something) the privilege of experimenting upon him for scientific purposes, and the result of a great number of experiments, ingeniously devised, and executed with great nicety, clearly proved the identity between the electricity of the fish and the common electricity. The shock, the circuit, the spark, were distinctly obtained; the galvanometer was sensibly affected; chemical decompositions were obtained; an annealed steel needle became magnetic, and the direction of its polarity indicated a current from the anterior to the posterior parts of the fish, through the conductors used. The force with which the electric discharge is made is also very considerable, for this philosopher tells us we may conclude that a single medium discharge of the fish is at least equal to the electricity of a Leyden Battery of fifteen jars, containing three thousand five hundred square inches of glass, coated upon both sides, charged to its highest degree. But great as is the force of a single discharge, the *Gymnotus* will sometimes give a double, and even a triple shock, with scarcely any intervals. Nor is this all. The instinctive action it has recourse to in order to augment the force of the shock, is very remarkable.

The Professor one day dropped a live fish, five inches long, into the tub; upon which the *Gymnotus* turned round in such a manner as to form a coil enclosing the fish, the latter representing a diameter across it, and the fish was struck motionless, as if lightning had passed through the water. The *Gymnotus* then made a turn to look for his prey, which having found, he bolted it, and then went about seeking for more. A second smaller fish was then given him, which being hurt, showed little signs of life; and thus he swallowed apparently without "shocking it." We are informed by Dr. Williamson, in a paper he communicated some years ago to the Royal

Society, that a fish already struck motionless gave signs of returning animation, which the Gymnotus observing, he instantly discharged another shock, which killed it. Another curious circumstance was observed by Professor Faraday,—the Gymnotus appeared conscious of the difference of giving a shock to an animate and an inanimate body, and would not be provoked to discharge its powers upon the latter. When, tormented by a glass rod, the creature in the first instance threw out a shock, but as if he perceived his mistake, he could not be stimulated afterwards to repeat it, although the moment the Professor touched him with his hands, he discharged shock after shock. He refused, in like manner, to gratify the curiosity of the philosophers, when they touched him with metallic conductors, which he permitted them to do with indifference. It is worthy of observation, that this is the only specimen of the Gymnotus Electricus ever brought over alive into this country. The great secret of preserving his life would appear to consist in keeping the water at an even temperature—summer and winter—of seventy-five degrees of Fahrenheit. After having been subjected to a great variety of experiments, the creature is now permitted to enjoy the remainder of its days in honorable peace, and the only occasion upon which he is now disturbed, is when it is found necessary to take him out of his shallow reservoir to have it cleaned, when he discharges angrily enough shock after shock, which the attendants describe to be very smart, even though he be held in several thick and well wetted cloths, for they do not at all relish the job.

The Gymnotus Electricus is not the only animal endowed with this very singular power; there are other fish, especially the Torpedo and Silurus, which are equally remarkable, and equally well known. The peculiar structure which enters into the formation of their electrical organs, was first examined by the eminent anatomist John Hunter, in the Torpedo; and, very recently, Rudolphi has described their structure with great exactness in the Gymnotus Electricus.

Without entering into minute details, the peculiarity of the organic apparatus of the Electric Eel seems to consist in this, that it is composed of numerous *laminae* or thin tendinous partitions, between which exists an infinite number of small cells filled with a thickish gelatinous fluid. These strata and cells are supplied with nerves of unusual size, and the intensity of the electrical power is presumed to depend on the amount of nervous energy accumulated in these cells, whence it can be voluntarily discharged just as a muscle may be voluntarily contracted. Furthermore, there are, it would appear, good reasons to believe that nervous power (in whatever it may consist) and electricity are identical. The progress of Science has already shown the identity between heat, electricity, and

magnetism;—that heat may be concentrated into electricity, and this electricity reconverted into heat; that electric force may be converted into magnetic force, and Professor Faraday himself discovered how, by reacting back again, the magnetic force can be reconverted into the electric force, and *vice versa*; and should the identity between electricity and nervous power be as clearly established, one of the most important and interesting problems in Physiology will be solved.

Every new discovery in Science, and all improvements in Industrial Art, the principles of which are capable of being rendered in the least degree interesting, are in this Exhibition forthwith popularised, and become, as it were, public property. Every individual of the great public can at the very small cost of one shilling, claim his or her share in the property thus attractively collected, and a small amount of previous knowledge or natural intelligence will put the visitor in actual possession of treasures which previously "he wot not of," in so amusing a manner that they will be beguiled rather than bored into his mind.

THE GENTLEMAN BEGGAR.

★

AN ATTORNEY'S STORY.

ONE morning, about five years ago, I called by appointment on Mr. John Balance, the fashionable pawnbroker, to accompany him to Liverpool, in pursuit for a Levanting customer,—for Balance, in addition to pawning, does a little business in the sixty per cent. line. It rained in torrents when the cab stopped at the passage which leads past the pawning boxes to his private door. The cabman rang twice, and at length Balance appeared, looming through the mist and rain in the entry, illuminated by his perpetual cigar. As I eyed him rather impatiently, remembering that trains wait for no man, something like a hairy dog, or a bundle of rags, rose up at his feet, and barred his passage for a moment. Then Balance cried out with an exclamation, in answer apparently to something I could not hear, "What, man alive!—slept in the passage!—there, take that, and get some breakfast for Heaven's sake!" So saying, he jumped into the "flansom," and we bowled away at ten miles an hour, just catching the Express as the doors of the station were closing. My curiosity was full set,—for although Balance can be free with his money, it is not exactly to beggars that his generosity is usually displayed; so when comfortably ensconced in a *coupé*, I finished with—

"You are liberal with your money this morning: pray, how often do you give silver to street cadgers?—because I shall know now what walk to take when flats and sharps leave off buying law."

Balance, who would have made an excellent parson if he had not been bred to a case-hardening trade, and has still a soft bit

left in his heart that is always fighting with his hard head, did not smile at all, but looked as grim as if squeezing a lemon into his Saturday night's punch. He answered slowly, "A cadger—yes; a beggar—a miserable wretch, he is now; but let me tell you, Master David, that that miserable bundle of rags was born and bred a gentleman; the son of a nobleman, the husband of an heiress, and has sat and dined at tables where you and I, Master David, are only allowed to view the plate by favour of the butler. I have lent him thousands, and been well paid. The last thing I had from him was his court suit; and I hold now his bill for one hundred pounds that will be paid, I expect, when he dies."

"Why, what nonsense you are talking! you must be dreaming this morning. However, we are alone, I'll light a weed, in defiance of Railway law, you shall spin that yarn; for, true or untrue, it will fill up the time to Liverpool."

"As for yarn," replied Balance, "the whole story is short enough; and as for truth, that you may easily find out if you like to take the trouble. I thought the poor wretch was dead, and I own it put me out meeting him this morning, for I had a curious dream last night."

"Oh, hang your dreams! Tell us about this gentleman beggar that bleeds you of half-crowns—that melts the heart even of a pawn-broker!"

"Well, then, that beggar is the illegitimate son of the late Marquis of Hoopborough by a Spanish lady of rank. He received a first-rate education, and was brought up in his father's house. At a very early age he obtained an appointment in a public office, was presented by the marquis at court, and received into the first society, where his handsome person and agreeable manners made him a great favourite. Soon after coming of age, he married the daughter of Sir E. Bumper, who brought him a very handsome fortune, which was strictly settled on herself. They lived in splendid style, kept several carriages, a house in town, and a place in the country. For some reason or other, idleness, or to please his lady's pride he said, he resigned his appointment. His father died, and left him nothing; indeed, he seemed at that time very handsomely provided for."

"Very soon Mr. and Mrs. Molinos Fitz-Roy began to disagree. She was cold, correct—he was hot and random. He was quite dependant on her, and she made him feel it. When he began to get into debt, he came to me. At length some shocking quarrel occurred; some case of jealousy on the wife's side, not without reason, I believe; and the end of it was Mr. Fitz-Roy was turned out of doors. The house was his wife's, the furniture was his wife's, and the fortune was his wife's—he was, in fact, her pensioner. He left with a few hundred pounds ready money, and some personal jewellery, and went to an hotel. On

these and credit he lived. Being illegitimate, he had no relations; being a fool, when he spent his money he lost his friends. The world took his wife's part, when they found she had the fortune, and the only parties who interfered were her relatives, who did their best to make the quarrel incurable. To crown all, one night he was run over by a cab, was carried to a hospital, and lay there for months, and was during several weeks of the time unconscious. A message to the wife, by the hands of one of his debauched companions, sent by a humane surgeon, obtained an intimation that 'if he died, Mr. Croak, the undertaker to the family, had orders to see to the funeral,' and that Mrs. Molinos was on the point of starting for the Continent, not to return for some years. When Fitz-Roy was discharged, he came to me limping on two sticks, to pawn his court suit, and told me his story. I was really sorry for the fellow, such a handsome, thoroughbred-looking man. He was going then into the West somewhere, to try to hunt out a friend. 'What to do, Balance,' he said, 'I don't know. I can't dig, and unless somebody will make me their gamekeeper, I must starve, or beg, as my Jezebel bade me when we parted!'

"I lost sight of Molinos for a long time, and when I next came upon him it was in the Rookery of Westminster, in a low lodging-house, where I was searching with an officer for stolen goods. He was pointed out to me as the 'gentleman cadger,' because he was so free with his money when 'in luck.' He recognised me, but turned away then. I have since seen him, and relieved him more than once, although he never asks for anything. How he lives, Heaven knows. Without money, without friends, without useful education of any kind, he tramps the country, as you saw him, perhaps doing a little hop-picking or hay-making, in season, only happy when he obtains the means to get drunk. I have heard through the kitchen whispers that you know come to me, that he is entitled to some property; and I expect if he were to die his wife would pay the hundred pound bill I hold; at any rate, what I have told you I know to be true, and the bundle of rags I relieved just now is known in every thieves' lodging in England as the 'gentleman cadger.'"

This story produced an impression on me,—I am fond of speculation, and like the excitement of a legal hunt as much as some do a fox-chase. A gentleman a beggar, a wife rolling in wealth, rumours of unknown property due to the husband: it seemed as if there were pickings for me amidst this carrion of pauperism.

Before returning from Liverpool, I had purchased the gentleman beggar's acceptance from Balance. I then inserted in the "Times" the following advertisement: "*Horatio Molinos Fitz-Roy*.—If this gentleman will apply to David Discount, Esq., Solicitor, St. James's, he will hear of something to his advantage.

Any person furnishing Mr. F.'s correct address, shall receive 1*l.* reward. He was last seen," &c. Within twenty-four hours I had ample proof of the wide circulation of the "Times." My office was besieged with beggars of every degree, men and women, lame and blind, Irish, Scotch, and English, some on crutches, some in bowls, some in go-carts. They all knew him as "the gentleman," and I must do the regular fraternity of tramps the justice to say that not one would answer a question until he made certain that I meant the "gentleman" no harm.

One evening, about three weeks after the appearance of the advertisement, my clerk announced "another beggar." There came in an old man leaning upon a staff, clad in a soldier's great coat all patched and torn, with a battered hat, from under which a mass of tangled hair fell over his shoulders and half concealed his face. The beggar, in a weak, wheezy, hesitating tone, said, "You have advertised for Molinos Fitz-Roy. I hope you don't mean him any harm; he is sunk, I think, too low for enmity now; and surely no one would sport with such misery as his." These last words were uttered in a sort of piteous whisper.

I answered quickly, "Heaven forbid I should sport with misery: I mean and hope to do him good, as well as myself."

"Then, Sir, I am Molinos Fitz-Roy!"

While we were conversing candles had been brought in. I have not very tender nerves—my head would not agree with them—but I own I started and shuddered when I saw and knew that the wretched creature before me was under thirty years of age and once a gentleman. Sharp, aquiline features, reduced to literal skin and bone, were begrimed and covered with dry fair hair; the white teeth of the half-open mouth chattered with eagerness, and made more hideous the foul pallor of the rest of the countenance. As he stood leaning on a staff half bent, his long, yellow bony fingers clasped over the crutch-head of his stick, he was indeed a picture of misery, famine, squalor, and premature age, too horrible to dwell upon. I made him sit down, sent for some refreshment which he devoured like a ghoul, and set to work to untangle his story. It was difficult to keep him to the point; but with pains I learned what convinced me that he was entitled to some property, whether great or small there was no evidence. On parting, I said, "Now Mr. F., you must stay in town while I make proper enquiries. What allowance will be enough to keep you comfortably?"

He answered humbly after much pressing, "Would you think ten shillings too much?"

I don't like, if I do those things at all, to do them shabbily, so I said, "Come every Saturday and you shall have a pound." He was profuse in thanks of course, as all such men are as long as distress lasts.

I had previously learned that my ragged client's wife was in England, living in a

splendid house in Hyde Park Gardens, under her maiden name. On the following day the Earl of Owning called upon me, wanting five thousand pounds by five o'clock the same evening. It was a case of life or death with him, so I made my terms and took advantage of his pressure to execute a *coup de main*. I proposed that he should drive me home to receive the money, calling at Mrs. Molinos in Hyde Park Gardens, on our way. I knew that the coronet and liveries of his father, the Marquis, would ensure me an audience with Mrs. Molinos Fitz-Roy.

My scheme answered. I was introduced into the lady's presence. She was, and probably is, a very stately, handsome woman, with a pale complexion, high solid forehead, regular features, thin, pinched, self-satisfied mouth. My interview was very short. I plunged into the middle of the affair, but had scarcely mentioned the word husband, when she interrupted me with "I presume you have lent this profligate person money, and want me to pay you." She paused, and then said, "He shall not have a farthing." As she spoke, her white face became scarlet.

"But, Madam, the man is starving. I have strong reasons for believing he is entitled to property, and if you refuse any assistance, I must take other measures." She rang the bell, wrote something rapidly on a card; and, as the footman appeared, pushed it towards me across the table, with the air of touching a toad, saying, "There, Sir, is the address of my solicitors; apply to them if you think you have any claim. Robert, show the person out, and take care he is not admitted again."

So far I had effected nothing; and, to tell the truth, felt rather crest-fallen under the influence of that grand manner peculiar to certain great ladies and to all great actresses.

My next visit was to the attorneys Messrs. Leasem and Fashun, of Lincoln's Inn Square, and there I was at home. I had had dealings with the firm before. They are agents for half the aristocracy, who always run in crowds like sheep after the same wine-merchants, the same architects, the same horse-dealers, and the same law-agents. It may be doubted whether the quality of law and land management they get on this principle is quite equal to their wine and horses. At any rate, my friends of Lincoln's Inn, like others of the same class, are distinguished by their courteous manners, deliberate proceedings, innocence of legal technicalities, long credit and heavy charges. Leasem, the elder partner, wears powder and a huge bunch of seals, lives in Queen Square, drives a brougham, gives the dinners and does the cordial department. He is so strict in performing the latter duty, that he once addressed a poacher who had shot a Duke's keeper, as "my dear creature," although he afterwards hung him.

Fashun has chambers in St. James Street, drives a cab, wears a tip, and does the grand haha style.

My business lay with Leasem. The interviews and letters passing were numerous. However, it came at last to the following dialogue:—

"Well, my dear Mr. Discount," began Mr. Leasem, who hates me like poison. "I'm really very sorry for that poor dear Molinos—knew his father well; a great man, a perfect gentleman; but you know what women are, eh, Mr. Discount? My client won't advance a shilling, she knows it would only be wasted in low dissipation. Now don't you think (this was said very insinuatingly)—don't you think he had better be sent to the workhouse; very comfortable accommodation there, I can assure you—meat twice a week, and excellent soup; and then, Mr. D., we might consider about allowing you something for that bill."

"Mr. Leasem, can you reconcile it to your conscience to make such an arrangement. Here's a wife rolling in luxury, and a husband starving!"

"No, Mr. Discount, not starving; there is the workhouse, as I observed before; besides, allow me to suggest that these appeals to feeling are quite unprofessional—quite unprofessional."

"But, Mr. Leasem, touching this property which the poor man is entitled to."

"Why, there again, Mr. D., you must excuse me; you really must. I don't say he is, I don't say he is not. If you know he is entitled to property, I am sure you know how to proceed; the law is open to you, Mr. Discount—the law is open; and a man of your talent will know how to use it."

"Then, Mr. Leasem, you mean that I must, in order to right this starving man, file a Bill of Discovery, to extract from you the particulars of his rights. You have the Marriage Settlement, and all the information, and you decline to allow a pension, or afford any information; the man is to starve, or go to the workhouse?"

"Why, Mr. D., you are so quick and violent, it really is not professional; but you see (here a subdued smile of triumph), it has been decided that a solicitor is not bound to afford such information as you ask, to the injury of his client."

Then you mean that this poor Molinos may rot and starve, while you keep secret from him, at his wife's request, his title to an income, and that the Court of Chancery will back you in this iniquity?"

I kept repeating the word "starve," because I saw it made my respectable opponent wince. "Well, then, just listen to me. I know that in the happy state of our equity law, Chancery can't help my client; but I have another plan; I shall go hence to my office, issue a writ, and take your client's husband in execution—as soon as he is lodged in jail, I shall file his schedule in the Insolvent Court, and when he comes up for his discharge, I shall put you in the witness-box, and examine you on oath, 'touching any property of which you know

the insolvent to be possessed,' and where will be your privileged communications then?"

The respectable Leasem's face lengthened in a twinkling, his comfortable confident air vanished, he ceased twiddling his gold chain, and at length he muttered, "Suppose we pay the debt?"

"Why then, I'll arrest him the day after for another."

"But, my dear Mr. Discount, surely such conduct would not be quite respectable?"

"That's my business; my client has been wronged, I am determined to right him, and when the aristocratic firm of Leasem and Fashun takes refuge according to the custom of respectable repudiators, in the cool harbours of the Court of Chancery, why, a mere bill-discounting attorney like David Discount need not hesitate about cutting a bludgeon out of the Insolvent Court."

"Well, well, Mr. D., you are so warm—so fiery; we must deliberate, we must consult. You will give me until the day after tomorrow, and then we'll write your final determination; in the mean time, send us copy of your authority to act for Mr. Molinos Fitz-Roy."

Of course I lost no time in getting the gentleman beggar to sign a proper letter.

On the appointed day came a communication with the L. and F. seal, which I opened not without unprofessional eagerness. It was as follows:

"In re Molinos Fitz-Roy and Another.

"Sir,—In answer to your application on behalf of Mr. Molinos Fitz-Roy, we beg to inform you that under the administration of a paternal aunt who died intestate, your client is entitled to two thousand five hundred pounds eight shillings and sixpence, Three per Cents.; one thousand five hundred pounds nineteen shillings and fourpence, Three per Cents. Reduced; one thousand pounds, Long Annuities; five hundred pounds, Bank Stock; three thousand five hundred pounds, India Stock, besides other securities, making up about ten thousand pounds, which we are prepared to transfer over to Mr. Molinos Fitz-Roy's direction forthwith."

Here was a windfall! It quite took away my breath.

At dusk came my gentleman beggar, and what puzzled me was how to break the news to him. Being very much overwhelmed with business that day, I had not much time for consideration. He came in rather better dressed than when I first saw him, with only a week's beard on his chin; but, as usual, not quite sober. Six weeks had elapsed since our first interview. He was still the humble, trembling, low-voiced creature, I first knew him.

After a prelude, I said, "I find, Mr. D., you are entitled to something; pray, what do you mean to give me in addition to my bill, for obtaining it?" He answered rapidly, "Oh,

take half: if there is one hundred pounds, take half: if there is five hundred pounds, take half."

"No, no; Mr. F., I don't do business in that way, I shall be satisfied with ten per cent."

It was so settled. I then led him out into the street, impelled to tell him the news, yet dreading the effect; not daring to make the revelation in my office, for fear of a scene.

I began hesitatingly, "Mr. Fitz-Roy I am happy to say that I find you are entitled to ten thousand pounds!"

"Ten thousand pounds!" he echoed. "Ten thousand pounds!" he shrieked. "Ten thousand pounds!" he yelled; seizing my arm violently. "You are a brick,—Here, cab! cab!" Several drove up—the shout might have been heard a mile off. He jumped in the first.

"Where to?" said the driver.

"To a tailor's, you rascal!"

"Ten thousand pounds! ha, ha, ha!" he repeated hysterically, when in the cab; and every moment grasping my arm. Presently he subsided, looked me straight in the face, and muttered with agonising fervour, "What a jolly brick you are!"

The tailor, the hosier, the bootmaker, the hair-dresser, were in turn visited by this poor pagan of externals. As by degrees under their hands he emerged from the beggar to the gentleman, his spirits rose; his eyes brightened; he walked erect, but always nervously grasping my arm; fearing, apparently, to lose sight of me for a moment, lest his fortune should vanish with me. The impatient pride with which he gave his orders to the astonished tradesman for the finest and best of everything, and the amazed air of the fashionable hairdresser when he presented his matted locks and stubble chin, to be "cut and shaved," may be acted—it cannot be described.

By the time the external transformation was complete, and I sat down in a *Café* in the Haymarket opposite a haggard but handsome thoroughbred-looking man, whose air, with the exception of the wild eyes and deeply browned face, did not differ from the stereotyped men about town sitting around us, Mr. Fitz-Roy had already almost forgotten the past; he bullied the waiter, and criticised the wine, as if he had done nothing else but dine and drink and scold there all the days of his life.

Once he wished to drink my health, and would have proclaimed his whole story to the coffee-room assembly, in a raving style. When I left he almost wept in terror at the idea of losing sight of me. But, allowing for these ebullitions—the natural result of such a whirl of events—he was wonderfully calm and self-possessed.

The next day, his first care was to distribute fifty pounds among his friends the cadgers, at a house of call in Westminster, and

formally to dissolve his connection with them; those present undertaking for the "fraternity," that for the future he should never be noticed by them in public or private.

I cannot follow his career much further. Adversity had taught him nothing. He was soon again surrounded by the well-bred vampires who had forgotten him when penniless; but they amused him, and that was enough. The ten thousand pounds were rapidly melting when he invited me to a grand dinner at Richmond, which included a dozen of the most agreeable, good-looking, well-dressed dandies of London, interspersed with a display of pretty butterfly bonnets. We dined deliciously, and drank as men do of iced wines in the dog-days—looking down from Richmond Hill.

One of the pink bonnets crowned Fitz-Roy with a wreath of flowers; he looked—less the intellect—as handsome as Alcibiades. Intensely excited and flushed, he rose with a champagne glass in his hand to propose my health.

The oratorical powers of his father had not descended on him. Jerking out sentences by spasms, at length he said, "I was a beggar—I am a gentleman—thanks to this—"

Here he leaned on my shoulder heavily a moment, and then fell back. We raised him, loosened his neckcloth—

"Fainted!" said the ladies—

"Drunk!" said the gentlemen—

He was dead!

CHIPS.

FAMILY COLONISATION LOAN SOCIETY.

IF on any Saturday you should chance to find your way to Charlton Crescent, an obscure thoroughfare lying between the road from Islington to Holloway and the New River, not far from the Angel, you will see several men and women dropping into a small house, the parlour window of which contains a printed bill with the above words. The callers are chiefly of the decent mechanic class, and not a few travellers from the country,—pilgrims in search of truth about emigration. Saturday is the day on which the subscriptions of emigrants desiring to avail themselves of the Family Colonisation Loan Society are received.

And what is the Colonisation Loan Society? The question is worth asking.

It is an association—devised by Mrs. Chisholm, and to be speedily carried out extensively with the aid of several philanthropists, and the advice of two eminent actuaries—for establishing a self-supporting system of emigration, for assisting industrious people, and for promoting practically the spread of sound moral principles in a much neglected colony.

Persons desirous of emigrating form themselves into "groups," after being mutually

satisfied of their respective suitability and respectability. Each intending emigrant pays, either in one sum or by weekly instalments, as much as will amount to half the passage-money to Australia. The philanthropists of the society lend the other half to be repaid by four annual instalments,—each family becoming jointly bound for the sums lent to each member of that family, and each group being publicly pledged to assist in enforcing punctual repayments.

The details for securing repayment of the loans have been arranged by Mrs. Chisholm, and are the result of her large practical experience. Each emigrant, when he has paid back his loan, will have the privilege of nominating a relation or friend to be assisted in emigrating with the same amount of money. Thus, the original charitable fund will work in a circle of colonisation, at the mere sacrifice of annual interest. That emigrants among the humble classes are willing to remit for the purpose of assisting their friends and relations to follow them, is proved by the fact that, within the last three years, upwards of one million sterling has been remitted by the Irish emigrants from the United States alone, in small sums, to pay the passage of parents, brothers, sisters, wives, or sweet-hearts in Ireland. Australia, in proportion to its population, affords even greater opportunities of earning money wages than the United States.

Mrs. Chisholm's plan offers several advantages of an important character. It will enable many to emigrate who, though frugal and industrious, are not only unable to raise the whole passage money; but, during temporary trade-depressions, would be consuming their savings. It will keep families united, and cherish an honourable, independent spirit. It will secure a class of emigrants calculated to improve the moral tone of the colony, for, as the character of each emigrant will be investigated by his fellows, there will be no room for the deceptions practised on the wealthy charitable. The certificate of shop-mates with whom a man has worked, is more to be trusted than that of the clergyman who has only seen him in his Sunday clothes. It will afford the best kind of protection for young girls or single women desirous of joining friends in Australia, because each ship will be filled with "groups" previously acquainted and mutually sifted. Among minor advantages, the cost of passage and outfit, by the aid of co-operation and communication, will be much diminished.

The two following instances will display the practical working of Mrs. Chisholm's plan. Among the applicants to join the Society (for already the working-classes are prepared to subscribe two thousand pounds) was an artisan in the North, belonging to a trade which "strikes" periodically. When contemplating these "strikes," the leaders of the trade base their financial arrangements for support-

ing the body while out of work, upon the savings made by the more frugal of their associates. The artisan in question being a Testotaller and skilful, had three times been able to save from fifteen to twenty pounds, with the express design of emigrating; but twice his stock of cash, had been melted in the common treasury during strikes. With the assistance of a loan from the Society, he will now be able to emigrate. There can be no fear of such a man not repaying it honourably. Had he been able to emigrate a few years ago, he would have been wealthy by this time, and in a position to help all his relatives to join him.

Again, a benevolent Dowager Countess has subscribed two hundred and twenty-five pounds to this Society; a sum which has been appropriated to assisting the following parties in making up their passage-money to Australia. Let us see what this money will do:—

It will send three wives with nine children, out to join husbands in Australia.

Two aged widows who have children there.

Ditto a man and wife, who have children there.

M. and wife, with five children.

H. and wife.

P. and wife, with three children.

L. and wife, with seven children. (This man

has received the insufficient sum of fifty pounds to pay his passage from a brother in Australia.)

W. and wife, with four children (have received twenty-five pounds from Australia for same purpose).

Five young men, of whom three have relations in the Colony.

Nine friendless young women, of whom four have relations there.

Thus it will be seen this two hundred and twenty-five pound loan affords

A passage, to Adults	31
Children	28
Total	59

At the end of the first year after the arrival of these persons, there will be available for assisting other friends and relatives of this batch of fifty-nine to join them, about forty pounds; at the end of the second year, about sixty pounds; third year, about eighty pounds; fourth year, about one hundred and twenty pounds.

This system sacrifices no independence; incurs scarcely any weight of obligation. It affords the best possible kind of assistance; for it helps those who help themselves, and puts it in their power to help their fellows.

THE STRANGERS' LEAF FOR 1851.

AMONG the myriads of products of art, science, and manufactures, to be congregated under Mr. Paxton's great glass house in Hyde Park next year, it is to be hoped that our newspaper press will not be unrepresented. We do not mean model morning papers, displaying several square acres of advertisements, or news conveyed from the other hemisphere,

by steam and electricity, since the previous morning; but a modest sheet, in the humble guise of a miniature Morning Post (like the Morning Post of old), for the registry of the names and "up-puttings" of the tens of thousands of strangers who will inevitably be thrusting themselves into London, like needles in bundles of hay, where nobody can find them. Such a humble record as we propose already exists, and we will describe it:—

About three years since, a brother of the well-known German philosopher, Hegel, established a paper in Vienna, called the "*Fremden Blatt*," or "Strangers' Leaf." One of its chief objects is to give the names and residences of such strangers as arrive daily in the capital, and the dates of their departure. It is printed on a sheet about the size of a lady's pocket-handkerchief. It costs rather less than a penny; the expenses of conducting it are trifling, and its circulation is very extensive. There is not an hotel or coffee-house, not a lounge, or a pastry-cook's shop, (the chief place of resort in Vienna), which does not take it in, and indeed, among the idlers and triflers—a very large class of every population—it is the only paper read at all.

It will, perhaps, however, give a better idea of it to analyse the contents of the number for July 31st, 1850, now before us. The first column, and two-thirds of the second, is devoted to intelligence connected with Austria and the provinces; all short paragraphs, most of them of only three or four lines. Their matter concerns the movements of persons of note, and such military and civil appointments, promotions, and retirements, as are likely to be of general interest. If they touch upon any other news, the bare fact is related without comment of any kind. In the next column, Foreign news—including the exciting intelligence from Schleswig Holstein—are disposed of in a dozen paragraphs, containing, however, quite as much as it is necessary to know to be on equal terms with one's friends after dinner. Then come the domestic *on dits* of Vienna with the current topics of conversation and a spice or two of scandal; by no means to be imitated here, or anywhere else. Births, deaths, marriages, accidents and offences follow. All this is, however, merely the prelude. The rise and fall of nations, the mere change of a dynasty, or the details of an earthquake, are but accessories to the grand aim, end, and purpose of the *Fremden Blatt's* existence. As Sarah Battle relaxed from the serious business of whist, to unbend over a book, so the editor of the Strangers' Leaf dallies with the great globe itself and its most terrific catastrophes to recreate the minds of his readers previous to the study of—"arrivals and departures." Upon these the editor fastens all his care—all his genius. They are alphabetically arranged with great precision. They are his leading article. Should a mistake occur in geography, or should he be a few thousands out in his statistics, it is nothing;

but the accidental mis-spelling of a title of ten syllables; if he happen to leave out a "z" in the name of Count Sczorowszantzski; he inserts, next morning, an apologetic "erratum" of great length.

The utility of such a register in London, at the approaching Industrial Fair, as we presume, to call it, is easily seen. Let us suppose Count Smorltork arriving in England with the intention of writing an account of the Exposition. He has only a few days to make his observations; and it is not till he has driven half over London, that he discovers of Lord Tomnoddy and Sir Carnaby Jenks—from whom he expects to derive his chief information—that one is at Leamington, and the other in Scotland. Or we may imagine Dr. Dommheit, with the grave Senor Erganados, and their volatile coadjutor, M. de Tête-à-vidé, arriving in our capital on a scientific excursion. It costs them a month's income in messengers and cab-fares, and a week's waiting while their strangely spelt letters are decyphered at the Post-Office, before they learn that Mr. Crypt is off with Lord Rhomboid and the Chrononhotonthologos Society, somewhere in the provinces; Dr. Dryasdust is looking for antiquities in the Hebrides; and the oracle of their tribe, Earl Everlasting—having been left alone with the secretary and the porter at the sixth hour of the reading of his paper on the antediluvian organisms of a piece of slate—has gone down to his "place" in Dorsetshire in a huff. On the other hand, the famous Dr. Ledern Langweile, Monsieur de Papillon-Sauvage, and the great Condé Hermosa-Muchacha-Quierces, are going crazy because they cannot find each other; yet all are perhaps dwelling within a stone's throw of each other; perhaps in the same street or square—most probably Leicester Square, which they have been given to understand is the most fashionable quarter of the town. This is exactly the condition of things which may be expected without such a register of names and addresses as we suggest.

To our own men about town, also, or to "ladies of condition," as Addison's Spectator has it, the Strangers' Leaf will be invaluable. None have so little time as the idle; and how severely Indolence will have to work for the benefit of its foreign and provincial friends in 1851, it must tremble to anticipate. To relieve it a little, some such means as we suggest should be adopted, for allowing Indolence to find out easily those strangers who have been recommended to his attention and good offices. One glance at a list of "arrivals" would save it a world of trouble.

The duties of the editor of the "London Strangers' Leaf" would not be very onerous. The names and intended addresses of every individual coming from abroad it will not be difficult to obtain. To reach us Islanders every visitor must arrive by sea, and at each port we are blessed with a custom-house. The

captain of every steamer is bound for custom-house purposes to have the name of each of his passengers set down in a sort of Way-bill; and, for a slight consideration, the person who performs that office (generally the steward), would doubtless learn, and add the address to which each of the passengers is going in London. An arrangement with a custom-house clerk at each of the ports could be made for forwarding daily a copy of the list. Thus a complete record of arrivals from abroad could be obtained with little trouble. The names and lodgings of persons from the provinces would be more difficult of access; but a good understanding with hotel-keepers, and some assistance from the "Lodging-house Committee" (for of course there will be one,) of the Executive of the Great Congress, would insure the editor a tolerably complete "List of the Company" who assemble, even from the country. The "Strangers' Leaf" might be published early each afternoon so as to give the arrivals of the morning.

It is not to be doubted that at the essentially Industrial Meeting of 1851, the *Chevaliers d'Industrie* of all nations will make it their especial business to attend in large numbers. Their names, personal appearance, addresses, and achievements, it would be very useful to record in "the Strangers' Leaf." To our excellent friends the Detectives the benefit would be great and reciprocal: for they would not only derive, but contribute much useful information. As a kind of "Hue and Cry," of a more refined and fashionable kind, the proposed sheet would be invaluable.

Should any enterprising gentleman, literary or otherwise, make the experiment, it may possibly turn out not only useful but profitable. Should such a speculation be deemed too undignified, we would silence the objection with a remark from Macaulay's Essay on the life of Bacon, to the effect that Nothing is too insignificant for the attention of the wisest, which may be of advantage to the smallest in the community.

NO HOSPITAL FOR INCURABLES.

It is an extraordinary fact that among the innumerable medical charities with which this country abounds, there is not one for the help of those who of all others most require succour, and who must die, and do die in thousands, neglected, unaided. There are hospitals for the cure of every possible ailment or disease known to suffering humanity, but not one for the reception of persons past cure. There are, indeed, small charities for incurables scattered over the country—like the asylum for a few females afflicted with incurable diseases, at Leith, which was built, and solely supported by Miss Gladstone; and a few hospital wards, like the Cancer ward of Middlesex, and the ward for seven incurable patients in the Westminster; but a large hospital for incurables, does not exist.

The case of a poor servant girl which lately

came to our knowledge, is the case of thousands. She was afflicted with a disease to which the domestics of the middle classes, especially, are very liable—white swelling of the knee. On presenting herself at the hospital, it was found that an operation would be certain death; and that, in short, being incurable, she could not be admitted. She had no relations; and crawling back to a "miserable lodging, the lay helpless till her small savings were exhausted. Privations of the severest kind followed; and despite the assistance of some benevolent persons who learnt her condition when it was too late, she died a painful and wretched death.

It is indeed a marvellous oversight of benevolence that sympathy should have been so long withheld from precisely the sufferers who most need it. Hopeless pain, allied to hopeless poverty, is a condition of existence not to be thought of without a shudder. It is a slow journey through the Valley of the Shadow of Death, from which we save even the greatest criminals.

When the law deems it necessary to deprive a human being of life, the anguish, though sharp, is short. We do not doom him to the lingering agony with which innocent misfortune is allowed to make its slow descent into the grave.

SORROWS AND JOYS.

Bury thy sorrows, and they shall rise
As souls to the immortal skies,
And then look down like mothers' eyes.

But let thy joys be fresh as flowers,
That suck the honey of the showers,
And bloom alike on huts and towers.

So shall thy days be sweet and bright,—
Solemn and sweet thy starry night,—
Conscious of love each change of light.

The stars will watch the flowers asleep,
The flowers will feel the soft stars weep,
And both will mix sensations deep.

With these below, with those above,
Sits evermore the brooding Dove,
Uniting both in bonds of love.

Children of Earth are these; and those
The spirits of intense repose—
Death radiant o'er all human woes.

For both by nature are akin!—
Sorrow, the ashen fruit of sin,
And joy, the juice of life within.

O, make thy sorrows holy—wise—
So shall their buried memories rise,
Celestial, e'en in mortal skies.

O, think what then had been their doom,
If all unshriven—without a tomb—
They had been left to haunt the gloom!

O, think again what they will be
Beneath God's bright serenity,
When thou art in eternity!

For they, in their salvation, know
No vestige of their former woe,
While thro' them all the Heavens do flow.

Thus art thou wedded to the skies,
And watched by ever-loving eyes,
And warned by yearning sympathies.

THE HOME OF WOODRUFFE THE GARDENER.

IN EIGHT CHAPTERS.—CHAPTER I.

"How pleased the boy looks to be sure!" observed Woodruffe to his wife, as his son Allan caught up little Moss (as Maurice had chosen to call himself before he could speak plain) and made him jump from the top of the drawers upon the chair, and then from the chair to the ground. "He is making all that racket just because he is so pleased he does not know what to do with himself!"

"I suppose he will forgive Fleming now for carrying off Abby," said the mother. "I say, Allan, what do you think now of Abby marrying away from us?"

"Why, I think it's a very good thing. You know she never told me that we should go and live where she lived, and in such a pretty place, too, where I may have a garden of my own, and see what I can make of it—all fresh from the beginning, as father says."

"You are to try your hand at the business, I know," replied the mother, "but I never heard your father, nor any one else, say that the place was a pretty one. I did not think new railway stations had been pretty places at all."

"It sounds so to him, naturally," interposed Woodruffe. "He hears of a south aspect, and a slope to the north for shelter, and the town seen far off; and that sounds all very pleasant. And then, there is the thought of the journey, and the change, and the fun of getting the ground all into nice order, and, best of all, the seeing his sister so soon again. Youth is the time for hope and joy, you know, love."

And Woodruffe began to whistle, and stepped forward to take his turn at jumping Moss, whom he carried in one flight from the top of the drawers to the floor. Mrs. Woodruffe smiled, as she thought that youth was not the only season, with some people, for hope and joy.

Her husband, always disposed to look on the bright side, was particularly happy this evening. The lease of his market-garden ground was just expiring. He had prospered on it; and would have desired nothing better than to live by it as long as he lived at all. He desired this so much that he would not believe a word of what people had been saying for two years past, that his ground would be wanted by his landlord on the expiration of the lease, and that it would not be let again. His wife had long foreseen this; but not till the last moment would he do what she thought should have been done long before—

offer to buy the ground. At the ordinary price of land, he could accomplish the purchase of it; but when he found his landlord unwilling to sell, he bid higher and higher, till his wife was so alarmed at the rashness, that she was glad when a prospect of entire removal opened. Woodruffe was sure that he could have paid off all he offered at the end of a few years; but his partner thought it would have been a heavy burden on their minds, and a sad waste of money; and she was therefore, in her heart, obliged to the landlord for persisting in his refusal to sell.

When that was settled, Woodruffe became suddenly sure that he could pick up an acre or two of land somewhere not far off. But he was mistaken; and, if he had not been mistaken, market-gardening was no longer the profitable business it had been, when it enabled him to lay by something every year. By the opening of a railway, the townspeople, a few miles off, got themselves better supplied with vegetables from another quarter. It was this which put it into the son-in-law's head to propose the removal of the family into Staffordshire, where he held a small appointment on a railway. Land might be had at a low rent near the little country station where his business lay; and the railway brought within twenty minutes' distance a town where there must be a considerable demand for garden produce. The place was in a raw state at present; and there were so few houses, that, if there had been a choice of time, the Flemings would rather have put off the coming of the family till some of the cottages already planned had been built; but the Woodruffes must remove in September, and all parties agreed that they should not mind a little crowding for a few months. Fleming's cottage was to hold them all till some chance of more accommodation should offer.

"I'll tell you what," said Woodruffe, after standing for some time, half whistling and thinking, with that expression on his face which his wife had long learned to be afraid of "I'll write to-morrow—let's see—I may as well do it to-night;" and he looked round for paper and ink. "I'll write to Fleming, and get him to buy the land for me at once."

"Before you see it?" said his wife, looking up from her stocking mending.

"Yes. I know all about it, as much as if I were standing on it this moment; and I am sick of this work—of being turned out just when I had made the most of a place, and got attached to it. I'll make a sure thing of it this time, and not have such a pull at my heart-strings again. And the land will be cheaper now than later; and we shall go to work upon it with such heart, if it is our own. Eh?"

"Certainly, if we find, after seeing it, that we like it as well as we expect. I would just wait till then."

"As well as we expect! Why, bless my soul! don't we know all about it? It is not any land-agent or interested person, that has described it to us; but our own daughter and her husband; and do not they know what we want? The quantity at my own choice; the aspect capital; plenty of water (only too much, indeed); the soil anything but poor, and sand and marl within reach to reduce the stiffness; and manure at command, all along the railway, from half-a-dozen towns; and osier-beds at hand (within my own bounds if I like) giving all manner of convenience for fencing, and binding, and covering! Why, what would you have?"

"It sounds very pleasant, certainly."

"Then, how can you make objections? I can't think where you look, to find any objections?"

"I see none now, and I only want to be sure that we shall find none when we arrive."

"Well! I do call that unreasonable! To expect to find any place on earth altogether unobjectionable! I wonder what objection could be so great as being turned out of one after another, just as we have got them into order. Here comes our girl. Well, Becky, see how you like the news! Now, would not you like it better still if we were going to a place of our own, where we should not be under any landlord's whims! We should have to work, you know, one and all. But we would get the land properly manured, and have a cottage of our own in time; would not we? Will you undertake the pigs, Becky?"

"Yes, father; and there are many things I can do in the garden too. I am old and strong, now; and I can do much more than I have ever done here."

"Aye; if the land was our own," said Woodruffe, with a glance at his wife. She said no more, but was presently up-stairs putting Moss to bed. She knew, from long experience, how matters would go. After a restless night, Woodruffe spoke no more of buying the land without seeing it; and he twice said, in a meditative, rather than a communicative, way, that he believed it would take as much capital as he had to remove his family, and get his new land into fit condition for spring crops.

CHAPTER THE SECOND.

"You may look out now for the place. Look out for our new garden. We are just there now," said Woodruffe to the children as the whistle sounded, and the train was approaching the station. It had been a glorious autumn day from the beginning; and for the last hour, while the beauty of the light on fields and trees and water had been growing more striking, the children, tired with the novelty of all that they had seen since morning, had been dropping asleep. They roused up suddenly enough at the news that

they were reaching their new home; and thrust their heads to the windows, eagerly asking on which side they were to look for their garden. It was on the south, the left-hand side; but it might have been anywhere, for what they could see of it. Below the embankment was something like a sheet of grey water, spreading far away.

"It is going to be a foggy night," observed Woodruffe. The children looked into the air for the fog, which had always, in their experience, arrived by that way from the sea. The sky was all a clear blue, except where a pale green and a faint blush of pink streaked the west. A large planet beamed clear and bright; and the air was so transparent that the very leaves on the trees might almost be counted. Yet could nothing be seen below for the grey mist which was rising, from moment to moment.

Fleming met them as they alighted; but he could not stay till he had seen to the other passengers. His wife was there. She had been a merry hearted girl; and now, still so young, as to look as girlish as ever, she seemed even merrier than ever. She did not look strong, but she had hardly thrown off what she called "a little touch of the ague;" and she declared herself perfectly well when the wind was anywhere but in the wrong quarter. Allan wondered how the wind could go wrong. He had never heard of such a thing before. He had known the wind too high, when it did mischief among his father's fruit trees; but it had never occurred to him that it was not free to come and go whence and whither it would, without blame or objection.

"Come—come home," exclaimed Mrs. Fleming. "Never mind about your bags and boxes! My husband will take care of them. Let me show you the way home."

She let go the hands of the young brothers, and loaded them, and then herself, with parcels, that they might not think they were going to lose every thing, as she said; and then tripped on before to show the way. The way was down steps, from the highest of which two or three chimney-tops might be seen piercing the mist which hid everything else. Down, down, down went the party, by so many steps that little Moss began to totter under his bundle.

"How low this place lies!" observed the mother.

"Why, yes," replied Mrs. Fleming. "And yet I don't know. I believe it is rather that the railway runs high."

"Yes, yes; that is it," said Woodruffe. "What an embankment this is! If this is to shelter my garden to the north—"

"Yes, yes, it is. I knew you would like it," exclaimed Mrs. Fleming. "I said you would be delighted. I only wish you could see your ground at once; but it seems rather foggy, and I suppose we must wait till the morning. Here we are at home."

The travellers were rather surprised to see how very small a house this "home" was. Though called a cottage, it had not the look of one. It was of a red brick, dingy, though evidently new: and, to all appearance, it consisted of merely a room below, and one above. On walking round it, however, a sloping roof in two directions gave a hint of further accommodation.

When the whole party had entered, and Mrs. Fleming had kissed them all round, her glance at her mother asked, as plainly as any words, "Is not this a pleasant room?"

"A pretty room, indeed, my dear," was the mother's reply, "and as nicely furnished as one could wish."

She did not say anything of the rust which her quick eye perceived on the fire-irons and the door-key, or of the damp which stained the walls just above the skirting-board. There was nothing amiss with the ceiling, or the higher parts of the walls,—so it might be an accident.

"But, my dear," asked the mother, seeing how sleepy Moss looked, "Where are you going to put us all? If we crowd you out of all comfort, I shall be sorry we came so soon."

As Mrs. Fleming led the way upstairs, she reminded her family of their agreement not to mind a little crowding for a time. If her mother thought there was not room for all the newly-arrived in this chamber, they could fit out a corner for Allan in the place where she and her husband were to sleep.

"All of us in this room?" exclaimed Becky.

"Yes, Becky; why not? Here, you see, is a curtain between your bed and the large one; and your bed is large enough to let little Moss sleep with you. And here is a morsel of a bed for Allan in the other corner; and I have another curtain ready to shut it in."

"But," said Becky, who was going on to object. Her mother stopped her by a sign.

"Or," continued Mrs. Fleming, "if you like to let Allan and his bed and curtain come down to our place, you will have plenty of room here; much more than my neighbours have, for the most part. How it will be when the new cottages are built, I don't know. We think them too small for new houses; but, meantime, there are the Brookes sleeping seven in a room no bigger than this, and the Vines six in one much smaller."

"How do they manage, now?" asked the mother. "In case of illness, say: and how do they wash and dress?"

"Ah! that is the worst part of it. I don't think the boys wash themselves—what we should call washing—for weeks together: or at least only on Saturday nights. So they slip their clothes on in two minutes; and then their mother and sisters can get up. But there is the pump below for Allan, and he can wash as much as he pleases."

It was not till the next day that Mrs. Woodruffe knew—and then it was Allan who told

her—that the pump was actually in the very place where the Flemings slept,—close by their bed. The Flemings were, in truth, sleeping in an outhouse, where the floor was of brick, the swill-tub stood in one corner, the coals were heaped in another, and the light came in from a square hole high up, which had never till now been glazed. Plenty of air rushed in under the door, and yet some more between the tiles,—there being no plaster beneath them. As soon as Mrs. Woodruffe had been informed of this, and had stepped in, while her daughter's back was turned, to make her own observations, she went out by herself for a walk,—so long a walk, that it was several hours before she reappeared, heated and somewhat depressed. She had roamed the country round, in search of lodgings; and finding none,—finding no occupier who really could possibly spare a room on any terms,—she had returned convinced that, serious as the expense would be, she and her family ought to settle themselves in the nearest town,—her husband going to his business daily by the third-class train, till a dwelling could be provided for them on the spot.

When she returned, the children were on the watch for her; and little Moss had strong hopes that she would not know him. He had a great cap of rushes on his head, with a heavy bulrush for a feather; he was stuck all over with water-flags and bulrushes, and carried a long osier wand, wherewith to flog all those who did not admire him enough in his new style of dress. The children were clamorous for their mother to come down, and see the nice places where they got these new play-things; and she would have gone, but that their father came up, and decreed it otherwise. She was heated and tired, he said; and he would not have her go till she was easy and comfortable enough to see things in the best light.

Her impression was that her husband was, more or less (and she did not know why), disappointed; but he did not say so. He would not hear of going off to the town, being sure that some place would turn up soon,—some place where they might put their heads at night; and the Flemings should be no losers by having their company by day. Their boarding all together, if the sleeping could but be managed, would be a help to the young couple,—a help which it was pleasant to him, as a father, to be able to give them. He said nothing about the land that was not in praise of it. Its quality was excellent; or would be when it had good treatment. It would take some time and trouble to get it into order,—so much that it would never do to live at a distance from it. Besides, no trains that would suit him ran at the proper hours; so there was an end of it. They must all rough it a little for a time, and expect their reward afterwards.

There was nothing that Woodruffe was so hard to please in as the time when he should

take his wife to see the ground. It was close at hand; yet he hindered her going in the morning, and again after their early dinner. He was anxious that she should not be prejudiced, or take a dislike at first; and in the morning, the fog was so thick that everything looked dank and dreary; and in the middle of the day, when a warm autumn sun had dissolved the mists, there certainly was a most disagreeable smell hanging about. It was not gone at sunset; but by that time Mrs. Woodruffe was impatient, and she appeared—Allan showing her the way—just when her husband was scraping his feet upon his spade, after a hard day of digging.

"There, now!" said he, good-humouredly, striking his spade into the ground, "Fleming said you would be down before we were ready for you; and here you are!—Yes, ready for you. There are some planks coming, to keep your feet out of the wet among all this clay."

"And yours too, I hope," said the wife. "I don't mind such wet, after rain, as you have been accustomed to; but to stand in a puddle like this is a very different thing."

"Yes—so 'tis. But we'll have the planks; and they will serve for running the wheelbarrow too. It is too much for Allan, or any boy, to run the barrow in such a soil as this. We'll have the planks first; and then we'll drain, and drain, and get rare spring crops."

"What have they given you this artificial pond for," asked the wife, "if you must drain so much?"

"That is no pond. All the way along here, on both sides the railway, there is the mischief of these pits. They dig out the clay for bricks, and then leave the places—pits like this, some of them six feet deep. The railways have done a deal of good for the poor man, and will do a great deal more yet; but, at present this one has left those pits."

"I hope Moss will not fall into one. They are very dangerous," declared the mother, looking about for the child.

"He is safe enough there, among the osiers," said the father. "He has lost his heart outright to the osiers. However, I mean to drain and fill up this pit, when I find a good outfall; and then we will have all high and dry, and safe for the children. I don't care so much for the pit as for the ditches there. Don't you notice the bad smell?"

"Yes, indeed, that struck me the first night."

"I have been inquiring to-day, and I find there is one acre in twenty hereabouts occupied with foul ditches like that. And then the overflow from them and the pits, spoils many an acre more. There is a stretch of water-flags and bulrushes, and nasty coarse grass and rushes, nothing but a swamp, where the ground is naturally as good as this; and, look here! Fleming was rather out, I tell him, when he wrote that I might graze a pony on the pasture below, whenever I have a market-

cart. I ask him if he expects me to water ~~it~~ here."

So saying, Woodruffe led the way to one of the ditches which, instead of fences, bounded his land; and, moving the mass of weeds with a stick, showed the water beneath, covered with a whitish bubbling scum, the smell of which was insufferable.

"There is plenty of manure there," said Woodruffe: "that is the only thing that can be said for it. We'll make manure of it, and sweep out the ditch, and deepen it, and narrow it, and not use up so many feet of good ground for a ditch that does nothing but poison us. A fence is better than a ditch any day. I'll have a fence, and still save ten feet of ground, the whole way down."

"There is a great deal to do here," observed the wife.

"And good reward when it is done," Woodruffe replied. "If I can fall in with a stout labourer, he and Allan and I can get our spring crops prepared for; and I expect they will prove the goodness of the soil. There is Fleming. Supper is ready, I suppose."

The children were called, but both were so wet and dirty that it took twice as long as usual to make them fit to sit at table: and apologies were made for keeping supper waiting. The grave half-hour before Moss's bedtime was occupied with the most solemn piece of instruction he had ever had in his life. His father carried him up to the railway, and made him understand the danger of playing there. He was never to play there. His father would go up with him once a day, and let him see a train pass; and this was the only time he was ever to mount the steps, except by express leave. Moss was put to bed in silence, with his father's deep, grave voice sounding in his ears.

"He will not forget it," declared his father. "He will give us no trouble about the railway. The next thing is the pit. Allan, I expect you to see that he does not fall into the pit. In time, we shall teach him to take care of himself; but you must remember, meanwhile, that the pit is six feet deep—deeper than I am high; and that the edge is the same clay that you slipped on so often this morning."

"Yes, father," said Allan, looking as grave as if power of life and death were in his hands.

CHAPTER THE THIRD.

One fine morning in the next spring, there was more stir and cheerfulness about the Woodruffes' dwelling than there had been of late. The winter had been somewhat dreary; and now the spring was anxious; for Woodruffe's business was not, as yet, doing very well. His hope, when he bought his pony and cart, was to dispatch by railway to the town the best of his produce, and sell the commoner part in the country neighbourhood, sending his cart round within the reach of a few miles. As it turned out, he had nothing yet to send to the town, and his agent there

was vexed and displeased. No radishes, onions, early salads, or rhubarb were ready: and it would be sometime yet before they were.

"I am sure I have done everything I could," said Woodruffe to Fleming, as they both lent a hand to put the pony into the cart. "Nobody can say that I have not made drains enough, or that they are not deep enough; yet the frost has taken such a hold that one would think we were living in the north of Scotland, instead of in Staffordshire."

"It has not been a severe season either," observed Fleming.

"There's the vexation," replied Woodruffe. "If it had been a season which set us at defiance, and made all sufferers alike, one must just submit to a loss, and go on again, like one's neighbours. But, you see, I am cut out, as my agent says, from the market. Everybody else has spring vegetables there, as usual. It is no use telling him that I never failed before. But I know what it is. It is yonder great ditch that does the mischief."

"Why, we have nothing to do with that."

"That is the very reason. If it was mine or yours, do you think I should not have taken it in hand long ago? All my draining goes for little while that shallow ditch keeps my ground a continual sop. It is all uneven along the bottom;—not the same depth for three feet together anywhere, and not deep enough by two feet in any part. So there it is, choked up and putrid; and, after an hour or two of rain, my garden gets such a soaking, that the next frost is destruction."

"I will speak about it again," said Fleming. "We must have it set right before next winter."

"I think we have seen enough of the uselessness of speaking," replied Woodruffe, gloomily. "If we tease the gentry any more, they may punish you for it. I would show them my mind by being off,—throwing up my bargain at all costs, if I had not put so much into the ground that I have nothing left to move away with."

"Don't be afraid for me," said Fleming, cheerfully. "It was chiefly my doing that you came here, and I must try my utmost to obtain fair conditions for you. We must remember that the benefit of your outlay has all to come."

"Yes; I can't say we have got much of it yet."

"By next winter," continued Fleming, "your privet hedges and screens will have grown up into some use against the frost; and your own drainage——. Come, come, Allan, my boy! be off! It is getting late."

Allan seemed to be idling, re-arranging his bunches of small radishes, and little bundles of rhubarb, in their clean baskets, and improving the stick with which he was to drive: but he pleaded that he was waiting for Moss, and for the parcel which his mother was getting ready for Becky.

"Ah! my poor little girl!" said Woodruffe. "Give my love to her, and tell her it will be a happy day when we can send for her to come home again. Be sure you observe particularly, to tell us how she looks; and, mind, if she fancies anything in the cart,—any radishes, or whatever else, because it comes out of our garden, be sure you give it her. I wish I was going myself with the cart, for the sake of seeing Becky; but I must go to work. Here have I been all the while, waiting to see you off. Ah! here they come! you may always have notice now of who is coming by that child's crying."

"O, father! not always!" exclaimed Allan.

"Far too often, I'm sure. I never knew a child grow so fractious. I am saying, my dear," to his wife, who now appeared with her parcel, and Moss in his best hat, "that boy is the most fractious child we ever had; and he is getting too old for that to begin now. How can you spoil him so?"

"I am not aware," said Mrs. Woodruffe, her eyes filling with tears, "that I treat him differently from the rest; but the child is not well. His chilblains tease him terribly; and I wish there may be nothing worse."

"Warm weather will soon cure the chilblains, and then I hope we shall see an end of the fretting.—Now, leave off crying this minute, Moss, or you don't go. You don't see me cry with my rheumatism, and that is worse than chilblains, I can tell you."

Moss tried to stifle his sobs, while his mother put more straw into the cart for him, and cautioned Allan to be careful of him, for it really seemed as if the child was tender all over. Allan seemed to succeed best as comforter. He gave Moss the stick to wield, and showed him how to make believe to whip the pony, so that before they turned the corner, Moss was wholly engrossed with what he called driving.

"Yes, yes," said Woodruffe, as he turned away, to go to his garden, "Allan is the one to manage him. He can take as good care of him as any woman, without spoiling him."

Mrs. Woodruffe submitted to this in silence; but with the feeling that she did not deserve it.

Becky had had no notice of this visit from her brothers: but no such visit could take her by surprise; for she was thinking of her family all day long, every day, and fancying she should see them, whichever way she turned. It was not her natural destination to be a servant in a farm-house: she had never expected it,—never been prepared for it. She was as willing to work as any girl could be; and her help in the gardening was beyond what most women are capable of: but it was a bitter thing to her to go among strangers, and toil for them, when she knew that she was wanted at home by father and mother, and brothers, and just at present, by her sister too; for Mrs. Fleming's confinement was to happen this spring. The reason why Becky was not at home while so much wanted

there was, that there really was no accommodation for her. The plan of sleeping all huddled together as they were at first would not do. The girl herself could not endure it; and her parents felt that she must be got out at any sacrifice. They had inquired diligently till they found a place for her in a farm-house where the good wife promised protection, and care, and kindness; and fulfilled her promise to the best of her power.

"I hope they do well by you here, Becky," asked Allan, when the surprise caused by his driving up with a dash had subsided, and everybody had retired, to leave Becky with her brothers for the few minutes they could stay. "I hope they are kind to you here."

"O, yes,—very kind. And I am sure you ought to say so to father and mother."

Becky had jumped into the cart, and had her arms round Moss, and her head on his shoulder. Raising her head, and with her eyes filling as she spoke, she inquired anxiously how the new cottages went on, and when father and mother were to have a home of their own again. She owned, but did not wish her father and mother to hear of it, that she did not like being among such rough people as the farm servants. She did not like some of the behaviour that she saw; and, still less, such talk as she was obliged to overhear. When would a cottage be ready for them?

"Why, the new cottages would soon be getting on now," Allan said: but he didn't know; nobody fancied the look of them. He saw them just after the foundations were laid; and the enclosed parts were like a clay-puddle. He did not see how they were ever to be improved; for the curse of wet seemed to be on them, as upon everything about the Station. Fleming's cottage was the best he had seen, after all, if only it was twice as large. If anything could be done to make the new cottages what cottages should be, it would be done: for every body agreed that the railway gentlemen desired to do the best for their people, and to set an example in that respect: but it was beyond anybody's power to make wet clay as healthy as warm gravel. Unless they could go to work first to dry the soil, it seemed a hopeless sort of affair.

"But, I say, Becky," pursued Allan, "you know about my garden—that father gave me a garden of my own."

Becky's head was turned quite away; and she did not look round, when she replied,

"Yes; I remember. How does your garden get on?"

There was something in her voice which made her brother lean over and look into her face; and, as he expected, tears were running down her cheeks.

"There now!" said he, whipping the back of the cart with his stick; "something must be done, if you can't get on here."

"O! I can get on. Be sure you don't tell

mother that I can't get on, or anything about it."

"You look healthy, to be sure."

"To be sure I am. Don't say any more about it. Tell me about your garden."

"Well: I am trying what I can make of it, after I have done working with father. But it takes a long time to bring it round."

"What! is the wet there, too?"

"Lord, yes! The wet was beyond everything at first. I could not leave the spade in the ground ten minutes, if father called me, but the water was standing in the hole when I went back again. It is not so bad now, since I made a drain to join upon father's principal one; and father gave me some sand, and plenty of manure: but it seems to us that manure does little good. It won't sink in when the ground is so wet."

"Well, there will be the summer next, and that will dry up your garden."

"Yes. People say the smells are dreadful in hot weather, though. But we seem to get used to that. I thought it sickly work, just after we came, going down to get osiers, and digging near the big ditch that is our plague now: but somehow, it does not strike me now as it did then, though Fleming says it is getting worse every warm day. But come—I must be off. What will you help yourself to? And don't forget your parcel."

Becky's great anxiety was to know when her brothers would come again. O! very often, she was assured—oftener and oftener as the vegetables came forward: whenever there were either too many or too few to send to the town by rail.

After Becky had jumped down, the farmer, and one of the men were seen to be contemplating the pony.

"What have you been giving your pony lately?" asked the farmer of Allan. "I ask as a friend, having some experience of this part of the country. Have you been letting him graze?"

"Yes, in the bit of meadow that we have leave for. There is a good deal of grass there, now. He has been grazing there these three weeks."

"On the meadow where the osier beds are? Ay! I knew it, by the look of him. Tell your father that if he does not take care, his pony will have the staggers in no time. An acquaintance of mine grazed some cattle there once; and in a week or two, they were all feverish, so that the butcher refused them on any terms; and I have seen more than one horse in the staggers, after grazing in marshes of that sort."

"There is fine thick grass there, and plenty of it," said Allan, who did not like that anybody but themselves should criticise their new place and plans.

"Ay, ay; I know," replied the farmer. "But if you try to make hay of that grass, you'll be surprised to find how long it takes to make, and how like wool it comes out at

"last. It is a coarse grass, with no strength in it; and it must be a stronger beast than this that will bear feeding on it. Just do you tell your father what I say, that's all; and, then, he can do as he pleases: but I would take a different way with that pony, without loss of time, if it was mine."

Allan did not much like taking this sort of message to his father, who was not altogether so easy to please as he used to be. If anything vexed him ever so little, he always began to complain of his rheumatism—and he now complained of his rheumatism many times in a day. It was managed, however, by tacking a little piece of amusement and pride upon it. Moss was taught, all the way as they went home, after selling their vegetables, how much everything sold for; and he was to deliver the money to his father, and go through his lesson as gravely as any big man. It succeeded very well. Everybody laughed. Woodruffe called the child his little man-of-business; gave him a penny out of the money he brought; and when he found that the child did not like jumping as he used to do, carried him up to the railway to listen for the whistle, and see the afternoon train come up, and stop a minute, and go on again.

TOPOGRAPHY AND TEMPERANCE.

FROM MR. CHRISTOPHER SHRIMBLE.

"MR. CONDUCTOR,

"Sir, I take up my pen to tell you what's going to happen if the cause of temperance is to be allowed to have unlicensed power to unlicense all the public-houses. We have heard a good deal about the advantages of Temperance (and I don't deny them), but Mr. Ledru Rollin has taught me to look closer than ever to the dark side of things, and tee-totalism has its dark side like everything else; it is not all clear water, I can tell you. I look forward to the time when strong liquors will be abolished, and pot-houses taken from the corners of the streets or shifted from the sides of the road, and I say, 'how shall I find my way about?'

"For the fact is, Sir, public-houses are the great land-marks of the country. Whether you are benighted in a Northumberland moor; lost in a Devonshire lane (the one thing in nature which it is well known has no end); whether you are cast away in a river; left without a clue upon Salisbury Plain; or reduced to a state of topographical despair in a Warwickshire wood; the first person you meet—be it he or she, gentle or simple, old or young, a genius or an idiot—will assuredly convince you that the only rural means of directing you are the names and signs of places of public entertainment. 'Go on straight till you come to the Green Lion, then turn to the left close to the Goat and Compasses, and after you have passed the Plough, bear off to the right; and, opposite the Jolly Gardeners, you will see a lane: go down that lane till

you have to cross a brook by the side of the Bottle and Bagpipes, and when you have got to the Three Whistles and Cockchafer further down, get over a stile next to the Tinker and Turkey-Cock, take the first to the left—and that's it.' Such were the directions by which I found my old friend, Groggles, last Monday. Without the signs I have mentioned, I never should have found Groggles to this day.

"Now, Sir, I trust the advocates of temperance will pause before they wash away the land-marks of England (Tooting included), in order to substitute water-marks. How are we to find our way about without signs, I wonder? for I suppose these will not be allowed to stand when the houses behind them are taken away. Do the great Father Mathews of this age intend—like the monks of old—to christen the wells, and to give names to the pumps, and springs, and fountains, and conduits? Indeed I hope they do; for these, I venture to say will be the only taps they intend leaving to a future generation.

"Unless, Sir, they wish the topography of our native land to be utterly confused, and desire to make voluntary locomotion impossible (I call railways compulsory travelling, for you must go where they choose to take you), I do intreat of them to leave us their signs, whatever they do with the inns. Why not move the former to stand sponsors to their new-fangled watering places? Take the 'Punchon of Rum' from what used to be the posting-house (before steam blew post-horses off the road) and stick it on the parish pump. Let wayside wells be ornamented with effigies of 'Toppers Heads'; transfer the 'Barrel of Beer' from the village inn to the village fountain, and the 'Jolly Full Bottle' from the alehouse to the conduit. Then, when a man comes to the picture of three drunken soldiers, and the inscription, 'The Rendezvous,' he will know it means a reservoir, or regular meeting of the waters. The 'Punch-Bowl,' in gold letters, will indicate a water-trough; the 'Black Jack' would give a significant license for water to be drunk on the premises; and the 'Sir John Barleycorn' would indicate that a good supply of the ale of our first parent is not far off.

"I do hope my suggestion will be complied with. The tavern signs of England are a great topographical institution. If they will not take them down, the Temperance Movement may do its worst for me. I, and a good many others who live out of town and don't carry lanterns at night, will still be able to find our way about, and the agricultural population will be able to show us when we have lost it. In that case, the Green Dragons, Marquises of Granby, Roses and Crowns, Bears and Buttermilks, Bulls in the Pounds, Stars and Stumps, with innumerable other signs dear to the eyes and ready to the tongues of unconverted tipplers for the behoof of way-beguiled strangers, would not be utterly

lost to the land. Without them, I venture to assert, in conclusion, in the words of the late Mr. Pope, England (Tooting included) will be 'a mighty maze without a plan.'

"I am, &c., &c.

"CHRISTOPHER SHRIMBLE.

"Paradise Row, Tooting."

THE LATE AMERICAN PRESIDENT.

TOWARDS the close of the last century there was a movement of settlers to the frontiers of Kentucky. The new comers to the then unsettled district were from various parts of the American continent, and each of the pioneers who thus cast his lot upon the extreme verge of civilisation made his account for holding his homestead by aid of his rifle, against the attacks of the denizens of the neighbouring forests. Sometimes the enemy was only in shape of a wolf or a bear—oftentimes in that of an Indian. In either case the farmer had to maintain his ground by the strong hand, in those days the only law that held sway in the backwoods. In such a state of affairs it is clear that none but bold spirits would venture to found a home on the frontier; yet such were not wanting; and amongst them was a farmer, who at an earlier period of his life had left the plough to take up arms in defence of American independence. In that rough and ready service he had gained the often quickly-acquired rank of Colonel; but the war ceasing, he, like others among his patriotic countrymen, quietly returned to his more peaceful occupation as a farmer; choosing a location where land was plenty and cheap to those who had the courage to hold it where Indians and other dangerous neighbours were abundant. The sons of such a man, nurtured in such a spot, might well be expected to inherit the enterprise, courage, and hardihood which distinguished their parent. Handling a rifle as soon as they were strong enough to lift one; accustomed to hunting excursions and "camping out;" working now at the plough, now in building up a barn, or in filling it when complete; driving the waggon and its load to a distant market, and bringing back at any hour, and in all seasons, the stores that varied their farm-grown contributions to the larder; and when winter-time brought comparative leisure, turning to books for almost the only education procurable in the rough and primitive region they inhabited;—boys, so reared, could scarcely be other than bold, energetic, and fruitful in resources, and equal in after life to the shifting exigencies of an active military career. From such a parent, and such a childhood and youth, and with such an early training, sprang President and General Zachary Taylor, whose recent death our Transatlantic brethren are even now deploring; and the story of whose life their journals will help us to tell.

Zachary Taylor before he was twenty-one

volunteered to leave home on a military expedition needed by the exigencies of the time. This, his first essay in war, proved very harmless; for no enemy was found, and he soon returned to his father's farm, with a taste, however, for the new life he had made this short trial of. The taste thus acquired induced him to accept with great alacrity an opportunity that subsequently offered of joining the regular army of the United States, which he did in 1803, with the rank of lieutenant. Shortly afterwards an occasion arose for distinguishing himself, and he did not let it pass unimproved. He defended a post called Fort Harrison, against great odds; and by the check thus given to a large hostile party of Indians, saved a frontier from devastation. This gallant commencement was followed by a succession of equally noticeable exploits. He courted every chance of securing active service, and in succession won new reputation in contests with the Indians, with the English, and lastly with the Mexicans. Since it was with this last opponent that his chief battles were fought, and his really important victories won; and as those victories have gained an European reputation from the fact that they led to the acquisition of the real land of gold—El Dorado—California itself; we may glance over the events that induced and characterised the strife, and led to so memorable a result.

Mexico and the United States had long had causes of quarrel; not the least of which was that the Mexicans got into debt to the Yankees, and would not pay what they admitted to be due. With several such unsettled and unsatisfactory accounts on hand, the Texas difficulty arose, and a large body of the Texans declaring for annexation with the United States, the few scruples that stood in the way of such an increase of dominion were quickly overlooked, and the large and fertile province was incorporated in the Union. Half such a cause of quarrel was enough to secure a declaration of war from a country like Mexico—a country that has gone through eighteen revolutions in twenty-five years—and accordingly war began. The Mexicans took steps for re-assuming the lost Texas, when, on the 4th of February, 1846, General Taylor received orders to march, with a force of three thousand men under his command, to the Rio Grande, the western limit of the newly-attached State. The President, for the time being, of Mexico claimed Texas as a revolted province, and hastened to submit the question to the ordeal of battle. The Mexicans shed the first blood. They took some prisoners—some Americans—and shot them in cold blood; and soon afterwards they captured more Americans, including some women, whose bodies were discovered subsequently with their throats cut. This brutality added fuel to the flame before existing, and the struggle began that ended in the capture of Mexico and the cession of California.

The early days of the war were charac-

terised by many acts of daring bravery. Amongst others, we find mention of the feat performed by a Captain Walker. The Americans were in total ignorance of the movements of the enemy, when they heard cannonading in the direction of a fort with which they had been unable to keep open communications. Taylor dispatched a squadron of cavalry, who returned without definite information, and the General was in suspense as to the condition of his friends in the fort, when Captain Walker arrived in the camp bearing dispatches from the leader of the beleaguered party in Fort Brown. He had left the small stronghold under the cover of night, and with no other guide than the wind on his cheek had tracked his way through the enemy's camp, and through the wild, roadless country that lay between it and the army of General Taylor. He brought the news that the Mexicans had attacked Fort Brown, opening upon it a heavy cannonade. The besieged had, however, returned the fire with spirit, and had succeeded in dismounting some of the Mexican guns. General Taylor at once set off to raise the siege, taking with him two thousand three hundred men. With this force he encountered the enemy at Palo Alto, and the battle so named was fought. For five hours was the strife continued, when the attacking party carried the day. The Mexicans fell back.

On the next morning another engagement took place with the same result. The Mexicans lost a thousand men; some cannon; and had one of their generals taken prisoner;—and Fort Brown was relieved.

The war had thus commenced. The Mexicans loudly denounced what they called the dismemberment of their empire; the Americans heard with evident joy that their small army had won two battles of an enemy who had provoked the encounter.

President Polk (the history of whose administration, by L. B. Chase, affords us some of these particulars) was, after much debate, authorised to call into the field volunteers, "to serve for a year or during the war." Double the number asked for soon offered themselves, and General Taylor found himself at the head of a force comparatively undisciplined but eager to advance, and equal to almost any amount of endurance in the prosecution of the enterprise on hand. The temper of the new levies was soon tried. The fight at Monterey was a repetition, on a larger scale, of the scenes and successes near Fort Brown. The Americans attacked and put to flight an enemy four times as numerous as the attacking force. The Mexicans seemed to think their invaders invincible; victory for the American flag was the result of each encounter, and before long General Taylor had a greater extent of country in his possession than the whole force under his command could well grasp with security. At this juncture General Scott, who for some time before this war began, had been Commander-in-Chief of the

American Army, finding that great renown was being won by his junior officer, wrote from New York to General Taylor to state his intention of taking command in Mexico; and leading forward an additional force in advance of the positions conquered and held by Taylor. General Scott decided upon attacking Vera Cruz, and Taylor, being ordered to act on the defensive, complained bitterly when he found that Scott was to withdraw from his command all the regular troops he had, with the exception of one thousand men, leaving him to defend his position chiefly with volunteers, and these in deficient force. The military law of obedience to orders, however, left no choice, and though stating his belief in the weakness of his army he declined to fall back, urging the bad effect such a step must have on the minds of his new levies. He enjoyed the prestige of successive victories, and by supporting that alone could he hope to maintain his small force against an enemy so largely outnumbering him.

About twelve thousand Americans had marched under Scott against Vera Cruz; about five thousand mustered under the flag of Taylor, when the news came that Santa Anna, with an army of twenty thousand strong, was marching upon the scattered and weakened forces of the smallest of the two American armies. Scott was too far on his way towards the sea coast to march to the rescue of Taylor, and the latter was left to do his best alone. On the morning of the 23rd of February, 1847, the unequal battle began. General Taylor had secured for his five thousand men a strong position at Buena Vista, in which the artillery of his antagonist could not readily be brought into play. When Santa Anna approached with twenty thousand men, he sent a message to Taylor to surrender at discretion; a request which the American chieftain abruptly declined, and the fight began. The contest was long and doubtful. The disparity of numbers was soon felt, and the feeling that all depended on their valour nerved the attacked party to greater desperation in their defence. Less than five hundred of Taylor's men were regular troops; more than four thousand of them, but a few months before, were at work in the fields, and on wharfs, and in warehouses in the States. But volunteers though they were, no veterans could have done more. About seven hundred of them fell, killed and wounded, but night, which stayed the battle, saw the Mexicans in retreat before a force over which, in the morning, they expected a rapid and easy victory. The gallantry of the Anglo-Saxons prevailed over the numbers of their semi-Spanish antagonists, and Santa Anna retreated with an army weakened by the loss of nearly two thousand killed and wounded. "Along the road leading from Buena Vista to Agua Nueva (says Mr. Chase), a scene of horror was presented on the night of the 23rd of February. The means of transporting

the wounded being extremely limited, they were left to struggle with suffering and with death, and the sighing of the wind and the cry of the wolf were their only requiem. Abandoned to their fate, without food, parched with thirst, without medical aid, and with no shelter to protect them from the piercing night air, they awaited the moment when death should release them from their suffering. The main body of the army reached Agua Nueva at midnight, and, dying with thirst, many of the soldiers plunged into a stagnant sheet of water which, in many cases, produced instant death. Suffering from the want of food and water, dispirited and disheartened by the result of the battle, they presented a striking contrast to that splendid array which, buoyant with hope and confident of victory, had attacked the American army."

Many anecdotes of this period of Taylor's career are told with pride by his countrymen. Here are some of them which amusingly illustrate the character of the man.

First we have one descriptive of his personal appearance.

"Winding down a hill near Mont Morales, the column is halted to let a troop of horse pass. Do you see at their head a plain looking gentleman, mounted upon a brown horse, having upon his head a Mexican sombrero, dressed in a brown olive-coloured loose frock coat, gray pantaloons, wool socks, and shoes? From under the frock appears the scabbard of a sword: he has the eye of a hawk, and every lineament of his countenance is expressive of honesty, and a calm determined mind. The plain-looking gentleman is General Zachary Taylor, who, with his military family, and a squadron of dragoons as an escort, is on his way to the front."

A few more anecdotes will serve to show the peculiarities of the now deceased general.

"After the capitulation of Monterey, the officers of the army used their exertions to get General Taylor to move from his camp at St. Domingo to the Plaza, and there establish his head-quarters. Several public buildings were examined and decided upon as suitable. After considerable persuasion General Taylor consented to move, at the same time giving the following instructions:—'Choose a pleasant location—a house that is surrounded by a garden filled with large trees; put up a tent under the trees for my residence, and you [the staff and other officers] may have the house in front.' It is needless to add, that no more was said about the head quarters being removed into the city of Monterey.

"In the early part of a severe action, when the enemy had succeeded in turning the left wing of his little army, and secured a seeming advantageous position in rear of their line, at the base of the mountain; when a portion of the troops, overpowered by the superiority of numbers, were forced to retire in "hot haste;" when, indeed, the fortunes of the day seemed extremely problematical, an officer of high rank rode up to General Taylor, and announced the temporary success of the enemy, and expressed his fears for the success of the army. Taylor's reply was

characteristic of the man. 'Sir,' said he, 'so long as we have thirty muskets, we can never be conquered! If those troops who have abandoned their position can be rallied and brought into action again, I will take three thousand of the enemy's prisoners. Had I the disposition of the enemy's forces, I would myself place them just where they are.' The officer resumed his duties with a light heart, considering that the battle, in spite of appearance, was already won."

The volunteers who flocked to his standard soon learned to regard the old general as a friend as well as a commander.

"As proof of his humanity, it is recorded that Taylor, before leaving the battle-ground of Buena Vista, ordered upwards of forty mule loads of provisions to be sent from his camp to Incarnacion, for the use of the wounded Mexicans who were in the hospital there, and starving from hunger.

"Taylor told General Ricardo that General Ampudia had written to him, stating that the war should be conducted in accordance with the usages of civilised nations, but that after the last battle they had barbarously stripped and mutilated our dead. To this charge General Ricardo replied, that 'this was done by the rancheros, who could not be controlled.' 'I am coming over, and will control them for you,' said Taylor.

"The general had assembled his council of officers the night previous to the conflict of Buena Vista, for the purpose of hearing their suggestions in relation to the approaching battle. A good deal of uneasiness was exhibited—objections were raised—the disadvantages of the immense 'odds' were presented—propositions to retire and wait for reinforcements were urged—some were for giving the enemy battle—and one proposed that the American army should 'fall back'—when the old hero's opinion was asked. 'Are you all done, gentlemen?' Every one had finished. 'Then, gentlemen, I will adjourn this meeting,' coolly added Taylor, 'till after the fight to-morrow.' 'Good!' was the unanimous response. The battle was fought and—won."

But we must return to our narrative. Whilst Taylor was holding his position in the interior, General Scott was approaching the sea-coast, and a naval force being there ready to co-operate with him, the news that reached Santa Anna not long after he had been beaten by Taylor was, that the Americans had bombarded and captured Vera Cruz. The Mexicans were deeply dispirited; intestine quarrels and partisan disputes, added to the presence of a foreign enemy, rendered them more than ordinarily indisposed to make any really great and national exertions for their defence. Santa Anna had by his personal crimes gained many enemies, and there were not wanting Mexicans who secretly hailed the advent of the Americans rather as an advantage than a calamity. Hence, when Scott advanced from his newly acquired stronghold upon the city of Mexico itself, Santa Anna could at first bring only six thousand men to oppose his march, and these were met and beaten at Jalapa by the Americans. Three desperately

contested battles soon followed, in which the invaders, though suffering most severely, came off victorious. In one of these, three thousand and one hundred Americans met and defeated fourteen thousand Mexicans, leaving, however, seven hundred of their comrades dead upon the field. The final attack was upon the city itself, and by the 14th of September, Santa Anna had fled; the city of the Montezumas was in the hands of Brother Jonathan, and the stars and stripes waved on the national palace of Mexico.

General Taylor never entirely forgave the Commander-in-Chief for taking from him the best part of his force, and he contended that had Scott threatened Vera Cruz only, and so divided the attention of Santa Anna, leaving the army at Monterey in its full force to march thence upon the capital, Mexico would have been taken at a less cost of time and blood than was ultimately expended on the conquest of the place. So also thought a large section of the American people, and though another commander actually took possession of the capital, Taylor was popularly regarded as the real hero of the Mexican war. This feeling was strengthened when the series of quarrels began between Scott and his companions in arms, and between that general and the American Minister, Mr. Trist, deputed to arrange a treaty between the two countries; and when Scott left the army in charge of General Butler to return in disgust to the United States, there was no officer in all Mexico, whose reputation could stand in competition with that of "Old Rough and Ready," as Taylor was now called. He was looked upon as the one heroic leader of the successful war.

Bayard Taylor, after his stay in the city of Mexico, says he does not believe that Mexican enmity has been increased by the war, but rather the contrary. During all his stay in the country he did not hear a bitter word against the Americans. The officers of the United States' army seem to have made friends everywhere, and the war, by throwing the natives into direct contact with foreigners, greatly abated their former prejudices against all not of Spanish blood. The departure of the American troops is declared to have been a cause of general lamentation amongst the tradesmen of Mexico and Vera Cruz. Nothing was more common to me (continues the traveller) than to hear Generals Scott and Taylor mentioned by the Mexicans in terms of entire respect and admiration. "If you see General Taylor," said a gentleman to his namesake Bayard, "tell him that the Mexicans all honour him. He has never given up their houses to plunder; he has helped their wounded and suffering; he is as humane as he is brave, and they can never feel enmity towards him."

Not without contest and difficulties, but still by a considerable majority, General Taylor was in November, 1848, rewarded for his

many years' services by being installed in the highest position his countrymen had in their gift. They made him President of the United States, and his term of office in that capacity commenced in March, 1849, under the favourable impression created by the following straightforward declaration:—

"I intend that all new appointments shall be of men honest and capable. I do not intend to remove any man from office because he voted against me, for that is a freeman's privilege; but such desecration of office and official patronage as some of them have been guilty of to secure the election of the master whom they served as slaves is degrading to the character of American freemen, and will be a good cause for removal of friend or foe. The office of the government should be filled with men of all parties; and as I expect to find many of those now holding to be honest, good men, and as the new appointments will, of course, be whigs, that will bring about this result. Although I do not intend to allow an indiscriminate removal, yet it grieves me to think that it will be necessary to require a great many to give place to better men. As to my cabinet, I intend that all interests and all sections of the country shall be represented, but not, as some of the newspapers will have it, all parties. I am a whig, as I have always been free to acknowledge, but I do not believe that these who voted for me wish me to be a mere partisan President, and I shall, therefore, try to be a President of the American people. As to the new territory, it is now free, and slavery cannot exist there without a law of Congress authorising it, and that I do not believe they will ever pass. I was opposed to the acquisition of this territory, as I also was to the acquisition of Texas. I was opposed to the war, and, although by occupation a warrior, I am a peace man."

His subsequent conduct tended to realise the hopes created by this opening avowal. But a life of hardship and an age verging on sixty years, prepared him, but indifferently, to meet the renewed exertions required by his new position. Resigning the panoply of the general to assume the garb of the President, he gained a respite from the toils of war to accept the still more soul-wearrying contests, jealousies, and responsibilities of civil government. With soldierly determination, however, he addressed himself to the task, and, like a true hero, fell with harness on his back. He was born on the 9th of November, 1786—he died on the 9th of July, 1850. His last words were:—"I am prepared. I have endeavoured to do my duty." May all deathbeds be consoled by the truthful utterance of such a sentiment.

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

No. 23.]

SATURDAY, AUGUST 31, 1850.

[PRICE 2d.]

A PAPER-MILL.

Down at Dartford in Kent, on a fine bright day, I strolled through the pleasant green lanes, on my way to a Paper-Mill. Accustomed, mainly, to associate Dartford with Gunpowder Mills, and formidable tin canisters, illustrated in copper-plate, with the outpourings of a generous cornucopia of dead game, I found it pleasant to think, on a summer morning when all living creatures were enjoying life, that it was only paper in my mind—not powder.

If sturdy Wat Tyler, of this very town of Dartford in Kent (Deptford had the honour of him once, but that was a mistake) could only have anticipated and reversed the precept of the pious Orange-Lodges; if he could only have put his trust in Providence, and kept his paper damp—for printing—he need never have marched to London, the captain of a hundred thousand men, and summarily beheaded the archbishop of Canterbury as a bad adviser of the young king, Richard. Then, would William Walworth, Lord Mayor of London (and an obsequious courtier enough, may be) never have struck him from his charger, unawares. Then, might the "general enfranchisement of all bondmen"—the bold smith's demand—have come, a long time sooner than it did. Then, might working-men have maintained the decency and honour of their daughters, through many a hazy score of troubled and oppressive years, when they were yet as the clods of the valley, broken by the ploughshare, worried by the harrow. But, in those days, paper and printing for the people were not; so, Wat lay low in Smithfield, and Heaven knows what became of his daughter, and the old ferocious wheel went driving round, some centuries longer.

The wild flowers were blowing in these Dartford hedges, all those many summer-times; the larks were singing, high in air; the trees were rustling as they rustle to-day; the bees went humming by; the light clouds cast their shadows on the verdant fields. The pleasant little river Darent ran the same course; sparkled in the same sun; had, then as now, its tiny circles made by insects; and its plumps and splashes, made by fish. But, the river has changed, since Wat the Blacksmith, bending over with his bucket, saw his grimy face, im-

patient of unjust and grievous tribute, making remonstrance with him for his long endurance. Now, there are indeed brooks in the running brooks—for they go to feed the Paper-Mill.

Time was, in the old Saxon days, when there stood a Mill here, "held in fenn by a Reve," but that was not a Paper-Mill. Then, came a Nunnery, with kings' fair daughters in it; then, a Palace; then, Queen Elizabeth, in her sixteenth year, to sojourn at the Palace two days; then, in that reign, a Paper-Mill. In the church yonder, hidden behind the trees, with many rooks discoursing in their lofty houses between me and it, is the tomb of Sir John Spielman, jeweller to the Queen when she had grown to be a dame of a shrewd temper, aged fifty or so: who "built a Paper-Mill for the making of writing-paper," and to whom his Royal Mistress was pleased to grant a license "for the sole gathering for ten years of all rags, &c., necessary for the making of such paper." There is a legend that the same Sir John, in coming here from Germany, to build his Mill, did bring with him two young lime-trees—then unknown in England—which he set before his Dartford dwelling-house, and which did flourish exceedingly; so, that they fanned him with their shadows, when he lay asleep in the upper story, an ancient gentleman. Now, God rest the soul of Sir John Spielman, for the love of all the sweet-smelling lime-trees that have ever greeted me in the land, and all the writing-paper I have ever blotted!

But, as I turn down by the hawthorn hedge into the valley, a sound comes in my ears—like the murmuring and throbbing of a mighty giant, labouring hard—that would have unbraced all the Saxon bows, and shaken all the heads off Temple Bar and London Bridge, ever lifted to those heights from the always butchering, always craving, never sufficiently-to-be-regretted, brave old English Block. It is the noise of the Steam Engine. And now, before me, white and clean without, and radiant in the sun, with the sweet clear river tumbling merrily down to kiss it, and help in the work it does, is the Paper-Mill I have come to see!

It is like the Mill of the child's story, that ground old people young. Paper! White, pure, spick and span new paper, with that fresh smell which takes us back to school and

school-books ; can it ever come from rags like these ? Is it from such bales of dusty rags, native and foreign, of every colour and of every kind, as now environ us, shutting out the summer air and putting cotton into our summer ears, that virgin paper, to be written on, and printed on, proceeds ? We shall see presently. Enough to consider, at present, what a grave of dress this rag-store is ; what a lesson of vanity it preaches. The coarse blouse of the Flemish labourer, and the fine cambric of the Parisian lady, the court dress of the Austrian jailer, and the miserable garb of the Italian peasant ; the woollen petticoat of the Bavarian girl, the linen head-dress of the Neapolitan woman, the priest's vestment, the player's robe, the Cardinal's hat, and the ploughman's nightcap ; all dwindle down to this, and bring their littleness or greatness in fractional portions here. As it is with the worn, it shall be with the wearers ; but there shall be no dust in our eyes then, though there is plenty now. Not all the great ones of the earth will raise a grain of it, and nothing but the Truth will be.

My conductor leads the way into another room. I am to go, as the rags go, regularly and systematically through the Mill. I am to suppose myself a bale of rags. I am rags.

Here, in another room, are some three-score women at little tables, each with an awful scythe-shaped knife standing erect upon it, and looking like the veritable tooth of time. I am distributed among these women, and worried into smaller shreds—torn cross-wise at the knives. Already I begin to lose something of my grosser nature. The room is filled with my finest dust, and, as gratings of me drop from the knives, they fall through the perforated surface of the tables into receptacles beneath. When I am small enough, I am bundled up, carried away in baskets, and stowed in immense bins, until they want me in the Boiling-Room.

The Boiling-Room has enormous cauldrons in it, each with its own big lid, hanging to the beams of the roof, and put on by machinery when it is full. It is a very clean place, "coddled" by much boiling, like a washer-woman's fingers, and looks as if the kitchen of the Parish Union had gone into partnership with the Church Belfry. Here, I am pressed, and squeezed, and jammed, a dozen feet deep, I should think, into my own particular cauldron ; where I simmer, boil, and stew, a long, long time. Then, I am a dense, tight mass, cut out in pieces like so much clay—very clean—faint as to my colour—greatly purified—and gradually becoming quite ethereal.

In this improved condition, I am taken to the Cutting-Room. I am very grateful to the clear fresh water, for the good it has done me ; and I am glad to be put into some more of it, and subjected to the action of large rollers filled with transverse knives, revolving by steam power upon iron beds, which favour me with no fewer than two

million cuts per minute, though, within the memory of man, the functions of this machine were performed by an ordinary pestle and mortar. Such a drumming and rattling, such a battering and clattering, such a delight in cutting and slashing, not even the Austrian part of me ever witnessed before. This continued, to my great satisfaction, until I look like shaving lather ; when I am run off into chambers underneath, to have my friend the water, from whom I am unwilling to be separated, drained out of me.

At this time, my colour is a light blue, if I have indigo in me, or a pale fawn, if I am rags from which the dyes have been expelled. As it is necessary to bleach the fawn-coloured pulp (the blue being used for paper of that tint), and as I am fawn-coloured pulp, I am placed in certain stone chambers, like catacombs, hermetically sealed, excepting the first compartment, which communicates with a gasometer containing manganese, vitriol, and salt. From these ingredients, a strong gas (not agreeable, I must say, to the sense of smell) is generated, and forced through all the chambers, each of which communicates with the other. These continue closed, if I remember right, some four-and-twenty hours, when a man opens them and takes to his heels immediately, to avoid the offensive gas that rushes out. After I have been aired a little, I am again conveyed (quite white now, and very spiritual indeed) to some more obliging rollers upstairs.

At it these grinders go, "Munch, munch, munch !" like the sailor's wife in MACBETH, who had chesnuts in her lap. I look, at first, as if I were the most delicious curds and whey ; presently, I find that I am changed to gruel—not thin oatmeal gruel, but rich, creamy, tempting, exalted gruel ! As if I had been made from pearls, which some voluptuous Mr. Fmden had converted into groats !

And now, I am ready to undergo my last astounding transformation, and be made into paper by the machine. Oh what can I say of the wonderful machine, which receives me, at one end of a long room, gruel, and dismisses me at the other, paper !

Where is the subtle mind of this Leviathan lodged ? It must be somewhere—in a cylinder, a pipe, a wheel—or how could it ever do with me the miracles it does ! How could it receive me on a sheet of wire-gauze, in my gruel-form, and slide me on, gradually assuming consistency—gently becoming a little paper-like, a little more, a little more still, very paper-like, indeed—clinging to wet blankets, holding tight by other surfaces, smoothly ascending Witney hills, lightly coming down into a woolly open country, easily rolling over and under a planetary system of heated cylinders, large and small, and ever growing, as I proceed, stronger and more paper-like ! How does the power that fights the wintry waves on the Atlantic, and cuts and drills adamantine slabs of metal like

cheese, how does it draw me out, when I am frailest and most liable to tear, so tenderly and delicately, that a woman's hand—no, even though I were a man, very ill and helpless, and she my nurse who loved me—could never touch me with so light a touch, or with a movement so unerring! How can I believe, even on experience, that, being of itself insensible, and only informed with intellect at second hand, it changes me, in less time than I take to tell it, into any sort of paper that is wanted, dries me, cuts me into lengths, becomes charged, just before dismissing me, with electricity, and gathers up the hair of the attendant-watcher, as if with horror at the mischiefs and desertions from the right, in which I may be instrumental! Above all, how can I reconcile its being mere machinery, with its leaving off when it has cut me into sheets, and not conveying me to the Excise-man in the next room, whom it plainly thinks a most unnatural conclusion!

I am carried thither on trucks. I am examined, and my defective portions thrown out, for the Mill, again; I am made up into quires and reams; I am weighed and excised by the hundredweight; and I am ready for my work. Of my being made the subject of nonsensical defences of Excise duty, in the House of Commons, I need say nothing. All the world knows that when the Right Honourable the Chancellor of the Exchequer, for the time being, says I am only the worse by a duty of fifteen shillings per hundredweight, he is a Wrong Honourable, and either don't know, or don't care, anything about me. For, he leaves out of consideration all the vexatious, depressing, and preventing influences of Excise Duty on any trade, and all the extra cost and charge of packing and unpacking, carrying and re-carrying, imposed upon the manufacturer, and of course upon the public. But we must have it, in future, even with Right Honourables as with birds. The Chancellor of the Exchequer that can sing, and won't sing, must be made to sing—small.

My metempsychosis ends with the manufacture. I am rags no more, but a visitor to the Paper-Mill. I am a pleased visitor to see the Mill in such beautiful order, and the workpeople so thriving; and I think that my good friend the owner has reason for saying with an agreeable smile, as we come out upon the sparkling stream again, that he is never so contented, as when he is in rags.

Shining up in the blue sky, far above the Paper-Mill, a mere speck in the distance, is a Paper Kite. It is an appropriate thing at the moment—not to swear by (we have enough of that already) but to hope by, with a devout heart. May all the Paper that I sport with, soar as innocently upward as the paper kite, and be as harmless to the holder as the kite is to the boy! May it bring, to some few minds, such fresh associations; and to me no worse remembrances than the kite that once

plucked at my own hand like an airy friend. May I always recollect that paper has a mighty Duty, set forth in no Schedule of Excise, and that its names are love, forbearance, mercy, progress, scorn of the Hydra-Cant with all its million heads!

So, back by the green lanes, and the old Priory—a farm now, and none the worse for that—and away among the lime-trees, thinking of Sir John.

CHEERFUL ARITHMETIC.

"COMPETITION is fast crushing us!" the tradesman exclaims as he drives you out to his elegant villa behind his seventy-guinea gelding. "Wheat at forty shillings a quarter is ruin!" groans the farmer, while dallying with his champagne glass. "We are all going to the workhouse."—"A diamond necklace, my dear?" replies the mill-owner to a lovely Lancashire witch, whose smile is on other occasions law—"What! two hundred pounds for a bauble, while calico is only three farthings a yard, and cotton-spinning on the brink of bankruptcy. Impossible!" Should these gentlemen ever meet it is ten to one that on comparing notes they resolve unanimously that the whole country is going to the dogs; but it is also ten to one that this resolution is passed at a public dinner to which they have each cheerfully contributed one-pound-one: besides another guinea to the occasion of the feast:—some plethoric, bloated, routine charity.

Considering their patriotic despondency in regard to the utterly hopeless condition of the nation, it is wonderful to observe the contented complacency with which these gentlemen eat their filberts and sip their claret. Neither is this stoic philosophy confined to them alone. All sorts of predicted want and impending misery are borne with exemplary fortitude by all sorts of Englishmen. The skilful artisan seldom allows a week to pass without deploring the inadequacy of wages; but, although he manages to get a good Sunday's dinner some fifty times a year, and once or twice in the twelvemonth indulges his family with a healthful pleasure trip in the country, he is able to scrape up a few pounds in the savings' bank. Yet if you ask him touching the state of things in his particular line, he will tell you that "Times never were so bad." So universally is the propensity to depreciate things as they are, that if a commission were appointed to inquire into the state of the nation, their report, if derived solely from the evidence of well-to-do witnesses, would be lugubrious in the extreme. It is only the very poor who gaze cheerfully into the future; for their existence is a condition of hope. They apprehend nothing, for they have nothing to lose; whatever change fortune may bring, must be, they believe, for the better.

Happily, better testimony to the real con-

dition of the industrious classes is producible than that dark cloud of witnesses who speak out of the fulness of an Englishman's privilege—grumbling. That testimony has been lucidly sifted, and was adduced by Mr. G. R. Porter at the recent meeting of the British Association in Edinburgh. It consisted—in proof of the well-being and continued progress of our country—of a comparison between the income tax returns in respect of incomes derived from trades and professions in 1812, and the like returns in 1848, excluding from the former period the incomes below one hundred and fifty pounds; which, under the existing law, are allowed to pass untaxed. The total amount thus assessed, after deducting exemptions, was, in 1812, about twenty-one millions and a quarter; while, in 1848, the amount was nearly fifty-seven millions; showing an increase, in thirty-six years, of about thirty-five millions and three-quarters, or one hundred and sixty-eight per cent.; being at the rate of upwards of four and-a-half per cent., yearly:—an increase very nearly three-fold greater than the increase during the same period of the population of Great Britain; where, alone, the income tax flourishes in full bloom.

But how has this three-fold prosperity been distributed? Have the rich grown richer, and the poor, poorer; or has Fortune taken off her bandage and rewarded honest industry, with a discriminating hand? Have the bulk of the people shared in the productive wealth which thirty-six years have accumulated? In order to answer these questions, Mr. Porter entered into a series of elaborate and interesting calculations, which prove the pleasing fact that the great progressive wealth has been shared among the middle and working classes.

He found that the returns of 1812 as well as those of 1848 gave the sums assessed to Income Tax in various classes; and, for the purpose of his examination, he distinguished the incomes thus given:—those between one hundred and fifty pounds and five hundred pounds; those between five hundred pounds and one thousand pounds; incomes between one thousand pounds and two thousand pounds; incomes between two thousand pounds and five thousand pounds; and those above five thousand pounds. Adhering strictly to these distinctions, Mr. Porter perceived, in 1848, a positive increase in incomes between one hundred and fifty and five hundred pounds per annum, of thirteen millions seven hundred thousand pounds, over the incomes assessed in 1812. Between five hundred pounds and one thousand pounds per annum, the increase since 1812 has been five millions. On incomes between one thousand pounds and two thousand pounds, and incomes between two thousand pounds and five thousand pounds, there is an increase of upwards of four millions respectively; while in the highest class, which included all incomes above five thousand

pounds per annum, the increase is found to be no more than eight millions and three-quarters. Comparing the highest with the lowest class, the increase has been greater in the lowest by nearly five millions—or fifty-six per cent.

This improvement in circumstances, however, descends to no lower a class of society than persons in the receipt of at least one hundred and fifty pounds per annum. It was necessary to dig a little lower in the strata of private circumstances, in order to show the progress of wealth among the working classes; and Mr. Porter had recourse to the returns from savings' banks; these being chiefly used by the humbler orders. From data thus derived it was ascertained, that, while the deposits in England, Wales, and Ireland, proportioned to the whole population, amounted in 1831 to twelve shillings and eightpence per head; in 1848 they had risen to twenty shillings and elevenpence per individual. The largest amount of these savings occurred in 1846; when they reached, in England alone, to more than twenty-six millions and three-quarters, and in the three Kingdoms, to more than thirty-one millions seven hundred thousand pounds, being equal to twenty-four shillings per head on the population of England, Wales, and Ireland, and ten shillings and one penny per head on that of Scotland.*

The exceeding moderation of this estimate will be observed when we mention another description of savings' banks which Mr. Porter has taken no account of—we mean Friendly Societies. Of these, there are fourteen thousand in Great Britain, regularly enrolled according to Act of Parliament, consisting of one million six hundred thousand members, with a gross annual revenue of two millions eight hundred thousand, and accumulated capital amounting to six millions four hundred thousand pounds sterling. To this must be added the capital belonging to unenrolled benefit societies (exclusive of those in Ireland), which has been estimated at a greater amount than those which exist "as the Act directs;" namely, at nine millions sterling, belonging to two millions and a half of members. It is indeed a most gratifying proof of the prudential, and therefore moral, as well as pecuniary advance which this country has made during the past thirty years, that half our labouring male population belong to Friendly Societies. The operative classes of Great Britain alone possess, at this moment, capital in savings' banks and friendly societies, the total of which reaches the enormous sum of forty-two millions of money. How very like national ruin *this* looks!

* The comparative smallness of the deposits in Scotland arises from two causes: first, the system of allowing interest upon very small sums deposited in private and joint-stock banks; and, secondly, the more recent connection of savings' banks with the Government in that division of the kingdom. Hence, there is no reason for supposing that the labouring-classes of Scotland are less saving than those of England or Ireland.

In further proof of the greater distribution of means among the humbler than the higher orders, we can turn once more to Mr. Porter, who assures us that in proportion as the savings of the industrious poor have augmented, the dividends received at the Bank by the "comfortable" and the rich, have decreased.

The test of the dividend-books of the Bank of England, to which Mr. Porter next brought his calculations, varies essentially from that afforded by the progress of savings' banks; inasmuch as it excludes all evidence of actual saving or accumulation, while it offers a strictly comparative view of such saving as between different classes of the community. The accounts furnished to Parliament by the Bank of the number of persons entitled to dividends upon portions of the public debt, divide the fund-holders into ten classes, according to the amount of which they are so entitled. Mr. Porter contrasted the numbers in each class as they stood on the 5th of April and 5th of July of the years 1831 and 1848, respectively. He then went on to show, that there has been a very large addition between 1831 and 1848 to the number of persons receiving under five pounds at each payment of dividends, and a small increase upon the number receiving between five pounds and ten pounds, while, with the exception of the largest holders—those whose dividends exceed two thousand pounds at each payment, and of whom there has been an increase of five—every other class has experienced a considerable decrease in its numbers. There has been a diminution of more than Eight per cent. in the numbers receiving between three hundred pounds and five hundred pounds; of Twelve and-a-half per cent. of those receiving between five hundred pounds and one thousand pounds; and of more than Twenty per cent. among holders of stock yielding dividends between one thousand pounds and two thousand pounds; this would seem conclusively to prove that, at least as respects this mode of disposing of accumulations, there is not any reason to believe that the already rich are acquiring greater wealth at the expense of the rest of the community.

All evidence proves, then, that the great accession of wealth which has been accumulated in this country during the past thirty years, has been most distributed amongst the middle classes. The natural effect of a change from agricultural to manufacturing industry—a change which has come over this country during the roll of a single century—is to increase the wealth of the manufacturing and trading elements of the community, in proportion as these are called into activity. The "great fortunes" of the old time were nobles and land-holders; the millionaires of to-day are merchants, bankers, and mill-owners. Forty years ago a rich retail tradesman was a rarity; his dealings with the

wholesale trade were chiefly carried on by means of bills at long dates, in which large sums were included for risk and interest; charges which decreased his profits, and increased the price of all articles to the consumer. Now the more frequent rule amongst retailers is prompt payment, discounts in their own favour, and affluence. In our "nation of shopkeepers," it is industry which has prospered and had its reward.

Turning from the British Association to the Poor-Law Board—from Mr. Porter to Mr. Baines—we shall see that in the scramble for wealth, pauperism itself has benefited; that, in fact, the highest grades in the scale of society have benefited as little as the very lowest. It is true that in the progress of accumulation by manufactures, the necessity of bringing large masses of operatives into confined foci, and of providing work for them at all times and seasons, has caused temporary spasms of poverty, that have occasionally almost defied relief; but despite the rapid increase of the population, the ranks of what may be called permanent pauperism have not been augmented. Consequently the increased wealth of the country has descended even to the lowest ranks of the people. In the year 1813, when the population of England and Wales was only ten millions, the sum expended for the relief of the poor amounted to six millions and a half sterling. From the return of the Poor-Law Board, now before us, it appears that during the year which ended on Lady Day, 1849, and with a population in England and Wales of one-third more—or nearly fifteen millions—the exactions for poor's-rates amounted to no more than five millions, seven hundred and ninety-two thousand, nine hundred and sixty-three pounds—three-quarters of a million less than was drawn for the pauperism of 1813. The poor have ceased to regard the rich, as a class, as their natural enemies. We hear no more, now, of a "grinding oligarchy."

Besides the decrease of poor rates, other taxes have diminished. Let the three grumblers with whom we started be pleased to remember that, no longer ago than 1815, when war had done its worst on the lives and fortunes of our fathers, they were taxed at the enormous rate of five pounds four shillings and ten pence a head to each individual of the population, from the centegenarian to the latest born baby; while we, in this day and generation of "ruin," pay per head, only fifty shillings and eleven-pence, or scarcely one-half.

It is the strength and safeguard of the English nation, that its most prominent elements are industry and commerce; for, tending as they do, to the general dissemination, as well as to the general accumulation of wealth, they effect a fusion of interests—a union of classes, and a dependence of each upon the others—which is true national power. At the moment at which we write, we learn from local sources of information, the accuracy

of which we have never had occasion to question, that skilled labour of nearly every kind is in demand in the manufacturing districts; and that all sorts of capable "hands" can have work. Everything indicates improvement. If, indeed, our friends the Croakers will only look their phantom "Ruin" boldly in the face, his gaunt form will soon assume the smiling semblance of Prosperity.

AN EMIGRANT AFLOAT.

I ~~new~~ knew very little of the sea when I determined to emigrate. Like most emigrants, I thought beforehand more of the dangers than of the disagreeables of this voyage; but found, when actually at sea, that its disagreeables seemed more formidable than its dangers. I shall describe the voyage, in order that those who follow me may know precisely what it is that they have to encounter, satisfied as I am, that nothing will tend more to conduce to the comforts of the emigrant at sea, than his being able to take a full and accurate measure of its disagreeable as well as its agreeable accompaniments, before stepping on board.

It was late in the afternoon of a bright May day, when the Seagull, 480 tons register, and bound for Quebec, spread her wings to the wind, after having been towed out of the harbour of Greenock. A gentle breeze carried her smoothly by the point of Gourock, the Holy Loch, Dunoon, and other places familiar to the tourist on the noble Frith of Clyde. We were off the neat little town of Largs, when the shadows of evening thickened around us. I was one of more than a hundred steerage passengers, most of whom soon afterwards went below for the night, many with heavy hearts, thinking that they had seen the last glimpses of their native land.

I remained long enough on deck to perceive the approach of a marked change in the weather. We were still landlocked, when the wind veered round to the west, directly ahead of us. It increased so rapidly in violence, that by the time we were off Brodick, in the Island of Arran, it was blowing more than half a gale. As we tacked to and fro to gain the open sea, the vessel laboured heavily, and I soon felt sufficiently squeamish to descend and seek refuge in my berth. Here a scene awaited me for which I was but little prepared. With very few exceptions, all below were far advanced in sea-sickness. Some were groaning in their berths; others were lying upon the floor, in a semi-torpid state; and others, again, were retching incessantly. What a contrast was the Seagull then, to the neat, tempting picture she presented when lying quietly in dock, and when, as I paced her white, dry, warm, sunny decks, visions filled my mind of the pleasant days at sea before me, when, reclining on the cordage, beneath the shelter of the bulwarks, I could read the live-long day, whilst the stout ship

sped merrily on her voyage. Delightful anticipations! Let no one be extravagant in forming them, unless he has a preference for disappointment. My faith in the romance of the sea was greatly shaken by my first night's experiences on board, and it soon received a fatal blow from the commotion which was being gradually engendered within my own frame, and which, at length, resulted in a catastrophe. I could not sleep, for as the gale increased, so did the noises within and without. I could hear the heavy wind whistling mournfully through the damp, tight-drawn cordage, and the waves breaking in successive showers on the deck overhead. It made my flesh creep, too, to hear the water trickling by my very ear, as it rushed along outside the two-inch plank which (pleasing thought) was all that separated me from destruction. As the storm gained upon us, the ship laboured more and more heavily, until, at length, with each lurch which she made, everything moveable in the steerage rolled about from side to side on the floor. Pots and pans, trunks, boxes, and pieces of crockery kept up a most noisy dance for the entire night, their respective owners being so ill as to be utterly indifferent to the fate of their property. In the midst of the horrid din, I could distinguish the distressing groan of the strong man prostrated by sea-sickness, the long-drawn sigh and scarcely audible complaint of the woman, and the sickly wail of the neglected child; and, that nothing might be wanting to heighten the horrors of the scene, we were all this time in perfect darkness, every light on board having been extinguished for hours.

Morning was far advanced as I fell into a fitful and feverish sleep. On awaking, I found all as still as before leaving port. My fellow-passengers were all on deck; and I hurried up after them to ascertain the cause of the change. It was soon explained. The gale had, at length, become so violent, that the ship had put back for shelter, and was now lying quietly at anchor in the beautiful bay of Rothesay.

But what a change had, in the meantime, taken place in the appearance of my fellow-passengers. The buoyant air of yesterday had disappeared; and those who were then in ruddy health, now looked pale and woe-begone. Such was the effect of our night's prostration.

For my own part, I began to feel that I had already had enough of the sea, and heartily wished myself safe ashore on the banks of the St. Lawrence. I had formerly experienced a sort of enthusiasm in listening to such songs, as "The sea, the sea, the open sea!" "A life on the ocean wave!" &c., &c. But had anyone on board now struck up either of them, I should assuredly have set him down for a maniac. We remained for two days in Rothesay Bay, waiting for a change of wind, during which time we recruited

our spirits—and water, a fresh stock of which we shipped. It was not, therefore, without some of the lightness of heart, which had characterised our first start, that, on the morning of the third day, we made way again for the New World. But it seemed as if we were never to get rid of the coast, for we were overtaken by a dead calm off Ailsa, causing delay for ten days more sweltering under a hot sun, within half a mile of that lonely and stupendous rock. On the evening of the second day a gentle breeze from the north-east carried us out of the Channel, and next morning found us with all sail set, speeding westward, with the Irish coast on our lee.

We were a very mixed company in the steerage. Some had been farmers, and were going out to try their hands at agriculture in the wilds of Canada. Others had been servants, predial and domestic, and were on their way in search of better fortunes in the New World, although they had not yet made up their minds as to the precise manner in which they were to woo the fickle dame. We had a brace of wives on board who were proceeding to join their husbands in Canada, who had prudently preceded their families, and prepared for their advent, by constructing a home for them in the woods. There was an old man with a slender capital, who was emigrating at an advanced period of life, that he might make a better provision for his grandson, a lusty youth of about seventeen, of whom he seemed doatingly fond. We had also amongst us a large family from Edinburgh, of that class of people who have "seen better days," who were hurrying across the Atlantic in the hope of at least catching a glimpse of them again. Besides the father and mother, there were several sons and two daughters, the eldest son having duly qualified himself for the honour of writing W. S. after his name—a nominal appendage which he would find of far less value to him than a good axe in the woods. We had a clergyman, too, of the poorer class, in worldly circumstances, who had been accredited as a missionary to the Canadian wilds. I must not overlook four or five infants, the precise ownership of which I never thoroughly traced, they were so tumbled about from one to another; and which generally of nights favoured us with prolonged choruses of the most enlivening description.

Thus mixed and assorted, the first few days passed off agreeably enough to such as were proof against a relapse of sea-sickness. When it was not blowing too strong, the deck was a pleasant place for exercise, which is necessary to comfort, as it is generally cold and disagreeable at sea, except when calm, and then one is annoyed, whilst being broiled, at the thought of making no progress. The chief occupation on board, seemed to be that of cooking and eating. The cooking apparatus for the steerage was on deck; each family, and each individual who had no family, was con-

tinually cooking for themselves. As the accommodation for cooking was not very ample for upwards of a hundred passengers, there was scarcely an hour of the day between sunrise and sunset, that was not witness to the progress of some culinary operations—men, women, and children were constantly appearing and disappearing at the hatchways with pots, saucepans, kettles, and other utensils; and it was not long ere some began to fear, having made but little account of the voracity of appetite engendered by convalescence after sea-sickness, that their stock of provisions would prove rather scanty for the voyage.

Perhaps the greatest privation to which the poor steerage passenger is subjected, is in connection with the water which he uses for drinking and in some of his cooking processes. As the voyage may be protracted beyond reasonable calculation, an extra supply of fresh water is or should be laid in to meet such an emergency. To preserve this extra stock from becoming impure, different devices are resorted to,—such as impregnating it with lime, large quantities of which are thrown into each cask. Were this the case only with the extra stock, the comfort of the passenger might, for a time at least, be unimpaired in this respect; but the misfortune is, that all the water for steerage consumption, immediate and contingent, is treated in the same way; so that the emigrant is scarcely out of harbour, when he finds the water of which he makes use not only extremely unpalatable to drink, but in such a state as to spoil every decoction into which it enters. Fancy a cup of tea without cream, but with sugar and coarse lime, in about equal proportions, to flavour it. The most unquestionable sloe leaves might, under such circumstances, pass for young hyson, and the worst of chicory for the best of coffee. This sorely discomfited the more elderly of the females on board, whose cup of life was poisoned by very thin mortar.

On the fifth day out, after gaining the open sea, we were overtaken by a tremendous gale, which did us considerable damage. I was standing near the fore-castle, when a heavy block dropped from aloft with terrific force at my feet. I had scarcely recovered from my fright, when crash after crash over head, making me run under the jolly boat in terror. For a moment afterwards all was still, and then arose a tremendous uproar on board, officers giving all sorts of directions at once, and sailors running about, and jumping over each other to obey them. When I ventured to peep out from my place of safety, a sad spectacle of wreck and ruin presented itself to me. On our lee, masts, ropes, spars, and sails were floating alongside on the uneasy waters. Our fore-top-mast had given way, and in falling overboard, had dragged the maintop-gallant mast and the greater part of our bowsprit along with it. Sails and rigging went of course

with the wreck, which was provoking, as the wind was a-beam and so far favourable. We soon hauled the wreck on board, however, and in the course of two or three days, with the aid of the carpenter, the dismantled ship was re-rigged in a very creditable manner.

We had scarcely yet put to rights, when a vessel made up to us bound westward like ourselves. What a sight to the lonely wanderers on the ocean is a ship at sea!—it seems like a herald coming to you from the world, from which you are seemingly cut off for ever. It is a sight which must be seen to be appreciated. She was labouring heavily on our lee, and every now and then her whole keel became visible to us. To this, one of the passengers very innocently directed attention, much to the horror of the second mate, who smartly rebuked the offender; it being, he said, not only indelicate, but perilous to own having seen the keel of any ship under canvas. We all, of course, admitted the reasonableness of this caution, and strictly observed it.

The ship was no sooner repaired, than the wind, which had abated a little, seemed to redouble its fury. We were now in the midst of a terrible storm, and great was the commotion in the steerage. Some moaned in pain—others screamed occasionally in terror—whilst one old lady was constantly inquiring in a most piteous voice, if there was not one good man on board, for whose sake the rest might be saved. On making the inquiry of a rough, but good-natured tar, he rebuked her scepticism, and referred her to the minister. We had two sailors on board, named Peter. One was an ordinary looking mortal, from whom the other was distinguished by the appellation of Peter the Leerer, a name having reference to the extraordinary facial phenomena which he exhibited. On the point of his nose was an enormous wart, the counterpart of which had taken possession of his chin. He had likewise one, but of smaller dimensions, on either cheek, only wanting one on his forehead, to complete the diagram; a want, which, for most of the voyage, was providentially made up by a large pimple, which underlay his bump of benevolence. Add to this an enormous quantity of wiry red hair, and a portentous squint, and you may form some conception of the goblin in question. He was the terror of all the children on board, and came regularly into the steerage in the morning, begging a "toothful" from the passengers. We never saw his tooth, but it must have been very large, as what he meant by the term was a glass of raw spirits, to the strength of which he was stoically indifferent, so that it was above proof. It appeared that he now thought that the time had come for making some sort of return for sundry gifts of this nature. He appeared amongst us, as the storm was at its height, and confidentially informed us that, unless some of the "canvas" were imme-

diately taken down, the ship "had not another hour's life in her." To describe the confusion and dismay occasioned by this announcement is impossible. Nobody questioned Peter's judgment, who stood looking at us as if he thought that one good turn deserved another. But every one was too much frightened to think of rewarding him for his kindness. Some ran at once upon deck to take immediate advantage of the boats—the women all screamed together—and we had a pretty tolerable taste of the horrors to be witnessed on the eve of a shipwreck. The hubbub at length ended in the appointment of a deputation to wait upon the captain, and solicit him to shorten sail. The deputation went upon its mission, but soon afterwards returned from the cabin to their constituents with the report that they had been politely requested by the functionary in question to mind their own business. The storm, however, gradually abated, and things and persons resumed their ordinary aspect.

Great was the anxiety evinced every time the log was thrown, to ascertain our rate of sailing, and at noon of each day, to know our daily run, and our precise locality on the terraqueous globe. It is difficult for an emigrant to reconcile himself to less than eight or nine knots an hour. He may put up with seven, or even six, provided the ship is in her direct course, but he regards everything below that as a justifiable ground of murmuring and complaint. Sometimes it is the ship that is wrong, and sometimes the captain, sometimes the rigging, and at other times, all is wrong together. But to do the emigrant justice, if he is in the surly mood when he is making but little progress, he makes amends for his ill-humour when the vessel is making a good run. We, one day, made but about twenty miles, and I apprehended a mutiny. On another we made two hundred, and nothing could exceed the hilarity and good-humour of those on board. At one time, the Seagull was the merest tub, a disgrace to her owners, and to the mercantile navy of the kingdom. At another, she was one of the best vessels afloat; the captain one of the best sailors on the sea; and the crew the cleverest set of fellows in the world. But all this time it was the same ship, the same captain, and the same crew. The diversity of opinion was the result of extraneous circumstances which caused us at different times to take different points of view. If the weather was favourable, and we made good way, the ship, captain, and crew, got all the honour and glory; if it was adverse and our progress was retarded, the ship, captain, and crew, had to bear all our sinister glances and ill humours. One morning, after we had been about ten days out, our minds were all made up that we were pretty near the banks of Newfoundland, when a fellow-passenger, evidently not very deeply versed in human nature, had the hardihood to inform us that he had, but the day.

Before, seen the mate's log-book, from which it appeared that we were as yet but five hundred miles to the westward of the Irish coast. I can scarcely understand to this day, how it was that he escaped being thrown overboard.

We had two men on board, the very antipodes of each other. The one was a colossal bachelor, who was never ill; the other a diminutive member of a large family, who was never well. They resembled each other only in one point—that they both ate prodigiously. The only account the bachelor could give of himself was that he was going out to Canada to saw the big trees. He had, in fact, been engaged as a sawyer to proceed to the banks of the Ottawa, there to prosecute his avocation in connection with some of the large timber establishments, which are situated far up that noble river. He was so powerful a fellow, that a Yankee passenger declared "he would have only to look at a tree to bring it down." He lived, whilst on board, on nothing but oatmeal porridge, a large gobletful of which, after first making it himself, he devoured regularly on deck four times a day. As to the little man, he lived, as regularly, on mashed potatoes, enriched with butter and melted cheese; and his meals were invariably followed by fits of sea-sickness which he considered quite unaccountable. His habits became at length such a scandal to all on board, that the doctor was compelled, by the force of public opinion, to order him to eat less. He had remained below from our time of starting, until the day we made land, when he appeared on deck for the first time, and was for the first time seen without his nightcap.

When we had been about three weeks at sea an incident occurred which appalled us all, and elicited the sympathies of everyone for one of the unfortunate sufferers. I have already alluded to the old man, who was emigrating with his only grandson, whom he wished to see comfortably settled in life, ere his eyes were sealed in death. The youth was one of several on board who were fond, after having been a few days at sea, of climbing the rigging, and exposing themselves to a variety of unnecessary risks. He had been frequently warned, with the rest, against the consequences which might ensue, but disregarded the advice. One day, whilst out upon the bowsprit, he missed his hold and dropped into the water. The alarm of "man over-board" was instantly raised, and, to save him, the ship was immediately hove to; but he had disappeared, and although we remained for an hour upon the spot, we never caught a glimpse of him again. One of the men near him at the time said that, on reaching the water, he was struck on the head by the cut-water of the ship, which was then running about eight knots an hour. The blow stunned him, and he sank like a stone. The poor old man was inconsolable, and gradually sank into a state of vacant

imbecility; and, on landing, found a home in the Lunatic Asylum at Quebec.

Let no one dream that the sea, particularly on board an emigrant ship, is the place for reading or study. It is either too cold, when there is the slightest breeze, or too hot when it is calm: it is too noisy at all times. Happy is he who, under such circumstances, has a resource against *ennui* in his own reflections. Having a clergyman on board, we had divine service regularly on the Sundays. When it was rough, the assemblage took place between decks in the steerage; but when fine we were convened upon deck. Sailors have a dread, not exactly of clergymen in the abstract, but of clergymen on board. A blackbird on the rigging as the ship is about to start, or a clergyman on board, is equally, in their estimation, a token of ill luck; and some of the crew pitied us for anticipating anything else, under the circumstances.

If there is one thing more disagreeable than a storm at sea, it is a calm. It is all very well for a steamer, which can then make her way nobly over the waters; but, the annoyance and tedium on board a sailing vessel are indescribable. In all our calms we were surrounded by sea-gulls and other marine birds. Some of them ventured so close as to be shot; others we endeavoured to catch by means of baited hooks tied to a stick, which was attached to a long cord, but they were too wary for us, for, after closely examining it, they fought shy of the temptation.

On nearing the banks of Newfoundland we were constantly immersed in fogs. One morning, whilst thus situated, the temperature of the sea suddenly lowered, which the captain interpreted into an indication of icebergs not being far off, and a sharp look out was ordered to be kept. It was scarcely noon ere we were in imminent peril of running at full speed against one. We owed our escape to a passenger, who was on the lookout, and who called the attention of one of the sailors to something a-head of us. "Star-board—star-board hard!"—cried he at once to the man at the wheel. The helm was scarcely turned ere we glided rapidly by the frozen mass, which gleamed like a huge emerald in the faint and struggling sunlight. We passed so close, to it that I could have leaped upon it with ease. We might as well have run against a whinstone rock as encountered this floating peril, at the rate at which we were then gliding through the water.

Whilst crossing the banks the ship was frequently hove to for soundings. We took advantage of such occasions to fish for cod; nor were we unsuccessful, for we, altogether, hauled on board several dozen fish of a large size. The delight with which we feasted upon our prey, after some weeks' experience of nothing but salt meat, I leave the reader to imagine. It was during one of our angling attempts that an incident occurred, which would have seemed as incredible to me as it

may, now do the reader, had I not been an eye-witness of it. One of the crew, whilst fishing for a few minutes, with a line belonging to a passenger, hooked a very large fish, which dropped into the water in the act of being hauled on board. The man, determined on securing his prize, without a moment's hesitation, leaped overboard after it; and, seizing the half-insensible fish in his arms, held it there until he was hauled on board, with his extraordinary booty. In explanation of this, it should be known that the gills of a cod-fish, when out of the water, swell considerably, so as to prevent it from properly performing their functions when restored, even alive, to its native element. It was whilst the fish in question was in the act of thus "coming to" that the man seized and secured it.

On the banks, when the night was clear, we witnessed magnificent exhibitions of the aurora-borealis. It was generally between midnight and ten in the morning that the phenomenon attained the greatest splendour. When the whole northern sky was enveloped in a trellis-work of flashing wavy light, of a mingled golden, silvery pink, and blood-red hue.

The first land we made, was Cape Breton, an island off the northern extremity of Nova Scotia; and between which and Newfoundland, is the entrance to the Gulf of St. Lawrence. The back shore of the island was more picturesque than inviting; but for the live-long day every passenger strained his eyes upon this, the first positive revelation of the New World to him. The delight imparted by the first sight of land, can only be appreciated by those who have been for weeks at sea, with nothing to meet the eye, day after day, but the same monotonous and dreary circle of waters, in the midst of which the ship seems to rest immovable. From Cape Breton we stood up the Gulf, and being favoured by the wind, soon made the Island of Anticosti, not far from the mouth of the St. Lawrence. It looked like a mass of petrified guano; an illusion which was not disturbed by the myriads of water-fowl which hovered about its precipices.

The Gulf of St. Lawrence has not been inaptly designated, the "vildest of seas." It was our lot to have ample experience of its capricious humours. When almost at the mouth of the river, which expands into a magnificent estuary of from seventy to ninety miles in width, we were becalmed for two whole days. Between us and the rocky shore on our left, to which we were very close, lay a vessel from Belfast, crowded with emigrants. There was music and dancing on board; and so near were we to each other, that we, too, sometimes danced to the sound of her solitary violin. On the evening of the second day, we were suddenly overtaken by a furious squall, which descending the river, came upon us so unprepared, that much of our canvas was cut to pieces ere it could be

taken in. In about half an hour all was comparatively tranquil again, but on looking for our comrade, not a vestige of her was to be seen. It was not for three weeks afterwards, when we heard of her total loss, with upwards of three hundred and fifty souls on board, that our dreadful suspicions respecting her, were confirmed. Next morning it blew very fresh; and although it was the 3rd of June, we had several heavy falls of snow.

After beating about for two days longer in the mouth of the river, we were boarded by a pilot, and made way for Quebec, about four hundred miles up. The ascent of the stream is sometimes exceedingly tedious; as, when the wind is adverse, it is necessary to come to anchor at every turn of the tide. Thus as much time is sometimes consumed in ascending the river, as in crossing the Atlantic. We were more fortunate, for we made the quarantine ground, thirty miles below the city, in ten days. Under such circumstances, the sail up the river is interesting and agreeable. For the first hundred miles or so, it is so wide, that land on either side is but dimly visible. But, as the estuary narrows, objects on either side become more distinct. The northern shore, which is bold and mountainous, is replete with scenes of the most romantic grandeur. The southern bank being much tamer in its character, and more adapted for human habitations. The channel too, some distance up, is occasionally studded with islands, which add greatly to the interest of the sail.

The quarantine ground of Canada is Gros Isle, between which and Quebec stretches the long Island of Orleans. We had scarcely dropped anchor when we were boarded by an officer of the Board of Health. Whilst ascending the river, the ship had been thoroughly cleaned, and the berths in the steerage white-washed. We were all passed in review before the functionary in question, and could have been at once permitted to proceed to our destination, but for one old lady, who was not exactly ill, but ailing; on her account we were detained until every piece of clothing on board had undergone a thorough ablution. We landed immediately in boats, and, after having been for about six weeks at sea, it was with inexpressible joy that I sprang ashore, for the first time, in the New World.

Gros Isle! With what melancholy associations have the events of 1847 encircled the name of the Canadian lazaretto! On our arrival, in a year when the tide of emigration was not strong, there was a little fleet anchored along side of it. Some of the vessels (they were all from Ireland), with their overloaded cargoes of human beings, had been already there for a month, nor was there any prospect of their being relieved for some weeks to come. There was an hospital for the sick; the accommodation ashore for such as were well, consisted of several large open sheds, tolerably well covered and floored. In these, meals were taken during the day, and beds

were made for the night. Outside, the scene presented was picturesque, and even gay; there were nearly three thousand people ashore, and a universal washing of clothes of all kinds was going on; the water being heated by hundreds of wood fires, which were blazing and smoking amongst the rocks in the open air. When there were families, the families belonging to them washed for them; such as were alone had to hire the services of professional washerwomen. The appliances of washing are rather peculiar. Between high and low water-mark the island was very rocky, and the action of the water had here and there scooped out bowls of various sizes from the rock. Into them, for the most part, the hot water was poured, and in them, between tides, the clothes were washed. They were then spread upon the rocks, or hung upon the trees to dry, which gave the island a holiday look. It was anything, however, but a holiday time for hundreds, who were forced to tenant it.

To our great satisfaction, we were permitted, after but one day's detention, to resume our course. With wind and tide in our favour, we soon dropped up to the city. It was a clear and brilliant morning in June when we left Gros Isle, and as we made our way up the narrow channel between the Island of Orleans and the southern bank of the river, nothing could exceed the beauty of the scene, the great basin, into which the city juts, being visible in the distance, directly ahead of us, whilst the precipitous bank on either side, particularly that on our left, was covered with the most luxuriant vegetation, in the shade of which we could, every here and there, discover foaming torrents, dashing headlong from the country above into the river, like those which, after heavy rains, rush with such fury down the western bank of Loch Ness. On opening one of the points of the Isle Orleans, the cataract of Montmorency burst suddenly upon our view, looking in the distance like a long streak of snow amid the rich green foliage which imbedded it. Considerably higher up, Point Levy still projected between us and the city, but long before we turned it, we could see over it the British flag floating in the distance from the lofty battlements of Cape Diamond. On turning the point, the change of scene was as sudden and complete as any ever effected by the scenic contrivances of the stage. The city was at once disclosed to view, skirting the fort and crowning the summit of the bold rocky promontory on which it stands, its tinned roofs and steeples gleaming in the sunlight, as if they were cased in silver. Very few vessels were at the wharves, but abreast of the city hundreds were anchored in the middle of the stream, some getting rid of their ballast, and others surrounded by islands of timber, with which they were being loaded. The clearness of the air, the brightness of the sky, the merry tumble of the water, slightly ruffled by a fresh easterly breeze, the singular

position and quaint appearance of the town, with its massive battlements, its glistening turrets, and its break-neck looking streets, zig-zagging up the precipice, with the rich greenery of the Heights of Abraham beyond, and that of Point Levy right opposite, and with hundreds of vessels lying quietly at anchor on the broad expanse of the river, whilst the echoes reverberated to the merry choruses of their busy crews,—all conspired to form a picture calculated to make an impression upon the imagination too deep to be ever effaced.

The anchor had scarcely dropped, terminating our long and weary voyage, when we were boarded by a Custom-House officer, and by an officer of the Board of Health. After another inspection, we were permitted to land; and it was not without many anxious reflections upon the novelty of my situation, that I found myself retiring that night to rest within a stone's throw of the monument raised to the joint memories of Wolf and Montcalm.

Such were the incidents of my voyage. I have set them down simply, and exactly as they occurred, for the purpose of presenting a true picture of the emigrant's life afloat. I have since learned that, in all respects, ours was an average journey across the wide waste. Intending emigrants, therefore, who picture to themselves in bright colours the glories of a sea voyage, will, by reading these pages, have their dreams modified by some touches of reality and truth, if not entirely dispelled. If, however, they are adapted for success in the other hemisphere, they will not be daunted by the trials and inconveniences I have pictured.

THE SISTER'S FAREWELL.

DEAR Sister, sit beside my bed,
And let me see your gentle smile,
And let me lay my aching head
Upon your kindly arm awhile;
I shall not long be with you now,
My time is drawing to an end:
May we our spirits meekly bow,
And be release from suffering send.

The longed-for summer's drawing near;
The wind is softer, and the sun
Streams down so brightly on me here,
It almost seems already come.
But now—I never more shall see
The fields and lanes, all gay with flowers,
Nor hear the murmur of the bee,
Nor song of birds among the bowers.

For here, no beauteous change we see
In nature, as the year rolls on;
No green bursts forth on bush and tree
When winter's chilling frosts are gone.
No gentle flowers or odours sweet,
In summer cheer us as we go;
Nought see we but th' unchanging street,
And weary passing to and fro.

The summer, though 'tis summer still,
Seems not the same while we are here.
How sweet the thought of that clear rill,
That trembled from the hillock near

To our old house! I sometimes think,
With my eyes closed, and half-asleep,
That I am lying on the brink
Of the old fish-pond, still, and deep.

methinks in one of those sweet nooks,
Beneath the hanging willow-trees,
I listen to the cawing rooks
And busy humming of the bees.
And, moodily, I watch the trout
Make circles in the tranquil pool;
And watch the swallows skim about,
And feel the breeze so fresh and cool.

Let me awake—the dream was brief—
Be thankful for my sufferings, here;
Be thankful, too, for Heaven's relief,
Even though I leave thee, sister dear.
Yet let me once more see you smile;
A Vision opens on me bright!
Lay your hand by me for a while—
And now, God bless you, love—Good Night!

THE HOME OF WOODRUFFE THE GARDENER.

IN EIGHT CHAPTERS.—CHAPTER IV.

FLEMING did what he could to find fair play for his father-in-law. He spoke to one and another—to the officers of the railway, and to the owners of neighbouring plots of ground, about the bad drainage, which was injuring everybody; but he could not learn that anything was likely to be done. The ditch—the great evil of all—had always been there, he was told, and people never used to complain of it. When Fleming pointed out that it was at first a comparatively deep ditch, and that it grew shallower every year, from the accumulations formed by its uneven bottom, there were some who admitted that it might be as well to clean it out; yet nobody set about it. And it was truly a more difficult affair now than it would have been at an earlier time. If the ditch was shallower, it was much wider. It had once been twelve feet wide, and it was now eighteen. When any drain had been flowing into it, or after a rainy day, the contents spread through and over the soil on each side, and softened it, and then the next time any horse or cow came to drink, the whole bank was made a perfect bog; for the poor animals, however thirsty, tried twenty places to find water—that they could drink, before going away in despair. Such was the bar in the way of poor Woodruffe's success with his ground. Before the end of summer, his patience was nearly worn out. During a showery and gleamy May and a pleasant June, he had gone on as prosperously as he could expect under the circumstances; and he confidently anticipated that a seasonable July and August would quite set him up. But he had had no previous experience of the peculiarities of ill-drained land; and the hot July and August from which he hoped so much did him terrible mischief. The drought which would have merely dried and pulverised a well-drained soil, leaving it free to profit

much by small waterings, baked the over-charged soil of Woodruffe's garden into hard hot masses of clay, amidst which his produce died off faster and faster every day, even though he and all his family wore out their strength with constant watering. He did hope, he said, that he should have been spared drought at least; but it seemed as if he was to have every plague in turn; and the drought seemed, at the time, to be the worst of all.

One day, Fleming saw a welcome face in one of the carriages; Mr. Nelson, a Director of the railway, who was looking along the line to see how matters went. Though Mr. Nelson was not exactly the one, of all the Directors, whom Fleming would have chosen to appeal to, he saw that the opportunity must not be lost; and he entreated him to alight, and stay for the next train.

"Eh! what?" said Mr. Nelson; "what can you want with us here? A station like this! Why, one has to put on spectacles to see it!"

"If you would come down, Sir, I should be glad to show you . . ."

"Well: I suppose I must."

As they were standing on the little platform, and the train was growing smaller in the distance, Fleming proceeded to business. He told of the serious complaints that were made for a distance of a few miles on either hand, of the clay pits, left by the railway brickmakers, to fill with stagnant waters.

"Pho! pho! Is that what you want to say?" replied Mr. Nelson. "You need not have stopped me just to tell me that. We hear of those pits all along the line. We are sick of hearing of them."

"That does not mend the matter in this place," observed Fleming. "I speak freely, Sir, but I think it my duty to say that something must be done. I heard, a few days ago, more than the people hereabouts know,—much more than I shall tell them—of the fever that has settled on particular points of our line; and I now assure you, Sir, that if the fever once gets a hold in this place, I believe it may carry us all off, before anything can be done. Sir, there is not one of us, within half a mile of the Station, that has a wholesome dwelling."

"Pho! pho! you are a croaker," declared Mr. Nelson. "Never saw such a dismal fellow! Why, you will die of fright, if ever you die of anything."

"Then, Sir, will you have the goodness to walk round with me, and see for yourself what you think of things. It is not only for myself and my family that I speak. In an evil day, I induced my wife's family to settle here, and . . ."

"Ay! that is a nice garden," observed Mr. Nelson, as Fleming pointed to Woodruffe's land. "You are a croaker, Fleming. I declare I think the place is much improved."

since I saw it last. People would not come and settle here if the place was like what you say."

Instead of arguing the matter, Fleming led the way down the long flight of steps. He was aware that leading the gentleman among bad smells and over shoes in a foul bog would have more effect than any argument was ever known to have on his contradictory spirit.

"You should have seen worse things than these, and then you would not be so discontented," observed Mr. Nelson, striking his stick upon the hard-baked soil, all intersected with cracks. "I have seen such a soil as this in Spain, some days after a battle, when there were scores of fingers and toes sticking up out of the cracks. What would you say to that?—eh?"

"We may have a chance of seeing that here," replied Fleming; "if the plague comes, —and comes too fast for the coffin-makers,—a thing which has happened more than once in England, I believe."

Mr. Nelson stopped to laugh; but he certainly attended more to business as he went on; and Fleming, who knew something of his ways, had hopes that if he could only keep his own temper, this visit of the Director might not be without good results.

In passing through Woodruffe's garden, very nice management was necessary. Woodruffe was at work there, charged with ire against railway directors and landed proprietors, whom, amidst the pangs of his rheumatism, he regarded as the poisoners of his land and the bane of his fortunes; while, on the other hand, Mr. Nelson, who had certainly never been a market-gardener, criticised and ridiculed everything that met his eye. What was the use of such a tool-house as that?—big enough for a house for them all. What was the use of such low fences?—of such high screens?—of making the walks so wide?—sheer waste!—of making the beds so long one way, and so narrow another?—of planting or sowing this and that?—things that nobody wanted. Woodruffe had pushed back his hat, in preparation for a defiant reply, when Fleming caught his eye, and, by a good-tempered smile, conveyed to him that they had an oddity to deal with. Allan, who had begun by listening reverently, was now looking from one to another, in great perplexity.

"What is that boy here for, staring like a dunce? Why don't you send him to school? You neglect a parent's duty if you don't send him to school."

Woodruffe answered by a smile of contempt, walked away, and went to work at a distance.

"That boy is very well taught," Fleming said, quietly. "He is a great reader, and will soon be fit to keep his father's accounts."

"What does he stare in that manner for, then? I took him for a dunce."

"He is not accustomed to hear his father called in question, either as a gardener or a parent."

"Pho! pho! I might as well have waited, though, till he was out of hearing. Well, is this all you have to show me? I think you make a great fuss about nothing."

"Will you walk this way?" said Fleming, turning down towards the osier beds, without any compassion for the gentleman's boots or olfactory nerves. For a long while Mr. Nelson affected to admire the reeds, and waterflags, and marsh-blossoms, declared the decayed vegetation to be peat soil, very fine peat, which the ladies would be glad of for their hearths in the flower-garden,—and thought there must be good fowling here in winter. Fleming quietly turned over the so-called peat with a stick, letting it be seen that it was a mere dung-heap of decayed rushes, and wished Mr. Nelson would come in the fowling season, and see what the place was like.

"The children are merry enough, however," observed the gentleman. "They can laugh here, much as in other places. I advise you to take a lesson from them, Fleming. Now, don't you teach them to croak."

The laughter sounded from the direction of the old brick-ground; and thither they now turned. Two little boys were on the brink of a pit, so intent on watching a rat in the water and on pelting it with stones, that they did not see that anybody was coming to disturb them. In answer to Mr. Nelson's question, whether they were vagrants, and why vagrants were permitted there, Fleming answered that the younger one—the pale-faced one—was his little brother-in-law; the other—

"Ay, now, you will be telling me next that the pale face is the fault of this place."

"It certainly is," said Fleming. "That child was chubby enough when he came."

"Pho, pho! a puny little wretch as ever I saw—puny from its birth, I have no doubt of it. And who is the other—a gipsy?"

"He looks like it," replied Fleming. On being questioned, Moss told that the boy lived near, and he had often played with him lately. Yes, he lived near, just beyond those trees, not in a house, only a sort of house the people had made for themselves. Mr. Nelson liked to lecture vagrants, even more than other people; so Moss was required to show the way, and his dark-skinned play-fellow was not allowed to skulk behind.

Moss led his party on, over the tufty hay-coloured grass, skipping from bunch to bunch of rushes, round the osier-beds, and at last straight through a clump of alders, behind whose screen now appeared the house, as Moss had called it, which the gipsies had made for themselves. It was the tilt of a waggon, serving as a tent. Nobody was visible but a woman, crouching under the shadow of the tent, to screen from the sun that which was lying across her lap.

"What is that that she's nursing? Lord bless me! Can that be a child?" exclaimed Mr. Nelson.

"A child in the fever," replied Fleming.

"Lord bless me!—to see legs and arms hang down like that!" exclaimed the gentleman: and he forthwith gave the woman a lecture on her method of nursing—scolded her for letting the child get a fever—for not putting it to bed—for not getting a doctor to it—for being a gipsy, and living under an alder clump. He then proceeded to inquire whether she had anybody else in the tent, where her husband was, whether he lived by thieving, how they would all like being transported, whether she did not think her children would all be hanged, and so on. At first, the woman tried a facetious and wheedling tone, then a whimpering one, and, finally, a scolding one. The last answered well. Mr. Nelson found that a man, to say nothing of a gentleman, has no chance with a woman with a sore heart in her breast, and a sick child in her lap, when once he has driven her to her weapon of the tongue. He said afterwards, that he had once gone to Billingsgate, on purpose to set two fishwomen quarrelling, that he might see what it was like. The scene had fulfilled all his expectations; but he now declared that it could not compare with this exhibition behind the alders. He stood a long while, first trying to overpower the woman's voice; and, when that seemed hopeless, poking about among the rushes with his stick, and finally, staring in the woman's face, in a mood between consternation and amusement:—thus he stood, waiting till the torrent should intermit; but there was no sign of intermission; and when the sick child began to move and rouse itself, and look at the strangers, as if braced by the vigour of its mother's tongue, the prospect of an end seemed further off than ever. Mr. Nelson shrugged his shoulders, signed to his companions, and walked away through the alders. The woman was not silent because they were out of sight. Her voice waxed shriller as it followed them, and died away only in the distance. Moss was grasping Fleming's hand with all his might when Mr. Nelson spoke to him, and shook his stick at him, asking him how he came to play with such people, and saying that if ever he heard him learning to scold like that woman, he would beat him with that stick: so Moss vowed he never would.

When the train was in sight by which Mr. Nelson was to depart, he turned to Fleming, with the most careless air imaginable, saying,

"Have you any medicine in your house?—any bark?"

"Not any. But I will send for some."

"Ay, do. Or,—no—I will send you some. See if you can't get these people housed somewhere, so that they may not sleep in the swamp. I don't mean in any of your houses, but in a barn, or some such place. If the physic comes before the doctor, get somebody

to dose the child. And don't fancy you are all going to die of the fever. That is the way to make yourselves ill: and it is all nonsense, too, I dare say."

"Do you like that gentleman?" asked Moss, sapiently, when the train was whirling Mr. Nelson out of sight. "Because I don't—not at all."

"I believe he is kinder than he seems, Moss. He need not be so rough: but I know he does kind things sometimes."

"But, do you like him?"

"No, I can't say I do."

Before many hours were over, Fleming was sorry that he had admitted this, even to himself; and for many days after he was occasionally heard telling Moss what a good gentleman Mr. Nelson was, for all his roughness of manners. With the utmost speed, before it would have been thought possible, arrived a surgeon from the next town, with medicines, and the news that he was to come every day while there was any fear of fever. The gipsies were to have been cared for; but they were gone. The marks of their fire and a few stray feathers which showed that a fowl had been plucked, alone told where they had encamped. A neighbour, who loved her poultry yard, was heard to say that the sick child would not die for want of chicken broth, she would be bound; and the nearest farmer asked if they had left any potato-peels and turnip tops for his pig. He thought that was the least they could do after making their famous gipsy stew (a capital dish, it was said,) from his vegetables. They were gone; and if they had not left fever behind, they might be forgiven, for the sake of the benefit of taking themselves off. After the search for the gipsies was over, there was still an unusual stir about the place. One and another stranger appeared and examined the low grounds, and sent for one and another of the neighbouring proprietors, whether farmer, or builder, or gardener, or labourer; for every one who owned or rented a yard of land on the borders of the great ditch, or anywhere near the clay-pits or osier beds. It was the opinion of the few residents near the Station that something would be done to improve the place before another year; and everybody said that it must be Mr. Nelson's doings, and that it was a thousand pities that he did not come earlier, before the fever had crept thus far along the line.

CHAPTER THE FIFTH.

For some months past, Becky had believed without a doubt, that the day of her return home would be the very happiest day of her life. She was too young to know yet that it is not for us to settle which of our days shall be happy ones, nor what events shall yield us joy. The promise had not been kept that she should return when her father and mother removed into the new cottage. She had been told that there really was not, even now

decent room for them all; and that they must at least wait till the hot weather was completely over before they crowded the chamber, as they had hitherto done. And then, when autumn came on, and the creeping mists from the low grounds hung round the place from sunset till after breakfast the next day, the mother delayed sending for her daughter, unwilling that she should lose the look of health which she alone now, of all the family, exhibited. Fleming and his wife and babe prospered better than the others. The young man's business lay on the high ground, at the top of the embankment. He was there all day while Mr. Woodruffe and Allan were below, among the ditches and the late and early fogs. Mrs. Fleming was young and strong, full of spirit and happiness; and so far fortified against the attacks of disease, as a merry heart strengthens nerve and bone and muscle, and invigorates all the vital powers. In regard to her family, her father's hopeful spirit seemed to have passed into her. While he was becoming permanently discouraged, she was always assured that everything would come right next year. The time had arrived for her power of hope to be tested to the utmost. One day this autumn, she admitted that Becky must be sent for. She did not forget, however, to charge Allan to be cheerful, and make the best of things, and not frighten Becky by the way.

It was now the end of October. Some of the days were balmy elsewhere—the afternoons ruddy; the leaves crisp beneath the tread; the squirrel busy after the nuts in the wood; the pheasants splendid among the dry ferns in the brake, the sportsman warm and thirsty in his exploring among the stubble. In the evenings the dwellers in country houses called one another out upon the grass, to see how bright the stars were, and how softly the moonlight slept upon the woods. While it was thus in one place, in another, and not far off, all was dank, dim, dreary and unwholesome; with but little sun, and no moon or stars; all chill, and no glow; no stray perfumes, the last of the year, but sickly scents coming on the steam from below. Thus it was about Fleming's house, this latter end of October, when he saw but little of his wife, because she was nursing her mother in the fever, and when he tried to amuse himself with his young baby at meal-times (awkward nurse as he was) to relieve his wife of the charge for the little time he could be at home. When the baby cried, and when he saw his Abby look wearied, he did wish, now and then, that Becky was at home: but he was patient, and helpful, and as cheerful as he could, till the day which settled the matter. On that morning he felt strangely weak, barely able to mount the steps to the station. During the morning, several people told him he looked ill; and one person did more. The porter sent a message to the next large station that somebody must be sent

immediately to fill Fleming's place, in case of his being too ill to work. Somebody came; and before that, Fleming was in bed—certainly down in the fever. His wife was now wanted at home; and Becky must come to her mother.

Though Becky asked questions all the way home, and Allan answered them as truthfully as he knew how, she was not prepared for what she found—her father aged and bent, always in pain, more or less, and far less furnished with plans and hopes than she had ever known him; Moss, fretful and sickly, and her mother unable to turn herself in her bed. Nobody mentioned death. The surgeon who came daily, and told Becky exactly what to do, said nothing of anybody dying of the fever, while Woodruffe was continually talking of things that were to be done when his wife got well again. It was sad, and sometimes alarming, to hear the strange things that Mrs. Woodruffe said in the evenings when she was delirious; but if Abby stepped in at such times, she did not think much of it, did not look upon it as any sign of danger; and was only thankful that her husband had no delirium. His head was always clear, she said, though he was very weak. Becky never doubted, after this, that her mother was the most severely ill of the two; and she was thunderstruck when she heard one morning the surgeon's answers to her father's questions about Fleming. He certainly considered it a bad case; he would not say that he could not get through; but he must say it was contrary to his expectation. When Becky saw her father's face as he turned away and went out, she believed his heart was broken.

"But I thought," said she to the surgeon, "I thought my mother was most ill of the two."
 "I don't know that," was the reply, "but she is very ill. We are doing the best we can.—You are, I am sure," he said, kindly; "and we must hope on, and do our best till a change comes. The wisest of us do not know what changes may come. But I could not keep your father in ignorance of what may happen in the other house."

No appearances alarmed Abby. Because there was no delirium, she apprehended no danger. Even when the fatal twitchings came, the arm twitching as it lay upon the coverlid, she did not know it was a symptom of anything. As she nursed her husband perfectly well, and could not have been made more prudent and watchful by any warning, she had no warning. Her cheerfulness was encouraged, for her infant's sake, as well as for her husband's and her own. Some thought that her husband knew his own case. A word or two,—now a gesture, and now a look,—persuaded the surgeon and Woodruffe that he was aware that he was going. His small affairs were always kept settled; he had probably no directions to give; and his tenderness for his wife showed itself in his enjoying her cheerfulness to the last. When, as soon as it

was light, one December morning, Moss was sent to ask if Abby could possibly come for a few minutes, because mother was worse, he found his sister alone, looking at the floor, her hands on her lap, though the baby was fidgetting in its cradle. Fleming's face was covered, and he lay so still that Moss, who had never seen death, felt sure that all was over. The boy hardly knew what to do; and his sister seemed not to hear what he said. The thought of his mother,—that Abby's going might help or save her,—moved him to act. He kissed Abby, and said she must please go to mother; and he took the baby out of the cradle, and wrapped it up, and put it into its mother's arms; and fetched Abby's bonnet, and took her cloak down from its peg, and opened the door for her, saying, that he would stay and take care of everything. His sister went without a word; and, as soon as he had closed the door behind her, Moss sank down on his knees before the chair where she had been sitting, and hid his face there till some one came for him,—to see his mother once more before she died.

As the two coffins were carried out, to be conveyed to the churchyard together, Mr. Nelson, who had often been backward and forward during the last six weeks, observed to the surgeon that the death of such a man as Fleming was a dreadful loss.

"It is that sort of men that the fever cuts off," said the surgeon. "The strong man, in the prime of life, at his best period, one may say, for himself and for society, is taken away,—leaving wife and child helpless and forlorn. That is the ravage that the fever makes."

"Well: would not people tell you that it is our duty to submit?" asked Mr. Nelson, who could not help showing some emotion by voice and countenance.

"Submit!" said the surgeon. "That depends on what the people mean who use the word. If you or I were ill of the fever, we must resign ourselves, as cheerfully as we could. But if you ask me whether we should submit to see more of our neighbours cut off by fever, as these have been, I can only ask in return, whose doing it is that they are lying in a swamp, and whether that is to go on? Who dug the clay pits? Who let that ditch run abroad, and make a filthy bog? Are you going to charge that upon Providence, and talk of submitting to the consequences? If so, that is not my religion."

"No, no. There is no religion in that," replied Mr. Nelson, for once agreeing in what was said to him. "It must be looked to."

"It must," said the surgeon, as decidedly as if he had been a railway director, or king and parliament in one.

CHAPTER THE SIXTH.

"I wonder whether there is a more forlorn family in England than we are now," said Woodruffe, as he sat among his children, a few hours after the funeral.

His children were glad to hear him speak, however gloomy might be his tone. His silence had been so terrible that nothing that he could say could so weigh upon their hearts. His words, however, brought out his widowed daughter's tears again. She was sewing—her infant lying in her lap. As her tears fell upon its face, it moved and cried. Becky came and took it up, and spoke cheerfully to it. The cheerfulness seemed to be the worst of all. Poor Abby laid her forehead to the back of her chair, and sobbed as if her heart would break.

"Ay, Abby," said her father, "your heart is breaking, and mine too. You and I can go to our rest, like those that have gone before us: but I have to think what will become of these young things."

"Yes, father," said Becky gently, but with a tone of remonstrance, "you must endeavour to live, and not make up your mind to die, because life has grown heavy and sad."

"My dear, I am ill—very ill. It is not merely that life is grown intolerable to me. I am sure I could not live long in such misery of mind: but I am breaking up fast."

The young people looked at each other in dismay. There was something worse than the grief conveyed by their father's words in the hopeless daring—the despair—of his tone when he ventured to say that life was unendurable.

Becky had the child on one arm; with the other hand she took down her father's plaid from its peg, and put it round his rheumatic shoulders, whispering in his ear a few words about desiring that God's will should be done.

"My dear," he replied, "it was I who taught you that lesson when you were a child on my knee, and it would be strange if I forgot it when I want so much any comfort that I can get. But I don't believe (and if you ask the clergyman, he will tell you that he does not believe), that it is God's will that we, or any other people, should be thrust into a swamp like this, scarcely fit for the rats and the frogs to live in. It is man's doing, not God's, that the fever makes such havoc as it has made with us. The fever does not lay waste healthy places."

"Then why are we here?" Allan ventured to say. "Father, let us go."

"Go! I wonder how or where! I can't go, or let any of you go. I have not a pound in the world to spend in moving, or in finding new employment. And if I had, who would employ me? Who would not laugh at a crippled old man asking for work and wages?"

"Then, father, we must see what we can do here, and you must not forbid us to say 'God's will be done!' If we cannot go away, it must be His will that we should stay, and have as much hope and courage as we can."

Woodruffe threw himself back in his chair.

It was too much to expect that he would immediately rally; but he let the young people confer, and plan, and cheer each other.

The first thing to be done, they agreed, was to move hither, whenever the dismal rain would permit it, all Abby's furniture that could not be disposed of to her husband's successors. It would fit up the lower room. And Allan and Becky settled how the things could stand so as to make it at once a bedroom and sitting-room. If, as Abby had said, she meant to try to get some scholars, and keep a little school, room must be left to seat the children.

"Keep a school?" exclaimed Woodruffe, looking round at Abby.

"Yes, father," said Abby, raising her head. "That seems to be a thing that I can do: and it will be good for me to have something to do. Becky is the stoutest of us all, and . . ."

"I wonder how long that will last," groaned the father.

"I am quite stout now," said Becky; "and I am the one to help Allan with the garden. Allan and I will work under your direction, father, while your rheumatism lasts; and . . ."

"And what am I to do?" asked Moss, pushing himself in.

"You shall fetch and carry the tools," said Becky; "that is, when the weather is fine, and when your chilblains are not very bad. And you shall be bird-boy when the sowing season comes on."

"And we are going to put up a pent-house for you, in one corner, you know, Moss," said his brother. "And we will make it so that there shall be room for a fire in it, where father and you may warm yourselves, and always have dry shoes ready."

"I wonder what our shoe leather will have cost us by the time the spring comes," observed Woodruffe. "There is not a place where we ever have to take the cart or the barrow that is not all mire and ruts: not a path in the whole garden that I call a decent one. Our shoes are all pulled to pieces; while the frost, or the fog, or something or other, prevents our getting any real work done. The waste is dreadful. Nothing should have made me take a garden where none but summer crops are to be had, if I could have foreseen such a thing. I never saw such a thing before,—never—as market-gardening without winter and spring crops. Never heard of such a thing!"

Becky glanced towards Allan, to see if he had nothing to propose. If they could neither mend the place nor leave it, it did seem a hard case. Allan was looking into the fire, musing. When Moss announced that the rain was over, Allan started, and said he must be fetching some of Abby's things down, if it was fair. Becky really meant to help him: but she also wanted opportunity for consultation, as to whether it could really be God's will that they should neither be able

to mend their condition nor to escape from it. As they mounted the long flight of steps, they saw Mr. Nelson issue from the Station, looking about him to ascertain if the rain was over, and take his stand on the embankment, followed by a gentleman who had a roll of paper in his hand. As they stood, the one was seen to point with his stick, and the other with his roll of paper, this way and that. Allan set off in that direction, saying to his sister, as he went,

"Don't you come. That gentleman is so rude, he will make you cry. Yes, I must go; and I won't get angry; I won't indeed. He may find as much fault as he pleases; I must show him how the water is standing in our furrows."

"Hallo! what do you want here?" was Mr. Nelson's greeting, when, after a minute or two, he saw Allan looking and listening. "What business have you here, hearkening to what we are saying?"

"I wanted to know whether anything is going to be done below there. I thought, if you wished it, I could tell you something about it."

"You! what, a dainty little fellow like you?—a fellow that wears his Sunday clothes on a Tuesday, and a rainy Tuesday too! You must get working clothes and work."

"I shall work to-morrow, Sir. My mother and my brother-in-law were buried to-day."

"Lord bless me! You should have told me that. How should I know that unless you told me?" He proceeded in a much gentler tone, however, merely remonstrating with Allan for letting the wet stand in the furrows, in such a way as would spoil any garden. Allan had a good ally, all the while, in the stranger, who seemed to understand everything before it was explained. The gentleman was, in fact, an agricultural surveyor—one who could tell, when looking abroad from a height, what was swamp and what meadow; where there was a clean drain, and where an uneven ditch; where the soil was likely to be watered, and where flooded by the winter rains; where genially warmed, and where fatally baked by the summer's sun. He had seen, before Allan pointed it out, how the great ditch cut across between the cultivated grounds and the little river into which those grounds should be drained: but he could not know, till told by Allan, who were the proprietors and occupiers of the parcels of land lying on either side the ditch. Mr. Nelson knew little or nothing under this head, though he contradicted the lad every minute; was sure such an one did not live here, nor another there: told him he was confusing Mr. Smith and Mr. Brown: did not believe a word of Mr. Taylor having bought yonder meadow, or Mrs. Scott now renting that field. All the while, the surveyor went on setting down the names as Allan told them; and then observed that they were not so many but that they might combine, if they

would, to drain their properties, if they could be relieved of the obstruction of the ditch—if the surveyor of highways would see that the ditch were taken in hand. Mr. Nelson pronounced that there should be no difficulty about the ditch, if the rest could be managed; and then, after a few whispered words between the gentlemen, Allan was asked first, whether he was sure that he knew where every person lived whose name was down in the surveyor's book; and next, whether he would act as guide to-morrow. For a moment he thought he should be wanted to move Abby's things; but, remembering the vast importance of the plan which seemed now to be fairly growing under his eye, he replied that he would go: he should be happy to make his day's work to help, ever so little, towards what he wished above everything in the world.

"What makes you in such a hurry to suppose we want to get a day's work out of you for nothing?" asked Mr. Nelson. "He thrust half-a-crown into the lad's waistcoat pocket, saying that he must give it back again, if he led the gentleman wrong. The gentleman had no time to go running about the country on a fool's errand; Allan must mind that. As Allan touched his hat, and ran down the steps, Mr. Nelson observed that boys with good hearts did not fly about in that way, as if they were merry, on the day of their mother's funeral.

"Perhaps he is rather thinking of saving his father," observed the surveyor.

"Well; save as many of them as you can. They seem all going to pot as it is."

When Allan burst in, carrying nothing of Abby's, but having a little colour in his cheeks for once, his father sat up in his chair, the baby suddenly stopped crying, and Moss asked where he had been. At first, his father disappointed him by being listless—first refusing to believe anything good, and then saying that any good that could happen now was too late; and Abby could not help crying all the more because this was not thought about a year sooner. It was her poor husband that had made the stir; and now they were going to take his advice the very day that he was laid in his grave. They all tried to comfort her, and said how natural it was that she should feel it so; yet, amidst all their sympathy, they could not help being cheered that something was to be done at last.

By degrees, and not slow degrees, Woodruffe became animated. It was surprising how many things he desired Allan to be sure not to forget to point out to the surveyor, and to urge upon those he was to visit. At last he said he would go himself. It was a very serious business, and he ought to make an effort to have it done properly. It was a great effort, but he would make it. Not rheumatism, nor anything else, should keep him at home. Allan was glad at heart to see

such signs of energy in his father, though he might feel some natural disappointment at being left at home, and some perplexity as to what, in that case, he ought to do about the half-crown, if Mr. Nelson should be gone home. The morning settled this, however. The surveyor was in his gig. If Allan could hang on, or keep up with it, it would be very well, as he would be wanted to open the gates, and to lead the way in places too wet for his father, who was not worth such a pair of patent waterproof tall boots as the surveyor had on.

The circuit was not a very wide one; yet it was dark before they got home. There are always difficulties in arrangements which require combined action. Here there were different levels in the land, and different tempers and views among the occupiers. Mr. Brown had heard nothing about the matter, and could not be hurried till he saw occasion. Mr. Taylor liked his field best, wet—would not have it drier on any account, for fear of the summer sun. When assured that drought took no hold on well-dried land in comparison with wet land, he shook with laughter, and asked if they expected him to believe that. Mrs. Scott, whose combination with two others was essential to the drainage of three portions, would wait another year. They must go on without her; and after another year, she would see what she would do. Another had drained his land in his own way long ago, and did not expect that anybody would ask him to put his spade into another man's land, or to let any other man put his spade into his. These were all the obstructions. Everybody else was willing, or at least, not obstructive. By clever management, it was thought that the parties concerned could make an island of Mrs. Scott and her field, and win over Mr. Brown by the time he was wanted, and show Mr. Taylor that, as his field could no longer be as wet as it had been, he might as well try the opposite condition—they promising to flood his field as often and as thoroughly as he pleased, if he found it the worse for being drained. They could not obtain all they wished, where every body was not as wise as could be wished; but so much was agreed upon as made the experienced surveyor think that the rest would follow; enough, already, to set more labourers to work than the place could furnish. Two or three stout men were sent from a distance; and when they had once cut a clear descent from the ditch to the river, and had sunk the ditch to seven feet deep, and made the bottom even, and narrowed it to three feet, it was a curious thing to see how ready the neighbours became to unite their drains with it. It used to be said, that here—however it might be elsewhere—the winter was no time for digging; but that must have meant that no winter-digging would bring a spring crop; and that therefore it was useless. Now, the sound of the spade never ceased for the rest

of the winter; and the labourers thought it the best winter they had ever known for constant work. Those who employed the labour hoped it would answer—found it expensive—must trust it was all right, and would yield a profit by and by. As for the Woodruffes, they were too poor to employ labourers. But some little hope had entered their hearts again, and brought strength, not only to their hearts, but to their very limbs. They worked like people beginning the world. As poor Abby could keep the house and sew, while attending to her little school, Becky did the lighter parts (and some which were far from light) of the garden work, finding easy tasks for Moss; and Allan worked like a man at the drains. They had been called good drains before; but now, there was an outfall for deeper ones; and deeper they must be made. Moreover, a strong rivalry arose among the neighbours about their respective portions of the combined drainage; and under the stimulus of ambition, Woodruffe recovered his spirits and the use of his limbs wonderfully. He suffered cruelly from his rheumatism; and in the evenings felt as if he could never more lift a spade; yet, not the less was he at work again in the morning, and so sanguine as to the improvement of his ground, that it was necessary to remind him, when calculating his gains, that it would take two years, at least, to prove the effects of his present labours.

INES TO A DEAD LINNET.

BY A SOLITARY STUDENT.

SWEET little friend in hours of lonely thought.
And studious toil thro' the unresting day,
Why hast thou left me to the sullen hours,
So dull and changeless now? Thy light-heart
song,

And fluttering plume of joy, beguile no more
My weary mind, happy when so estranged,
From books, which are the bane of all repose.

The secret bustle of thy frequent meal,
Like elfin working mischief, all unseen
At bottom of thy cage; thy dipping bill,
Oft splashing sportive o'er the learned tome,
And rousing my 'rapt soul to homelier themes;
The tuning twitter, snatch'd and interrupt—
The timorous essay, low and querulous—
The strain symphonious—and the full burst of
song,

That made my study-walls re-echo sweet
The harmonious peal, while all its tatter'd maps
And prints unframed, responsive tremblings
gave;—

All these are past, and joy takes wing with thee.

Nor less, when in the dreary night, far spent,
Still was I pondering o'er the murky page,
Hast thou attracted notice by thy bill
Rattling along the wires; and in the twinkle—
The clos'd—and then, bright little eye, half-oped,
Well have I read thy meaning, and full soon,
Thus warn'd of needful slumber, borne away
The wasted lamp, and sought my lonely couch.

Thy empty cage now hangs against the wall!
No one inhabits it—nothing is there—
Thy seed-box is half full of dust and film;
A spider weaves within thy water-glass:
The wretchedness of silence—no response
To calls and questionings of the heart—the mind—
All show me thou art dead—for ever gone!
I stand and gaze on thy perplexing cage—
Like a friend's house—deserted!—one we have
loved—

And before which, returning after years,
We pause, and think of hours enjoyed within;
And gaze upon the dusty shutters—closed!

THE GOOD GOVERNOR.

IN a region where favourable latitude and tempering sea-breezes combine to produce perpetual summer, lie "the still vexed Bermoothes," the Bermuda of modern navigators, where one-half of the year is the fitting seed-time for plants of the tropical, and the other half of the temperate zones. These islands, discovered to us by a shipwreck, with one exception, our oldest colony, offer a miniature copy of the institutions of the parent state.

About twenty square miles of surface, consisting of one island thirty miles long by two broad, and a half-dozen *aide-de-camp* sort of islets, support a population rather less numerous, and considerably less wealthy, than that of the City of Canterbury; and enjoy the dignity of a capital, with two thousand inhabitants; of a Governor and Commander-in-Chief, who takes his seat on "the throne" when opening the Bermoothean Parliament; of a Council, or miniature House of Lords, and a Representative Assembly of thirty-six members, forming a miniature House of Commons. They had formerly an Archdeacon, but, by one of those extraordinary decisions that occasionally originate in high quarters, the Archdeacon has been metamorphosed into a Bishop of Newfoundland, whom the Bermudians never see, although they still have the honour of paying the salary of the late Archdeacon.

Formerly Bermuda, like Virginia, from which it was an offshoot, was a slave colony, and grew tobacco. But tobacco would not pay, and every Bermudian, being born within a mile of the water, was bred amphibious. Capital cedar for ship-building grows on the hills, and harbours are all around to receive the craft when built. So it came to pass, that the "Mudian" clippers became plentiful all over the neighbouring seas, and took a large share of the carrying trade between our American colonies and the West Indies. Even when a large slice of these said colonies had struggled into the Republic of the United States, the Mudians continued to do a good stroke of sea-faring business.

Then whales abounded in the neighbouring seas, and every Mudian took to handling the oar, the lance, or the harpoon, at a time of life when other children were driving hoops, or riding rocking-horses.

It was the natural result of these handy occupations in so limited a space, that the whole population, with the exception of that supported by the expenditure of the garrison, was occupied in building, or rigging, or manning, or loading, vessels of some kind, if not whaling or fishing. White or black, they were all sailors and sea-faring to a man, almost to a woman. The real mermaid still lingers round Bermuda's coast. Breechless babies swaggered along with a mixture of long and short steps in true jack-tar style. Bermudian young ladies directed their maids to let out a reef in a petticoat, and officers driving tandem were bid "put yer helm down," by native guides.

There are no records to show which first in Bermuda sea-faring arts began to devour all others; certain it is that just as the manufacture of glass and porcelain, purple dye, and other signal utilities and ornaments have been more than once discovered, lost, and re-discovered, so were agriculture and horticulture in the year 1839 of the islands of perpetual spring, among the lost arts. If in that year some convulsion had for ever separated them from external communications, the process of food-growing among a British race would have been left as rude in theory, more imperfect in practice, than among the New Zealanders or South Sea Islanders.

There were, in that year two persons in the islands who could plough, but they did not. Haymaking and mowing was a theory learned in books, just as curious inquirers in Lancashire may have read of cotton cultivation. As for the state of gardening, it was about parallel with British gardening in the time of Queen Bess, who used to send to Holland for a salad.

So there was neither corn nor hay, and very little fruit, of the worst quality. A sort of bitter orange-tree abounded through the islands. Inquisitive strangers asked "Why not graft or bud sweet oranges on these luxuriant stocks, or why not sow sweet seeds?" But the natives were positive that buds would not take, and seeds would not grow.

Such was Bermuda in 1839; somewhat depressed in its fishing, whaling, ship-building, sea-carrying commerce, by the competition of New Brunswick and the United States. Although less affected than the sugar-growing islands by negro emancipation, still whites, who had lived easily, although barely by hiring out a few black artisans, were reduced to sore straits.

It was in this year there arrived a new Governor. He travelled the length and breadth of his islands, and found all green and all barren; a light, but fertile soil, bearing fine timber, and luxuriant weeds. Round the government-house was a waste of eight acres, within sight a great swamp. According to popular opinion, Colonial Governors are gentlemen of broken fortunes, and strong political connections, who endure

temporary evils for the sake of future ease and dignity.

At any rate, among military martinet Governors; naval bashaw Governors; didactic despatch-writing Governors; Governors landing with crotchets all ready-cut and dry; Governors who support the Royal Prerogative by quarrelling with all their subjects, and Governors whose whole soul is in quiet and domestic economy, the popular Governor, the wise, conciliating Governor, is indeed a rare bird. According to stereotyped precedent, our Bermoothean Governor ought to have first sat down and written a flaming despatch home, painting the misery of the island, detailing his plans, and asking for money. Next he should have filled up a scheme on a scale large enough to satisfy the ideas of a Paxton in horticulture, or a Smith of Deanston in agriculture, and applied to his little parliament for a vote, in order to make a garden for himself, and a model farm for his own amusement and the benefit of the islanders.

But it happened that our "good" Governor as he was afterwards called with good reason, was not a stereotyped Governor, so that the people he was sent to rule became happy and prosperous. He cared not to become either rich or famous. Therefore, all his proceedings were on a humble, commonplace scale. Seeing that the climate was admirably adapted for oranges; which, if of good quality, would afford a valuable export, he sent for slips and seeds of the best kinds.

In front of Government House stands a bitter citron-tree: on this, with his own hands, he budded a sweet orange. The bud, contrary to all Bermudian opinions, sprouted, and grew, and flourished. After the living example of the Governor's tree, it became a fashion—a rage—to bud sweet oranges; so by this simple and short cut an horticultural revolution was effected. Still working out the maxim that example is better than precept, our good Governor beat up for gardener recruits, accepting those who knew a little as well as those who knew nothing, but were willing to learn. With their aid, and at his own expense, the eight acres of waste round his residence, Mount Langton, were converted into a pleasure-ground, adorned with plants and shrubs of the tropical and temperate zones, which he threw open freely to the inhabitants without distinction of colour.

The next step was to drain the great marsh, the Langton Marsh, and grow hay upon it, so as to give the Bermudians a hint on the oddness of importing hay, while fine grass land lay waste. Two men who could plough were discovered, and pupils put under their hands; at the same time ploughs were imported. Having, out of his own pocket, offered prizes for garden flowers and vegetables, for corn and hay, for the best ploughman, and the best scytheman, the performances of these two being as wonderful to the islanders as skating to an Indian prince, or wine-making to a York-

shireman, the Local Parliament willingly voted other prizes for the same purpose.

It would take up too much time to detail all the good Governor's efforts—by example, by instruction, by rewards, by distribution of books, and by the promotion of industrial schools, to educate the rising generation of Bermuda in useful, civilising arts.

A grand holiday, held in May, 1846, showed that these efforts had not been without pleasant and practical results.

Mount Langton and all the pleasure-grounds created under the personal inspection and at the expense of the good Governor, were crowded with a noisy happy population, of all ranks, all ages, and all colours, black, white, and brown, assembled to enjoy and celebrate the taking stock of the revived Industry of the islands. Not equal in variety to the great Parisian Exposition, or in quality to the Royal Agricultural Shows, it was still an era in the history of the colony.

The Queen's representative did not grudge to give up for the occasion his private domain, as that was the best site in the Island. Amid the luxuriant shrubs and gorgeous tropical flowers, the gay groups wandered; sweetly the sounds of the regimental band intermingled with the shouts and whip-crackings of the contending ploughmen as they turned up the brown furrows of long neglected soil, and with the switching of twenty-five scythemen exhibiting their newly acquired skill on the drained pasture of Langton Marsh. Below lay the shipping in harbour, and far beyond the golden purple ocean was dotted over with the cloud-like canvas of the famous 'Mudian craft. Almost at once—one glance—it was possible to take in a view of the pursuits of old and young Bermuda. Government House was closed;—to have entertained the thousands who had assembled (beyond the needful supply of cold water found in huge jars and tubs in every shady place, a provision so grateful under a tropical sun,) was impossible; to have entertained a part—an exclusive few—on such an occasion, would have been contrary to the Governor's principles; so for that day all personal attendants were enabled to share in the universal holiday.

In due time after the ploughing and mowing matches, came the competition in turnips, strawberries, potatoes, dabbias, barley, pot-herbs, flax, and cabbages, and the parading and comparison of horse-colts, ass-colts, calves, keifers, bulls, sows, and boars.

Now, before the advent of this reforming Governor, the Bermudians had been accustomed to no other competition than that of sailing or cricket matches or steeple-chases; to no other exhibitions than military reviews; all excellent in their way, but now usefully varied by a kind of competition that brought new comforts to every cottager.

Years have elapsed since the day of this well-remembered *fête*. But the good Governor is still affectionately remembered. The Bermu-

dians love to show passing strangers the sweet orange-tree on Mount Langton which still blooms a green and golden monument of plain, practical, kind-hearted common sense. And this sketch of a remote and insignificant dependency has been thought worth telling for the benefit, not only of colonial Governors, but of well-meaning reformers in all parts of the world. If we would do good we must not be content with mere talk; we must not disdain to commence at our own doors by budding—a sweet orange on a bitter citron.

LONDON PAUPER CHILDREN.

HIGH and dry upon a pleasant breezy hill-top about seven miles south of London stands a house worthy of a visit. Far enough away to be quite free from the cloud of smoke, yet near enough for easy access from London; it is a large house in the country, in and out of which a large family of essentially London tenants are perpetually going. Walk round the hill it stands upon, and a succession of charming views present themselves for admiration. A far distant horizon bounds a country made up of purple woods, rich golden brown stripes of corn-fields, and bright green meadows. Here young plantations; there stately single timber trees; with villas nestling under fringes of woods on pleasant slopes, whilst in the valley below runs the Croydon Railway, linking this charming, quiet country round Norwood, to the smoky, busy, useful London.

The place we speak of is the Pauper-School at Norwood, which may be called a factory for making harmless, if not useful subjects, of the very worst of human material—a place for converting those who would otherwise certainly be miserable, and most likely vicious, into rational, reasonable, and often very useful members of society;—in short, a house for training a large and wretched class in habits of decency, regularity, and order, and leading a pitiable section of the great two-million-strong family of London from the road to crime into that of honest industry and self-respect.

The exterior of the building has no trace of the architectural display that won for the school near Manchester the title of a Pauper Palace. The exterior of the Norwood house is as dingy and ugly as a small brewhouse. In shape it reminds one of the old cities, built upon no definite plan, but enlarged from time to time as the population found it most convenient. It is neither square, nor round, nor triangular; but then, when we go over it, we shall find that the lack of straight lines and right angles does not prevent the presence of much good, and of a fair amount of comfort and happiness within its confines.

The irregularity of its construction is explained by the fact that the place was established twenty-seven years ago, not by a public body, but by a private individual, Mr. Aubin, the present superintendent. The commencement of such a place was an epoch in the

history of pauperism in this country. Before the time of the benevolent Jonas Hanway, no regard was paid to the destitute children of the poor, and those young children, whose ill-fate it was to be born of pauper parents, in town, were condemned to a life that began in the gutters of back lanes, and usually ended in the gaol, by fever, or more suddenly, on the gallows. Hanway secured the passing of a law empowering the parishes to collect the juvenile paupers and send them into the country for nurture and maintenance. It was a step in advance to get the children away from the dens in which they had previously been confined, but the nurture was of a very unsatisfactory kind. When an old woman applied for parish relief, she had two or three children given to her to keep, and out of their allowance she was to help to keep herself. She usually set them to collect firewood for her; or to watch sheep, or to scare crows; and, in their search for fuel, they were often taught to rob hedges, or fences, or trespass on plantations. At seven years' old they were sent back to finish their education in the work-houses, and frequently remained there for six or seven years without even learning their letters. Indeed, to teach them at all was regarded as a kind of small treason. "Teach paupers to read! What next?" was a common exclamation. Reading was, by a great many people, considered to be a mere premium for laziness—whilst writing was thought to be a temptation to forgery, and its then certain result—the gallows. To collect the pauper children, and "farm them out" to persons who would teach as well as feed them, was the next step in advance. The fruit of this plan was the growth of various places where large numbers of the pauper rising generation were gathered together in houses, the proprietors of which often realised large profits upon the moneys allowed for maintaining this class of the population.

Taking advantage of the generally and loudly expressed public opinion, that "something must be done," the Poor-Law Board succeeded in establishing some school districts near the metropolis. The first step taken was to purchase Mr. Aubin's place at Norwood, and thus take it into their own hands. This school had long been regarded as the best of its class, and as one where many steps of great practical value had been taken for the improved treatment of youthful paupers. The purchase-money of this school is said to have been about eleven thousand pounds, and the authorities wisely retained the aid of the man who had originated it, to carry out still further into effect their improved plans. This step was soon followed by others. In the publication of the Poor-Law Board, just issued—the promoters of our present poor-law system long ago saw the mischiefs of this plan, and after some years' consideration, and many difficulties, succeeded in procuring an Act of Parliament for the establishment of district

pauper Industrial Schools. But though the law was made, it was found impossible to overcome the objections raised by parish authorities, and it was not carried out to any extent, until the terrible calamity of footing startled all England with the spectacle of hundreds of deaths by cholera, in an establishment where the little unfortunates were "farmed out."

In the Second Annual Report of the Poor-Law Board, Mr. Baines, its President, says, that three very important school districts have, within the year, been formed in and near the metropolis. These are:—

"1st. The Central London School District, comprising the City of London Union, the East London Union, and the St. Saviour's Union. The Board of Management of this district have completed all their arrangements and hold their regular meetings. They have purchased of Mr. Aubin his premises at Norwood for the district school, retaining him in the capacity of steward or superintendant of the establishment, and have appointed an efficient staff of teachers in every department. The school is now in full activity, upon an improved footing, and nearly eight hundred children (nine hundred) are maintained and educated in it.

"2nd. The South Metropolitan School District comprised, as originally formed, the Union of St. Olave's, and the large parishes, not in Union, of Bermondsey, Camberwell, and Rotherhithe.

"3rd. The North Surrey School District includes the Unions of Wandsworth and Clapham, Kingston, Croydon, Richmond, and Lewisham. The managers have purchased fifty acres of land near Norwood, and have commenced the erection of a building capable of accommodating six hundred children.

"It will thus be seen that provision has been made in and around London for the proper education and training of more than two thousand poor children. We have, moreover, sanctioned arrangements whereby, when completed, the state of the children of other metropolitan parishes will be very materially improved."

About nine hundred children are congregated at Norwood, and out of the whole number there is not perhaps a dozen the offspring of decent parents. Many are foundlings, picked up at the corners of streets, or at the doors of parish officers. The names of some of them suggest an idea of how they began life. Thus, one owned the name of Olive Jewry, whilst another was called Alfred City. Others have lost both parents by death, and been left pining living legacies to the parish, but the majority are the children of parents living in workhouses. When able-bodied paupers claim relief, they are "offered the house." They are received into the Union, and their children are sent up to this out-of-town school, that fresh air, cleanliness, good food and the schoolmaster, may try what can be done to lift them up from the slough of pauperism. Let us examine the process through which they go.

The children, on their first appearance at this Norwood School, are usually in the most

parts of the country. A boy gets this promotion in life by his own merits. For instance, at the Norwood Pauper-School, the most apt pupil becomes, as elsewhere, the monitor of his form or class. When the day of examination arrives, he distinguishes himself before the Government Inspector of Schools. This official is empowered thereupon to select him as a "pupil-teacher," &c.; he becomes an apprentice to the art of instruction. To encourage the chief-master of the school to help on his boys to this reward, an allowance of three pounds a year is made to the master for each boy who thus distinguishes himself, and thus gains promotion. Thus, there being twelve boys at Norwood so in training, Mr. Ineson, their instructor, gains thirty-six pounds a year for his success in bringing forward that number of his scholars.

In appearance, the boys have little to recommend them, and it is tolerably evident, that if not raised a little in the social scale—if not taught to do something and know something—they would inevitably belong to the class of incurable paupers, who burden poor-rates and hang about workhouses all their lives. Society must educate such boys, if only in self-defence. Some of them are at first most turbulent, but by patient management they gradually subside into the orderly arrangements of the place, and often those at first most unruly become the quickest boys in the school. The energy that would make them nuisances, when rightly directed makes them most useful.

When the hours of teaching are over, the boys are assembled in one of the large open yards belonging to the establishment, and are there exercised by the drill-master. This official is an ex-non-commissioned officer of Guards, who in a short time makes the metamorphosis seen on parade. The ungainly, slouching, slow lout, is taught to march, wheel right or left, in concert with others, punctually and accurately. They answer the command, "left wheel," "right form, four deep," and so on, like little soldiers, and seem to like the fun. This gives them at once exercise in the fresh air, notions of regularity and prompt attention, and a habit of obedience to discipline.

There is also a naval class. Behind the school is a play-ground, two acres in extent, and in the centre of this stands a ship. True, its deck is of earth, but there are bulwarks, real bulwarks all round, and rising up above are genuine lofty masts, with rigging complete. Up these ropes the boys swarm with great delight. At a given signal they "man the yards," give three miniature cheers, and then, all in chorus, sing God save the Queen. They evidently like the fun, pride themselves, boy-like, upon their feline power of climbing, and one or two of them show their expertness and bravery by disdaining the rope-ladder—pardon us, the shrouds—and slide down the main-stay from the top of the foremast to the bowsprit.

All these things are evident sources of enjoyment; for running, and climbing, and shouting in the open air, are natural to the human animal in a normal state of existence. Of the climbing, there is a story, told which illustrates the character of a very worthy man now passed away. Dr. Stanley, the late Bishop of Norwich, paid many visits to this school, and always looked on with evident pleasure whilst the lads were enjoying themselves with their ship. One day the good-natured dignitary was looking on, when he began to rub his hands together, and presently turning to an officer of the place who stood by, said in a genial, half confidential tone, "If I were not a bishop I'd join in and climb that pole myself!"

Besides this drill, or parade, and this exercise aloft, the boys, on two days of the week, are employed in the Industrial training of the place. The smaller boys, in classes of about thirty-five, are ranged on benches round a large tailor's shop. Patterns decorate the walls, and "corduroys" in all stages, from the huge bale to the perfect breeches, are seen all round the room. The boys stitch and sew, and make and mend, under the instruction of a master tailor, a large part of the clothes worn in the place. When each boy grows bigger he is drafted into a neighbouring shop, where, also, under a competent master, he learns the craft of St. Crispin. It is curious to see thirty or forty little cobblers, all in rows, waxing and stitching, and hammering on lap-stones, and entering *con amore* into the mysteries of sole and upper leathers, brads, pegs, and sparrowbills. When they have learned all these things, some of the lads pass into a third shop, where they are made acquainted with the forge, and anvil, and sledge hammer, and where they help to shoe horses, construct iron bedsteads, and make and mend all the iron-work (and there is a great deal of it) required by this family party of nearly a thousand souls—pauper children, masters, and servants, together. After going through all these stages of training, with the incidental knowledge picked up in the stables with the horses, in the playground with the dogs, when helping to feed the pigs, and whilst aiding the operation of milking the twenty-five cows which supply milk for the house, the boys have acquired a great amount of useful knowledge. The place is indeed a little colony in itself, and if its inmates had not often to pass from it back to the sinkholes of London, they might leave Norwood almost with the certainty of becoming good and prosperous citizens.

THE STEEL PEN.

WE remember (early remembrances are more durable than recent) an epithet employed by Mary Wolstonecroft, which then seemed as happy as it was original:—"The *iron* pen of Time." Had the vindicatrix of the "Rights of Women" lived in these days (fifty years later), when the iron pen is the almost universal instrument of writing, she would have bestowed upon Time a less common material for recording his doings.

Whilst we are remembering, let us look back for a moment upon our earliest school-days—the days of large text and round hand. Twenty urchins sit at a long desk, each intent upon making his *copy*. A nicely mended pen has been given to each. Our own labour goes on successfully, till, in school-boy phrase, the pen begins to splutter. A bold effort must be made. We leave the form, and timidly address the writing-master with—"Please, sir, mend my pen." A slight frown subsides as he sees that the quill is very bad—too soft or too hard—used to the stump. He dashes it away, and snatching a feather from a bundle—a poor thin feather, such as green geese drop on a common—shapes it into a pen. This mending and making process occupies all his leisure—occupies, indeed, many of the minutes that ought to be devoted to instruction. He has a perpetual battle to wage with his bad quills. They are the meanest produce of the plucked goose.

And is this process still going on in the many thousand schools of our land, where, with all drawbacks of imperfect education, both as to numbers educated and gifts imparted, there are about two millions and a half of children under daily instruction? In remote rural districts, probably; in the towns certainly not. The steam-engine is now the pen-maker. Hecatombs of geese are consumed at Michaelmas and Christmas; but not all the geese in the world would meet the demand of England for pens. The supply of *patés de foie gras* will be kept up—that of quills, whether known as *primers*, *seconds*, or *pinions*, must be wholly inadequate to the wants of a writing people. Wherever geese are bred in these islands, so assuredly, in each succeeding March, will every full-fledged victim be

robbed of his quills; and then turned forth on the common, a very waddling and impotent goose, quite unworthy of the name of bird. The country schoolmaster, at the same spring-time, will continue to buy the smallest quills, at a low price, clarify them after his own rude fashion, make them into pens, and sorely spite the boy who splits them up too rapidly. The better quills will still be collected, and find their way to the quill dealer, who will exercise his empirical arts before they pass to the stationer. He will plunge them into heated sand, to make the external skin peel off, and the external membrane shrivel up; or he will saturate them with water, and alternately contract and swell them before a charcoal fire; or he will dip them in nitric acid, and make them of a gaudy brilliancy but a treacherous endurance. They will be sorted according to the quality of the barrels, with the utmost nicety. The experienced buyer will know their value by looking at their feathery ends, tapering to a point; the uninitiated will regard only the quill portion. There is no article of commerce in which the market value is so difficult to be determined with exactness. For the finest and largest quills no price seems unreasonable; for those of the second quality too exorbitant a charge is often made. The foreign supply is large, and probably exceeds the home supply of the superior article. What the exact amount is we know not. There is no duty now on quills. The tariff of 1845—one of the most lasting monuments of the wisdom of our great commercial minister—abolished the duty of half-a-crown a thousand. In 1832 the duty amounted to four thousand two hundred pounds, which would show an annual importation of thirty-three millions one hundred thousand quills; enough, perhaps, for the commercial clerks of England, together with the quills of home growth;—but how to serve a letter-writing population?

The ancient reign of the quill-pen was first seriously disturbed about twenty-five years ago. An abortive imitation of the form of a pen was produced before that time; a clumsy, inelastic, metal tube fastened in a bone or ivory handle, and sold for half-a-crown. A man might make his mark with one—but as to writing, it was a mere delusion. In due course came more carefully finished inventions

for the luxurious, under the tempting names of ruby pen, or diamond pen—with the plain gold pen, and the rhodium pen, for those who were sceptical as to the jewellery of the inkstand. The economical use of the quill received also the attention of science. A machine was invented to divide the barrel lengthwise into two halves; and, by the same mechanical means, these halves were subdivided into small pieces, cut pen-shape, slit, and nibbed. But the pressure upon the quill supply grew more and more intense. A new power had risen up in our world—a new seed sown—the source of all good, or the dragon's teeth of Cadmus. In 1818 there were only one-hundred and sixty-five thousand scholars in the monitorial schools—the new schools, which were being established under the auspices of the National Society, and the British and Foreign School Society. Fifteen years afterwards, in 1833, there were three-hundred and ninety thousand. Ten years later, the numbers exceeded a million. Even a quarter of a century ago two-thirds of the male population of England, and one-half of the female, were learning to write; for in the Report of the Registrar-General for 1846, we find this passage:—"Persons when they are married are required to sign the marriage-register; if they cannot write their names, they sign with a mark: the result has hitherto been, that nearly one man in three, and one woman in two, married, sign with marks." This remark applies to the period between 1839 and 1845. Taking the average age of men at marriage as twenty-seven years, and the average age of boys during their education as ten years, the marriage-register is an educational test of male instruction for the years 1824—28. But the gross number of the population of England and Wales was rapidly advancing. In 1821 it was twelve millions; in 1831, fourteen millions; in 1841, sixteen millions; in 1851, taking the rate of increase at fourteen per cent., it will be eighteen millions and a half. The extension of education was proceeding in a much quicker ratio; and we may therefore fairly assume that the proportion of those who make their marks in the marriage-register has greatly diminished since 1844.

But, during the last ten years, the natural desire to learn to write, of that part of the youthful population which education can reach, has received a great moral impulse by a wondrous development of the most useful and pleasurable exercise of that power. The uniform penny postage has been established. In the year 1838, the whole number of letters delivered in the United Kingdom was seventy-six millions; in this year that annual delivery has reached the prodigious number of three hundred and thirty-seven millions. In 1838, a Committee of the House of Commons thus denounced, amongst the great commercial evils of the high rates of postage, their injurious effects upon the great bulk of the

people:—"They either act as a grievous tax on the poor, causing them to sacrifice their little earnings to the pleasure and advantage of corresponding with their distant friends, or compel them to forego such intercourse altogether; thus subtracting from the small amount of their enjoyments, and obstructing the growth and maintenance of their best affections." Honoured be the man who broke down these barriers! Praised be the Government that, for once, stepping out of its fiscal tram-way, dared boldly to legislate for the domestic happiness, the educational progress, and the moral elevation of the masses! The steel pen, sold at the rate of a penny a dozen, is the creation, in a considerable degree, of the Penny Postage stamp; as the Penny Postage stamp was a representative, if not a creation, of the new educational power. Without the steel pen, it may reasonably be doubted whether there were mechanical means within the reach of the great bulk of the population for writing the three hundred and thirty-seven millions of letters that now annually pass through the Post Office.

Othello's sword had "the ice-brook's temper;" but not all the real or imaginary virtues of the stream that gave its value to the true Spanish blade could create the elasticity of a steel pen. Flexible, indeed, is the Toledo. If thrust against a wall, it will bend into an arc that describes three-fourths of a circle. The problem to be solved in the steel-pen, is to convert the iron of Danneborra into a substance as thin as the quill of a dove's pinion, but as strong as the proudest feather of an eagle's wing. The furnaces and hammers of the old armourers could never have solved this problem. The steel pen belongs to our age of mighty machinery. It could not have existed in any other age. The demand for the instrument, and the means of supplying it, came together.

The commercial importance of the steel pen was first manifested to our senses a year or two ago at Sheffield. We had witnessed all the curious processes of converting iron into steel, by saturating it with carbon in the converting furnace;—of tilting the bars so converted into a harder substance, under the thousand hammers that shake the waters of the Sheaf and the Don; of casting the steel thus converted and tilted into ingots of higher purity; and, finally, of *milling*, by which the most perfect development of the material is acquired under enormous rollers. About two miles from the metropolis of steel, over whose head hangs a canopy of smoke through which the broad moors of the distance sometimes reveal themselves, there is a solitary mill where the tilting and rolling processes are carried to great perfection. The din of the large tilts is heard half a mile off. Our ears tingle, our legs tremble, when we stand close to their operation of beating bars of steel into the greatest possible density; for the whole building vibrates as the workmen swing before

them in suspended baskets, and shift the bar at every movement of these hammers of the Titans. We pass onward to the more quiet rolling department. The bar that has been tilted into the most perfect compactness has now to acquire the utmost possible tenuity. A large area is occupied by furnaces and rollers. The bar of steel is dragged out of the furnace at almost a white heat. There are two men at each roller. It is passed through the first pair, and its squareness is instantly elongated and widened into flatness;—rapidly through a second pair,—and a third,—and a fourth,—and a fifth.—The bar is becoming a sheet of steel. Thinner and thinner it becomes, until it would seem that the workmen can scarcely manage the fragile substance. It has spread out, like a morsel of gold under the beater's hammer, into an enormous leaf. The least attenuated sheet is only the hundredth part of an inch in thickness; some sheets are made as thin as the two-hundredth part of an inch. And for what purpose is this result of the labours of so many workmen, of such vast and complicated machinery, destined?—what the final application of a material employing so much capital in every step, from the Swedish mine to its transport by railroad to some other seat of British industry? *The whole is prepared for one Steel-pen Manufactory at Birmingham.*

There is nothing very remarkable in a steel-pen manufactory, as regards ingenuity of contrivance or factory organisation. Upon a large scale of production the extent of labour engaged in producing so minute an article is necessarily striking. But the process is just as curious and interesting, if conducted in a small shop as in a large. The pure steel, as it comes from the rolling mill, is cut up into strips about two inches and a half in width. These are further cut into the proper size for the pen. The pieces are then annealed and cleansed. The maker's name is neatly impressed on the metal; and a cutting-tool forms the slit, although imperfectly in this stage. The pen shape is given by a convex punch pressing the plate into a concave die. The pen is formed when the slit is perfected. It has now to be hardened, and finally cleansed and polished, by the simple agency of friction in a cylinder. All the varieties of form of the steel pen are produced by the punch; all the contrivances of slits and apertures above the nib, by the cutting-tool. Every improvement has had for its object to overcome the rigidity of the steel,—to imitate the elasticity of the quill, whilst bestowing upon the pen a superior durability.

The perfection that may reasonably be demanded in a steel pen has yet to be reached. But the improvement in the manufacture is most decided. Twenty years ago, to one who might choose, regardless of expense, between the quill pen and the steel, the best Birmingham and London production was an abomination. But we can trace the gradual ac-

quiescence of most men in the writing implement of the multitude. Few of us, in an age when the small economies are carefully observed, and even paraded, desire to use quill pens at ten or twelve shillings a hundred, as Treasury Clerks once luxuriated in their use,—an hour's work, and then a new one. To mend a pen, is troublesome to the old and even the middle-aged man who once acquired the art; the young, for the most part, have not learnt it. The most painstaking and penurious author would never dream of imitating the wondrous man who translated Pliny with "one grey goose quill." Steel pens are so cheap, that if one scratches or splutters, it may be thrown away, and another may be tried. But when a really good one is found, we cling to it, as worldly men cling to their friends; we use it till it breaks down, or grows rusty. We can do no more; we handle it as Isaak Walton handled the frog upon his hook, "as if we loved him." We could almost fancy some analogy between the gradual and decided improvement of the steel pen—one of the new instruments of education—and the effects of education itself upon the mass of the people. An instructed nation ought to present the same gradually perfecting combination of strength with elasticity. The favourites of fortune are like the quill, ready made for social purposes, with a little scraping and polishing. The bulk of the community have to be formed out of ruder and tougher materials—to be converted, welded, and tempered into pliancy. The manners of the great British family have decidedly improved under culture—"enollit mores;" may the sturdy self-respect of the race never be impaired!

TWO CHAPTERS ON BANK NOTE FORGERIES.

CHAPTER I.

VIOLIN's division of violin-playing into two great classes—good playing and bad playing—is applicable to Bank note making. The processes employed in manufacturing good Bank notes we have already described; we shall now cover a few pages with a faint outline of the various arts, stratagems, and contrivances employed in concocting bad Bank notes. The picture cannot be drawn with very distinct or strong markings. The tableaux from which it is copied are so interwisted and complicated with clever, slippery, ingenious scoundrelism, that a finished chart of it would be worse than morally displeasing;—it would be tedious.

All arts require time and experience for their development. When anything great is to be done, first attempts are nearly always failures. The first Bank note forgery was no exception to this rule, and its story has a spice of romance in it. The affair has never been circumstantially told; but some research enables us to detail it:—

In the month of August, 1757, a gentleman living in the neighbourhood of Lincoln's Inn Fields named Bliss, advertised for a clerk. There were, as was usual even at that time, many applicants; but the successful one was a young man of twenty-six, named Richard William Vaughan. His manners were so winning and his demeanour so much that of a gentleman (he belonged indeed to a good country family in Staffordshire, and had been a student at Pembroke Hall, Oxford), that Mr. Bliss at once engaged him. Nor had he occasion, during the time the new clerk served him, to repent the step. Vaughan was so diligent, intelligent, and steady, that not even when it transpired that he was, commercially speaking, "under a cloud," did his master lessen confidence in him. Some enquiry into his antecedents showed that he had, while at College, been extravagant; that his friends had removed him thence; set him up in Stafford as a wholesale linen draper, with a branch establishment in Aldersgate Street, London; that he had failed, and that there was some difficulty about his certificate. But so well did he excuse his early failings and account for his misfortunes, that his employer did not check the regard he felt growing towards him. Their intercourse was not merely that of master and servant. Vaughan was a frequent guest, at Bliss's table; by-and-by a daily visitor to his wife, and—to his ward.

Miss Bliss was a young lady of some attractions, not the smallest of which was a handsome fortune. Young Vaughan made the most of his opportunities. He was well-looking, well-informed, dressed well, and evidently made love well, for he won the young lady's heart. The guardian was not flinty hearted, and acted like a sensible man of the world. "It was not," he said on a subsequent and painful occasion, "till I learned from the servants and observed by the girl's behaviour that she greatly approved Richard Vaughan, that I consented; but on condition that he should make it appear that he could maintain her. I had no doubt of his character as a servant, and I knew his family were respectable. His brother is an eminent attorney." Vaughan boasted that his mother (his father was dead), was willing to re-instate him in business with a thousand pounds; five hundred of which was to be settled upon Miss Bliss for her separate use.

So far all went on prosperously. Providing Richard Vaughan could attain a position satisfactory to the Blisses, the marriage was to take place on the Easter Monday following, which the Calendar tells us happened early in April, 1758. With this understanding, he left Mr. Bliss's service, to push his fortune.

Months passed on, and Vaughan appears to have made no way in the world. He had not even obtained his bankrupt's certificate. His visits to his affianced were frequent, and his protestations passionate; but he had effected

nothing substantial towards a happy union. Miss Bliss's guardian grew impatient; and, although there is no evidence to prove that the young lady's affection for Vaughan was otherwise than deep and sincere, yet even she began to lose confidence in him. His excuses were evidently evasive, and not always true. The time fixed for the wedding was fast approaching; and Vaughan saw that something must be done to restore the young lady's confidence.

About three weeks before the appointed Easter Tuesday, Vaughan went to his mistress in high spirits. All was right: his certificate was to be granted in a day or two; his family had come forward with the money, and he was to continue the Aldersgate business he had previously carried on as a branch of the Stafford trade. The capital he had waited so long for, was at length forthcoming. In fact, here were two hundred and forty pounds of the five hundred he was to settle on his beloved. Vaughan then produced twelve twenty-pound notes; Miss Bliss could scarcely believe her eyes. She examined them. The paper she remarked seemed rather thicker than usual. "Oh," said Bliss, "all Bank bills are not alike." The girl was naturally much pleased. She would hasten to apprise Mistress Bliss of the good news.

Not for the world! So far from letting any living soul know he had placed so much money in her hands, Vaughan exacted an oath of secrecy from her, and sealed the notes up in a parcel with his own seal; making her swear that she would on no account open it till after their marriage.

"Some days after, that is, 'on the twenty-second of March' (1758) we are describing the scene in Mr. Bliss's own words—"I was sitting with my wife by the fireside. The prisoner and the girl were sitting in the same room—which was a small one—and although they whispered, I could distinguish that Vaughan was very urgent to have something returned which he had previously given to her. She refused, and Vaughan went away in an angry mood. I then studied the girl's face, and saw that it expressed much dissatisfaction. Presently a tear broke out. I then spoke, and insisted on knowing the dispute. She refused to tell, and I told her that until she did, I would not see her. The next day I asked the same question of Vaughan; he hesitated. 'Oh!' I said, 'I dare say it is some ten or twelve pound matter—something to buy a wedding bauble with.' He answered that it was much more than that, it was near three hundred pounds! 'But why all this secrecy,' I said; and he answered it was not proper for people to know he had so much money till his certificate was signed. I then asked him to what intent he had left the notes with the young lady? He said, as I had of late suspected him, he designed to give her a proof of his affection and truth. I said, 'You have demanded them in such a way that,

it must be construed as an abatement of your affection towards her." Vaughan was again exceedingly urgent in asking back the packet; but Bliss remembering his many evasions, and supposing that this was a trick, declined advising his niece to restore the parcel without proper consideration. The very next day it was discovered that the notes were counterfeits.

This occasioned stricter enquiries into Vaughan's previous career. It turned out that he bore the character in his native place of a dissipated and not very scrupulous person. The intention of his mother to assist him was an entire fabrication, and he had given Miss Bliss the forged notes solely for the purpose of deceiving her on that matter. Meanwhile the forgeries became known to the authorities, and he was arrested. By what means, does not clearly appear. The "Annual Register" says that one of the engravers gave information; but we find nothing in the newspapers of the time to support that statement; neither was it corroborated at Vaughan's trial.

When Vaughan was arrested he thrust a piece of paper into his mouth, and began to chew it violently. It was, however, rescued, and proved to be one of the forged notes; fourteen of them were found on his person, and when his lodgings were searched twenty more were discovered.

Vaughan was tried at the Old Bailey on the seventh of April, before Lord Mansfield. The manner of the forgery was detailed minutely at the trial:—On the first of March (about a week before he gave the twelve notes to the young lady) Vaughan called on Mr. John Corbould, an engraver, and gave an order for a promissory note to be engraved with these words:—

"No. ———.

"I promise to pay to ———, or Bearer, ———, London ———."

There was to be a Britannia in the corner. When it was done, Mr. Sneed (for that was the *alias* Vaughan adopted) came again, but objected to the execution of the work. The Britannia was not good, and the words "I promise" were too near the edge of the plate. Another was in consequence engraved, and on the fourth of March Vaughan took it away. He immediately repaired to a printer, and had forty-eight impressions taken on thin paper, provided by himself. Meanwhile, he had ordered, on the same morning, of Mr. Charles Foudrinier, another engraver, a second plate, with what he called "a direction," in the words, "For the Governor and Company of the Bank of England." This was done, and about a week later he brought some paper, each sheet "folded up," said the witness, "very curiously, so that I could not see what was in them. I was going to take the papers from him, but he said he must go upstairs with me, and see them worked off himself. I took him upstairs; he would not let me have them out of

his hands. I took a sponge and wetted them, and put them one by one on the plate in order for printing them. After my boy had done two or three of them, I went downstairs, and my boy worked the rest off, and the prisoner came down and paid me."

Here the Court pertinently asked, "What imagination had you when a man thus came to you to print on secret paper, 'the Governor and Company of the Bank of England?'"

The engraver's reply was:—"I then did not suspect anything. But I shall take care for the future." As this was the first Bank of England note forgery that was ever perpetrated, the engraver was held excused.

It may be mentioned as an evidence of the delicacy of the reporters that, in their account of the trial, Miss Bliss's name is not mentioned. Her designation is "a young lady." We subjoin the notes of her evidence:—

"A young lady (sworn). The prisoner delivered me some bills; these are the same (producing twelve counterfeit Bank notes sealed up in a cover, for twenty pounds each), said they were Bank bills. I said they were thicker paper—he said all bills are not alike. I was to keep them till after we were married. He put them into my hands to show he put confidence in me, and desired me not to show them to any body; sealed them up with his own seal, and obliged me by an oath not to discover them to any body. And I did not till he had discovered them himself. He was to settle so much in Stock on me."

Vaughan urged in his defence that his sole object was to deceive his affianced, and that he intended to destroy all the notes after his marriage. But it had been proved that the prisoner had asked one John Ballingar to change first one, and then twenty of the notes; but which that person was unable to do. Besides, had his sole object been to dazzle Miss Bliss with his fictitious wealth, he would most probably have entrusted more, if not all the notes, to her keeping.

He was found guilty, and passed the day that had been fixed for his wedding, as a condemned criminal.

On the 11th May, 1758, Richard William Vaughan was executed at Tyburn. By his side, on the same gallows, there was another forger: William Boodgere, a military officer, who had forged a draught on an army agent named Calcroft, and expiated the offence with the first forger of Bank of England notes.

The gallows may seem hard measure to have meted out to Vaughan, when it is considered that none of his notes were negotiated and no person suffered by his fraud. Not one of the forty-eight notes, except the twelve delivered to Miss Bliss, had been out of his possession; indeed the imitation must have been very clumsily executed, and detection would have instantly followed any attempt to pass the counterfeits. There was no endeavour to copy the style of engraving on a real Bank note. That was left to the engraver;

and as each sheet passed through the press twice, the words added at the second printing, "For the Governor and Company of the Bank of England," could have fallen into their proper place on any one of the sheets, only by a miracle. But what would have made the forgery clear to even a superficial observer was the singular omission of the second "n" in the word England.*

The criticism on Vaughan's note of a Bank clerk examined on the trial was:—"There is some resemblance, to be sure; but this note" (that upon which the prisoner was tried) "is numbered thirteen thousand eight hundred and forty, and we never reach so high a number." Besides there was no water-mark in the paper. The note of which a fac-simile appeared in our eighteenth number, and dated so early as 1699, has a regular design in the texture of the paper; showing that the water-mark is as old as the Bank notes themselves.

Vaughan was greatly commiserated. But despite the unskilfulness of the forgery, and the insignificant consequences which followed it, the crime was considered of too dangerous a character not to be marked, from its very novelty, with exemplary punishment. Hanging created at that time no remorse in the public mind, and it was thought necessary to set up Vaughan as a warning to all future Bank note forgers. The crime was too dangerous not to be marked with the severest penalties. Forgery differs from other crimes not less in the magnitude of the spoil it may obtain, and of the injury it inflicts, than in the facilities attending its accomplishment. The common thief finds a limit to his depredations in the bulkiness of his booty, which is generally confined to such property as he can carry about his person; the swindler raises insuperable and defeating obstacles to his frauds if the amount he seeks to obtain is so considerable as to awaken close vigilance or enquiry. To carry their projects to any very profitable extent, these criminals are reduced to the hazardous necessity of acting in concert, and thus infinitely increasing the risks of detection. But the forger need have no accomplice; he is burdened with no bulky and suspicious property; he needs no register to assist his contrivances. The skill of his own individual right hand can command thousands; often with the certainty of not being detected, and oftener with such rapidity as to enable him to baffle the pursuit of justice.

It was a long time before Vaughan's rude attempt was improved upon: but in the same year, (1758), another department of the crime was commenced with perfect success;—namely, an ingenious alteration, for fraudulent purposes, of real Bank notes. A few months after Vaughan's execution, one of the northern knights was stopped and robbed by a highway-

man; several Bank notes were comprised in the spoil, and the robber, setting up with these as a gentleman, went boldly to the Hatfield Post-office, ordered a chaise and four, rattled away down the road, and changed a note at every change of horses. The robbery was, of course, soon made known, and the numbers and dates of the stolen notes were advertised as having been stopped at the Bank. To the genius of a highwayman this offered but a small obstacle, and the gentleman-thief changed all the figures "1" he could find into "4's." These notes passed currently enough; but, on reaching the Bank, the alteration was detected, and the last holder was refused payment. As that person had given a valuable consideration for the note, he brought an action for the recovery of the amount; and at the trial it was ruled by the Lord Chief Justice, that "any person paying a valuable consideration for a Bank note, payable to bearer, in a fair course of business, has an understood right to receive the money of the Bank."

It took a quarter of a century to bring the art of forging Bank notes to perfection. In 1779, this was nearly attained by an ingenious gentleman named Mathison, a watchmaker, from the matrimonial village of Gretna Green. Having learnt the arts of engraving and of simulating signatures, he tried his hand at the notes of the Darlington Bank; but, with the confidence of skill, was not cautious in passing them, was suspected, and absconded to Edinburgh. Scorning to let his talent be wasted, he favoured the Scottish public with many spurious Royal Bank of Scotland notes, and regularly forged his way by their aid to London. At the end of February he took handsome lodgings in the Strand, opposite Arundel Street. His industry was remarkable; for, by the 12th of March, he had planned and polished rough pieces of copper, engraved them, forged the water-mark, printed and negotiated several impressions. His plan was to travel and to purchase articles in shops. He bought a pair of shoe-buckles at Coventry with a forged note, which was eventually detected at the Bank of England. He had got so bold that he paid such frequent visits in Threadneedle Street that the Bank clerks became familiar with his person. He was continually changing notes of one, for another denomination. These were his originals, which he procured to make spurious copies of. One day seven thousand pounds came in from the Stamp Office. There was a dispute about one of the notes. Mathison, who was present, though at some distance, declared, oracularly, that the note was a good one. How could he know so well? A dawn of suspicion arose in the minds of the clerks; one trail led into another, and Mathison was finally apprehended. So well were his notes forged that, on the trial, an experienced Bank clerk declared he could not tell whether the note handed him to examine was forged or.

* Bad orthography was by no means uncommon in the most important documents of that period; the days of the week, in the day-books of the Bank of England itself, are spelt in a variety of ways.

not. Mathison offered to reveal his secret of forging the water-mark, if mercy were shown to him; this was refused, and he suffered the penalty of his crime.

Mathison was a genius in his criminal way, but a greater than he appeared in 1786. In that year perfection seemed to have been reached. So considerable was the circulation of spurious paper-money that it appeared as if some unknown power had set up a bank of its own. Notes were issued from it, and readily passed current, in hundreds and thousands. They were not to be distinguished from the genuine paper of Thread-needle Street. Indeed, when one was presented there, in due course, so complete were all its parts; so masterly the engraving; so correct the signatures; so skilful the watermark, that it was promptly paid; and only discovered to be a forgery when it reached a particular department. From that period forged paper continued to be presented, especially at the time of lottery drawing. Consultations were held with the police. Plans were laid to help detection. Every effort was made to trace the forger. Clarke, the best detective of his day, went, like a sluth-hound, on the track; for in those days the expressive word "blood-money" was known. Up to a certain point there was little difficulty; but beyond that, consummate art defied the ingenuity of the officer. In whatever way the notes came, the train of discovery always paused at the lottery-offices. Advertisements offering large rewards were circulated; but the unknown forger baffled detection.

While this base paper was in full currency, there appeared an advertisement in the Daily Advertiser for a servant. The successful applicant was a young man, in the employment of a musical-instrument maker; who, some time after, was called upon by a coachman, and informed that the advertiser was waiting in a coach to see him. The young man was desired to enter the conveyance, where he beheld a person with something of the appearance of a foreigner, sixty or seventy years old, apparently troubled with the gout. A camel surtout was buttoned round his mouth; a large patch was placed over his left eye; and nearly every part of his face was concealed. He affected much infirmity. He had a faint hectic cough; and invariably presented the patched side to the view of the servant. After some conversation—in the course of which he represented himself as guardian to a young nobleman of great fortune—the interview concluded with the engagement of the applicant; and the new servant was directed to call on Mr. Brank, at 29, Titchfield Street, Oxford Street. At this interview Brank inveighed against his whimsical ward for his love of speculating in lottery tickets; and told the servant that his principal duty would be to purchase them. After one or two meetings, at each of which

Brank kept his face muffled, he handed a forty and twenty pound Bank note; told the servant to be very careful not to lose them; and directed him to buy lottery tickets at separate offices. The young man fulfilled his instructions, and at the moment he was returning, was suddenly called by his employer from the other side of the street, congratulated on his rapidity, and then told to go to various other offices in the neighbourhood of the Royal Exchange, and to purchase more shares. Four hundred pounds in Bank of England Notes were handed him, and the wishes of the mysterious Mr. Brank were satisfactorily effected. These scenes were continually enacted. Notes to a large amount were thus circulated; lottery-tickets purchased; and Mr. Brank—always in a coach, with his face studiously concealed—was ever ready on the spot to receive them. The surprise of the servant was somewhat excited; but had he known that from the period he left his master to purchase the tickets, one female figure accompanied all his movements; that when he entered the offices, it waited at the door, peered cautiously in at the window, hovered around him like a second shadow, watched him carefully, and never left him until once more he was in the company of his employer—that surprise would have been greatly increased.* Again and again were these extraordinary scenes rehearsed. At last the Bank obtained a clue, and the servant was taken into custody. The directors imagined that they had secured the actor of so many parts; that the flood of forged notes which had inundated that establishment would at length be dammed up at his source. Their hopes proved fallacious, and it was found that "Old Patch," (as the mysterious forger was, from the servant's description, nick-named) had been sufficiently clever to baffle the Bank directors. The house in Titchfield Street was searched; but Mr. Brank had deserted it, and not a trace of a single implement of forgery was to be seen.

All that could be obtained was some little knowledge of "Old Patch's" proceedings. It appeared that he carried on his paper coining entirely by himself. His only confidant was his mistress. He was his own engraver. He even made his own ink. He manufactured his own paper. With a private press he worked his own notes; and counterfeited the signatures of the cashiers, completely. But these discoveries had no effect; for it became evident that Mr. Patch had set up a press elsewhere. Although his secret continued as impenetrable, his notes became as plentiful as ever. Five years of unbounded prosperity ought to have satisfied him; but it did not. Success seemed to pall him. His genius was of that insatiable order which demands new excitements, and a constant succession of new fights. The following

* Francis's History of the Bank of England.

paragraph from a newspaper of 1786 relates to the same individual:—

"On the 17th of December, ten pounds was paid into the Bank, for which the clerk, as usual, gave a ticket to receive a Bank note of equal value. This ticket ought to have been carried immediately to the cashier, instead of which the bearer took it home, and curiously added an 0 to the original sum, and returning, presented it so altered to the cashier, for which he received a note of one hundred pounds. In the evening, the clerks found a deficiency in the accounts; and on examining the tickets of the day, not only that but two others were discovered to have been obtained in the same manner. In the one, the figure 1 was altered to 4, and in another to 5, by which the artist received, upon the whole, nearly one thousand pounds."

To that princely felony, Old Patch, as will be seen in the sequel, added smaller misdemeanors which one would think were far beneath his notice; except to convince himself and his mistress of the unbounded facility of his genius for fraud.

At that period the affluent public were saddled with a tax on plate; and many experiments were made to evade it. Among others, one was invented by a Mr. Charles Price, a stock-jobber and lottery-office keeper, which, for a time, puzzled the tax-gatherer. Mr. Charles Price lived in great style, gave splendid dinners, and did everything on the grandest scale. Yet Mr. Charles Price had no plate! The authorities could not find so much as a silver tooth-pick on his magnificent premises. In truth, what he was too cunning to possess, he borrowed. For one of his sumptuous entertainments, he hired the plate of a silversmith in Cornhill, and let the value in bank-notes as security for its safe return. One of these notes having proved a forgery, was traced to Mr. Charles Price; and Mr. Charles Price was not to be found at that particular juncture. Although this excited no surprise—for he was often an absentee from his office for short periods—yet in due course and as a formal matter of business, an officer was set to find him, and to ask his explanation regarding the false note. After tracing a man who he had a strong notion was Mr. Charles Price through countless lodgings and innumerable disguises, the officer (to use his own expression) "nabbed" Mr. Charles Price. But, as Mr. Clarke observed, his prisoner and his prisoner's lady were even then "too many" for him; for although he lost not a moment in trying to secure the forging implements, after he had discovered that Mr. Charles Price, and Mr. Brank, and Old Patch, were all concentrated in the person of his prisoner, he found the lady had destroyed every trace of evidence. Not a vestige of the forging factory was left. Not the point of a graver, nor a single spot of ink, nor a shred of silver paper, nor a scrap of anybody's handwriting, was to be met with. Despite, however, this paucity of evi-

dence to convict him, Mr. Charles Price had not the courage to face a jury, and eventually he saved the judicature and the Tyburn executive much trouble and expense, by hanging himself in Bridewell.

The success of Mr. Charles Price has never been surpassed; and even after the darkest era in the history of Bank forgeries—which dates from the suspension of cash payments, in February, 1797, and which will be treated of in a succeeding paper—"Old Patch" was still remembered as the Cæsar of Forgers.

THE TWO GUIDES OF THE CHILD.

A SPIRIT near me said, "Look forth upon the Land of Life. What do you see?"

"Steep mountains, covered by a mighty plain, a table-land of many-coloured beauty. Beauty, nay, it seems all beautiful at first, but now I see that there are some parts barren."

"Are they quite barren?—look more closely still!"

"No, in the wildest deserts, now, I see some gum-dropping acacias, and the crimson blossom of the cactus. But there are regions that rejoice abundantly in flower and fruit; and now, O Spirit, I see men and women moving to and fro."

"Observe them, mortal."

"I behold a world of love; the men have women's arms entwined about them; some upon the verge of precipices—friends are running to the rescue. There are many wandering like strangers, who know not their road, and they look upward. Spirit, how many, many eyes are looking up as if to God! Ah, now I see some strike their neighbours down into the dust; I see some wallowing like swine; I see that there are men and women brutal."

"Are they quite brutal?—look more closely still."

"No, I see prickly sorrow growing out of crime, and penitence awakened by a look of love. I see good gifts bestowed out of the hand of murder, and see truth issue out of lying lips. But in this plain, O Spirit, I see regions—wide, bright regions,—yielding fruit and flower, while others seem perpetually veiled with fogs, and in them no fruit ripens. I see pleasant regions where the rock is full of clefts, and people fall into them. The men who dwell beneath the fog deal lovingly, and yet they have small enjoyment in the world around them, which they scarcely see. But whither are these women going?"

"Follow them."

"I have followed down the mountains to a haven in the vale below. All that is lovely in the world of flowers makes a fragrant bed for the dear children; birds singing, they breathe upon the pleasant air; the butterflies play with them. Their limbs shine white among the blossoms, and their mothers come down full of joy to share their innocent delight."

They pelt each other with the lilies of the valley. They call up at will fantastic masques, grim giants play to make them merry, a thousand grotesque loving phantoms kiss them; to each the another is the one thing real, the highest bliss—the next bliss is the dream of all the world beside. Some that are motherless, all mother's love. Every gesture, every look, every odour, every song, adds to the charm of love which fills the valley. Some little figures fall and die, and on the valley's soil they crumble into violets and lilies, with love-tears to hang in them like dew.

"Who dares to come down with a frown into this happy valley? A severe man seizes an unhappy, shrieking child, and leads it to the roughest ascent of the mountain. He will lead it over steep rocks to the plain of the future. On ugly needle-points he makes the child sit down, and teaches it its duty in the world above."

"Its duty, mortal! do you listen to the teacher?"

"Spirit, I hear now. The child is informed about two languages spoken by nations extinct centuries ago, and something else, O Spirit, about the base of a hypothesis."

"Does the child attend?"

"Not much; but it is beaten sorely, and its knees are bruised against the rocks, till it is hauled up, woe-begone and weary, to the upper plain. It looks about bewildered; all is strange,—it knows not how to act. Fogs crown the barren mountain paths. Spirit, I am unhappy; there are many children thus hauled up, and as young men upon the plain; they walk in fog, or among brambles; some fall into pits; and many, getting into flower-paths, lie down and learn. Some become active, seeking right, but ignorant of what right is; they wander among men out of their fog-land, preaching folly. Let me go back among the children."

"Have they no better guide?"

"Yes, now there comes one with a smiling face, and rolls upon the flowers with the little ones, and they are drawn to him. And he has magic spells to conjure up glorious spectacles of fairy land. He frolics with them and might be first cousin to the butterflies. He wreathes their little heads with flower garlands, and with his fairy land upon his lips he walks toward the mountains; eagerly they follow. He seeks the smoothest upward path, and that is but a rough one, yet they run up merrily, guide and children, butterflies pursuing still the flowers as they nod over a host of laughing faces. They talk of the delightful fairy world, and resting in the shady places learn of the yet more delightful world of God. They learn to love the Maker of the Flowers, to know how great the Father of the Stars must be, how good must be the Father of the Beetle. They listen to the story of the race they go to labour with upon the plain, and love it for the labour it has done. They learn old languages of men, to understand the past—more eagerly they learn the voices of the

men of their own day, that they may take part with the present. And in their study when they flag, they fall back upon thoughts of the Child Valley they are leaving. Sports and fancies are the rod and spur that bring them with new vigour to the lessons. When they reach the plain they try, "We know you, men and women; we know to what you have aspired for centuries; we know the love there is in you; we know the love there is in God; we come prepared to labour with you, dear, good friends. We will not call you clumsy when we see you tumble, we will try to pick you up; when we fall, you shall pick us up. We have been trained to love, and therefore we can aid you heartily, for love is labour!"

The Spirit whispered, "You have seen and you have heard. Go now, and speak unto your fellow-men: ask justice for the child."

To-day should love To-morrow, for it is a thing of hope; let the young Future not be nursed by Care. God gave not fancy to the child that men should stamp its blossoms down into the loose soil of intellect. The child's heart was not made full to the brim of love, that men should pour its love away, and bruise instead of kiss the trusting innocent. Love and fancy are the stems on which we may graft knowledge readily. What is called by some dry folks a solid foundation may be a thing not desirable. To cut down all the trees and root up all the flowers in a garden, to cover walks and flower-beds alike with a hard crust of well-rolled gravel, that would be to lay down your solid foundation after a plan which some think good in a child's mind, though not quite worth adopting in a garden. O, teacher, love the child and learn of it; so let it love and learn of you.

CHIPS.

EASY SPELLING AND HARD READING.

AN interesting case of educational destitution presents itself in the following letter. It is written by the son of a poor, but honest, brickmaker of Hammersmith, who emigrated to Sidney, and is now a shepherd at Bathurst. While the facts it contains are clearly stated, and the sentiments expressed are highly creditable to the writer—showing that his moral training had not been neglected by his parents—the orthography is such as we may safely affirm, would not have emanated from any human being with similar abilities, and in a similar station, than an Englishman.

England stands pre-eminent in this respect. The parents of this letter-writer were too poor to pay to have their child taught, and consequently with the best will in the world to be an ordinary scholar, he is unable to spell. The clever manner in which such letters are selected as represent the sounds he is in the habit of giving to each word, shows an aptitude which would assuredly have made

with the commonest cultivation a literate and useful citizen. More amusing orthography we have no where met; but the information it conveys is of the most useful kind. The reader will perceive that the points touched upon are precisely those respecting which he would wish to be informed, were he about to emigrate.

The epistle not only gives a truthful picture of an Australian shepherd's condition, but is in itself a lesson and a censure on that want of national means of education from which at least one-third of the adult population of England suffer, and of which the writer is an especial victim and example:—

"Deer mother and father and sisters i foot these few lines hoopin to find you All well for I arr in gudd halth my self and i wood root befor onley i was very un settled and nbw i have root i houp you will rite back as soon as you can and send how you all arr and likewise our frends and i am hired my self for a sheaprd 12 munts for 19 pound and my keep too for it was to soun for our work when i arive in the cuntry it is a plesent and a helthay cuntry and most peple dows well in it as like onley it is a grait cuntry for durnkerds and you do not Xpket for them to do well no woer i have not got any folt to find of the cuntry for after few theres man can bee is own master if hee like for the wagers is higher then tha arr at hom and the previsian is seeper and peple do not work so hard as they do at tom and if any wne wish to com com at worco and dwn with it same as i did and take no feer oof the soc whot ever for i did not see any danger whot ever and it is a cuntry that puur poapole can get a gud living in hoostlue wich they can not at tom i arr vrey well plesed off the cuntry and i should bee very happy if i had som reliashon over with mee and i am 230 miles up the cuntry and wee had a very plesent voygo ogor in deed and likewise luckey and vrey little sicknass and no deths deer mother and father i houp you will lett our frends no how i am geeting on and der frends you take no heed whot peple says about horstler take and past your own thouths about it and if any body wishes to com i wood swade them to com con peple can geet a gud living there wer tha cant at tome and peple beter com and geet a belly full then to stop at tome and work day and night then onely get haf a bely full and i am shuur that no body can not find any folt off the cuntry eXcep tis peple do not now when tha arr doing well [price of pervison] tee lb 1s to 3s suuger lb 2d to 6d coofe lb 8d to 1s bred lb 1d to 2d beef lb 1d to 2d mutten ditto baken lb 6d to 1s. pork lb 2d to 4d butter lb 6d to 1s chees lb 4d to 8d pertas price as tome sope lb 4d to 6d starch and blue and sooder home price bandles lb 4d to 6d rice lb 2d to 4d hags hom price trokle lb 4d to 5d solt lb 1d peper nounc 2d tabaker lb 1s to 6s beer 4d pot at sedmay and up in the pool 1s spirits hom price frut happles pars horengs lemons peashes gusbryes curneth cheerys cokelnut storbyes rubbers nuts of all sorts vegtbls of all sorts price of cloths much the same as tome stok vrey reasonble sheep 2s 6d heed wait about 80 pounds fat bullok about 1000 wit 3l pour hors from 2l to 10l ther is wonderful gruit many black in the cuntry but tha will not hurt any one if you will let them solze.

A VERY OLD SOLDIER.

THE following is a chip from a block whence we have already taken a few shavings:—"Kohl's Travels in the Netherlands." It describes the National Hospital for the Aged at Brussels. Some of the inmates whom he found in it, though still alive, belong to history. It must have been with a sort of archaic emotion that our inquisitive friend found himself speaking to a man who had escorted Marie Antoinette from Vienna to Paris, on the occasion of her marriage!

"The magnitude of the *Hospice des Vieillards* in Brussels," says Mr. Kohl, "fully realises the idea of a National establishment. The building itself fulfils all the required conditions of extent, solidity, and convenience. The gardens, court-yards, and apartments are spacious and well arranged. The sleeping and eating rooms are large, and well furnished; and it is pleasing to observe, here and there, the walls adorned with pictures painted in oil-colours. The inmates of this *Hospice* pass their latter days in the enjoyment of a degree of happiness and comfort which would be unattainable in their own homes. The

chapel is situated only at the distance of a few paces from the main building, and is connected with it by means of a roofed corridor; thus obviating the difficulties which prevent old people from attending places of public worship when, as it frequently happens, they are situated at long and inaccessible distances from their dwellings. In winter the Chapel of the *Hospice* is carefully warmed and secured against damp.

"At the time of my visit to the *Hospice des Vieillards* in Brussels, the establishment contained about seven hundred inmates, of both sexes, between the ages of seventy and eighty. Of this number six hundred and fifteen were maintained at the charge of the establishment, and seventy-five, being in competent circumstances, defrayed their own expenses. That the number of those able to maintain themselves should bear so considerable a relative proportion to the rest, is a fact which bears strong testimony in favour of the merits of the establishment. Those who support themselves live in a style more or less costly, according to the amount of their respective payments. Some of the apartments into which I was conducted certainly presented such an air of comfort that persons, even of a superior condition of life, could scarcely have desired better.

"I learned from the Governor of the *Hospice* that the average cost of the maintenance of each individual was about seventy-five centimes per day, making a total diurnal expenditure of six hundred francs, or of two hundred thousand francs per annum. But as this estimate includes the wages of attendants and the expenses consequent on repairs of the building, it may fairly be calculated that each individual costs about three hundred francs per annum. The *Hospice* frequently receives liberal donations and bequests from opulent private persons.

"For such of the pensioners as are able to work, employment is provided: others are appointed to fill official posts in the veteran Republic. Now and then a little task-work is imposed; but the *Hospice* being rich, this duty is not exacted with the precision requisite in establishments for the young, where the inmates having a long worldly career before them, it is desirable that they should be trained in habits of regularity and industry. The pensioners of the Brussels *Hospice des Vieillards*, enjoy much freedom; and they are even allowed some amusements and indulgences, which it might not be proper to concede to young persons. For example, they are permitted to play at cards; but it will scarcely be said there is anything objectionable in such an indulgence to old persons who have run out their worldly course; for even were they fated once more to enter into society, their example could neither be very useful nor very dangerous. Here and there I observed groups of the pensioners, male and female, seated at cards, staking

their pocket-money of which each has a small allowance, on the hazard of the game. The penalties assigned for misdemeanours are very mild, consisting merely in the offending party being prohibited from going out, or, as it is called, *la priv e de la sortie*. In extreme cases the delinquent is confined to his or her own apartment.

"It has seldom been my lot to visit a charitable institution, which created in my mind so many pleasing impressions as those I experienced in the Hospital for the Old in Brussels. It was gratifying to observe in the spacious court-yards the cheerful and happy groups of grey-haired men and women, sunning themselves in the open air. Some were playing at cards, whilst here and there the females were seated at work, and men sauntering about smoking their pipes and gossiping. Every now and then I met an old man whistling or singing whilst he paced to and fro. More than one of these veterans had been eye-witnesses of interesting historical events, which now belong to a past age. Several of them had served as soldiers during the Austrian dominion in Belgium. Of these the porter of the Hospital was one.

"The most remarkable character in the whole establishment was an old Dutchman, named Jan Hermann Jankens, who was born at Leyden in the year 1735. At the time when I saw him, he was one hundred and nine years of age; or, to quote his own description of himself, he was "*leste, vaillant, et sain*."

"Il nous rapelle en vain
Apr s un si cle de s jour,
Ses plaisirs ainsi que ses amertumes."

"These lines were inscribed beneath his portrait, which hung in his own apartment. I remarked that the painter had not flattered him. 'You are right, Sir,' replied he; 'the fact is, I am much younger than my portrait,' and to prove that he was making no vain boast, he sprang up, and cut several capers, with surprising agility. His faculties were unimpaired, and he was a remarkable example of that vigorous organisation which sometimes manifests itself in the human frame; and which excites our wonder when we find that such delicate structures as the nerves of sight and hearing may be used for the space of a century without wearing out. Until within two years of the time when I saw Jankens, he had been able to work well and actively. His hand was firm and steady, and he frequently wrote letters to his distant friends. When in his one hundred and seventh year, he thought, very reasonably, that he might give up work. 'And what do you do now?' I enquired. 'I enjoy my life,' replied he; 'I saunter about the whole day long, singing, smoking, and amusing myself. I spend my time very gaily!'

"'Yes, Sir; he dances, drinks, and sings all day long!' exclaimed, in a half-jeering, half-envious tone, another veteran, named

Watermans, who had joined us, and who, though *only* ninety years of age, was much more feeble than Jankens.

"I learned from the latter that he had had fifteen children; but that of all his large family, only one survived, though most of them had lived to a goodly age. His memory was stored with recollections of events connected with the marriage of Louis the Sixteenth; for, when a soldier in the Austrian service, he had formed one of the military escort which conducted Marie Antoinette into France. He sang me an old song, which had been composed in honour of the Royal nuptials, and which he said was very popular at the time. It was in the usual style of such effusions; a mere string of hyperbolic compliments, in praise of the 'beauteous Princess,' and the 'illustrious Prince.' It sounded like an echo from the grave of old French loyalty. Jankens sang this song in a remarkably clear, strong voice; but nevertheless, the performance did not give satisfaction to old Watermans, who, thrusting his fingers into his ears, said peevishly, 'What a croaking noise!'

"Heedless of this discouraging remark, the venerable centenarian was preparing to favour me with another specimen of his vocal ability, when the great bell in the court-yard rang for supper. 'Pardon, Sir,' said Jankens, with an apologetic bow, 'but—supper.' Whereupon he hurried off in the direction of the refectory, with that sort of eager yearning with which it might be imagined he turned to his mother's breast one hundred and nine years before.

"It is amazing that that old fellow should have so sharp an appetite," observed the petulant Watermans, hobbling after him in a way which showed that he too was not altogether unprepared to do honour to the evening meal."

This Hospital for the Aged is a sort of National Almshouse not solely peculiar to Belgium. Private munificence does in England what is done abroad by Governments; but it is to be deplored that a more general provision for the superannuated does not exist in this country. Workhouses are indeed asylums for the old; but for those who are also delayed in worldly circumstances, they cannot afford those comforts which old age requires. Except Greenwich Hospital for sailors, and Chelsea Hospital for soldiers, we have no national institution for old people.

THE HOUSEHOLD JEWELS.

A TRAVELLER, from journeying
In countries far away,
Re-passed his threshold at the close
Of one calm Sabbath day;
A voice of love, a comely face,
A kiss of chaste delight,
Were the first things to welcome him
On that blest Sabbath night.

He stretched his limbs upon the hearth,
Before its friendly blaze,
And conjured up mixed memories
Of gay and gloomy days;
And felt that none of gentle soul,
However far he roam,
Can e'er forego, can e'er forget,
The quiet joys of home.

"Bring me my children!" cried the sire,
With eager, earnest tone;
"I long to press them, and to mark
How lovely they have grown;
Twelve weary months have passed away
Since I went o'er the sea,
To feel how sad and lone I was
Without my babes and thee."

"Refresh thee, as 'tis needful," said
The fair and faithful wife,
The while her pensive features paled,
And stirred with inward strife;
"Refresh thee, husband of my heart,
I ask it as a boon;
Our children are reposing, love;
Thou shalt behold them soon."

She spread the meal, she filled the cup,
She pressed him to partake;
He sat down blithely at the board,
And all for her sweet sake;
But when the frugal feast was done,
The thankful prayer preferred,
Again affection's fountain flowed;
Again its voice was heard.

"Bring me my children, darling wife,
I'm in an ardent mood;
My soul lacks purer aliment,
I long for other food;
Bring forth my children to my gaze,
Or ere I rage or weep,
I yearn to kiss their happy eyes
Before the hour of sleep."

"I have a question yet to ask;
Be patient, husband dear.
A stranger, one auspicious morn,
Did send some jewels here;
Until to take them from my care,
But yesterday he came,
And I restored them with a sigh:
—Dost thou approve, or blame?"

"I marvel much, sweet wife, that thou
Shouldst breathe such words to me;
Restore to man, resign to God,
Whate'er is lent to thee;
Restore it with a willing heart,
Be grateful for the trust;
Whate'er may tempt or try us, wife,
Let us be ever just."

She took him by the passive hand,
And up the moonlit stair,
She led him to their bridal bed,
With mute and mournful air;
She turned the cover down, and there,
In grave-like garments dressed,
Lay the twin children of their love,
In death's sereneest rest.

"These were the jewels lent to me,
Which God has deigned to own;
The precious caskets still remain,
But, ah, the gems are flown;

But thou dost teach me to resign
What God alone can claim ;
He giveth and he takes away,
Blest be His holy name !

The father gazed upon his babes,
The mother drooped apart,
Whilst all the woman's sorrow gushed
From her o'erburdened heart ;
And with the striving of her grief,
Which wrung the tears she shed,
Were mingled low and loving words
To the unconscious dead.

When the sad sire had looked his fill,
He veiled each breathless face,
And down in self-abasement bowed,
For comfort and for grace ;
With the deep eloquence of woe,
Poured forth his secret soul,
Rose up, and stood erect and calm,
In spirit healed and whole.

"Restrain thy tears, poor wife," he said,
"I learn this lesson still,
God gives, and God can take away,
Blest be His holy will !
Blest are my children, for they live
From sin and sorrow free,
And I am not all joyless, wife,
With faith, hope, love, and thee."

THE LABORATORY IN THE CHEST.

THE mind of Mr. Bagges was decidedly affected—beneficially—by the lecture on the Chemistry of a Candle, which, as set forth in a previous number of this journal, had been delivered to him by his youthful nephew. That learned discourse inspired him with a new feeling ; an interest in matters of science. He began to frequent the Polytechnic Institution, nearly as much as his club. He also took to lounging at the British Museum ; where he was often to be seen, with his left arm under his coat-tails, examining the wonderful works of nature and antiquity, through his eye-glass. Moreover, he procured himself to be elected a member of the Royal Institution, which became a regular house of call to him, so that in a short time he grew to be one of the ordinary phenomena of the place.

Mr. Bagges likewise adopted a custom of giving *conversazioni*, which, however, were always very private and select—generally confined to his sister's family. Three courses were first discussed ; then dessert ; after which, surrounded by an apparatus of glasses and decanters, Master Harry Wilkinson was called upon, as a sort of juvenile Davy, to amuse his uncle by the elucidation of some chemical or other physical mystery. Master Wilkinson had now attained to the ability of making experiments ; most of which, involving combustion, were strongly deprecated by the young gentleman's mamma ; but her opposition was overruled by Mr. Bagges, who argued that it was much better that a young dog should burn phosphorus before your face than let off gunpowder behind your back, to

say nothing of occasionally planting a cracker to your skirts. He maintained that playing with fire and water, throwing stones, and such like boys' tricks, as they are commonly called, are the first expressions of a scientific tendency—endeavours and efforts of the infant mind to acquaint itself with the powers of Nature.

His own favourite toys, he remembered, were squibs, suckers, squirts, and flings ; and he was persuaded that, by his having been denied them at school, a natural philosopher had been nipped in the bud.

Blowing bubbles was an example—by-the-bye, a rather notable one—by which Mr. Bagges, on one of his scientific evenings, was instancing the affinity of child's play to philosophical experiments, when he bethought him Harry had said on a former occasion that the human breath consists chiefly of carbonic acid, which is heavier than common air. How then, it occurred to his inquiring, though elderly mind, was it that soap-bladders, blown from a tobacco-pipe, rose instead of sinking ? He asked his nephew this.

"Oh, uncle !" answered Harry, "in the first place, the air you blow bubbles with mostly comes in at the nose and goes out at the mouth, without having been breathed at all. Then it is warmed by the mouth, and warmth, you know, makes a measure of air get larger, and so lighter in proportion. A soap-bubble rises for the same reason that a fire-balloon rises—that is, because the air inside of it has been heated, and weighs less than the same sized bubbleful of cold air."

"What, hot breath does !" said Mr. Bagges. "Well, now, it's a curious thing, when you come to think of it, that the breath should be hot—indeed, the warmth of the body generally seems a puzzle. It is wonderful, too, how the bodily heat can be kept up so long as it is. Here, now, is this tumbler of hot grog—a mixture of boiling water, and what d'ye call it, you scientific geniuses ?"

"Alcohol, uncle."

"Alcohol—well—or, as we used to say, brandy. Now, if I leave this tumbler of brandy-and-water alone—"

"If you do, uncle," interposed his nephew, archly.

"Get along, you idle rogue ! If I let that tumbler stand there, in a few minutes the brandy-and-water—eh ?—I beg pardon—the alcohol-and-water—gets cold. Now, why—why the deuce—if the brand—the alcohol-and-water cools ; why—how—how is it we don't cool in the same way, I want to know ? eh ?" demanded Mr. Bagges, with the air of a man who feels satisfied that he has propounded a "regular poser."

"Why," replied Harry, "for the same reason that the room keeps warm so long as there is a fire in the grate."

"You don't mean to say that I have a fire in my body ?"

"I do, though."

"Eh, now ? That's good," said Mr. Bagges.

"That reminds me of the man in love crying, 'Fire! fire!' and the lady said, 'Where, where?' And he called out, 'Here! here!' with his hand upon his heart. Eh?—but now I think of it—you said, the other day, that breathing was a sort of burning. Do you mean to tell me that I—eh?—have fire, fire, as the lover said, here, here—in short, that my chest is a grate or an Arnott's stove?"

"Not exactly so, uncle. But I do mean to tell you that you have a sort of fire burning partly in your chest; but also, more or less, throughout your whole body."

"Oh, Henry!" exclaimed Mrs. Wilkinson, "How can you say such horrid things!"

"Because they're quite true, mamma—but you needn't be frightened. The fire of one's body is not hotter than from ninety degrees, to one hundred and four degrees or so. Still it is fire, and will burn some things, as you would find, uncle, if, in using phosphorus, you were to let a little bit of it get under your nail."

"I'll take your word for the fact, my boy," said Mr. Bagges. "But, if I have a fire burning throughout my person—which I was not aware of, the only inflammation I am ever troubled with being in the great toe—I say, if my body is burning continually—how is it I don't smoke—eh? Come, now!"

"Perhaps you consume your own smoke," suggested Mr. Wilkinson, senior, "like every well-regulated furnace."

"You smoke nothing but your pipe, uncle, because you burn all your carbon," said Harry. "But, if your body doesn't smoke, it steams. Breathe against a looking-glass, or look at your breath on a cold morning. Observe how a horse reeks when it perspires. Besides—as you just now said you recollected my telling you the other day—you breathe out carbonic acid, and that, and the steam of the breath together, are exactly the same things, you know, that a candle turns into in burning."

"But if I burn like a candle—why don't I burn out like a candle?" demanded Mr. Bagges. "How do you get over that?"

"Because," replied Harry, "your fuel is renewed as fast as burnt. So perhaps you resemble a lamp rather than a candle. A lamp requires to be fed; so does the body—as, possibly, uncle, you may be aware."

"Eh?—well—I have always entertained an idea of that sort," answered Mr. Bagges, helping himself to some biscuits. "But the lamp feeds on train-oil."

"So does the Laplander. And you couldn't feed the lamp on turtle or mulligatawny, of course, uncle. But mulligatawny or turtle can be changed into fat—they are so, sometimes, I think—when they are eaten in large quantities, and fat will burn fast enough. And most of what you eat turns into something which burns at last, and is consumed in the fire that warms you all over."

"Wonderful, to be sure," exclaimed Mr.

Bagges. "Well, now, and how does this extraordinary process take place?"

"First, you know, uncle, your food is digested—"

"Not always, I am sorry to say, my boy," Mr. Bagges observed, "but go on."

"Well; when it is digested, it becomes a sort of fluid, and mixes gradually with the blood, and turns into blood, and so goes over the whole body, to nourish it. Now, if the body is always being nourished, why doesn't it keep getting bigger and bigger, like the ghost in the Castle of Otranto?"

"Eh? Why, because it loses as well as gains, I suppose. By perspiration—eh—for instance?"

"Yes, and by breathing; in short, by the burning I mentioned just now. Respiration, or breathing, uncle, is a perpetual combustion."

"But if my system," said Mr. Bagges, "is burning throughout, what keeps up the fire in my little finger—putting gout out of the question?"

"You burn all over, because you breathe all over, to the very tips of your fingers' ends," replied Harry.

"Oh, don't talk nonsense to your uncle!" exclaimed Mrs. Wilkinson.

"It isn't nonsense," said Harry. "The air that you draw into the lungs goes more or less over all the body, and penetrates into every fibre of it, which is breathing. Perhaps you would like to hear a little more about the chemistry of breathing, or respiration, uncle?"

"I should, certainly."

"Well, then; first you ought to have some idea of the breathing apparatus. The laboratory that contains this, is the chest, you know. The chest, you also know, has in it the heart and lungs, which, with other things in it, fill it quite out, so as to leave no hollow space between themselves and it. The lungs are a sort of air-sponges, and when you enlarge your chest to draw breath, they swell out with it, and suck the air in. On the other hand you narrow your chest and squeeze the lungs and press the air from them;—that is breathing out. The lungs are made up of a lot of little cells. A small pipe—a little branch of the windpipe—opens into each cell. Two blood-vessels, a little tiny artery, and a vein to match, run into it also. The arteries bring into the little cells dark-coloured blood, which has been all over the body. The veins carry out of the little cells bright scarlet-coloured blood, which is to go all over the body. So all the blood passes through the lungs, and in so doing, is changed from dark to bright scarlet."

"Black blood, didn't you say, in the arteries, and scarlet in the veins? I thought it was just the reverse," interrupted Mr. Bagges.

"So it is," replied Harry, "with all the other arteries and veins, except those that"

circulate the blood through the lung-cells. The heart has two sides, with a partition between them that keeps the blood on the right side separate from the blood on the left; both sides being hollow, mind. The blood on the right side of the heart comes there from all over the body, by a couple of large veins, dark, before it goes to the lungs. From the right side of the heart, it goes on to the lungs, dark still, through an artery. It comes back to the left side of the heart from the lungs, bright scarlet, through four veins. Then it goes all over the rest of the body from the left side of the heart, through an artery that branches into smaller arteries, all carrying bright scarlet blood. So the arteries and veins of the lungs on one hand, and of the rest of the body on the other, do exactly opposite work, you understand."

"I hope so."

"Now," continued Harry, "it requires a strong magnifying glass to see the lung-cells plainly, they are so small. But you can fancy them as big as you please. Picture any one of them to yourself of the size of an orange, say, for convenience in thinking about it; that one cell, with whatever takes place in it, will be a specimen of the rest. Then you have to imagine an artery carrying blood of one colour into it, and a vein taking away blood of another colour from it, and the blood changing its colour in the cell."

"Aye, but what makes the blood change its colour?"

"Recollect, uncle, you have a little branch from the windpipe opening into the cell which lets in the air. Then the blood and the air are brought together, and the blood alters in colour. The reason, I suppose you would guess, is that it is somehow altered by the air."

"No very unreasonable conjecture, I should think," said Mr. Bagges.

"Well; if the air alters the blood, most likely, we should think, it gives something to the blood. So first let us see what is the difference between the air we breathe in, and the air we breathe out. You know that neither we nor animals can keep breathing the same air over and over again. You don't want me to remind you of the Black Hole of Calcutta, to convince you of that; and I dare say you will believe what I tell you, without waiting till I can catch a mouse and shut it up in an air-tight jar, and show you how soon the unlucky creature will get uncomfortable, and begin to gasp, and that it will by-and-by die. But if we were to try this experiment—not having the fear of the Society for the Prevention of Cruelty to Animals, nor the fear of doing wrong, before our eyes—we should find that the poor mouse, before he died, had changed the air of his prison considerably. But it would be just as satisfactory, and much more humane, if you or I were to breathe in and out of a silk bag or a bladder till we could stand it no longer, and then collect the air which we had been

breathing in and out. We should find that a jar of such air would put out a candle. If we shook some lime-water with it, the lime-water would turn milky. In short, uncle, we should find that a great part of the air was carbonic acid, and the rest mostly nitrogen. The air we inhale is nitrogen, and oxygen; the air we exhale has lost most of its oxygen, and consists of little more than nitrogen and carbonic acid. Together with this, we breathe out the vapour of water, as I said before. Therefore in breathing, we give off exactly what a candle does in burning, only not so fast, after the rate. The carbonic acid we breathe out, shows that carbon is consumed within our bodies. The watery vapour of the breath is a proof that hydrogen is so too. We take in oxygen with the air, and the oxygen unites with carbon, and makes carbonic acid, and with hydrogen, forms water."

"Then don't the hydrogen and carbon combining with the oxygen—that is, burning—in the lungs, and isn't the chest the fireplace, after all?" asked Mr. Bagges.

"Not altogether, according to those who are supposed to know better. They are of opinion, that some of the oxygen unites with the carbon and hydrogen of the blood in the lungs; but that most of it is merely absorbed by the blood, and dissolved in it in the first instance."

"Oxygen absorbed by the blood? That seems odd," remarked Mr. Bagges. "How can that be?"

"We only know the fact that there are some things that will absorb gases—suck them in—make them disappear. Charcoal will, for instance. It is thought that the iron which the blood contains gives it the curious property of absorbing oxygen. Well; the oxygen going into the blood makes it change from dark to bright scarlet; and then this blood containing oxygen is conveyed all over the system by the arteries, and yields up the oxygen to combine with hydrogen and carbon as it goes along. The carbon and hydrogen are part of the substance of the body. The bright scarlet blood mixes oxygen with them, which burns them, in fact; that is, makes them into carbonic acid and water. Of course, the body would soon be consumed if this were all that the blood does. But while it mixes oxygen with the old substance of the body, to burn it up, it lays down fresh material to replace the lost. So our bodies are continually changing throughout, though they seem to us always the same; but then, you know, a river appears the same from year's end to year's end, although the water in it is different every day."

"Eh, then," said Mr. Bagges, "if the body is always on the change in this way, we must have had several bodies in the course of our lives, by the time we are old."

"Yes, uncle; therefore, how foolish it is to spend money upon funerals. What becomes

of all the bodies we use up during our lifetimes? If we are none the worse for their flying away in carbonic acid and other things without ceremony, what good can we expect from having a fuss made about the body we leave behind us, which is put into the earth? However, you are wanting to know what becomes of the water and carbonic acid which have been made by the oxygen of the blood burning up the old materials of our frame. The dark blood of the veins absorbs this carbonic acid and water, as the blood of the arteries does oxygen,—only, they say, it does so by means of a salt in it, called phosphate of soda. Then the dark blood goes back to the lungs, and in them it parts with its carbonic acid and water, which escapes as breath. As fast as we breathe out, carbonic acid and water leave the blood; as fast as we breathe in, oxygen enters it. The oxygen is sent out in the arteries to make the rubbish of the body into gas and vapour, so that the veins may bring it back and get rid of it. The burning of rubbish by oxygen throughout our frames is the fire by which our animal heat is kept up. At least this is what most philosophers think; though doctors differ a little on this point, as on most others, I hear. Professor Liebig says, that our carbon is mostly prepared for burning by being first extracted from the blood sent to it—which contains much of the rubbish of the system dissolved)—in the form of bile, and is then re-absorbed into the blood, and burnt. He reckons that a grown-up man consumes about fourteen ounces of carbon a-day. Fourteen ounces of charcoal a-day, or eight pounds two ounces a-week, would keep up a tolerable fire."

"I had no idea we were such extensive charcoal-burners," said Mr. Bagges. "They say we each eat our peck of dirt before we die—but we must burn bushels of charcoal."

"And so," continued Harry, "the Professor calculates that we burn quite enough fuel to account for our heat. I should rather think, myself, it had something to do with it—shouldn't you?"

"Eh?" said Mr. Bagges; "it makes one rather nervous to think that one is burning all over—throughout one's very blood—in this kind of way."

"It is very awful!" said Mrs. Wilkinson.

"If true. But in that case, shouldn't we be liable to inflame occasionally?" objected her husband.

"It is said," answered Harry, "that spontaneous combustion does happen sometimes; particularly in great spirit drinkers. I don't see why it should not, if the system were to become too inflammable. Drinking alcohol would be likely to load the constitution with carbon, which would be fuel for the fire, at any rate."

"The deuce!" exclaimed Mr. Bagges, pushing his brandy-and-water from him. "We

had better take care how we indulge in combustibles."

"At all events," said Harry, "it must be bad to have too much fuel in us. It must choke the fire I should think, if it did not cause inflammation; which Dr. Truepenny says it does, meaning, by inflammation, gout, and so on, you know, uncle."

"Ahem!" coughed Mr. Bagges.

"Taking in too much fuel, I dare say you know, uncle, means eating and drinking to excess," continued Harry. "The best remedy, the doctor says, for overstuffing is exercise. A person who uses great bodily exertion, can eat and drink more without suffering from it than one who leads an inactive life; a fox-hunter, for instance, in comparison with an alderman. Want of exercise and too much nourishment must make a man either fat or ill. If the extra hydrogen and carbon are not burnt out, or otherwise got rid of, they turn to blubber, or cause some disturbance in the system, intended by Nature to throw them off, which is called a disease. Walking, riding, running, increase the breathing—as well as the perspiration—and make us burn away our carbon and hydrogen in proportion. Dr. Truepenny declares that if people would only take in as much fuel as is requisite to keep up a good fire, his profession would be ruined."

"The good old advice—Baillie's, eh?—or Abernethy's—live upon sixpence a day, and earn it," Mr. Bagges observed.

"Well, and then, uncle, in hot weather the appetite is naturally weaker than it is in cold—less heat is required, and therefore less food. So in hot climates; and the chief reason, says the doctor, why people ruin their health in India is their spurring and goading their stomachs to crave what is not good for them, by spices and the like. Fruits and vegetables are the proper things to eat in such countries, because they contain little carbon compared to flesh, and they are the diet of the natives of those parts of the world. Whereas food with much carbon in it, meat, or even mere fat or oil, which is hardly anything else than carbon and hydrogen, are proper in very cold regions, where heat from within is required to supply the want of it without. That is why the Laplander is able, as I said he does, to devour train-oil. And Dr. Truepenny says that it may be all very well for Mr. McGregor to drink raw whiskey at deer-stalking in the Highlands, but if Major Campbell combines that beverage with the diversion of tiger-hunting in the East Indies, habitually, the chances are that the Major will come home with a diseased liver."

"Upon my word, sir, the whole art of preserving health appears to consist in keeping up a moderate fire within us," observed Mr. Bagges.

"Just so, uncle, according to my friend the Doctor. 'Adjust the fuel,' he says, 'to the draught—he means the oxygen; keep the

bellows properly at work, by exercise, and your fire will seldom want poking.' The Doctor's pokers, you know, are pills, mixtures, leeches, blisters, lancets, and things of that sort."

"Indeed? Well, then, my heart-burn, I suppose, depends upon bad management of my fire?" surmised Mr. Bagges.

"I should say that was more than probable, uncle. Well, now, I think you see that animal heat can be accounted for, in very great part at least, by the combustion of the body. And then there are several facts that—as I remember Shakspeare says—

"'help to thicken other proofs,
That do demonstrate thinly.'"

"Birds that breathe a great deal are very hot creatures; snakes and lizards, and frogs and fishes, that breathe but little, are so cold that they are called cold-blooded animals. Bears and dormice, that sleep all the winter, are cold during their sleep, whilst their breathing and circulation almost entirely stop. We increase our heat by walking fast, running, jumping, or working hard; which sets us breathing faster, and then we get warmer. By these means we blow up our own fire, if we have no other, to warm ourselves on a cold day. And how is it that we don't go on continually getting hotter and hotter?"

"Ah!" exclaimed Mr. Bagges, "I suppose that is one of Nature's mysteries."

"Why, what happens, uncle, when we take violent exercise? We break out into a perspiration; as you complain you always do, if you only run a few yards. Perspiration is mostly water, and the extra heat of the body goes into the water, and flies away with it in steam. Just for the same reason, you can't boil water so as to make it hotter than two hundred and twelve degrees; because all the heat that passes into it beyond that, unites with some of it and becomes steam, and so escapes. Hot weather causes you to perspire even when you sit still; and so your heat is cooled in summer. If you were to heat a man in an oven, the heat of his body generally wouldn't increase very much till he became exhausted and died. Stories are told of mountebanks sitting in ovens, and meat being cooked by the side of them. Philosophers have done much the same thing—Dr. Fordyce and others, who found they could bear a heat of two hundred and sixty degrees. Perspiration is our animal fire-escape. Heat goes out from the lungs, as well as the skin, in water; so the lungs are concerned in cooling us as well as heating us, like a sort of regulating furnace. Ah, uncle, the body is a wonderful factory, and I wish I were man enough to take you over it. I have only tried to show you something of the contrivances for warming it, and I hope you understand a little about that!"

"Well," said Mr. Bagges, "breathing, I un-

derstand you to say, is the chief source of animal heat, by occasioning the combination of carbon and hydrogen with oxygen, in a sort of gentle combustion, throughout our frame. The lungs and heart are an apparatus for generating heat, and distributing it over the body by means of a kind of warming pipes, called blood-vessels. Eh?—and the carbon and hydrogen we have in our systems we get from our food. Now, you see, here is a slice of cake, and there is a glass of wine—Eh?—now see whether you can get any carbon and oxygen out of that."

The young philosopher, having finished his lecture, applied himself immediately to the performance of the proposed experiment, which he performed with cleverness and dispatch.

THE HOME OF WOODRUFFE THE GARDENER.

IN EIGHT CHAPTERS.—CHAPTER THE SEVENTH.

It was observed by Woodruffe's family, during one week of spring of the next year, that he was very absent. He was not in low spirits, but absorbed in thought, and much devoted to making calculations with pencil and paper. At last, out it came, one morning at breakfast.

"I wonder how we should all like to have Harry Hardiman to work with us again?"

Every one looked up. Harry! where was Harry? Was he here? Was he coming?

"Why, I will tell you what I have been thinking," said their father. "I have thought long and carefully, and I believe I have made up my mind to send for Harry, to come and work for us as he used to do. We have not labour enough on the ground. Two stout men to the acre is the smallest allowance for trying what could be made of the place."

"That is what Taylor and Brown are employing now on the best part of their land," said Allan; "that is, when they can get the labour. There is such difference between that and one man to four or five acres, as there was before, that they can't always get the labour."

"Just so; and therefore," continued Woodruffe, "I am thinking of sending for Harry. Our old neighbourhood was not prosperous when we left it, and I fancy it cannot have improved, since; and Harry might be glad to follow his master to a thriving neighbourhood; and he is such a careful fellow that I dare say he has money for the journey,—even if he has a wife by this time, as I suppose he has."

Moss looked most pleased, where all were pleased, at the idea of seeing Harry again. His remembrance of Harry was of a tall young man, who used to carry him on his shoulders, and wheel him in the empty water-barrel, and sometimes offer to dip him in it when it was full, and show him how to dig in the sand-heap with his little wooden spade.

"Your rent, to be sure, is much lower than in the old place," observed Abby.

"Why, we must not build upon that," replied the father; "rent is rising here, and will rise. My landlord was considerate in lowering mine to 3*l*. per acre, when he saw how impossible it was to make it answer; and he says he shall not ask more yet, on account of the labour I laid out at the time of the drainage. But when I have partly repaid myself, the rent will rise to 5*l*.; and, in fact, I have made my calculations, in regard to Harry's coming, at a higher rent than that."

"Higher than that?"

"Yes: I should not be surprised if I found myself paying, as market-gardeners near London do, ten pounds per acre, before I die."

"Or rather, to let the ground to me, for that, father," said Allan, "when it is your own property, and you are tired of work, and disposed to turn it over to me, I will pay you ten pounds per acre then, and let you have all the cabbages you can eat, besides. It is capital land, and that is the truth. Come—shall that be a bargain?"

Woodruffe smiled, and said he owed a duty to Allan. He did not like to see him so hard worked as to be unable to take care of his own corner of the garden;—unable to enter fairly into the competition for the prizes at the Horticultural Show in the summer. Becky now, too, ought to be spared from all but occasional help in the garden. Above all, the ground was now in such an improving state that it would be waste not to bestow due labour upon it. Put in the spade where you would, the soil was loose and well-aired as needs be: the manure penetrated it thoroughly; the frost and heat pulverised, instead of binding it; and the crops were succeeding each other so fast, that the year would be a very profitable one.

"Where will Harry live, if he comes?" asked Abby.

"We must get another cottage added to the new row. Easily done! Cottages so healthy as these new ones pay well. Good rents are offered for them,—to save doctors' bills and loss of time from sickness;—and, when once a system of house-drainage is set agoing, it costs scarcely more, in adding a cottage to a group, to make it all right, than to run it up upon solid clay as used to be the way here. Well, I have good mind to write to Harry to-day. What do you think,—all of you?"

Fortified by the opinion of all his children, Mr. Woodruffe wrote to Harry. Meantime, Allan and Becky went to cut the vegetables that were for sale that day; and Moss delighted himself in running after and catching the pony in the meadow below. The pony was not very easily caught, for it was full of spirit. Instead of the woolly insipid grass that it used to crop, and which seemed to give it only fever and no nourishment, it now fed on sweet fresh grass, which had no sour stagnant water soaking its roots. The pony was so full of play this morning

that Moss could not get hold of it. Though much stronger than a year ago, he was not yet anything like so robust as a boy of his age should be; and he was growing heated, and perhaps a little angry, as the pony galloped off towards some distant trees, when a boy started up behind a bush, caught the halter, brought the pony round with a twitch, and led him to Moss. Moss fancied he had seen the boy before, and then his white teeth reminded Moss of one thing after another.

"I came for some marsh plants," said the boy. "You and I got plenty once, somewhere hereabouts: but I cannot find them now."

"You will not find any now. We have no marsh now."

The stranger said he dared not go back without them: mother wanted them badly. She would not believe him if he said he could not find any. There were plenty about two miles off, along the railway, among the clay-pits, he was told; but none nearer. The boy wanted to know where the clay-pits hereabouts were. He could not find one of them.

"I will show you one of them," said Moss; "the one where you and I used to hunt rats." And, leading the pony, he showed his old gipsy playfellow all the improvements, beginning with the great ditch,—now invisible from being covered in. While it was open, he said, it used to get choked, and the sides were plastered after rain, and soon became grass-grown, so that it was found worth while to cover it in; and now it would want little looking to for years to come. As for the clay-pit, where the rats used to pop in and out,—it was now a manure-pit, covered in. There was a drain into it from the pony's stable and from the pig-styes; and it was near enough to the garden to receive the refuse and sweepings. A heavy lid, with a ring in the middle, covered the pit, so that nobody could fall in, in the dark, and no smell could get out. Moss begged the boy to come a little further, and he would show him his own flower-bed; and when the boy was there, he was shown everything else: what a cart-load of vegetables lay cut for sale; and what an arbour had been made of the pent-house under which Moss used to take shelter, when he could do nothing better than keep off the birds; and how fine the ducks were,—the five ducks that were so serviceable in eating off the slugs; and what a comfortable nest had been made for them to lay their eggs in, beside the water-tank in the corner; and what a variety of scarecrows the family had invented,—each having one, to try which would frighten the sparrows most. While Moss was telling how difficult it was to deal with the sparrows, because they could not be frightened for more than three days by any kind of scarecrow, he heard Allan calling him, in a tone of vexation, at being kept waiting so long. In an instant the stranger boy was off,—leaping the gate, and flying along the meadow till he was hidden behind a hedge.

Two or three days after this one of the ducks was missing. The last time that the five had been seen together was when Moss was showing them to his visitor. The morning after Moss finally gave up hope, the glass of Allan's hotbed was found broken, and in the midst of the bed itself was a deep foot-track, crushing the cucumber plants, and, with them, Allan's hopes of a cucumber prize at the Horticultural Exhibition in the summer. On more examination, more mischief was discovered, some cabbages had been stolen, and another duck was missing. In the midst of the general concern, Woodruffe burst out a-laughing. It struck him that the chief of the scarecrows had changed his hat; and so he had. The old straw hat which used to flap in the wind so serviceably was gone, and in its stead appeared a helmet,—a sancepan full of holes, battered and split, but still fit to be a helmet to a scarecrow.

"I could swear to the old hat," observed Woodruffe, "if I should have the luck to see it on anybody's head."

"And so could I," said Becky, "for I mended it,—bound it with black behind, and green before, because I had not green ribbon enough. But nobody would wear it before our eyes."

"That is why I suspect there are strangers hovering about. We must watch."

Now Moss, for the first time, bethought himself of the boy he had brought in from the meadow; and now, for the first time, he told his family of that encounter.

"I never saw such a simpleton," his father declared. "There, go along and work! Now, don't cry, but hold up like a man and work."

Moss did cry; he could not help it; but he worked too. He would fain have been one of the watchers, moreover; but his father said he was too young. For two nights he was ordered to bed, when Allan took his dark lantern, and went down to the pent-house; the first night accompanied by his father, and the next by Harry Hardiman, who had come on the first summons. By the third evening, Moss was so miserable that his sisters interceded for him, and he was allowed to go down with his old friend Harry.

It was a starlight night, without a moon. The low country lay dim, but unobscured by mist. After a single remark on the fineness of the night, Harry was silent. Silence was their first business. They stole round the fence as if they had been thieves themselves, listened for some time before they let themselves in at the gate, passed quickly in, and looked the gate (the lock of which had been well oiled), went behind every screen, and along every path, to be sure that no one was there, and finally, perceiving that the remaining ducks were safe, settled themselves in the darkness of the pent-house.

There they sat, hour after hour, listening. If there had been no sound, perhaps they could not have borne the effort; but the sense was relieved by the bark of a dog at a distance;

and then by the hoot of the owl that was known to have done them good service, in mousing, many a time; and, once, by the passage of a train on the railway above. When these were all over, poor Moss had much ado to keep awake, and at last his head sank on Harry's shoulder, and he forgot where he was, and everything else in the world. He was awakened by Harry's moving, and then whispering quite into his ear:—

"Sit you still. I hear somebody yonder. No—sit you still. I won't go far—not out of call: but I must get between them and the gate."

With his lantern under his coat, Harry stole forth, and Moss stood up, all alone in the darkness and stillness. He could hear his heart beat, but nothing else, till footsteps on the path came nearer and nearer. They came quite up; they came in, actually into the arbour; and then the ducks were certainly fluttering. In an instant more, there was a gleam of light upon the white plumage of the ducks, and then light enough to show that this was the gipsy boy, with a dark lantern hung round his neck, and, at the same moment, to show the gipsy boy that Moss was there. The two boys stood, face to face, motionless from utter amazement, and the ducks had scuttled and waddled away before they recovered themselves. Then, Moss flew at him in a glorious passion, at once of rage and fear.

"Leave him to me, Moss," cried Harry, casting light upon the scene from his lantern, while he collared the thief with the other hand. "Let go, I say, Moss. There, now we'll go round and be sure whether there is any one else in the garden, and then we'll lodge this young rogue where he will be safe."

Nobody was there, and they went home in the dawn, locked up the thief in the shed, and slept through what remained of the night.

It was about Mr. Nelson's usual time for coming down the line; and it was observed that he now always stopped at this station till the next train passed,—probably because it was a pleasure to him to look upon the improvement of the place. It was no surprise therefore to Woodruffe to see him standing on the embankment after breakfast; and it was natural that Mr. Nelson should be immediately told that the gipsies were here again, and how one of them was caught thieving.

"Thieving! So you found some of your property upon him, did you!"

"Why, no. I thought myself that it was a pity that Moss did not let him alone till he had laid hold of a duck or something."

"Pho! pho! don't tell me you can punish the boy for theft, when you can't prove that he stole anything. Give him a whipping, and let him go."

"With all my heart. It will save me much trouble to finish off the matter so."

Mr. Nelson seemed to have some curiosity about the business; for he accompanied Woodruffe to the shed. The boy seemed to

feel no awe of the great man whom he supposed to be a magistrate, and when asked whether he felt none, he giggled and said "No;" he had seen the gentleman more afraid of his mother than anybody ever was of him, he fancied. On this, a thought struck Mr. Nelson. He would now have his advantage of the gipsy woman, and might enjoy, at the same time, an opportunity of studying human nature under stress—a thing he liked, when the stress was not too severe. So he passed a decree on the spot that, it being now nine o'clock, the boy should remain shut up without food till noon, when he should be severely flogged, and driven from the neighbourhood: and with this pleasant prospect before him, the young rogue remained, whistling ostentatiously, while his enemies locked the door upon him.

"Did you hear him shoot the bolt?" asked Woodruffe. "If he holds to that, I don't know how I shall get at him at noon."

"There, now, what fools people are! Why did you not take out the bolt? A pretty constable you would make! Come—come this way. I am going to find the gipsy-tent again. You are wondering that I am not afraid of the woman, I see: but, you observe, I have a hold over her this time. What do you mean by allowing those children to gather about your door? You ought not to permit it."

"They are only the scholars. Don't you see them going in? My daughter keeps a little school, you know, since her husband's death."

"Ah, poor thing! poor thing!" said Mr. Nelson, as Abby appeared on the threshold, calling the children in.

Mr. Nelson always contrived to see some one or more of the family when he visited the station; but it so happened, that he had never entered the door of their dwelling. Perhaps he was not himself fully conscious of the reason. It was, that he could not bear to see Abby's young face within the widow's cap, and to be thus reminded that hers was a case of cruel wrong; that if the most ordinary thought and care had been used in preparing the place for human habitation, her husband might be living now, and she the happy creature that she would never be again.

On his way to the gipsies, Mr. Nelson saw some things that pleased him in his heart, though he found fault with them all. What business had Woodruffe with an additional man in his garden? It could not possibly answer. If it did not, the fellow must be sent away again. He must not burden the parish. The occupiers here seemed all alike. Such a fancy for new labour! One, two, six men at work on the land within sight at that moment, over and above what there used to be! It must be looked to. Humph! he could get to the alders dryshod now; but that was owing solely to the warmth of the spring. It was nonsense to attribute every-

thing to drainage. Drainage was a good thing; but fine weather was better.

The gipsy-tent was found behind the alders as before, but no longer in a swamp. The woman was sitting on the ground at the entrance as before, but not now with a fevered child laid across her knees. She was weaving a basket.

"Oh, I see," said Woodruffe, "This is the way our osiers go."

"You have not many to lose, now-a-days," said the woman.

"You are welcome to all the rushes you can find," said Woodruffe; "but where is your son?"

Some change of countenance was seen in the woman; but she answered carelessly that the children were playing yonder.

"The one I mean is not there," said Woodruffe. "We have him safe—caught him stealing my ducks."

She called the boy a villain—disowned him, and so forth; but when she found the case a hopeless one, she did not, and therefore, probably could not, scold—that is, anybody but herself and her husband. She cursed herself for coming into this silly place, where now no good was to be got. When she was brought to the right point of perplexity about what to do, seeing that it would not do to stay, and being unable to go while her boy was in durance, she was told that his punishment should be summary, though severe, if she would answer frankly certain questions. When she had once begun giving her confidence, she seemed to enjoy the license. When her husband came up, he looked as if he only waited for the departure of his visitors to give his wife the same amount of thrashing that her son was awaiting elsewhere. She vowed that they would never pitch their tent here again. It used to be the best station in their whole round—the fogs were so thick! From sunset to long after sunrise, it had been as good as a winter night, for going where they pleased without fear of prying eyes. There was not a poultry-yard or pig-stye within a couple of miles round, where they could not creep up through the fog. And they escaped the blame, too; for the swamp and ditches used to harbour so much vermin, that the gipsies were not always suspected, as they were now. Till lately, people shut themselves into their homes, or the men went to the public-house in the chill evenings; and there was little fear of meeting any one. But now that the fogs were gone, people were out in their gardens, on these fine evenings, and there were men in the meadows, returning from fishing; for they could angle now, when their work was done, without the fear of catching an ague in the marsh as they went home.

Mr. Nelson used vigorously his last opportunity of lecturing these people. He had it all his own way, for the humility of the gipsies was edifying. Woodruffe fancied he

saw some finger-talk passing, the while, though the gipsies never looked at each other, or raised their eyes from the ground. Woodruffe had to remind the Director that the whistle of the next train would soon be heard; and this brought the lecture to an abrupt conclusion. On his finishing off with, "I expect, therefore, that you will remember my advice, and never show your faces here again, and that you will take to a proper course of life in future, and bring up your son to honest industry;" the woman, with a countenance of grief, seized one hand and covered it with kisses, and the husband took the other hand and pressed it to his breast.

"We must make haste," observed Mr. Nelson, as he led the way quickly back; "but I think I have made some impression upon them. You see now the right way to treat these people. I don't think you will see them here again."

"I don't think we shall."

As he reached the steps the whistle was heard, and Mr. Nelson could only wave his hand to Woodruffe, rush up the embankment, and throw himself panting into a carriage. Only just in time!

By an evening train, he re-appeared. When thirty miles off, he had wanted his purse, and it was gone. It had no doubt paid for the gipsies' final gratitude.

Of course, a sufficient force was immediately sent to the alder clump; but there was nothing there but some charred sticks, and some clean pork bones, this time, instead of feathers of fowls, and a cabbage leaf or two. The boy had had his whipping at noon, after a conference with his little brother at the keyhole, which had caused him to withdraw the bolt, and offer no resistance. Considering his cries and groans, he had run off with surprising agility, and was now, no doubt, far away.

CHAPTER VIII.

THE gipsies came no more. The fogs came no more. The fever came no more; at least, in such a form as to threaten the general safety. Where it still lingered, it was about those only who deserved it,—in any small farm-house, where the dung-yard was too near the house; and in some cottage where the slatternly inmates did not mind a green puddle or choked ditch within reach of their noses. More dwellings arose, as the fertility of the land increased, and invited a higher kind of tillage; and among the prettiest of them was one which stood in the corner,—the most sunny corner,—of Woodruffe's paddock. Harry Hardiman and his wife and child lived there, and the cottage was Woodruffe's property.

Yet Woodruffe's rent had been raised; and pretty rapidly. He was now paying eight pounds per acre for his garden-ground, and half that for what was out of the limits of the garden. He did not complain of it; for he was making money fast. His skill and industry deserved this; but skill and industry

could not have availed without opportunity. His ground once allowed to show what it was worth, he treated it well; and it answered well to the treatment. By the railway, he obtained what manure he wanted from the town; and he sent it back by the railway to town in the form of crisp celery and salads, wholesome potatoes and greens, luscious strawberries, and sweet and early peas. He knew that a Surrey gardener had made his ground yield a profit of two hundred and twenty pounds per acre. He thought that, with his inferior market, he should do well to make his yield one hundred and fifty pounds per acre; and this, by close perseverance, he attained. He could have done it more easily if he had enjoyed good health; but he never enjoyed good health again. His rheumatism had fixed itself too firmly to be entirely removed; and, for many days in the year, he was compelled to remain within doors, or to saunter about in the sun, seeing his boys and Harry at work, but unable to help them.

From the time that Allan's work became worth wages, in addition to his subsistence, his father let him rent half a rood of the garden-ground for three years, saying—

"I limit it to three years, my boy, because that term is long enough for you to show what you can do. After three years, I shall not be able to spare the ground, at any rent. If you fail, you have no business to rent ground. If you succeed, you will have money in your pocket wherewith to hire land elsewhere. Now you have to show us what you can do."

"Yes, father," was Allan's short but sufficient reply.

It was observed by the family that, from this time forward, Allan's eye was on every plot of ground in the neighbourhood which could, by possibility, ever be offered for hire: yet did his attention never wander from that which was already under his hand. And that which was so great an object to him became a sort of pursuit to the whole family. Moss guarded Allan's frames, and made more and more prodigious scarecrows. Their father gave his very best advice. Becky, who was no longer allowed, as a regular thing, to work in the garden, found many a spare half-hour for hoeing and weeding, and trimming and tying up, in Allan's beds; and Abby found, as she sat in her little school, that she could make nets for his fruit trees. It was thus no wonder that, when a certain July day in the second year arrived, the whole household was in a state of excitement, because it was a sort of crisis in Allan's affairs.

Though breakfast was early that morning, Becky and Allan and Moss were spruce in their best clothes. A hamper stood at the door, and Allan was packing in another, which had no lid, two or three flower-pots, which presented a glorious show of blossom. Abby was putting a new ribbon on her sister's

straw bonnet; and Harry was in waiting to carry up the hampers to the station. It was the day of the Horticultural Show at the town. Woodruffe had been too unwell to think of going till this morning; but now the sight of the preparations, and the prospect of a warm day, inspired him, and he thought he would go. At last he went, and they were gone. Abby never went up to the station: nobody ever asked her to go there; not even her own child, who perhaps had not thought of the possibility of it. But when the train was starting, she stood at the upper window with her child, and held him so that he might lean out, and see the last carriage disappear, as it swept round the curve. After that the day seemed long, though Harry came up at his dinner-hour to say what he thought of the great gooseberry in particular, and of everything else that Allan had carried with him. It was holiday time, and there was no school to fill up the day. Before the evening, the child became restless, and Abby fell into low spirits, as she was apt to do when left long alone; so that Harry stopped suddenly at the door when he was rushing in to announce that the train was within sight.

"Shall I take the child, Miss?" said Harry. (He always called her "Miss.") "I will carry him—But, sure, here they come! Here comes Moss,—ready to roll down the steps! My opinion is that there's a prize."

Moss was called back by a voice which everybody obeyed. Allan should himself tell his sister the fortune of the day, their father said.

There were two prizes, one of which was for the wonderful plate of gooseberries; and at this news Harry nodded, and declared himself anything but surprised. If that gooseberry had not carried the day, there would have been partiality in the judges, that was all; and nobody could suppose such a thing as that. Yet Harry could have told, if put upon his honour, that he was rather disappointed that everything that Allan carried had not gained a prize. When he mentioned one or two, his master told him he was unreasonable; and he supposed he was.

Allan laid down on the table, for his sister's full assurance, his sovereign, and his half-sovereign, and his tickets. She turned away rather abruptly, and seemed to be looking whether the kettle was near boiling for tea. Her father went up to her; and on his first whispered words, the seb broke forth which made all look round.

"I was thinking of one, too, my dear, that I wish was here at this moment. I can feel for you, my dear."

"But you don't know—you don't know—you never knew——" She could not go on.

"What don't I know, my dear?"

"That he constantly blamed himself for saying anything to bring you here. He said you had never prospered from the hour you came, and now——"

And now Woodruffe could not speak, as

the past came back upon him. In a few moments, however, he rallied, saying,

"But we must consider Allan. He must not think that his success makes us sad."

Allan declared that it was not about gaining the prizes that he was chiefly glad. It was because it was now proved what a fair field he had before him. There was nothing that might not be done with such a soil as they had to deal with now.

Harry was quite of this opinion. There were more and more people set to work upon the soil all about them; and the more it was worked the more it yielded. He never saw a place of so much promise. And if it had a bad name in regard to healthiness, he was sure that was unfair,—or no longer fair. He and his were full of health and happiness, as they hoped to see everybody else in time; and, for his part, if he had all England before him, or the whole world, to choose a place to live in, he would choose the very place he was in, and the very cottage; and the very ground to work on that had produced such a gooseberry and such strawberries as he had seen that day.

THE SINGER.

Unto the loud acclaim that rose
To greet her as she came,
She bent with lowly grace that seemed
Such tribute to disclaim;
With arms meek folded on her breast
And drooping head, she stood;
Then raised a glance that seemed to plead
For youth and womanhood;
A soft, beseeching smile, a look,
As if all silently
The kindness to her heart she took,
And put the homage by.

She stood dejected then, methought,
A Captive, though a Queen,
Before the throng, when sudden passed
A change across her mien.
Unto her full, dilating eye,
Unto her slender hand,
There came a light of sovereignty,
A gesture of command:
And, to her lip, an eager flow
Of song, that seemed to bear
Her soul away on rushing wings
Unto its native air;
Her eye was fixed; her cheek flushed bright
With power; she seemed to call
On spirits that around her stood,
The radiant Queen of all;
There was no pride upon her brow,
No tumult in her breast;
Her soaring soul had won its home,
And smiled there as at rest;
She felt no more those countless eyes
Upon her; she had gained
A region where they troubled not
The joy she had attained!
Now, now, she spoke her native speech,
An utterance fraught with spells
To wake the echoes of the heart
Within their slumber-cells;

For at her wild and gushing strain,
The spirit was led back
By windings of a silver chain,
On many a long-lost track;
And many a quick unbidden sigh,
And starting tear, revealed
How surely at her touch the springs
Of feeling were unsealed;
They who were always loved, seemed now
Yet more than ever dear;
Yet closer to the heart they came,
That ever were so near:
And, trembling to the silent lips,
As if they ne'er had changed
Their names, returned in kindness back
The severed and estranged;
And in the strain, like those that fall
On wanderers as they roam,
The Exiled Spirit found once more
Its country and its home!

She ceased, yet on her parted lips
A happy smile abode,
As if the sweetness of her song
Yet lingered whence it flowed;
But, for a while, her bosom heaved,
She was the same no more,
The light and spirit fled; she stood
As she had stood before;
Unheard, unheeded to her ear
The shouts of rapture came,
A voice had once more power to thrill,
That only spoke her name.
Unseen, unheeded at her feet,
Fell many a bright bouquet;
A single flower, in silence given,
Was once more sweet than they;
Her heart had with her song returned
To days for ever gone,
Ere Woman's gift of Fame was her's,
The Many for the One.

E'en thus, O, Earth, before thee
Thy Poet Singers stand,
And bear the soul upon their songs
Unto its native land.
And even thus, with loud acclaim,
The praise of skill, of art,
Is dealt to those who only speak
The language of the heart!
While they who love and listen best,
Can little guess or know
The wounds that from the Singer's breast
Have bid such sweetness flow;
They know not mastership must spring
From conflict and from strife.
"These, these are but the songs they sing;"
They are the Singer's life!

A LITTLE PLACE IN NORFOLK.

THEODORE HOOK's hero, Jack Bragg, boasted of his "little place in Surrey." The Guardians of the Guiltcross poor have good reason to be proud of *their* little place in Norfolk. When the Guiltcross Union was formed, Mr. Thomas Rackham, master of the "house," set aside a small estate for the purpose of teaching the Workhouse children how to cultivate land. This pauper's patrimony consisted of exactly one acre one rood and thirty-five poles of very rough "sountry."

A certain number of the boys worked upon it so diligently, that it was soon found expedient to enlarge the domain, by joining to it three acres of "hills and holes," which in that state were quite useless for agricultural purposes. Two dozen spades were purchased at the outset to commence digging the land with, and six wheel-barrow were made by a pauper, who was a wheelwright; pickaxes and other tools were also fashioned with the assistance of the porter, who was a blacksmith. By means of these tools, and the labour of some fourteen sturdy boys, the whole of this barren territory was levelled, the top sward being carefully kept uppermost. We copy these and the other details from Mr. Rackham's report to the Guardians, for the information and encouragement of other Workhouse masters, who may have the will and the power to "go and do likewise."

It appears then, that by the autumn of 1846 one acre of the new land was planted with wheat, and two roods twenty-three poles of the home land—the one acre one rood and thirty-five poles mentioned above—was also planted with wheat, making in all one acre two roods and twenty-three poles under wheat for 1847. This land produced eighteen coombs three pecks beyond a sufficient quantity reserved for seed for the wheat crop of 1848. The remainder of the land was planted with Scotch kale, cabbages, potatoes, &c., &c., which began coming into use in March, 1847. The entire domain is now under fruitful cultivation.

"The quantity of vegetables actually consumed by the paupers according to the dietary tables only," says Mr. Rackham, "is charged in the provision accounts. Persons acquainted with domestic management and the produce of land are aware that, where vegetables are purchased, a great deal is paid for that which is useless for cooking purposes. In the present case this refuse is carefully preserved and used for feeding pigs, which were first kept in April 1848. This accounts for the large amount of pork fatted, as compared with the small quantity of corn and pollard used for the pigs. The leaves, &c., not eaten by the pigs, become valuable manure. If the Guardians would consent to keep cows, different roots and vegetables might be grown to feed them with; and these would produce an increased quantity of manure, whilst an increased quantity of manure would afford the means of raising a larger amount of roots and green crops, and secure a more extended routine in cropping the land. This would add to the profit of the land account, and give much additional comfort to the aged people and the young children in the workhouse." But Mr. Rackham is ambitious of a dairy, chiefly for the training of dairy-maids: who would become doubly acceptable as farm servants.

Besides other advantages, the experiment presents one dear to the minds of rate-payers—it tends to reduce the rates. The average

profit per annum on each of the acres has been fifteen pounds. Here are the sums :—The profit of the first year was sixty pounds two shillings and fourpence farthing ; second year, fifty-one pounds seventeen shillings and sixpence ; to Christmas, 1849, three-quarters of a year, sixty-seven pounds two shillings and one penny farthing ; total, one hundred and seventy-nine pounds one shilling and elevenpence halfpenny.

As at the Swinton and other pauper schools, a variety of industrial arts are taught in the Guiltcross Union house, and the fact that sixty of the boys and girls who have been trained in it are now earning their own living, is some evidence of the success of the system pursued there.

Of one of the cultivators of this "little place in Norfolk" (not we believe an inmate of the Union), an agreeable account was published in a letter from Miss Martineau lately in the *Morning Chronicle*. It shows to what good account knowledge of small farming may be turned. That lady having two acres of land, at Ambleside, in Westmoreland, which she wished to cultivate, sent to Mr. Rackham to recommend her a farm servant. The man arrived, and his Guiltcross experience in cultivating small "estates" proved of essential service. He has managed to keep two cows and a pig, besides himself and a wife, on these narrow confines ; for Miss Martineau calculates that the produce in milk, butter, vegetables, &c., obtained from his skill and economy for herself and household, quite pays his wages. This is her account of him :—

"He is a man of extraordinary industry and cleverness, as well as rigid honesty. His ambition is roused ; for he knows that the success of the experiment mainly depends on himself. He is living in comfort, and laying by a little money, and he looks so happy that it would truly grieve me to have to give up ; though I have no doubt that he would immediately find work at good wages in the neighbourhood. His wife and he had saved enough to pay their journey hither out of Norfolk. I gave him twelve shillings a-week all the year round. His wife earns something by occasionally helping in the house, by assisting in my washing, and by taking in washing when she can get it. I built them an excellent cottage of the stone of the district, for which they pay one shilling and sixpence per week. They know that they could not get such another off the premises for five pounds a year."

This is all very interesting and gratifying, but there are two sides to every account. Supposing the system of agricultural and other industrial training were pursued in all Unions in the country (and if it be a good system, it ought to be so followed), then, instead of boys and girls being turned out every three years in sixties, there would be accessions of farmers, tailors, carpenters, dairy-maids, and domestic servants every year to

be reckoned by thousands. Supposing that every fourteen of the agricultural section of the community had been earning fifteen pounds a-year profit per acre, we should then have a large amount of produce brought into the market in competition with that of the independent labourer. When, again, the multitude of boys had passed their probation, themselves would be thrown in the labour-market (as the sixty Guiltcross boys already have been), so that their older and weaker competitors would, in their turn, be obliged to retire to the Workhouse, not only to their own ruin, but to the exceeding mortification of the entire body of parochial rate-payers. The axiom, that when there is a glut in a market any additional supply of the same commodity is an evil, applies most emphatically to labour. In this view, the adoption of the industrial training system for paupers and criminals would be an evil ; and an evil of the very description it is meant to cure—a pauperising evil.

The easy and natural remedy is a combination of colonisation, with the industrial training system. In all our colonies ordinary, merely animal labour is eagerly coveted, and skilled labour is at a high premium. There a competition *for*, instead of against, all sorts of labour is keenly active. Yet great as is the demand, it is curious that no comprehensive system for the supply of skilled labour has yet been adopted. Except the excellent farm school of the Philanthropic Society at Red Hill, no attempt is made to teach colonisation. The majority of even voluntary colonists are persons utterly ignorant of colonial wants. They have never learned to dig or to delve. Many clever artists have emigrated to Australia, where pictures are not wanted ; not a few emigrant ladies, of undoubted talents in Berlin work and crochet, have always trembled at the approach of a cow, and never made so much as a pat of butter in their lives. Still they succeed in the end ; but only after much misery and mortification, which would have been saved them if they had been better prepared for colonial exigencies. The same thing happens with the humbler classes. Boys, and even men, have been sent out to Canada and the Southern Colonies (especially from the Irish Unions), utterly unfitted for their new sphere of life and labour.

If, therefore, the small beginnings at Guiltcross be imitated in other Unions (and it is much to be wished that they should be), they will be made to grow into large results. But these results must be applied not to clog and glut the labour market at home ; but to supply the labour market abroad.

If to every Union were attached an agricultural training school, upon a plan that would offer legitimate inducements for the pupils to emigrate when old enough and skilled enough to obtain their own livelihood, this country would, we are assured, at no distant date be de-pauperised.

"Familiar in their Mouths as HOUSEHOLD WORDS."—*CHARLES DICKENS.*

HOUSEHOLD WORDS.

A WEEKLY JOURNAL.

CONDUCTED BY CHARLES DICKENS.

Nº 25.]

SATURDAY, SEPTEMBER 14, 1850.

[Part 24.]

THREE "DETECTIVE" ANECDOTES.

I.—THE PAIR OF GLOVES.

"It's a singular story, Sir," said Inspector Wiold, of the Detective Police, who, in company with Sergeants Dornton and Mith, paid us another twilight visit, one July evening; "and I've been thinking you might like to know it.

"It's concerning the murder of the young woman, Eliza Grimwood, some years ago, over in the Waterloo Road. She was commonly called The Countess, because of her handsome appearance and her proud way of carrying of herself; and when I saw the poor Countess (I had known her well to speak to), lying dead, with her throat cut, on the floor of her bedroom, you'll believe me that a variety of reflections calculated to make a man rather low in his spirits, came into my head.

"That's neither here nor there. I went to the house the morning after the murder, and examined the body, and made a general observation of the bedroom where it was. Turning down the pillow of the bed with my hand, I found, underneath it, a pair of gloves. A pair of gentleman's dress gloves, very dirty; and inside the lining, the letters *Tn*, and a cross.

"Well, Sir, I took them gloves away, and I showed 'em to the magistrate, over at Union Hall, before whom the case was. He says, 'Wiold,' he says, 'there's no doubt this is a discovery that may lead to something very important; and what you have got to do, Wiold, is, to find out the owner of these gloves.'

"I was of the same opinion, of course, and I went at it immediately. I looked at the gloves pretty narrowly, and it was my opinion that they had been cleaned. There was a smell of sulphur and rosin about 'em, you know, which cleaned gloves usually have, more or less. I took 'em over to a friend of mine at Kennington, who was in that line, and I put it to him. 'What do you say now? Have these gloves been cleaned?' 'These gloves have been cleaned,' says he. 'Have you any idea who cleaned them?' says I. 'Not at all,' says he; 'I've a very distinct idea who didn't clean 'em, and that's myself. But I'll tell you what, Wiold, there ain't no eight or nine reg'lar glove cleaners in London,—there were not, at that time, it

seems,—and I think I can give you their addresses, and you may find out, by that means, who did clean 'em.' Accordingly, he gave me the directions, and I went here, and I went there, and I looked up this man, and I looked up that man; but, though they all agreed that the gloves had been cleaned, I couldn't find the man, woman, or child, that had cleaned that aforesaid pair of gloves.

"What with this person not being at home, and that person being expected home in the afternoon, and so forth, the inquiry took me three days. On the evening of the third day, coming over Waterloo Bridge from the Surrey side of the river, quite beat, and very much vexed and disappointed, I thought I'd have a shilling's worth of entertainment at the Lyceum Theatre to freshen myself up. So I went into the Pit, at half-price, and I sat myself down next to a very quiet, modest sort of young man. Seeing I was a stranger (which I thought it just as well to appear to be) he told me the names of the actors on the stage, and we got into conversation. When the play was over, we came out together, and I said, 'We've been very companionable and agreeable, and perhaps you wouldn't object to a drain?' 'Well, you're very good,' says he; 'I shouldn't object to a drain.' Accordingly, we went to a public house, near the Theatre, sat ourselves down in a quiet room upstairs on the first floor, and called for a pint of half-and-half, a-piece, and a pipe.

"Well, Sir, we put our pipes aboard, and we drank our half-and-half, and sat a talking, very sociably, when the young man says, 'You must excuse me stopping very long,' he says, 'because I'm forced to go home in good time. I must be at work all night.' 'At work all night?' says I. 'You ain't a Baker?' 'No,' he says, laughing, 'I ain't a baker.' 'I thought not,' says I, 'you haven't the looks of a baker.' 'No,' says he, 'I'm a glove-cleaner.'

"I never was more astonished in my life than when I heard them words come out of his lips. 'You're a glove cleaner, are you?' says I. 'Yes,' he says, 'I am.' 'Then, perhaps,' says I, taking the gloves out of my pocket, 'you can tell me who cleaned this pair of gloves?' It's a rum story, I says. 'I was dining over at Lambeth, the other day, at a free-and-easy—quite promiscuous—with

a public company—when some gentleman, he left these gloves behind him! Another gentleman and me, you see, we laid a wager of a sovereign, that I wouldn't find out who they belonged to. I've spent as much as seven shillings already, in trying to discover; but, if you could help me, I'd stand another seven and welcome. You see there's Tr and a cross, inside. I see, he says. Bless you, I know these gloves very well! I've seen dozens of pairs belonging to the same party. 'No?' says I. 'Yes,' says he. 'Then you know who cleaned 'em?' says I. 'Rather so,' says he. 'My father cleaned 'em.'

"Where does your father live?" says I. 'Just round the corner,' says the young man, 'near Exeter Street, here. He'll tell you who they belong to, directly.' 'Would you come round with me now?' says I. 'Certainly,' says he, 'but you needn't tell my father that you found me at the play, you know, because he mightn't like it.' 'All right!' We went round to the place, and there we found an old man in a white apron, with two or three daughters, all rubbing and cleaning away at lots of gloves, in a front parlour. 'Oh, Father!' says the young man, 'here's a person been and made a bet about the ownership of a pair of gloves, and I've told him you can settle it.' 'Good evening, Sir,' says I to the old gentleman. 'Here's the gloves your son speaks of. Letters Tr, you see, and a cross.' 'Oh yes,' he says, 'I know these gloves very well; I've cleaned dozens of pairs of 'em. They belong to Mr. Trinkle, the great upholsterer in Cheapside.' 'Did you get 'em from Mr. Trinkle, direct?' says I, 'if you'll excuse my asking the question?' 'No,' says he; 'Mr. Trinkle always sends 'em to Mr. Phibbs's, the haberdasher's, opposite his shop, and the haberdasher sends 'em to me.' 'Perhaps you wouldn't object to a drain?' says I. 'Not in the least!' says he. So I took the old gentleman out, and had a little more talk with him and his son, over a glass, and we parted excellent friends.

"This was late on a Saturday night. First thing on the Monday morning, I went to the haberdasher's shop, opposite Mr. Trinkle's, the great upholsterer's in Cheapside. 'Mr. Phibbs in the way?' 'My name is Phibbs.' 'Oh! I believe you sent this pair of gloves to be cleaned?' 'Yes, I did, for young Mr. Trinkle over the way. There he is, in the shop?' 'Oh! that's him in the shop, is it? Him in the green coat?' 'The same individual.' 'Well, Mr. Phibbs, this is an unpleasant affair; but the fact is, I am Inspector Wield of the Detective Police, and I found these gloves under the pillow of the young woman that was murdered the other day, over in the Waterloo Road?' 'Good Heaven!' says he. 'He's a most respectable young man, and if his father was to hear of it, it would be the ruin of him!' 'I'm very sorry for it,' says I, 'but I must take him into custody.' 'Good Heaven!' says Mr. Phibbs,

again; 'can nothing be done?' 'Nothing,' says I. 'Will you allow me to call him over here,' says he, 'that his father may not see it done?' 'I don't object to that,' says I; 'but unfortunately, Mr. Phibbs, I can't allow of any communication between you. If any was attempted, I should have to interfere directly. Perhaps you'll beckon him over here?' Mr. Phibbs went to the door and beckoned, and the young fellow came across the street directly; a smart, brisk young fellow.

"Good morning, Sir," says I. 'Good morning, Sir,' says he. 'Would you allow me to inquire, Sir,' says I, 'if you ever had any acquaintance with a party of the name of Grimwood?' 'Grimwood! Grimwood!' says he, 'No!' 'You know the Waterloo Road?' 'Oh! of course I know the Waterloo Road!' 'Happen to have heard of a young woman being murdered there?' 'Yes, I read it in the paper, and very sorry I was to read it.' 'Here's a pair of gloves belonging to you, that I found under her pillow the morning afterwards!'

"He was in a dreadful state, Sir; a dreadful state! 'Mr. Wield,' he says, 'upon my solemn oath I never was there. I never so much as saw her, to my knowledge, in my life!' 'I am very sorry,' says I. 'To tell you the truth; I don't think you are the murderer, but I must take you to Union Hall in a cab. However, I think it's a case of that sort, that, at present, at all events, the magistrate will hear it in private.'

A private examination took place, and then it came out that this young man was acquainted with a cousin of the unfortunate Eliza Grimwoods, and that, calling to see this cousin a day or two before the murder, he left these gloves upon the table. Who should come in, shortly afterwards, but Eliza Grimwood! 'Whose gloves are these?' she says, taking 'em up. 'Those are Mr. Trinkle's gloves,' says her cousin. 'Oh!' says she, 'they are very dirty, and of no use to him, I am sure. I shall take 'em away for my girl to clean the stoves with.' And she put 'em in her pocket. The girl had used 'em to clean the stoves, and, I have no doubt, had left 'em lying on the bedroom mantel-piece, or on the drawers, or somewhere; and her mistress, looking round to see that the room was tidy, had caught 'em up and put 'em under the pillow where I found 'em.

"That's the story, Sir.

II. THE ARTFUL TOUCH.

"One of the most beautiful things that ever was done, perhaps," said Inspector Wield, emphasising the adjective, as preparing us to expect dexterity or ingenuity rather than strong interest, "was a move of Serjeant Witchem's. It was a lovely idea!

"Witchem and me were down at Epsom one Derby Day, waiting at the station for the Swell Mob. As I mentioned, when we were talking about these things before, we are

ready at the station when there's races, or an Agricultural Show, or a Chancellor sworn in for an university, or Jenny Lind, or any thing of that sort; and as the Swell Mob come down, we send 'em back again by the next train. But some of the Swell Mob, on the occasion of this Derby that I refer to, so far kiddied us as to hire a horse and shay* start away from London by Whitechapel, and miles round; come into Epsom from the opposite direction; and go to work, right and left, on the course, while we were waiting for 'em at the Rail. That, however, ain't the point of what I'm going to tell you.

"While Witchem and me were waiting at the station, there comes up one Mr. Tatt; a gentleman formerly in the public line, quite an amateur Detective in his way, and very much respected. 'Halloo, Charley Wield,' he says. 'What are you doing here? On the look out for some of your old friends?' 'Yes, the old move, Mr. Tatt.' 'Come along,' he says, 'you and Witchem, and have a glass of sherry.' 'We can't stir from the place,' says I, 'till the next train comes in; but after that, we will with pleasure.' Mr. Tatt waits, and the train comes in, and then Witchem and me go off with him to the Hotel. Mr. Tatt he's got up quite regardless of expense, for the occasion; and in his shirt-front there's a beautiful diamond prop, cost him fifteen or twenty pound—a very handsome pin indeed. We drink our sherry at the bar, and have had our three or four glasses, when Witchem cries, suddenly, 'Look out, Mr. Wield! stand fast!' and a dash is made into the place by the swell mob—four of 'em—that have come down as I tell you, and in a moment Mr. Tatt's prop is gone! Witchem, he cuts 'em off at the door. I lay about me as hard as I can. Mr. Tatt shows fight like a good 'un, and there we are, all down together, heads and heels, knocking about on the floor of the bar—perhaps you never see such a scene of confusion! However, we stick to our men (Mr. Tatt being as good as any officer), and we take 'em all, and carry 'em off to the station. The station's full of people, who have been took on the course; and it's a precious piece of work to get 'em secured. However, we do it at last, and we search 'em; but nothing's found upon 'em, and they're locked up; and a pretty state of heat we are in by that time, I assure you!

"I was very blank over it, myself, to think that the prop had been passed away; and I said to Witchem, when we had set 'em to rights, and were cooling ourselves along with Mr. Tatt, 'we don't take much by this move, anyway, for nothing's found upon 'em, and it's only the braggadocio* after all.' 'What do you mean, Mr. Wield?' says Witchem. 'Here's the diamond pin!' and in the palm of his hand there it was, safe and sound! 'Why, in the name of wonder,' says me and Mr. Tatt, in astonishment, 'how did you come

by that?' 'I'll tell you later. I come by it,' says he. 'I saw which of 'em took it; and when we were all down on the floor together, knocking about, I just gave him a little touch on the back of his hand, as I knew his pal would; and he thought it was his pal, and gave it me!' It was beautiful, beau-ti-ful!

"Even that was hardly the best of the case, for that chap was tried at the Quarter Sessions at Guildford. You know what Quarter Sessions are, Sir. Well, if you'll believe me, while them slow justices were looking over the Acts of Parliament, to see what they could do to him, I'm blowed if he didn't cut out of the dock before their faces! He cut out of the dock, Sir, then and there; swam across a river; and got up into a tree to dry himself. In the tree, he was took—an old woman having seen him climb up—and Witchem's artful touch transported him!

III.—THE SOFA.

"What young men will do, sometimes, to rfin themselves and break their friends' hearts," said Serjeant Dorniton, "it's surprising! I had a case at Saint Blank's Hospital which was of this sort. A bad case, indeed, with a bad end!

"The Secretary, and the House-Surgeon, and the Treasurer, of Saint Blank's Hospital, came to Scotland Yard to give information of numerous robberies having been committed on the students. The students could leave nothing in the pockets of their great-coats, while the great-coats were hanging at the Hospital, but it was almost certain to be stolen. Property of various descriptions was constantly being lost; and the gentlemen were naturally uneasy about it, and anxious, for the credit of the Institution, that the thief or thieves should be discovered. The case was entrusted to me, and I went to the Hospital.

"Now, gentlemen," said I, after we had talked it over; 'I understand this property is usually lost from one room.'

"Yes, they said. It was.

"I should wish, if you please," said I, 'to see that room.'

"It was a good-sized bare room downstairs, with a few tables and forms in it, and a row of pegs, all around, for hats and coats.

"Next, gentlemen," said I, 'do you suspect anybody?'

"Yes, they said. They did suspect somebody. They were sorry to say, they suspected one of the porters.

"I should like," said I, 'to have that man pointed out to me, and to have a little talk to look after him.'

"He was pointed out, and I looked at him, and then I went back to the Hospital, and said, 'Now, gentlemen, it's not the porter. He's, unfortunately for himself, a little too fond of drink, but he's nothing worse. My suspicion is, that these robberies are committed by one of the students; and if you'll put me

* Three months' imprisonment as reputed thieves.

a sofa into that room where the pegs are—as there's no closet—I think I shall be able to detect the thief. I wish the sofa, if you please, to be covered with chintz, or something of that sort, so that I may lie on my chest, underneath it, without being seen."

"The sofa was provided, and next day at eleven o'clock, before any of the students came, I went there, with those gentlemen, to get underneath it. It turned out to be one of those old-fashioned sofas with a great cross beam at the bottom, that would have broken my back in no time if I could ever have got below it. We had quite a job to break all this away in the time; however, I fell to work, and they fell to work, and we broke it out, and made a clear place for me. I got, under the sofa, lay down on my chest, took out my knife, and made a convenient hole in the chintz to look through. It was then settled between me and the gentlemen that when the students were all up in the wards, one of the gentlemen should come in, and hang up a great-coat on one of the pegs. And that that great-coat should have, in one of the pockets, a pocket-book containing marked money."

"After I had been there some time, the students began to drop into the room, by ones, and twos, and threes, and to talk about all sorts of things, little thinking there was anybody under the sofa;—and then to go upstairs. At last there, came in one who remained until he was alone in the room by himself. A tallish, good-looking young man of one or two and twenty, with a light whisker. He went to a particular hat-peg, took off a good hat that was hanging there, tried it on, hung his own hat in its place, and hung that hat on another peg, nearly opposite to me. I then felt quite certain that he was the thief, and would come back by-and-bye."

"When they were all upstairs, the gentleman came in with the great-coat. I showed him where to hang it, so that I might have a good view of it; and he went away; and I lay under the sofa on my chest, for a couple of hours or so, waiting."

"At last, the same young man came down. He walked across the room, whistling—stopped and listened—took another walk and whistled—stopped again, and listened—then began to go regularly round the pegs, feeling in the pockets of all the coats. When he came to the great-coat, and felt the pocket-book, he was so eager and so hurried that he broke the strap in tearing it open. As he began to put the money in his pocket, I crawled out from under the sofa, and his eyes met mine."

"My face, as you may perceive, is brown now, but it was pale at that time, my health not being good; and looked as long as a horse's. Besides which, there was a great draught of air from the door, underneath the sofa, and I had tied a handkerchief round my head: so what I looked like, altogether, I

don't know. He turned blue—literally blue—when he saw me crawling out, and I couldn't feel surprised at it."

"I am an officer of the Detective Police," said I, "and have been lying here, since you first came" in this morning. I regret, for the sake of yourself and your friends, that you should have done what you have; but this case is complete. You have the pocketbook in your hand and the money upon you; and I must take you into custody!"

"It was impossible to make out any case in his behalf, and on his trial he pleaded guilty. How or when he got the means I don't know; but while he was awaiting his sentence, he poisoned himself in Newgate."

We inquired of this officer, on the conclusion of the foregoing anecdote, whether the time appeared long, or short, when he lay in that constrained position under the sofa?

"Why, you see, Sir," he replied, "if he hadn't come in, the first time, and I had not been quite sure he was the thief, and would return, the time would have seemed long. But, as it was, I being dead-certain of my man, the time seemed pretty short."

"EVIL IS WROUGHT BY WANT OF THOUGHT."*

"It must come some day; and come when it will, it will be hard to do, so we had best go at once, Sally. I shall have more trouble with Miss Isabel than you will with Miss Laura; for I am twice the favourite you are."

So said Fanny to her cousin, who had just turned to descend the staircase of Aldington Hall, where they had both lived since they were almost children, in attendance on the two daughters of the old baronet, who were near their own ages, and had always treated them with great kindness.

"I am not sure of that," replied Sally, "for Miss Laura is so seldom put out, that when once she is vexed, she will be hard to comfort; and I am sure, Fanny, she loves me every bit as well as Miss Isabel does you, though it is her way to be so quiet. I dare say she will cry when I say I must go; but then John would be like to cry too, if I put him off longer."

This consideration restored Sally's courage, and she proceeded with Fanny to the gallery into which the rooms of their young mistresses opened; but here Fanny's heart failed her; and, stopping short, she said,

"Suppose we tell them to wait awhile longer, as the young ladies are going to travel. We might as well see the world first, and marry in a year or two. But still," added she, after a pause, "I could not find it in my heart to say so to Thomas; and I promised him to speak to-day."

Each cousin then knocked at the door of her mistress. Laura was not in her room, and Sally went to seek her below stairs; but Isabel called to Fanny to go in.

Fanny obeyed, and walking forward a few steps, faltered out, with many blushes, that as young Thomas had kept company with her for nearly a twelvemonth, and had taken and furnished a little cottage, and begged hard to take her home to it. She was sorry to say, that if Miss Isabel would give her leave, she wished to give warning and to go from her service in a month.

Fanny's most sanguine wishes or fears, must have been surpassed by the burst of surprise and grief that followed her modest statement. Isabel reproached her; refused to take her warning; declared she would never see her again if she left the Hall, and that rather than be served by any but her dear Fanny, she would wait upon herself all her life. Fanny expostulated, and told her mistress that, foreseeing her unwillingness to lose her, she had already put Thomas off several months; and that at last, to gain further delay, she had run the risk of appearing selfish, by refusing to marry him till he had furnished a whole cottage for her. This, she said he had—by working late and early—accomplished in a surprisingly short time, and had the day before, claimed the reward of his industry. "And now, Miss," added she, "he gets quite pale, and begins to believe I do not love him, and yet I do, better than all the world, and could not find it in my heart to vex him, and make him look sad again. Yesterday he seemed so happy, when I promised to be his wife in a month." Here Fanny burst into tears. Her sobs softened Isabel, who consented to let her go; and after talking over her plans, became as enthusiastic in promoting, as she had at first been, in opposing them. Thomas was to take Fanny over to see the cottage, that evening, and Isabel, in the warmth of her heart, promised to accompany them. Fanny thanked her with a curtesy, and thought how pleased she ought to be at such condescension in her young mistress, but could not help fearing that her sweetheart would not half appreciate the favour.

After receiving many promises of friendship and assistance, Fanny hastened to report to Sally the success of her negotiation. Sally was sitting in their little bedroom, thoughtful, and almost sad. She listened to Fanny's account; and replied in answer to her questions concerning Miss Laura's way of taking her warning, "I am afraid, Fanny, you were right in thinking yourself the greatest favourite, for Miss Laura seemed almost pleased at my news; she shook me by the hand, and said, 'I am very glad to hear you are to marry such a good young man as everyone acknowledges John Maythorn to be, and you may depend upon my being always ready to help you, if you want assistance.' She then said a

deal about my having lived with her six years, and not having once displeased her, and told me that master had promised my mother and yours too, that his young ladies should see after us all our lives. This was very kind, to be sure; but then Miss Isabel promised you presents whether you wanted assistance or not, and is to give you a silk gown and a white ribbon for the wedding, and is to go over to the cottage with you: now Miss Laura did not say a word of any such thing."

Fanny tried to comfort her cousin by saying it was Miss Laura's quiet way; but she could not help secretly rejoicing that her own mistress was so generous and affectionate.

In the evening the two sweethearts came to lead their future wives to the cottages, which were near each other, and at about a mile from the Hall. John had a happy walk. He learned from Sally that he was to "take her home" in a month, and was so pleased at the news, that he could scarcely be happier when she bustled about, exclaiming at every new sight in the pretty bright little cottage. The tea-caddy, the cupboard of china, and a large cat, each called forth a fresh burst of joy. Sally thought everything "the prettiest she had ever seen;" and when John made her sit in the arm-chair and put her foot on the fender, as if she were already mistress of the cottage, she burst into sobs of joy. We will not pause to tell how her sobs were stopped, nor what promises of unchanging kindness, were made in that bright little kitchen; but we may safely affirm that Sally and John were happier than they had ever been in their lives, and that old Mrs. Maythorn, who was keeping the cottage for Sally, felt all her fondest wishes were fulfilled as she saw the two lovers depart.

Fanny and Thomas, who had left them at the cottage door, walked on to their own future home, quite overwhelmed by the honour Miss Isabel was conferring on them by walking at their side.

"You see, Miss," said Thomas, as he turned the key of his cottage-door, "there is nothing to speak of here, only such things as are necessary, and all of the plainest; but it will do well enough for us poor folks:" and as he threw open the door, he found to his surprise that what had seemed to him yesterday so pretty and neat, now looked indeed "all of the plainest." The very carpet, and metal teapot, which he had intended as surprises for Fanny, he was now ashamed of pointing out to her, and he apologised to Isabel for the coarse quality of the former, telling her it was only to serve till he could get a better.

"Yes," answered she, "this is not half good enough for my little Fanny, she must have a real Brussels carpet. I will send her one. I will make your cottage so pretty, Fanny, you shall have a nice china tea set, not these common little things, and I will give you some curtains for the window."

Thomas blushed as this deficiency was pointed out. "Why, Miss," said he, "I meant to have trained the rose tree over the window, I thought that would be shady, and sweet in the summer, and in the winter, why, we should want all the day-light; but then to be sure, curtains will be much better."

"Yes, Thomas," replied the young lady, "and warm in the winter; you could not be comfortable with a few bare rose stalks before your window, when the snow was on the ground." This had not occurred to Thomas, who now said faintly, "Oh no, Miss," and felt that curtains were indispensable to comfort.

Similar deficiencies or short-comings were discovered everywhere, so that even Fanny, who would at first be pleased with all she saw, in spite of the numerous defects that seemed to exist everywhere, gradually grew silent and ashamed of her cottage. She did her utmost to conceal from Thomas how entirely she agreed with her mistress, and as this generous young lady finished every remark, by saying "I will get you one," or, "I will send you another," she felt that all would be right before long.

As Thomas closed the door, he wondered how in his wish to please Fanny he could have deceived himself so completely as to the merits of his cottage and furniture; but he too comforted himself by remembering how his kind patroness was to remedy all the defects; "though," thought he, "I should have liked better to have done it all well myself."

The lady and the two lovers walked homewards, almost without speaking till they overtook John and Sally, who were whispering and laughing, talking of their cottage, Mrs. Maythorn's joy at seeing them happy, their future plans for themselves and her, and all in so confused a way, that though twenty new subjects were started and discussed, none came to any conclusion, but that John and Sally loved each other and were very, very happy.

"What ails you, Thomas?" said John, "Has any one robbed your house? I told you it was not safe to leave it," but seeing Miss Isabel, he touched his hat and fell back to where Fanny was talking to her cousin. Isabel, however, left them that she might take a short cut through the park, while they went round by the road.

At the end of the walk, Sally was half inclined to be dissatisfied with her furniture, so much had Fanny boasted of the improvements that were to be made in her own, but she could not get rid of the first impression it had made on her, and in a few days she quite forgot the want of curtains and carpet, and could only remember the happy time when she sat in the arm-chair with her foot on the fender.

As the month drew to a close, the two sisters made presents to their maids. Laura gave Sally a merino dress, a large piece of

linen, a cellar full of coals, and a five pound note. Isabel gave Fanny a silk gown that cost three guineas, a beautiful white bonnet ribbon, a small chimney glass (for which she kindly went into debt), three left-off muslin dresses, a painting done by her own hand, in a handsome gilt frame, and a beautiful knitted purse. Besides all this, she told Fanny it was still her intention to get the other things she had promised for the cottage, as soon as she had paid for the chimney glass. "I am very sorry," she said, "that just now I am so poor, for unfortunately, as you know, I have had to pay for those large music volumes I ordered when I was in London, and which after all I never used. It always happens that I am poor when I want to make presents."

Fanny stopped her mistress with abundant thanks for the beautiful things she had already given her. "I am sure, Miss," said she, "I shall scarcely dare wear these dresses, they look so lady-like and fine; Sally will seem quite strange by me. And this purse too, Miss; I never saw anything so smart."

Isabel was quite satisfied that she had eclipsed her sister in the number and value of her gifts, but she still assured Fanny she had but made a beginning. Large and generous indeed, were this young lady's intentions.

On the wedding morning Isabel rose early and dressed herself without assistance, then crossing to the room of the two cousins, she entered without knocking. Sally was gone, and Fanny lay sleeping alone.

"How pretty she is!" said Isabel to herself. "She ought to be dressed like a lady to-day. I will see to it;" then glancing proudly at the silk gown, which was laid out with all the other articles of dress, ready for the coming ceremony, her heart swelled with consciousness of her own generosity. "I have done nothing yet," continued she; "she has been with me nearly six years, and always pleased me entirely, then papa promised her mother that he should befriend her as long as we both lived, and he has charged us both to do our utmost for our brides. Laura has bought Sally a shawl, I ought to give one too—what is this common thing? Fanny! Fanny! wake up. I am come to be your maid to-day, for you shall be mistress on your wedding morning and have a lady to dress you. What is this shawl? It will not do with a silk dress, wait a minute," and off she darted, leaving Fanny sitting up and rubbing her eyes trying to remember what her young mistress had said. Before she was quite conscious, Isabel returned with a Norfolk shawl of fine texture and design, but somewhat soiled. "There," said she, throwing it across the silk gown, "those go much better together. I will give it you, Fanny."

"Thank you, Miss," said Fanny, in a tone of hesitation; "but—but suppose, Miss, I was to wear Thomas' shawl just to-day, as he gave it me for the wedding, and John got

Sally one like it—I think, Miss—don't you think, Miss, it might seem unkind to wear another just to-day?"

"Why, it is just to-day I want to make you look like a lady, Fanny; no, no, you must not put on that white cotton-looking shawl with a silk dress, and this ribbon," said Isabel, taking up the bonnet, proudly. Fanny looked sad, but the young mistress did not see this, for she was examining the white silk gloves, that lay beside the bonnet. "These," thought she, "are not quite right, they look servanish, but my kid gloves would not fit her, besides, I have none clean, and it is well, perhaps, that she should have a few things to mark her rank. Yes, they will do."

There was so much confusion between the lady's offering help, and the maid's modestly refusing it, that the toilette was long in completing. At last, however, Isabel was in ecstasies. "Look," said she, "how the bonnet becomes you! and the Norfolk shawl, too, no one would think you were only a lady's-maid, Fanny. Stop, I will get a ribbon for your throat." Off she flew, and was back again in five minutes. "But what is that for, Fanny? Are you afraid it will rain, this bright morning?"

Fanny had, in Isabel's absence, folded Thomas' shawl, and hung it across her arm. "I thought, Miss," answered she, blushing, "that I might just carry it, to show Thomas that I did not forget his present, or think it too homely to go to church with me."

"Impossible," said Isabel, who, to do her justice, we must state, was far too much excited to suspect that she was making Fanny uncomfortable; "you will spoil all. There, put the shawl away,—that's right, you look perfect. Go down to your bridegroom, I hear his voice in the hall, I will not come too, though I should like above all things to see his surprise, but I should spoil your meeting, and I am the last person in the world to do anything so selfish. One thing more, Fanny: I shall give you two guineas, that you may spend three or four days at L—, by the sea-side; no one goes home directly, you would find it very dull to settle down at once in your cottage; tell Thomas so." Isabel then retired to her room, wishing heartily that she could part with half her prettiest things, that she might heap more favours on the interesting little bride.

Laura's first thought that morning had also been of the little orphan, who had served her so long and faithfully, and whom her father had commended to her special care. She, too, had risen early, but without dressing herself, she went across to Sally. Sally was asleep, with the traces of tears on her cheeks; Laura looked at her for a few moments, and remembered how, when both were too young to understand the distinction of rank, they had been almost playmates; she wiped from her own eyes a little moisture that dimmed them, then putting her hand gently on Sally's

shoulder, she said, "Wake, Sally, I call you early that you may have plenty of time, to dress me first and yourself afterwards. I know you would not like to miss waiting on me, or to do it hurriedly for the last time. You have been crying, Sally, do not colour about it, I should think ill of you if you were not sorry to leave us, you cannot feel the parting more than I do. I dare say I shall have hard work to keep dry eyes all day, but we must do our best, Sally, for it will not do for John to think I grudge you to him, or that you like me better than you do him."

"Oh no, Miss!" replied Sally, who felt at that moment that she could scarcely love any one better than her kind mistress. "Still John will not be hard upon me for a few tears," added she, putting the sheet to her eyes.

"Come, come, Sally, this will not do, jump up and dress yourself quickly, that you may be ready to brush my hair when I return from the dressing-room; you must do it well to-day, for you know I am not yet suited with a maid, and must do it myself to-morrow."

This roused Sally, who dressed in great haste and was soon at her post. Laura asked her many questions about her plans for the future, and found with pleasure that most things had been well considered and arranged. "There is only one thing, Miss," said Sally in conclusion, "that we are sorry for, and it is that we cannot offer old Mrs. Maythorn a home. She has no child but John, and will sadly feel his leaving her."

"But why cannot she live with you and work as she does now, so as to pay you for what she costs?"

"Why, Miss, where she is she works about the house for her board, and does a trifle out-doors besides, that gets her clothing. John says it makes him feel quite cowardly, as it were, to see his old mother working at scrubbing and scouring, making her poor back ache, when he is so young and strong; yet we scarcely know if we could undertake for her altogether. I wish we could."

"How much would it cost you?"

"A matter of four shillings a week; besides, we must get a bed and bedding. That we could put up in the kitchen, if we bought it to shut up in the day-time, and, as John says, Mrs. Maythorn would help us nicely when we get some little ones. But it would cost a deal of money to begin and go on with."

"I will think of this for you, Sally. I would be easy for me to give you four shillings a week now, but I may not always be able to do it. I may marry a poor man, or one who will not allow me to spend my money as I please, and were Mrs. Maythorn to give up her present employments, she would not be able to get them back again three or four years hence, nor would she, at her age, be able to meet with others; and if you would find it difficult to keep her now, you would much more when you have a little family; so we must do nothing hastily. I will consult

Papa; he will tell me directly whether I shall be right in promising you the four shillings a week. If I do promise it, you may depend on always having it."

"Oh, thank you, thank you, Miss, for the thought: I will tell John directly I see him; the very hope will fill him with joy."

"No," said Laura, "do not tell him yet, Sally, for you would be sorry to disappoint him afterwards, if I could not undertake it. Wait a day or two, and I will give you an answer; or, if possible, it shall be sooner. Now, thank you for the nice brushing: I will put up my hair while you go and dress; it is getting late. If you require assistance, and Fanny is not in your room, tap at my door, for I shall be pleased to help you to-day."

Laura was not called in; but when she thought the toilette must be nearly completed, went to Sally with the shawl which she had bought for her the day before. As she entered, Sally was folding the white one John had given her. "I have brought you a shawl," said Laura, "which I want you to wear to-day; it is much handsomer than that you are folding. See, do you like it?"

"Yes, Miss," said Sally, "It is a very good one, I see," and she began to re-fold the other; but Laura noticed the expression of disappointment with which she made the change, and taking up the plain shawl, said, "I do not know whether this does not suit your neat muslin dress better than mine. Did you buy it yourself, Sally?"

"No, Miss, it was John's present; but I will put on yours this morning, if you please, Miss, and I can wear John's any day."

"No, no," replied Laura, "you must put on John's to-day. It matters but little to me when you wear mine, so long as it does you good service; but John will feel hurt if you cast his present aside on your wedding-day, because some one else has given you a shawl worth a few shillings more." So Laura put the white shawl on the shoulders of Sally, who valued it more than the finest Cashmere in the world.

As Sally went down stairs, she saw Fanny in tears on the landing. "I cannot think how it is," answered she, in reply to Sally's questioning, "but just on this day, when I thought to feel so happy, I am quite low. Miss Isabel has been so kind, she has dressed me, and quite flustered me with her attentions. See what nice things she has given me—this shawl—though for that matter, I'd rather have worn Thomas's. Oh, how nice you look. Dear, so neat and becoming your station, and with John's shawl, too, but then Miss Laura has made you no present."

"Yes, a good shawl, and a promise besides, but I will tell you about that another time. Let us go in now, they must be waiting for us."

Fanny felt so awkward in her fine clothes, that she could scarcely be prevailed on to

encounter the gaze of the servants; but her good-natured cousin promising to explain that all her dress was given and chosen by her mistress, she at last went into the hall. Sally's explanation was only heard by a few of the party, and as Fanny, in trying to conceal herself from the gaze of the astonished villagers, slunk behind old Mrs. Maythorn, she had the mortification of hearing her say to John, in the loud whisper peculiar to deaf people, "I am so glad, John, the neat one is yours; I should be quite frightened to see you take such a fine lady as Fanny to the altar; it makes me sorry for Thomas to see her begin so smart."

When the ceremony was over, the party returned to the Hall, where an hospitable meal had been provided for all the villagers of good character who chose to partake of it. It was a merry party, for even Fanny, when every one had seen her finery long enough to forget it, forgot it herself. Thomas was very good-natured about the shawl, and delighted at the prospect of spending a few days at L—. He and Fanny talked of the boat-excursions they would have, the shells they would gather for a grotto in their garden, and the long rambles they would take by the sea-side, till they wondered how ever they could have been contented with the prospect of going to their cottage at once.

As the pony chaise which the good baronet had lent for the day, drove up to take the bridal party to L—, for John and Sally were also to spend one day there, the two young ladies came to take leave of their *protégées*. Laura said, "Good bye, Sally, I have consulted Papa and will undertake to allow you four shillings a-week as long as Mrs. Maythorn lives. Here is a sovereign towards expenses; you will not, I am sure, mind changing your five pound note for the rest."

Isabel said, "Good bye, Fanny. I am very, very sorry to disappoint you of your treat at L—, but I intended to have borrowed the two pounds of Miss Laura, and I find she cannot lend them to me. Never mind, I am sure you will be happy enough in your little cottage. I never saw such a sweet little place as it is." So the bridal party drove away.

In less than a week the cousins were established in their new abode. Sally settled and happy; but Fanny, unsettled, always expected the new carpet, the china tea-set, and the various other alterations that Isabel had suggested and promised to make. The young lady was, however, unfortunate with her money. At one time she lost a bank-note; at another, just as she was counting out money for the Brussels carpet, the new maid entered to tell her that sundry articles of dress were "past mending," and must be immediately replaced. One thing after another nipped her generous intentions in the bud, and at last she was obliged to set out for her long-expected journey to France, without having done more

towards the fulfilment of her promises than call frequently on Fanny, to remind her that all her present arrangements were temporary, and that she should shortly have almost everything new.

"Good bye, Fanny," said she at parting; "I shall often write to you, and send you money. I will not make any distinct promise, for I daresay I shall be able to do more than I should like to say now."

Laura had given Sally a great many useful things for her cottage, but made no promise at parting. She said, "Be sure you write to me, Sally, from time to time, to say how you are going on, and tell me if you want help."

When Isabel was gone, Fanny saw that she must accustom herself to her cottage as it was, and banish from her mind the idea of the long-anticipated improvements. It was, however, no easy task. The window once regarded as bare and comfortless still seemed so, in spite of Fanny's reasoning that it was no worse than Sally's, which always looked cheerful and pretty. To be sure, John, who did not think of getting curtains, had trained a honeysuckle over it, still that made but little show at present. The carpet, too, so long regarded as a coarse temporary thing, never regained the beauty it first had to the eye of Thomas, as he laid it down the evening before he took Fanny to the cottage; and Fanny could never forget, as she arranged her tea-things, that Miss Isabel had called them "common little things;" so of all the other pieces of furniture that the young lady had remarked upon. Sally's house was, in reality, more homely than her cousin's, yet as she had never entertained a wish that it should be better, and as Laura had been pleased with all its arrangements, she bustled about it with perfect satisfaction; and even to Fanny it seemed replete with the comfort her own had always wanted.

At the end of three months Isabel enclosed an order for three pounds to Fanny, desiring her to get a Brussels carpet, and if there was a sufficient remainder, to replace the tea-set.

"I would rather," said Fanny to her cousin, "put up with the old carpet and china, and get a roll of fine flannel, some coals, an extra blanket or two, and a cradle for the little one that's coming, for it will be cold weather when I am put to bed; but I suppose as Miss Isabel has set her mind on the carpet and china, I must get them."

A week or two after John was invited, with his wife and mother, to drink tea from Fanny's new china. It was very pretty, so was the carpet, and so was Fanny making tea, elated with showing her new wealth.

"Is not Miss Isabel generous?" asked she, as she held the milk-pot to be admired.

"I sometimes wish Miss Laura had as much money to spare," replied Sally; "for she lets me lay it out as I please, and I could get a number of things for three guineas."

"Fie, Sally," said her husband; "are not

three shillings to spend as one pleases, better than three guineas laid out to please some one else?"

"Nonsense, John," said Fanny, pettishly; "how can a carpet for my kitchen be bought to please any one but me?"

"John isn't far wrong either," answered her husband; "but the carpet is very handsome, and does please you and me too, now it is here."

Time passed on, and Fanny gave birth to a little girl. Isabel stood sponsor for her by proxy, sending her an embroidered cloak and lace cap, and desiring that she should be called by her own name. Little Bella was very sickly, and as her mother had not been able to procure her good warm clothing, or lay in a large stock of firing, she suffered greatly from cold during the severe winter that followed her birth. The spring and summer did not bring her better health; and as Fanny always attributed her delicacy to the want of proper warmth in her infancy, she took a great dislike to the Brussels carpet, which now lay in a roll behind a large chest, having been long ago taken up as a piece of inconvenient luxury, in a kitchen. "I wish you could find a corner for it in your cottage, Sally," said she, "for I never catch a sight of it without worrying myself to think how much flannels and coals I might have bought with the money it cost."

Laura frequently sent Sally small presents of money, but Isabel, though not so regular as her sister, surprised every one by the splendour of her presents, when they did come. As Bella entered her second year, she received from her godmother a beautiful little carriage, which Thomas said must have "spoilt a five-pound note." This was Isabel's last gift, for it was at about this time that she accepted an offer from a French Count, and became so absorbed in her own affairs, that she forgot Fanny and Bella too. Poor Bella grew more and more sickly every month; the apothecary ordered her beef tea, arrowroot, and other strengthening diet, but work was slack with Thomas, and it was with difficulty that he could procure her the commonest food. "I am sure," said Fanny to her cousin, as little Bella was whining on her knee, "that if only Miss Isabel were here, she would set us all right. She never could bear to see even a stranger in distress."

"I wish," said Thomas, "that great folks would think a little of what they don't see. I'll lay anything Miss Isabel gives away a deal of money, more than enough to save our little one, to a set of French impostors that cry after her in the street, and yet, when she knows our child is ill, she never cares, because she can't see it grow thin, or hear it cry."

"For shame, Thomas," said his wife, "do not speak so rudely of the young lady. Have you forgotten the pretty carriage she sent Bella, and how pleased we were when it came?"

"I don't mean any harm," answered her husband; "only it strikes me that Miss was pleased to buy the carriage because it was pretty, and seemed a great thing to send us, and that she would not have cared a straw to give us a little each, that would have served us every bit as well."

"I never heard you so ungrateful, Thomas. Of course she would not, because she wished to please us."

"Or herself," said John; "but may-be I am wrong; only it goes to my heart to see the child want food while there is a flagree carriage in the yard that cost more than would keep her for six months."

"Well, cheer up," said Sally; "Miss Laura will be coming home soon, and I'll say anything she won't let Bella die of want."

"I'm afraid she won't think of giving to me, Sally," said Fanny despondingly; "I was never her maid, you know."

"You would not fear, if you knew Miss Laura as I do, Fanny; she never cares who she helps so long as the person is deserving, and in want. She has no pride of that sort."

Isabel's marriage was put off, and Laura's return, consequently, postponed. As Bella grew worse every day, and yet no help came, the unselfish Sally wrote to her patroness, telling her of poor Fanny's distress, and begging her either to send her help, or speak on her behalf to her sister.

Isabel was dressing for a party when Laura showed her Sally's letter. "Poor Fanny," said she, "I wish I had known it before I bought this wreath. I have, absolutely, not a half-franc in the world. Will you buy the wreath of me at half-price, it has not even been taken from its box."

"I do not want it," said Laura, "but I will lend you some money."

"No, I cannot borrow more," said her sister despondingly. "I owe you already for the flowers, the brooch, the bill you paid yesterday, and I know not what else besides; but I will tell Eugène there is a poor Englishwoman in distress, I am sure he will send her something."

Eugène gave a five-franc piece.

It was late one frosty evening when Sally ran across to her cousin's cottage, delighted to be the bearer of the long hoped-for letter. Fanny was sitting on the fender before a small fire, hugging her darling to her breast, and breathing on its little face to make the air warmer. "I'm afraid," said she, in answer to Sally's inquiries, "that the child won't be here long;" and she wiped away a few hot tears that had forced their way as she sat listening to the low moans of the little sufferer.

"But I have good news for you," said her cousin, cheerfully. "Here is a letter from Miss Isabel at last. I would not tell you before, but I wrote to Miss Laura, saying how you were expecting every week to be put to bed again, and how Bella was wasting away,

and see, I was right about her, she has sent you a sovereign, and her sister's letter, no doubt, contains a pretty sum."

Fanny started up, and could scarcely breathe as she broke the seal. What was her disappointment on seeing an order for five shillings!

"I am very sorry, my good Fanny," said Isabel, "that just now I have no money. A charitable gentleman sends you five shillings, and as soon as I possibly can, I will let you have a large sum. I have not yet paid for the carriage I sent you, and as the bill has been given me several times, I must discharge it before I send away more money. I hope that by this time, little Bella is better."

Fanny laid her child upon the bed, and putting her face by its side, shed bitter tears. Sally did not speak, and so both remained till Thomas came in from his work. Fanny would have hidden the letter from him, but he saw and seized it in a moment.

"Five guineas for a carriage, and five shillings for a child's life," said he with a sneer, as he laid it down. "Do not look for the large sum, Fanny, you won't get it; but I will work hard, and bury the child decently."

Fanny felt no inclination to defend her mistress. For the first time, it occurred to her that Thomas and John might be right in their judgment of her. She raised Bella, as Thomas, who had been twisting up the money order, was about to throw it in the fire. He caught a sight of the child's wan face, and, advancing to the bed, said, in a softened tone, "Do you know father, pretty one!" and as Bella smiled faintly, he added, "I will do anything for your sake. Here, Fanny, take the money, and get the child something nourishing."

Bella seemed to revive from getting better food; and the apothecary held out great hope of her ultimate recovery, if the improved diet could be continued; but expenses fell heavily on Thomas, Fanny was put to bed with a fine strong little boy, and, though Sally and Mrs. Maythorn devoted themselves to her and Bella, the anxiety she suffered from being separated from her invalid child, added to her former constant uneasiness, and want of proper food, brought on a fever that threatened her life. In a few days she became quite delirious. During this time Isabel was married, and Laura returned to England.

When Fanny regained her consciousness she was in the dark, but she could see someone standing by the window. On her speaking the person advanced to her side. "Do not be startled to find me here," said a sweet soft voice. "Sally has watched by your side for three nights, and when I came this evening she looked so ill that I insisted on her going to bed; then, as we could find no one on whose care and watchfulness we could depend, I took her place. You have been in a sound sleep Dr. Hart said you would wake up much better. Are you better?"

"Yes, ma'am, a deal better; but where am I, and who is it with me?"

"You are in your own pretty cottage, and Miss Laura is with you. You expected me home, did you not?"

"Oh thank God; who sent you, dear Miss Laura? How is—but may-be I had best not ask just while I am so weak. Is the dear boy well?"

"Yes, quite well; and Bella is much better. I have sent her for a few days to L—, with Mrs. Maythorn; the sea air will do her good."

"Oh, thank you—thank you—dear young lady for the thought. I seem so bound up in that dear child, that nothing could comfort me for her loss. How good and kind you are, Miss—you do all so well and so quietly!"

"Yes, Fanny, dear," said Thomas, coming from behind the curtain and stooping to kiss his wife. "Miss Laura has saved you and Bella, and me too, for I could not have lived if you had died; and has found me work; and all without making one great present, or doing anything one could speak about. I'll tell you what it is, wife, dear, Miss Isabel does all for the best, but it is just as she feels at the moment. Now Miss Laura—if I may be so bold to speak, Miss—Miss Laura does not give to please her own feelings, but to do good. I can't say it well, but do you say it for me, Miss; I want Fanny to know the right words, to teach the little ones by-and-bye. You know what I wish to say, Miss Laura."

"Yes Thomas," said Laura, blushing, "but I do not say you are right. You mean, I think, that my sister acts from impulse, and I from principle. Is that it?"

"I suppose that's it, Miss," said Thomas, considering, and apparently not quite satisfied.

"You have no harder meaning, I am sure," said Laura, quietly, "because I love my sister very much."

"Certainly not, Miss," returned Thomas. "But, myself, if I may take the liberty of gratefully saying so, I prefer to be acted to on principle, and think it a good deal better than impulse."

CHIPS.

TORTURE IN THE WAY OF BUSINESS.

The mention in a recent number of the extreme cruelty practised on calves, has drawn forth the following statement from a correspondent,—a clergyman in Bedfordshire:—

"A member of my family was witness to the following act of barbarity, viz., that of plucking the feathers from a duck while yet alive. Upon being expostulated with, the man replied that it was a common practice, —we half break their necks, then pluck them while they are warm, and then finish them off." This act of cruelty was witnessed in Brighton Market. If the above will at all

assist you in exposing the atrocities which are practised on the brute creation, I shall be thankful. The public generally (save a few gross sensualists) have only, it is to be hoped, to be told what is practised on many articles of consumption, to make them protest against such wanton insults on God's workmanship."

The only means of accounting for such irrational cruelty, is the supposition that the offending poulterers imagine ducks to be endowed by nature with no more feeling than feather-beds.

The savage indifference with which unappreciable agonies are systematically inflicted upon sentient creatures, strikes us occasionally with wonder. The police reports have lately revealed a case which nothing but the best testimony could render credible. A correspondent of the Times Newspaper was some weeks since walking in the Walworth Road, when he saw several persons assembled round the shop of a butcher; half a dozen men were endeavouring to force two bullocks into a slaughter-house. The butcher's journeyman struck one of the animals on the legs with a broom handle, which had a sharp pointed spike. The door of the slaughter-house was very narrow; the man got a rope and fixed it tightly round the horns of the bullock, and some of them then pulled this from the inside of the slaughter-house; the others were beating the brute behind and pushing it on. He saw one of the butchers twisting the animal's tail till he doubled it up, and the bones were dislocated—at least, he was led to think so by the right angle formed by the two portions of the tail. The man's hands were covered with blood which flowed from the tail; and he rubbed the dislocated parts together, which caused the poor animal to moan most piteously. Several of the bystanders expressed their disgust.

The fellows were brought before the Lambeth magistrate by the Society for the Prevention of Cruelty to Animals; but unfortunately the principal witness mistook one of the offenders for another person—his brother. The complaint, therefore, from that legal informality, broke down.

The defendants appeared to treat the mere pulling a bullock through a passage too small for its comfortable admission, with ropes tied to its horns; the pushing it with goads from behind; the agonising twisting of its tail; as matters of the most perfect indifference. In his exultation at getting off, one of them facetiously promised the magistrate, in answer to an expostulation as to the narrowness of the passage, "that, to oblige his Worship, he would make the place big enough to admit a full-grown elephant, or a hippopotamus."

We have in former articles shown that this sort of brutality is of everyday occurrence, and perpetrated in the regular way of business. Use begets insensibility. We have no doubt that the poulterer and butchers concerned in the atrocities we have detailed,

are worthy men enough in their families. They would not tear the hair out of the head of a child, or good a wife with a broomstick, for the world. They are most likely tender fathers and affectionate husbands, but in the way of business, as poulterers, and butchers, what can exceed, or what censure can be too sharp for, their cruelty? Exposure is the only cure; and this we will always do our part in administering.

A COTTAGE MEMORY.

In that far foreign country, the dream of old days
And old haunts often bears me to Anthony Wray's;
The white little cottage with nest-crowded eaves,
Peeping out half the year from 'an ambush of leaves.

And now once again have my footsteps been there,
And have found it—deserted, dismantled, and bare;

Except where the wall-flow'rs still cluster and wave
On the gable: they now are like flow'rs on a grave.

At that window, I thought as I passed through
the door,

Where the late sunbeam strikes down the weed-
covered floor,

How often the sunlight and moonlight have shone
Upon bright, living faces, that now are all gone.

In the choice inglo-nook stood no Martha's arm-
chair,

But a heap of dead leaves which the wind had
swept there;

The low-talking wind that breathed thoughts of
the time

When young voices rang round like a holiday
chime.

And the hearth had become like a cold churchyard
stone,

Encrusted with mould and with moss overgrown,
That had glowed through so many a long winter
night,

The heart of the cottage, a core of warm light.

What talk and what mirth there! what tales told
or read

To the children that listened in joy tinged with
dread!

A storm shakes the window; they solemnly gaze
On each other, and draw their stools nearer the
blaze.

Their father is drowsy with labour gone through,
And the deep satisfaction of nothing to do,

The web of light sleep in its network has bound
him,

And home mildly shines through the mist that's
around him.

The mother sits knitting and smiling fond praise;
The cheek of the youngest shines warm in the
blaze

As he rests his white head on his grandmother's
knee;

Alas! that these pictures mere phantoms should be.

As ghosts of burnt roses cloud up from their
ashes,

Rise scenes from the past in these transient flashes;

Thin visions, soon melted, which leave the heart
sore,

By half-showing that which they will not restore.

Could it be that this Household was gone, and for
ever?

The wood looked unchanged, and the fields, and
the river;

Co-tenants of time, even part did these seem

Of beings who now are but shapes of a dream.

The broad-leaved horse-chestnut my thoughts used
to wed

With those for whose shelter its boughs seemed
to spread,

Dipped slowly in sunlight its fans as of old,
But beneath, all had passed "like a tale that is
told."

Long I stood, and had no word of comfort to say
Yet not unconsoled did I turn me away:

Thank God for the faith that is stronger than grief,
The fountain that springs to the parched soul's
relief.

The whispered assurance which raises and soothes,
That these are the phantoms, and those still the
truths,

And their trials and virtues, their tears and their
mirth

Not faded like yesterday's light from the earth!

"CAPE" SKETCHES.

THERE is a peculiarity evinced by such of the advocates of colonisation as have acquainted themselves personally with colonial life, which puts in a strong light the adaptability of most of our territories beyond sea for bettering the condition of enterprising emigrants. It is this.—each man vaunts loudly the superiority of the colony he has visited over all the others. "How is it possible," writes a settler in New Zealand to us, "that people will be so blind as to risk their capital in Australia while there is New Zealand, the finest country, with the finest climate in the world!" The friend, who occasionally amuses and instructs us with his vivid sketches of Australian life, exclaims—"New Zealand!—Where are its markets?—What is a farmer to do with his produce when he has got it?—No, no; my advice is Sydney." "By no means," ejaculates a third, just home from Port Philip, "South Australia is the country for an energetic man to gain independence and wealth." A successful emigrant, hot from Hobart Town, vaunts the advantages of Van Dieman's Land. Our friend from Canada over-rides all these opinions. "Why," he argues, "go to uncivilised, uncultivated, and far-off countries, when you can, at once, join established communities, and enjoy regular British institutions, only a three weeks' sail distant; where markets are regular, food cheap, and where (on account of the intense cold) there is nothing to do for one-third of the year?" Lastly, we are favoured with the opinion of a five years' resident in South

Africa:—"Truly," he says, "people who brave the regions of a northern climate, who expose their lives in dangerous proximity to savages, who heed not agues in swamps, nor thirst in deserts, forget there is such a place as the Cape of Good Hope."

Although all this one-sided enthusiasm does not prove either of the respective cases argued by the different advocates; yet it shows in a broad light the certain advantages of emigration in general. To whatever quarter of the globe the observer turns, he sees, amidst occasional instances of disappointment and loss, that emigration has, in general, answered the expectations of the emigrants. But this general success he does not attribute to the soundness of the principle in the abstract, but to the advantages of the particular country in which he has witnessed the most prosperity.

In, therefore, sifting and comparing with other evidence the numerous papers which we receive from, and relative to, the various colonies, it is our aim to give such true pictures of colonial life as enable the reader to judge fairly of the pains, pleasures, losses and gains of all the new homes which have been established by and for Englishmen in various parts of the globe.

We have been led into these remarks by a communication now before us from the gentleman already mentioned who has passed five active years in the colony of the Cape of Good Hope. His characteristic preface to the amusing and instructive sketches of Cape Life is as follows:—

"I cannot but think, that, in the present rage for promoting emigration, too much attention is paid to new and untried countries whose resources are as yet doubtful and undeveloped, to the detriment of the old established colonies, whose constant cry is for 'labour, labour, labour.' Amongst the least popular of our old colonies is the Cape of Good Hope. Yet I think, that most, if not all, the objections usually raised against it are erroneous; while many of its undoubted advantages are overlooked. It is my desire, if possible, to remove some of the prejudices entertained against a land where I spent five happy years of my life. My intention is simply to give a few travelling sketches, and to portray some of the characteristic features of the country and its inhabitants."

Cape Wine enjoys a very unenviable notoriety in England. Order a glass of sherry at a fourth-rate tavern: taste it—it is *very bad*—you turn up your nose and cry "Cape!" Mr. Lazarus, a Hebrew dealer in wine and money, "does a little bill" for you, and sends you home as part payment a few dozen of "excellent Madeira." Are you rash enough to taste it? If so, as soon as you have recovered from the sputtering caused by its fearful acidity, you mutter a phrase never mentioned to ears polite, and say again—

"Cape!" In fact, whenever you drink any vile compound, under the name of wine, to which you are at a loss to ascribe a native land, you cry—"Cape!"

The old adage of "give a dog a bad name and hang him," is fully exemplified here. Still it must be admitted that the dog must first have *earned* his bad name. So it is with Cape Wine. It *was* very bad, and a great part of it is so still; while decidedly the worst of it is sent to England. I have often endeavoured to persuade the wine farmers that this is bad policy on their part; but they will not be convinced. They say that Cape Wine has a bad name in the market; that it is bought only as "Cape Wine," without any distinction of vintage or class; and that the worst of it brings them as good a price as the best. And yet there is a vast difference in the various qualities; and even the best of them are still susceptible of wonderful improvement.

There is a similarity between the Cape and the Madeira grape. Both are cultivated very much in the same manner, but the grand point of difference between the two is the time of gathering the grapes. In Madeira they are not gathered till so ripe that many begin to fall, and many are withered from over ripeness; these are of course rejected. By this means a smaller amount of wine is obtained from a vineyard than would have been produced had the grapes been gathered earlier: but the quality of the wine is improved beyond conception. Every grape is full, ripe, and luscious, and the wine partakes of its quality. Nothing can prove more clearly the necessity of the grape being fully, and rather *over* ripe, than the difference of the wine produced on the north side of the Island of Madeira, where this perfection of the grape can scarcely be attained, and that grown on the south side: the latter is Nectar; the former Cape; or little better.

Now at the Cape the object of the farmer is always to get the greatest *quantity* of wine from his vineyard; and consequently he gathers his grapes when they are barely ripe, and none have fallen or withered; whereby he fills his storehouses with wine full of acidity and of that vile twang which all who have tasted shudder to recal.

Some of the wine-growers in the colony have lately pursued a different plan, and with vast success. This has been chiefly among the English colonists; for a Dutch boor at the Cape is a very intractable animal, and not easily induced to swerve from old systems, be they ever so bad. Probably, the principal reason why the colony produced from the very first such bad wines, was its having been colonised by Dutchmen, who could have had no experience at home in wine-growing.

Who knows what might have been the case had a colony from the plains of Champagne or Bordeaux first settled there? A propos of

this, I may mention that a fellow passenger of mine was a Frenchman from Champagne. At the Cape he entered into partnership with a young Englishman (also a fellow passenger), and agreed to take a wine farm. The Englishman was to supply capital—the Frenchman knowledge. Monsieur had determined to make "Cape Champagne;" and remarkably well he succeeded. Often at public and even at private dinners, when swallowing something dignified with the name of that right-royal wine, have I sighed to think how far more palatable would be a bottle of Monsieur L—'s vintage.

It perhaps requires a greater outlay of capital to be a successful wine-grower than almost anything else in the colony. There are, in addition to the purchase of land and vines, the expenses of storehouses, casks, and, above all, that most difficult commodity to attain—labour. So great is the want of the latter, and so uncertain the supply of even that which is attainable, that he is a bold man who ventures on wine-farming at the Cape.

The wine-growers are generally wealthy men, for, in spite of all obstacles, their profits are very large. Few people who even touch at the Cape fail to visit the Constantia wine farms, producing the delicious sweet wine of that name. It is grown on a mountain named after the wife of one of the former Governors of the Cape—whether "in compliment to the lady's sweetness of disposition, or her love for the wine then produced, I know not. Three farms monopolise this mountain. Even half a mile from them, the wine produced is of a very inferior flavour. They live in excellent style, these Constantia wine-growers. When first I visited one of them, a carriage-and-four and two buggies, conveying a party of Indian visitors, had just drawn up at the door. A *déjeuner* was spread in a long, handsome, and elegantly-furnished apartment, for the entertainment of any one who might chance to come and visit the farm. Two or three superintendents were ready to show the "lions" of the place to visitors, and to give them samples of the wine to taste. There are many varieties of it. And, oh, how seductive that same Constantia is! Who can resist it in all its delicious varieties?

I recollect that as I rode towards the farm, I passed a toll-gate, and looking, I suppose, extremely like a "griffin" (for I had only been a week in the colony), the "pikeman" observed, as he took my twopence, and handed me the ticket, "Hopes you'll be able to read it as you comes back, Sir!"

"What do you mean?" I asked.

"No offence, Sir," said the man with a grin; "only I've seed a many as couldn't—that's all."

The three Constantia wine-growers are Dutchmen; and so, in fact, are nearly all the wine-farmers throughout the colony. Englishmen who go out there generally take to trade or sheep-farming; and they are right,—for it

requires far less experience, less capital, and less labour, to follow almost any calling at the Cape than that of a wine-grower. I think, however, that a Company might be profitably established here or in the colony, for cultivating the vine there and importing its produce to Europe. For this purpose, they should send out labourers and superintendents, carefully selected from the wine districts of France and Germany; and take care that the Madeira plan of gathering the grapes be adopted. They should agitate, too, for a reduction of the duty on the wine: at present it is far too high. Perhaps the profits would not at first be great, for there is a serious obstacle to be overcome,—a bad name in the market; but eventually I believe that the speculation would be a lucrative one, and that it would in time remove the unfortunate stigma now allixed to Cape wine.

In these days of railroad travelling, when twenty miles an hour would be considered slow enough to justify a letter of complaint from "Viator" to the editor of the Times, it may rather astonish my readers to learn that twenty miles is considered a fair day's journey at the Cape. Yet so it is.

Unless you amble on horseback, which only men and young men can undertake, the sole and universal method of travelling is by an ox-wagon. Just go and look at the wagon exhibited by Cumming in his South-African Exhibition, at Hyde Park corner! Imagine such a machine, with twelve or fourteen oxen attached to it by a long rope of plaited hide (called a treck-tow) attached to the pole, and to which are fastened the yokes of the oxen. Then fancy a little Hottentot lad, very much like one of the Bushmen lately exhibited in London (but, perhaps, hardly so handsome,) leading the two front oxen by a strip of hide fastened to their horns (called a reum), and a full-grown Hottentot seated on the driving-seat, in the front of the wagon, with an enormous whip in his hands formed of a long bamboo handle and a lash of plaited thongs, with which he can, from his seat, reach the leaders of his team; and you have the "travelling carriage" of South Africa complete before your eyes.

The same team (or "span" in South-African phraseology) of oxen take you the whole journey, whether it be twenty or two hundred miles; and as they have no other food on the way, nor indeed at any other time, than the grass and water on the roadside, you may imagine that twenty or twenty-five miles a day is quite work enough for them. The journey is, however, by no means so tedious or uninteresting an affair as might be supposed. It is like so many days of pic-nic-ing, with new scenery each day, and in a glorious climate. The wagon is of course well furnished with tea, sugar, coffee, wine, flour, eggs, fresh and preserved meat, vegetables, and in fact all that refreshes and cheers the inward man.

for, be it recollected, that there are no inns, or at least the very few there are are scattered at such great distances apart over the country that no wagon traveller thinks of visiting them. The wagon in fact becomes your home and your store-house as well as your travelling carriage. A long stretcher is slung in it, on which is placed your bed, which serves for a lounging couch by day. Some people travel with a tent, but this is unnecessary when the party does not exceed two or three, besides the Hottentots, who sleep under the wagon, or under a bush or anywhere else on the ground, as soundly as their masters in their beds.

Travellers generally take their guns with them, as they may chance to get a little sport on the road. At six in the morning we will suppose the carriage to start; at about ten you will "outspan"—that is, take out the oxen and let them feed, and prepare for breakfast. Your Hottentots soon collect fuel, the wagon is drawn up close by a mimosa or some other bush, a fire is lighted, the kettle set to boil, the coffee prepared, the steaks cooked in a frying-pan, and perhaps some hot cakes made of meal baked for you; and with a beautiful country round you, and a magnificent sky above you, if you cannot make a good breakfast, and feel a light heart, I fear that you must be terribly "used up."

Then comes a stroll through the bush with your double-barrel on your shoulder, in search of a partridge or a Guinea fowl, or a stray antelope; and back to the wagon, now ready for another start.

Forward, again, till dinner-time, when the same process is gone through. After dinner, perhaps you will go forward another four or five miles, and then "outspan" for the night.

The nights of the Cape climate are glorious! I can scarcely imagine anything more beautiful. The sky of that deep, dark blue, which we never see in northern climates; the moon shining as she only can in such a sky, the stars so bright and distinct, with the beautiful southern cross in all its brilliancy, among them; the perfect stillness of everything around; the lofty and rugged mountains where the foot of man has never trodden; the thick dark bush, penetrable only by the wild beast or the savage; the broad plain covered with Aloes, Cape Heath, Wild Stocks, and the ten thousand variegated shrubs which make a carpet beneath your feet as beautiful as the canopy of heaven above your head; and that little spot worthy the pencil of Salvator Rosa—the dark foliage of the bush lighted up by your fire, and around it the dusky forms of your Hottentots stretched at their ease, and enjoying, as none but a half savage knows how thoroughly to enjoy, the requisite delight of the "Dolce far niente."

No doubt railroads are glorious inventions. • All honour, too, to Macadam, and to stage-

coaches and post-chaises; all praise to the comforts and convenience of a good English Inn. But if you have a spark of native poetry in your composition, in spite of bad roads, slow travelling, rough fare, and a bad "al fresco," you will enjoy one of these South African journeys more than any trip you ever took in Europe. You have no other travelling companions than the beauties of Nature's works around you, fresh as from the hands of their Creator, and the thoughts and reflections high and holy, as such scenes and such companionship will not fail to call forth.

CHEMICAL CONTRADICTIONS.

SCIENCE, whose aim and end is to prove the harmony and "eternal fitness of things," also proves that we live in a world of paradoxes; and that existence itself, is a whirl of contradictions. Light and darkness, truth and falsehood, virtue and vice, the negative and positive poles of galvanic or magnetic mysteries, are evidences of all-pervading antitheses, which acting like the good and evil genii of Persian Mythology, neutralise each other's powers when they come into collision. It is the office of science to solve these mysteries. The appropriate symbol of the lecture-room is a Sphinx; for a scientific lecturer is but a better sort of unraveller of riddles.

Who would suppose, for instance, that water—which everybody knows, extinguishes fire—may, under certain circumstances, add fuel to flame, so that the "coming man" who is to "set the Thames on fire," may not be far off. If we take some mystical grey-looking globules of potassium (which is the metallic basis of common pearl-ash) and lay them upon water, the water will instantly appear to ignite. The globules will swim about in flames, reminding us of the "death-fires" described by the Ancient Mariner, burning "like witches' oil" on the surface of the stagnant sea. Sometimes even, without any chemical ingredient being added, Fire will appear to spring spontaneously from water; which is not a simple element, as Thales imagined, when he speculated upon the origin of the Creation, but two invisible gases—oxygen and hydrogen, chemically combined. During the electrical changes of the atmosphere in a thunder-storm, these gases frequently combine with explosive violence, and it is this combination which takes place when "the big rain comes dancing to the earth." These fire-and-water phenomena are thus accounted for; certain substances have peculiar affinities or attractions for one another; the potassium has so inordinate a desire for oxygen, that the moment it touches, it decomposes the water, abstracts all the oxygen, and sets free the hydrogen or inflammable gas. The potassium, when combined with the oxygen, forms that corrosive substance known as caustic potash, and the heat disengaged during this process, ignites

the hydrogen. Here the mystery ends; and the contradictions are solved;—Oxygen and hydrogen when combined, become water; when separated the hydrogen gas burns with a pale lambent flame. Many of Nature's most delicate deceptions are accounted for by a knowledge of these laws.

Your analytical chemist sadly annihilates, with his scientific machinations, all poetry. He bottles up at pleasure the Nine Muses, and proves them—as the fisherman in the Arabian Nights did the Afrite—to be all smoke. Even the Will o' the Wisp cannot flit across its own morass without being pursued, overtaken, and burnt out by this scientific detective policeman. He claps an extinguisher upon Jack o' Lantern thus:—He says that a certain combination of phosphorus and hydrogen, which rises from watery marshes, produces a gas called phosphuretted hydrogen, which ignites spontaneously the moment it bubbles up to the surface of the water and meets with atmospheric air. Here again, the Ithuriel wand of science dispels all delusion, pointing out to us, that in such places animal and vegetable substances are undergoing constant decomposition; and as phosphorus exists under a variety of forms in these bodies, as phosphate of lime, phosphate of soda, phosphate of magnesia, &c., and as furthermore the decomposition of water itself is the initiatory process in these changes, so we find that phosphorus and hydrogen are supplied from these sources; and we may therefore easily conceive the consequent formation of phosphuretted hydrogen. This gas rises in a thin stream from its watery bed, and the moment it comes in contact with the oxygen of the atmosphere, it bursts into a flame so buoyant, that it flickers with every breath of air, and realises the description of Goëthe's Mephistopheles, that the course of Jack-o'-lantern is generally "zig-zag."

Who would suppose that absolute darkness may be derived from two rays of light! Yet such is the fact. If two rays proceed from two luminous points very close to each other, and are so directed as to cross at a given point on a sheet of white paper in a dark room, their united light will be twice as bright as either ray singly would produce. But if the difference in the distance of the two points be diminished only one-half, the one light will extinguish the other, and produce absolute darkness. The same curious result may be produced by viewing the flame of a candle through two very fine slits near to each other in a card. So, likewise, strange as it may appear, if two musical strings be so made to vibrate, in a certain succession of degrees, as for the one to gain half a vibration on the other, the two resulting sounds will antagonise each other and produce an interval of perfect silence. How are these mysteries to be explained? The Delphic Oracle of science must again be consulted, and among

the high priests who officiate at the shrine, no one possesses more recondite knowledge, or can recal it more instructively, than Sir David Brewster. "The explanation which philosophers have given," he observes, "of these remarkable phenomena, is very satisfactory, and may easily be understood. When a wave is made on the surface of a still pool of water by plunging a stone into it, the wave advances along the surface, while the water itself is never carried forward, but merely rises into a height and falls into a hollow, each portion of the surface experiencing an elevation and a depression in its turn. If we suppose two waves equal and similar, to be produced by two separate stones, and if they reach the same spot at the same time, that is, if the two elevations should exactly coincide, they would unite their effects, and produce a wave twice the size of either; but if the one wave should be put so far before the other, that the hollow of the one coincided with the elevation of the other, and the elevation of the one with the hollow of the other, the two waves would obliterate or destroy one another; the elevation as it were of the one filling up half the hollow of the other, and the hollow of the one taking away half the elevation of the other, so as to reduce the surface to a level. These effects may be exhibited by throwing two equal stones into a pool of water; and also may be observed in the Port of Batsha, where the two waves arriving by channels of different lengths actually obliterate each other. Now, as light is supposed to be produced by waves or undulations of an ethereal medium filling all nature, and occupying the pores of the transparent bodies; and as sound is produced by undulations or waves in the air: so the successive production of light and darkness by two bright lights, and the production of sound and silence by two loud sounds, may be explained in the very same manner as we have explained the increase and obliteration of waves formed on the surface of water."

The apparent contradictions in chemistry are, indeed, best exhibited in the lecture-room, where they may be rendered visible and tangible, and brought home to the general comprehension. The Professor of Analytical Chemistry, J. H. Pepper, who demonstrates these things in the Royal Polytechnic Institution, is an expert manipulator in such mysteries; and, taking a leaf out of his own magic-book, we shall conjure him up before us, standing behind his own laboratory, surrounded with all the implements of his art. At our recent visit to this exhibition we witnessed him perform, with much address, the following experiments:—He placed before us a pair of tall glass vessels, each filled, apparently, with water;—he then took two hen's eggs, one of these he dropped into one of the glass vessels, and, as might have been expected, it immediately sank to the bottom. He then took the other egg, and dropped it

into the other vessel of water, but, instead of sinking as the other had done, it descended only half way, and there remained suspended in the midst of the transparent fluid. This, indeed, looked like magic—one of Houdin's sleight-of-hand performances—for what could interrupt its progress? The water surrounding it appeared as pure below as around and above the egg, yet there it still hung like Mahomet's coffin, between heaven and earth, contrary to all the well established laws of gravity. The problem, however, was easily solved. Our modern Cagliostro had dissolved in one half of the water in this vessel as much common salt as it would take up, whereby the density of the fluid was so much augmented that it opposed a resistance to the descent of the egg after it had passed through the unadulterated water, which he had carefully poured upon the briny solution, the transparency of which, remaining unimpaired, did not for a moment suggest the suspicion of any such impregnation. The good housewife, upon the same principle, uses an egg to test the strength of her brine for pickling.

Every one has heard of the power which bleaching gas (chlorine) possesses in taking away colour, so that a red rose held over its fumes will become white. The lecturer, referring to this fact, exhibited two pieces of paper; upon one was inscribed, in large letters, the word "PROTEUS;" upon the other no writing was visible; although he assured us the same word was there inscribed. He now dipped both pieces of paper in a solution of bleaching-powder, when the word "Proteus" disappeared from the paper upon which it was before visible; whilst the same word instantly came out, sharp and distinct, upon the paper which was previously a blank. Here there appeared another contradiction: the chlorine in the one case obliterating, and in the other reviving the written word; and how was this mystery explained? Easily enough! Our ingenious philosopher, it seems, had used indigo in penning the one word which had disappeared; and had inscribed the other with a solution of a chemical substance, iodide of potassium and starch; and the action which took place was simply this: the chlorine of the bleaching solution set free the iodine from the potassium, which immediately combined with the starch, and gave colour to the letters which were before invisible. Again—a sheet of white paper was exhibited, which displayed a broad and brilliant stripe of scarlet—(produced by a compound called the bin-iodide of mercury)—when exposed to a slight heat the colour changed immediately to a bright yellow, and, when this yellow stripe was crushed by smartly rubbing the paper, the scarlet colour was restored, with all its former brilliancy. This change of colour was effected entirely by the alteration which the heat, in the one case, and the friction, in the other, produced in the particles which reflected these different

colours;—and, upon the same principle, we may understand the change of the colour in the lobster-shell, which burns from black to red in boiling; because the action of the heat produces a new arrangement in the particles which compose the shell.

With the assistance of water and fire, which have befriended the magicians of every age, contradictions of a more marvellous character may be exhibited, and even the secret art revealed of handling red hot metals, and passing through the fiery ordeal. If we take a platinum ladle, and hold it over a furnace until it becomes of a bright red heat, and then project cold water into its bowl, we shall find that the water will remain quiescent and give no sign of ebullition—not so much as a single "fizz;" but, the moment the ladle begins to cool, it will boil up and quickly evaporate. So also, if a mass of metal, heated to whiteness, be plunged in a vessel of cold water, the surrounding fluid will remain tranquil so long as the glowing white heat continues; but, the moment the temperature falls, the water will boil briskly. Again—if water be poured upon an iron sieve, the wires of which are made red hot, it will not run through; but, on the sieve cooling, it will run through rapidly. These contradictory effects are easily accounted for. The repelling power of intense heat keeps the water from immediate contact with the heated metal, and the particles of the water, collectively, retain their globular form; but, when the vessel cools, the repulsive power diminishes, and the water coming into closer contact with the heated surface its particles can no longer retain their globular form, and eventually expand into a state of vapour. This globular condition of the particles of water will account for many very important phenomena; perhaps it is best exhibited in the dew-drop, and so long as these globules retain their form, water will retain its fluid properties. An agglomeration of these globules will carry with them, under certain circumstances, so much force that it is hardly a contradiction to call water itself a solid. The water-hammer, as it is termed, illustrates this apparent contradiction. If we introduce a certain quantity of water into a long glass tube, when it is shaken, we shall hear the ordinary splashing noise as in a bottle; but, if we exhaust the air, and again shake the tube, we shall hear a loud ringing sound, as if the bottom of the tube were struck by some hard substance—like metal or wood—which may fearfully remind us of the blows which a ship's side will receive from the waves during a storm at sea, which will often carry away her bulwarks.

It is now time to turn to something stronger than water, for more instances of chemical contradictions. The chemical action of certain poisons (the most powerful of all agents,) upon the human frame, has plunged the faculty into a maze of paradoxes; indeed

there is actually a system of medicine, advancing in reputation, which is founded on the principle of contraries. The famous Doctor Hahnemann, who was born at Massien in Saxony, was the founder of it, and, strange to say, medical men, who are notorious for entertaining contrary opinions, have not yet agreed among themselves whether he was a very great quack or a very great philosopher. Be this as it may, the founder of this system, which is called HOMOEOPATHY, when translating an article upon bark in Dr. Cullen's *Materia Medica*, took some of this medicine, which had for many years been justly celebrated for the cure of ague. He had not long taken it, when he found himself attacked with agueish symptoms, and a light now dawned upon his mind, and led him to the inference that medicines which give rise to the symptoms of a disease, are those which will specifically cure it, and however curious it may appear, several illustrations in confirmation of this principle were speedily found. If a limb be frost-bitten, we are directed to rub it with snow; if the constitution of a man be impaired by the abuse of spirituous liquors, and he be reduced to that miserable state of enervation when the limbs tremble and totter, and the mind itself sinks into a state of low muttering delirium, the physician to cure him must go again to the bottle and administer stimulants and opiates.

It was an old Hippocratic aphorism that two diseases cannot co-exist in the same body: wherefore, gout has actually been cured by the afflicted person going into a fenny country and catching the ague. The faculty of consumption is also said to be retarded by a common catarrh; and upon this very principle depends the truth of the old saying, that ricketty doors hang long on rusty hinges. In other words, the strength of the constitution being impaired by one disease has less power to support the morbid action of another.

We thus live in a world of apparent contradictions; they abound in every department of science, and beset us even in the sanctuary of domestic life. The progress of discovery has reconciled and explained the nature of some of them; but many baffle our ingenuity, and still remain involved in mystery. This much, however, is certain, that the most opposed and conflicting elements so combine together as to produce results, which are strictly in unison with the order and harmony of the universe.

AN IRISH PECULIARITY.

THE characteristics attributed by one nation to another are never patented without some foundation in truth; but, in time, by means of successive overlays of jest, constant repetition, and the heaping up of one exaggeration upon another, national portraiture flashes forth into glaring caricature. If we were to believe old plays and old novels,

we should suppose that, only a half century since, every Englishman fed exclusively on roast beef and plum-pudding—rattled his guineas in ample pockets, tightened by the portly protuberance of his figure, and rapped out oaths against “frog-eating Mounseers” with the same energy with which, after dinner, he imbibed crusted port to the health and prosperity of Church and State. On Sunday morning, we view him, through the same medium, standing upright in his red-cushioned pew, pronouncing the responses with the *ore rotundo* of Sir Roger de Coverley, and, like that worthy baronet, looking daggers at little boys whom he catches napping.

The Scotchman of the same authorities was invariably a long, lean, raw-boned, hungry, grey-eyed Sawney, with high cheek-bones, reddish hair, and a diffused aroma of brimstone pervading his threadbare garments. Pertaining to him also, by inalienable birth-right, was an insatiable appetite for oaten-cakes, haggis, and singed sheep's head; of which viands the supply usually fell very far short of the demand. No matter what his rank in life might be, he was forced, as a necessary condition of his existence, to talk “bruid scots,” and to look sharply after the “siller.” Somehow, he regularly found his way to London, where a lucrative place, and a rich wife, to whom he continually proclaimed the glories of the “Land o' Cakes,” gratified and rewarded his cautious persevering endeavours to replenish his “ponch and sporrnan;” for all Scotchmen were Highlanders, and were supposed only to have abandoned their kilts in deference to decency and English prejudice while in the act of crossing the border.

The Irishman of novel, tale, or comedy, was a Phelim or a Patrick, always either immersed in love or drink and often the victim of both these exciting predicaments:—telling humorous lies, making unheard-of blunders, winning money by his tricking cleverness, and losing it by his unaccountable folly; leading a good-humoured, reckless, rollicking life, breaking the hearts and emptying the purses of maid, wife, and widow; and carrying off every shade of embarrassment with the cut-and-dry exclamation, “By the powers!”—“Arrah, honey!”—or, “Och, my jewel!”

All this served very well to amuse the juvenile minds of our grand parents, but in those days when the wandering Jewish propensity to travel over the face of the earth, has attained its full development, we find it to be a well-ascertained fact that there are Englishmen who affect fricassees more than roast beef, drink French wines, and dress in the French fashion; that Scotchmen may be found, even in Scotland, who have neither caution in their heads, avarice in their hearts, nor kilts round their bodies. Facility of intercourse has done this. The ancient prophecy is being daily fulfilled—“Many shall run to and fro, and knowledge shall be in,

creased." Railways have rounded off the sharp angles of national dislikes, by promoting social attrition. The locomotive engine is the steam-plough which tears up local prejudices by the roots.

Thus the Rose and the Thistle are vindicated, but the tiny shamrock still droops its green leaf in the atmosphere of public estimation. In judging of Irish character, a very useful distinction drawn in the days of good Queen Bess is overlooked. It divided the nation into "the Irish, the wild Irish, and the extreme wild Irish." In justice, these distinctions ought to be preserved; for the "Irish" of the present day are, upon the whole, pretty much like other well-bred, well-educated members of the civilised world: eating, drinking, sleeping, dressing, and living much as their neighbours do. But it must be owned that the lower orders, —the "wild Irish" of the towns, and the "extreme wild Irish" of the bogs and mountains,—present some striking and picturesque peculiarities to justify the conventional Irishman of the old novel: the most prominent being that mingled love of fun and fighting, which would make one believe that the atmosphere of the four fair provinces is compounded in equal portions of inflammable and laughing gas.

Very deplorable, indeed, must be the state of an Irishman—he must "be gone to the bad entirely," when he can neither smile nor quarrel; and often even "under the ribs of death" is "an appetite created" for these excitements. He loves fun; but fighting is his pride and his glory. For fighting he forswears name and wealth. You may call him by all the uncomplimentary names in the vocabulary of censure, and he hears you meekly; but cast an imputation on his courage or his prowess, and—"Hah! Whoo!—you will feel his shillelagh whizzing around your ears like a fire-work in a state of explosion.

An illustration of this peculiarity, of the ease with which a "wild Irishman" will forego every prudent consideration in preference to the disgrace of having been beaten in battle occurred, but a short while since. In a Union workhouse in the south, some of the able-bodied paupers came into rather forcible collision with the officials. The cause of dispute was the supply of "stirabout," which being deemed insufficient by a few stout fellows, they marched into the kitchen, seized ladles and bowls, and proceeded to help themselves. An alarm of this lawless incursion being given, in rushed to the rescue the master and his myrmidons. Fast and furious were the blows dealt by both parties, but the strong hand of the law at length prevailed, the well-fed officers triumphed over their famine-weakened foes, and the stalwart master counted his victory by the number of broken heads prostrated by the huge ladle which he wielded. The proprietors of the damaged

craniums were subsequently conveyed to the surgeon's room, and severally bandaged and plastered as their cases required. Most of the hurts were found to be trifling, but one poor fellow had received a severe contusion. With the dislike which many of his countrymen feel, to submit to the prescription of qualified practitioners, Tim Murphy, in a day or two, asked for his discharge, threw off the well-fixed bandages, and betook himself to the squalid shelter of a cabin belonging to an "uncle's son" nearly as poor as himself, an unqualified "docther," whose unprofessional practice it was to prescribe charms and philtres in place of physic. This reckless proceeding was followed by its natural result. The hurt which, with common care, would have readily healed, became inflamed, fever ensued, and the man died. This melancholy finale to the workhouse row caused much excitement, and an investigation of the whole business was instituted by the magistrates. On the day when it took place, the hall of the workhouse was crowded, and although it was shown that the master was justified in using force to protect the kitchen stores from the paupers, and it was also proved that under proper surgical treatment the patient would, in all human probability, have recovered, yet the point to be decided was, whether John Minahan, the master, had used unnecessary violence in the discharge of his duty. The principal witness against him, was a man who appeared with evident "tokens of a foughten field" on his forehead, and who indeed had been the only recipient, besides Tim Murphy, of any serious injury. The examination proceeded nearly as follows:—

After having deposed readily and clearly to the fact of the combat, and of John Minahan having rushed to the rescue of the porridge-pots, he was asked:

"Did you see the master strike any one in particular?"

"No, he, indeed; he was no ways particular; but he murdered and killed every one that came in his way."

"Did he strike you?"

"Did he strike me, is it?" "Why, then, if he did, I paid it back to him handsomely."

"Answer distinctly. Whom did you see him strike?"

"Ah, then, little matter 'twould be who he'd strike, if the boys had his feeding, and he had theirs to depend on for one month. It's little good the son of ould Thady Minahan, the tinker, would do, if he was living on lugsy male and water."

"Come, come," said the magistrate, impatiently, "give me a plain answer to a plain question. Did Minahan knock you down?"

"Is it the likes of him to knock me down? I'd like to see him try it. He didn't, nor couldn't, your Honour's glory."

Up started the accused, and cried: "I did knock you down, and bate you well, too. Your

Honours," he continued, turning to the bench, "if I'm to swing for it the next minute, I won't let *that* go with the ribbone. I wouldn't lave it to him to say that I didn't knock him down, and murder him handsomely to his heart's content."

The witness had been summoned to prove that the master had used unnecessary violence; the defendant was there to prove he had not employed more force than the occasion demanded. But could they establish such proofs at the expense of their respective reputations? Should it be said that Tim Murphy's friend, or John Minahan, were not able to "murder a ch other intirely," at any given minute's notice? Never! Tim Murphy's friend would starve on. "Ingy, male," and John Minahan would lose his place first.

What became of the witness has not been stated; but the defendant did lose his situation; the guardians of the Union thought that his national ideas of honour were undoubtedly more suited to military than to civil avocations.

Although it is doubtful whether the Irish peculiarity will ever be totally eradicated from the national character, yet the savage custom of faction-fighting is becoming each year more rare. Sometimes, indeed, at the close of a fair a "bit of a fight" does spring up; but the casualties thence resulting, are seldom of a grave or fatal character; and the contending parties may frequently be seen proceeding homewards, with arms lovingly linked together, and tongues vowing eternal friendship; although this, it must be confessed, is an indication of a renewal rather than of the end of an Irish fight.

No doubt the process of fusing the national peculiarities of the three kingdoms is advancing rapidly. It is no wild speculation to anticipate the probability, that fifty years hence there may be little apparent difference between an average native of England, Ireland, (always excepting the "extreme wild Irishman") or Scotland.

WHERE DWELL THE DEAD?

Where do they dwell? Neath grassy mounts, by daisies,
Lilies, and yellow-cups of fairest gold;
Near grey-grown walls, where in 'wild, tortuous
mazes,

Old clustering ivy wreathes in many a fold:

Where in red summer noods
Fresh leaves are rustling,
Where neath large autumn moons
Young birds are nestling—

Do they dwell there?

Where do they dwell? In sullen waters, lying
On beds of purple sea-flowers newly sprung;
Where the mad whirlpool's wild and ceaseless
sighing,

Preta slapping banks, by dark green reeds o'erhung:
Where, by the torrent's swell,
Cry's a belgie's glitter,

While sounds the heavy bell

Over the river—

Do they dwell there?

No: for in these they slumber to decay,
And their remembrance with their life departs:
They have a home,—nor dark, nor far away—
Their proper home,—within our faithful hearts;
There happy spirits wed,
Loving for ever;
There dwell with us, the dead,
Parting—ah, never—
There do they dwell!

FATE DAYS.

It is a difficult puzzle to reconcile the existence of certain superstitions that continue to have wide influence with the enlightenment of the nineteenth century. When we have read glowing paragraphs about the wonderful progress accomplished by the present generation; when we have regarded the giant machinery in operation for the culture of the people—moved, in great part, by the collective power of individual charity; when we have examined the stupendous results of human genius and ingenuity which are now laid bare to the lowliest in the realm; we turn back, it must be confessed, with a mournful despondency, to mark the debasing influence of the old superstitions which have survived to the present time.

The superstitions of the ancients formed part of their religion. They consulted oracles as now men pray. The stars were the arbiters of their fortunes. Natural phenomena, as lightning and hurricanes, were, to them, awful expressions of the anger of their particular deities. They had their *dies atri* and their *dies alli*; the former were marked down in their calendars with a black character, to denote ill-luck, and the latter were painted in white characters to signify bright and propitious days. They followed the finger-posts of their teachers. Faith gave dignity to the tenets of the star-gazer and fire-worshipper.

The priests of old taught their disciples to regard six particular days in the year as days fraught with unusual danger to mankind. Men were enjoined not to let blood on these black days, nor to imbibe any liquid. It was devoutly believed that he who ate goose on one of these black days would surely die within forty more; and that any little stranger who made his appearance on one of the *dies atri* would surely die a sinful and violent death. Men were further enjoined to let blood from the right arm on the seventh or fourteenth of March; from the left arm on the eleventh of April; and from either arm on the third or sixth of May, that they might avoid pestilential diseases. These barbaric observances, when brought before people in illustrations of the mental darkness of the ancients, are considered at once to be proof positive of their abject condition. We thereupon congratulated ourselves upon living in the nineteenth century; when such foolish superstitions are

laughed at; and perhaps our vanity is not a little flattered by the contrast which presents itself, between our own highly cultivated condition, and the wretched state of our ancestors.

Yet Mrs. Flimmins will not undertake a sea-voyage on a Friday; nor would she on any account allow her daughter Mary to be married on that day of the week. She has great pity for the poor Red Indians who will not do certain things while the moon presents a certain appearance, and who attach all kinds of powers to poor dumb brutes; yet if her cat purrs more than usual, she accepts the warning, and abandons the trip she had promised herself on the morrow.

Miss Nippers subscribes largely to the fund for eradicating superstitions from the minds of the wretched inhabitants of Kamschatka; and while she is calculating the advantages to be derived from a mission to the South Sea Islands, to do away with the fearful superstitious reverence in which those poor dear islanders hold the native flea: a coal pops from her fire, and she at once augurs from its shape, an abundance of money that will enable her to set her pious undertaking in operation; but on no account will she commence collecting subscriptions for the anti-drinking-slave-grown-sugar-in-tea society, because she has always remarked that Monday is her unlucky day. On a Monday her poodle died, and on a Monday she caught that severe cold at Brighton, from the effects of which she is afraid she will never recover.

Mrs. Carmine is a very strong-minded woman. Her unlucky day is Wednesday. On a Wednesday she first caught that Hustl which she has never been able to chase from her cheeks, and on one of these fatal days her Maria took the scarlet fever. Therefore, she will not go to a picnic on a Wednesday, because she feels convinced that the day will turn out wet, or that the wheel will come off the carriage. Yet the other morning, when a gipsy was caught telling her eldest daughter her fortune, Mrs. Carmine very properly reproached the first-born for her weakness, in giving any heed to the silly mumblings of the old woman. Mrs. Carmine is considered to be a woman of uncommon acuteness. She attaches no importance whatever to the star under which a child is born,—does not think there is a pin to choose between Jupiter and Neptune; and she has a positive contempt for ghosts; but she believes in nothing that is begun, continued, or ended on a Wednesday.

Miss Crumple, on the contrary, has seen many ghosts,—in fact, is by this time quite intimate with one or two of the mysterious brotherhood; but at the same time she is at a loss to understand how any woman in her senses, can believe Thursday to be a more fortunate day than Wednesday, or why Monday is to be black-balled from the Mrs. Jones's calendar. She can state, on her oath, that the ghost of her old schoolfellow, Eliza Artichoke,

appeared at her bedside on a certain night and she distinctly saw the mole on its left cheek, which poor Eliza, during her brief career, had vainly endeavoured to eradicate, with all sorts of poisonous things. The ghost, moreover, lisped,—so did Eliza! This was all clear enough to Miss Crumple, and she considered it a personal insult for anybody to suggest that her vivid apparitions existed only in her own over-wrought imagination. She had an affection for her ghostly visitors, and would not hear a word to their disparagement.

The unearthly warnings which Mrs. Piptoss had received had well-nigh spoilt all her furniture. When a relative dies, the fact is not announced to her in the commonplace form of a letter,—no, an invisible sledge-hammer falls upon her Broadwood, an invisible power upsets her loo-table, all the doors of her house unanimously blow open, or a coffin flies out of the fire into her lap.

Mrs. Grumple, who is a very economical housewife, looks forward to the day when the moon re-appears,—on which occasion she turns her money, taking care not to look at the pale lady through glass. This observance, she devoutly believes, will bring her good fortune. When Miss Caroline has a knot in her lace, she looks for a present; and when Miss Amelia snuffs the candle out, it is her faith that the act defers her marriage for a twelvemonth. Any young lady who dreams the same dream two consecutive Fridays, will tell you that her visions will "come true."

Yet these are exactly the ladies, who most deplore the "gross state of superstition" in which many "benighted savages" live, and willingly subscribe their money for its eradication. The superstition so generally connected with Friday, may easily be traced to its source. It undoubtedly and confessedly has its origin in scriptural history: it is the day on which the Saviour suffered. The superstition is the more revolting from this circumstance; and it is painful to find that it exists among persons of education. There is no branch of the public service, for instance, in which so much sound mathematical knowledge is to be found, as in the Navy. Yet who are more superstitious than sailors, from the admiral down to the cabin boy? Friday fatality is still strong among them. Some years ago, in order to lessen this folly, it was determined that a ship should be laid down on a Friday, and launched on a Friday; that she should be called "Friday," and that she should commence her first voyage on a Friday. After much difficulty a captain was found who owned to the name of Friday; and after a great deal more difficulty men were obtained, so little superstitious, as to form a crew. Unhappily, this experiment had the effect of confirming the superstition it was meant to abolish. The "Friday" was lost—was never, in fact, heard of from the day she set sail.

Day-fatality, as Miss Nippers interprets it

is, simply the expression of an undisciplined and extremely weak mind; for, if any person will stoop to reason with her on her aversion to Mondays, he may ask her whether the death of the poodle, or the catching of her cold, are the two greatest calamities of her life; and, if so, whether it is her opinion that Monday is set apart, in the scheme of Nature, so far as it concerns her, in a black character. Whether, for her insignificant self there is a special day accursed! Mrs. Carmine is such a strong-minded woman, that we approach her with no small degree of trepidation. Wednesday is her *dies ater*, because, in the first place, on a Wednesday she imprudently exposed herself, and is suffering from the consequence; and, in the second place, on a Wednesday her Maria took the scarlet fever. So she has marked Wednesday down in her calendar with a black character; yet her contempt for stars and ghosts is prodigious. Now there is a consideration to be extended to the friends of ghosts, which Day-fatalists cannot claim. Whether or not deceased friends take a more airy and flimsy form, and adopt the invariable costume of a sheet to visit the objects of their earthly affections, is a question which the shrewdest thinkers and the profoundest logicians have debated very keenly, but without ever arriving at any satisfactory conclusion.

The strongest argument against the positive existence of ghosts, is, that they appear only to people of a certain temperament, and under certain exciting circumstances. The obtuse, matter-of-fact man, never sees a ghost; and we may take it as a natural law, that none of these airy visitants ever appeared to an attorney. But the attorney, Mr. Fee Simple, we are assured, holds Saturday to be an unlucky day. It was, on a Saturday that his extortionate bill in poor Mr. G.'s case, was cut down by the taxing master; and it was on a Saturday that a certain heavy bill was duly honoured, upon which he had hoped to reap a large sum in the shape of costs. Therefore Mr. Fee Simple believes that the destinies have put a black mark against Saturday, so far as he is concerned.

The Jew who thought that the thunder-storm was the consequence of his having eaten a slice of bacon, did not present a more ludicrous picture, than Mr. Fee Simple presents with his condemned Saturday.

We have an esteem for ghost inspectors, which it is utterly impossible to extend to Day-fatalists. Mrs. Piptoss, too, may be pitied; but Meg, turning her money when the moon makes her re-appearance, is an object of ridicule. We shall neither be astonished, nor express condolence, if the present, which Miss Caroline anticipates from the knot in her lace, be not forthcoming; and as for Miss Amelia, who has extinguished the candle, and to the best of her belief lost her husband for a twelvemonth, we can only wish for her, that when she is married, her

lord and master will shake her faith in the prophetic power of snuffers. But of all the superstitions that have survived to the present time, and are to be found in force among people of education and a thoughtful habit, Day-fatalism is the most general, as it is the most unfounded and preposterous. It is a superstition, however, in which many great and powerful thinkers have shared, and by which they have been guided; it owes much of its present influence to this fact; but reason, Christianity, and all we have comprehended of the great scheme of which we form part, alike tend to demonstrate its absurdity, and utter want of all foundation.

A LETTER ABOUT SMALL BEGINNINGS.

SIR,—Fortunate mistakes are by no means uncommon. In your number seventeen you fall into an error in reference to the Westminster Ragged Dormitory; in the correction of which I have the good fortune to be able to give you some interesting information. You stated that the particular institution there alluded to was founded by Mr. Walker, the city missionary—that was the error. The credit is due, and should have been given to Mr. C. Nash, who was formerly a school-master, employed by Mr. Walker to teach a ragged school which that gentleman had established before "Ragged Schools" and received their appropriate designation and wide popularity.

The tact, management, and energy displayed by Mr. Nash in forming and establishing the St. Ann Street dormitory deserve every praise; but the ground was in some measure prepared for him by his former principal. The manner in which this was done shows "the power of small beginnings," even in a stronger light than was exhibited in your article with that title.*

In the year 1840 it became my duty to enquire into the condition of what are but too literally the outcasts of society; and for that purpose obtained introductions to several city missionaries—adequate description of the scenes of harrowing want, disease, and crime into which those gentlemen introduced me, it would be impossible to pen. They alone seemed able to penetrate the dark moral atmosphere. They were always welcomed even by the poorest and the worst.

As one specimen of the efforts made by the Westminster missionaries, I was introduced to a dilapidated shed in New Pye Street. Here I found several young children of both sexes, in rags, and some nearly naked. The scene was most grotesque; the clotted hair, the mud-covered hands and faces, and the haggard countenances, at once told a tale which would have pierced the coldest heart. They were being taught reading and needle-

work. They were not particularly orderly and some showed a quaint, pantomimic, half-witted disposition to be funny, which pained rather than amused the spectator. Most of them were the sons and daughters of thieves. The small beginning which gave rise to the general idea of Ragged Dormitories took rise in an event for which I can vouch.

The missionary who had formed this school was standing one day, in 1846, at its door, when two adult thieves appealed to him in behalf of a wretched boy who had, they said, been cruelly maltreated and kicked out of doors by his mother, because his day's prowl for the purpose of thieving had been unsuccessful. "Why do you not take pity on him yourselves?"—asked the missionary. "Why!"—one of them answered,—“why, if you knew what a thief's life is as well as we do; you would not train a dog to thieving.” It must have been, thought the missionary, a desperate case which could have so forcibly excited the sympathies of two hardened depredators; and he determined to see into it. He soon found the boy; and his condition was too debased for any description which would not excite loathing. Having made the lad decent, he took him to the model lodging-house in Great Peter Street, benevolently commenced and ably supported by Lord Kimbaird. The boy was kept there for four months; supported three out of the four solely out of the poor boy's slender private funds.

This circumstance forced on his attention the necessity of providing shelter for such fallen outcasts, and he drew up an appeal to certain benevolent persons to that effect. The secretary of the Ragged School Union immediately promised that if the missionary would find house room, he would find funds. A house was taken in Old Pye Street, which was soon afterwards opened as the Westminster Juvenile Refuge and School of Industry. This establishment was afterwards removed to Duck Lane, where it now flourishes, under a roof which formerly covered a Thieves' public-house. The transformation is thus described by the gentleman who made it, in a pamphlet now before me:—

"Indulge me for a moment," he says, "with a glance at the old public-house, (now The Refuge!) Let us look in at the upper room—(now the girls' school). Here were fifty youths met around their master (as able a one in his calling as England could produce), listening with undivided attention to his instructions on the 'map,'—(a pair of trowsers suspended from the ceiling)—on the subject of 'fob-ology,' or pocket-picking. After this course of tuition, the next was the mock trial—an imitation of the Old Bailey Court, with a *fac-simile* of its functionaries and ordeal, done with very great taste, and calculated to make the young rascal not only expert in extracting from the fob or pocket, but clever in defence. To train the young novice in his first essay, he was supplied with

a glass, below in, the tap—(now the dining-room of the children). If successful, then he returned for the purpose of reporting his success, and having a game at skittles in the skittle ground—(now the boys' school-room.)"

A concise calculation of the respective expenses entailed on the country, in the same house, under its former and present destiny, may here be made. When it was a finishing-school for thieves, each, on conviction and transportation, cost the community not less than one hundred and fifty pounds. Comparing fifty thieves in the upper room with the fifty pupils now in the lower room, we find that, for the first fifty the cost was five thousand five hundred pounds; for the present fifty, two hundred and fifty pounds. Had the five thousand five hundred pounds been used for the preventing instead of the punishing of crime, what would not have been accomplished for these neglected mortals? It would have educated eleven hundred youths, many of whom would not only have been rescued from vice and crime, but have become a blessing instead of a curse to society.

What I have described, then, is the true origin of the class of institutions to which that founded by Mr. Nash belongs.

The Duck Lane Ragged School and Dormitory averages at present a daily attendance of two hundred and twenty children of both sexes; forty have no fathers, twenty eight have no mothers, eighteen are orphans, six of the fathers have been transported. Provision is made for ten who are totally destitute; they are fed and lodged on the premises; twenty-four thieves and vagrants have been admitted during the year, and many more refused for want of support, eleven have emigrated, three have been provided with situations in this country; some of those have spent three, five, seven, and ten years in a course of crime; who have gone forth from this Institution after a moral and an industrial training and are now doing well.

Three of the emigrants have given an account of themselves in the following joint epistle to Mr. Walker, their benefactor. It is so characteristic that we print it almost literally:—

"Mr. Walker. "B—, July 16th, 1850.

"Dear Sir,—You may wonder how it is that you have not heard from us before, but as they that came from Mr. Nash, was going to write, they promised Mr. Cain that they would acquaint you of our safe arrival. We left Gravesend on the Sunday morning, and sailed out for the great depths of the Atlantic, which gave us some great shakes before we got to our journey's end. The vessel proved to be in but a sorry condition for passengers, there being hardly any dry berths on board, and ours the worst of the whole lot, Mr. Cain and Chura got another berth aft, and Fred and me had to take to the sails room aft where we stopt during the remainder of the voyage. We had four deaths on board, two babies, one old lady, and one of the poor sailors who fell from the fore top across the windlass, which killed him

instantly. We made the passage in about five weeks and five days, as we arrived at New York on the 17th of May. We found it to be a place quite different to our liking, and so we left it and proceeded up the country without anything in our pockets, for we were determined not to be discouraged, though in a strange land, for we knew that we had the same eye watching over us here as we had in England, so we pushed on, on board of a canal boat that was going to Buffalo, but stopping about 2½ miles from the Town of B— on account of a breakage in the canal, we took the opportunity to look round the Town for work and was fortunate enough to fall into work, the three of us. Fred is learning the harness-making, as he did not much care about learning the shoemaking over again, as me and Churn has to do, for the work here is as different to what we had been accustomed to as light from darkness. I do scarcely anything but upper leathers, with now and then a pair or two of Boy's Boots which I make here in about three hours, being all pegged work, as for closing you must not take a day to close one pair, but must do 16 or 18 pair a day, and 6 of 8 pair of what you call Wellingtons. So you will see by this that it is no use coming over unless you mean to work in downright earnest, for they think of nothing but of making money, up at 4 past 4 four in the morning, begin work at five and keep on till seven in the evening, and no time allowed for your meals but eat away as fast as you like and then back again to work, our breakfast here beats all the dinners in England, for theres roast and boil meats, pies, puddings, cakes, salads, tea, coffee, bread and butter which latter article comes on at all meals. We had grand doings here on the fourth of July, in anniversary of their Independence fireworks, Bonfires, Circus, shows, firemen going round all the City with the engines decorated out with flowers which look very pretty. The President of the united States died at Washington on the tenth of this month of Billious Diarrhoea, he is to be buried on Friday the 12th. Twenty years ago this Town was nothing but a low swampy mass of Land, with but one house on it, now it is a flourishing place with twenty thousand inhabitants, its rise is owing to a salt spring about 2 miles off where they make vast quantities of salt, indeed it is one of the chief trades here it employs about three thousand hands all the summer, but they do not work at it in the winter, their weekly earnings are from 4 to 5 Dollars that is 1 pound English. It is very hard work I can tell you, in this country were the thermometer is never much less than 100 during the summer, where they have got to stand over large Furnaces, attending to the boiling of the salt. I do not think that I shall rest contented over here longer than a few years, for a man earns not a fraction more here than he does in England, the only difference is, that he works more hours here than he does there and consequently he is glad to get home to rest himself, instead of cooling his money away at the pothouse, and then some of the things are rather cheaper here, and as I told you before they only think of getting money. I shall write and let you know more about it when I have been over some time longer, I shall then I guess know more about the place. You can tell the others if they come over that I should advise them to push up a little higher in the country than stop in New York as it is far

better, and tell them that they need not mind having any money for they will not starve over here for we found the people very kind to us here not like they are in England. You must excuse this funny letter, as it is the work of several evenings, and therefore it may read curious, for I have felt rather unsettled as yet being among strangers, but I will write you another shortly, when I feel more at home, and will give you a further description of the place, so you must excuse all faults. Timothy Case left his place in New York, for what reason I do not know further than that he said he only was going there till we came that he might go with us, as he felt sure when I saw New York that I should not stop in it, and that if we would not go with him, he should then have gone by himself. I felt very vexed with him at leaving, and tried to persuade to stop but it was no use, so Fred and me took him under our care and got our boss to take him where he is now learning the harness making. I guess he will get about 20 Dollars a year he being hardly an inch taller than he was at home. When you return an answer direct to me at Mr. Apples Boot and Shoe Store 8 Empire Block B— Onondaga County State of New York. They don't say streets, but call them Blocks, and they guess they don't think here so I suppose that I shall get a regular Yankee in time. It is tremendous hot here now, and I feel it so when at work very much. Tell Mr. Slade that I will write him a letter soon. I get 2s. 6d. english money a week or 30 Dollars a year of this, board lodging and washing which is pretty fair wages here for boys, learning pegged work, the general pay being 15 or 18 dollars a year, but as we had learned the other work our boss gave us thirty, (boss here is what they call the Master in England) Fred and Churn gets the same wages, as me, you must give all our best loves and wishes to all the School children, and we hope that they will all value their learning, which they will find will be a blessing and comfort to them hereafter. You can tell them that I often think of them when I sit at work and that I almost fancy that I am in the old shop once more hearing their voices as they say their lessons showing how strong fancy leads us back again to old familiar scenes, I hope that God will bless and prosper them all in this life, and that he will take them to his everlasting home is the fervent prayer of John Jones. Give our love to all kind friends at home, for so I am bound to call it, and receive the same yourself with Mrs. W— and Harriet.

"From yours ever affectionate pupils,
"J. J., J. H. C., and F. J."

Before reception into the Duck Lane School, all these boys had been thieves. J. J. had lived by plunder for seven years; J. H. C. had been a thief from early childhood; and F. J. from the age of five years.

On the 20th inst. will be published, price 5s. 6d.,
neatly bound in cloth.

THE FIRST VOLUME

"HOUSEHOLD WORDS,"

Containing Numbers 1 to 50.

"Familiar in their Mouths as HOUSEHOLD WORDS."—SHAKESPEARE

HOUSEHOLD WORDS.

A WEEKLY JOURNAL

CONDUCTED BY CHARLES DICKENS.

No. 26.]

SATURDAY, SEPTEMBER 21, 1850.

[PRICE 2d.]

FOREIGNERS' PORTRAITS OF ENGLISHMEN.

THE extraordinary being, conjured up in the minds of most foreigners under the generic term Englishman, seems to be something more uncommon than the veracious Gulliver ever encountered, and more heterogeneous than John Bulwer in his *Artificiall Changeling* portrayed. As a Spanish *olla podrida* and a Devonshire squab-pie are said to be made up of all the contradictory edibles that can be conceivably assembled in one dish; so is the hash, cooked up by the French or German novelist and dramatist to represent a true born Briton, an incarnation of every unlikely extravagance it is possible to assemble in one character.

The true expression of what is popularly believed of us abroad is not to be found so distinctly set forth in novels, as in plays. The novelist is restricted in a measure within the not narrow bounds of probability; but the dramatist may first revel at will in the rankest breadths of impossible absurdity; and then the actor may intensify the enormity by dress, gait, and unmeasured foolery. The amount of instruction on the manners, habits, feelings, modes of expression, gesture, dress, and general demeanour of his compatriots which an Englishman may glean in some of the foreign Theatres, when an Englishman is being represented on the stage, is perfectly astounding. We have in this way become acquainted with English characteristics of which the most comically inclined maniac could never dream after the most dyspeptic of suppers.

It is not long since the mirror held up to Nature—that is, English nature reflected by the French—revealed to us, at the Ambigu Comique and at the Théâtre des Variétés, in Paris, "that of ourselves which yet we knew not of"—dreamt not of. One gentleman who reported not only the character of a Prefect, but an enormous cocked-hat, assured us that when we were at home, we groined under the tyranny of a feudal government, which ground us to the dust; that our Commonality was overridden and harrowed by tax-exacting aristocrats; that they died of starvation in heaps; that if they dared to call their souls their own, the latter were summarily released from their bodies by a perambulating police disguised as

members of the Royal Humane Society. In another scene the same public instructor told us, that all Englishmen (of course including the starved Commonality) possess enormous wealth, which they usually employ in the purchase of "*Le titre de Lord*;"—an unnecessary outlay, as every person not a tradesman receives the title as a matter of course. Yet this avails them little, as the different orders of our nobility hold no communication with persons of higher or lower rank; our national pride preventing the one, and the best of all reasons—"because they can't"—the other. Our patricians ride abroad followed by armed retainers; nor is any vulgar person allowed to come between the wind and their nobility; the streets being expressly cleared for them by constables. When at home, however, seated in a golden chair in company with the Splend, the "jeune Miss," his wife, and a "bouille-dog," a native of our kingdom passes his time chiefly in drinking tea with lemon in it, and saying, "Hoh!—Hah!—Veeas!—Gottam!—and ver gut!"

Our ladies are a little too much given to fighting, and a little too lightly won. We sell our wives. This is a very common mercantile transaction indeed. A "pen" of no mean dimensions is appropriated in Smithfield for the interesting periodical auction. Our Queen quakes away with many millions a year, and cuts off the heads of any persons to whom she might take a dislike, or hangs them, without the intervention of judge, jury, or any other functionary than the executioner, who—another Tristan the Hermit—is a regular member of the Royal Household. We are, however, for the most part, a harmless and ridiculous race, affording excellent sport to rickkeepers and adventurers. We eat prodigiously. Indeed so great is our love for good cheer, that we name our children after our favourite dishes. If a person in good society is not called Sir Rosbif, he will probably answer to the name of Lord Bifstek—in honor of the two great national dishes, which we have spelt in that manner from time immemorial.

In a pretty piece at the Gymnase in Paris, where the Prime Minister of England unfortunately ruined himself by speculating in Railway shares, a thorough, and the English servant appeared under that name, going

English name Tom Bob—the honest fellow having been christened Tom, and born the lawful son of Mr. and Mrs. Bob. In an Italian adaptation of Dumas' preposterous play of "KEAN," which we once saw at the great Theatre of Genoa, the curtain rose upon that celebrated Tragedian, drunk and fast asleep in a chair, attired in a dark blouse fastened round the waist with a broad belt and a most prodigious buckle, and wearing a dark red hat of the sugar-loaf shape, nearly three feet high. He bore in his hand a champagne-bottle, with the label RUM, in large capital letters, carefully turned towards the audience; and two or three dozen of the same popular liquor which we are nationally accustomed to drink neat as imported by the half-gallon, ornamented the floor of the apartment. Every frequenter of the Coal Hole Tavern in the Strand, on that occasion, wore a sword and a beard.

Every English lady presented on the stage in Italy, wears a grega veil; and almost every such specimen of our fair countrywomen carries a bright red reticule, made in the form of a monstrous heart. We do not remember to have ever seen, an Englishman on the Italian stage, or in the Italian Circus, without a stomach like Daniel Lambert, an immense shirt-frill, and a bunch of watch-seals, each several times larger than his watch, though the watch itself was an impossible engine. And we have rarely beheld this mimic Englishman, without seeing present, then and there, a score of real Englishmen, sufficiently characteristic and unlike the rest of the audience, to whom he bore no shadow of resemblance.

These edifying pictures of the English are not complete without the finishing touches of grotesque absurdity vouchsafed by the actors. A few winters ago we were enticed into the little theatre of Coblenz by the information paraded in large placards on the doors that it was "very well warmed;" that Auber's opera of *Fra Diavolo* was to be played; and that the part of Lord Allicash was to be personated by a distinguished comic actor. Even while we write, his lordship is before our mind's eye, blazingly costumed in a green coat, blue inexpressibles, top-boots, a brace of yellow handkerchiefs sticking out of either pocket, a couple of watches, and a hat with a feather in it! Yet, if they do not know something of the ordinary appearance of an English traveller in Coblenz, where should they! He must be at least as well known there, as in Devonshire or the Isle of Wight.

So, in Brussels, where the English almost outnumber the native population, the audiences relish a curious amount of ignorance respecting *Anglais* and the English; as the draughtsman of a piece exhibited so recently at the Théâtre St. Hubert, last May at the Théâtre St. Hubert, called *La Lectrice, ou une femme de bien*. Comédie Vaudeville en 1 acte. It must have had a comic turn; for the play-bill

states that M. Ferville had created a great sensation in the character of "Sir Cobridge," at Paris. We have some idea that "Sir Cobridge" must be intended for the Sleeping Partner in a Porter-Brewery, and that the name is a dreamy reminiscence of the popular individual Sir Co, made easy of remembrance by sign-boards. But the first personage we have occasion to mention is, "Sir Arthur" (jeune officier) who has no other name, and who has no occasion for one, everybody calling him "my lord," according (as he observed) to the usual form of address in England. Sir Arthur considers it the first duty of a British officer to insult a respectable blind old gentleman—who is moreover his guest—because the blind old gentleman ventures to insinuate something against one of the officers of Sir Arthur's regiment, through whom he has suffered severely. This chivalrous young nobleman, disdaining all inquiry into the circumstances, at once constitutes himself champion of every individual belonging to the entire British army. The next personage is a young gentleman possessing (as he observed) a name extremely common in Britain, to wit, "Clac-Own." The actor of this part was fitted up with a wig of violently red hair, like a carriage-rug, and was dressed in a kind of fusion of an English jockey with a French Field-Marshal. Expecting to inherit the vast possession of his uncle, Sir Cobridge, Clac-Own passed his time, according to the custom of Anglican nephews in such cases, in giving his uncle to understand how extremely inconvenient he finds his society, and in informing him that "Shak-es-pair," who, being Sir Cobridge's favourite author, is naturally the avowed bugbear of Clac-Own,—is an insufferable bore. This is going too far; and the wealthy old gentleman (who has quietly submitted to every other species of personal insult from his intended heir,) is so shocked by this contempt for "Shak-es-pair," that he feels himself compelled to sing a song; wherein he demonstrates, in the most lucid tira-lal-a-la logic, that Clac-Own is very decidedly in the wrong. The scena concludes by Sir Cobridge ordering Clac-Own off, in some very deep bass notes, to "Le Lincoln!"—an idiomatic place of banishment, that would appear to be very popular among us, though whether it stands for Coventry, Bath, Jericho, Halifax, or any other such place, we are unable to report. Clac-Own, Sir Arthur, and several others having assembled at a later stage of the proceedings to go out hunting, the Belgian public perceive that our usual equipment for that sport is a white tailed coat, light blue breeches, patent leather hessian boots with brass spurs, a red neckerchief—such as one may see whispering to the gale in Field Lane, or Wapping,—a turned-down shirt-collar, a gun, a cutlas, and an enormous game pouch. Thus arrayed and mounted on the "chevaux fougueux" of our island, we pursue and capture the crafty fox.

—When we add that Monsieur Bazard, who is the author of this singular production, is of the opinion of Boiardo, that the English have an especial talent for falling off their horses—and no wonder, riding across the country in such trim!—we have described the leading points of this accurate picture.

Most of these distorted views of English life originate with the French with whom we have had most intercourse, and who ought to know us best; but our German and Austrian friends, the dramatic caricaturists, have a very hard hit at us now and then. Only last month we were attracted to the Carl Theatre, in Vienna, by one little line in a play-bill, which announced a new piece, the English title of which is, "The Benefit Night." Here is the line:—

Lord Pudding, ein reisender Engländer . . . Hr. Heese.

Lord Pudding, a Travelling Englishman . . . Mr. Heese.

In rigid obedience to the law, which has impressed the names of entables upon the eaters thereof, the author had christened his "pock-pudding-Englischer" (to borrow a pleasant periphrasis from Scotland), out of the pot. Nevertheless "The Benefit Night"—in which we think we deserve some reflection of a very good French vaudeville—is written with considerable cleverness and wit. The plot was chiefly evolved from the endeavours of a manager to obtain the assistance of certain eminent "stars" of the profession for his benefit. He first presented himself to a great singer, who was, of course, afflicted with a cold, but who was at length frightened into voice by hearing that a rival had already agreed to sing his part, and by an assurance from the manager that the new singer had already taken everybody by storm at the rehearsal. A great tragedian the manager won by flattery; "the food of gods" being the only thing worthy the acceptance of so august a personage; and a dancer he bribed by assuring her that the wealthy Englishman, "Lord Pudding," would be in the house, especially to fall in love with her. He also promised a troop of experienced claqueurs to applaud her new "pas."

We were introduced to Lord Pudding, as he appeared while indulging in the singular fancy of taking a lesson in Elocution from a German actor! His personal appearance was wonderful to behold. He was much stuffed out with wadding to increase his natural proportions, and his dress was such as the tailors—not only of Pall-Mall and St. James's Street, but of any English extraction or habitation whatsoever—would see with amaze. It was composed of a blue dress coat, with white buttons, a red waistcoat, nankeen tights, shoes of polished leather, and long brass spurs. His neckerchief was a bright blue, carrying the eye pleasantly up to a very white hat with an imperceptible brim. The author appeared to have studied the manners of our aristocracy

with exceeding diligence; for, to the usual peculiarities which may be considered the "stock" of Foreign theatricals, he added some strikingly original features. Lord Pudding was, of course, a lover, and of course an unsuccessful one; he was jilted by the French dancer. When he danced he was made to tumble; when he saluted a lady he gave his lips a loud smack. He entered a room like a whirlwind, and between his paroxysms of "fuss" our usual friendly salutation "*Gottam*" was repeated many times; to the enthusiastic delight of the audience, who believed it to be a polished sort of "How-d'ye-do?" He was quite the Clown to the Ring; and had the long pockets—in which that gentleman usually searches for the chalk when it is required for the tight-rope—well-filled. Nor was Pudding stingy with his money. Despite his hard usage by the ballet-lady, he was liberal to the manager. Though wrathful, he was of easy faith; being readily imposed upon, and peculiarly sensible to flattery, by which means he was induced to take three boxes for the benefit, viz., one for himself; one for the policeman who had been in constant attendance on him since his arrival, to restrain his inveterate propensity for knocking down the lieges of the city (so intense was his love for "the boaks;") the third for the exclusive occupation of —, his bonlie-dog! One or two little touches, which distinguished his lordship, showed that the actor was, at least, an observer. Such were, the hat pushed back from the crimson forehead, the heavy rolling walk, and a strenuous objection to be kissed—all particularly English.

Other specimens of the genus we had previously seen, however, showed that Lord Pudding was a very fair example of an English gentleman on the German stage.

We cannot but believe that though amusing, these caricatures—exhibited as they are to ignorant and prejudiced minds—tend to confound the just relations between one people and another. Perhaps friendly Excursions on both sides of the channel may do much to lessen these absurdities. Unfortunately—as recent publications too well prove—the mistaken estimate of the English is by no means corrected by the graver works now and then put forth by distinguished men. Highly as we esteem M. Guizot and some Frenchmen of real attainments, who have written upon England, we have never taken up a book on the subject without painful disappointment, or without seeing in it errors almost equal to M. Ledru Rollin's more recent incongruities.

To the honour of our modern English authors be it spoken, they have been zealous to avoid such ridiculous mistakes. It is true that the harmless old legends respecting Foreigners—that nine-tenths of them are Frenchmen; that all are of very slender proportions in figure; that their staple diet is frogs; and that, despite Alison's and every other History of Europe,

they very much prefer to dance than to fight; together with other popular delusions—still linger in the minds of some of our bold peasantry and milder cockneys; but it is to be hoped, after many years of peace and better sense, that we may now claim for the majority of even an under-educated British public, a more correct knowledge of the personnel and manners of our Continental neighbours, than our Continental neighbours manifestly have of us.* The very foible of Lord Pudding himself—that of being a *travelling* Englishman—would defend him from such blunders as the literary Frankenstein who gave life to the monster, has fallen into. Travelling Englishmen are common abroad, who speak foreign languages, and understand foreign customs, extremely well. There are many of our travellers whom we should be very glad to improve: and thanks to railways, and to our possession of some—though not very much—of the wealth which the foreign dramatic and fictionist artists so liberally attribute to us, we are rapidly polishing off the rust of national prejudice, and ignorance of our brethren abroad. Should an English author or actor be guilty of such laughable mistakes about foreigners as those we have pointed out, woe unutterable would alight on his ignorant head.

Every sort of attraction which brings people of different nations, and even of different counties, together—whether it be a German wool fair, a music meeting, or a Swiss shooting-match—smooths away the acerbities of caste, and strengthens the sympathies of individuals. Let us, therefore, hope that the myriads of exotics which will be attracted next year to the Great Industrial Conservatory in Hyde Park, will receive new vigour and fresh intelligence from their temporary transplantation; that they will learn that Englishmen and English women are not quite the monstrosities they at present appear to believe them. Foreigners will then have the advantage of seeing us at home, and in a mass; and will thenceforth cease to judge us by these follies which they observe in a few idle tourists from these islands. They will see us as we are, reciprocating what we believe to be the general desire here, in reference to them,

THE STEAM PLOUGH.

WHEN the first experiments were being made with the Hay-making Machine, now commonly used in some parts of the country, it happened that Shelley, Mrs. Shelley, and Peacock, the author of "Crotchet Castle," "Headlong Hall," and other works of pungent erudition, were walking through a field where this strange-looking machine was in operation. Instead of the pleasant sight of the rustic men and women with their forks and rakes—a scene so full of indelible associations, from childhood, upwards—they saw this quaint monster rolling round the

field over the long swathes of hay, its rotatory forks, or rather fingers on wheels, flinging up the hay on all sides as it went spinning onwards. Meditating on the effect, if successful, this would, some day, have on the vast numbers of poor people in England, to say nothing of the summer invasions of Irish—whose sole dependence for the year is the money they make in the English hay-season—Shelley and the others walked onwards, and left the field. Presently they met a clownish fellow, who was looking intently at the whirling and whisking performance of the round-about machine in the hay-field. Shelley, having no objection to find, in the then adjusted state of society with regard to the labouring classes, that this machine was a failure, said to the clown, in a sort of half contemptuous tone—"Now, tell me,—does that thing answer at all?" The fellow looked Shelley full in the face—"It answers a deuced deal too well," said he; "I wish it was working in the inside of him that made it!"

In this very unsophisticated reply, how vast a question is comprised! But into it we cannot now enter; our present business is how to plough by steam; and the smoke from the "nostrils" of a variety of elegant ploughs, of various horse-and-man powers, is already inviting our attention. Truly, it requires one to take one's breath before commencing the examination!

Old Hesiod, in the second book of his "Works and Days," after giving particular directions for the selection of the wood, as to its natural qualities and form, and also its suitability to an artificial curve, gravely shakes his venerable head, and says—

"To make a plough, great is the expense and care."

Virgil, following his great progenitor, enters with still more minute precision into the details of the selection of the wood and its manufacture into a plough, adding, that he can "recite to you many precepts of the ancients—unless you decline them."

Well, then, to be frank with antiquity, and all its great poets and philosophers, the present age fairly announces by its practices, that it *does* decline, not only the precepts but the example of the ancients, especially in agricultural matters.

The last and not the least important innovation on agricultural labour has yet to be consummated; and it would seem from two large plates, with explanatory remarks, which have been recently published by Lord Wiltoughby de Eresby, that a monster innovation is not very distant;—no less than "Ploughing by Steam." All great inventions are the result of gradual improvement on a first idea; and an examination of these plates naturally induces us to take a cursory view of what has previously been attempted, and done, in this way.

Not wishing to go back to the "dawning

idea" of a steam-plough, (for the problem was started some fifty years ago), we will begin with taking a look at Mr. Etzler's "Iron Slave." This was invented by a German, and constructed by an Oxfordshire engineer. A public trial of the Iron Slave was made in October 1845. A few signal shots, were fired at day-break, the church-bells were set to ring a merry peal, and all the inhabitants of Bicester and Blackthorn came pouring out into the fields to witness the steam-performance of the newly discovered agricultural serf. Booths were erected, and the spectators made a long morning's holiday while the Slave did his ploughing; and hoped that his success would lead, as it ought, to many other morning holidays. The most important result of this first trial was the establishment of a new mechanical principle, *viz.* "the transmission of power from a fixed point to a moving point, going in arbitrary directions at the will of one man at the steering wheel." This, it seems, had been thought impossible by many scientific engineers. The engine was intended to move and do its work at the rate of three miles an hour; but whether the Iron Slave had not had his proper breakfast of coals, nor time enough to digest them into steam, or some part of his inside was a little out of order, was not accurately discovered; but certain it is that he could not plough fast enough. In other respects everybody was satisfied that steam-ploughing was a practicable thing.

In 1847, Mr. John T. Osborne, of Deme-rara, took out a patent for a steam-plough, the chief improvement (or distinguishing peculiarity—we must be cautious in the use of the word improvement,) on all previous attempts, being the employment of two engines and two ploughs, for one course of ploughing. While one plough was working in a given direction, and laying down the chain or rope by which it is to be worked back to the side from which it started—the other plough was performing a similar course in the reverse direction. When both had each traversed the ground once, the engines were removed forward the breadth of one furrow, by means of a chain or rope; one end of which was attached to an anchor fixed in the ground a-head.

Another Mr. Osborn, in 1848, tried some experiments near Stratford, in Essex, with a locomotive steam-engine, constructed for agricultural works in general, and for ploughing more especially. He appears to have taken out his patent in conjunction with Mr. Andrew Smith's wire-rope—a manufacture of extraordinary strength. In the first trial, a pair of these peculiarly constructed locomotives was placed opposite each other—about one hundred and twenty yards apart—with a sufficient length of wire-rope between them. Although not successful, it demonstrated a novel fact as between the comparative draught by horses, and by a long rope, showing that the condition of the

modes differ in a very marked way; the horse draught being upwards, and exercising a direct control by its proximity to the plough; whereas, the draught by steam-power and a rope was downwards, distant, and exercised no direct control over the plough. Hence this experiment, though unsuccessful, was instructive, and therefore to be valued as a good contribution to knowledge. Other trials were subsequently made by Mr. Osborn with a locomotive engine of ten horse power, and the ploughing was well done; fully settling the question of practicability, but leaving doubts in the minds of many on the important question of economy.

"These engines," says a writer in the *Mechanics' Magazine*, "possess great advantages in being applicable to thrashing, and other agricultural purposes, and can be moved from farm to farm, and from field to field, with the greatest facility." No doubt of it. We see what will soon happen. Thrashing, and many other agricultural purposes! The great farmers, once in possession of the talisman of a steam-plough, will never rest till they make it applicable to all sorts of operations. Already almost every farmer in Scotland is provided with a stationary steam-engine; a locomotive that can turn—not its hands—but its wheels to anything, is now his only other thing needful. In the specification of the very first of these ploughs—Etzler's Iron Slave—it is distinctly stated that, although the machine is intended for ploughing, yet the Slave will be ready at all times to devote his energies and skill to "sowing, and reaping; and also to making canals, roads, tunnels," &c. Exactly so! After we have ploughed, sowed, reaped, and thrashed by steam, we shall soon find turnips hoed, carrots drawn, beans plucked up, dried, carted, and stacked; sheep sheared, cows milked, butter churned, cheese pressed, pigs transformed into pork, and pork into gammons, by the same omnipotent agency. Hatching eggs by steam is already an old story.

A patent for a new steam-plough was taken out in January of the present year by Mr. James Usher of Edinburgh; and another in June, by Messrs. Calloway and Purkiss. The peculiarity of the former consists in mounting "a series of ploughs in the same plane round an axis, so that the ploughs shall successively come into action;" and secondly, in applying power to give a rotary motion to the series, "so that the resistance of the earth to the ploughs, as they enter and travel through the earth, shall cause the machine to be propelled"—instead of motion being communicated to the machine from the wheels which run on the land. The other invention—that of Messrs. Calloway and Purkiss—mainly consists of a number of chains working round a wheel, and fitted on the outside with ploughshares. Rotary motion is communicated by a locomotive.

"I consider," says Sir Abel Haury, in the

comedy of Speed the Plough, "that a healthy young man between the handles of a plough, is one of the noblest illustrations of the prosperity of Britain." But shortly after saying this, Sir Abel invents a splendid curriple plough drawn by high-bred Leicestershire horses; who set off at full gallop with the plough at their heels over hill and dale, and instead of doing the allotted work a-field, they rush about at random, ploughing up Salisbury Plain. What would Sir Abel have said to Sir Willoughby de Eresby's snorting steam-horse, perfectly under control?

His machinery consists of a locomotive engine, weighing only three-and-a-half tons, and of a twenty-six horse power. It was designed by Mr. Gooch. It has a double capstan attached, "removable, when the engine is required for other purposes." His lordship does not indicate any of these; but we may fairly imagine that his farm-engine will possess the same versatile genius as the inventions which have preceded it. His description of this machinery is very brief, clear, and without the use of any technical terms.

"The engine moves across the centre of the field on a light, portable railway. The ploughs advance and recede on either side of the railway, at right angles to it.

"The ploughs employed consist of four ordinary, and four subsoil ploughs, fixed in a frame. It is directed by a person standing upon a small platform.

"Two such ploughs, one on either side the railway, alternately advance and recede; the advancing plough working, the other idle until it regains its proper position for ploughing the next four furrows. On the completion of the four furrows both ways, the engine and side frames advance each three feet.

"The ploughs are attached to an endless chain, one hundred and fifty yards in length. They can be detached at pleasure, or shifted from one side of the chain to the other. They travel at the rate of five miles an hour. Provision is made in case they strike against any impediment."

Arrangements are also made to suit irregularly shaped fields. The full power of the engine is not exerted with the ploughs, as thus described; and the number of blades can be increased if desirable. And now for the next statement, which brings us to a most important consideration.

"In the present state of things, it is difficult to form a correct estimate of the value of the invention in a commercial point of view. I will only say that a machine of the power, and with the arrangement described, would perform the work usually done by sixteen ploughs, driven by as many men, and drawn by thirty-two horses. Requiring itself the attendance of eight men, and a horse to draw the water for the engine, it would thus save the labour of thirty-one horses and eight men. Against this must be set an expense of five shillings a day for coals."

In examining the question of economy in the use of steam-power instead of horses, we

shall obtain valuable assistance from a paper addressed to Mr. J. T. Osborne, of Demerara, by the Council of the Highland Society. This paper sets the period of the productive labour of a horse against the unproductive period necessary for its rest, and exhibits results of a startling kind. Horses are fed and tended three hundred and sixty-five days of twenty-four hours, or eight thousand seven hundred and sixty hours in the year. But they work only three hundred days, of about eight hours, taking the average, or two thousand four hundred hours a year. Thus we have a clear loss of six thousand three hundred and sixty hours of unproductive feeding and tending. It may be argued, that they are not fed and tended throughout the night, and therefore there is no such loss as the figures displayed by the Highland Society; but they are fed and tended enough to suffice them during the night, for which no compensating work is performed, so that it comes, we think, to nearly the same thing.

According to McCulloch, there are about one million two hundred thousand agricultural horses employed in Great Britain, which, at twenty-five pounds per head for maintenance, amounts to thirty millions sterling per annum for their keep. The unproductive portion, therefore, he finds amounting to the enormous sum of twenty-one millions seven hundred and eighty-five thousand three hundred and six pounds. It will be seen that this estimate is founded on the previous figures displaying the number of hours of feeding and tending, compared with the number of hours' work, and the consequent loss of six thousand three hundred and sixty hours. The only compensation for this loss of hours, represented by the above sum of upwards of twenty-one millions sterling, is in the value of the manure, which is thus produced at too great a cost.

"There are insuperable difficulties," writes the Council of the Highland Society, "attending the employment of vital power; but mechanical power puts forth its energy when called for—it can be regulated, and, at pleasure, stopped. If it is desired to occupy the entire hours of daylight—to extend the field of operations—to work up more raw material—the energy of the animal ceases after a time; but not so that of the machine. The longest hours of summer may be advantageously employed." And why not in the shortest nights of winter also? Could not steam-ploughs be made to carry their own lights with Hale Thomson's patent silvered-glass reflectors, like other locomotives?

The next sentence brings us full-blown against the corner-stone of our social edifice, and moots the question as to the effect of machinery in increasing the demand for human labour:—"Were the whole period of daylight industriously employed in the most effective manner—that is, by the employment of machinery—the demand for human labour would be sug-

mented in the exact ratio of the increased time, multiplied by the augmented force of the machinery."

"Be fruitful and multiply," said the God of Nature;—"You must be starved, if you do!" say the beldame economists. Meantime, an immense proportion of the habitable and fertile earth lies quite uncultivated, the vast seas are full of prolific food, and the land which is cultivated, is not made the most of. The art of tilling has not kept pace with other improvements. Before the wonders of steam appeared in the world there was occasionally a random attempt to introduce some improvement in tillage, but the experiments originated in a wish rather than in any definite plan, and were of course a failure and an absurdity. Dean Swift brought his pungent satire to bear upon these attempts, in his account of the grand Academy of Lagado, Mr. Lemuel Gulliver says he was highly pleased with a projector who had discovered a plan for turning up the ground with hogs, to save the charge of ploughs, cattle, and labour. The method was beautifully simple. In a given field you bury at six inches distance, and eight inches deep, a quantity of acorns in long rows. You then drive six hundred hogs into the field, who, in search of the food they most love, will root or plough up the whole into furrows, with their snouts. The absurdities committed soon led to a cessation of all mere experiments, until at length came steam-engines, and thence, in due course, the dream of a steam-plough. This dream we are peradventure about to see realised in a few months; and then, though our million of agricultural horses will be diminished, our fine breed of Yorkshire and Lancashire ploughmen will not be thinned; any more than spinning and weaving machinery exterminated—as was awfully predicted it would—our army of spinners and weavers.

"I was bred to the plough," said Robert Burns, when addressing a letter to the wealthy gentlemen of the Ayrshire Hunt:—"I am independent;" but it may turn out that the plough of old will soon be a sorry thing to depend upon. We are rather reminded of the Prologue to Chaucer's "Ploughman Tale," though he could have had no anticipation that his cessation from this labour would be final.

"The Ploughman plucked up his plough,
When Midsummer moon was comen in,
And said his beasts should cut yowre,
And lye in the grass up to the chin.
He shook off shere, and couler off drowe,
And honged his harvis on a pin."

"Our strongest hope for the improvement of our social condition," says Miss Martineau, "lies in the directing of intelligence full upon the cultivation of the soil." The more the powers of science are brought to bear upon the tillage of the earth, and the production and manufacture of food, the greater will be the

number benefited, and the more speedily will Miss Martineau's axiom be verified. Cordially coinciding with that lady, we wish all success to the important undertaking of Lord Willoughby de Eresby, and shall be glad to find he accomplishes and establishes what has hitherto been confined to experimental trials.

A SACRED GROVE.

HEAR Silence is the queen of time; her hand
Is raised—and the tide trembles to a pause.
Beauty, too awful to be loved, awakes
And spell-binds Man's repose. The sunken sun,
Whose mantle's gold is melted in the tint
Of evening's purple sadness, near the west
Lingers awhile, as loth to quit the scene.
Yet 'tis not sadness all; for though the trees,
Heavy with cumbersome melancholy, sweep
Their sombre-foliated boughs close to the grass,
And solemn twilight peers between the trunks,
Tinging the dome of yonder vacant fane—
O'er all a spirit of subdued emotion
Breathes in pathetic sweetness, deep diffused.

In this dim palace of grey Solitude,
Where not a sigh wafts o'er the lily's urn,
And nought, save marble forms of tenderest grace,
With pensive attitude stand in lone bowers—
The heart, upheaving into the fresh air,
Itself abandons to the scene, and claims
Kindred with placid Death, and those lost hopes
That lived around the loved ones, now no more.
Their tombs smile pale beneath these cypress
boughs,
Heavy with memory of all the past.

Moveless I stand before these moveless trees—
Breathless as those broad boughs; and gazing thus,
At the dark foliage imaged in the pools,
Which deepen, as the brooding mind surveys
Their grace and awful beauty; 'tis a scene
That lures us backward to an older time,
Through ages dim—and, thence, into a realm
Whose secret influence fills us with its soul—
Shadows of things which are not of the world,
And hope: that burn, yet find no vent save tears.

"CAPE" SKETCHES.

CAPE WANT are neither peculiar nor numerous. Captain Smoke, in Jerrold's comedy of "Bubbles of the Day," confides to his friend, Lord Skindeep, that he is "terribly in want of a thousand pounds." The reply is "You may take it as a general rule, Captain Smoke, that every man wants a thousand pounds." As with men so with Colonies. The sun never sets upon one of the dependencies of Great Britain, young or old, which would not be the better for a thousand pounds. Our Colonies feel, however, another want;—it is for something to which the Smokes of the old country show a very marked aversion; and that is labour. "Capital and labour!" is a cry which reaches us from every quarter of the earth. The demand does not resound so loudly perhaps from the Cape as from other and newer Colonies; but the want of the first necessities of enterprise, civilisation, and

progress is not the least felt. Any sort of European labour (except convict labour), any kind of capital, is welcome in our South African dependencies; and in the long run "pays."

As to Capital; men with from two thousand pounds to ten thousand pounds will find plenty of most profitable employment for their money. The Colony has innumerable resources—amongst them, I may mention her fisheries and her mineral treasures. The former produce a large revenue even now, though carried on, from want of enterprise and capital, in the most unsystematic and slovenly manner. Of minerals there is abundance; ore in many places actually lying on the surface. The assegais (or spears) of the Kafirs are all made of iron, smelted and welded by themselves; while recent travellers from the northernmost extremity of the Colony bring accounts of innumerable implements in use among the savage tribes there, formed of iron of their own manufacture. Copper and lead have been discovered within fifteen miles of Algoa Bay.

But such riches remain utterly unproductive without facile means of transport, and a great want in the Colony is good roads. Of course, want of labour is the cause of this deficiency, which is, however, being slowly remedied by the local government. Whether the Cape Colonists were wise in rejecting the convicts, so kindly proffered to them by Lord Grey, I shall not presume to opine, because I have a notion that everybody knows their own business best; but we must not forget that New South Wales owes the blessing of her good roads to what was, it must be admitted, in other respects, a great curse to her—the bands of convicts the Colonial Office were so obliging as to send her.

Before I dilate on the greatest of all colonial wants, I will mention what the Cape of Good Hope does *not* want; namely, young gentlemen with white hands and empty pockets, of no profession, and with very extensive notions of refinement. She does not require martinet "half-pays," who know more of pipe-clay than of soils, and more of killing than of breeding and fattening. Fine ladies, who are proficient pianistes, and do not understand poultry, she is much better without. What she *does* require, are:—In the towns, mechanics and artisans of all kinds; in the country, good farmers and sturdy dames, shepherds and agricultural labourers; in both, domestic servants, male and female. For all these the Cape is open, and it offers them first-rate livelihoods, abundance of food of the best description, and a climate which the returns taken of the mortality among the troops prove to be amongst the healthiest in all Her Majesty's world-wide dominions. The Colony has also one great advantage over Australia—it is ten thousand miles nearer to England.

Want the third in point of importance is a change in the present system of selecting

Colonial Governors. Were we to choose Generals to lead our armies—not from soldiers trained to arms and distinguished in the field—but from decayed statesmen, who had "never set a squadron in the field," nor even handled a sword; would not our enemies not only beat us, but laugh at us? Yet conversely we commit, precisely this absurdity: we "reward" meritorious Generals by appointing them Governors; of whose duties they are, as a rule, as ignorant as a Lord of the Treasury is of fortification. The Governor of a Colony, as the representative of the highest power in the Empire, is required to fulfil the highest civil functions; to conduct the most difficult and delicate negotiations; and we select a brave old General, who hardly knows the geography of his government; is profoundly ignorant of the habits and requirements of its people; who never even pretended to statesmanship, and either commits himself to something so rash that it makes everybody angry, or to something so silly that it makes everybody laugh.

IN EDUCATION, England might take a lesson from her South African dependency—it is in the education of the people. Government schools are established in every town, and almost every village of the Colony, open to children of all classes and all creeds, and free of all expense. They are presided over by intelligent teachers, chiefly selected from the Scotch Universities, and truly their pupils do these gentlemen infinite credit. I do not hesitate to say, that the rising generation of the Cape Colony will be the best educated men of their class in all the British Empire. It is to Dr. Jones, the former President of the South African College, in Cape Town, that the colony is indebted for this invaluable boon. Even the population in the far interior are better off in this respect than the children of our English peasantry. Thanks to the energy of Campbell, Latrobe, Moffat, and other energetic, common-sense, as well as pious, members of the Missionary Society; the children of the Hottentots, Griquas, and even of some of the Bechuanas, are fast being brought into the pale of civilisation by attendance at the schools established by those gentlemen. Some of the offspring of English parents in the "interior" of England, have no such schools to attend.

SHEEP FARMING is, perhaps, the best and most profitable occupation at the Cape. It is far better than agriculture, and better than cattle farming, for the following reasons. The great deficiency of the colony is the want of sufficient water for irrigation. Wherever this want is not felt, all kinds of grain may be raised with profit, and Cape wheat is universally pronounced to be the finest in the world. But the farms, or portions of farms, on which it can be grown are few and far between. Nor is this the only drawback to agriculture;

the farmer has two other dire enemies to contend with. The one is the blight or "smut," which is very common; and frequently destroys whole crops. Two young friends of mine hired a farm in partnership, and, in spite of the warnings of more experienced persons, determined to turn their principal attention to agriculture. They went to great expense in the purchase of agricultural implements, paid the highest wages for labourers, and worked with their own hands as hard as any ploughman in England. They raised a magnificent crop, and began to indulge a sweet reverie on the "Dollars" it was to bring them. Alas, the "smut" came, and the beautiful crop was destroyed, while not one solitary dollar found its way into the young farmers' pockets. Disappointed, but not disheartened, they set to work again, and next year with precisely the same result. Inckily they were prudent fellows, and had neither been personally extravagant, nor sunk all their money in one enterprise. They, therefore, purchased some sheep, cattle, and horses, and only cultivated a very *small portion* of their farm; and now they are among the most prosperous farmers in the Colony.

Another enemy of the agriculturist at the Cape, not less destructive than the former, though less frequent in his attacks, is the locust. Till I went to the Cape, I never had a clear conception of the mischief that could be done by this one of the "Plagues of Egypt." They came always in clouds, and fly *with* the wind. I am almost afraid to describe their numbers. I have seen the air as full of these creatures as of the flakes of snow in a heavy snow-storm—in fact, literally "raining locusts." I have been obliged to turn back on a journey from the impossibility of getting my horse to face them when driven against us by the wind. I have seen immense plains one day covered with grass, corn, and gardens; and the next day left, after a visit of locusts, without one solitary blade of verdure on any part of them. I have seen millions of these insects driven by the wind into the sea at Algoa Bay, and washed on shore in such heaps, that their bodies decaying have become so offensive as to oblige the authorities of the town to employ all the Coolies in the place in burying them. Think of all this, grumbling farmers of England. What corn-laws could afford you "protection" against such an importation? Still, I must add that during my five years' residence at the Cape, I can only recall three visits of these pests; nor must it be supposed that they at any time spread over the whole Colony. When they visit a sheep or cattle farm, the owner has, of course, no other alternative than to move his stock to some place which they have not visited.

Cattle are profitable stock at the Cape; but no Englishman seems to like them so well as sheep. Besides, it occasionally happens that, in a fit of caprice, every Hottentot labourer on your farm will leave you in a day,

and you will have to be your own herdsman. This is comparatively nothing with sheep; but if you had a couple of hundred cows that wanted milking you would be rather in a "fix."

Horses are also a profitable stock, and far more suited to English taste. But the "returns" are necessarily slow; and few men can afford to wait three years for their profits.

Sheep are the best. Here is one example, by no means extraordinary, but forming an average sample of the fruits of sheep-farming:—A gentleman who was reading for the Church, at Cambridge, found that his health would not allow him to continue his studies; he emigrated to Algoa Bay, with a capital of about two thousand five hundred pounds. He wisely listened to good advice in the selection of a farm and the purchase of his stock of sheep. At the end of three years I visited him, and we talked about sheep-farming, which was then in a bad condition. I was expressing my wonder that so many sheep-farmers had lately been "sold up;" and this was his reply, "What else could you expect? Half of them come out here without one farthing of capital. They hire a farm; buy stock on credit (for two or three years), live on the sale of the wool and also on credit—for they live 'like fighting-cocks'—and then when pay-day comes at last, they, of course, have not a sixpence. But, look at my own case: I have been here three years; my wool fetches double the price that it did the first year; my stock is just doubled in number and vastly improved in quality; I have lived in as much comfort as I require in the meantime; and I don't owe a sixpence."

The life of a Cape farmer is necessarily solitary. His nearest neighbour is probably seven miles off, and his only daily companions are his stock and his labourers. A visitor (especially if he come from one of the Towns) is a veritable Godsend; and is safe to be welcome as long as he chooses to remain. He may ride his host's horses and shoot or hunt his game, smoke his pipes, and drink his "Cape Smoke,"* as long as he pleases. But he must be contented with very rough fare. Mutton and *its* flesh, meal-cakes (very similar, I fancy, to those which King Alfred burnt), Indian corn, and badly-made coffee, will form the staple articles of his food. He will sleep on a home-made sofa with goat-skins for blankets, in a room with a mud floor, and very probably no ceiling but the thatch roof. The house will most likely be built of *lath* and plaster, and look far more like the stable of a third-rate country inn than a gentleman's residence. Yet the host is often a highly educated and sensible man, fighting his way to competence, living a comparatively easy life, and, if unblest with luxuries, at least unharassed by cares, save when an occasional wolf (or rather hyena) makes a night assault on his homestead.

* Cape Brandy.

OF THE CAPE TRADE, the most popular and profitable branch is that with the native tribes. At present it is carried on in the most primitive style. A trader will load a couple of waggons with such goods as are likely to sell among savages. Coarse cloth, smart Manchester printed calicoes, blankets, beads, brass curtain-rings (worn by the natives as ornaments on their arms), soldiers' jackets, wide-awake hats, &c. With this load he will proceed across the colonial boundary, and penetrate as far as he pleases into the interior, calling where experience has shown him he is likely to find customers, and selling his goods like a hawker, or "Cheep Jack," in England. But he seldom obtains money for his goods, nor does he wish for it. He gets ivory, ostrich feathers, wild-beast skins, harns, and, in fact, all the rarest trophies of the chase. With these he reloads his waggons for his return home, and reaches the Colony after, perhaps, six or eight months' absence, with a load which fetches him at once, seven or eight hundred, sometimes a thousand, pounds in exchange for his outlay of one hundred and fifty pounds.

It seems clear that the establishment of trading stations in the interior of Southern Africa would be most profitable to the projectors, and most advantageous to the native tribes, by accustoming them to the sights and habits of a civilised life.

The shopkeepers are rather jealous of the merchants at the Cape. The latter are very often so undignified as to sell a dozen pair of stockings or a single hat, to the exceeding disgust of retailers.

A Cape shop is a curiosity. It strikes a man as odd, to buy his boots and his cheese, or his hat and his sugar, at the same shop,—still more odd to purchase his wife a Chinese shawl and his child a peg-top in the same establishment.

THE WILD SPORTS of South Africa have been celebrated by many a writer, from Major Cornwallis Harris down to Mr. Gordon Cumming. For large game the country is perhaps the finest sporting ground in the world. People come even from India to hunt the lion and the buffalo, the rhinoceros and the hippopotamus, the elephant, the giraffe, and the innumerable varieties of wild deer, from the delicate and graceful springbok to the heavy and powerful gnu. Some of the most dreaded amongst them are not nearly so terrible as travellers' tales would persuade "the gentlemen of England who sit at home at ease."

On one occasion I was riding through a wood, with a single companion; we were on a journey, and quite unarmed. At a little open space in the woods we dismounted and knee-haltered our horses to let them feed, while we lazily stretched ourselves under a tree, and "took a pull" at our pocket-pistols, loaded with Cognac. A slight rustling sound was heard above our heads, and down came

something to the ground in front of us. It was a fine, full-grown, handsome leopard, who coolly turned round and stared us in the face. I very much doubt whether two respectable young gentlemen ever felt in a greater fright than my friend and myself at that moment. The unwelcome visitor, however, merely wagged his tail, and having apparently satisfied his curiosity as to our personal appearance, trotted quietly off into the woods. Without uttering a word we each drew a long breath, took another pull at the *can-de-vie*, caught our horses, and put as many miles as we could in a few minutes between ourselves and that same wood.

The lion can even be companionable. Major Nicholson occupies a farm near the north-east boundary of the Colony. He is a great sportsman, and goes out alone to look after a lion with as much unconcern as a Regent Street loungee seeks out a Skye-terrier as a present for his lady-love. In one of his afternoon rambles the Major fell in with a lion; they were both going the same way and jogged along for some distance silent, though excellent friends. At length the lion stopped, turned round, faced the Major, and sat on his haunches like a great tom-cat. The Major, not knowing how soon his majesty's tacit treaty of peace might be broken with him, levelled his piece, taking aim between the eyes. He was just about to fire, when a sound caused him to turn round; he then at once understood that, the lion having been out for a walk, his lady had come, like a dutiful wife, to meet him. The Major drew back and calculated the odds—two to one in favour of the quadrupeds—and reserved his fire; deciding that it would be little satisfaction to kill the husband and be eaten by the wife, or *vice versa*. The respectable couple then continued their walk alone, treating the Major with the most sovereign contempt, and allowing him, like Young Norval, to "mark the course they took," and to follow them to their abode. This he next day visited, with men, dogs, and guns; and a week afterwards I was sleeping soundly, in the Major's house, on the skin of that same king of the forest, while his consort's hide served me for a coverlid.

Although the keener sportsman prefers to go beyond the colonial boundary for prey, yet it is customary in the towns for a number of friends to make up a shooting party, who sally forth with waggons and a tent, which they pitch on some agreeable spot, and stay for several days, living *al fresco*,—enjoying good sport by day and good fare at the end of it, with merry songs, toasts, and stories. Others prefer hunting, mount their active little horses, and, followed by a whole host of curs, whose pedigrees would puzzle the most ingenious zoologist, sally forth in search of wild bucks; and many a good run they enjoy, and much do they contribute to the stock of good things which grace the table on the green-sward at night.

"BATTLE WITH LIFE!"

BEAR thee up bravely,
Strong heart and true!
Meet thy woes gravely,
Strive with them too!
Let them not win from thee
Tear of regret,
Such were a sin from thee,
Hope for good yet!

Rouse thee from drooping,
Care-laden soul;
Mournfully stooping
Neath grief's control!
Far o'er the gloom that lies,
Shrouding the earth,
Light from eternal skies
Shows us thy worth.

Nerve thee yet stronger,
Resolute mind!
Let care no longer
Heavily bind.
Rise on thy eagle wings
Gloriously free!
Till from material things
Pure thou shalt be!

Bear ye up bravely,
Soul and mind too!
Droop not so gravely,
Bold heart and true!
Clear rays of streaming light
Shine through the gloom,
God's love is beaming bright
E'en round the tomb!

SPY POLICE.

We have already given some insight into the workings of the Detective Police system of London, and have found that it is solely employed in bringing crime to justice. We have no political police, no police over opinion. The most rabid demagogue can say in this free country what he chooses, provided it does not tend to incite others to do what is annoying to the lieges. He speaks not under the terror of an organised spy system. He dreads not to discuss the affairs of the nation at a tavern, lest the waiter should be a policeman in disguise; he can converse familiarly with his guests at his own table without suspecting that the interior of his own liveries consists of a spy; when travelling, he has not the slightest fear of perpetual imprisonment for declaring himself freely on the conduct of the powers that be, because he knows that even if his fellow-passenger be a Sergeant Myth or an Inspector Wield, no harm will come to him.

It is not so across the Channel. There, while the criminal police is very defective, the police of politics is all powerful. In March last, thirty thousand political malecontents were swept beyond the gates of Paris in a single morning, before the rest of the people were up; and nobody was any the wiser till the masterly feat had been performed; but during the same month several single individuals were knocked down and robbed—some in broad day, others

at dusk—yet neither of the robbers were taken. In Austria, in some of the German states, and in Italy, political espionage is carried to a point of refined ingenuity of which no Englishman can form an idea. Mr. Tomkins goes, for instance, to Naples; and—as the Emperor of Russia might have enlarged on the happiness and prosperity of that city after his recent visit to it, because the streets were cleared of beggars, the cabmen compelled to dress in their best, and the fishermen to wear shoes—so in the "Travels in Italy," which Mr. Tomkins would undoubtedly publish, there would be not a word about the police spy system; because he, innocent man, was unable to detect in his table companions, in his courier, or in his landress, an agent of police. It is now our purpose to supply from the authentic information of a resident in Naples, the hiatus to be found in all the books of all the Mr. Tomkineses who have written "Travels."

The chief agent is the Commissary, who, says our friend, has a certain district put under his care, and is thus made responsible for its order and fidelity; he is a kind of nursing father, in short, to the unhappy inhabitants, with power to ruin or destroy; for though he nominally receives his orders from the Minister of Police, yet, as the cant phrase is, his office is eminently "suggestive;" and whether a suspicion is to be cleared up, an act of vengeance to be perpetrated, or some object of interest or licentiousness to be attained, the report of the Commissary supplies all the data for the operations at head-quarters.

Immediately under his orders this General of Division has both regular and irregular troops, the former being the Policemen of the City, the latter simply Spies. When any long course of inquiry is to be carried out, he employs deputies, who bring in their intelligence from time to time; but if any immediate or important information is desired, the Commissary undertakes that little bit of business himself—it is a delicate *morceau* which this gourmand cannot resist, and away he posts to enjoy the banquet.

Some years ago, there resided in the neighbourhood of Naples a foreigner, whose health compelled him to seek a southern climate. His tastes and occupations were literary, and his habits quiet; but whether he had some secret enemy who had denounced him, or whether the Government were afraid of him, because he read and wrote, I know not; but one fine morning the little town was much agitated by the appearance of a Commissary of Police and his attendant "Sbirri." Many were the conjectures—as is always the case under such circumstances—as to what could be the object of this visitation. No one took it to himself; but as in a church each good Christian holds in his corner and admires the applicability of the sermon to his neighbour in the next pew; so every little townsman knew precisely the person who merited the in-

spection of the Police. Don Roberto was sure that the visit was meant for his mortal enemy, Don Giuseppe; whereas the master of the favourite "Cantino" was equally sure that it must be for his rival who sold such acid wine, and permitted scenes in his shop enough to awaken the anger of the Saints. He always thought he was a Carbonaro!

The Commissary, on his arrival, sent for the Syndic.

"Pray, Signor Syndic," he said, "is there a foreigner residing here, called Don Ferdinand?" (every one is Don, in Naples.)

"Yes!" was the reply.

"And pray, Sir, what is the object of his residence here?"

"I understand, Signor Commissario, that he is in search of health and amusement."

"Ah! very good: health and amusement. And what may be his occupations?"

"They do say, Sir, that he is engaged much in reading and writing."

"Reading and writing! Yet in search of health and amusement," said the official, opening his eyes. "That's a curious combination; but tell me, has Don Ferdinand any intercourse with the inhabitants? does he ever invite any of them to dinner?"

"I must confess," said the Syndic, "that he does."

"Then it is true, that Don Ferdinand proposes toasts after dinner?"

"Well," replied the Syndic, as if such an admission would be fraught with danger. "I cannot deny it—he *does* propose toasts."

"What are they?" asked the great official, sharply.

"His usual practice is, first, to propose the health of our Sovereign Lord the King, and then the health of *his* Sovereign Lady, the Queen."

Not without disappointment at having made out nothing serious against Don Ferdinand, our Commissary dismissed the Syndic, merely observing that he had taken note of all his answers, and should draw up his report therefrom, and present it to the Minister of Police.

After that, the Commissary of the Police came twice to my friend's residence, and put a number of searching questions to his porter. Nothing, however, came of these investigations; first, because there was nothing really alarming in the fact of a man reading and writing, and giving toasts; and, secondly, and perhaps more strongly, because Don Ferdinand was an Englishman; for there is a prestige attaching to the very name of an Englishman which attracts to him the respect of the people and a cautious deferential treatment on the part of the Governments. It is felt, that, however distant he may be from his native land, he is not beyond its protective power, and that any injustice done to him will be resented as an injustice done to the nation. It is this conviction which has been his security in circumstances where I have known the subjects of other States

arrested, imprisoned, or sent out of the country, without receiving the protection of their Governments.

The Commissary is eminently a night-bird; sometimes you see him with "measured step and slow," followed by his *Myrmidons*, stealing along under the dark shadows of the houses, like a cat treading; or, perchance, you are returning home through the silent streets, carelessly and thoughtlessly, when, at some dark corner, you find yourself confronted by this spectre. He listens for and pauses at every foot-fall, waits about in entries, stops at doors, watches the lights in houses, and, like a true inductive philosopher, from such simple facts—as seeing two or three lights, more or less, or a larger group of heads than usual, infers conspiracies most dreadful and dangerous to the State. Presently a Commissary is seen bustling along with his attendants, with a quick and eager step. He is not on a mission of inspection—oh, no—that cheerful promptitude indicates that game's a-foot, and that something is to be done. And now he stops before a house and knocks aloud—"Who is there?"—demands some one from within. "Open in the name of the law!" is the reply. What consternation do these words create; lights are gleaming and people are hurrying backwards and forwards, but the knocking continues and becomes louder, and the door is opened, and the unfortunate master of the house is dragged from his bed to be plunged into the dungeons of the Vicaria. His neighbour, luckier than he, had timely notice of the honour intended him by the Commissary; and, escaping over the roof of his house, was enabled to get on board some friendly vessel. Their crime you ask? That of hundreds of others who are eating the bread of penury in exile, or pining in loathsome dungeons—they had taken part in the movements which preceded the publication of the "Constitution" (yet an article of that "Constitution" says, that "a veil of oblivion shall rest upon the past"). They had, in short, assisted in the development of a Constitution which I saw the Majesty of Naples swear on the Gospels to observe.

I know no better type than certain noxious insects for the myrmidons of the Commissary—the Police Spies of the South of Italy. Their multitude, their ubiquity, their unwearyed perseverance, their sharp sting, make them worse than the whole insect tribe united, and infinitely more dangerous. You may crush the wasp, or smoke the mosquito, or brush away the ant, and get some intervals of repose in spite of renewed attacks; they give you, too, some warning signs of their approach—but the Police Spy is invisible and never out of hearing; whether you are relaxing in frank and thoughtless merriment, or abandoning yourself to the sweet and delicious dreams of friendship; in the market or the street—the drawing-room—the café—or the church—there he is:

"A thiel's amang ye taking notes, and 'faith he'll prent it!" They reconnoitre the ground in various detachments for the Commissary, and report the movements, words, and almost thoughts, of the "suspected," or of whomsoever they please to place upon that fatal list. They assume no distinctive dress—make no sign; they walk in darkness, and move like the pestilence, yet they are as real existences, and follow as precise a trade, as the vendor of macaroni. These spies are not sent forth at random, like gleaners in a wheat-field, to pick up whatever they can; but they are selected with caution, and assigned a position for which their talents or rank best fit them. Thus it happens that every grade of society has its appropriate and peculiar spies. Some are appointed to watch over the upper classes; some over the *canaglia*; some over the clergy; all watch each other. Enter a drawing-room, and rustling in satin, and distributing the courtesies and refinements of the *galleria* (drawing-room), you may behold a Government Spy. Beauty and refinement unite to lament the fate of the poor Marchese Maroni, who was arrested yesterday; nay, two crystal drops confirm the grief of the sympathising syren—"It was so hard a case. There was really nothing that could be proved against his Eccellenza. Alas! who is safe under the existing order of things—is there no hope—will there never be any change?" But beware—fall not into the meshes, though they may be woven of silk; be silent or indifferent; the very lips which pronounced these commiserations, are those which a few hours ago denounced the subject of them to the Government. You adjourn, at the close of the Opera, to a café; you are accompanied by several friends, and feel disposed to relax over a glass of iced punch—'tis so hot—and then from one topic of conversation you range to another, as if you were breathing the air of liberty. But who is that sleek old gentleman opposite, whose keen and cunning eye glances occasionally at you from above his paper? He has been seated there, I know not how long, spelling rather than reading yesterday's paper; yet he has a benevolent expression of countenance; perhaps he is infirm, poor fellow, or is looking for an advertisement; perhaps some article has deeply interested him. Phough! waste not your compassion or your speculation upon him—he is a Spy! he has been taking notes, and woe be to you if you have been betrayed into any thoughtless expression of opinion; for every word is registered. What corner of the city, or the country, what class of society is free from this pest! Nor is all this merely imaginary. I paint from the life, and could adduce instances of betrayal in the belle of high society, or in the shopman at the counter, in the caburan who takes your paltry *buonamancia*, or the friend you have cherished in your bosom.

For even private friendship is not held sacred. There was living in Naples, upwards of a year

since, a Count Montinona, who appeared to have no particular object in view except the pursuit of pleasure. For many years he had lavished his bounty and his friendship on another, who was at length discovered to have made somewhat free with the Count's property; accusations ensued, and, though compassion and a certain lingering recollection of the past did not permit the Count to cast the villain entirely off; yet he so far restricted his intimacy as to put it out of his power to rob him—"he was poor, and the temptation had been too great!" But what ensued?—This man denounced his friend as having concealed arms, and as entertaining free and dangerous opinions. Straightway the Count was arrested—his house and papers were examined, though nothing could be found to implicate him or to prove the charge; yet for many, many months he pined away in prison. I never heard when he was released, or if he is yet at liberty. All that time the informer raged about at his own sweet will, to entrap as many new jail victims as he could make.

The effect of the Spy System on the national character is exceedingly demoralising. There is no country in Europe where the low, secret vices, as opposed to those of a bolder, opener, and more ferocious character, exist so strongly as in the South of Italy. There, the result of that timidity and want of faith in what is good, and just, and true, which has been engendered by intrigue, is practised in its most comprehensive sense. The Secret Police system is one of the very many causes of this. To appreciate this thoroughly, you must regard it as being not merely a political institution, but as having now become national; people have followed the example which has been set them, and have all become spies—spies on each other's actions, words, and thoughts. Sometimes this habit is pursued to the extent only of simple curiosity, watching, investigating, and reporting the commonest trifles. Sometimes it is a little more malignant, and engages almost as a pastime, in embroiling individuals or families. Sometimes it pushes further, and furnishes denunciations to the Priest, the Bishop, the Intendente, or the Minister. I have seen it under all its phases, and the effect has been to produce a want of faith in all that is high, generous and noble, and to form a low national character.

It is more ridiculous and annoying than can well be imagined, to get behind the scenes of Italian life, and listen to the daily gossip:—How such an one "*ha fatto un ricorso*," against this or that person. How Don So and So has written certain letters to the Intendente, containing charges against another Don, and has forged two signatures. How So and So has been to the bishop and laid a long list of crimes at the door of some luckless priest. Then watch the tempest of official papers which fly through the air; some contain inquiries into the truth of the statements;

addressed to the judge or the syndic; some are orders to a dozen unfortunate wights to present themselves at the Intendenza; while others contain ghostly reproofs from the bishop, or orders to suspend a priest at his reverence's will and pleasure, and rusticate him in some monastery. Every denunciation is received and inquired into.

I remember an instance of two men who kept a whole district in inquietude during one winter. Both had received some private offence, and straightway each shrank into a corner and wove his envenomed meshes; charges were devised and letters written to the Intendente, accusing some score of their friends of Carbonarism or constitutionalism; then came the usual dispatches to the judge and other authorities to inquire into the truth of the statements. The judge, it happened, was friendly with the unfortunate denounced, and drew up therefore a favourable report, but had he been less honest or less amiable, these poor fellows might have swelled the number of those who now pine in the prisons of the Vicaria.

Indeed, the influence of the Police Spy System (united with other causes), has been such as to convert the whole nation into spies upon each other. As suspicion and want of confidence universally prevail, so there is a deficiency of truthfulness. This cannot be more strongly proved than by the admission of the Italians themselves who, when wishing to conciliate your belief, tell you that they speak "*la parola Inglese*,"—on the word of an Englishman.

CHIPS.

THE INDIVIDUALITY OF LOCOMOTIVES.

It is a remarkable truth, and, well applied, it might be profitable to us, in helping us to make fair allowance for the differences between the temperaments of different men—that every Locomotive Engine running on a Railway, has a distinct individuality and character of its own.

It is perfectly well known to experienced practical engineers, that if a dozen different Locomotive Engines were made, at the same time, of the same power, for the same purpose, of like materials, in the same Factory—each of these Locomotive Engines would come out with its own peculiar whims and ways, only ascertainable by experience. One engine will take a great deal of coke and water at once; another will not hear of such a thing, but will insist on being coaxed by spades-full and buckets-full. One is disposed to start off, when required, at the top of his speed; another must have a little time to warm at his work, and to get well into it. These peculiarities are so accurately mastered by skilful drivers, that only particular men can persuade particular engines to do their best. It would seem as if some of these "excellent monsters" declared, on being brought out of the stable, "If it's Smith who is to drive me, I won't go.

If it's my friend Stokes, I am agreeable to anything!"

All Locomotive Engines are low-spirited in damp and foggy weather. They have a great satisfaction in their work when the air is crisp and frosty. At such a time they are very cheerful and brisk; but they strongly object to haze and Scotch mists. These are points of character on which they are all united. It is in their peculiarities and varieties of character that they are most remarkable.

The Railway Company who should consign all their Locomotives to one uniform standard of treatment, without any allowance for varying shades of character and opinion, would soon fall as much behind-hand in the world as those greater Governments are, and ever will be, who pursue the same course with the finer piece of work called Man.

THE OLDEST INHABITANT OF THE PLACE DE GRÈVE.

THE Police Courts of London have often displayed many a curious character, many a strange scene, many an exquisite bit of dialogue; so have the Police Courts in Ireland, especially at the Petty Sessions in Kilmish; but we are not so well aware of how often a scene of rich and peculiar humour occurs in the Police *tribunaux* of Paris. We will proceed to give the reader a "taste of their quality."

An extremely old woman, all in rags, was continually found begging in the streets, and the Police having goodnaturedly let her off several times, were at last obliged to take her in charge, and bring her into the Court. Several magistrates were sitting. The following dialogue took place between the President and the old woman.

President. Now, my good woman, what have you to say for yourself? You have been frequently warned by the Police, but you have persisted in troubling people with begging.

Old Woman (in a humble quavering tone). Ah, Monsieur le President, it is not so much trouble to other people as it is to me. I am a very old woman.

Pres. Come, come, you must leave off begging, or I shall be obliged to punish you.

Old W. But, Monsieur le President, I cannot live without—I must beg—pardon me, Monsieur—I am obliged to beg.

Pres. But I say you must not. Can you do no work?

Old W. Ah, no, Monsieur; I am too old.

Pres. Can't you sell something—little cakes—boudons?

Old W. No, Monsieur, I can't get any little stock to begin with; and, if I could, I should be robbed by the *gamins*, or the little girls, for I'm not very quick, and can't see well.

Pres. Your relations must support you, then. You cannot be allowed to beg. Have you no son—no daughter—no grandchildren?

Old W. No, Monsieur; none—none—all my relations are dead.

Pres. Well, then, your friends must give you assistance.

Old W. Ah, Monsieur, I have no friends; and, indeed, I never had but one, in my life; but he too is gone.

Pres. And who was he?

Old W. Monsieur de Robespierre—*le pauvre cher homme!* (The poor, dear man!)

Pres. Robespierre!—why what did you know of him?

Old W. Oh, Monsieur, my mother was one of the *tricoteurs* (knitting-women) who used to sit round the foot of the guillotine, and I always stood beside her. When Monsieur de Robespierre was passing by, in attending his duties, he used to touch my cheek, and call me (here the old woman shed tears) *la belle Marguerite*—*le pauvre, cher homme!*

We must here pause to remind the reader that these women, the *tricoteurs*, who used to sit round the foot of the guillotine on the mornings when it was at its hideous work, were sometimes called the "Furies;" but only as a grim jest. It is well known, that, although there were occasionally some sanguinary hags amongst them, yet, for the most part, they were merely idle, gossiping women, who came there dressed in neat white caps, and with their knitting materials, out of sheer love of excitement, and to enjoy the *spectacle*.

Pres. Well, Goody; finish your history.

Old W. I was married soon after this, and then I used to take my seat as a *tricoteur* among the others; and on the days when Monsieur de Robespierre passed, he used always to notice me—*le pauvre cher homme*. I used then to be called *la belle tricoteuse*, but now—now, I am called *la vieille radoteuse* (the old dotardess). Ah, Monsieur le President, it is what we must all come to!

The old woman accompanied this reflection with an inimitable look at the President, which completely involved him in the *we*, thus presenting him with the prospect of becoming an old dotardess; not in the least meant offensively, but said in the innocence of her aged heart.

Pres. Ahem!—silence! You seem to have a very tender recollection of Monsieur Robespierre. I suppose you had reason to be grateful to him?

Old W. No, Monsieur, no reason in particular; for he guillotined my husband.

Pres. Certainly this ought to be no reason for loving his memory.

Old W. Ah, Monsieur, but it happened quite by accident. Monsieur de Robespierre did not intend to guillotine my husband—he had him executed by mistake for somebody else—*le pauvre cher homme!*

Thus leaving it an exquisite matter of doubt, as to whether the "poor dear man" referred to her husband, or to Monsieur de Robespierre; or whether the tender epithet was equally divided between them.

TWO CHAPTERS ON BANK NOTE FORGERIES.

CHAPTER II.

In the history of crime, as in all other histories, there is one great epoch by which minor dates are arranged and defined. In a list of remarkable events, one remarkable event more remarkable than the last, is the standard around which all smaller circumstances are grouped. Whatever happens in Mohammedan annals, is set down as having occurred so many years after the flight of the Prophet; in the records of London commerce a great fraud or a great failure is mentioned as having come to light so many months after the flight of Rowland Stephenson. Sporting men date from remarkable struggles for the Derby prize; and refer to 1840 as "Bloomsbury's year." The highwayman of old dated from Dick Turpin's last appearance on the fatal stage at Tyburn turnpike. In like manner, the standard epoch in the annals of Bank Note Forgery, is the year 1797, when (on the 25th of February) one pound notes were put into circulation instead of golden guineas; or, to use the City idiom, "cash payments were suspended."

At that time the Bank of England note was no better in appearance—had not improved as a work of art—since the days of Vaughan, Mathieson, and Old Patch; it was just as easily imitated, and the chances of the successful circulation of counterfeits were increased a thousand-fold.

Up to 1793 no notes had been issued even for sums so small as five pounds. Consequently all the bank paper then in use, passed through the hands and under the eyes of the affluent and educated, who could more readily distinguish the false from the true. Hence, during the fourteen years which preceded the non-golden and small-note era, there were only three capital convictions for the crime. When, however, the Bank of England notes became "common and popular," a prodigious quantity—to complete the quotation—was also made "base," and many persons were hanged for counterfeiting them.

To a vast number of the humbler orders, Bank Notes were a rarity and a "sight." Many had never seen such a thing before they were called upon to take one or two pound notes in exchange for small merchandise, or their own labour. How were they to judge? How were they to tell a good from a spurious note?—especially when it happened that the officers of the Bank themselves, were occasionally mistaken, so complete and perfect were the imitations then afloat. There cannot be much doubt that where one graphic rascal was found out, ten escaped. They snapped their fingers at the executioner, and went on enjoying their beefsteaks and porter; their winter treats to the play; their summer excursions to the suburban tea-gardens; their fashionable lounges at Tun-

bridge Wells, Bath, Margate, and Ramsgate; doing business with wonderful unconcern and "face" all along their journeys. These usually expensive, but to them profitable enjoyments, were continually coming to light at the trials of the lesser rogues who undertook the issue department; for, from the ease with which close imitation was effected, the manufacture was more readily completed than the uttering. The fraternity and sisterhood of utterers played many parts, and were banded in strict compact with the forgers. Some were turned loose into fairs and markets, in all sorts of appropriate disguises. Farmers, who could hardly distinguish a field of standing wheat from a field of barley: Butchers who never wielded more deadly weapons than two-prong forks: Country boys with Cockney accents, bought gingerbread, and treated their so-called sweethearts with ribbons and muslins, all by the interchange of false "flimseys." The better mannered disguised themselves as ladies and gentlemen, paid their losses at cards or hazard, or their tavern bills, their milliners, and coach-makers, in motley money composed of part real and part base bank paper. Some went about in the cloak of the Samaritan, and generously subscribed to charities wherever they saw a chance of changing a bad "five" for three or four good "ones." Ladies of sweet disposition went about doing good among the poor; personally inquired into distress, relieved it by sending out a daughter or a son to a neighbouring shop for change; and left five shillings for present necessities, walking off with fifteen. So openly—in spite of the gallows—was forgery carried on, that whoever chose to turn utterer found no difficulty in getting a stock-in-trade to commence with. Indeed, in the days of highwaymen, no travelling gentleman's pocket or valise was considered properly furnished without a few forged notes wherewith to satisfy the demands of the members of the "High Toby." This offence against the laws of the road, however, soon became too common, and wayfarers who were stopped and rifled had to pledge their sacred words of honour that their notes were the genuine promises of Abraham Newland; and that their watches were not of the factory of Mr. Pinchbeck.

With temptations so strong, it is no wonder that the forgers' trade flourished, with only an occasional check from the strong arm of the law. It followed, therefore, that from the issue of small notes in February 1797, to the end of 1817—twenty years—there were no fewer than eight hundred and seventy prosecutions connected with Bank Note Forgery, in which there were only one hundred and sixty acquittals, and upwards of three hundred executions! 1818 was the culminating point of the crime. In the first three months there were no fewer than one hundred and twenty-eight prosecutions by the Bank; and by the

end of that year, two-and-thirty individuals had been hanged for Note Forgery. So far from this appalling series of examples, having any effect in checking the progress of the crime, it is proved that at, and after that very time, base notes were poured into the Bank at the rate of a hundred a day!

The enormous number of undetected forgeries afloat, may be estimated by the fact, that from the 1st of January 1812, to the 10th April 1818, one hundred and thirty-one thousand three hundred and thirty-one pieces of paper were ornamented by the Bank officers with the word "Forged"—upwards of one hundred and seven thousand of them were one-pound counterfeits.

Intrinsically, it would appear from an Hibernian view of the case, then, that bad notes were nearly as good, (except not merely having been manufactured at the Bank), as good ones. So thoroughly and completely did some of them resemble the authorised engraving of the Bank, that it was next to impossible to distinguish the false from the true. Countless instances, showing rather the skill of the forger than the want of vigilance in Bank officials, could be brought forward. Respectable persons were constantly taken into custody on a charge of uttering forgeries, imprisoned for days and then liberated. A close scrutiny, proving that the accusations were made upon genuine paper. In September, 1818, Mr. A. Burnett, of Portsmouth, had the satisfaction of having a note which had passed through his hands returned to him from the Bank of England with the base mark upon it. Satisfied of its genuineness, he re-inclosed it to the cashier, and demanded its payment. By return of post he received the following letter:

"Bank of England, 16 Sept., 1818.

"Sir,—I have to acknowledge your letter to Mr. Hase, of the 13th inst. inclosing a one pound note, and, in answer thereto, I beg leave to acquaint you, that, on inspection it appears to be a genuine Note of the Bank of England; I therefore, agreeably to your request, inclose you one of the like value, No. 26,276, dated 22nd August, 1818.

"I am exceedingly sorry, Sir, that such an unusual oversight should have occurred to give you so much trouble, which I trust your candour will induce you to excuse when I assure you that the unfortunate mistake has arisen entirely out of the hurry and multiplicity of business.

"I am, Sir,

"Your most obedient servant,

"A. BURNETT, Esq.

J. RIPPON."

"7 Belle Vue Terrace.

"Southsea, near Portsmouth."

A more extraordinary case is on record. A note was traced to the possession of a tradesman, which had been pronounced by the Bank Inspectors to have been forged. The man would not give it up and was taken before a magistrate, charged with "having a note in his possession, well knowing it to be forged." He was committed to prison on

evidence of the Bank Inspector; but was afterwards released on bail to appear when called on. He was not called on; and, at the expiration of twelvemonths (having kept the note all that time), he brought an action against the Bank for false imprisonment. On the trial the note was proved to be genuine! and the plaintiff was awarded damages of one hundred pounds.

It is a fact sufficiently dreadful that three hundred and thirty human lives should have been sacrificed in twenty-one years; but when we relate a circumstance which admits the merest probability that some—even one—of those lives may have been sacrificed in innocence of the offence for which they suffered, the consideration becomes appalling.

Some time after the frequency of the crime had, in other respects subsided, there was a sort of bloody assize at Haverfordwest, in Wales; several prisoners were tried for forging and uttering, and thirteen were convicted; chiefly on the evidence of Mr. Christmas, a Bank Inspector, who swore positively, in one case, that the document named in the indictment "was not an impression from a Bank of England plate; was not printed on the paper with the ink or watermark of the Bank; neither was it in the handwriting of the signing clerk." Upon this testimony the prisoner, together with twelve participators in similar crimes, were condemned to be hanged!

The morning after the trial, Mr. Christmas was leaving his lodging, when an acquaintance stepped up and asked him, as a friend, to give his opinion on a note he had that morning received. It was a bright day; Mr. Christmas put on his spectacles, and carefully scrutinised the document in a business-like and leisurely manner. He pronounced it to be forged. The gentleman, a little chagrined, brought it away with him to town. It is not a little singular that he happened to know Mr. Burnett, of Portsmouth, whom he accidentally met, and to whom he showed the note. Mr. Burnett was evidently a capital judge of Bank paper. He said nothing, but slipping his hand into one pocket, handed to the astonished gentleman full change, and put the note into another. "It cannot be a good note," exclaimed the latter, "for my friend Christmas told me at Haverfordwest that it is a forgery!" But as Mr. Burnett had backed his opinion to the amount of twenty shillings he declined to retract it; and lost no time in writing to Mr. Henry Hase (Abraham Newland's successor) to test its accuracy.

It was lucky that he did so; for this little circumstance saved thirteen lives!

Mr. Christmas's co-inspectors at the Bank of England actually reversed his non-official judgment that the note was a forgery. It was officially pronounced to be a good note; yet upon the evidence of Mr. Christmas as regards other notes, the thirteen human beings

at Haverfordwest were trembling at the foot of the gallows. It was promptly and cogently argued that as Mr. Christmas's judgment had failed him in the deliberate examination of one note, it might also err as to others, and the convicts were respited.

The converse of this sort of mistake often happened. Bad notes were pronounced to be genuine by the Bank. Early in January, 1818, a well-dressed woman entered the shop of Mr. James Hammond, of 40, Bishopsgate Street Without, and having purchased three pounds worth of goods, tendered in payment a ten-pound note. There was something hesitating and odd in her manner; and, although Mr. Hammond could see nothing the matter with the note, yet he was ungallant enough to suspect—from the uncomfortable demeanour of his customer—that all was not right. He hoped she was not in a hurry, for he had no change; he must send to a neighbour for it. He immediately dispatched his shopman to the most affluent of all his neighbours—to her of Threadneedle Street. The delay occasioned the lady to remark, "I suppose he is gone to the Bank?" Mr. Hammond having answered in the affirmative, engaged his customer in conversation, and they freely discussed the current topics of the day; till the young man returned with ten one pound Bank of England Notes. Mr. Hammond felt a little remorse at having suspected his patroness; who departed with the purchases with the utmost despatch. She had not been gone half an hour before two gentlemen rushed into the shop in a state of grievous chagrin; one was the Bank clerk who had changed the note. He begged Mr. Hammond would be good enough to give him another for it. "Why?" asked the puzzled shopkeeper. "Why, Sir," replied the distressed clerk, "it is forged!" Of course his request was not complied with. The clerk declared that his dismissal was highly probable; but Mr. Hammond was inexorable.

The arguments in favour of death punishments never fail so signally as when brought to the test of the scaffold and its effect on Bank Forgeries. When these were most numerous, although from twenty to thirty persons were put to death in one year, the gallows was never deprived of an equal share of prey during the next. As long as simulated notes could be passed with ease, and detected with difficulty, the Old Bailey had no terrors for clever engravers and dexterous imitators of the hieroglyphic autographs of the Bank of England signers.

At length public alarm at the prevalence of forgeries, and the difficulty of knowing them as such, arose to the height of demanding some sort of relief. In 1819 a committee was appointed by the Government to enquire into the best means of prevention. One hundred and eighty projects were submitted. They mostly consisted of intricate designs such as rendered great expense necessary to

imitate. But none were adopted, for the obvious reason that ever so indifferent and easily executed imitation of an elaborate note is quite sufficient to deceive an uneducated eye; as had been abundantly proved in the instance of the Irish "black note." The Bank had not been indifferent or idle on the subject, for it had spent some hundred thousand pounds in projects for inimitable notes. At last—not long before the Commission was appointed—they were on the eve of adopting an ingenious and costly mechanism for printing a note so precisely alike on both sides as to appear as one impression, when one of the Bank printers imitated it exactly by the simple contrivance of two plates and a hinge. This may serve as a sample of the other one hundred and seventy-nine projects.

Neither the gallows, nor expensive and elaborate works of art, having been found effectual in preventing forgery, the true expedient for at least lessening the crime was adopted in 1821:—the issue of small notes was wholly discontinued, and sovereigns were brought into circulation. The forger's trade was nearly annihilated. Criminal returns inform us that during the nine years after the resumption of gold currency the number of convictions for offences having reference to the Bank of England notes were less than one hundred, and the executions only eight. This clinches the argument against the efficacy of the gallows. In 1830 death punishments were repealed for all minor offences, and, although the cases of Bank Note Forgeries slightly increased for a time, yet there is no reason to suppose that they are greater now than they were between 1821 and 1830.

At present, Bank paper forgeries are not numerous. One of the latest was that of the twenty pound note, of which about sixty specimens found their way into the Bank. It was well executed in Belgium by foreigners, and the impressions were passed among the Change-agents in various towns in France and the Netherlands. The speculation did not succeed; for the notes got into, and were detected at, the Bank, a little too soon to profit the schemers much.

The most considerable frauds, now perpetrated are not forgeries; but are done upon the plan of the highwayman mentioned in our first chapter. In order to give currency to stolen or lost notes which have been stopped at the Bank (lists of which are supplied to every banker in the country), the numbers and dates are fraudulently altered. Some years since, a gentleman, who had been receiving a large sum of money at the Bank, was robbed of it in an omnibus. The notes gradually came in, but all were altered. The last was one for five hundred pounds, dated the 12th March, 1846, and numbered 32109. On the Monday (3rd June) after the last "Derby Day," amid the twenty-five thousand pieces of paper that were examined by

the Bank Inspectors, there was one note for five hundred pounds, dated 12th March, 1846, and numbered 32409. At that note an inspector suddenly arrested his rapid examination of the pile of which it was one. He scrutinised it for a minute, and pronounced it "altered." On the next day, that same note, with a perfect one for five hundred pounds, is shown to us with an intimation of the fact. We look at every letter; we trace every line; follow every flourish: we hold both up to the light; we undulate our visuals with the waves of the water-mark. We confess that we cannot pronounce decisively; but we have an opinion derived from a slight "goutiness" in the fine stroke of the figure 4 that No. 32409 is the forgery! so indeed it was. Yet the Bank Inspector had picked it out from the hundred genuine notes as instantaneously—pounced upon it as rapidly, as if it had been printed with green ink upon card-board.

This then, O gentlemen forgers and sporting note alterers, is the kind of odds which is against you. A minute investigation of the note assured us of your exceeding skill and ingenuity; but it also convinced us of the superiority of the detective ordeal which you have to blind and to pass. In this instance you had followed the highwayman's plan, and had put with great cunning, the additional marks to the 1 in 32109 to make it into a 4. To hide the scraping out of the top or serif of the figure 1—to make the angle from which to draw the fine line of the 4—you had artfully inserted with a pen the figures "£16 16" as if that sum had been received from a person bearing a name that you had written above. You had with extraordinary neatness cut out the "6" from 1846, and filled up the hole with an 8 abstracted from some note of lesser value. You had fitted it with remarkable precision; only you had not got the 8 quite upright enough to pass the shrewd glance of the Bank Inspector.

We have seen a one-pound note made up of refuse pieces of a hundred other Bank notes, and pasted on a piece of paper (like a note that had been accidentally torn), so as to present an entire and *passable* whole.

To alter with a pen a 1 into a 4 is an easy task—to cut out the numeral from the date in one note and insert it into another, needs only a tyro in paper-cutting; but to change the special number by which each note is distinguished, is a feat only second in impossibility to trumping every court-card of every suit six times running in a rubber of whist. Yet we have seen a note so cleverly altered by this expedient, that it was actually paid by the Bank cashiers. If the reader will take a Bank note out of his purse, and examine its "number," he will at once appreciate the combination of chances required to find, on any other note, any other figure that shall displace any one of the numerals so as to avoid detection. The "number" of every Bank note is printed twice on one line—first, on the words

"I promise," secondly, on the words, "or bearer." Sometimes the figures cover the whole of those words; sometimes they only partly obscure them. No. 99066 now lies before us. Suppose we wished to substitute the "O" of another note for the first "9" of the one now under our eye; we see that the "9" covers a little bit of the "P" and intersects in three places the "r," in "Promise." Now, to give this alteration the smallest chance, we must look through hundreds of other notes till we find an "O" which not only covers a part of the "P" and intersects the "r" in three places, but in precisely the same places as the "9" on our note does; else the strokes of those letters would not meet when the "O" was let in, and instant detection would ensue. But even then the job would only be half done. The second initial "9" stands upon the "or" in "or bearer," and we should have to investigate several hundred more notes, to find an "O" that intersected that little word exactly in the same manner, and then let it in with such mathematical nicety, that not the hundredth part of a hair's breadth of the transferred paper should fail to range with the rest of the letters and figures on the altered note; to say nothing of hiding the joins in the paper. This is the triumph of ambidexterity; it is a species of patch-work far beyond the most sublime achievements of "Old Patch" himself.

Time has proved that the steady perseverance of the Bank—despite the most furious clamour—in gradually improving their original note and thus preserving those most essential qualities, simplicity and uniformity—has been a better preventive to forgery than any one of the hundreds of plans, pictures, complications, chemicals, and colours, which have been forced upon the Directors' notice. Whole-note forgery is nearly extinct. The lives of Eminent Forgers need only wait for a single addendum; for only one man is left who can claim superiority over Mathieson, and he was, unfortunately for the Bank of England, born a little too late, to trip up his heels, or those of the late Mr. Charles Price. He can do everything with a note that the patchers, and alterers, and simulators, can do, and a great deal more. Flimsy as a Bank note is to a proverb, he can split it into three perfect continuous, flat, and even leaves. He has forged more than one design sent into the Bank as an infallible preventive to forgery. You may, if you like, lend him a hundred pound note: he will undertake to discharge every trace of ink from it, and return it to you perfectly uninjured and a perfect blank. We are not quite sure that if you were to burn a Bank note and hand him the black cinders, that he would not bleach it, and join it, and conjure it back again into a very good-looking, payable piece of currency. But we are sure of the truth of the following story, which we have from our friend the transcendent forger

referred to; and who is no other than the chief of the Engraving and Engineering department of the Bank of England:

Some years ago—in the days of the thirty-shilling notes—a certain Irishman saved up the sum of eighty-seven pounds ten, in notes of the Bank of Ireland. As a sure means of securing this valuable property, he put it in the foot of an old stocking, and buried it, in his garden, where Bank note paper couldn't fail to keep dry, and to come out, when wanted, in the best preservation.

After leaving his treasure in this excellent place of deposit for some months, it occurred to the depositor to take a look at it, and see how it was getting on. He found the stocking-foot apparently full of the fragments of mildewed and broken mushrooms. No other shadow of a shade of eighty-seven pounds ten.

In the midst of his despair, the man had the sense not to disturb the ashes of his property. He took the stocking-foot in his hand, posted off to the Bank in Dublin, entered it one morning as soon as it was opened, and, staring at the clerk with a most extraordinary absence of all expression in his face, said:

"Ah, look at that, Sir! Can ye do anything for me?"

"What do you call this?" said the clerk.

"Eighty-sivin pound ten, praise the Lord, as I'm a sinner! Ohone! There was a twenty as was paid to me by Mr. Phalim O'Dowd, Sir, and a ten as was changed by Pat Reilly, and a five as was owen by Tim; and Ted Connor, ses he to ould Phillips—"

"Well! Never mind old Phillips. You have done it, my friend!"

"Oh Lord, Sir, and it's done it I have, most com-plate! Oh, good luck to you, Sir, can you do nothing for me?"

"I don't know what's to be done with such a mess as this. Tell me, first of all, what you put in the stocking, you unfortunate blunderer?"

"Oh, yes, Sir, and tell you true as if it was the last word I had to spake entirely, and the Lord be good to you, and Ted Connor ses he to ould Phillips, regarden the five as was owen by Tim, and not includen of the ten which was changed by Pat Reilly—"

"You didn't put Pat Reilly, or ould Phillips into the stocking, did you?"

"Is it Pat, or ould Phillips as was ever the valy of eighty-sivin pound ten, lost and gone, and includen the five as was owen by Tim, and Ted Connor—"

"Then tell me what you *did* put in the stocking, and let me take it down. And then hold your tongue, if you can, and go your way, and come back to-morrow."

The particulars of the notes were taken, without any reference to ould Phillips; who could not, however, by any means be kept out of the story; and the man departed.

When he was gone, the stocking-foot was shown to the then Chief Engraver of the notes, who said that if anybody could settle the busi-

ness, his son could. And he proposed that the particulars of the notes should not be communicated to his son, who was then employed in his department of the Bank, but should be put away under lock and key; and that if his son's ingenuity should enable him to discover from these ashes what notes had really been put in the stocking, and the two lists should tally, the man should be paid the lost amount. To this prudent proposal the Bank of Ireland readily assented; being extremely anxious that the man should not be a loser; but, of course, deeming it essential to be protected from imposition.

The son readily undertook the delicate commission proposed to him. He detached the fragments from the stocking with the utmost care, on the fine point of a penknife; laid the whole gently in a basin of warm water; and presently saw them, to his delight, begin to unfold and expand like flowers. By and by, he began to "tease them" with very light touches of the ends of a camel's-hair pencil, and so, by little and little, and by the most delicate use of the warm water, the camel's-hair pencil, and the penknife, got the various morsels separate before him, and began to piece them together. The first piece laid down was faintly recognisable by a practised eye as a bit of the left-hand bottom corner of a twenty pound note; then came a bit of a five; then of a ten; then mere bits of a twenty; then more bits of a five and ten; then, another left-hand bottom corner of a twenty—so there were two twenties!—and so on, until, to the admiration and astonishment of the whole Bank, he noted down the exact amount deposited in the stocking, and the exact notes of which it had been composed. Upon this—as he wished to see and divert himself with the man on his return—he provided himself with a kindle of corresponding new, clean, rustling notes, and awaited his arrival.

He came exactly as before, with the same blank staring face, and the same inquiry, "Can you do anything for me, Sir?"

"Well," said our friend, "I don't know. Maybe I can do something. But I have taken a great deal of pains, and lost a great deal of time, and I want to know what you mean to give me."

"Is it give, Sir? Thin, is there anything I wouldn't give for my eighty-sivin pound tin, Sir; and it's murdered I am by ould Phillips."

"Never mind him; there were two twenties, were there not?"

"Oh, holy mother, Sir, there was! Two most elegant twenties! and Ted Conner—and Phelim—which Reilly."

He faltered, and stopped as our friend, with

much ostentatious rustling of the crisp paper, produced a new twenty, and then the other twenty, and then a ten, and then a five, and so forth. Meanwhile, the man, occasionally murmuring an exclamation of surprise, or a protestation of gratitude, but gradually becoming vague and remote in the latter as the notes re-appeared, looked on, staring, evidently inclined to believe that they were the real lost notes, reproduced in that state by some chemical process. At last they were all told out, and in his pocket, and he still stood staring and muttering, "Oh holy Mother, only to think of it! Sir, it's bound to you for ever that I am!"—but more vaguely and remotely now than ever.

"Well," said our friend, "what do you propose to give me for this?"

After staring and rubbing his chin for some time longer, he replied with the unexpected question:

"Do you like bacon?"

"Very much," said our friend.

"Thin it's a side as I'll bring your honor to-morrow morning, and a bucket of new milk—and ould Phillips—"

"Come," said our friend, glancing at a notable shillelah the man had under his arm, "let me undeceive you. I don't want anything of you, and I am very glad you have got your money back. But I suppose you'd stand by me, now, if I wanted a boy to help me in any little skirmish?"

They were standing by a window on the top storey of the Bank, commanding a courtyard, where a sentry was on duty. To our friend's amazement, the man dashed out of the room without speaking one word, suddenly appeared in the courtyard, performed a war-dance round this astonished soldier—who was a modest young recruit—made the shillelah flutter, like a wooden butterfly, round his musket, round his bayonet, round his head, round his body, round his arms, inside and outside his legs, advanced and retired, rattled it all round him like a firework, looked up at the window, cried out with a high leap in the air, "Whooroo! Thry me!"—vanished—and never was beheld at the Bank again from that time forth.

THE
HOUSEHOLD NARRATIVE
OF CURRENT EVENTS.

1850.]

FROM THE 30TH MARCH TO THE 26TH APRIL.*

[PRICE, 5d.]

THE THREE KINGDOMS.

ENGLISHMEN are said to begin whatever they have to say, by talking about the weather. As the weather has a very material influence on the condition and prospects of the "Three Kingdoms," in the changing month of April, we need offer no apology for availing ourselves of an Englishman's privilege in commencing our account of it.

For, in spring, as we all know, the first indications of good or bad harvests present themselves. Upon those, a vast deal nationally depends,—prosperity or depression; wealth or want; employment or idleness; mercantile activity, or commercial stagnation. In politics, also, "our agricultural prospects" have their influence. A bad harvest surrounds the minister with accumulating difficulties, while a good one smooths many a way. It is said of an ex-premier, who has been at the head of affairs more than once, that when called upon to deliberate on taking office, he is guided less by the aspect of what is called "the political horizon," than by the state of the barometer. He calculates that if there be a reasonable chance of excellent crops, there is a corresponding probability of the people being good-humoured. It is astonishing how a man's mind clears up with the weather; and how it darkens (on such subjects as the Income Tax, and other trifles of that nature) with the sky.

Happily, the month's accounts from almost every part of the country give hope of an abundant season. A dry seed-time was followed by an unusually cold and nipping frost during March, which, though retarding vegetation, kept it from peering above ground to be bitten and blighted. April was ushered in with storms, the disastrous effects of which on shipping we have to record,—but the genial weather which followed, was only interrupted by heavy showers, much required for irrigation after the long drought. An unusual amount of electricity discharged itself on two occasions in severe thunderstorms. Upon the whole, vegetation promises unusually well. And, as things run on smoothly with the human, as with the equine race, when it can command abundance of corn, we are happy in the prospect before us.

Plenty, however, so advantageous to the buyer, is, according to protectionist theories, a bane to the seller. Indeed, it is so, unless means of production are multiplied by skill, energy, and industry, in an inverse ratio to the diminution of prices. It has yet to be seen, whether the downward tendencies in the price of farm produce will be met by the farmer so as to decrease "the agricultural difficulty" which still exists.

The emigration movement has not slumbered, and is making head vigorously, as the season advances. Vast numbers of persons have recently departed from Ireland, chiefly to the United States. The public, at length awakened to a sense of the vast magnitude of the subject, and to its immeasurable benefits,—both to those who go abroad, and to those who remain at home,—are beginning to bestir themselves out of doors. Attention is universally directed to our great Australian colonies, but it rests with the public, still, to enforce upon the Government and Legislature the necessity of a careful, comprehensive, liberal scheme of popular emigration, and of a system of regulations for the health, comfort, and happiness of emigrants. There is no question of importance to the community, which is not included in this question. Its vital interest to every man who has the least care for the welfare of his country, and the progress of his race, cannot be exaggerated.

The lamentable intellectual wants of a vast proportion of the humble classes have occasioned during the month much solicitude and discussion. These are due chiefly to Mr. Fox, member for Oldham, whose educational Bill—to extend the means of instruction to all sects and classes,—has excited much wholesome and energetic agitation throughout the more thinking districts of the country; by which we mean the districts where men think, and act. It is striking, but discouraging, to note the contrast between the manner in which such comprehensive educational projects as that of Mr. Fox are met by the practical men of action in the manufacturing districts, and by the passive theorists of the House of Commons. But, in the manufacturing districts, they know the danger, and the monstrous ignorance and degradation lying at the base of all society; and in the House of Commons they do not,—yet. The party-walls of that building are extremely thick, and keep out a great deal of social knowledge.

Our record of party politics presents features of vicissitude, and therefore of interest. April has been (as Francis Moore, physician, might have predicted, if he had foreseen it,) a disastrous month in the ministerial calendar. In the first week of the meetings of parliament after the Easter holidays, the Cabinet had to endure, in the House of Commons, three defeats,—two positive, and one comparative; and, shortly after, a fourth. On a motion, having for its object improvement in the status and accommodation of Assistant-Surgeons on board her Majesty's ships, ministers were placed in a minority equal to eight votes. On the measure for extending the jurisdiction of County Courts, to which they were not disposed to agree, they voted with a minority, which numbered 67 against 144 votes. These were the positive defeats; the comparative one arose out of a motion to abolish the window tax. Against this the Cabinet made some effort, but its supporters only mustered in sufficient strength to afford a majority of three. Their last disaster was in a committee on the New Stamp Duties Bill.

* It will be remembered by the readers of the preliminary announcement of this Supplement, that it is intended that numbers of the "Household Narrative of Current Events" for the months of January, February, and March, shall be published, at convenient intervals in time to complete the volume for the year. This is the explanation of the first page of the present number being page 73.

Whoever rejoices, or whoever grieves, at those evidences of ministerial declension, cannot fail to observe that the present government has not only evinced, but acted on, a desire for economy. Whether impelled by the pressure from without of the "Financial Reformers," or by a deeply-rooted conviction that the salaries of many of his colleagues in various departments are too great, Lord John Russell has obtained a committee to inquire into the emoluments of certain state officers with a view to reduction. This committee is constituted fairly, and includes Mr. Cobden, and his platform colleague Mr. Bright.

The Bill for the abolition of intramural interments will be considered in a committee of the whole House, next month. The Report on which this Bill is founded, is one of the most remarkable public documents that have ever appeared in England. It would be impossible to illustrate more impressively the deplorable condition into which we have insensibly lapsed, in respect of our disposal of the dead—the shocking indecorum, the waste of means and life, the diffusion of sickness, pestilence, misery, and want attendant on our present burial customs. To assert the awe and sanctity of Death; to separate the dead from the living; to surround death, among the poor and wretched, with humanising and not hardening influences; to respect the ashes of the humblest sharer in the common lot; is the lesson that it teaches. This is the end of the legislative measure founded upon it. It may be retarded by weak, mercenary, or bigoted opposition; but it would be to doubt the sense, the decency, and human feeling, of the country, to doubt its ultimate attainment.

NARRATIVE OF PARLIAMENT AND POLITICS.

VERY little business has been transacted in the HOUSE OF PEERS during the month. The House met after the Easter recess on Thursday 11th, sat half-an-hour to hear some bills read from the Commons, and adjourned.

On Friday 12th, Lord CAMPBELL introduced a bill for the better Regulation of Special Pleadings.—Earl GREY then moved the third reading of the *Convict Prisons Bill*. Lord STANLEY dwelt especially on the danger of starving off that which is inevitable, a thorough revision of our secondary-punishment system.—Transportation, said Lord MONTEAGLE, must be placed upon a new footing altogether: it must be made acceptable to the colonists themselves, which it cannot be without free institutions.—Earl GREY combated what he conceived to be the extravagant objections to transportation; the prosperity, nay the free emigration to Australia, are both the creation of transportation; but the system of labour-gangs at so great a distance has proved a failure. To that he ascribed the frightful evils alleged against transportation; and prospectively, but not very distinctly, he foreshadowed some system of which the penal part should be accomplished at home, while a more extensive employment would be found for convict-labour in the Colonies.—The bill was read a third time and passed.

On Monday 15th the Bishop of LONDON declared his intention to bring forward a bill to establish a *Court of Appeal for the Clergy*, to supersede such appeals to the Judicial Committee of the Privy Council. The proposed court would be, he said, a strictly clerical tribunal.

On Thursday 18th the *Pirates' Head Money Repeal Bill* was brought forward by the Marquis of LANSDOWNE for the second reading. It was not intended to deprive parties engaged in the capture or destruction of pirate vessels of reward, but to reward them according to the value of their services.—Lord ELLENBOROUGH commented severely on recent actions with pirates on the coast of Borneo, while he stigmatised as military executions; and gave notice, that when the bill passed into committee, he should move to substitute for one of the present clauses a new clause, the effect of which would be to give the same power of conferring rewards on those engaged with pirates on shore, which was now granted to those engaged with pirates at sea.—The Earl of ELLSMERE defended Sir James Brooke, whose conduct in Borneo entitled him to rank among the heroes of civilisation. He had little doubt that Borneo would soon become a flourishing settlement.—Lord ELLENBOROUGH reiterated his statement respecting the natives of Borneo, and declared that what was termed piracy only amounted to international war. Labuan was utterly useless to England.—Earl GREY declared that the natives were determined pirates, whose expeditions were a terror to all who traded in the Indian Archipelago. So far from Labuan being a

failure, it appeared that 120 town allotments had been disposed of; while the entire amount of revenue estimated for the current year had been realised during the month of January alone.—The bill was read a second time.

A debate on *The Abuses of the Irish Poor Law* arose on Friday 19th, in consequence of a petition presented by the Marquis of WESTMEATH, relative to Carrick-on-Shannon. In illustration of the working of the law, his lordship referred to certain proceedings taken against himself without the smallest legal notification, by which a demand of rates amounting to 33*l.* was swelled to 77*l.* by costs. He concluded by moving for a committee to inquire into the subject-matter of the petition.—The Marquis of LANSDOWNE did not deny that abuses had crept into the administration of the poor law in particular unions, but he did not think sufficient grounds had been made out for inquiry.—Lord STANLEY thought the reverse. The grossest abuses had prevailed for months in the union to which the petition referred, and he thought their lordships would not fulfil their duty if they refused inquiry.—The Marquis of LANSDOWNE withdrew his opposition to the appointment of a committee, in consequence of what Lord STANLEY had stated, and the motion was agreed to.

On the 22nd, the Duke of RICHMOND obtained a select committee to inquire into the evasions of the act for preventing the importation, with foreign cattle, of infectious diseases.

The Door-keepers of the House came in for a share of its attention on Tuesday 23rd. The report of the committee on the fees and emoluments of parliamentary officers, was laid on the table by its chairman, the Duke of RICHMOND, who mentioned some curious facts respecting the door-keepers. During four years the minimum receipts of one of them ranged from 401*l.* to 772*l.* per annum; and during four maximum years, from 884*l.* to 2570*l.* per annum. Yet this very gentleman, while incapacitated by age from performing his simple duties, employed another person, who did it well for 160*l.* a year. Fees were paid to the door-keepers, not only by peers, editors of newspapers, and the East India Company; but the Society of Friends—for what reason his Grace knew not—paid five pounds a year to the door-keepers of that House.

The Earl of MALMESBURY then moved for a *Return of Corn* imported since 1st January last, and of the average price since that period.—The Duke of RICHMOND warned the House not to drive the British farmer "to desperation."—The Marquis of LANSDOWNE expressed his belief that the present low prices were exceptional.—Lord STANLEY on the other hand declared his conviction that they were not exceptional but permanent.—The returns were ordered.

Business was commenced, when the HOUSE OF COMMONS met after the Easter recess, on Monday the 8th, by Captain BOLDERO, who directed attention to the disabilities endured by the *Assistant-Surgeons in the Navy*. They nominally rank as lieutenants in the army or

first lieutenants of marines, but are excluded from the ward-room and from the society of their equal officers, and put into the cock-pit. "Then," said the captain, "where is the cock-pit? Why, in the hold of a ship, where the sun never penetrates, where the only light afforded is by lamps or candles, where an impure atmosphere constantly prevails, where it was impossible to study, for study could not be carried on in the midst of middies fond of larking and full of fun!" The school-master, the engineer, his assistant, and even boatswains and carpenters have each a separate room.—The resolution was opposed by Admiral DUNDAS, because there are plenty of applicants for the place of assistant-surgeons in our navy under the existing arrangement; and secondly, that the proposed alteration is impracticable. When the House divided, ministers found themselves in a minority; for 48 voted with Captain Boldero, and 40 against him.—Sir Francis BARING afterwards remarked, that the wish of the House was one thing, and the practicability of the resolution another; and he feared that it could not be carried out with advantage to the service. The ward-room of each ship was already fully crammed with officers entitled to use it.

The House then resolved itself into a *Committee of Supply*, when Colonel SINTHROP proposed to reduce the number of lords of the Admiralty from six to four; and that their salaries, and those of their secretaries, and other officers in that department, should be curtailed so as to effect a saving of 7,100*l.* a year.—Sir F. BARING contended that the number of the lords was not disproportioned to the mass of detailed business to be superintended, and that their salaries should be left to the consideration of the committee upon public salaries.—Upon this, Colonel SINTHROP restricted his motion to the reduction of two lords, which, upon a division, was negatived by 110 to 33.

Mr. HUMS sought to retrench the vote of 689,971*l.* for home naval establishments by the 10,000*l.* for drilling the dockyard artificers. He too was beaten by 66 to 15.

On Tuesday the 9th, the *Repeal of the Window Duty* was brought under notice by Lord DUNCAN. When, he said, the deleterious effects of this tax upon the public health is so notorious, it seemed a mockery to have dwelt so strongly on sanitary measures in the Queen's speech unless ministers had intended to abolish the tax upon the light of Heaven. The Health of Towns Association had pronounced it "more vicious in principle, more injurious in its practical consequences, than a tax on food." If the 100,000*l.* a-year voted for the impossible endeavour to suppress the Slave trade on the coasts of Africa were saved, there would be no necessity for taxing houses containing fewer than fourteen windows.—Sir Charles WOOD said, the tax already presses as lightly on the poor as possible. Out of 3,500,000 houses, it is only paid by 500,000 of the better class of houses; and even for those the duty is ultimately paid by the capital of the landlord in reduction of rent, rather than by the tenant. The superiority of the dwellings of the poor in England over those in Ireland, where the tax does not exist, refutes, according to Sir Charles, much of the sanitary argument. The exemption of all houses having fewer than twelve windows would cost, not 100,000*l.* but 250,000*l.*—the duty now received from such houses.—Sir George PRESTELL recalled the fact, that since 1835, five Chancellors of the Exchequer have promised to "consider" this subject, and not one has considered it in the way the public voice requires.—Lord Robert GROSVEHOR was obliged to tell the Government, that after the Commissions issued by them, which without exception have recommended the abrogation of the tax, their refusal to mitigate or moderate amounts to a great loss of character on their part.—When the House divided, there were for the motion, 77; against it, 80; Ministerial majority, 3. The announcement of numbers drew hearty cheers from the minority.

[Subsequently Sir George PRESTELL's annual return of the window-duties was printed. It shows that the amount assessed in the year ending on the 5th, was 1,893,988*l.*, and the net amount received was 1,813,629*l.* The number of houses charged, 487,411.]

The *County Courts Extension Bill* came on for second reading on Wednesday 10th. It was opposed by Ministers and a portion of the Protectionist party.—Sir

George GREY advised caution. The sum to be sued for in these courts was now limited to 20*l.*, but it was proposed to enlarge the limit to 50*l.* for debts, and from 5*l.* to 20*l.* in cases of "tort," in which damages for wrong were sought to be recovered. Where, urged Sir George, was this to stop? The House may next year be called on to extend the jurisdiction indefinitely. The bill also proposed an increase of the judges' and clerks' salaries and to remove the limits of counsel's fees, which will detract from the present advantages of cheapness. To test the opinion of the House with respect to the bill, he moved that it be read a second time that day six months.—Mr. JOHN EVANS, in astonishment at Sir George Grey's objection, asked, why defer the legislation from continuing in a course of utility? The frequency of decisions on pitiful quibbles is so great in the superior courts, that the judges will find it impossible to go on much longer, from mere contempt and ridicule.—Mr. MARTIN conceived the bill to be a step towards the abrogation of trial by jury. All experience proved that the best system of jurisprudence was that in which a jury decided upon matters of fact, and a judge upon law. Reverse that system, and allow 60 gentlemen [the present number of County Court judges] through the country to decide both fact and law, and serious evils would ensue. [In a County Court it is at the option of parties to have juries or not, as they please.]—Mr. COCKBURN gave his cordial support to the bill. As to trial by jury in civil actions, he believed that a single judge of knowledge, education, and experience, was infinitely better than juries, especially those selected at assizes. In the course of equity, where property was dealt with in masses and in its most important relations, there were no juries. If important points of law arose, the case might be brought before a superior court. The public would do without juries willingly, for they very seldom asked for them in County Court trials. The principle of these courts simplified the law, which is so voluminous and perplexing, that a lawyer's lifetime is too short to learn it, and even at last he cannot understand it; while, to the subject, the law is a sealed book; a state of things to be ashamed of.—The ATTORNEY-GENERAL opposed the bill with emphatic warmth. His arguments rested chiefly on the grounds that the County Court judges are unrestrained by the opinion of a professional bar; that the admission of persons to be witnesses in their own cause either promotes perjury, or hinders sensitive parties from seeking justice.—On a division, Sir George Grey's amendment was negatived, by 144 to 69; and the bill was read a second time.—Mr. HUMS inquired whether, after this demonstration of feeling, the Government would persevere in opposing so salutary a measure?—Sir George GREY said, he should object to increasing the salaries of the judges; but he could not undertake to say whether Government would oppose the measure any further.

The *Public Libraries and Museums Bill* was now to be moved into committee, and Mr. EWART announced that he had modified it in two points:—First, To limit its operation to boroughs whose populations exceeded 10,000; Secondly, To make it necessary for the town council of any borough, before determining to carry this act into effect, to call a public meeting of rate-payers, and to obtain their distinct consent.—Colonel SINTHROP would still oppose the bill; inasmuch as it would impose a fresh tax, and he moved that it be committed on that day six months.—Lord J. MANNERS also objected to the bill as doing that for libraries and museums what the legislature had refused to do for churches, hospitals, and charities.—Mr. OSWALD wished to know whether the bill was intended to apply to Scotland? If so, he should oppose it.—Colonel CHATTERTON asked whether the bill was to apply to Ireland? These eager questions produced a laugh.—Mr. EWART said that the bill was not intended to apply to Scotland, but he should be most ready to include Ireland in its operation, if the majority of the Irish members so desired. He regretted to find a proposition for the establishment of libraries and the extension of knowledge opposed by three of the four members for our universities.—Colonel SINTHROP's amendment was eventually lost by a majority of 35 out of 163 votes.

On Friday 12th Lord JOHN RUSSELL moved for a

select committee on *Official Salaries*. He proposed that the inquiry should embrace the pay and emoluments of offices held during the pleasure of the Crown by Members of either House of Parliament; of judicial officers in the Superior Courts of Law and Equity; the retiring pensions of the Judges; and also the expense of Diplomatic Establishments. Lord John supported his motion by an appeal to precedents, and to the reductions effected at the recommendation of former committees of inquiry, of which there was one in 1798, in civil establishments; others in 1618, 1828, and 1830, on the salaries of office-holders in Parliament; and a fifth, on military establishments, in 1848. It was, said his lordship, quite impossible to make sudden and sweeping reductions, or to form fixed tariffs of salaries. The motion was opposed by an amendment from Mr. D'Israeli: he did not see why that should be done by parliamentary committees, which it was the duty of government to do. Why did not ministers introduce a bill on the subject at once? Lord John Russell's experience and studies would enable him to settle in a single morning the scale of Parliamentary salaries; the Home Secretary might do the same for the Judicial salaries; Lord Palmerston for the Foreign salaries—no one more capable. But committees, meant procrastination. If this one be granted, it must go into the whole subject, as if no information existed; and nothing will satisfy it but thorough investigation. Its evidence will be published; and at the beginning of the session of 1851—observed the honourable member, amid much laughter—"leave will be asked to sit again." Much has been said about the exhibition of works of art in 1851—much respecting the competition of foreigners; but there is one production which no foreign nation can touch, and that is the blue book which the committee will produce! Mr. D'Israeli then moved "That this House is in possession of all information requisite to revise and regulate public salaries; that Parliamentary Committees of inquiry would only lead to delay; and that it is the duty of the Government, on their own responsibility, to introduce the measures that may be necessary for effecting every reduction in the National Establishments consistent with the efficient discharge of the public service."—The debate then exhibited some splitting of parties, especially among the financial reformers.—Mr. HUME would not oppose the amendment because it emanated from the opposite side of the house: he should like to see how many of those who profess a desire for public economy could vote against it. Perhaps it pressed Government, but Governments ought to be pressed. If the Committee's recommendations agreed with the wishes of Government, Government would carry them out; if not, they would abstain. A committee was next to useless.—Mr. HENLEY complained that Lord John gave no indication that he intended reductions. As to the Committee—would the child unborn see the issue of its inquiries? Mr. Henley would vote for the amendment.—Sir Benjamin HALL could not trust Ministers with the reduction of their own salaries.—Mr. BRIGHT was gratified to observe both parties vying with each other in carrying out Mr. Cobden's economic views. If the Committee were to be such as Lord John had appointed on former occasions, there would be delay and shirking. In the long, however, of an independent Committee excluding Government influence, officials, and all salaried or pensioned Members of the House, Mr. Bright would give his vote for the Government.—Finally, Mr. DINHAULT's amendment was negatived by 250 to 159.—Mr. HOUSMAN then moved another amendment, adding to the original motion these words—"And incomes and emoluments of Ecclesiastical Dignitaries." This was negatived, by 208 to 95; and Lord John's motion was carried.

The *Stamp Duties Bill* was considered in Committee on Monday 15. On the Chancellor of the Exchequer proposing a further diminution of the rates of duty on bonds and mortgages—from 5s. marked in the schedule for every 50l. of loan, down to 2s. 6d.; and half-a-crown upon every 50l. of increase.—Sir Henry WILLOUGHBY moved that the duty be 1s. on 50l., instead of 2s. 6d., as the Chancellor of the Exchequer proposed. Sir Charles WOOD objected—and after some discursive conversation the House affirmed Sir Henry Willoughby's amendment, by 162 to 135; whereupon there arose

great cheering. Sir Charles WOOD immediately stated, that in consequence of this decision, the Government would proceed with the bill no further that night, and would take time to consider what to do next.

On 16th Mr. MILNER GIBSON brought forward four resolutions for the abolition of *Taxes on Knowledge*: 1st, To repeal the excise duty only on paper; 2nd, To abolish the stamp, and 3rd, the advertisement duty on newspapers; 4th, To do away with the customs duty on foreign books. The sacrifice, said Mr. Gibson, of the small excise duty on paper yearly, would lead to the employment of 40,000 people in London alone. We are totally driven out of our own colonies in British America by the paper of the United States, France, Germany, and Italy. The suppression of Chambers' Miscellany, and the prevented reissue of Mr. Charles Knight's Penny Cyclopædia, from the pressure of the duty, are gross instances of the check those duties impose on the diffusion of knowledge. Mr. Gibson did not propose to alter the postal part of the newspaper stamp duties; all the duty paid for postage—a very large proportion—would therefore still be paid. He dwelt on the unjust Excise caprices which permit this privilege to humorous and scientific weekly periodicals, and even to the candlestick and candelabrum circular of an advertising tradesman, but deny it to the avowed "news" columns of the daily press. He especially showed by extracts from a heap of unstamped newspapers, that great evil is committed on the poorest reading classes, by denying them that useful fact and true exposition which would be the best antidote to the pernicious principles now disseminated among them by the cheap unstamped press. There is no reason but this duty, which only gives 350,000l. per annum, why the poor man should not have his penny and even his halfpenny newspaper, to give him the leading facts and the important ideas of the passing time. The tax on advertisements checks information, fines poverty, mulets charity, depresses literature, and impedes every species of mental activity, to realize 150,000l. per annum. That mischievous tax on knowledge, the duty on foreign books, is imposed for the sake of no more than 8000l. a year! Mr. Gibson concluded by expressing his firm conviction, that unless these taxes were removed, and the progress of knowledge by that and every other possible means facilitated, evils most terrible would arise in the future,—a not unfit retribution for the gross impolicy of the Legislature.—Mr. COWAN pointed out that the paper tax checked the progress of manufacture. An attempt was made a few years ago, in Gloucestershire, to manufacture paper from straw; but while the cost of raw material was 2s. a hundredweight, the duty was 14s. 9d. the hundredweight, and, of course, the undertaking failed. He had in his possession some paper made so long ago as the year 1800 from straw; and but for the excise incubus, that peculiar manufacture would, by this time, have been brought to a high state of perfection.—Sir Charles WOOD opposed the motion. Everybody was nibbling at the surplus, although it had been already disposed of in other reductions. This course persisted in, he seriously apprehended that a surplus would be more disastrous to a Chancellor of the Exchequer than a deficiency.—Mr. ROEBUCK, in supporting Mr. Gibson, assured the House that it was centuries behind the time; whereat the House laughed. The education which the House refused, the French Socialists will give. The masses are learning from them the power of "combination." The learned member then proceeded to exclaim with vehemence—"They will put you down to a certainty; but they won't know how to direct their power for the good of mankind. For God's sake, therefore, allow us to give the instruction which these vast multitudes need, who are destined to exercise power in this country!"—Lord John RUSSELL owned that it is "very desirable that the people in general should have political intelligence. It is very fit that all the political concerns of the country should be known;" but much of the matter contained in the newspapers is hardly to be dignified by the name of knowledge. He opposed the motion, chiefly on account of the financial difficulties it presented.—After a speech from Mr. D'Israeli, partly in favour and partly against them, the resolutions were negatived.

Mr. Fox's *Education Bill* came on for second reading on Wednesday 17th. Mr. STAFFORD opposed it on philosophical grounds. It did not accurately define the word "secular," which might mean "atheistic." He concluded by moving that the bill be read that day six months.—The Earl of ARUNDEL and SURREY maintained that secular education is quite inconsistent with religion, and warned the House, that in this country there are books of a highly intellectual character, beautifully written and widely circulated, which would utterly destroy every vestige of the Christian religion. The noble Lord read a series of extracts from works by Dr. Ullathorne, a Catholic vicar apostolic, Mr. Laing, Mr. Newman, two American writers, the Rev. Mr. Rose, and also from several newspapers; winding up with a stanza from "Reverberations." His lordship then having thanked the House for having allowed him to "disgust" them by the passages he had read, proceeded in the following strain:—Every one knew what his particular religious belief was; but he was not advocating the claims of the Roman Catholic Church; he was speaking on behalf of the poor of every religious denomination, that they should not be exposed to the peril of their souls. Some three centuries ago a great convulsion arose in men's minds; what was called the Reformation took place, and the Scriptures were set up for the teaching of the Church. He did not say whether that was right or wrong; but now they had arrived at another period;—the Scriptures were to be utterly laid aside. Lord Arundel wound up with a tremendous peroration. The present movement he regarded as that of a mere skirmishing party which would be easily driven in; but what he called on the House to consider was, that this was not the last attack; the two armies were joined; the battle-cry was "religion" or "irreligion," "God" or "devil," and the issue for which they must fight was heaven or hell!

"The mover of the amendment," said Mr. ROEBUCK, in answer to these various remarks, "had come with his quiver full of arrows, feathered with epithets, and barbed with imputations. In a mellifluous voice and well-poised sentences, he had nakedly charged the supporters of the bill with supporting Atheism." The noble seconder, continued the honourable gentleman, had followed with quoted doctrines which had as little to do with the bill as the doctrines of every saint in the calendar. His lordship objected to the Reformation; and why? Because it took mankind out of the thralldom of that priesthood which the noble lord would call a Church. Mr. Roebuck denied it. The priesthood were neither the Church nor the exclusive teachers of religion. Every father of a family when he opened the Bible and taught his children from its pages, was as much a teacher of religion as the meddling priest; he formed as much a portion of the Church as he who propounded doctrines from the pulpit. Mr. Roebuck asked for the education of the people, and he asked it upon the lowest ground. As a mere matter of policy, the State ought to educate the people; and why did he say so? Lord Ashley had been useful in his generation in getting up Ragged Schools. [Here a titter arose in the house.] Mr. Roebuck saw nothing to laugh at, it was a great imputation upon this kingdom that such schools were needed. Why were they needed? Because of the vice which was swarming in all our great cities. We pass laws, send forth an army of judges and barristers to administer them, erect prisons and place aloft gibbets to enforce them; but religious bigotry prevents the chance of our controlling the evil at the source, by so teaching the people as to prevent the crimes we strive to punish. It was because he believed that prevention was better than cure; it was because he believed that the business of Government was to prevent crime in every possible way, rather than to punish it after its commission, that he asked the House to divest themselves of all that prejudice and bigotry which was at the bottom of the opposition to this measure. Mr. Stafford's speech was in the same spirit as Lord Arundel's. The latter represented Grandmother Church, and the former Good Mother Church; and he had no doubt that many hon. gentlemen would be found on the Ministerial side of the house who represented some of her improper daughters. Mr. Roebuck

then proceeded to ask how the secular knowledge which it was proposed to give under this bill would shut the mind of the children? He begged it to be borne in mind that it was not proposed to take the child away from home for seven years and then restore him. He was to be at home day by day, and almost hour by hour; at school, and at home, alternately. The school would teach him secular education, and he would go home trained for the moment; by degrees he would be better trained to receive religious instruction at home. Mr. Roebuck concluded by remarking in reference to Mr. Fox, the framer of the bill, that he was glad to see that there was a gentleman in the house who had courage to face all the imputations that had been brought forward—for he must have known that he would have to face them—and having now broken the ice, he hoped he would no longer halt by the way—that he would, in the language of the noble lord, continue the great fight, for a "great fight" it undoubtedly was. During some portion of the learned gentleman's speech, the house resounded with cheers.—Lord ASHLEY believed that this was the beginning of a series of conflicts; and he confessed alarm that the propounders of this measure persevered in renewing their attacks on the religious education of the country. He then quoted certain statistics to show that the educational resources of the country were much under-estimated.—Lord John RUSSELL believed that if it were totally impossible to agree on any mode of religious instruction, it would be better to have secular education than none; but nothing short of absolute necessity could justify the omission of religion. The bill is despotic; it would altogether destroy existing schools; for when so much was demanded in rates, the voluntary resources for promoting education must fail. It would be extremely hard that those who had spent their money, time, and labour, in establishing schools upon the religious basis, should have their purposes defeated.—Mr. HUME regretted Lord John Russell's opposition, as contrary to the whole tenor of his previous conduct and opinions.—On the motion of Mr. ANSTEV, the debate was adjourned to 2nd of May.

On Thursday the 18th, an attempt was made, but defeated, to prevent the *Larceny Summary Jurisdiction Bill* from going into committee. Two amendments were carried; one removing adults from the operation of the bill, and the other that no offender above the age of 14 should be whipped.—Mr. ROEBUCK—whose personal appearance is rather juvenile—caused some amusement during the latter discussion. He remarked that, speaking of himself, he could say, that if anybody had laid hands upon him as a boy—(here he was interrupted by much laughter). He spoke what he felt as an individual, and had a right to suppose that the same feelings existed in the breast of the peasant.—In the end, the bill was reported as amended.

The *Australian Colonies Bill* was debated in committee on Friday the 19th. On the sixth clause Sir William MOLISWORTH moved an amendment, for the purpose of establishing "in the Colonies of Van Diemen's Land and South Australia respectively, a Legislative Council and a House of Assembly." After a sharp debate, it was lost by 218 to 150.

The CHANCELLOR OF THE EXCHEQUER, on the 22nd, gave his promised explanations of what he intended to do with the *Stamp Duties Bill*. It was simply this:—that the amendment carried on a former evening would produce so great a diminution of revenue, that if it were persisted in, he should be obliged to abandon the bill. Meantime he proposed to abide by the vote of the House as to the 1s. duty on sums under 50l.; then to raise that by 1s. 6d. on every 25l., up to his own scale of 10s. for 200l., and to carry it uniformly up, from that amount, to 100,000l., at one-fourth per cent.; finally to adopt a limit, and to confine the maximum duty to that which was payable on borrowing 100,000l., viz., 250l.

The details of the *Australian Colonies Bill* were then debated at great length, and most of them affirmed.—Mr. C. LUSHINGTON moved an amendment to clause 17, namely, that that part of it which provides for the signification of Her Majesty's pleasure on every bill which shall be passed by the council in any of the

colonies altering the sums allotted for the sustentation of public worship, be omitted.

On the second reading of the *Metropolitan Interments Bill* (introduced on the 16th), it was agreed that it should not be committed till Friday the 10th May.

Col. SMITHORP was amusing on the *Official Salaries Bill*.—On Lord John Russell naming the select committee, the Colonel said, that instead of appointing this "select" committee, the noble lord at the head of the Government had better have said candidly—"I mean to take care of myself and of my own salary. I shall look after my friends, and I will stand by them as long as they stand by me; *ubi mel, ibi apes* [where the honey, there the bees]. Let them support me, and they shall have plenty of turtle and venison!" He then called the committee a "packed" one; with what justice will be seen: it was agreed to consist of the following members.—Lord J. Russell, Mr. W. Patten, Mr. Bright, Sir J. Y. Buller, Mr. Cobden, Mr. Beckett, Mr. Napier, Mr. Home Drummond, Mr. W. Evans, Sir W. Molesworth, Mr. Henley, Mr. Ellice, Mr. Ricardo, Mr. Walter, and Mr. Deedes.

Mr. LABOUCHERE brought in the *Mercantile Marine Bill* in its altered state, and it was read a first time.

Mr. HEYWOOD, on the 23rd, moved for an address praying for a Royal Commission to inquire into the *State of the Universities* of Oxford, Cambridge, and Dublin, with a view to their adaptation to the requirements of modern times. Many things, he said, demanded reforms, which the Universities could not make for themselves. Sir R. INGLIS denied the right of the House to ask the Crown to interfere unless a *prima facie* case were made out against these institutions. They were reforming themselves, and the University of Oxford since 1800 was a great reforming body.—Lord John RUSSELL could not agree to a motion which might be characterised as a bill of indictment against the Universities, not considering that they were objects of accusation by the great majority of the country. Considerable improvements had been made by the Universities themselves, but these improvements might be rendered more complete; and he proposed to advise the Crown to issue a Royal Commission for Oxford and Cambridge.—Mr. HEYWOOD withdrew his motion; and Mr. Roundell PALMER, on the ground that so important a matter required consideration, moved an adjournment of the debate, which was carried by 273 to 31.

Mr. MILNES moved the second reading of *Juvenile Offenders' Bill* on Wednesday 24th, in a speech in which he stated that the 645,454, which youthful criminals had cost the country during the last six years, had not produced a single reformatory result. That sum had therefore been utterly wasted.—Sir G. STRECKLAND moved that the bill be read that day six months, which was carried without a division.

The *Affirmation Bill* was next discussed, on Mr. PAGE WOOD moving it into committee. The object of the measure was to legalise a simple affirmation by all persons who have conscientious scruples against taking an oath—a privilege now only enjoyed by Quakers and Moravians. After a short conversation the motion was negatived by a majority of 148 to 129.

PROGRESS OF BUSINESS.

House of Lords.—April 12th. Convicts' Prison Bill read third time and passed.

15th.—Briek Duties Bill passed through committee.

16th.—Exchequer Bills and Briek Duties Bills read third time and passed.

18th.—Pirates' Head-money Bill read second time.

22nd.—Smoke Prohibition and School District Contribution Bills, passed through Committee.—Select Committee to inquire into Evasions of 11 & 12 Victoria, esp. 106.—Foreign Cattle Importations Act.

23rd.—Regulation of Pleadings Bill read second time.—School Districts Contributions Bill read third time and passed.

House of Commons.—April 8. Stamp Duties Bill read second time, "pro forma."—Public Health (Ireland) and Parochial Assessments Bills read first time.

9th.—Security for Advances on Irish Land Bill, read first

time.—Vote of 2,484,417, taken for Ordnance Estimates.—Briek Duties Bill and Small Charitable Trusts Bill passed.

10th.—County Courts Extension Bill, Public Library and Museums Bill, and Parish Constables Bill, read second time.—Exchequer Bills (9,200,000*l.*) read third time and passed.

11th.—Distressed Unions (Ireland) Advances and Repayment Bill, read second time.—Judgments (Ireland) Bill, read third time and passed.—Legal Technical Objections Retaining Bill, read first time.—Naval Prize Balance and Indemnity Bills read first time.

12th.—Committee of Inquiry into Public Salaries agreed to.—Public Health (Scotland), and Public Improvement (Scotland) Bills, read second time.—Estates Leasing (Ireland) Bill, read third time and passed.—Indemnity Bill read second time.

15th.—Medical Charities (Ireland) Bill read second time.—Indemnity Bill passed through Committee.—Metropolitan Interments, Convict Prisons, and Railway Abandonment Bills, all read first time.

16th.—Committee to inquire into Investments for the Savings of the Poor granted.

18th.—Larceny Jurisdiction Bill reported, as amended in Committee.—Naval Prize Balance Bill read second time.—Indemnity Bill read third time and passed.

19th.—Mercantile Marine Bill withdrawn for modification and amendment.

22nd.—Metropolitan Interments, and Railway Abandonment Bills were read each a second time.—Resolution that Naval Prize Balances should be paid out of Consolidated Fund.—Mercantile Marine Bill read a first time on re-introduction.

23rd.—Committee granted to Mr. Roebuck to inquire into the defalcations of Sir Thomas Turtton, Registrar of the Court of Bengal.—Collector of Fees in Chancery Bill read first time.

24th.—New Writ for Lynton ordered, Mr. Keppel having accepted the Chiltern Hundreds.

THERE was an aggregate meeting of the citizens of Dublin convened in the Rotunda, to petition the legislature against the contemplated *Abolition of the Office of Lord Lieutenant* on the 8th. The Round Room was crowded, the audience including ladies. The chair was taken by the Lord Mayor. Resolutions condemnatory of the intended abolition of the viceregal court were adopted.—At a meeting of an opposite tendency, of the Irish Alliance, a Mr. Leyne called upon the audience to despise the pocket patriotism that petitions for a continuance of the Lord-Lieutenancy. "Heed not, what is called the indignant protest of outraged national feeling. It is but the grumbling of the discharged menials of the Castle. It is but the lament of the official parveys who hold diplomas from Viceroy's Chamberlain. It is not a revolt of the people that rages. It is a squabble in the kitchen,—an *emete* of the scullery against the drawing-room." These remarks were received with great hilarity.

The *Tenant Right Movement* is increasing in some districts, especially in Ulster, Tipperary, and Limerick; and meetings were held at which ridiculously violent language was used. Combined action, no frequent expedient in Ireland, has been determined on. A congress of delegates, to meet in Dublin, is in course of organisation.

The *Repeal Association* is fast expiring. At the meeting in Conciliation Hall on Tuesday the 9th, there was a very small attendance. Mr. John O'Connell announced the rent for the week to be 4*l.*, and stated that if the country did not come forward to support the Association, it would be impossible for him to keep the doors of Conciliation Hall open much longer.

The first of two meetings of a conference convened by the *National Reform Association* was held in Crosby Hall on the 23rd & 24th. Its objects were to receive reports from delegates in reference to the progress of the reform movement, to devise means of carrying out with promptitude and vigour the objects of the Association, and to complete the arrangements for realising the fund of 10,000*l.* required for the present year's operations. The attendance was very numerous: many of the leading Reformers were present, and there were no less than 120 delegates from different parts of the kingdom. Sir Joshua Walsley, President of the Association, was in the chair. Able speeches were made by the Chairman, Colonel Thompson, Mr. Hunt, Mr. W. J. Fox, Mr. J. Kerhaw, Mr. Heyworth, and other eminent individuals; and several resolutions were unanimously adopted.

NARRATIVE OF LAW AND CRIME.

On the 2nd, Thomas Denny was tried at Kingston-on-Thames for *Murdering his Child*. He was a farm-servant, and so poor that he lived in a hay-loft on his master's premises with his reputed wife. In August a child was born, and died immediately. Suspicion arose, and an investigation took place, which led to the prisoner's commitment charged with murdering the infant. On the trial the prisoner's son, an intelligent boy of eight years old, told the following graphic story of his father's guilt:—"We all," he said, "lived together in the hay-loft at Fwell. When mother had a baby, I went to my father and told him to come home directly. When we got back, my father took up the baby in his arms. He then took up an awl. [Here the child became much affected and cried bitterly, and it was some time before he could proceed with his testimony. At length he went on.] My father took up the awl, and killed the baby with it. He struck the awl into its throat. The baby cried, and my father took the child to its mother, and asked her if he should make a coffin for it. Before he said this, he asked her if she would help to kill it, and gave her the awl. She tried to kill it also. My father gave her the child and the awl, and she did the same to it that he had done. I was very much frightened at what I saw, and ran away, and when I came back I found mother in bed." The woman (Eliza Tarrant) had been charged as an accomplice, but the bill against her was ignored by the Grand Jury. On the trial, she was called as a witness; to which the prisoner's counsel objected, she being a presumed participator in the crime. The woman however was called, and partly corroborated her son's testimony; but denied that she took any share in killing her offspring. The prisoner was convicted, and Mr. Justice Maule passed sentence of death, informing him that there was no hope of respite.—Subsequently however the objections of the prisoner's counsel proved more valid than the judge supposed, for the Secretary of State thought proper to commute the sentence. The unfortunate man received the respite with heartfelt gratitude. Since his conviction he appeared to be overcome with grief at his awful position.

"I'll throw you over!" exclaimed a carpenter of the Strand Theatre, named Lepridge, to a fellow-workman. They were quarrelling violently, and the latter (Matthews) having taken refuge in one of the upper boxes from the rage of his companion, was followed by Lepridge, who seized him by the throat and actually threw him over into the orchestra. This happened on the 2nd. Matthews was seriously injured, but was able to attend and give his evidence a few days afterwards at Bow-street. The prosecutor humbly begged his fellow-workman off, notwithstanding his savage conduct. The excuse was, that having been drinking all day, Lepridge was furious from intoxication. The magistrate sentenced him to a fine of 5*l.*, or two months imprisonment.

A *Tale of Misery* was revealed on the 3rd to Mr. A. Beckett, the magistrate of Southwark police court. He received a letter from a gentleman who stated that as he was walking home one evening, his attention was attracted to a young woman. She was evidently following an immoral career; but her appearance and demeanour interested him, he spoke to her. She candidly acknowledged, that having been deserted by her parents, she was leading an abandoned life to obtain food for her three sisters, all younger than herself. Her father had been in decent circumstances, but that unfortunately her mother was addicted to drink, and owing to this infirmity their parents had separated, and abandoned them. The writer concluded by hoping that the magistrate would cause an inquiry to be made. Mr. A. Beckett directed an officer of the court to investigate into this case. On the 4th, the officer called at the abode of the young woman, in a wretched street, at a time when such a visit could not have been expected. He found Mary Ann Bannister, the girl alluded to, and her three sisters, of the respective ages of eight, eleven, and fourteen, in deep distress. The eldest was washing some clothing for her sisters. There was no food of any description in the place. Altogether the case was a very distressing one, and although accustomed to scenes of misery, in the course of his duties, yet this was

one of the most lamentable the officer had met with. The publication of the case had the effect of inducing several benevolent individuals to transmit donations to Mr. A. Beckett for these destitute girls, to the amount, as he stated on a subsequent day, of above 26*l.* He added that it was in contemplation, to enable the girls to emigrate to South Australia, and that meanwhile they had been admitted into the workhouse of St. George's parish, where they would be kept till a passage was procured for them to the colony. More than one person had offered to take Mary Ann Bannister into domestic service; but emigration for the whole four was thought more advisable.

A female named Lewis, who resided at Bassingb., left her home on the 3rd to go to Newport, about three miles distant, to make purchases. She never returned. A search was made by her son and husband, who is a cripple, and on the night of the following day they discovered her *Murdered in a Wood* at no very great distance from the village, so frightfully mangled as to leave no doubt that she had been waylaid and brutally murdered. The head was shockingly disfigured, battered by some heavy instrument, and the clothes were saturated with blood. For some days the perpetrators escaped detection, but eventually Murphy and Sullivan, two young Irishmen, were arrested at Cheltenham, on suspicion. Wearing apparel covered with blood, and a number of trifling articles were found on them. They were sent off to Newport, where it was found they had been engaged in an atrocious outrage in Gloucestershire, on an old man whom they had assaulted and robbed on the road near Purby; his skull was fractured; and his life was considered to be in imminent peril. Both prisoners were fully committed to the county gaol at Monmouth to take their trial for wilful murder.

A *Dreadful Murder* has been discovered in the neighbourhood of Frome, in Somersetshire. On the 3rd a young man named Thomas George, the son of a labourer residing near that town, left his father's house about eight in the evening and never returned. Next morning his father went in search of him, and found his body in a farmer's barn; he had been apparently dead for some hours, and there were deep wounds in his head and throat. A man named Henry Hallier, who had been seen in company with the deceased, the night he disappeared, close to the barn where his body was found, was apprehended on the 18th on suspicion, and committed to the county gaol.

An act of *Unparalleled Atrocity* was committed during the Easter week in the Isle of Man. Two poor men named Craine and Gill went to a hill-side to procure a bundle of heather to make brooms. The proprietor of the premises observed them, and remarked that he would quickly make them remove their quarters. He at once set fire to the dry furze and heather, directly under the hilly place where the poor men were engaged. The fire spread furiously, and it was only by rolling himself down the brow of the hill, and falling over the edge of a precipice into the river underneath, that Gill escaped. His unfortunate companion, who was a pensioner, aged 80 years, and quite a cripple, was left in his helpless state a prey to the flames. After they had subsided, Gill went in search of Craine, whom he found burnt to a cinder. The proprietor of the heath has been apprehended.

A *Shot at his Sweetheart* was fired by John Humble Sharpe, a young man of 21, who was tried for it at the Norfolk Circuit on the 9th. The accused, a young carpenter, had courted and had been accepted by the prosecutrix, Sarah Lingwood. She, however, listened to other vows; the lover grew jealous, and was at length rejected. In the night after he had received his dismissal, the family of the girl's uncle with whom she lived were alarmed by the report of a gun. On examining her bed-room it was discovered that a bullet had been fired through the window, had crossed the girl's bed, close to the bottom where she lay, grazed a dress that was lying on the bedclothes, and struck a chest of drawers beyond. Suspicion having fallen on the prisoner, he was apprehended. The prisoner's counsel admitted the fact, but denied the intent. The prisoner had, he said, no desire to harm the girl, whom he tenderly loved,

but only to alarm her and induce her to return to him. The jury, after long deliberation, acquitted the prisoner.

Several shocking instances of *Aggravated Crime* have been mentioned in the Irish papers. At Glaslough, in the county of Monaghan, a shot was fired into the bedroom window of Mr. John Robertson, land steward to C. P. Trellis, Esq., on the night of the 10th. Arthur O'Donnell, Esq., of Pickwick Cottage, in Clare, was murdered near his own house, on the night of the 11th. He was attacked by a party of men and killed with a hatchet. The supposition was that this deed was committed by recipients of relief whom Mr. O'Donnell was wont to strike off the lists at the weekly revision by the board of the Kilrush union, of which he was one. A man was arrested on strong suspicion. There was another murder in Clare. The herdsman of Mr. Scanlon, of Fortune in that county, went out to look after some sheep, the property of his master, when he was attacked by some persons who had been lurking about the wood, and his throat cut.

Two evidences of the *Low Price of Labour* were brought before the magistrates. One at Bow-street on the 10th, when W. Gronow, a journeyman shoemaker, was charged with pawning eight pairs of ladies' shoes entrusted to him for making up. He pleaded extreme distress, and said he intended to redeem the shoes that week. The prisoner's employer owned that the man was entitled to no more than 4s. 8d. for making and preparing the eight pairs of shoes. "Why," said the magistrate, "that price is only *seventeen* pence a pair for the workman. I am not surprised to hear of so many persons pawning their employers' property, when they are paid so badly." The prisoner was fined 2s. and ordered to pay the money he had received upon the shoes within fourteen days; in default, to be imprisoned fourteen days. Being unable to pay the money, he was locked up.

On the previous day a man named Savage, a shop shirt seller, was summoned at Guildhall for 9d., the balance due to Mrs. Wallis for making three cotton shirts. When delivered, Savage found fault with them, and deferred payment. Eventually 1s. 3d. was paid instead of 2s. The alderman said he was surprised at any tradesman who only paid 8d. for making a shirt, deducting 3d. from so small a remuneration; it was disgraceful. He then ordered the money to be paid, with expenses.

Alexander Levey, a goldsmith, was tried at the Central Criminal Court on the 10th, for the *Murder of his Wife*. They were a quarrelsome pair: one day, while the husband, with a knife in his hand, was cooking a sweetbread, the wife came in, and, in answer to his inquiry where she had been, said she had been to a magistrate for a warrant against him. On this, with a violent exclamation, he stabbed her in the throat; she ran out of the house, while he continued eating with the knife with which he stabbed her, saying, however, he hoped she was not much hurt. She died in consequence of the wound. The defence was that the blow had been given in the heat of passion, and the prisoner was found guilty of manslaughter only. He was sentenced to fifteen years' transportation.

On the same day, Jane Kirtland was tried for the *Manslaughter of her Husband*. They lived at Shadwell, and were both addicted to drinking and quarrelling, in both which they indulged. Kirtland having called his wife an opprobrious name, she took up a chopper, and said that if he repeated the offensive expression, she would chop him. He immediately repeated it with a still more offensive addition, and at the same time thrust his fist in her face, when she struck him on the elbow with the chopper, and inflicted a wound of which he died a few days afterwards. The prisoner, when called upon for her defence, burst into tears, and said that her husband was constantly drunk, and that he was in the habit of going out all day, and leaving her and her children in a destitute state, and when he came home he would abuse her and insult her in every possible way. In a moment of anger she struck him with the chopper, but she had no intention to do him any serious injury. The jury found the prisoner guilty, but recommended her to mercy on account of the provocation she had received. She was sentenced to be kept to hard labour in the House of Correction for six months.

A coroner's inquest was held in Southwark on the same day, respecting the death of Mrs. Mary Carpenter, an *Eccentric Old Lady*, of eighty-two. She had been left, by a woman who attended her, cooking a chop for her dinner; and soon afterwards the neighbours were alarmed by smoke coming from the house. On breaking into her room on an upper floor, the place was found to be on fire. The flames were got under, but the old lady was burnt almost to a cinder. Mrs. Carpenter was a very singular person; she used at one time to wear dresses so that they did not reach down to her knees. Part of her leg was exposed, but the other was encoased with milk-white stockings, tied up with scarlet garters, the ribands extending to her feet, or flying about her person. In this extraordinary dress she would sally forth to market, followed by immense crowds of men and children. For some years past she discontinued these perambulations, and lived entirely shut up in her house in Moss-alley, the windows of which she had bricked up so that no light could enter from without. Though she had considerable freehold property, she had only an occasional female attendant, and would allow no other person, but the collector of her rents, to enter her preserve.

On the 12th, Mrs. Eleanor Dundas Percival, a lady of thirty-five, destroyed herself by poison at the Hope Coffee-house in Fetter-lane, where she had taken temporary apartments. A *Distressing History* transpired at the inquest. She was the daughter of a Scotch clergyman, and lost the countenance of her family by marrying a Catholic, a captain in the navy; while her husband suffered the same penalty for marrying a Protestant. About a year ago he and their infant died in the West Indies; she afterwards became governess in the family of Sir Colin Campbell, Governor of Barbadoes; her health failing, she returned to England in October last, and had since been reduced to extreme distress. Having been turned out of a West-end hotel, and had her effects detained on account of her debt contracted there, she had been received into the apartments in Fetter-lane partly through the compassion of a person who resided in the house. While there, she had written to Miss Burdett Coutts, and, a few days before her death, a gentleman had called on her from that benevolent lady, who paid up the rent she owed, amounting to 2l. 14s., and left her 10s. On the evening above-mentioned she went out and returned with a phial in her hand containing morphia, which, it appeared, she swallowed on going to bed between five and six o'clock, as she was afterwards found in a dying state, and the empty phial beside her. The verdict was Temporary Insanity.

Elias Lucas and Mary Reeder were Executed at Cambridge on the 13th. Lucas was the husband of the female convict's sister, whom they had poisoned. Morbid curiosity had attracted from twenty to thirty thousand spectators. In the procession from the jail to the scaffold there was a great parade of county magistrates.

The Middlesex magistrates sat on the 15th to hear appeals of publicans whose licenses had been refused by the divisional justices, for exhibiting "*Betting Lists*," which show the state of the "odds" against horses entered for different races. This, it was alleged, encouraged persons to make bets and to gamble. It was admitted that these lists were the same with those published in the newspapers; but on the other hand, when bets were made, it was usual for the landlord to hold the stakes; and the judge decided that, though the landlord could not be made responsible for bets made in his house, yet, when he became stake-holder, he was knowingly suffering gaming, contrary to the terms of his license. The licenses were ultimately granted on the applicants promising to discontinue the betting lists, and on payment, by each, of 10l. costs.

At the Mansion House, on the 16th, *Walter Watts*, clerk in the *Globe Assurance Office*, late lessee of the Marylebone and Olympic Theatres, after a series of examinations, was committed for trial on a charge of stealing two cheques of 1400l. each, the property of the above office.

Louisa Hartley was charged at the Southwark Police Court, on the 16th, with an *Attempt to poison her Father*, who is a fellowship-porter. On the previous morning

she made the coffee for breakfast, on tasting it, it burnt Hartley's mouth, and he charged the girl with having put poison in his cup, which she denied; he then tasted her coffee, and found it had no unpleasant flavour. His daughter then snatched away his cup, and threw the contents into a wash-hand basin. But in spite of her tears and protestations of innocence, he took the basin to Guy's Hospital, where it was found that the coffee must have contained vitriol. The girl, who was said to be of weak intellect, and stood sobbing at the bar, being questioned, only shook her head and said she had nothing to say. At a subsequent hearing the magistrate decided that there was sufficient evidence for a committal.

Fresh Illustrations of Smithfield Cruelty were brought to light by Mr. Thomas, secretary to the Royal Society for the Prevention of Cruelty to Animals, at the Clerkenwell Police Court on the 19th, to complain of acts of gross cruelty on the part of drovers and others. It was stated that oxen were daily overdriven, until they became completely exhausted, and were obliged to lie down in the streets, when they were cruelly beaten and pricked in the hocks until the blood flowed from their flesh, and by being thus tormented they crawled along in pain to their destination, where they were tied up, and fresh and unnecessary cruelties were inflicted upon them prior to their being slaughtered. Numerous complaints had been made to the Society by humane persons, who were determined, if possible, to check or put down the intolerable nuisance. The magistrate highly commended them for their exertions, and intimated that he would grant warrants against offending parties who could be identified.

A Scene from Life in London was detailed in the Court of Exchequer on the 19th. A buker and bill-discounter named Glen sued Lieut. Evans of the 69th, as acceptor of a bill of exchange drawn by Lieut. Baldwin of the Rifle Brigade. The defence was that the plaintiff had obtained the bill by fraud and collusion with one Humbert, who had stolen it from Mr. Baldwin, after having got from him a letter in which he said he had received money for the bill, which he had not. On being cross-examined, Mr. Baldwin said, Lieut. Evans was in London when the bill was drawn. We wanted to raise 200*l.*, of which each was to have 100*l.* The Turf Wine stores, in Jermyn Street, where I met Humbert, is not a regular gambling-house, but one to which men go to make bets. I was a very frequent visitor there, "Ladies" are admitted. I have played at hazard at this house with Humbert. When I have been there, they have always tried to persuade me to play. I have never been a winner there. I have never won a "copper" there in my life. The game was not played there habitually. When I wrote this letter I was intoxicated, although it was only 5 o'clock in the afternoon. I wrote it deliberately. "What!" exclaimed Baron Alderson, "do you call it writing a letter deliberately if you are drunk at the time?" The jury consulted for some minutes, and then found "that the bill had been obtained by fraud from the drawer, Baldwin, by Humbert, but that there was no evidence to connect the plaintiff with that fraud." The verdict was then entered as for the plaintiff, damages 200*l.*

A man named William Bennisson, a workman in an iron-foundry, has been committed to prison at Leith on suspicion of having Poisoned his Wife. The circumstances of the case are extraordinary. The scene of the murder is an old-fashioned tiled house in Leith. Bennisson and his wife occupied the second floor of a house in which also resides Alexander Milne, a cripple from his infancy, well known to the frequenters of Leith Walk, where he sits daily, in a small cart drawn by a dog. Mrs. Bennisson, after, it is said, partaking of some gruel, became very ill, and died on Monday, the 22nd inst. The dog which drew the cripple's cart died about the same time: suspicion was drawn upon the husband, and he was apprehended, and the dog's body conveyed to Surgeon's Hall for examination. Some weeks before, Bennisson had purchased arsenic from a neighbouring druggist, to kill rats, as he said. When suspected, he called on the druggist, and requested him and his wife not to mention that he had purchased the arsenic. He even pressed for a written denial of the fact, adding

that there might be arsenic found in his wife's stomach, but he did not put it there. On the Monday previous to her death it is said he enrolled her name in a benefit society, by which on her death he was entitled to a sum of 6*l.* At the prisoner's examination before the sheriff the report of the chemist pronounced the contents of the dog's stomach to have been metallic poison. The accused was eventually committed for trial. The deceased and her husband were members of the Wesleyan body, and bore an excellent character for piety. Bennisson professed to be extremely zealous in behalf of religion, and was in the habit of administering its consolations to such as would accept of them. His "gifts" of extempore prayer are said to be extensive.

Two Men were shot at by a Gamekeeper lately in a wood belonging to Lord Wharnccliffe, near Barnsley. The game on this estate is preserved by a solicitor, who resides near Wakefield, who employs Joseph Hunter as gamekeeper. Both the men were severely injured, and Cherry, one of them, sued Hunter as the author of the offence in the Barnsley County Court, and the case was heard on the 19th instant. Cherry stated, that on the 23rd February he went to see the Badsworth hounds meet at the village of Notton, and in coming down by the side of a wood he saw the defendant, who asked plaintiff and two others where the hounds were. Plaintiff told him they were in Notton-park. These men left Hunter, and walked down by the side of Norcote-wood. They went through the wood, when one of the men who was with him began cutting some sticks. Plaintiff then saw Hunter, who was about 25 yards from them, coming towards them: the men began to run away, when plaintiff said to the other, "He's going to shoot us;" and before he had well delivered the words, he was shot in the arm and side, and could not run with the others. A surgeon proved that the wounds were severe and in a dangerous part of the body. The two men who were with the plaintiff corroborated his evidence.—The Judge said that defendant deserved to be sent to York for what he had done already. The damages might have been laid at 100*l.* or 1000*l.* had plaintiff been acting lawfully; but he thought plaintiff had acted with discretion in laying the damages at 10*l.*, for which he should give a verdict, and all the costs the law would allow.

A simple personage named George Thompson, a cattle-salesman in Little Britain, charged a suspicious-looking fellow whose name did not transpire, at Bow-street, on the 23rd, with an *Ingenious Steindle*. The complainant's tale was, that on the previous day he was walking down Holborn, when the prisoner, accompanied by another person, accosted him in the following terms:—"Hallo, old brick, you're a countryman I can see by the look of your jib; dung it, we must have a drain together." The prisoner continued, "Well, we'll just go in to Tom Spring's and have a strain." They accordingly went in to Tom Spring's, and witness was treated to two glasses of port wine. While there a game at skittles was proposed by the prisoner, which was accepted, and his friend and witness were invited to watch the game. Various public houses were entered, and various potations of brandy and water indulged in. When the skittle-ground was reached, the prisoner and his friend played witness, but asked to bet on the game, and, briefly to relate, the only 5*l.* which he had were soon won by betting and playing. The prisoner then said, "Have you no more money?" Witness said, "Not with me, but I've 15*l.* at home." After a great deal of pressing on the part of the prisoner and his friend, witness was foolish enough to go home with them in a cab and get it. When he had got it, they adjourned to another skittle-ground, and, of course, the 15*l.* soon followed in the wake of 5*l.*, and then they all set off, leaving him "in pawn" at the public house for certain liquors they had had. Information was given to the police, and the prisoner discovered. The magistrate who adjudicated in the case remarked that he had never known a person evince such childishness as Thompson had shown. The affair appeared to him to be a mere gambling affair, though he had no doubt the money was won by unfair means, and the prisoner must therefore be discharged.

R. C. Willis, a clergyman of the Church of England,

was tried at the Central Criminal Court, on the eighth charge of *Obtaining Money on False Pretences*. He had gone to Hatchett's Hotel, Piccadilly, and having run up a bill of 82 3s. 6d., he gave a cheque for 14l. 13s. 1d., and being known as a customer of the house, no suspicion was entertained, and the difference was handed over to him, the cheque, as in the other cases, turning out to be of no value. He was found guilty on two charges, and it was stated that there were twelve similar ones against him. He was sentenced to imprisonment with hard labour, for a year, in the House of Correction.

An *Affecting Case* occurred at the Mansion House on the 23rd. William Powers, a boy, was brought up on the charge of picking a gentleman's pocket of a handkerchief. A little boy, who had seen the theft, was witness against him. The prisoner made a feeble attempt to represent the witness as an accomplice; but he soon abandoned it, and said, with tears, that he "did not believe the other boy to be a thief at all." The Alderman, moved by his manner, asked him if he had parents? He said he had, but they were miserably poor. "My father was, when I last saw him, six months ago, going into the workhouse. What was I to do? I was partly brought up to the tailoring business, but I can get nothing to do at that. I am able to job about, but still I am compelled to be idle. If I had work, wouldn't I work! I'd be glad to work hard for a living, instead of being obliged to thieve and tell lies for a bit of bread." Alderman Carden—If I send you for a month to Bridewell, and from thence into an industrial school, will you stick honestly to labour? The Prisoner—Try me. You shall never see me here or in any other disgraceful situation again. Alderman Carden—I will try you. You shall go to Bridewell for a month, and to the School of Occupation afterwards, where you will have an opportunity of reforming.—The wretched boy expressed himself in terms of gratitude to the Alderman, and went away, as seemed to be the general impression in the justice-room, for the purpose of commencing a new life.

Cobbe's *Divorce Bill* came judiciously before the House of Lords on the 23rd. Mr. T. Cobbe, a barrister, was married in 1838 to Miss Azelia Anne Cobbe, his cousin; both were young and attached to each other. They lived together in Queen Anne Street, Cavendish Square, from the time of the marriage to the year 1846, on the most affectionate terms. Among their visitors was Mr. Talmadge, a special pleader in the Temple, a college companion and intimate friend of Mr. Cobbe. In 1846 Mr. Cobbe's father came from Ireland to see him, and they took a trip to Germany together, leaving Mrs. Cobbe and her sister at home. They were absent about a fortnight. It has been proved by the evidence of the domestic servants, that Mr. Talmadge during that period was in the habit of being clandestinely admitted into the house and passing the night in Mrs. Cobbe's bed-chamber; and that this criminal intercourse was continued after the husband's return. On the 13th of March 1847, Mr. Cobbe went as usual to his chambers, and his wife, after giving the servants directions for dinner, &c., left the house and never returned. She is now living with Mr. Talmadge at Passy near Paris. Mr. Cobbe brought an action for adultery against Mr. Talmadge, who suffered judgment to go by default for 500l. damages; and he has obtained a sentence of divorce in the ecclesiastical court.—The bill was read a second time.

The *Legal Proceedings of the Gorham Case* have been discussed with great animation not only before the regular tribunals, but at meetings all over the country. On the 15th, the *Court of Queen's Bench*, Sir F. Kelly moved for a rule to show cause why the Archies Court and the Archbishop of Canterbury should not be prohibited from proceeding further in giving effect to the judgment of the Committee of the Privy Council in the case of Gorham versus the Bishop of Exeter; by which judgment the previous decree of the Court of Archies had been reversed. He contended, that, in such a case, the appeal from the Court of Archies lay, not to the Judicial Committee of the Privy Council, but to the Upper House of Convocation; and that, therefore, the proceedings which had been laid before her Majesty in

Council were entirely void, and the decree of the Court of Archies remained in full force. Lord Campbell, after having heard the learned counsel's argument, said that the Court would intimate its decision on an early day.

At the *Archies Court* on the same day, Mr. Bowdler, the proctor for Mr. Gorham, intimated that no return has been received to the monition which was ordered the last court-day to be served on the Bishop of Exeter, and prayed that a certificate of its continuance be granted. The presentation had not been sent in by the Bishop. Another application on behalf of Mr. Gorham was made on the 23rd, when the Judge ordered the case to stand over till next term.

At a *Great Number of Public Meetings* strong demonstrations of their respective opinions and sympathies have been made by the supporters of each side of the question.—The most noticeable was one on the 1st, by the *Parishioners of Mr. Gorham*, at St. Just, who adopted a resolution congratulatory on the successful issue of his suit, "involving, as they believe it did, vital Christian truth." In his reply Mr. Gorham says:—"That such a struggle should have been with my 'diocesan,' is, you will readily believe, the chief circumstance connected with it which has given me pain; but I had no choice between such a contest, and compromise of a great Protestant—let me rather say Scriptural—truth."

A good deal of attention has been excited by a *Correspondence between Miss Sellon and Lord Campbell*. Writing from the "Orphan's Home, Plymouth," March 19th, the lady desired his lordship to withdraw his name from the charitable establishment of which she is the head.—Lord Campbell wrote a good-humoured answer, expressing great respect for Miss Sellon's piety and benevolence, telling her that she misunderstood the judgment of which she complains.—Miss Sellon returned to the charge in a letter of the 8th, in which, after an impassioned lamentation for the wounds inflicted on the Church, she concludes by saying, "I thank you very earnestly for your promise of remembering me in your prayers. I am not worthy to pray for you—and yet if the God of all goodness will hear the supplication of a loving and deeply sorrowing heart, He will bring you to grieve for the injury done to the Church, and will help you to repair it—and give you all blessing in time and eternity."—Lord Campbell, in a reply, reiterated his previous arguments, and, lamenting her "stern resolution," tells the lady that "if at any time hereafter you should be induced to relent, I shall joyfully avail myself of the opportunity of again trying to further your benevolent schemes." Miss Sellon closed the correspondence by complaining that her previous letters should have been published without her sanction.

NARRATIVE OF ACCIDENT AND DISASTER.

NUMEROUS SHIPWRECKS were occasioned by the terrific storm which swept over these islands on the last two days of March, and produced innumerable disasters among shipping on nearly every coast, and great loss of human life.

The *Royal Adelaide Steamer*, which was due at the wharf, Lower East Smithfield, from Cork on the 30th ultimo, did not arrive. A river-pilot, who had been waiting at Gravesend to take charge of her, was informed by a Deal pilot that he had passed in his bark a large steamer on Saturday night, about 15 miles off Margate. Signals of distress were fired from her, and she seemed to be on the sand. The wind blew a gale, and the bark could render no assistance. The description of the wreck tallied with that of the missing ship. Subsequently intelligence was brought by steamers that arrived in the river, describing the appearance of the wreck. Not a soul was seen on board by any of these vessels. A telegraphic despatch from Margate on Monday afternoon (1st), announced that the wreck was covered at high-water, and that two boddies had been picked up off the sands. It was now ascertained that signals of distress had been heard by men of the Coast Guard near Margate, and by the people of the Tongue light ship; but as there were only two or

three repetitions, it was supposed that the vessel making them had got off. It was afterwards surmised that the steamer was filled too rapidly with water to fire off more signals. There was a tremendous sea running at the time, which tore away great pieces of the vessel. From the state of the weather, no boat could reach the wreck till Monday, when a few articles were brought away from it, but nothing of material importance; and soon after, the wreck was almost washed away. The vessel was between 400 and 500 tons burden, and was commanded by Captain John Barry, of Cork, who had been above 20 years in the service of the Company. The passengers who left Cork were 144 adults and 23 children; those from Plymouth, 14 adults; and the crew consisted of 24 men and one boy, so that 206 lives were lost.—During the following week several distressing scenes took place in the Company's office in Leadenhall Street, and at their wharf in Lower East Smithfield, by relatives of the unhappy sufferers, inquiring after their probable fate.—Many bodies were picked up by the wreckers, who flocked round the vicinity of the Tongue Sands, and, having stripped them, they were re-committed to the deep. Naked bodies of men and women were passed in the Channel by different ships which arrived in the river. Two or three vessels were seized, having property concealed on board evidently plundered from the wreck of the Royal Adelaide. A subscription has been opened at several banking-houses in the City for the relief of the families of the sufferers.

Among other disasters, a Liverpool ship, called the *Teresa Jane*, bound to Marmunham, with a cargo valued at 30,000*l.*, was wrecked on the Copeland Isles, near Belfast. The master and seven men perished, but a part of the vessel having remained on the rocks on which she struck, the rest of the crew, eight in number, were saved.

The *Emma*, bound from Dundee to Montreal, was also wrecked on the morning of the 1st. At daybreak, amidst the fury of the gale, the ship was discovered adrift, off St. Margaret's, Orkneys. Those on board managed to make sail on her, and she stood to the eastward; then tacked and stood to the north, when she drove and struck on the point of the rocks with terrible force. It was utterly impossible to render any assistance to the crew from the shore. They took to the rigging, and their cries and gestures for help were truly heart-rending. Their sufferings were of but short duration; for within half-an-hour the masts were carried away, and with it the unfortunate men, every one of whom perished. The hull of the ship was shortly broken up into a thousand pieces.

The *Howard*, of nearly a 1000 tons burden, was lost near Liverpool, having struck on a ledge of sand-banks at the mouth of the Ribble. The crew were seen at daybreak on Sunday morning (31st of March) clinging to the rigging, and were brought ashore by the Southport life-boat. One of them, John Smith, died; the rest recovered, though quite exhausted.

Along the Lincolnshire, Yorkshire, and Northumbrian coasts, there were innumerable casualties. Between thirty and forty coasting-vessels were driven ashore, and the bulk of them became wrecks. There were similar disasters on the Welsh coast. Nearly all the vessels in Beaumaris Harbour were driven ashore, and more or less injured. The smack *Brothers*, of Liverpool, was wrecked near Penmon, and Captain Barnett, the master, his wife, and one of the men, were drowned. The bodies were on the beach, the captain and his wife clasped in each other's arms.

On the 6th a pilot-boat brought into Cowes the master of the *Lincoln*, sailing from Boston for California. He had reached the latitude of 4° N. and longitude 25° W., and when at 10° 30 p.m. of March 2, during a heavy shower of rain, and without any menacing appearance in the air, the ship was struck with lightning, which shivered the mainmast, and darted into the hold. On opening the scuttle, volumes of smoke were emitted, and finding it impossible to extinguish the fire, the crew endeavoured to stifle it by closing every aperture. In this state they remained for nearly four days, with the fire burning in the hold, when they were relieved from their perilous situation by the providential appearance of the *Maria Christina*, and taken on board. Previous

to leaving the ill-fated brig, the hatches were opened, when the flames burst forth, and in thirty minutes afterwards the mainmast fell over the side. The unfortunate crew were most kindly treated by Captain Voss, the master of the *Maria Christina*, who did everything in his power for their relief.

Two deaths on the Railway have to be recorded. On the 2nd, as the up-train on the South Western Railway was proceeding from Windsor to London, at sixty miles per hour, the engine-driver perceived to his horror a man lying on the rails, who made no attempt to get off until the train had approached within a few yards of him; when he threw himself down on the permanent way. The whistle was sounded, brakes promptly applied, and the engine escaped striking him, but the steps of the first carriage dashed his brains out. His left leg and arm were also severed from the body. As soon as possible the train was brought to a stand-still, but it is needless to state that life was totally extinct. The unfortunate man was a farmer's servant who resided at Datchet, and had married only a few months ago one of the station clerk's servants. Some thought his object was suicide, whilst his friends believe that he was only crossing the line to get to his own home, when, hearing the sound of the whistle, he became paralysed with fear, and unable to move.

On the 5th another tragedy occurred on the Eastern Counties Railway. Mr. William Nowall, manager of the Norfolk division, in company with some other gentlemen, left the Norwich terminus for the purpose of inspecting a bridge, near the Haddiscoe station. Having viewed it, the engine returned to the Reedsham swing-bridge, where a goods train was waiting on the line, about eighty yards distant, for the engine to pass. The unfortunate gentleman, recollecting that he had not telegraphed their approach from Haddiscoe to Reedsham, and thinking the goods train was in motion, dreaded a collision, and jumped off. His foot caught the ledge of the car, and before there was a possibility of arresting his fate the engine travelled over him. The body was found doubled up, and a macintosh which he wore had been pulled over his head.

A Miss Downie met, on the 4th, with an *Extraordinary Death* at Traquair-on-the-Tweed. She had suffered, since childhood, from severe pains in the head and deafness; her health had been gradually declining for the last three years, and in August last she was seized with most painful inflammation in the left ear, accompanied by occasional bleedings also from the ear. On the 20th of March an ordinary-sized metallic pin was extracted from the left ear, which was enveloped in a firm substance with numerous fibres attached to it; several hard bodies, in shape resembling the grains of buck-wheat, but of various colours, were also taken out of the right ear. The poor girl endured the most intense pain, which she bore with Christian fortitude till death terminated her sufferings. It is believed the pin must have lodged in the head for nearly twenty years, as she never recollected of having put one in her ear, but she had a distinct remembrance of having, when a child, had a pin in her mouth, which she thought she had swallowed.

An *Explosion of Fire-damp* occurred on the 12th in a coal-mine at Marsdon. It has not been ascertained how the accident originated, as all the persons on the spot, five in number, were killed; their bodies were found by persons attracted from another part of the mine by the explosion. It probably arose, as was from carelessness. Each collier carries a safety-lamp, but some of them are in the habit of taking off the top to light their pipes or for other purposes; and the damp of one of these men was found near his dead body with the top taken off.

A *Waterspout*, a phenomenon seldom seen in these latitudes, happened on the 13th in the Bristol Channel. As the *Fanny and Jane* brig from London to Bristol was proceeding up channel, she had her masts, bowsprit, and everything above deck carried away by a waterspout. She was taken in tow by the *Alert of Bridport*, and brought into Bristol Harbour. Vessels distant from the brig at the time of the occurrence only half a mile escaped uninjured.

A Terrible Storm passed over Dublin on the afternoon of the 18th. The day had been unusually fine; but about three o'clock an extraordinary fall of the mercury was observed. At a few minutes before four the storm commenced; the peals of thunder, accompanied by lightning, followed each other with scarcely any interruption, and breaking with a tremendous crash over the city. The wind veered round fully half the compass, came with the force of a hurricane from the north, and drove the hailstones with such violence as to shatter almost all the windows in the line exposed to its fury. Trees were torn up by the roots in the College Park, and other places in the vicinity of the city. Some houses in the south suburbs were unroofed, and almost all the glass was shivered in the galleries of the Dublin Society, the Round Room of the Mansion-house, the Rotunda, the conservatories of the public gardens, and other places similarly exposed. The hailstones were of enormous size, as large as grapes, and some others much larger. Indeed the storm presented, on the whole, all the characteristics of such a phenomenon in the tropics. During the storm the Lord-Lieutenant and Vice-regal party had to fly for shelter from the flower exhibition of the Horticultural Society to the Round Room of the Rotunda; and at the same time the storm was committing great ravages among the sheds of the Royal Dublin Society's Cattle Show, where Lord Clements and a party of his friends were observed exerting themselves to rescue some persons from beneath the fallen structures. Happily no lives were lost, but the sacrifice of property was immense. The police of the city made a return which shows that the loss suffered by all classes from a storm the duration of which was only to be measured by minutes, approached in the aggregate to 27,000*l*.

SOCIAL, SANITARY, AND MUNICIPAL PROGRESS.

Education, Religious or Secular, is a question which Mr. Fox's bill appears to have brought into active discussion, especially in the manufacturing districts. On Easter Monday, the Lancashire Public School Association held a great meeting at Manchester. The MAYOR was in the chair; and several members of the Corporation, and a number of the clergy of the town and neighbourhood, were on the platform. A petition to parliament was adopted, praying for the establishment of "a system of education, excluding all theological doctrines and sectarian influences, supported by local rates assessed on the basis of the poor's rate, and managed by local authorities especially elected for that purpose by the ratepayers, so as to afford to all, especially to the untaught and neglected, opportunities free of charge for a thorough training in useful knowledge, good principles, and virtuous habits."—The Rev. Hugh STOWELL, who is a Canon of Chester, affirmed that education, to be advantageous to the people, must be "a Christian education." In the course of a vehement speech the Rev. gentleman cited the case of "infidel France," as an illustration of the fatal effects of the want of a religious education.—A long, a stormy debate ensued, in the course of which Dr. John WATTS reminded Mr. Stowell that the National education of France was entirely in the hands of the priesthood, up to the time of the great Revolution.—A number of Irishmen, who had early obtained admission, and formed a body close to the platform, created much disturbance by trying to hoot down the supporters of the motion; but the firmness of the mayor succeeded in preserving tolerable order.

Three important meetings have been held at Leeds during the present month. The first was summoned by the working men of Leeds, to consider the subject of public non-sectarian education; the second was called on a memorial signed by Dr. Hook, among others, to consider the extension of Education on some basis of impartiality towards all sects; the third was demanded by Mr. Edward Baines and the advocates of Voluntary education, to consider the objections against State interference.

At the first of these meetings, on the 11th instant, Mr. Hamer STANTFIELD denied the dictum, that religion is a bar to the progress of education; such an assertion is injurious to the cause of religion. "I care little," he

said, "for the statistics with which the opponents of national education so profusely treat us. When I see figures piled upon figures, I am forcibly reminded of the manoeuvres of a fish called the cuttle-fish, which, when closely pursued by its foes, discharges an inky sort of fluid, which muddles the water, and enables it to escape."—Dr. SMILES drew a strong picture of the lamentable ignorance prevalent among the working classes. About one-half of our poor, he said, can neither read nor write. The test of signing the name at marriage is a very imperfect absolute test of education, but is a very good relative one: taking that test, how stands Leeds itself in the Registrar-General's return? Thus, in 1846, of 1,860 marriages, 508 of the men and 1,020 of the women, or considerably more than one-half of the latter, signed their names with marks; of 47 men employed upon a railway in the immediate neighbourhood, only 14 men can sign their names in the receipt of their wages; and this not because of any diffidence on their part, but positively because they cannot write. And lately, of 12 witnesses, "all of respectable appearance," examined before the Mayor of Bradford at the Court-house there, only one man could sign his name and that indifferently. "I have seen it stated," said the doctor, "that a woman for some time had to officiate as clerk in a church in Norfolk, there being no adult male in the parish able to read and write. For a population of 17,000,000 we have but twelve normal schools; while in Massachusetts they have three such schools for only 800,000 of population. Every broken tradesman in this country thinks himself, and is thought by others, good enough to set up for a teacher. The Sunday School machinery, excellent in its kind, is valueless to impart secular education; and it is inefficient in its special religious aims in strict proportion; for it is a notorious fact that the great obstacle which a Sunday School teacher meets is the dense ignorance of the child in rudimentary secular knowledge.—He argued with great force and eloquence, that, in these days, the diffusion of wholesome knowledge among the people was essential to the very safety of the state: "Of all the signs of the present times this seems to me among the clearest—the steady advance of the democratic element in society—(cheers). It is absolutely inevitable; and the fact is universally admitted—by some with joy and exultation, by others with profound sorrow and alarm. It is only a question of time, or perhaps of opportunity. The next great revolutionary wave which rolls across Europe may bring the suffrage within the reach of the whole adult people of England, as it has already placed it within the possession of those of Germany and France, who a little more than two years ago seemed far further from it than we were—(hear). To the already enfranchised classes I would say, educate the people in time, that you may have an intelligent and reasonable people to deal with instead of a blind, ignorant, and exasperated one; and to them not enfranchised I would say, get education, that you may obtain the means of employing your new power to the greatest possible advantage, and for the common benefit of all (loud cheers). While the education of the rest of Europe is advancing with such rapid strides, and giving new life to the productive activities of the Continental states, it seems clear to me that if England does not educate ahead of them, she must inevitably lose her present supremacy among the nations."

At the meeting called by Mr. Baines he proposed a resolution against Mr. Fox's bill; but an amendment, moved by Mr. Hamer Stantfield, was carried by a considerable majority, and afterwards a resolution in favour of secular education, founded on local management and taxation, and under local control, was passed almost unanimously.

There were also meetings at Hull and Derby, with similar results.

The Mayor of Manchester has established a Fund for a Public Library and Reading Room for the Working Classes of that town. Sixteen, eighteen, or more firms have subscribed each 100*l*. towards this excellent design; and, altogether, the funds promised will be little less than 3000*l*. The Hall of Science in Camp-field, originally built (not many years ago) for the Socialists, is designed to be the depository of the library; and Sir Oswald Mosley, Bart. (till recently the lord of the

manor of Manchester), being the owner of the building as well as the land, is prepared to sell them for the purpose.

A plan is in contemplation to form a *New Park at Islington*, for the accommodation of the people of that vicinity. At a Vestry meeting on the 22nd, Mr. Lloyd, the projector of the park, gave a statement of its locality and probable cost. He said the area would cover 500 acres; the cost would be about 180,000*l.* to 200,000*l.*, and that the project had already received the countenance of His Royal Highness Prince Albert, Lord Robert Grosvenor, Lord Ashley, Lord Carlisle, and other eminent personages. Mr. Tyler, the chairman of the Islington committee, said that they had refrained from drawing up a petition until they could take the sense and obtain the co-operation of the whole 15 parishes of the borough: he urged active measures in favour of the proposed park, as he said the present open space, unless at once secured, would be covered with buildings in less than twelve months. Other members having discussed the question, a resolution approving of the proposed park was unanimously carried, and a public meeting of the borough was determined to be held forthwith.

At the anniversary dinner of the *Governesses' Benevolent Institution* on the 17th, the Duke of Cambridge, who filled the chair, gave a very pleasing account of the successful labours of the Institution. During the last seven years, the period of its existence, the ladies' committee have investigated 775 individual cases; they have received 3,150 applications from these distressed ladies, and have given aid 1,620 times, with an amount of 3,980*l.* 18*s.* 6*d.*; the annuities to the aged have also been steadily increased. There were now 35 ladies receiving regularly a small but certain income. The provident fund amounts to 58,286*l.*, the savings of 553 ladies, invested in Government security, to form a provision for their old age; whilst no less than 5,552 ladies have availed themselves of the registration, free of expense, of whom no less than 3,009 have been provided with situations.

Fifty-one committees, in furtherance of the *Exhibition of Industry of 1851*, have made a return of their first subscription lists to the Royal Commissioners. The amount of the sums announced is 43,619*l.* In addition to these returns, it was announced that the Royal Academy had voted 500*l.*, and the Mercers' Company 100*l.*, making the sum total up to this date 44,219*l.* Nor is the movement confined to this country. The French Minister of Commerce has addressed a circular to the different Chambers of Commerce and Manufactures, calling their attention to the exhibition which is to take place in 1851 in London, and urging on them the necessity of using their utmost efforts among the manufacturers in their respective districts, in order that the products of French industry sent to England may be such as to keep up the character of the country for ingenuity and skill in workmanship. The circular also explains that the exhibition will include agricultural productions, and calls the attention of those connected with those pursuits to the benefit which may result from their taking part in it.

A pleasing *Re-union of Employers and Work-people*, so beneficial to both classes, took place on the 20th at Moltram, near Manchester. In the beautiful vale of the river Gtait are situated the extensive calico and muslin print works of Mr. Matley. This was the fiftieth anniversary of Mr. and Mrs. Matley's wedding-day, and they determined to celebrate it by a feast to their work-people. A spacious marquee was erected, and covers were laid for between 600 and 700 guests, who, after a procession headed by a band of music, sat down to a plentiful repast at 2 o'clock. A handsome piece of plate, subscribed by the workmen, was presented to Mr. Matley; and the fête terminated with music and dancing.

The *Cholera Nursery* is a name which has been given to the churchyard of St. Clement's Danes. It is crammed with human remains, yet augmentations of corpses and of noxious vapours are daily made. The inhabitants of the neighbourhood are continually complaining in the newspapers of the disgusting scenes that take place, and of the aerial poison which rises out of the graves; but no power seems strong enough to abate the nuisance.

PERSONAL NARRATIVE.

THE QUEEN, Prince Albert, and the Royal family spent the Easter holidays at Windsor Castle. On the 6th Her Majesty visited the cavalry barracks at Spital to witness the conclusion of *Rustic Sports*, which have been going on during the week among the corporals and privates of the 1st Life Guards. These consisted of wrestling, a hurdle race—in which ten men ran about three quarters of a mile, taking fourteen leaps over hurdles,—jingling, and a broadsword combat between two corporals. The most extraordinary feat was that of cutting a sheep in two at one stroke of the broadsword. The carcass having been suspended on a tree immediately in front of the carriage in which Her Majesty and the Prince were seated, Corporal Newton took the sword—which had been handed to Her Majesty and the Prince by Colonel Hall for inspection—and with one blow severed the carcass in the middle.

The Royal family returned to Buckingham Palace on the 6th. On the 19th Prince Albert had a visit from the heirs presumptive to the throne of the Sandwich Islands. The lord in waiting must have had some difficulty in announcing them correctly; they are the Princes Kamehameha and Liholihi. As embryo foreign potentates they were introduced by Lord Palmerston.

Lord John Russell took a trip to Manchester during the Easter week, where he was pleasantly received, and added to his popularity by the interest he manifested in the prosperity of that great seat of industry. He left London on the 2nd, with his lady, on a visit to Sir Benjamin Heywood. In the course of the two following days he inspected some of the principal manufactories, particularly the premises of Messrs. Nasmyth and Gaskell, the engineers and machine-makers; and the great Mayfield print-works belonging to Alderman Neild, where female artisans are employed in engraving patterns on the cylinders, a novelty which appeared to give much pleasure to the visitors. Lord John received complimentary addresses from the corporation of Manchester and Salford, and much good-feeling towards the Premier was everywhere manifested.

The Oriental Club gave a banquet to Lord Gough on the 9th at their mansion in Hanover Square. Major-General Sir James Law Lushington presided: Lord Hardinge and Major Edwarde were among the guests, about a hundred in number. The Junior United Service Club gave an entertainment to his lordship in the following week.

Dr. Tait bade *Farewell to the Rugby School* on the 11th, and the event was celebrated by the formal presentation of addresses and gifts, testifying the affectionate respect entertained for him by all the masters and scholars. A large body of "old Rugbeans" were present, and took part both in the ceremonies of presentation and speech-making. Dr. Tait returned acknowledgments with affectionate earnestness: he avowed his belief, that in taking part in the great and noble system of the school, he had learnt far more than he had taught.

Lieut. Graham, who with Mr. Elliot was tried by court-martial for having *Deported the Children* in consequence of the tyranny of the commander, Pitman, and sentenced to imprisonment, has been discharged; apparently from the presentation of the affidavit of Matthew Speary, armourer, and George Brown, seaman, before Mr. Justice Coleridge, of the cruelties they had witnessed on board that vessel. Mr. Elliot has been allowed to suffer the whole term of imprisonment.

Obituary of Notable Persons.

The Earl of MACLESFIELD died on the 31st March, at Ensham Hall, near Tetworth, Oxfordshire, aged 87. He was son of the third Earl, by the daughter of Sir William Heathcote, Bart. His lordship was twice married, and had issue by both marriages. Viscount Parker succeeds to the title and estates. The deceased was deputy-lieutenant of Oxfordshire.

Captain T. R. Egan, R.N., commander of the *Amphitrite*, died at Valparaiso recently, after a few days' illness, when he was getting ready to return to this country with a freight which would have realised to him about 60,000*l.* He entered the navy in 1824, and attained his captain's rank in 1844.

The Very Rev. J. MERRITT, Dean of Hereford, who opposed with great energy the appointment of Dr. Hampden to the

Bishopric of Hereford, died on the 4th at the Kiborago, Madley. He was about 64 years of age.

Sir Archibald GALLOWAY, Chairman of the Hon. East India Company, died on the 6th, in Upper Harley Street, aged 74, after a few hours' illness. He transacted business at the India House on the 4th, and presided at the banquet recently given by the directors of the East India Company to Lord Gough. His chairmanship would have expired on the 12th.

Madame GRANDIN, the widow of M. Victor Grandin, representative of the Seine Inférieure, who died about seven or eight months since, met with a melancholy end on the 6th, at her residence at Elbeuf. She was confined to her bed from illness, and the women, who had been watching by her during the night, had left her but a short time, when the most piercing shrieks were heard to proceed from her room. Her brother ran in alarm to her assistance, but unfortunately she was too late, the poor lady had expired, having been burnt in her bed. It is supposed that, in reaching to take something from the table, her night-dress came in contact with the lamp, and thus communicated to the bed.

Rear-Admiral HILLS died on the 8th, at his seat, Askerhill, Essex, aged 73. He became a Lieutenant in 1798, and a post-captain in 1814. The deceased was a midshipman of the *Belair* at the occupation of Toulon, and was Lieutenant of the *Amethyst* at the capture of various prizes during the late war.

Dr. PHOUR, F.R.S., expired in Sackville-street, Piccadilly, on the 29th, at an advanced age. He was till lately in extensive practice as a physician, besides being a successful author.

The Rev. William Lisle BOWLES, canon of Salisbury, and rector of Bremhill, Wilts, died in the Close, Salisbury, on the 7th, at the age of 69. He once enjoyed a high reputation as a poet and a critic; in the former capacity he is best known by his sonnets, in the latter by a controversy with Lord Byron. He was the intimate friend of Moore, Rogers, Crabbe, and Southey.

Captain SMYTH, R.N., the Admiralty superintendent of packets at Southampton, died on the 8th unexpectedly. He was distinguished as the inventor of paddle-box boats for steamers, and of the movable target for practising naval gunnery. He entered the navy in 1808, and saw a good deal of service till the close of the war.

Madame TUSSAUD, the well-known exhibitor of wax figures, died on the 10th, in her 90th year. She was a native of Berne, but left Switzerland when but six years old for Paris, where she became a pupil of her uncle, M. Curtius, "artiste à Louis XV.," by whom she was instructed in the fine arts, of which he was an

eminent professor. Madame Tussaud prided herself upon the fact of having instructed Madame Elizabeth to draw and model, and she continued to be employed, by that princess until October, 1789. She passed unharmed through the horrors of the Revolution, perhaps by reason of her peculiar ability as a modeller; for she was employed to take heads of most of the Revolutionary leaders. She came to England in 1802, and has from that time been occupied in gathering the popular exhibition now exhibiting in Baker-street. She has left a large family of children and grand-children in this her adopted country.

Lieut.-General Sir James BARRIST, K.C.B., died at Kibworth Rectory, Leicestershire, on the 13th, in his 68th year. When he entered the army in 1794, if his age be correctly stated, he would have been only twelve years of age. He served at Gibraltar and in the West Indies, the capture of Surinam, the campaign in Egypt of 1801, in the expedition to Hanover, and in the actions fought for the relief of Dantzic, as well as in those of Lomitten, Deppen, Gustadt, Hellsberg, and Friedland. Subsequently he served at Rugen and at the siege of Copenhagen. In 1808 and 1809 he served with the army in Portugal and Spain as assistant quartermaster-general, and as military secretary to the Duke of Wellington. The appointment of governor of Berwick, of the annual value of £681, which he held, will not be filled up.

Madame DULCKEN died on the 13th, in Harley-street, aged 88. She was the sister of the celebrated violinist, David, and had been for many years resident in this country, where she held a conspicuous position among the most eminent professors of the pianoforte.

The Duchess of MARLBOROUGH was confined with a still-born infant some five weeks ago, and was considered to be rapidly progressing to recovery. A severe mental shock, however, which she unfortunately experienced about a fortnight ago, took such a powerful hold of the nervous system, that her Grace never rallied, and finally sank under its baneful influence at an early hour on the 20th. The Duchess, it will be remembered, had a taste for the sports of the field—was a bold and graceful horsewoman, and a good shot.

William WORDSWORTH died at his residence of Rydal Mount, Windermere, on the 23rd inst., in his eightieth year, having been born at Cockermouth in 1770. He was distributor of stamps for Westmoreland and Cumberland; and appointed Poet Laureate on the death of Southey. As the author of the "Lyrical Ballads" and "The Excursion," his name will descend to posterity as one of the best English Poets.

COLONIES AND DEPENDENCIES.

THE Foreign possessions of Great Britain have furnished no startling items of intelligence this month—a circumstance to be regarded as of excellent augury. The adage that "no news is good news," has an especial application to our Asiatic possessions, for there it means peace; and peace implies, in these days of commercial enterprise, prosperity. The East Indies furnish accounts of a small exception to the general tranquillity; some of our troops having had an unsuccessful encounter with a wild tribe in the Kohat hills.

From the West Indies, little is to be learned; but that little appears cheering. Jamaica promises to rise out of her ruin by the help of cotton; the experiment of cultivating that plant having succeeded in some instances beyond expectation.

The Australian Colonies (our pen-and-ink journals are more rapid than Puck's, for we "put a girle round the earth" in less than "forty minutes") are alive with excitement about the new Bill, now in discussion at Westminster for their better government.—There is great rejoicing at the Cape of Good Hope. Cape Town is blazing with illuminations, and wildly letting off its joy in fireworks, after successfully resisting the Colonial Office in its design of sending convicts thither. In this case, as in many others, we are naturally visited with the consequences of old misconduct. We cannot reasonably wonder, knowing what we have done in New South Wales, that our colonists elsewhere should have a horror of convict contributions from the mother country.

The two *Overland Mails from India* which arrived during this month brought dates from Bombay up to March 16, Calcutta, March 7, and Madras, March 13. There had been some fighting in the newly acquired territories. On the 2nd of February a body of Affredics, inhabitants of the Kohat hills, about a thousand strong, attacked the camp of a party of our sappers, employed in making a road in a pass between Peshawur and Kohat. Twelve of our men were killed, six wounded, and the camp was plundered. To avenge this massacre a strong force under Colonel Bradshaw, Sir Charles Napier himself, with Sir John Campbell accompanying him, marched from Peshawur on the 9th. The mountaineers made a stand in every pass and defile; but although our troops destroyed six villages and killed a great number of the enemy, they were obliged to return to Peshawur on the 11th without having accomplished their object. On the 14th February another force was sent to regain the passes and to keep them open for a larger armament. A letter from an officer in the 60th Rifles gives details of the expedition; here are some extracts:—We had to

march to a large village, by name Kohat, about 40 miles away to the hills, by forced marches. When we arrived there, we found that the robbers had betaken themselves to the hills, with all their property and families, while they were shooting at our party and attacking our pickets, who crowned the hills, without our being able to molest them in return. We burned all their villages, spoiled their crops, destroyed their water, and did all the harm we could. But the day we left, we and the 31st Bengal Native Infantry regiment were descending the hills when the robbers came to the heights and killed and wounded a hundred of us. Poor Lieutenant Sitwell, of the 31st Regiment, was, before we could come to his rescue, cut to pieces before our eyes. He was a most dear friend of mine, and a very handsome fellow. Lieutenant Hilliard, of 23rd Regiment, was shot through the lungs; many native officers were killed. The pass we had to go through was a very difficult and dangerous one, and Sir Charles Napier himself had some most providential escapes, as also myself, for my horse was shot under me by a matchlock ball. Several artillery-

men were out to pieces before we could come to help them; from their guns being upset. Never did I feel so much the horrors of death as I did at that moment. Poor Sitwell had passed through the bloodiest battle ever fought in India—viz., Chillianwallah, and then to be killed in a skirmish like this, where there was no glory or honour, except that he was nobly doing his duty! Hilliard was only married the day before he went out on the expedition. We had got up a very large ball at this station to be given to the Commander-in-Chief, but it is needless to say it has not come off. The doctors have so fully shown to Sir Charles Napier the unhealthiness of Peshawar, that we are ordered to march next week to Subacto, a two months' march, at the bottom of the hills, near Simla, and, I hear, a pleasant cool station."

The Court of Inquiry into the mutiny in the 66th Regiment of Bengal Native Infantry had closed its proceedings on the 7th of March. 60 privates were dismissed from the service, 30 sentenced to imprisonment for six months, 21 to imprisonment for seven years, and 5 were condemned to fourteen years' labour on the roads. This sentence being regarded by the Commander-in-Chief to be too lenient, he directed its reversal, and the five greatest criminals were condemned to death; but the Commander-in-Chief commuted this sentence to transportation for life. To make the example more impressive, Sir Charles Napier resolved to disband the regiment.

An uneasy feeling is represented as still prevalent in the Punjab. At Lahore further conspiracies of the Sikhs were apprehended. The operation of razing the walls of that city was begun on the 1st of February.

The Governor-General arrived at Point-de-Galle, in Ceylon, on the 7th of February, and left that place on the 9th for Singapore.

There are advices from Hong-kong to the 27th of February, but they contain no intelligence of public interest. Trade is stated to be pretty brisk. The coasting trade between Hong-kong and Shanghai is about to be taken up by the Peninsular and Oriental Company's steamers, Canton and Lady Mary Wood; so that the intercourse of Hong-kong with the northern ports will be more regular than it has been. M. Reynvan, the French Consul at Canton, had been nearly murdered by one of his domestics, a Chinese. While he was reading a newspaper, the man, stealthily coming behind him, attempted to cleave his skull with a chopper, inflicting a serious though not a fatal wound. The assailant was quickly pursued, but managed to escape. Flunder is supposed to have been his object.

Great excitement has been caused at Malta by the recent proceedings of the Council, declaring that the Roman Catholic religion is the dominant religion of the island, and that all others are only tolerated. Besides a protest from Bishop Tomlinson, officially lodged with the Governor, petitions were pouring in from all sects addressed to Earl Grey, beseeching him to intercede with Her Majesty to withhold her sanction to these proceedings. It must here be noted, that in the House of Commons Mr. Hawes declared that no such discrimination between any religions would be sanctioned.

The West India mail arrived on the 22nd. The weather was generally favourable, and the islands healthy. The Cultivation of Cotton in Jamaica was attracting increased attention; some very superior specimens had been grown, and it was deemed probable that this article might become one of the principal staple products of the island.

At a Court of Admiralty Sessions recently held in Spanish-town a case was tried which excited a good deal of interest. An aged woman named Klabor was charged with taking to Cuba with her, upwards of twenty-five years ago, and Selling a Black Woman as a Slave. The charge was fully substantiated, and the prisoner sentenced to three years' imprisonment in the Penitentiary.

A quick Succession of Fires in Barbados, amongst the sugar estates, had excited much uneasiness. Some of these were said to be occasioned by incendiaries; others by the long drought which had prevailed. These fires continued of frequent occurrence up to the sailing of the packet. With reference to the Crop of this island

it is stated that hitherto the yield of the canes had exceeded expectations, and although in one or two districts they suffered from drought last year, yet there was reason to expect that the present year's crop will not fall far short of that of 1849, which amounted to 33,000 hhds.

At St. Thomas a desperate act of piracy had been committed. The American schooner J. B. Lindsey left Port of Spain, Trinidad, on or about the 1st of February. While yet in sight of that place, at night, the mate and a passenger were murdered and thrown overboard by the crew. The captain was severely wounded, but contrived to secure the cabin-door against the murderers, and for some days kept them at bay. After ransacking the vessel for money, the miscreants took to the schooner's boat, and with an axe attempted to scuttle the vessel, but their design was defeated by the cook, who cut the boat's painter and set them adrift. The captain then managed to crawl upon deck, and by threatening to fire on the boat prevented the murderers from returning on board. The boat then made for the Spanish Main, and the captain managed to reach St. Thomas in the schooner, where he was taken care of by the American Consul, who has circulated handbills throughout the West Indies, offering a reward of 200 dollars for the capture of the murderers.

A Tornado of terrific violence passed over the town and harbour of Nassau (Bahamas) on the 30th March. About fifty houses were destroyed; many of them being actually smashed to atoms; trees of immense size were torn up by the roots; several small vessels in the harbour were sunk, and others dismantled. The squall in its course passed over a ship yard, and a large schooner on the stocks was blown over. Eight persons were killed, and several badly wounded. The tornado lasted not more than one minute. It happened about noon. A fire took place in Port of Spain, Trinidad, on the 7th ult., which destroyed property to the amount of 12,000*l.* sterling. The lower orders behaved nobly in rendering assistance; even women were seen working like the men. Many of those engaged in the Trinidad riots, six months ago, were seen labouring disinterestedly in removing and guarding furniture and stores, and though they had an opportunity of purloining to an immense amount, nothing was lost.

The Australian intelligence that has arrived during the month relates chiefly to the sensation produced by the Colonies Bill now under discussion in the Imperial Parliament.

The Sydney papers, which brought dates to the 20th December, mention a public meeting on the subject of the proposed *New Constitution for the Colonies*, which had separated without passing any resolution. A University is to be established at Sydney, and a 30,000*l.* has been voted for the building, and 5,000*l.* for its fittings-up. It will contain at first chairs of the Classical Languages, Mathematics, Chemistry, Natural History, Natural Philosophy, Mechanics, Physiology, and the Medical Sciences; and professorships of History, Philosophy, and Political Economy, are to be hereafter added. There is to be no faculty of Theology, and, apparently, no religious tests. The Professor of Classics will be Rector of the University, with an endowment of 800*l.* a-year. The appointments of the other professors will range from 300*l.* to 400*l.* a-year; and to each will be given 100*l.* a-year for lodgings until rooms shall be ready for his residence in the projected building. Professors coming from Europe will have 100*l.* each towards the expenses of the voyage.

In the Adelaide papers is printed a remarkable document, and which has been taken notice of in parliament. It is a draft of resolutions to be submitted to the legislative council, by a member of it, Mr. John Morphet. The document was published by order of Sir Henry Young, the governor of South Australia, and was sent home, it appears, by him, to the Colonial Office, as an official paper. The resolutions declare it to be the opinion of the council, that a constitution for South Australia should be based on the principle of municipal government, after the model of Great Britain; that affairs of local concern should be left to local jurisdiction; that the legislature

should consist of a governor, an hereditary chamber, and an elective chamber; that each of the members of the hereditary chamber, in order to enter the chamber or remain there, should be bound to establish his permanent possession of landed property to a fixed amount; that local acts passed by the two chambers with the assent of the governor should at once become law; that there should be an executive council, liable to removal on a vote of want of confidence; the governor himself being irresponsible, but to be removable on an address to the Crown by both houses; that the colonial government have absolute power over the waste lands, one-half of the purchase-money being absolutely reserved for purposes of immigration; finally, the draft resolutions deprecate any general assembly for colonies so various as those of Australia.

Meetings had been held in *Van Diemen's Land* to petition the Queen and parliament on the subject of a representative assembly, and against the continuance of transportation to the colony. The *Arrival of Smith O'Brien* and his fellow convicts in the *Swift brig* of war took place towards the end of November. Governor Denison had received instructions from the Home Government to grant the offenders tickets of leave, on the condition of their engaging that the liberty thus given them would not be used as a means to effect their escape. Meagher and O'Donohue at once agreed, the former being located at Campbell Town, and the latter at Hobart Town. Smith O'Brien and M'Manus refused, upon which a meeting of the Executive Council was convened on the 30th of October, when it transpired that M'Manus has relented, but that Smith O'Brien was obdurate. O'Donohue, who is a law worker, and without means, having represented his poverty and the necessity of seeking a livelihood by his pen, was permitted to reside in Hobart Town. O'Brien, having refused the promise required by Government, was forthwith sent by steamer, under surveillance, to Maria Island, where he is to be strictly watched. M'Manus will remain at New Norfolk, O'Dougherty at Oatlands, and Martin at Hobart Town. It is stated that, with the exception of O'Donohue, the State prisoners are in possession of ample funds for their support. In Sydney, the sympathisers had set on foot a subscription for these prisoners.

The chief item of intelligence from *New Zealand* is an account of a hazardous expedition, which had been recently made by the Lieutenant-Governor:—After leaving the Wairau, and previous to starting into the pass which is supposed to exist between that place and the Port Copper Plains, his Excellency ascended the great snowy mountain which forms the principal peak of the Kaikoras, and which attains an elevation of at least 9000 feet, the upper part being covered with snow to a great depth. He succeeded in reaching the top of the mountain, but so late as to be unable to push on to the southern edge of the summit, when an extensive view southwards would have been obtained. In returning, a steep face of the hill (little less than perpendicular), down which hung a bed of frozen snow, had to be crossed for a considerable distance. Mr. Eyre, who had led the party up the dangerous ascent, was in advance with one native, the others being 200 feet before and behind him, on the same perpendicular of the snow. He heard a cry, and looking round, saw Wiremu Hoota, a native guide, falling down the precipice, pitching from ledge to ledge, and rolling over and over in the intervals, till he fell dead at a depth below of about 1500 feet, where, though visible, it was impossible to get at his body. His Excellency narrowly escaped from similar destruction. He completely lost his footing, and only saved himself by the use of an iron-shod pole which he carried. Another of the natives had a still narrower escape, having actually fallen about fifteen yards, when he succeeded in clutching a rock and saving himself. The gloom which this unfortunate event caused, and the uncertainty of crossing the rivers while the snows are melting, induced his Excellency to return.

The intelligence of the revocation of the order in council which made the *Cape of Good Hope* a convict co-

lony, was received with every demonstration of rejoicing. The *Neptune*, which contained the first batch of the convicts, sailed on the 21st February, after a detention in Simon's Bay of five months and two days. A sum of 100*l.* was subscribed by the inhabitants, to be distributed amongst the convicts on their arrival at Van Diemen's Land. A general illumination took place on the evening of that day. The houses, from the highest to the lowest, were in a blaze of light; and the inhabitants promenade the streets until a late hour. A number of ministers and their congregations kept the day as one of religious thanksgiving.

Advices from *Natal* to the 15th of January are favourable. Trade with the interior was increasing, and the Boers in some of their original districts were again quietly settling down to farming pursuits. The experiment of taxing the natives had worked well, and the amount of the collections just ended was, in money and cattle, 3,684*l.* Land had risen in value during the year, and although there had been no instances of rapid worth among the settlers, all had succeeded to a fair extent. Cotton had not been so much attended to as had been anticipated, but this, it is said, was to be attributed to the general demand which existed for other farming products.

PROGRESS OF EMIGRATION AND COLONISATION.

A considerable increase has of late been perceptible in *Emigration to Natal*. The tide in that direction flows unabated; and not only are emigrants flocking thither in search of a new field for their labour and energies, but many are possessed of capital which they intend employing in farming, cotton-growing, and in various ways, with a view to a well-organised system of general colonisation. Materials of various descriptions are also being sent out plentifully for the requirements of the colony. The number of vessels already despatched to Natal by one firm alone is 12, all fully freighted with passengers. The total number of souls thus despatched to Natal within twelve months is 2,066; and there is every reason for believing, according to present appearances, that they will be speedily followed by many others anxious and ready to emigrate to a land where labour and capital are required and find ample and profitable employment. The latest accounts from the colony are up to the 12th of February, at which date many of the emigrants were settled upon their lands with every indication of ultimate success.

Thirty Female Emigrants selected by Mr. Sidney Herbert's committee departed on the 4th for Port Adelaide and Sydney, consisting nearly all of the class of needle-workers and stitchers. On the 10th sixty more were despatched from Gravesend for Port Philip and Sidney. This was the third batch. About 120 females have been sent out in all, and several others are now on the eve of departure.

The *British Ladies' Female Emigration Society* held its first annual meeting at Willis's Rooms; the Duke of Argyll in the chair. This society was "not established with any view of directly promoting emigration," but "originated in an earnest desire on the part of several benevolent individuals, to elevate the character of those who are leaving their native country, and who will form the basis from which society in our colonies is to be built up." It recognises the fact that a large emigration is going on; and it seeks to provide an agency of moral improvement to the emigrants by establishing homes for the reception of female emigrants before they leave this country, by providing visitation at the ports, and the supply of means for instruction and employment during the voyage, and the appointment of chosen matrons, and by forming corresponding societies in the Colonies, to receive, protect, and assist the emigrants on their arrival. The report stated that 1,070*l.* had been received and expended in this useful work.

The *Canterbury Association*, for establishing a settlement in New Zealand on Church-of-England principles, held a meeting in St. Martin's Hall, on the 17th. The Chairman was Lord Lyttelton; among the gentlemen on the platform were the Bishop of Norwich, the Bishop of Oxford, Mr. Sidney Herbert, Lord Wodehouse, Lord Courtenay, Mr. Adderley, and several other Members of Parliament. The plan of the settlement was explained

by the Chairman. The association had placed upon the whole of the extensive district held in trust for them, comprising considerably more than 2,000,000 acres, the price of 3*l.* an acre. This price, much higher than in our other colonies, arose from the distribution of certain proportions of it. One-sixth, or 10*l.*, was to go to the New Zealand Company as the actual price of the land; another sixth was to be applied to the general expenses of the association in this country and in the colony; one-third, or 1*l.*, was to be applied to promote emigration, in order to meet the demand for labour; and the remaining 1*l.* was to be devoted to the leading and cardinal feature of the undertaking—the provision, from the very beginning of the colony, of religious and educational establishments. An unexpected incident varied the proceedings with a little opposition. Mr. Sidney, the well-known writer on colonisation, rose in the body of the meeting, and entered a general protest against the Wakefield principles of colonisation—adopted by the founders of the Canterbury settlement, and avowed by the Bishop of Norwich and other speakers.

There was some desire to hear Mr. Sidney, he was had up to the platform, and there finished his speech. This debating episode called forth the mover of the next resolution, the Bishop of Oxford, in a vivacious reply. Resolutions in furtherance of the Canterbury scheme were passed unanimously.

At present there is a great amount of *Emigration* from Ireland, chiefly of the middle class. The numbers of people who crowd the quays of Galway, securing passages across the Atlantic, are described by the *Galway Vindicator*, as exhibiting in their appearance “a degree of comfort and independence hitherto unknown among emigrants.” Four hundred emigrants, chiefly of this class, sailed from that port in one week; and four more vessels, for different parts of America, were rapidly filling with passengers. The same state of things exists in Limerick. Since January last, upwards of 5000 persons had left that city to take shipping at Liverpool, besides the multitude sailing directly from the Shannon for America.

NARRATIVE OF FOREIGN EVENTS.

EUROPEAN history would have consigned the present month to oblivion but for his Holiness the Pope. April would have shared the collapse into which public affairs have been gradually subsiding from the throes of 1848, had not Pio Nono—after nearly a year of procrastination, protestation, and negotiation—actually entered Rome; which he did on the 12th.

In other parts of the Continent little of political or social interest has actually occurred, although no one can look on the condition of our nearest neighbour, France, without apprehension. Trade and manufactures are reviving, in consequence of a healthy return from credit and bills to ready-money dealing, but the wide-spread distress of the agricultural population, and the equally expansive dissemination of Socialist principles, offer no hopeful prospect, even for an early future. The vivacity with which large sections of the people change from one opinion to another, is an element in their political condition which defies calculation and baffles the subtlest foresight. Reason and principle are less their guides than accident and passion. Of this our present Narrative presents two examples:—In one case the President regained, in a day, some of his lost popularity by showing a prompt sympathy with the survivors of a fearful catastrophe; and in the other, a sentimental appeal to the passions of the Paris constituency will perhaps be effectual in rescuing one of its seats in the Assembly from being occupied by a Socialist. In opposition to M. Eugene Sue, the novelist—stood, on the side of order, a candidate of respectability and talent. But, this advocate of mere moderation made no way against his opponent; and would inevitably have lost the election, had not his friends made a dash for something more dazzling. They snatched a new candidate from comparative obscurity—a man who, at the barricades of February, having had one son killed by his side, went home for another, with whom he finished the fight. This gentleman was received with acclamation; and solely on account of his single act of Romanesque hardihood—not on the ground of senatorial fitness—may succeed; happily, but accidentally, on the side of order.

“German unity” is being attempted in the parliament of Erfurt with that slow elaboration of details for which Germans are celebrated. While the upper and lower houses are nibbling at the minutiae of the revised Imperial Constitution, Prussia and Austria are, by a succession of comprehensive intrigues, making the measure more and more difficult of attainment.

The calm current of events on the shores of the tideless Mediterranean, which has recently been ruffled by the Græco-Britannic “difficulty,” promises to resume its tranquil flow. French mediation is said to have smoothed the way for adjustment, but M. Pacilio’s bill is to be very severely taxed before it is paid. On the opposite shore, the shrewd Pacha of Egypt—foreseeing, perhaps, the remote possibility of the junction of the Red Sea with the Gulph of Gaza by means of a ship canal, and the consequent diversion of the great Indian transit from the heart of his dominions—has projected several improvements in the route from Alexandria to Suez.

The Indian Mail announces to us the appearance of a new Morning Newspaper in the capital of the Celestial Empire. Its advent took place on the first day of the new year. It is called the Pekin Monitor, and, though a government organ, is not, like the Pekin Gazette, wholly filled with imperial mandates. The first number contains a significant sign of the times, in a stringent antidote to the Californian gold fever, which—as has been already learned by the influx of Chinese into St. Francisco—ragged hotly in the “Middle Kingdom.” It is an ordinance of the Emperor Tsa-Kouang forbidding emigration either to California or Costa Rica.

“Vive la République Démocratique et Sociale!” This cry has gained utterance from a larger number of voices, and over a greater extent of France, than it obtained even in the time of the National Workshops. The recent elections for Paris, so decidedly favouring the socialist cause, contributed to this; and the flame has been fanned by the excitement of a new election. M. Vidal having been returned for two places, Paris and the lower Rhine, and he elected to sit for the latter.

Symptoms of commotion induced the government to a despotic measure:—On Sunday the 1st, there was a *General Expulsion from Paris of Vagrants*; that is to say, unemployed workmen—native and foreign, returned convicts and mendicants. All the preliminary measures for the execution of this order had been taken by the police, with the closest secrecy, and they performed their mission with a skill and completeness which only such a political police as that of Paris can manage. The scat-

tering of thousands of the poor and discontented over the country, is an effectual sending out of missionaries to preach the cause of disorder where comparative peace now reigns.

The sovereign people of the head-quarters of riot, the Faubourg St. Antoine, were not long in resenting this insult to those, many of whom they reckoned as friends. On the day following (Easter Monday) the concurrence of a ginger-bread fair at the Barrier du Trône in the above faubourg, and a grand military review by the President at Vincennes, brought but a vast concourse of holiday-makers. *The President was insulted* in returning from the review while passing through the barrier. A multitude surrounded his carriage—an open one; shook their fists in his face and assailed him tumultuously with the last new popular interjection, to which they were pleased to add "A bas le trône!" Prince Louis Napoleon was not in the least ruffled either by anger or fear. His escort compelled the mob to fall back, and he proceeded on his way without further annoyance. General Changarnier, who preceded, had had a foretaste of this reception, and very likely, to his spirited conduct may be attributed the easy manner in which the President was let off. When the shouting crowd gathered about him, he drew up his horse, and turned upon and menaced them with such stern determination, that they instantly fell back. Among them was a drunken soldier who neglected to salute him; Changarnier rode up to the fellow, removed his shako with the point of his sword, and then moved slowly on, amidst the applause of those who had previously hooted him.

Many indications showed a disposition among the army to support the socialist party not only in Paris but in the provinces. There was a *Mutiny in the 11th Infantry*. On the march of the 2nd battalion from Rennes to Toulon, on the 11th, the popular cry was raised by the common soldiers, urged on by the democrats of the town, and they insulted their officers. At Angers the men were entertained at a fête; and in the evening the soldiers and subaltern officers, accompanied by their entertainers, paraded the streets shouting again and again "Vive la République démocratique et sociale!" The Minister of War, on receiving intelligence of this affair, ordered the battalion to be disbanded, and the subalterns and soldiers drafted into the regiments at Algiers.

Besides this disgrace, an involuntary and *Appalling Calamity* befel this regiment. When the 3rd battalion was leaving Angers, on the 16th, at eleven o'clock in the morning they met a squadron of hussars coming from Nantes, which crossed over the suspension-bridge of the Basse Maine, without any accident. A fearful storm raged at the time. The last of the horses had scarcely crossed the bridge than the head of the column of the third battalion of the 11th appeared on the other side. Reiterated warnings were given to the troops to break into sections, as is usually done, but the rain falling heavily it was disregarded, and they advanced in close column. The head of the battalion had reached the opposite side,—the pioneers, the drummers, and a part of the band were off the bridge, when a horrible crash was heard; the cast-iron column of the right bank suddenly gave way, crushing beneath them the rear of the fourth company, which, with the flank company, had not stepped upon the bridge. To describe the frightful spectacle, and the cries of despair which were raised, is impossible. The whole town rushed to the spot to give assistance. In spite of the storm, all the boats that could be got at, were launched to pick up the soldiers in the river, and a great number who were clinging to the parapets of the bridge, or who were afloat by their knapsacks, were immediately got out. The greater number were, however, to be wounded by the bayonets, or by the fragments of the bridge falling on them. As the soldiers were got out, they were led into the houses adjoining, and every assistance given. A young lieutenant, M. Loup, rendered himself conspicuous for his heroic exertions; and a young workwoman, at the imminent danger of her life, jumped into the water, and saved the life of an officer who was just sinking. A journeyman hatter stripped and jumped into the river, and, by his strength and skill in swim-

ming, saved a great many lives. One of the soldiers, who had reached the shore unhurt, immediately stripped, and swam to the assistance of his comrades. The lieutenant-colonel, an old officer of the empire, was taken out of the river seriously wounded, but remained to watch over the rescue of his comrades. It appears that some people of the town were walking on the bridge at the time of the accident, for among the bodies found were those of a servant-maid and two children.

The following letter from the Lieutenant-Colonel of the regiment gives a short but affecting account of the disaster. It is curious that the same officer (Col. Simonet) should have survived the terrible catastrophe which occurred at the battle of Leipzig, when Poniatowski and so many others were drowned in the Elster:—"Before entering the faubourg of Angers, an aide-de-camp of General Duzer came to me with an order to enter the town by the suspension-bridge, and to draw up my men on the Place d'Académie, where he proposed to review them. I had scarcely resumed my march by column in sections, when the weather, which had been before very fine, suddenly changed to a perfect tempest,—a furious wind and pouring rain. It was then half-past 11. It was under these gloomy auspices that I entered on the fatal bridge, after having stopped the band, and broken the regularity of the step, as is usual in such cases. The wind was so high that the floor of the bridge rose and fell from it so much that I had difficulty in keeping my seat on my horse. Scarcely had the section of the advanced guard, the pioneers, and the greater part of the band, reached the opposite bank of the river, when suddenly a horrible crash was heard, and the floor of the bridge gave way under our feet. With the exception of the head of the column and the two rear sections, all the rest of the battalion followed the movement of the floor of the bridge, and fell into the water. Ah, General, what a spectacle! Never was there a more heart-rending one. My poor mare turned over, left me in the water, and then suddenly rising nearly crushed me. I rose and endeavoured to catch her, but Captain Desmarest, my adjutant-major, who was marching behind me, and to whom I owe my life at this moment, seizing me by the arm, drew me forcibly to the left side of the bridge (the water was then up to my armpits); then, assisted by some soldiers, I was lifted into a small boat, when one of the inhabitants, an old soldier, received me in his arms in a fainting state. Thence I got into a washerwoman's boat, and then gained the shore. I was saved, but too earnestly occupied with the fate of my children, my friends, and my comrades, to think of accepting the assistance which was eagerly offered me by the inhabitants and the officers of the garrison."

When the muster-roll was called, it was found that there were 219 soldiers missing, whose fate was unknown. There were, besides, 33 bodies lying in the hospital, and 30 wounded men; 70 more bodies were found during the morning, 4 of whom were officers. The President of the Republic set out for Angers, to see the extent of the disaster. He arrived on Thursday night (18th). The list of the dead was at his request given to him. He passed the whole morning in visiting the hospital where the wounded are taken care of. He was accompanied by the Minister of War and the general officer commanding the department of the Maine and Loire. The orderly officers of the President also visited the private houses where the wounded took refuge. The greatest attentions were paid to the unfortunate survivors. The kindly feeling shown by the Prince produced the best effect.

The funeral of the victims took place on the 19th. 182 corpses were buried, and followed by an immense population. All the shops were closed, and the town wore an appearance of deep sorrow. The usual military honours were paid as the dead were laid in their graves. The prompt sympathy shown by Louis Napoleon for the survivors of this great fatality help materially to regain that popularity he was fast losing. On his return to Paris he was well received. On the other hand, the disaster was basely taken hold of to damage the government.

M. Proudhon was arrested on the 16th, and sent to the fortress of Doullens, for having charged the ministry in his own paper, the "Voix du Peuple," with having occasioned the disaster of Angers by sending the 11th

Regiment of Light Infantry to Africa. In a letter from prison he acquitted the government of design in producing the catastrophe, but in a tone which hinted the possibility of so diabolical a crime having been meditated.

On Sunday evening, the 21st, a considerable sensation was created on the Boulevards by the measures taken by the Prefect of Police to prevent the sale of the *Evénement* and the *Estafette*, evening papers. All news-vendors found in possession of either of these papers, and not being the possessors of shops, had their papers seized, and were themselves conducted to prison. The *serjens de ville* examined every news' stall in the Boulevards, and wherever they found copies of the proscribed papers they seized them, demolished the stall, and conducted the proprietor to the Prefecture of Police. The only apparent ground for these proceedings is, that the papers in question oppose the government. The *Evénement* is edited by M. Victor Hugo and his son.

A *Notorious Murderer* has been arrested in France, whose mysterious and criminal career would afford the materials for a romance. He was taken at Ivry, in virtue of a writ granted by the President, on the demand of the Sardinian government, having been condemned for a murder under extraordinary circumstances. He was arrested in 1830, at Chambéry, his native town, for being concerned in a murder; but he escaped from the prison of Bonneville, where he was confined, and by means of a disguise succeeded in reaching the town of Chêne Tonnex, where he went to an inn which was full of travellers. There being no vacant beds, the innkeeper allowed him to sleep in a room with a cattle-dealer, named Claude Duret. The unfortunate cattle-dealer was found dead in the morning, he having been smothered with the mattress on which he had slept. He had a large sum of money with him, which was stolen, and this, as well as his papers, had, no doubt, been taken by Louis Pellet, who had disappeared. Judicial inquiries ensued, and the result was that Louis Pellet, already known to have committed a murder, was condemned, *par contumace*, to ten years' imprisonment at the galleys by the senate of Chambéry. In the mean time Louis Pellet, profiting by the papers of the unfortunate Claude Duret, contrived to reach Paris, when he opened a shop, where he organised a foreign legion for Algeria, enrolled himself under the name of his victim, and sailed for Oran in a government vessel. From this time up to 1834 all trace of him was lost. He came to Paris, took a house, amassed a large sum of money, and it turns out he was mixed up with a number of cases of murder, swindling, and forgery. These facts came to the knowledge of the police, owing to Pellet having been taken before the Correctional Police for a trifling offence, when he appealed against the punishment of confinement for five days. The French government immediately sent an account of the arrest of this great criminal to the consul of the government of Savoy resident at Paris.

"German Unity" is as far from being cemented as it was when first so enthusiastically broached by the King of Prussia. That monarch, at the end of last month, sent a reply to the collective note of the Kings of Wurtemberg, Bavaria, and Saxony, in which he declares formally that he will never consent to the Austrian monarchy as a collection of states entering the new Germanic union. The parliament of Erfurt is still engaged in revising the details of the imperial constitution.

The only material article of *Spanish Intelligence* is the restoration of diplomatic relations with England. The first advances were made by General Narvaez, and readily responded to by Lord Palmerston. Notes, containing mutual explanations and expressions of amity, were exchanged; in short, none of the formalities usual on such occasions were omitted.

The arrivals from Lisbon were to the 14th. Count Thomar has been defeated in his *Project of Crippling the Press*, it having been rejected in the upper chamber, but new peers are to be made to force the measure through the house.—For some time past *Don Miguel* has been dependent, in a great measure, upon a few of his partisans in Portugal for his support, who have

generously subscribed money on his behalf, and transmitted it to him in this country. These individuals have received intimation from the government, that they must henceforth discontinue such acts of benevolence, or they will be proceeded with "for aiding and assisting illegal associations for treasonable purposes."

At last the Pope has returned to Rome. His Holiness arrived on the 12th; on the day previous, thousands of people from the surrounding country were assembled in the streets, shouting "Fio Nono!" with the utmost excitement. As the Pope moved along he dispensed his blessing to the right and to the left. It was four o'clock when he entered Rome. The French and Papal troops were drawn up on the Piazza Lateranense, and presented arms, while the salutes from the French artillery and the guns of Castel St. Angelo rent the air, mingling with the solemn sound of the bells. Cardinal Barberini, arch-priest of the Basilica of Lateran, received the Pope at the head of his chapter, while the provisional municipal commission presented to him the keys of the Eternal City. On alighting from his carriage, his Holiness was received by the cardinals of the Commission of State, and by the Cardinal Vicar, preceded by all the secular and regular clergy of the capital. At the vestibule he received the homage of the diplomatic body. He then received the holy benediction in the church, which he afterwards left, and returned to his carriage. The procession then went to the basilica of the Vatican by the Strada San Giovanni, the Amphitheatre of Flavius, the Arco di Pantani, the Piazza Traiana, Piazza degli Apostoli, and Strada Papale. As his Holiness approached the steps of St. Peter the sky suddenly overcast and some drops of rain fell. A crimson umbrella was raised over his head, and Cardinal Mattei, the arch-priest of St. Peter's, at the head of his canons, accompanied him up the steps, at the top of which the pavement was covered with camellias and other choice flowers tastefully arranged. His Holiness hesitated to tread upon this brilliant carpet, but at length moved forward; and the surrounding prelates and *grandees* hastened to pick up each a flower, as a relic sanctified by the Pontiff's feet, the moment he had passed over them. On entering the church the Pope was received by the sacred college of cardinals, the papal choir sang St. Augustine's Prayer, and subsequently the Ambrosian Hymn, with the responses of the congregation. His Holiness then received the blessing of the Holy Sacrament, witnessed the exhibition of the four principal relics, kissed the bronze foot of St. Peter's statue, and eluded the mass of people who were waiting for him at the gate of the Capella del St. Sacramento by passing through the small door of the Capella della Madonna, and so entering the Vatican palace, accompanied by the Sacred Colleges and the *comps diplomatique*. In the evening, the cupola of St. Peter's, the Capitol, the Strada di Borgo Nuovo, the Monte Pincio, the Piazza del Popolo and the Via Condotti were illuminated. In the streets much eager curiosity was exhibited, but little enthusiasm; the multitude seemed more occupied in gazing on the pageant than in thinking of the circumstances which had given rise to it. Handkerchiefs in abundance were waved by ladies at the windows; but the cheers of the people in the streets were only occasional and partial. Within the walls of St. Peter's, however, the scene became highly impressive. When his Holiness stood in that sublime edifice, the assembled thousands appeared truly impressed with the grandeur of the scene. The word of command given to the troops rang through the immense building, then the crash of arms, and every man knelt for some moments amid a breathless silence, only broken by the drums, which rolled at intervals. The illumination which followed was very beautiful, not from the brilliancy of the lights, but from its being so universal. St. Peter's was but partially lighted; but as the wind played among the lamps, and the flames flickered and brightened in the breeze, the effect from the Pincian was singularly graceful. The Campodoglio, that centre of triumph, was in a blaze of glory, and the statues of the mighty of old stood darkly and solemnly forth in the sea of light. But one by one the lamps died out, the silence and the darkness of the night resumed their sway, and the glory of the day became the history of the past. As the lamps

died out one by one, and the ~~gazing~~ multitudes retired, the stillness and darkness of the night contrasted strikingly with the bustle and splendour of this remarkable day. No disturbance whatever occurred. An attempt was made on the same night to set fire to the Quirinal. One of the French sentries on duty, having observed some persons busy about the iron grating which communicates with the wood cellars of the palace, advanced to challenge them, upon which they took to flight, leaving some faggots and flasks of turpentine behind them, other materials of the same nature having already been thrown down into the cellars below. There would have been probably no fear of a conflagration taking place, had fire been actually set to the wood cellars, as the solid stone arches of which the palace foundations are constructed would effectually resist the fury of the flames. On the same night, at about eleven, a momentary alarm was created in the city by the report of a grenade, which exploded in the Vicolo dello Sdruciole, a lane behind the Chigi Palace, breaking all the windows in the neighbourhood, but injuring no individual. On the day following, the Pope was engaged in receiving a variety of deputations. Rome was illuminated three nights in succession. The Swiss guards at the gates of the Vatican received strict orders to subject all persons seeking admission to a severe scrutiny. Other precautions have been taken to insure the safety of his Holiness, the kitchen department forming an especial point of surveillance. A new cook has been appointed, and all communication with other persons and objects has been carefully cut off by bars, gratings, and a *ruota* or wheel, through which the viands are revolved into the Papal kitchen. On Thursday, the 18th, his Holiness was to go through the ceremony of giving the Papal benediction to the French army. General Baraguay d'Hilliers was to leave Rome for France on the 25th.

The advices from *Athens* represent the adjustment of the claims of this country on the Greek Government as still in progress. All the claims, it is said, will be recognised except that of M. Pacifico's, which are objected to as exorbitant. This, to some extent, has been admitted by Mr. Wyse; and, if any indemnity is granted to M. Pacifico, it is expected to be a small one. The interruption to trade occasioned by the blockade of the ports is said to have reduced the country to great distress.

There are accounts from Egypt to the 6th. The Pacha, who had been residing at his new palace in the Desert, had returned to Cairo. The proximity of his residence has drawn his attention to the *Improvement of the Overland Route*; and he has said that means must be adopted to reduce the period of travelling between the ships in the Mediterranean and Red Sea to 60 or 65 hours, instead of 80 or 85 hours. He has sent a small landing steamer to ply in Suez harbour; and he is causing the work of Maadamising the Desert road to be proceeded with vigorously. An agreement has been made with contractors to enlarge the station-houses on the Desert, so as to admit of the necessary stabling accommodation for eight or ten relays of horses, instead of four or five, by which means fifty or sixty persons will be moved across in one train, instead of, as at present, half that number. Mules again are to be substituted for baggage camels in the transport of the Indian baggage and cargoes, with the view to a reduction of the time consumed in this operation between Suez and Cairo, from 36 to 24 hours. It is easy to perceive the benefits which will be derived from those measures.

The intelligence which this month has produced from the AMERICAN CONTINENT is more varied than startling. The United States journals are copiously occupied with reports of the trial at Boston of Professor Webster for the *Murder of Dr. Parkman*. It lasted twelve days. The annals of crime present few more remarkable cases. On the 23rd of November last, Dr. Parkman, a professor in the college at Boston, disappeared unaccountably. After some days rewards were advertised for his discovery, and suspicion began to be directed to one of his fellow-professors, Dr. Webster, and a search was made in the college buildings. The janitor was directed to break through a partition-wall into a vault which communi-

cated with a privy belonging to Dr. Webster's apartments. In a hole which had been made in that wall there were found the thorax and thigh of a human being, with some pieces of flesh. In the furnace of his laboratory other fragments were found in a partially consumed state; and among them the remains of a set of artificial teeth attached to a human jaw. Other fragments were found in a box concealed under a heap of tan bark; a dirk-knife was also found. Dr. Webster was then arrested. On the trial one of the coroners of the county gave an account of Dr. Webster's appearance and conduct after his arrest: he said, "I saw Professor Webster in the gaol, and found him lying on his face, apparently in very great distress. Dr. Gay, who was with me, endeavoured to soothe his feelings, and requested him to get up. The doctor said he was unable to get up. He was agitated, and trembled more than any man I ever saw before, and exclaimed, 'What will become of my poor family?' He was then assisted up stairs, for he was nearly helpless. Somebody offered him water, but he was so agitated he could not drink—he passed the glass from him, and spilt some on his clothes." The dentist who made Dr. Parkman's artificial teeth proved those found in the college to have been his. Another witness recognised the dirk-knife as the property of Dr. Webster, and said that fresh oil and whiting were on it, as if an attempt had been made to clean it. A number of witnesses, examined respecting the pecuniary transactions of the parties, proved that Dr. Webster was considerably indebted to Parkman, who had been pressing for payment. Dr. Parkman's brother gave an account of an interview with Dr. Webster, who had called upon him while the search for Dr. Parkman was going on, to state that he had seen the deceased on the Friday, the day of his disappearance, by appointment, and had paid him money. But such accounts were given, by bankers and others, of Webster's circumstances and recent pecuniary transactions, as made it next to impossible that this assertion could be true.

For the defence a number of witnesses were examined as to the prisoner's character, and to shake the evidence for the prosecution. The jury, after three hours' deliberation, found him guilty; and the judge pronounced sentence of death. "The effect of the sentence," says the New York Herald, "on the prisoner was overwhelming. He sank to his seat, and for a few moments wept in agony. The scene was one of awful solemnity."

A remarkable but not sufficiently authenticated story, which did not come out on the trial, is mentioned in the American papers. Dr. Webster was seen by a medical student in the act of perpetrating the murder. The young man, it is said, was returning to the lecture-room for his over-shoes, and found the door locked. He then went down through the basement into the lower laboratory, and passed upstairs to enter the lecture-room by Dr. Webster's private door. As he got into the upper laboratory, he saw Dr. Webster standing over the corpse of Parkman. Either by entreaty or threats, the student was induced to take a solemn oath not to divulge what he had seen, and the next day he left for Boston. A short time since he was taken with brain fever, and in his delirium raved about the mysterious murder. He called for a clergyman, and asked him if he was bound to keep such an oath as he described. The result was, that he divulged all to the minister, who came to Boston and informed the government, but it was too late to use the evidence. The name of the medical student is said to be Hodges. He belongs to Bridgewater, and is the son of a minister.

No event of grave political import is recorded in the month's advices from the States except the *Death of Mr. Calhoun* one of the greatest of the American Statesmen. He died at Washington on the morning of Sunday the 31st of March. During the funeral solemnities the offices of all the public departments were closed, and, as well as the President's Mansion, hung with black. His remains were deposited in the cemetery of Congress. He was of Irish extraction, and was born in North Carolina, in 1782. In 1811 he was admitted to the bar of South Carolina, and became a member of the Legislature of that State, and then of Congress, where he soon distinguished himself. He became Secretary at War in 1817, and Vice-President in 1825. He entered the Senate

in 1831, and was Secretary of State for a short time under President Tyler.

The Senators of the gold country having made a formal demand for the *Admission of California into the Union*, the measure has been under discussion in Congress; there seems little doubt that the proposed junction will be effected. An official document states that all the gold-dust which had been received at the United States Mint amounted in value to no more than 11,379,129 dollars. "Neither, if our own eminent Geologist, Sir Roderick Murcheson, do not err, is the store inexhaustible. He has shown from known geological facts, that the greatest part of the gold is not in mines, but in the gravel and sand which cover the surface, and form the detritus of the summits of former mountains; and that, consequently, the supply of gold may be exhausted in no great number of years. Still emigration to California, from the United States, continues undiminished.

But we learn from *California* itself that the state of society there is by no means encouraging to well-disposed adventurers. Not more than one person in nine or ten can be called fortunate in searching for gold, and many of these afterwards get fleeced at the gambling tables of San Francisco; women (especially Mexican) gamble there as well as men; the merchants get most of the gold-dust that is

brought home—the diggers being little more than their purveyors. The market is fast getting glutted with all kinds of goods—many lots being spoiled by exposure in the rain. There are people of all nations besides Americans, especially Peruvians, Chilians, Sandwich Islanders, Hindoos, Chinese, English, French, Italians, Spaniards, and a pretty strong "delegation" of convicts from New South Wales. At San Francisco there had been three suicides, and in the mines two murders. Bull, cock, and bear fights are in full vogue, and especially by the fair sex. In one of them, a bull of immense magnitude and power was let loose on an old Spanish bull-fighter and clown. In an attempt, on foot, to thrust a short spear into his neck, the man's foot slipped, and the bull thrust him against the rude fence with such violence, that he survived the injury but a short time. This, to the women, seemed the climax of amusement, and the exhibition terminated amid shouts of applause.

From *Mexico*, the bondholders of that state were not pleased to hear that a new Minister of Finance was appointed on the 1st ult., who, it was thought, would not have sufficient vigour to organise the finances of the country in a satisfactory manner. The cholera was on the increase in the vicinity of Mexico City. The *Indian depredations* were still the cause of constant alarm.

NARRATIVE OF LITERATURE AND ART.

OUR recapitulation of the leading publications of the month sufficiently indicates its topics of literary interest; but these will yield, in the estimation of most readers, to the feeling awakened by the death of Wordsworth. The great poet had very recently completed a revision of his writings; but a few days before his last illness had celebrated his eightieth birthday; and has passed to his final rest in the fulness of his fame.

To the subject of the Fine Arts attention has been more than ordinarily directed by occasional discussions raised in the House of Commons, and the result has been Lord John Russell's declaration of the intention of Government to appropriate the whole of the building in Trafalgar Square to the reception of the pictures belonging to the nation. The Royal Academy will have to provide itself with a building elsewhere, but it will receive a vote of money in compensation for its loss of the tenement guaranteed to it by George the Third, and its removal will not be insisted on without due notice and preparation. Meanwhile the Vernon Gallery is to receive shelter in Marlborough House, which, when all the arrangements now in prospect are completed, is to be set apart for the establishment of the Prince of Wales. Another evidence of the growing interest of the public in matters of this nature is the change and improvement now promised in the management of the British Museum, where a "responsible executive council" is recommended as a substitute for the irresponsible mismanaging trustees. But the most remarkable and gratifying indication of the same excellent spirit is the announced determination of the prime minister to issue a Commission for the collection of evidence as to the existing state of the Universities of Oxford and Cambridge.

THE PUBLICATIONS OF THE MONTH have not been numerous, but they comprise several books of higher pretension than usual both in respect of subject and treatment.

Mr. Charles Merivale has completed a portion of his *History of the Romans under the Empire*, which appears in two octavo volumes, and embraces the period from the first Triumvirate to the death of Julius Caesar. It might be described as a history of the life and times of the greatest of the Romans, of the revolution which his genius brought about in the character of his countrymen as well as of their institutions, and of his assassination at the summit of human power and glory. Caesar is the central figure throughout, and the view taken of his character and genius is extremely favourable. It may be worth remarking, that Mr. Merivale describes with some care the person and countenance of his hero; and tells us to rely less on the coins,—from which we derive our common notions of the vivid animation and heroic majesty of Caesar's lineaments,—than upon the still remaining busts, which represent a long thin face, with a forehead rather high than capacious, furrowed with strong lines, and marked by an expression of patient endurance and even suffering, such as might be expected from frequent illness, and from a life of toil not unmingled with dissipation. He was pale in complexion ("wrought in him with passion," as Marlowe so grandly describes his conqueror Tamburlaine); had a tall and spare figure, and dark piercing eyes; was not only without beard, but was very scantily supplied with hair; and did his best to

conceal this baldness, which the ancients regarded as a deformity, by combing his locks over the crown of his head.—Mr. Merivale's *History* will extend, in subsequent publications, to the transfer of the seat of empire from Rome to Constantinople.

Another book on a great classical subject, not unworthily treated, is the first portion of Mr. Mure's *Critical History of the Language and Literature of Ancient Greece*, which has made its appearance in three octavo volumes. The plan of this history embraces six periods, of which the part now published contains the first and second, or Mythical and Poetical periods, devoted to the earliest authenticated productions of Greek poetical genius, and terminating in point of time at about the middle of the fifth century before Christ; the four remaining periods, the Attic, Alexandrian, Roman, and Byzantine, to be included in subsequent publications. Thus the complete history will extend from the primeval growth of the language, with the influences which modified its early culture and stamped the peculiar genius of the people upon it, down to the period when the decay and corruption of ancient civilisation finally extinguished it as a living language. In the portion now given to the public, Homer is the theme most prominently discussed; and certainly there exists in no other English book so detailed an examination and analysis of the *Iliad* and *Odyssey*. It is to be regretted that Mr. Mure should too exclusively have addressed himself to scholars, by leaving his extracts untranslated;

for the variety and comprehensiveness of his treatment of these earliest and greatest productions of the human intellect would have interested all classes of readers. He leaves nothing untouched—the origin of the poems, the purpose and unky of the action, the divine mechanism employed, the style and its various elements, the concordance, discordance, and interpolations of the text, and the biography and influence of the writer—fifteen chapters are occupied with these various discussions; and it is almost needless to add, that Mr. Mure strongly opposes the Wolfian theory, arguing for the individuality of Homer's authorship, and for the personality of Homer himself. Apart from this great theme, and that of the Homeric Hymns and Hesiod, we have an outline of the history of lyric poetry, in its connexion with the arts of music and dancing, a review of the more remarkable occasions or objects of lyric celebration, and biographical notices of the more distinguished lyric poets. To the extracts given from the latter, Mr. Mure has appended careful translations by himself; and in a series of appendices to each volume he has dealt with the leading matters of dispute and controversy connected with his subject.

Mr. Coleridge's daughter has collected such of her father's supposed writings in the *Watchman*, *Morning Post*, and *Courier*, ranging between the years 1795 and 1817, as could with any certainty be identified for his, and, with such as he avowed by his signature, has published them in three duodecimo volumes, as *Essays on his own Times*, or a second series of *The Friend*. They are dedicated to Archdeacon Hare, and embody not a little of that system of thought, or method of regarding public affairs from the point of view of a liberal and enlarged Christianity, which is now ordinarily associated with what is called the German party in the English Church. Mr. Coleridge's daughter thinks that these essays establish her father's virtual consistency, and in one sense they do. His habits of thinking were always the same; but in proportion as his perceptive or imaginative powers predominated, their respective influences may be curiously traced in the results to which they brought him. The volumes are, in any case, not only a valuable contribution to the history of a very remarkable man's mind, but also to the history of the most powerful influence now existing in the world—the Newspaper Press. But to the latter the past month has also contributed a more regular and direct illustration in the shape of two post octavo volumes by Mr. F. Knight Hunt, entitled *The Fourth Estate*. Mr. Hunt describes his book very fairly as contributions towards a history of newspapers, and of the liberty of the press, rather than as a complete historical view of either; but he has had a proper feeling for the literature of his subject, and has varied his entertaining anecdotes of the present race of newspaper men, with extremely curious and valuable notices of the past.

Of books on mixed social and political questions the most prominent has been a new volume of Mr. Laing's *Observations on the Social and Political State of the European People*, devoted to the last two years (from the momentous incidents of which Mr. Laing derives sundry warnings as to the instability of the future, the necessity of changes in education and political arrangements, and the certain ultimate predominance of material over imaginative influences in the progress of civilisation, which his readers will very variously estimate, according to their habits of thinking); and Mr. Kay's collections of evidence as to the present *Social Condition and Education of the People in England and Europe*, which he has published in two thick post octavo volumes, and the object of which is to show that the results of the primary schools, and of the system of dividing landed property, existing on the continent, has been to produce a certain amount of mental cultivation and social comfort among the lower classes of the people abroad, to which the same classes in England can advance no claim whatever. The book contains a great deal of curious evidence in support of this opinion.

Of works strictly relating to modern history the first volume of General Klapka's memoirs of the *War in Hungary*, and a military treatise by Colonel Cathcart on the *Russian and German Campaigns of 1812 and 1813*, may be mentioned as having authority. Klapka was a dis-

tinguished actor in the war he now illustrates by his narrative, and Colonel Cathcart saw eight general actions lost and won in which Napoleon commanded in person.

In the department of biography the principal publications have been a greatly improved edition of Mr. Charles Knight's illustrations of the *Life of Shakespeare*, with the erasure of many fanciful, and the addition of many authentic, details; a narrative of the *Life of the Duke of Kent*, by Mr. Erskine Neale, in which the somewhat troubled career of that very amiable prince is described with an evident desire to do justice to his character and virtues; and a *Life of Dr. Andrew Combe*, of Edinburgh, an active and benevolent physician, who led the way in that application of the truths and teachings of physiology to health and education, which has of late occupied so largely the attention of the best thinkers of the time, and whose career is described with affectionate enthusiasm by his brother Mr. George Combe.—Not as a regular biography, but as a delightful assistance, not only to our better knowledge of the wittiest and one of the wisest of modern men, but to our temperate and just judgments of all men, we may mention the publication of the posthumous fragments of Sydney Smith's *Elementary Sketches of Moral Philosophy*.

To the department of poetry, Mr. Browning's *Christmas Eve and Easter Day* has been the most prominent addition. But we have also to mention a second and final volume of *More Verse and Prose* by the late Corn-law Rhymers; a new poetical translation of *Dante's Divine Comedy*, by Mr. Patrick Bannerman; and a dramatic poem, called the *Roman*, by a writer who adopts the fictitious name of Sydney Yendys, on the recent revolutionary movements in Italy. In prose fiction the leading productions have been a novel on social life in America, by Mr. Cooper, called the *Ways of the Hour*; one entitled the *Initials*, depicting German social life, by a new writer; and an historical romance, called *Reginald Hastings*, of which the subject is taken from the English civil wars, by Mr. Eliot Warburton.

The FINE ARTS have taken an unusually wide field lately, and art progresses, like railways, by the mile. The *Moving Panorama* mania with which English artists were bitten by Mr. Banvard, showed itself very strongly at Easter. Several canvas locomotives were set a going on Easter Monday, but for an account of them we cannot do better than refer our readers to Mr. Booley's experiences, as set forth in No. IV. of "Household Words."

Another instalment has been paid towards the completion of the *Nelson Column*; the second of the four bas-reliefs was put up at the commencement of the month in the base of the column, immediately facing the National Gallery. It is the work of Mr. Woodington. The subject is the Nile, and the incident that in which the surgeon of the ship is quitting a disabled sailor, that he might attend to the wounded Admiral. "No," said Nelson, "I will take my turn with my brave fellows." The subdued suffering and settled composure of the hero are well represented. The action is good, and the story well made out. Two other bas-reliefs, together with whatever else is necessary for the completion of the column, are left to posterity.

The *National Institution*, a society of artists who formerly exhibited their works under the name of "The Free Exhibition of Modern Art," opened on the 14th in Regent Street, a gallery of 373 pictures: those most admired are Mr. R. Scott Lauder, the President of the Association, "Galeotti, the Astrologer, showing Louis XI. the First Specimen of Printing," "Christ appearing to two of his Disciples, on the way to Emmaus." One novel feature of interest is found in the landscapes of the Williams family. Three brothers exhibit with their names; but others of the family have adopted assumed names, in order to prevent confusion. Most praise has been bestowed upon "Noon," by one brother; "A Scene in Sussex," by a second; and a "Woodland River," by a third. The other pictures are so well selected, that the gallery is full of interest. At the end of the season it is to be thrown open gratis, for a fortnight.

The Commissioners of Woods and Forests have received possession of Marlborough-house, from the officers of the late Queen Dowager's household; and it is understood that the *Vernon Collection* of pictures will be removed thither almost immediately.

In the Art-Journal for April is published the following statement of the number of *Pictures Imported* into the United Kingdom in the year 1849. From Prussia, 34; Germany, 1066; Holland, 1946; Belgium, 2420; France, 3498; Spain and Portugal, 326; Italy, 1723; other countries, 1678; total, 12691.

The *New Society of Water Colours* has opened its exhibition for this season. Miss Setchel, the painter of the well-known "Momentous Question," has another picture of the same class, "Jesse and Colin," the subject taken from Crabbe. Mr. Haghe's principal work is an eastern subject, a public reservoir attached to a mosque; but he has two pieces illustrating war in the seventeenth century, which attracted much notice. Mr. Vacher has a picture of the Bazaar of Algiers, with numerous groups of figures. Mr. E. H. Corbould has a number of pieces, of which the most remarkable is the "Country Girl." Mr. Absolom has depicted Joan of Arc in her prison. There are some excellent animal subjects by Mr. W. Harrison Weir; and landscapes by Mr. W. Bennett, Mr. Davidson, Mr. Penby, and others. Mr. Bennett's excited very considerable interest on the day of the private view. The exhibition, on the whole, is interesting.

A provincial paper mentions the discovery of the *Original Portrait of Charles the First* by Vandyck, lost in the time of the Commonwealth, and which has been found at Barnstaple in Devonshire. It had been for many years in the possession of a furniture-broker in that town, from whom it was lately purchased by a gentleman of the name of Taylor, for two shillings. Mr. Taylor, the account adds, has since required 2000*l.* for it.

Mr. Layard and his party are still carrying on their *Excavations at Nineveh*. A large number of copper vessels beautifully engraved have been found, and a large assortment of fine slabs, illustrative of the rule, conquests, domestic life, and arts of the ancient Assyrians, are daily coming to light, and are committed to paper by the able artist, Mr. Cooper, one of the expedition. Mr. Layard intends to make a trip to Chaboor, the Chaboras of the Romans, and to visit Reish Aina, the Resen of Scripture, where he hopes to find a treasure of Assyrian remains.

The principal MUSICAL EVENTS of the month have been the concerts of the *Philharmonic Society*, on the 8th and 22nd. At the former the orchestral pieces (always the chief features of these concerts) were Spohr's third and Beethoven's fourth symphonies, Weber's overture to *The Ruler of the Spirits*, and Riev's overture to *Don Carlos*. Mr. Cooper played Mendelssohn's violin concerto with extraordinary vigour and effect. The singers were the Misses Williams, Mr. Benson, and Mr. Borda. At the latter there was a greater display than usual of "native talent" both in composition and performance. Of the two symphonies one was by Haydn, and the other by Mr. Cipriani Potter, a work of great merit. Mr. Sterndale Bennett's fine "Caprice," for the pianoforte, with orchestral accompaniments, was played in a masterly style by Miss Kate Loder. The singers were Miss Catherine Hayes and Mr. Whitworth, who were greatly applauded, the one in the famous scena from *Der Freischutz*, and the other in Mozart's beautiful cantata "L'Addio." The *Philharmonic Society* is at present in a most flourishing condition. At the beginning of the season the subscription was almost filled up the day it was opened, and many persons have been unsuccessful in obtaining tickets.

The only Oratorio performed during the month by the "Sacred Harmonic Society," at Exeter Hall, has been Mendelssohn *Elijah*.

The "Boethoven Quartet Society," established seven or eight years ago by the late Mr. Alsager, to do honour to the composer's memory by the perfect performance of his works, commenced its meetings for this season on Wednesday evening, the 17th, under the direction, as

formerly, of M. Roussellet, the eminent violoncellist. Herr Ernst has been engaged as principal violin for the whole season,—an improvement of the plan, as unity and finish of execution can be obtained only by means of a permanent leader.

The "Musical Union," a society similar to the above, but wider in its range, has had two meetings this season, on the 9th and 23rd, under the direction of Mr. Ella. At its meetings, which are attended by very fashionable company, classical chamber compositions are performed by the most eminent instrumentalists of the day.

The benefit concerts are by far too numerous for separate mention; and unfrequently, at this season, there are three or four in a single evening.

Amongst the THEATRES the two *Italian Operas* put forth their strength on re-opening after Easter. Her Majesty's commenced on the 2nd with Lucia di Lammermoor. Miss Catherine Hayes was the Lucia, and Mr. Sims Reeves the Edgardo; both native artistes, and both triumphantly successful—an unprecedented coincidence since the days of Billington and Ibrahim.—On the 4th Sontag re-appeared, as Norina in Don Pasquale, and received an enthusiastic welcome.—On Tuesday, the 9th, Sontag performed Rosina in the Barbiere di Siviglia; on the Thursday following, Zerlina in Don Giovanni; and on Thursday the 18th, Susanna, in the Nozze di Figaro.

The *Royal Italian Opera* opened on Thursday, 4th, with Masaniello, an Italian version of Auber's Muette de Portici, in which the principal character was sustained by Signor Tamberlik, a tenor new to this country, who was successful.—On the 9th, the old favourites Grisi, Mario, and Tamburini made their re-entrée to Lucrezia Borgia, and were received with acclamations.

On Easter Monday the English Theatres were attended by holiday crowds, to enjoy the expected entertainments—extravagant parodies or burlesques of classical and heroic subjects. At the *Haymarket* there was a travesty of "Ivanhoe," in which Cedric, the Saxon, is a fine old English gentleman, a foe to railways and all new-fangled improvements; Isaac of York, an advertising clothier; Locksley, a leader of a "swell mob;" Richard, a swaggering man about town; John, a sort of ancient Wild-combe, or master of the tournaments; and Sir Brian, a minister of young France. The dramatic version of "The Vicar of Wakefield," by Stirling Coyne, was well produced at this theatre.—At *Drury Lane* came out an Eastern spectacle called "The Devil's Ring," full of diablerie and stage enchantment. Subsequently a melodramatic piece by Mr. Bernard, called "A Passing Cloud," was produced.—At the *Lycæum* there was a burlesque of "Cymon and Iphigenia," after Garrick, a charming jeu-d'esprit, in which some delicious old and now forgotten music of the Arne school is introduced.—At the *Princess's* "The Queen of the Roses" was a version of Hallevy's new opera *La Fée aux Roses*—without the music.—The *Adephi* entertainment, called "Playing First Fiddle," is founded on the history of Lulli, the famous violinist, who, from being a cook-boy, became the leader of Louis XIVth's memorable band—the "four and twenty fiddlers" of the old ballad. The other theatre had entertainments of a similar cast.—Another piece, by Mr. Tom Taylor, founded on Goldsmith's novel, and previously produced at the *Strand Theatre*, continues to be performed there; also an interesting sketch, called "Poor Cousin Walter," in which Mrs. Stirling and Mr. Leigh Murray have the principal parts.

The *St. James's*, after a pleasant series of French comic operas, was re-opened after Easter with an excellent company for light French comedy and vaudeville. Two stars have appeared, M. Samson and Mlle Denain, both of the Théâtre Français. M. Samson is not only a first-rate comedian, but a distinguished dramatic author. He has appeared in two of his own pieces, "Un Veuve," and "La Belle Mère et le Gendre," the original of our farce, "My Wife's Mother." Mlle Denain's acting is a fine specimen of French "gaiteel comedy," evincing grace and good breeding,—her principal performance, the "Marquise de Lemneterre," in the comedy of that name.

COMMERCIAL RECORD.

BANKRUPT.

From the Gazette of April 2. WILLIAM BARNES, Hungerford, Berkshire, auctioneer.—JOHN CROSTHWAITE, Liverpool, merchant.—JOHN HOWARD, Leeds, cloth-merchant.—ANDREW PALMER, Great Hadham, Hertfordshire, grocer.—HENRY SPILLES, St. John's-wood-terrace, St. Marylebone, slater.—DAVID STRAD, George-street, Adelphi.—WILLIAM STUBBS, Chapel Allerton, Yorkshire, innkeeper.—THOMAS WILLIAMS, Sandway, Cheshire, innkeeper.—JOHN YOUNG, Manby, Lincolnshire, innkeeper.

April 5. ELIAS BRIDGEMAN, Tiverton, Devonshire, grocer.—JULIUS GEORGE GAYLOR, Liverpool, zinc worker.—WILLIAM GORDON, Gloucester, dealer in Berlin wool.—THOMAS LEWIS, Exeter, draper.—FRILEMON AUGUSTINE MORLEY, Great Bridge, Staffordshire, iron manufacturer.—JOSEPH NYK, Mill-pond-wharf, Surrey Canal, pump maker.—THOMAS WILLIAM SKINNER, Devonport, draper.—WILLIAM WALKER, Mansfield, Nottinghamshire, innkeeper.

April 9. ROBERT DAVIES EVANS and DAVID MEREDITH EVANS, Wrexham, Denbighshire, drapers.—JOHN HARRIMAN, Nottingham, draper.—RICHARD THOMAS PETERS, High Holborn, hotel keeper.

April 12. HENRY BRADING, Shepherds-walk, City-road, licensed victualler.—JOHN CLARKE, Stourbridge, Gloucestershire, grocer.—JAMES PARRAND HOLYLAND Fore-street, City, innholder.—JAMES HONIBALL, Ingram-court, City, and Dunston, Durham, anchor and chain cable manufacturer.—WILLIAM JAMES, Newport, Monmouthshire, bonded stockkeeper.—HENRY JAMES, Liverpool, grocer.—BENJAMIN SYMES SAUNDERS, Stowell, Somersetshire, & acetyman.—PHILIP STAMER, Edward Evans, and SOLOMON CROSS, Birmingham, manufacturers of crown and sheet glass.—JOHN DAY TERRELL, Boston, Lincolnshire, horse-dealer.—JAMES GALLEY WATSON, Sunderland, grocer.

April 16. JOSEPH ARUNDEL, Titchfield, Hampshire, common brewer.—DAVID HENRY BERNARD, Stockport, Cheshire, linen draper.—ALEXANDER BROWN and WILLIAM TODD, Liverpool, provision merchants.—THOMAS COLLINGWOOD, Abingdon, Berkshire, butcher.—RICHARD DEAN, Church-st., Trinity-square, Southwark, builder.—JOSEPH DONOVAN, Oxford-street, fishmonger.—EDWARD HOLLIS and JOSEPH WYNOR, Battersea, manufacturing chemists.—CHARLES JOHN HUBBARD, Fitcham, City, and Saffron Walden, Essex, hop merchant.—WILLIAM JOHN ALFRED SOX, Merchant's-dock-lane, Deptford-green, and Bexley-heath, Kent, shipbuilder.—DANIEL TURTON JOHNSON, HENRY HILDITCH JOHNSON, and GEORGE HILDITCH JOHNSON, Aldermany Churchyard, Watling-street, wholesale tea dealers.—MATTHEW DIXON ROBINSON, Dudley, Worcestershire, confectioner.—BENJAMIN SYMES SAUNDERS, Stowell, Somersetshire, quarryman.—GEORGE ALEXANDER VON DOMMER, Newcastle-upon-Tyne, merchant.—GEORGE WILLIAMS, Woolwich-common, Kent, builder.

April 19. THOMAS WHITMORE ALPORT, Bristol, ironmonger.—JOHN ARNETT, St. Dunstan's-hill, City, Custom-house agent.—JAMES BIRD, Cwmavon, Glamorganshire, grocer.—ELIZABETH HART and MARTIN HART, Northwich, Cheshire, draper.—JOSEPH HOLMOYD, Dalton, Yorkshire, cotton dyer.—WILLIAM JOHN ALFRED IVE (and not Jor., as advertised in last Tuesday's Gazette), Merchant's-dock-yard, Deptford-green, & cent. shipbuilder.—SAMUEL JACOBSON JACKSON, Richmond-buildings, Soho, picture dealer.—JAMES McEVY, Hulm, Lancashire, grocer.—SARAH L. PATTERSON, Winchester, glazier.—WILLIAM RAWSON, Market Rasen, Lincolnshire, cake and seed merchant.—JOHN STORMONT, Shiffnal, Shropshire, iron manufacturer.—WILLIAM STORMONT, Shiffnal, Shropshire, iron manufacturer.—WILLIAM WILSON THOMPSON, Gooly, Yorkshire, butcher.—CHARLES VEALS, Uffculme, Devonshire, baker.—GEORGE WINTER, Granville-square, Pentonville, merchant.

April 22. WILLIAM WALKER, Park-place, Mill-end, brush manufacturer.—SAMUEL BROWNING, Farringdon, Berkshire, surveyor.—JAMES POOLE and WALTER POOLE, South-street, Spitalfields, builders.—JOHN RICHARD WEST, Mill-wall, Poplar, block maker.—DAVID WILLIAMS, Bangor, Carnarvonshire, victualler.—WILLIAM SHARMAN, Hulm, near Manchester, builder.

THE STOCK AND SHARE MARKETS.

City, April 25.

There have been few fluctuations in the Money Market during the month. The opening price for Consols on the 1st was 96½, but the troubled aspect of affairs in France caused on the same day a decline. Since then prices have been firm, owing to the numerous purchases of small amounts, usually made soon after the payment of the dividends. The quotations therefore now stand nearly as on the 1st of April.

Railway Shares steadily declined in price from the beginning to the 16th of the month, when sales took place to an extent that amounted to a panic. Then came a re-action which promised well, but within the last day or two these banks have turned out a large number of shares on which they had made advances, and this, added to a prevalent want of confidence in the management of certain lines, once more brought prices low.

The following Tables present the highest, lowest, and latest prices during the month:—

STOCKS.

	Prices During the Month.		
	Highest.	Lowest.	Latest.
Three per Cent. Consols	96½	95½	96
Three per Cent. Reduced	95½	94½	95½
Three and a quarter per Cent.	97½	96½	97½
Long Annuities	8-3	7½	8½
Bank Stock	207½	205	207½
India Stock	288	286	288
South Sea Stock	105½	105½	105½
Exchequer Bills	71s. prn.	64s. prn.	68s. prn.
India Bonds	95s. prn.	88s. prn.	92s. prn.

	American, 40s.
	Veal, per 8 lbs., 2s. 4d. to 3s. 4d.

PRODUCE MARKET.

Colonial produce has been dull of sale during the month, and prices have declined. Ceylon Coffee which at first stood at 48s. was afterwards driven up by some speculative purchases to 55s., but the market since gradually gave way, and the last quotations are 46s. to 48s. 6d. Sugar scarcely sustained the March prices. In Tea more business has been done than for some time previous, supplies having come in freely. For gunpowder, and the fine kinds of tea, the tendency has been downward.

GROCERY.—LATEST WHOLESALE PRICES.

Tea.—Common Congou, per lb., 8½d. to 10d.	Molasses, 12s. to 16s.
Sonohong, 1s. 2d. to 1s. 6d.	Sugar, 100 lb. per cwt., 48s. 6d. to 50s.
Coffee, Fine, per cwt., 58s. to 66s.	British plantation, 36s. to 42s.
Good ordinary, 44s. to 48s.	Brazil, 36s. to 42s.

Candles, per 12 lbs., 4s. 6d. to 5s. | Coals, per ton, 12s. to 17s. 6d.

THE.
HOUSEHOLD NARRATIVE
OF CURRENT EVENTS.

1850.]

FROM THE 27TH APRIL TO THE 28TH MAY,

[PRICE 2d.]

THE THREE KINGDOMS.

THAT ingenious and estimable French publicist, M. Ledru Rollin, who has been living in London for some months at the particular request of a great many of his countrymen, has favoured the world with a not very flattering account of us, as the result of his personal observation. He says we are declining in every way. We are crumbling to pieces like Carthage, Venice, Holland, and Spain. Capital is destroying our working classes; with the repeal of the navigation laws we have lost our hold upon the sea; everybody in the cities and the rural districts is starving (he is credibly informed of this by correspondents of the *Morning Chronicle*); nothing good is doing in parliament; the whole body politic is corrupted by the aristocracy; a young unaristocratic man of talent cannot get to the bar, queen's counsel dare not plead against the sovereign, and the common people are not allowed to be jurymen: in short, we are going to the dence as fast as we can. Such is M. Ledru Rollin's opinion of us; yet, for a people in this condition, we have a tolerably hopeful summary to present at the close of this merry month of May. The reader shall judge.

It has been the month of meetings. Orators have been holding forth, at Exeter Hall and elsewhere, on every conceivable subject; and probably more money has been asked for the behoof of eager applicants than since the year of railroad scrip. The protection of the Aborigines, the conversion of the Hindoos, and the education of the Negro; the relief of the governess, the artist, and the distressed man of letters; have given very various scope to charitable effort. Ragged School Unions, Protestant Associations, Roman Catholic meetings, Exhibitions of Industry, Sons of the Clergy, Colleges of University and King's, Benevolent News-venders, Savings Banks Promoters, Foreigners in Distress, Distressed Undertakers, Sanitary and Parliamentary Reformers, Advocates of universal Peace, and Celebrators of the triumphs of War, have held crowded assemblages of sympathy and charity. Hospitals and Societies without end, Ophthalmic, Orthopedic, Philanthropic, Bible, Christian, Caledonian, Unitarian, Humane, Mendicity, National, British and Foreign, and Agricultural Homes for sailors, for shipwrecked fishermen, for penitent women, for tramps and beggars, for every class of Her Majesty's subjects: Model lodging houses, and Model proposals for the utmost extent of possible improvements; all have been active, earnest, and in their several ways successful. As for Parliament, of which our French critic speaks so contemptuously, a mere glance at the measures now completed or in progress, apart from the more leading topics to which we shall presently refer, will show that in really useful legislation we are making no inconsiderable advance. Convict prisons, and Crown Woods and Forests, Merchant Seamen and Irish Fishermen, National Schools and Official Salaries, Distressed Unions in Ireland and Improvement bills for Scotland, Charitable Trusts, Highways, Marriages, Libraries and Museums, Factories, Savings Banks, Benefices in Plurality, Chancery Reform, County and Prerogative Courts, and Borough Gaols, are all of them subjects under various stages of discussion, most of them likely to add some leaves to the statute book, and not a few of them certain to contribute something to the advantage and well-being of the community. And for that important barometer of national health, the great manufacturing and trading interest, though there has been a cry of alarm about deficiencies of growth which has raised the price of cotton, in other respects prices have remained steady, and the markets active and prosperous. After all, perhaps, we are not so near our decline as M. Ledru supposes.

It must be confessed that he receives sanction, however, from influential people among ourselves. The Protectionists, for example, have been very doleful as well as active during the month, in parliament and elsewhere. The Duke of Richmond opened the campaign by informing the House of Lords that the farmers were fast becoming ripe for revolution; and, after a few days, the landlords and farmers had a meeting at the Crown and Anchor, at which his Grace presided, to exhibit and report revolutionary progress. Here, Mr. Booker showed the destitution to which loss of protection had reduced him, by declaring his readiness to subscribe a thousand pounds to protect his friends at the hustings; a Mr. Chowler proclaimed that the farmers had not only nine-tenths of the horses of the kingdom, but men to ride upon them, and men that were not going to ride against the labourers whatever might come to pass after next harvest; a Mr. Allmatt warned the fund-holder, as a drone, that the farmer, as a working bee, was quite losing his distaste to the notion of public robbery; a Mr. Caldecott recommended a league to refuse tithes and taxes; a Mr. Ball kept it up by declaring himself prepared to risk all, leave all, dare all, and take the most terrible steps that injury could suggest; a Mr. Higgins put this mystery into English by protesting himself ready to fight; and Sir Robert Peel was denounced, on the platform, as the arch-enemy of the human species. Nevertheless, nothing more immediately terrible ensued than a deputation to Lord John Russell, which, after getting somewhat cold comfort in Downing Street (for Lord John reminded them that they had brought their own discomforts on themselves by refusing his fixed duty in 1840), proceeded for a little encouragement to St. James's Square, and were advised by Lord Stanley not by any means to expect immediate relief from either house of legislature, but to be patient, to agitate for themselves, and to live in hope of the good time coming, when, like Wellington at Waterloo, *Up Guards and at Them* might be the signal for victory. Already had this very war-cry issued, however, from a gallant yeomanry captain in the Lower House, and it was now too late to intercept Mr. Grantley Berkeley's motion for the re-imposition of duties on corn. It came on as advertised, and with a result not at all flattering to the Higgins and Chowler farmers. The division exhibited a great

increase in the strength of the free-trade party, and the debate a great decrease even in the confidence of their opponents. Mr. Disraeli not only disapproved of the motion, for which nevertheless he thought himself bound to vote, but openly repudiated monopoly in favour of reciprocity, declared that his quarrel was not with low prices at home but with high duties abroad, and denounced protection for the benefit of a class as little better than plunder. If the "horses and men" should ever turn out, therefore, as Mr. Chowler promised at the Crown and Anchor, it seems probable that the leadership on the occasion, with whatever "punches on the head" may be contingent, will fall to Mr. Grantley Berkeley rather than to Mr. Benjamin Disraeli.

Objecting thus strongly to the benefit of a class as the basis of legislation, Mr. Disraeli had not scrupled, however, a few evenings before, on the occasion of Mr. Henley's proposition for a reduction of official salaries and wages, to argue the effect that because wheat had sunk to below forty shillings a quarter, the wages of public servants should be reduced in the same proportion. But the result of the debate very clearly showed that erroneous notions prevail generally as to the remuneration given in the public offices; and that, whatever may be the conclusions arrived at by the committee now sitting to hear evidence as to the higher official, judicial, and diplomatic salaries, the salaries of the working classes of public servants are more decidedly under than above the mark of the duties, and of the probity and ability evinced in their discharge. On this ground Sir Robert Peel and Mr. Roebuck met in perfect agreement, and some of the stoutest financial reformers voted against the proposition; though on the other hand, Mr. George Hudson, who had formerly tried the experiment of an indiscriminate reduction of wages (to "make things pleasant") on his various lines of railways, gave the benefit of his experience and support to Mr. Henley. But quite apart from this question of "wages" (which has really a very confined range), is that of the general cost of what are called the Civil Services, on the actual condition of which the appearance of the annual estimates throws timely and curious light. Here we at once perceive that steady and progressive reductions are undeniably at work in the salaries and expenses of public departments; but less cause for congratulation presents itself in the items of increase in other directions. The expenditure upon crime is fifty-five thousand pounds more than it was two years ago, and the money required for public buildings exceeds what was asked for, last year, by nearly ninety thousand. In other words, while our prison and convict administration is in the least possible satisfactory state, the country is paying two thousand pounds a day for it; and we are asked to contribute forty-five thousand pounds more than was voted last year to the building of the Palace of Westminster, within the same month in which we hear of the House of Commons having been actually built so small that it will not accommodate its members! Crime, for the most part the result of ignorance, costs us seven hundred and fifty thousand pounds a year; and for the removal of ignorance we are asked to give something less than a hundred and fifty thousand. The cost of the single convict establishment at Van Dieman's Land is larger than the whole national expenditure for the purposes of public education; and the entire sum that we pay, not alone for the extension of education, but also for the encouragement of science and art (government being here kept fully in countenance by ultra-liberal House of Commons majorities who think it decent to refuse a thousand pounds for three pictures by Mr. Edwin Landseer), is decidedly less than the solitary charge for keeping up that anti-slave trade squadron on the Coast of Africa, of which the principal effect is to exaggerate the horrors of slave traffic. The last item claiming notice is an increase of nearly twenty thousand pounds upon last year's estimate of Colonial and other Foreign services; and this may recall us to the legislative labours of the month, and the third reading of the Australian bill.

Mr. Gladstone and Sir William Molesworth have been the principal opponents of this measure, and they continued their hostility to the last. Yet it is to be hoped that it may receive no material damage in the Upper House, for, though it has unquestionable defects, it is a vast improvement upon the existing system, and offers stronger inducements than have yet existed to that higher kind of emigration which has long been desirable, and is now become essential. It has provoked opposition chiefly because it does not abolish the imperial veto, and because it does not give double legislatures to each of the colonies; but it secures absolute self-government to the colonists in all local affairs, and it leaves the mother country only so much general power as may be justly claimed in right of her connection and concessions, and exercised with advantage to the colonies themselves. Mr. Gladstone made an attempt to graft upon the bill a sort of legislative Convocation for the church independent of the local legislature; a convocation which would have been constituted of the laity as well as clergy, and so far inviting support from the more liberal of the church parties; but containing provisions too plainly indicating the intention of the mover not to render its defeat desirable. One of the clauses practically nullified the lay element in the proposed ecclesiastical legislature, by making the assent of the Australian bishops essential to the efficacy of the acts of convocation; and judging from the results of episcopal administration in our old world, it would have been hard to deliver over our new to the like tender mercies. In the month of which we present this record, the existence of an ecclesiastical sinecure of fifteen thousand a year, and its appropriation by the English primate for the benefit of his son, have startled economical as well as religious people not a little. Nor has the shock been greatly abated by the primate's explanation that he had presented his son with express submission to the power existing under a recent act, of lowering the salary and increasing the duty, if the legislature should be so inclined; or by the Bishop of London's palliation of the enormity by the greater enormity of an episcopal predecessor, who had appointed a son of six months old to a similar office, and so secured him its enjoyment for full seventy years! It is the disclosure of facts of this nature which has given personal bitterness to the discussions on the still pending Ecclesiastical Commission bill; and which indisposes the most easy and tolerant of church-goers to listen, with any sort of patience, to such further discoveries as that a million and a half of personal property has been left by the twenty-six bishops deceased during the last twenty years. It is a little comfort, in connection with so painful a subject, to have to record the final success in the House of Commons of the Manchester Rectory Division bill. The object of this most just and necessary measure is to apportion some forty thousand a-year of church property existing in Manchester, to the spiritual wants of four hundred thousand Christian souls also existing there; instead of devoting it to the comfortable maintenance of half-a-dozen church sinecurists, who openly profess themselves neither obliged nor disposed to discharge any clerical functions. Yet a minority of sixty members were found to oppose the third reading, headed by the members for both Universities! To the accomplishment of this act of justice we have to set off an unsuccessful attempt by Mr. Hume to abolish pluralities; but the attempt at least facilitated a less energetic move in the

same direction, and a clause was carried to enforce residence in all but the poorest livings, which will strip plurality of not a few of its charms.

Ireland has occupied a good deal of legislative attention during the month; and in connection with the Irish Chancery Reform bill (which has now passed the Lower House), we may glance at the extraordinary revolution which the sales under the Encumbered Estates Act are silently effecting over the whole face of that country. The predictions which attended the passing of this act, as to its clearing land of litigation, and turning into a blessing what for two centuries had been associated with little save suffering and crime, are in a steady course of gradual fulfilment. The prices obtained are reasonably good (eighteen and nineteen years purchase); the native bidders are more numerous than was expected; and additional inducements, now held out by Sir John Romilly's Security for Advances bill, a most statesmanlike measure, will have the effect of attracting to Ireland still more of unemployed English capital than has yet had courage to venture there. The object of this bill is to facilitate the borrowing of money on the absolute security of the fund bought by the borrower under the Encumbered Estates Act, to the extent of half the amount of the purchase money; thus guaranteeing the safety of such investments; and it is in contemplation, we believe, even to empower the Bank of England to lend money on mortgages thus secured. Another question very essential to any hope of continued peace in Ireland, has passed the lower house after a striking debate; and the new Irish Reform bill is in the House of Lords. Sir James Graham's emphatic warning against resting national institutions on a too narrow electoral basis, drawn from the recent example of Louis Philippe, produced a strong sensation; and it is no insignificant tribute to the spirit of the time that the same sagacious statesman should have expressed his readiness to see the principle of household suffrage generally adopted in parliamentary representation. Of the intolerable grievance to be remedied in Ireland no doubt whatever exists. Though the majority for the bill was only sixty-eight, in a house of four hundred and forty members, it was not denied in the debate that the Irish constituencies have been gradually dwindling away ever since the Act of '32; that the electors, for a population of eight millions, do not now amount to fifty thousand; and that whereas twenty-nine per cent. is the electoral average throughout Great Britain, two per cent. is the average in Ireland. The struggle in the Lords will mainly be to raise the franchise, and this will be led by Irish proprietors; nor will even the bill to abolish the universally admitted nuisance of the Irish vice-royalty, and to create an additional secretary for the Home Department, lately introduced by Lord John to the House of Commons, be permitted to pass without a considerable Irish opposition. Meanwhile Lord Ellenborough has revived, with perhaps more spirit than wisdom, the question of payment for the priesthood (who are reported to be starving amid those villages of the south and west which emigration and mortality have depopulated); and petitions have been presented both to Lords and Commons, during the month, as well for the appropriation of Protestant church revenues to the better accommodation of Catholic church parishes, as for the surrender of ill-filled Protestant churches to the use of over-filled Catholic chapels. But these modest suggestions have not yet begun to attract attention.

Other questions not directly political, but involving interests of the highest importance, have been brought in various ways into discussion. The Metropolitan Interments bill has made no further progress in the House of Commons, but it is to be hoped that the courage and resolve of its friends will not fall short of the desperate and eager activity of its opponents. The latter have done what they could to strengthen their case, by a foul riot at a meeting supposed to be unfavourable to them; when an organised body of "performers" in the solemn and gentle offices of the dead, went through a more congenial performance of ruffianism to the living, overpowering speakers on the platform, insulting and terrifying ladies who were present, and finally clearing the room. Lord Ashley has withdrawn his opposition to the government proposal for giving practical efficacy to the Ten Hours Act; and though Mr. Richard Oastler, but the morning before he did this, had been indulging a dream at Broadstairs of "Her Most Gracious Majesty sending for Lord Ashley to form a Ministry," all the more rational of the Ten Hours champions have since signified acquiescence in the compromise. When the bill shall have passed, factories will be worked from six to six on five days in the week, and between six and two on Saturdays, with perfect leisure after two on the latter day, and with an hour and a half for meals and leisure on each of the former. A measure not less deeply interesting to masses of the most industrious part of the population, is the scheme for securing more direct responsibility in the management of Savings Banks, and for extending the power of government to grant annuities and life assurances of small amounts through the medium of those institutions (the latter, as it seems to us, a most important step in legislation for the interests of working men), which is now before the House of Commons for discussion. Another measure, the discussion of which is likely to continue keen in proportion to the number and magnitude of the interests involved in it, is the County Courts Extension bill: members complaining that their very coats are torn off their backs in passing through the lobbies by parties eager to compel their advocacy of it, organised committees of merchants and traders assisting and memorialising as fiercely against it, and the Attorney-general and the Home Secretary by adroit adoption of it having already very nearly amended it "off the face of the earth." The month has brought announcement also of other law reforms. A Commission has been issued, preparatory to a reform of the system of special pleading, which will no doubt be of special benefit, though it has too much the appearance of a move in aid of the Higher against the County Courts; Lord Campbell has introduced a bill to simplify criminal pleadings, and prevent the lamentable and too notorious defects of justice on small technical points; the same active dignitary has declared, in judgment on a case in the Queen's Bench which has hardly attracted the notice due to its importance, that the intervention of an attorney is not essential in the employment of a barrister, but that the latter may receive his instructions directly from the party to the suit, though such a course is the reverse of commendable; a spirited attempt is in progress, by Mr. Keogh, to reform the Ecclesiastical Courts in Ireland; and the Lord High Chancellor Cottenham has at length roused himself to a part of the work so long expected from him, and has issued a series of Orders which will have the effect of dispensing, in a large class of suits, with the formality of bill and answer, and of providing for the reference to the master on a mere observance of certain very simple forms. It is a clear and decisive step in advance, and worthy to have been the last official act of one of the greatest lawyers that ever adorned the woollack; but it is to be hoped the next step will go beyond the master's offices, and venture into the penetralia of the High Court itself.

• A glance into lower law courts, before we close, may not inaptly conclude this month's review.

Remarkable social disclosures are made there, and social problems receive often strange solutions. Before Vice-Chancellor Knight Bruce, for example, there has been the case of a most foolish and frantic member of a ridiculous and not very decent sect, who has been refused the control and custody of his child, not for one of the many reasons that might fairly have been admitted to operate in support of such refusal, but because the Vice-Chancellor apprehends "that in England a man who holds the opinion that prayer, in the sense of entreaty and supplication to the Almighty, is superfluous, who considers moreover that there is not any day in the week which ought to be observed as a sabbath, or in any manner distinct from other days, must be deemed to entertain opinions noxious to society, adverse to civilisation, opposed to the usages of Christendom, contrary (in the case of prayer at least) to the express commands of the New Testament, and disqualifying the man who avows and practises them for the education and guardianship of an English child." These words are quoted literally; and they revive the worst and most dangerous doctrine of the days of Eldon; though, in the general disgust and contempt inspired by the *Agapemone* doctrine, the judgment against one of its professors will probably escape the condemnation due to it. Passing from Chancery to the Court of Queen's Bench, we find a criminal information very properly refused by Lord Campbell in a case of dispute between the Electric Telegraph Company and a very active news-agency house in Liverpool, which had opposed with considerable spirit the company's pretension to exclusive "trading in news;" but the peremptory refusal of even a rule nisi in a case affecting the character of a foreign exile, and the as peremptory disposition to make one absolute in a simple case of error very amply atoned for (we allude to the application against Mr. Murray, and to that in behalf of Miss Sellon), do not strike us in so impartial or just a light. Turning away into the Court of Exchequer, we are warned by the result of an action involving the responsibility of a railway company for the acts of its officers, that the duties of these officers are now held by law to be determined at the pleasure of their employers; and that if any one of them transacts a duty to which he has not been privately named by such employers, and in the course of it falsely accuses, maltreats, and wrongly imprisons a traveller on the railway, the unfortunate traveller has no remedy against the company, though the wrong could only have been done under cover of its authority, and by the express privileges with which parliament has invested its servants. Descending a little lower, into the Insolvent Debtors' Courts, we perceive, in such contrasted cases as Mr. Pritchard's and Mr. Dolafeld's, how, in the present constitution of English Society, one man may build up out of nothing a ten-thousand-a-year business in six years, and another spend every shilling of a hundred thousand pounds' gain of business in six months. Descending somewhat lower still, and entering the Thames Police Court, we discover that no man of colour, be he Englishman, Frenchman, or of what country he may, is permitted to approach the shores of the slave-holding states of America, without at once surrendering his freedom, delivering himself up into custody, and consenting to live in gaol until those who brought him are not only ready to take him away, but prepared to pay for his imprisonment, or to be mulcted in their property for it! The reader can hardly expect us to tell him anything more remarkable than this; or than Lord Palmerston's avowal in the House of Commons, not only that there is no help or remedy for it, but that the unhappy human beings thus arrested from all social protection have at least the benefit of fair notice that such really will be their fate! Here, therefore, we conclude: leaving him to meditate on the nature and claims of freedom, political and social, monarchical and republican.

NARRATIVE OF PARLIAMENT AND POLITICS.

THERE was no business of importance transacted in the HOUSE OF LORDS till the 2nd of May, when an Address of Congratulation to Her Majesty on the *Birth of another Prince*, was moved by the Marquis of LANSDOWNE and unanimously voted.

The Duke of RICHMOND presented above a hundred petitions complaining of *Agricultural Distress*; as a proof of its existence he called attention to the appearance of sixty advertisements in a Northumberland Newspaper of sales of farm-stock; and he complained of the undue pressure of the Income Tax on the farmers. Earl GREY observed that numerous sales of farm-stock always take place at this season; and that he himself had objected to the Income Tax as unjust to the farmers, but had been overruled by the leaders of the agricultural party.

On Monday the 6th, the Archbishop of CANTERBURY explained a transaction respecting the *Registrarship of the Prerogative Court*, which had been referred to in the House of Commons on the 30th of April, (as will be found below). It had been imputed to him that he had nominated his son to the reversion of a valuable sinecure. "My Lords," he said, "the case is so as regards the reversionary office; the case is not so as regards either the value or the sinecure. In the session of 1847, an act was passed which placed the Prerogative Court of Chancery under the control of Parliament in respect to all future nominations; and the office of Registrar, if ever held by my son, which is very uncertain, not to say improbable, will be performed by a person, and its salary regulated according to the duties and responsibilities of the station. The value, according to the doctrine of chances, would be scarcely equal to the stamp on which the nomination is recorded.

It was not until the close of the autumn of 1847, a few months before the death of my venerable predecessor, that the act passed which took away the sinecure. It took away the sinecure, and it limited the value; but the office must remain, and must be filled: wherever there is a diocese there must be a registry, and where there is a registry there must be a registrar. And I trust that in nominating, prospectively, that registrar, I shall, in the judgment of your Lordships, have exercised a privilege to which I was both legally and morally entitled, and have done nothing which, when explained, can subject me to the charge of nepotism; an imputation which I hope neither has been nor ever will be the characteristic of my official career." This explanation was received with general cheering; and the Bishop of LONDON mentioned, as a proof of the Most Rev. Prelate's disinterestedness, a case in which, when Bishop of Chester, he had at his disposal a valuable office which he might have given to his son, but did not.

On Friday the 10th, Ministers were worsted on a Colonial question. The Duke of ARGYLL revived the claim of Mr. Ryland, (formerly clerk of the Executive Council in Canada) for compensation for the loss of his appointment through the abolition of the office, which he had not obtained, though it had been officially promised. The DUKE moved resolutions declaratory of Mr. Ryland's right to compensation.—Earl GREY moved the previous question, on the ground that the claim was a matter for the Colonial Government to settle; but the original motion was carried by 22 to 19.

On Monday the 13th, the presentation by Lord BROUGHAM of a petition in favour of *University Reform*, gave occasion for some remarks on the subject by him, and the Duke of WELLINGTON. Lord BROUGHAM said, he believed that both the Duke of WELLINGTON and Lord LYNCHBURST concurred in deprecating any rash interference with the universities, in which great in-

improvements had recently taken place. He hoped that no Germanic system, or Germanic crotchets would be introduced into our ancient, and hitherto, flourishing universities.—The Duke of WELLINGTON said, that as far as he could understand, there was no desire to introduce any Germanic system into the University of Oxford. But while that University was anxious to introduce every requisite improvement, that which it could not do, was to repeal the statutes by which it was governed. He hoped that no proceedings would be taken which would have the effect of forcing some of the most respectable, faithful, and loyal of her Majesty's servants to choose between their duty of obedience to her Majesty's commands and their duty with respect to the execution of the law.

LORD STANLEY announced his intention of calling the attention of the House to the *Affairs of Greece*, and requested to know when official accounts of the late transactions would be laid before the House?—The Marquis of LANSDOWNE promised that the requested information should be speedily furnished. The French negotiator, he said, had broken off the negotiations on a single point: it was owing to an "accident of the winds," which occasioned a delay of three or four days, that the accommodation was not brought about by the instrumentality of the French Government, which would have been more satisfactory. The terms only differed from the French terms in one particular, and in that particular they were more favourable to Greece; "so that, in the exercise for its free discretion, Greece has obtained terms, in a pecuniary sense, much better than those the French Minister here thought her entitled to."—LORD STANLEY thought that the Marquis of LANSDOWNE had a strange idea of "free discretion," when the Greek Government had only submitted under a threat of bombardment by the fleet of the most powerful maritime state in the world.—LORD LANSDOWNE, in making an announcement on another subject soon afterwards, added: "I am reminded by my noble friend near me to inform your Lordships, that the threat of bombarding the Piræus, just adverted to by the noble Lord, is entirely an assumption of his own."

On Thursday the 16th, LORD BROUGHAM asked an explanation of a fact, which had just come to his knowledge—the *Departure of the French Ambassador*, by command of his government, on her Majesty's birth-day.—The Marquis of LANSDOWNE said, that the circumstance was purely accidental, and in no way connected with any design to manifest disrespect either to her Majesty or this country.—LORD BROUGHAM: "I can hardly ascribe the absence of the Russian Ambassador to accident also; I wish I could."

On Friday, LORD BROUGHAM returned to the subject, with considerable vehemence, and required explanations respecting the "inauspicious fact" of the *French Ambassador's Recal*.—The Marquis of LANSDOWNE said, that when the French Ambassador left this country he presented no letters of recal, and up to that moment no such notice of recal had been left with her Majesty's government. The Ambassador had left London, furnished, for the purpose of explanation, with documents that could not be known to the French Government. The noble Marquis expressed his earnest hope that the result would be such as to prevent any sort of interruption to the friendly intercourse of the two countries.—LORD BROUGHAM insisted that General La Hitte (the French Foreign Minister) directed M. Drouyn de Lhuys to "read" his despatch to Lord Palmerston.—The Marquis of LANSDOWNE replied that no letters of recal had been "presented."

In the HOUSE OF COMMONS, on Thursday the 25th April, the *Australian Colonies Bill* was proceeded with in Committee, and its remaining clauses were passed with little discussion.—Mr. VERNON SMITH objected to the clause establishing a Federative Assembly, as being useless and uncalled for by the opinion of the colonies; and Mr. ROEBUCK (Mr. DISRAELI concurring) objected to this measure as being contrary to the principal of federation—the equality of the constituent parts.—LORD JOHN RUSSELL defended the proposition as being practically useful.—Sir W. MOLESWORTH supported Mr. Roebuck's objection: and on a division the clause was carried by 64 to 10. The remainder of the clauses were passed and the bill reported.

The debate was resumed on the second reading of the *Securities for Advances (Ireland) Bill*. LORD NAAS objected to it as an interference with the present Encumbered Estates Act, and as being injurious to the Irish proprietors.—MR. BAILLIE contended that the measure would depreciate the currency, by forcing ten millions worth of mortgage paper, of the nature of Exchequer bills, into the market.—THE SOLICITOR GENERAL replied to these objections; and after observations in support of the bill from Mr. Egan, Mr. Sadler, Mr. H. Herbert, and Mr. Stuart Wortley, its second reading was carried by 186 to 41.

On Friday the 26th, the motion for going into Committee on the *Interest Unions Advances (Ireland) Bill* was opposed by Colonel Sibthorp, who moved that the House should go into Committee that day six months; but his amendment, after a little discussion, was lost by 132 to 12. The bill then went through the Committee. The further business of the House that evening was obstructed by a long discussion originated by Mr. DISRAELI, who, on the motion for going into a committee of supply, made an attack on the financial arrangements of the year.—LORD JOHN RUSSELL defended himself and his colleagues, and exposed the inconsistencies of Mr. Disraeli's own conduct. When this ended, the House went into committee; but it was now midnight, and too late to proceed to business.

The subject of the *New Houses of Parliament* was brought forward on Monday, the 29th ult., by Mr. OSBORNE.—MR. GREEN as one of the commissioners, said that the commissioners had been unable to reconcile the differences between the architect and the ventilator, and that in the meantime they were endeavouring to carry on the work the best way they could.—MR. OSBORNE gave notice of a motion with the view of getting rid of both Mr. Barry and Dr. Reid; an intimation that was received with cheers and laughter.

MR. COCKBURN called attention to the case, at the Thames Police Court, of the black steward of a British vessel who had been taken out of the ship at Charleston and imprisoned for two months, simply because he was a *Man of Colour*.—LORD PALMERSTON said that the case was not new; that such a law as that mentioned existed in the State of Carolina; and that our government had remonstrated against it as a violation of the principles of international law, as well as of the treaty of 1815: but the reply had been that the Federal government was unable to revoke the law, and that, if England insisted, the American government would be compelled to terminate the treaty of 1815. The English government, therefore, had not thought it expedient to press the matter further; but it should be remembered that the law is known, and that those who go there expose themselves to it voluntarily.

A Bill to amend the law as to *Savings Banks* was brought in by the Chancellor of the EXCHEQUER. He gave a sketch of the history of these establishments, which now hold the deposits of the poor to the amount of twenty-eight millions, and pointed out the necessity of remedying the evils caused by growing laxity of management. One of the chief evils (he said) is that exemption from any liability which was extended to trustees in 1844: it is proposed to restore this liability for wilful or neglectful losses. Neither the Government nor the trustees are now liable for loss by the treasurers of the savings-banks; the Government cannot be answerable for the officers it does not appoint, and the trustees are unanswerable for anybody or anything. It is proposed to place these officers in the appointment of Government, and to make Government responsible for their acts. Fraud is frequently occasioned by the treasurer or actuary receiving monies at his own house. It is intended that the treasurer alone shall receive money, and he shall attend at certain stated times for that purpose. The Government will generally appoint a local banker to fill the office; and the duties shall no longer be wholly unremunerated. It shall be a misdemeanour for any other person than the treasurer to receive money as a savings-bank deposit. Daily accounts shall be rendered to the Commissioners of the National Debt;

and those Commissioners shall appoint auditors, who shall exercise a constant auditing of the accounts, subject to supervision by special inspectors despatched at discretion. It was further proposed (he added) to reduce the rate of interest allowed to depositors from 3l. to 2l. 15s., and to limit deposits to the amount of 100l.; above that amount, Government would either hold the money without interest, or, at the depositor's option, invest in the funds free of charge. The power of buying should also be enlarged.—Some remarks were made, generally favourable to the measure, with criticisms on its details. Mr. HUME, in particular, observed that it provided only for the future, and that nothing was done for the relief of those who had already lost the money they had invested in savings-banks, trusting to the security of the Government. The bill was then read a first time.

In moving the second reading of the *Ecclesiastical Commissions Bill*, Sir George GRAY entered into some explanations. He said that the principal feature of the measure was the separation of the ecclesiastical and lay departments by the appointment of a tribunal to be designated "The Church Estates Committee," which was to be invested with the management of the property of the Church, and to report to the commission thereupon. This estates committee was to consist of three persons, two to be appointed by the Crown, and the third by the Archbishop of Canterbury, one of the former and the latter to be paid commissioners. Two others might be added, one of whom must be a layman. The decision of the committee would be practically conclusive from the weight which would attach to it. There was an important clause in the Bill by which fixed, instead of fluctuating incomes, would be given to the Archbishops and Bishops, and a clause was also to be introduced to prevent Deans from holding benefices beyond a certain distance from their Cathedrals.—Mr. HORSMAN strenuously objected to the Bill; showing how far it fell short of the recommendations of the committee, and how unfit it was to effect any practical good. The whole Episcopal body were to remain members of the board, at once perpetuating its unwieldiness and the undue weight of episcopal influence. "Why," said Mr. HORSMAN, "are bishops necessary in the Commission at all? The bishops are not the Church; it is the laity who compose its numbers, life, and strength, and who may fitly guard its property. Looking to such gentlemen as Sir James Graham and Mr. Goulburn, surely that property would be as safe in the hands of a devout layman as a devout ecclesiastic. The Church has been plundered often; by the monarchs first, then by the nobles, in the last century by the bishops, in the present day by the ecclesiastical commissioners. The bishops are not exempt from human infirmities, and think they are taking care of all when sometimes taking care of themselves alone. In earlier days, the bishop's residence was in the cathedral city; he was at the centre of a religious community, ever at home, ever in the public gaze, ever accessible to his clergy and people; now he is metamorphosed into a rural dignitary, secluded in an aristocratic mansion, which the clergy penetrate with difficulty, the people not at all. In this age of active speculation and cultivated intellect—in this age so unsusceptible of belief—who should be the guides in the arduous and critical warfare? Surely men of a higher spiritual order than those who now, styled "Fathers in God," are yet wholly engrossed with worldly affairs, vigilant only of the Church's monies, tenacious only of her dignities and ranks—more likely to smite and sink her than to save her in the struggle. Mr. Goulburn had once complained of Mr. Horsman's low idea of the Episcopal office; Mr. Horsman had yet to learn that political functions have aught to do with spiritual office, or, indeed, are aught but tumours and excrescences upon that office. That office he deemed divine in its origin, spiritual in its essence—too high to be tainted by worldly pomp, too holy to be profaned by worldly occupation; and if so large an amount of worldly duties be involved in its functions, it is impossible to advance anything more fatal to the establishment of which it is a part.—Mr. GOULBURN vindicated the bench of bishops with great warmth, and made a personal attack on Mr. Horsman, who, he said, had

"assaulted and vilified them with laboriously prepared eloquence." He described Mr. Horsman as a disappointed man, who had been a lord of the treasury, and was desirous of a higher office; and he entered into calculations, to show that Mr. Horsman, on a former occasion, had made unfair statements as to the incomes of the bishops.—Lord John RUSSELL observed that no objections had been made to the second reading of the bill; the observations which had been made being merely for the consideration of the committee. He would, therefore, only say, that so far as he had known the right rev. bench of prelates, they were pious, learned, courteous, and hospitable.—Mr. OSBORNE characterised the bill as being, in the present state of the Church, a mere compromise—a sort of "pull-bishop pull-curate" affair. He repelled Mr. Goulburn's attack on Mr. Horsman. He was surprised that a minister of Mr. Goulburn's standing and experience could condescend to throw out so low a taunt as to say that his honourable friend was a disappointed man. Such an expression did not come with grace from one who had been tied for years like a tin kettle to the tail of the right honourable baronet the member for Tamworth—so long, that whenever the right honourable baronet ran from one side of the house to the other, he it on this question or on that, the tinkle of the tin kettle was ever heard, whether it was against Catholic emancipation one day or in favour of Catholic emancipation on another, or whether against the principles of free-trade at one time, or for the principles of free-trade on the next occasion. "After such a career," continued Mr. Osborne, when the laughter and confusion caused by his remarks had subsided, "the honourable gentleman turns round upon my honourable friend, who has been engaged in a most meritorious manner; and because he has succeeded in making a stand in the country—such a stand as the right hon. gentleman himself has never made, and never will make—he taunts him with having brought this question forward because he is a disappointed man. I cannot sit here and hear a taunt, so low, so unworthy a representative of the University of Cambridge, without at once entering my protest against it.—Sir R. INGLES rose with great heat to answer Mr. Osborne, who had made an attack upon the member for the university of Cambridge,—his equal in everything, his superior in station, in temper, in talent, and in eloquence. Sir Robert's warmth produced a good many interruptions. On the subject of the bill he objected to the hierarchy of England being treated as mere stipendiary servants—the question was not of salaries, but of the inalienable property of the church. He trusted that the feeling with which he consented to the second reading of the bill would prevent him from being bound to the measure as it stood, or to the alterations which might be made in it.—Mr. SIDNEY HERBERT and Mr. PAGE WOOD expressed regret at the tone which the debate had taken; the latter condemning Mr. Goulburn for introducing idle gossip, to which he should not have condescended to give weight.—Mr. HORSMAN called on Mr. Goulburn to specify for what office he had ever known him a candidate.—Lord John RUSSELL interfered, with a tribute to the political independence of Mr. Horsman, and the unimpeached integrity and public character of Mr. Goulburn.—Mr. GOULBURN admitted that he had spoken under feelings of vexation, and retracted his allusion to what he admitted might have been a very foolish rumour.—Lord John RUSSELL promised to fix an early day for the discussion in committee, and the bill was read a second time.

On Tuesday the 30th, Sir B. HALL brought forward the subject of a *Sinecure Office in the Archdiocese of Canterbury*. He said that the emoluments of the office of Registrar of the Prerogative Court of Canterbury have been from 9000l. to 12,000l. a year; the office itself being a sinecure. The usage has been, that the Archbishop for the time being should nominate the incumbent of the office and two successors. Archbishop Moore appointed his two sons, and they in succession held the office. Dr. Manners Sutton appointed his grandson, the present Lord Canterbury, to the reversion of the office—that grandson being then ten or twelve years old. The late Dr. Howley made a communication to the Government, that, in the conscientious fulfilment of his

duty, he could not fill up the reversion of this sinecure when it became vacant in 1845; and it remained vacant at his death—not the only similar memorial of his pious self-denial. When Dr. Sumner, the present Archbishop, succeeded, he found the reversion of the office vacant, and immediately filled it up, by appointing his son, a young gentleman studying in the Temple. By the 10th and 11th Vict. c. 88, sec. 9, every such person appointed after the passing of the act is to hold office subject to the regulations made by Parliament; and Sir B. Hall desired to know what was the intention of Government with regard to the reversion of this Office.—Lord John RUSSELL assented to the correctness of the above statement. The office in question, he added, was under inquiry, and it appeared to be one that should be either abolished or greatly altered; in which case there could be no claim for compensation.

Mr. HENLEY moved for an address to Her Majesty, praying for a *Revision of the Salaries and Wages* paid in every department of the public service. He referred to the examination directed two years ago by Government, of various portions of the public expenditure, but remarked that official salaries were not included in the investigation, and that there had been no real inquiry into this question since 1821, when important reductions in salaries had been made. There was about four millions of payments every year which did not come under the revision of Parliament. He went through the details of the payments made to Cabinet Ministers, to "non-fighting" members of the military and naval services, to the diplomatic body, and to legal officers of all grades; and he contended that the principle upon which the payments to this mass of officials ought to be regulated should be the price of corn for the time being. But he also thought that great reforms might be made in the constitution of many of the departments, especially in the diplomatic service, in which he considered that both the number and the salaries of the *attachés* might be reduced. Recent reductions in the army and navy departments had affected the lower class of salaries only, and ought to be materially extended; and a large expenditure was kept up in order to preserve the aristocratic character of certain branches of the public service. He was of opinion that Lord John Russell's committee was intended chiefly to defeat the present motion; that the reductions, of which so much parade had recently been made, were in reality insignificant; and he sought to show that, though a number of items had been done away with, no corresponding reduction had followed in the cost of the departments wherein such reduction had taken place. He next went into statistics of pauperism, crime, and labour, to show the distressed condition of the nation; and asserting that the country demanded "more work for less money," he asked the House to compel an inquiry which should lead up to real economical reform.—The CHANCELLOR OF THE EXCHEQUER entered into a variety of statistical details in opposition to the statements and conclusions of Mr. Henley. He quoted from the Marylebone Workhouse accounts, to show that a pauper costs more in 1849 than in 1843, in the proportion of 5s. 9d. to 4s. 4d. He showed that considerable reductions have been made in late years on the numbers of departmental *employés*, and in the aggregate of their cost; in the Excise alone, since 1833, there have been reductions of 2,054 persons, receiving nearly half a million in salaries; in the Pay Office, consolidations which save 10,000*l.* a year. Affirming that the cost of collecting revenue has no fixed relation to its productiveness, he quoted figures to show that the cost of collection is lower for 1850 than in 1848, in all the departments. Lastly, he referred to the salaries of the servants in the great establishments organised by private enterprise—the Bank, the East India Company, &c.—the scale of which is equal to that of the Government establishments. He concluded by saying that there were not above 50,000 persons engaged in the civil service of the country; that there was no nation served by so few people, proportionately to the work they had to do, and served so well; and that the way to ensure heart-service, and not lip-service, was, in every department, to pay poor servants well, treat them with consideration and kindness, and not to discourage them by seeming willing to sacrifice their feelings and

interests.—Colonel SIBTHORP supported the motion in his usual quaint way, and kept the house in a state of merriment during his speech. He said it was very evident there would be no reduction or revision of salaries. He never thought there would. He never expected anything from Lord John Russell's committee above stairs, and the Chancellor of the Exchequer was only showing them how he could get rid of the question. But after all, such motions as that of his honourable friend did some good. It did a great deal of good to stir those people up. There was the grossest job that ever existed, the Comptrollership of the Exchequer, a nice fat place for the noble lord who enjoyed the case and the emoluments of the office, some 2,000*l.* a year. He had tried to get that gross job abolished. He had not succeeded, to be sure. He was refused, of course; but he would try again. Aye, he would. And he would tell the House that, even although he had not succeeded with his motion, he had done some good. The noble lord had never been in his office until that motion had been made. But he was often there now. The gallant Colonel then digressed to his favourite topic, the *evils* of free-trade. He saw the other day an engraved glass decanter, the price of which was sixpence. How could native industry prosper in the face of foreign competition like that? How could men not accustomed to live upon sour krout, but who were used to beef and ale, compete with such productions? And yet they were obliged to contribute to the keeping of the gentlemen upon the Treasury bench, who wallowed in champagne and turtle. It was only by a dissolution that they could expect to have a Government in a different position from that occupied by the present ministry.—Mr. NEWDEGATE argued that, as a rise in prices has ever been deemed a good reason for a rise in salaries, so the converse should hold good, of a reduction in salaries along with the present fall of prices.—Mr. HUMF considered that the motion was not unequal for as a supplement to the committee lately appointed, whose range of enquiry was much too limited. Without assigning any blame to the Government, who had recently done much for economy, he wished that the proposition of Mr. Henley should be adopted. He suggested the appointment of a Board to examine into the qualifications of candidates for places.—Mr. ROEBUCK, approving of the proposed scrutiny, believed that its result would show that the working officials who do the business of the nation are wretchedly paid. He took the case of the Treasury, where thirty-seven persons are employed. Look at any man who has attained honours at either of the Universities and entered the Treasury; he enters there unused to business, as much a learner as in a pleader's chambers, and remains two years with 90*l.* a year. There are four classes; he remains in the first class till he is thirty-three years old, and then obtains 200*l.* he then reaches the second class, in which he may rise to 500*l.* by the time he is fifty. And so he goes on to the fourth class, at the head of which he obtains 1,000*l.* a-year; but not before he is fifty-nine years old. Mr. Roebuck appealed to the House of Commons—looking to the habits of this country, and they must look to those habits—looking to all the exigencies a man must go through before he could fit himself for office—looking to the station he must hold in this great town, to meet others in the position of gentlemen, in the position of life in which he was, to be beyond the ordinary temptations of life—was it to be said that in the highest office of the working people of the state of this country a man must be sixty years old before he could attain to 1,000*l.* a-year, and that that should be considered overpaying in a hard-working service? Would any one say that a lawyer in business might be deemed overpaid if when he began life he hoped at sixty to attain 1,000*l.* a-year? He had heard it stated that the heads of his own profession were overpaid: he at once boldly said he did not think they were. If, then, the heads of that profession were not overpaid, and the heads of the Government were not overpaid, and the subordinates were not overpaid, where was the overpayment? It could only be in the number of persons employed; and he was sure the noble Lord would do well to allow the inquiry, to show that the numbers were not over what they ought to be; for if it be proved that they were more numerous

then they ought to be, the noble Lord would be the first to be benefited by the reduction. Why then should not an inquiry be made? Why should they have what he always considered a subterfuge—the previous question? It could not be said that the present was an inconvenient time, there could not be a fitter time than one of transition for such an inquiry.—Sir ROBERT PEEL agreed with much that had been said by Mr. ROEBUCK, but could not adopt his conclusion; as the proposed inquiry could lead to no practical result, the salaries of no class of the public servants being greater than what their services earned and the public interest required.—Mr. CORBEN opposed the motion; because, if he accepted the reduction of price as a plea for a reduction of salaries in public offices, he would be party to a proposition for a general reduction of wages throughout the country; a measure, uncalculated for, impracticable, and therefore absurd. So far from a reduction of price leading to a reduction of wages, the tendency is the other way; a diminution of price leading to increased demand, increased employment, and increase of wages. He admitted that the time is come when we should endeavour to deal with the non-effective branch of the military service by preventing its extension. Considerable advantages have generally resulted from Committees: but he would vote against this motion because he objected to the reduction of the salaries of humble clerks and labourers in the public departments; because he could not be a party to casting a blemish on free trade by making it the pretence for inflicting a wound on any class of the community; because he was unwilling to make it appear that the country was less able now than before the establishment of free trade to pay its officers and servants; because he was not disposed to acknowledge, as a consequence of free trade, that the people are in the enjoyment of fewer comforts than before; and finally, because he could not admit that the people are not entitled to the full benefit of the advantages which free trade gives them.—Mr. DISRAELI said that there was a general cry over the country for reduction of burdens which were felt to be grievous and intolerable; and maintained that this arose from the distress produced by the operation of free trade. He defended the policy recently adopted by the Protectionist party; and in reference to the charge that it was inspired by a new-born economy, he boasted that to the Tory party the nation was indebted for all the great financial reforms which had been effected since the declaration of the independence of America up to the Reform Bill. Financial reform, he asserted, had that night received a fatal blow. The proposal of Mr. HENLEY was to deal with an amount of seven millions a half, and might have effected a reduction of a million a-year. But the great financial reformers had decided that it was not to be. The present distress in the country was not the condemnation—that was coming—of the new commercial system, but one of its consequences. He did not intend to bring on a specific motion for a re-consideration of our financial system, because he did not think that Parliament was the place for settling the question. Experience could only be learned by affliction; and as soon as the people had, by bitter experience, arrived at a proper understanding of its position, the nation itself would take the settlement of the question into its own hands.—Lord JOHN RUSSELL said that this motion was clearly one of censure on the Government, inasmuch as it asked Her Majesty to direct that to be done which Government was already doing. The labouring classes were in a better position than before a free-trade policy was adopted. The motion was part of an avowed system of tactics for bringing back the duties on food, and he believed that no such proposal would for a moment be listened to by the country. On the division the numbers were, for the previous question 269, against it, 173: majority against the motion, 96.

On Wednesday the 1st of May, the House, on the motion of Sir G. GREY, voted an address of congratulation to Her Majesty on the birth of a prince.—The House went into Committee on the *Benefices in Plurality Bill*.—Mr. HUME moved, as an amendment on the first clause, the omission of the qualifying words, so as totally to prohibit the holding of pluralities; which,

after some discussion, was negatived by 166 to 53.—Mr. Sidney HERBERT then moved an amendment, extending the prohibition against plural holding not only to benefices situated beyond a certain proximity to one another, but also to those of which one at least should not fall beneath the annual value of 100*l.*; which was passed by a majority of 166 to 16.—The clause as so amended was adopted, as were several succeeding, without opposition, the one extending the operation of the bill to Ireland being withdrawn by consent.

The debate on the bill for the *Abolition of Attorney's Certificate Tax* was resumed on Thursday the 2nd. Sir F. TESSIGER supported the motion for leave to bring in the bill, entering into elaborate statistics in its favour, and contending that the tax originated in a spirit of hostility to lawyers.—The CHANCELLOR of the EXCHEQUER opposed the bill on the ground that as many taxes had been already removed as the state of the revenue would admit of. Leave, however, was given to bring in the bill, by 155 to 136; a majority of 19 against the government.

The intentions of the Government with respect to the *Factory Question* were announced on Friday the 3rd, by Sir George GREY, in answer to a question by Lord Ashley. He proposed, he said, to introduce a measure in conformity with the spirit of the act of 1847, though not with its letter. At present, the factory may work between the hours of half-past five in the morning and half-past eight in the evening; the ten hours to be included within that time. He proposed to limit the working of the factory between six in the morning and six in the evening, and to deduct from that time an hour and a half for meals; making the time for all hands ten hours and a half daily. On Saturday, however, he would take the eight hours from six till two, omitting half an hour for breakfast, and making in the whole sixty hours in the week, in lieu of fifty-eight hours as at present. Lord JOHN MANNERS and Mr. EDWARDS protested against this, or any compromise which would add two hours to the toil of the labourer.—Mr. HUME said he had always deprecated interference between master and workmen, and that he regretted to find the government so weak as to countenance so vicious a principle.—Several Irish measures—the *Distressed Unions Advances Bill*, the *Parliamentary Voters Bill*, and the *Court of Chancery Bill*, were considered and forwarded in committee, with little discussion. A small episcopal skirmish occurred on the *Franchise Bill*. Lord CASTLEREACH called on Mr. W. J. FOX to explain an expression he had used at the Reform conference—that their ultimate object was “a social revolution,” which, he (Lord Castlereagh) presumed, meant a socialist revolution.—Mr. FOX said, that what he meant, was not a revolution which had anything to do with bloodshed, plunder, or the destruction of venerated and useful institutions, the redistribution of property, or any such absurdities: but a change which should put talent, integrity, and legitimate influence in the place of corruption and of intimidation in the representation of the people in that House. This explanation was received with loud cheers.

On Monday the 6th, on the Report of the *Australian Colonies Bill* being brought up, Sir W. MOWATSWORTH moved its re-committal, in order to take the sense of the House on his scheme for depriving the Colonial Office of power to interfere with the local administration of the Australian colonies, and for giving those colonies the uncontrolled management of their own affairs. “I propose,” he said, “virtually to transport the colonial office, with all its powers, to the colonies. For instance, my object would virtually be accomplished if the noble earl the secretary of state for the colonies were transported to New South Wales and made governor of that colony, or if the honourable gentleman the under-secretary of state for the colonies were made lieutenant-governor of Western Australia, and both of them were, as far as their respective colonies were concerned, to retain all the powers of the colonial office. Without doubt, we should deeply grieve to lose the valuable services of the noble earl and the honourable gentleman in Downing Street; but I am satisfied that they would render far greater services to the Colonial empire in the colonies to which I have referred.” He concluded.

by saying that there was a striking analogy between the government of the United States and that which ought to be the system of government in our colonial empire. "For," he said, "the United States form a system of states clustered round a central republic; our colonial empire ought to be a system of colonies clustered round the hereditary monarchy of England. The hereditary monarchy should possess the powers of government, with the exception of that of taxation, which the central republic possesses. If it possessed less, the empire would cease to be one body politic; if it continue to possess more, the colonies will be discontented at the want of self-government, and on the first occasion will imitate their brethren in America." The motion, having been supported by Mr. Adderley and Mr. Gladstone, and opposed by Mr. Labouchere and Sir George Grey, was negatived by 165 to 42.

Mr. GLADSTONE then brought forward his proposal of an *Ecclesiastical Constitution for the Australian Colonies*. He contended that the system of established religion does not prevail in Australia for any useful purpose. The church is simply, like the sects, a stipendiary church; although the power of appointment to benefices lies with the Governor. There are no ecclesiastical courts for the maintenance of discipline; all discipline must emanate from the Prærogative Courts of the Province of Canterbury, at the other side of the world. The Bishop is powerless, unless he act with arbitrary despotism, and without any forms of judicial procedure at all and if he do this, the right of appeal to home is a right upon paper alone. Mr. Gladstone proposed, inasmuch as the Colonial Church is thus excluded from the rights and privileges of establishment to untie its hands from all disabilities, and let it fall back on its original freedom. With this object he moved that a clause be added to the bill enacting that the bishops, clergy, and laity, in communion with the church, in the several colonies, shall have power to meet from time to time and make regulations for the conduct of ecclesiastical affairs. — Mr. LABOUCHERE opposed the motion, observing that, whatever might be the mover's intentions, the effect of the clause would be the establishment of an ecclesiastical synod, which would have the power of making laws without the sanction either of the colonial legislature or the imperial parliament. After a debate in which the motion was supported by Mr. Hope, Mr. Page Wood, Mr. Randall Palmer, and Mr. Walpole, and opposed by Mr. Anstey, Mr. Roebuck, Sir G. Grey, the Attorney-General, and Mr. Hume, it was negatived by 187 to 102.

On Tuesday the 7th, Mr. EWART moved the *Repeal of the Advertisement Duty*; and briefly supported his motion by the usual arguments—the obstructive operation of the tax to transactions of business, the affairs of life, and the diffusion of religion and knowledge—its injustice and inequality, and the paltry amount of its produce. It was seconded by Mr. Milner Gibson, and opposed by the CHANCELLOR of the EXCHEQUER, chiefly on the ground that the finances could not bear any remission of taxation beyond those he had announced in his financial statement for the year. It was lost by 208 to 39.—The *Sanitary Condition of the Journeymen Bakers* was then brought before the House by Lord R. GROSVENOR, who moved for a select Committee to inquire whether any measures can be taken to improve it.—Lord Dudley STUART seconded the motion, observing that among the 16,000 persons interested in its fate, a great number are mere lads.—Sir GEORGE GREY said, that the state of the facts was well known and called for no further inquiry; that the evils and hardships of the journeymen bakers were not denied; but that the only legitimate redress was an arrangement between the employers and their workmen.—Mr. STAFFORD proposed that this rejection of the respectful supplications of a numerous and industrious body—this sacrifice to the cold fictions of political economy—would tell at future elections. Such treatment of the people might be politically philosophical, but was socially unsafe. Mr. BRIGHT opposed the motion; quoted articles from the *Bakers' Gazette and General Traders' Advocate*; and asked the House to judge whether there was anything in the projects, which Robert Owen or the French

Socialist leaders had put forward, that more partook of Communism than those articles. He would be ashamed to be the mouthpiece of a brawny, stalwart race of men of Scotchmen too—who notwithstanding they have sufficient intelligence to make their cause known to the public through the medium of a newspaper, come to the House to remedy their grievances.—Mr. GEORGE THOMPSON repudiated Mr. Bright's doctrine, and felt bound to separate from him altogether if he had no better arguments for his principles than these.—Mr. SHARMAN CRAWFORD was also in favour of inquiry. The House negatived the motion, by 90 to 44.

Mr. ANSTAY'S *Irish Fisheries Bill*, the principal object of which was to place in the hands of a Board of Commissioners the regulation of all the Irish fisheries, was lost on Wednesday the 8th, on the question of the second reading, by a majority of 197 to 37. The Bill received only a qualified support; and Sir W. SOMERVELL, believing legislation on the subject to be necessary, suggested the introduction of another bill, less objectionable in its details.—Mr. LACY, in moving the second reading of his *Extramural Interment Bill*, objected to the plan proposed by the Board of Health and embodied in the Ministerial Bill. His proposal was, that the Railway Companies should be empowered to buy waste lands on the margins of their railways, and establish cemeteries on them. Mr. LABOUCHERE opposed the bill on the single ground that it was contrary to all principle to allow Railway Companies to embark in traffic different from their legitimate business. The bill was thrown out by 123 to 4.

On Friday, the 10th, in the Committee on the *Manchester Rectory Division Bill*, Mr. GOULBURN moved that the Salaries of the Canon should be 750*l.* a-year, instead of 600*l.* The motion was opposed by Mr. Milner Gibson and Sir George Grey, the matter having been fully considered by the Select Committee; and negatived by 193 to 60. The remaining clauses were agreed to.—The CHANCELLOR of the EXCHEQUER stated the substance of his intended *Stamp Duties Bill*, and intimated that on Monday he should move for a Committee of the whole House on the subject.

The third reading of the *Parliamentary Voters (Irish) Bill* was opposed by Lord Bernard, Mr. Napier, Lord Jocelyn, Mr. Disraeli and others, on the ground of its democratic tendencies, and of the danger, by reducing the franchise to 8*l.* of throwing it open to classes liable to evil influences, and unfit to be entrusted with it. Its principal supporters were Mr. Sheil, Sir James Graham, and Lord John Russell. Sir James GRAHAM'S speech was remarkable for the broad ground on which he supported the measure; alluding to the objection that the Bill would unduly enlarge the constituent body, he said, "I do not object to it on that ground. I must say, considering the increase of the democratic element in our institutions, that I see the greatest danger in erecting an immense superstructure upon a narrow electoral basis. Sir, if that superstructure cannot stand upon an extended electoral basis, I am sure that a narrow basis cannot long sustain it. On principle, therefore I cannot object to this bill as it extends that basis. Allusion has been made to what has lately been witnessed elsewhere, and I think it is not good policy to neglect examples which are patent and before our eyes. If I were to mention what in my humble judgment was the immediate cause of the fall of the kingly power of Louis Philippe, it would be, that he attempted to maintain the semblance of representative government with a constituent body, which, as compared with the great bulk of the population, was dangerously narrow, and utterly inadequate. What was the consequence? A tumult arose in the metropolis, and the Government was overthrown without a struggle. His power was buried in this ruin; and the consequence has been, that for the last two years the nation has been plunged into anarchy, and property and life have been rendered insecure. But what is the return of the wave, and the reaction from that state of things following the universal extension of the suffrage in France? The return is a desire to base the suffrage, restricted as compared with universal suffrage, on household suffrage, on permanent residence, and the payment of local taxation. And, I am sure that that is a safe

basis on which to test the franchise." These remarks were loudly cheered throughout. The result of the division was that the third reading was carried by 264 to 186, and the bill passed.

On Monday the 13th, on the third reading of the *Australian Colonies Bill*, Mr. GLADSTONE moved an amendment, in substance, that legislation on the subject should not proceed further till the people and the authorities in the Colonies were enabled to consider the provisions of the measure as they stand, and the several proposals for varying them. He objected to the bill on four special grounds:—1. The constant interference of the authorities at home with the management of local Colonial affairs; 2. The power given to any two—a minority—of the five Colonies to erect a General Assembly able to override the Legislatures in all the Colonies; 3. The framing of the constitution with a single Legislative Chamber; 4. The refusal to deal with the elective franchise. And he protested against imposing on Parliament a management of enormous expense and responsibility, against the will and not in accordance with the wants of the colonists.—Mr. ROEUCK seconded the amendment.—Mr. HAWES deprecated postponement, insisting that the colonists had sufficiently considered their future constitution, and were generally satisfied with the measure proposed to them.—Mr. HUMBLE felt so much anxiety to remove the baneful influence of the Colonial-office, that he would not consent to postpone for another session the gift of a constitution to Australia. It might not be altogether good, but was the best that could be hoped for under the auspices of the department, and contained an element of self-rectification in the power given to the colonists to modify their constitution hereafter.—The other speakers were, for the bill, Mr. Anstey, Mr. Aglionby, and Mr. Macgregor; for the amendment, Mr. Denison, Mr. Scott, Mr. Simon, and Mr. Adderley.—The amendment was negatived by 266 to 128.—Mr. ROEUCK moved the insertion of a clause extending the principle of a Federal Assembly to Canada, which he withdrew without a division.—Mr. AGLIONBY moved a clause including New Zealand, which was negatived by 222 to 82. The bill then passed.

On the motion of Lord ASHLEY, the House went into committee *pro forma* on the *Factories Bill*, in order to have the clauses of his lordship's bill withdrawn, and the Government measure substituted. The formality was completed after some discussion, during which a promise was elicited from Sir G. Grey that an early day should be fixed for recommitting the bill, so as to have the ten-hour principle fairly debated and disposed of.

On Tuesday the 14th, Mr. GRANTLEY BEKKLEY moved for a committee of the whole House to take into consideration the laws relative to the *Importation of Foreign Corn*. He entered largely into the agricultural question, arguing that the only remedy for the existing distress was a return to the principle of protection.—Colonel DUNNE seconded the motion.—A long debate ensued; the motion being supported by the Marquis of Granby, Col. Sibthorp, Mr. Miles, Mr. Sandars, Mr. Hewes, Mr. Disraeli, and Mr. Newdegate; and opposed by Mr. Hastie, Mr. Slaney, Sir B. Hall, Mr. Mitchell, Mr. Wilson, Mr. Labouchere, and Mr. Cobden.—Mr. DISRAELI, while he voted for the motion, objected to it as too limited in its character, embracing the interest of one class only, instead of the interests of all, and he disclaimed any desire for an immediate return to protection. However he might differ from the policy in 1846, he respected the gravity of that policy and of its great contingencies which it involved. He did not wish to adopt the legislature pass laws, and then, like a capricious tactics, within a year and a half turn round and repeal believed and done. His motion was lost by 298 to 184, listened to by day, the 16th, the *Greek Question* was were, for these the House by Mr. Milner Gibson, who majority again as to the departure of the French.

On Wednesday Lord PALMERSTON said, "It is well motion of Sir the French Ambassador went yesterday to London personally to be the medium of communication between the two Governments as to these Bill.—Mr. out I trust nothing can arise out of these clause, there is likely to disturb the friendly relations totally to the two countries."

The House went into Committee on the *Marriages Bill*, having previously negatived, by 42 to 49, a motion by Mr. DIVERT, against proceeding with the bill, which he characterised as "scandalous and immoral." In the Committee, Sir F. THESIGER moved an amendment to prevent the bill from having a retrospective effect, which was negatived by 111 to 88. Another amendment to exclude Scotland from the operation of the bill was moved by Mr. FOX MAULE, who affirmed that the measure was adverse to the wishes and feelings of the whole Scottish community. The LORD ADVOCATE admitted the general truth of this statement, but contended for the necessity of making the law uniform. He gave it as his professional opinion, that marriage with a deceased wife's sister is not forbidden by the existing law of Scotland; and Mr. COCKBURN mentioned a case where an Englishman, divorced and re-married in Scotland, had been convicted of bigamy in England, and sent to the hulks for a marriage which the Scotch lawyers assured him was legal. Mr. Fox Maule's amendment was negatived by 144 to 137.

On Friday the 17th, further explanations were demanded by Mr. DISRAELI, on the subject of the *Recal of the French Ambassador*.—Lord John RUSSELL said, in answer, that Lord Normanby had received a statement from General de la Hitte that in consequence of the ill-treatment of France by the government of this country, he had thought it necessary to recal M. Drouin de Lhuys; at the same time, as M. Drouin de Lhuys had been sent over for the special purpose of effecting an arrangement on the Greek affair, and the affair had terminated, it was natural that he should return home. Lord John Russell regretted this feeling on the part of the French government, and felt convinced that if M. Gros had not, for some unaccountable reason, suddenly given up his mission, there would have been ample time for the arrival of the despatch of her Majesty's government in Athens, and this misunderstanding would not have occurred. Sir John WALSH asked whether, when Lord Palmerston made his statement the preceding night, he had General de la Hitte's letter to the French ambassador in his possession?—Lord John RUSSELL said, that when Lord Palmerston made his statement, he had not that letter in his possession.—Mr. ROEUCK observed, that the ordinary form in such cases, is, to communicate the note by reading it; if M. Drouin de Lhuys did so, Lord Palmerston must have been in full possession of the facts when he made his explanatory statement to Mr. Milner Gibson.—Lord John RUSSELL said that M. Drouin de Lhuys read the letter, but communicated no copy of it; "and my noble friend, in his statement to the house yesterday, gave what was his impression of the case."—Sir John WALSH: "Still, he was in full possession of the contents of the note."—Lord John RUSSELL: "No doubt; at the same time, the French ambassador accompanied it with such observations as he thought proper to make. A very long interview took place."—In reply to Mr. ANSTAY, Lord John RUSSELL said, "There has been no order sent recalling Lord Normanby, and I trust no such order will be found necessary." Lord Palmerston, who had been absent during these questions and answers, made his appearance in the House, when, by the rules of the House, it was too late to question him on the subject.

Lord John RUSSELL introduced a bill to abolish the *Viceroyal Office in Ireland*. The bill gives power to the Queen to abolish the office by order in Council; to appoint a fourth Secretary of State, chargeable like the others with any of the functions of a Secretary of State, but in practice with Irish affairs: some of the functions of the Lord-Lieutenant will be transferred to the Secretary for the Home Department, others be given to Her Majesty in Council. The Lord Chancellor of Ireland will be President of the Privy Council in Ireland.—The bill was opposed by several Irish members, but leave was given to bring it in by 107 to 13.

After the adjournment for the Whitsun holidays the House met on the 23rd. Lord PALMERSTON entered into explanations relative to the difference with France arising out of the Greek question. He defended the truth of his statement on the preceding Thursday; the fact being, as he had said, that M. Drouin de Lhuys had not been recalled, but rather ordered to return;

Paris, and had gone charged with documents and explanations for his government of a conciliatory tendency. After giving a narrative of the whole negotiations, Lord Palmerston expressed his regret that any misunderstanding had arisen, disclaimed any wish to slight the mediation of France, and trusted that good feeling would speedily be restored. Some comments on these explanations were made by Sir J. Walsh, Lord Mahon, the Hon. J. Smythe, Mr. Drummond, and Mr. Disraeli. Lord John Russell replied to Mr. Disraeli's observations, vindicated the sincerity of his own statements on a previous evening, and expressed his desire and hope that the misunderstanding should cease. The subject then dropped.

Mr. ANSTAY moved a resolution to enforce the existing excise laws prohibiting the fraudulent adulteration of coffee. The CHANCELLOR OF THE EXCHEQUER declared he would not undertake a vexatious and ineffectual crusade against the coffee-dealers. The motion was withdrawn.—The house went into a Committee of Supply on the Naval Estimates, and several sums were voted. The vote of 100,000*l.* for Pirates' Head Money passed, after some opposition from Mr. CORDEN, Mr. BAIGUT, and Col. THOMPSON.

On the 24th Mr. BLACKSTONE moved a resolution for repealing the 10 per cent addition on the *Excise and Windows Duties*, which was negatived by 130 to 65.—In reply to a question from Lord C. Hamilton, Lord PALMERSTON denied that the Sardinian aggressions on the Austrian dominions in Italy had been suggested by Lord Minto.—In the Committee of Supply various miscellaneous sums were voted. A long discussion took place on the expenditure connected with the New Houses of Parliament, objections being made to various items of it. On one article, a sum of 1000*g.* to decorate the peers' private room with paintings, a specific motion was made by Sir de Lucy Evans; and on a division this sum was disallowed by a majority of 91 to 75.

PROGRESS OF BUSINESS.

House of Lords.—April 25th. Titles of Religious Congregations Bill, Regulation of Pleadings Bill, and Pirates' Head-Money Bill, passed through Committee.

20th.—Fisheries in Scotland Bill read a first time.—West India Appeals Bill read a second time.

30th.—Process and Practice (Ireland) Bill read a second time.—West India Appeal Bill went through Committee.—Titles of read a third time.

May 2nd.—Address to the Queen on the birth of a Prince.—West India Appeals Bill read a third time.

3rd.—Pirates' Head-Money Bill read a third time and passed.—Indemnity Bill read a second time.

6th.—Administration of Justice Improvement Bill read a second time. Appeals from Ecclesiastical Court Bill read a first time.

7th.—Annual Indemnity Bill read a third time and passed.—Process and Practice (Ireland) Bill reported.

13th.—Distressed Unions Advances (Ireland) Bill read a second time.

14th.—Judgments (Ireland) Bill, and Estates Leasing (Ireland) Bill, read a second time.

16th.—Distressed Unions Advances (Ireland) Bill read a third time and passed.—Sunday Trading Prevention Bill reported.

17th.—Defects in Leases (Ireland) Bill read a second time.—Parish Constables' Bill read a third time and passed.—Adjourned till Monday the 27th.

27th.—The House met after the recess. The Masters Jurisdiction in Equity Bill, the Estates Leasing (Ireland) Bill, and the Judgments (Ireland) Bill, passed through committee.—The Defect in Leases Amendment Bill was read a third time and passed.

House of Commons.—April 25th. Australian Colonies Bill passed through Committee. Securities for Advances (Ireland) Bill read a second time.—Fees (Court of Chancery) Bill read a first time.

20th.—Distressed Unions Advances (Ireland) Bill reported.—Stamps on Marine Insurance, Mr. M'Gregor's motion for abolition negatived.

29th.—Savings Bank Bill read a first time.—Ecclesiastical Commission Bill read a second time.—Naval Prize Balance Bill read a third time and passed.—Defects in Leases Bill read a second time.—Court of Chancery Bill read a first time.

30th.—Public Salaries, Mr. Hensley's motion negatived.

May 1st.—Address to the Queen on the birth of a Prince.—Landlord and Tenants' Bill read a second time.—Railway Traffic Bill thrown out on second reading.—Benefices in Plurality

Bill in Committee. Parish Constables Bill read a third time and passed.—Schools (Scotland) Bill read a first time.

2nd.—At torneys' Certificate Duties Abolition Bill brought in and read a first time.—County Court Extension Bill reported.

3rd.—Factories Bill, statement by Sir G. Grey.—Distressed Unions Advances Bill, and Court of Chancery (Ireland) forwarded in Committee.

6th.—Australian Colonies Bill reported; Sir W. Molesworth's motion for its recommitment negatived; Mr. Gladstone's motion to add an Ecclesiastical clause negatived.—Distressed Unions Advances (Ireland) Bill read a third time and passed.—Public Health (Ireland) Bill read a second time.—Petty Sessions (Ireland) Bill read a first time.

7th.—Repeal of Advertisement Duty, Mr. Ewart's motion negatived.—Journeyman Bakers, Lord R. Grosvenor's motion for a Committee negatived.

8th.—Mr. Lacy's Extramural Interment Bill, and Mr. Anstey's Irish Fisheries Bill thrown out on second reading.—Borough Gaol Bill read a second time.

9th.—Police Improvement (Scotland) Bill, Court of Sessions Bill, Railway Abandonment Bill, and Elections (Ireland) Bill, passed through Committee.—Benefices in Plurality Bill read a third time and passed.—Weights and Measures Bill read a second time.

10th.—Stamp Duties Bill withdrawn for a new one.—Manchester Rectory Division Bill passed through Committee.—Parliamentary Voters (Ireland) Bill read a third time and passed.—Ecclesiastical Residences (Ireland) Bill, Churches and Chapels (Ireland) Bill, Clergy (Ireland) Bill, and Sunday Fairs Prevention Bill read a first time.

13th.—Australian Colonies Bill read a third time and passed.

14th.—London and Watford Spring Water Company Bill, and Metropolitan Waterworks Bill, thrown out on second reading.—Agricultural Protection, Mr. Granley Berkeley's motion negatived.—Municipal Corporations (Ireland) Bill read a first time.—Regulation of Deeds (Ireland) Bill reported.—Borough Court of Record (Ireland) Bill, read a first time.

16th.—Mr. Witley's Marriage Bill, considered in Committee; amendments by Sir F. Theobald and Mr. Fox Maule negatived.—Borough Bridges Bill read a first time.

17th.—Stamp Duties (No. 2) Bill read a first time.—Lord Lieutenant of Ireland Abolition Bill read a first time.—Improvement of Land Advances (Ireland) Bill, and Alterations in Pleading Bill read a second time.—Sunday Fairs Prevention Bill read a third time and passed.—Adjourned till Thursday the 23rd.

23rd.—Committee of Supply on Naval Estimates.—Stamp Duties (No. 2) Bill, Exchequer Bills Bill, and Municipal Corporations (Ireland) Bill, read a second time.

24th.—Swansea Dock Bill read a third time and passed.—Committee of Supply on Miscellaneous Estimates.—Registration of Deeds (Ireland) Bill read a third time and passed.

27th.—The Chester and Holyhead Railway Bill was read a third time.—The River Lea Trust Bill was read a second time.—The House in Committee of Supply.—The Court of Chancery (Ireland) Bill, and Petty Sessions (Ireland) Bill, read a second time.—The Municipal Corporations (Ireland) Bill, and the Vestries and Vestry Clerks Bill, passed through Committee.—The Court of Prerogative (Ireland) Bill was read a second time.

THERE was a great *Protectionist Demonstration* in London on the 7th. The Duke of Richmond and ten other peers, with upwards of forty Members of Parliament, a crowd of landed proprietors, and delegates from local Protectionist societies in the provinces, met in the Crown and Anchor Tavern, to "consult on the present alarming position of agriculture and other native interests." The speakers, who were principally farmers, gave expression to very violent feelings against free trade. Mr. Booker declared himself ruined by protection, but offered to subscribe 1000*l.* to secure the return of Protectionist candidates. Mr. Allnutt affirmed that free trade had shaken the loyalty of the farmers. A Mr. Chowler, a Nottinghamshire farmer, dwelt on the spirit that was rising among the farmers and labourers. "Hitherto," he said, "the position we had held has been one of peace and quiet; we were not agitating men: but if labourers were to congregate—they know the cause, and they do not blame us—is it likely that we shall mount our horses and come forward to stop our labourers from what we all know to be their just rights? If they are industrious and steady, they have the right to have the means of living comfortably; and are we to mount our horses to stop them?" (Here several individuals present called out valiantly 'No! No!' 'I won't,' &c.) "Mr. Cobden says," continued Mr. Chowler, "if you attempt to reintroduce protection, what he will do, and what will become of the landlords.

But I say, that if the landlords stick to us we will stick to them." (At this, the whole assembly rose in a body and cheered vehemently; Lord Stanhope's excitement rose to the pitch of giving the speaker a slap on the back in token of approbation.)—The next speaker, Mr. Bull, was equally energetic; alluding to an alleged observation of Mr. Cobden's at Leeds, that, if the landlords put a single shilling of fixed duty on corn, he would raise such a tumult as would shake the kingdom to its centre, Mr. Bull exclaimed—"The sooner the better! No worse can come." In the name of the tenantry of the country, he declared they were prepared "to risk all, to dare all. They would be prepared, in the hour of the country's peril, to take those terrible steps, most frightful to imagine, which necessity was driving them to contemplate." Here, again, the assembly rose and uttered tremendous cheers, at the close of which a gentleman on the platform proposed three groans for Sir Robert Peel "the arch enemy of the human species;" but the meeting, with all its excitement, was not prepared for this, and the call was not answered. Mr. Caldecott said that Lord John Russell was a public destroyer; and Mr. Higgins called on Government to redress their wrongs—if not, they would "fight for it." A good deal more hot-blooded language was used and responded to by loud acclamations. The Noble Chairman counselled moderation; and resolutions somewhat moderate in tone were passed, and a deputation appointed to represent to the Prime Minister the state of the country.

On the 11th of this deputation, headed by Mr. G. F. Young, the Chairman of the National Association for the Protection of British Industry, had an interview with Lord John Russell, who heard them and replied to them with great attention and courtesy, making them aware at the same time that his mind was made up, and that he did not think himself called on to advise Her Majesty to dissolve the Parliament, or to take any other step on the subject. Mr. Young made a sort of apology for the strong language which had been used, and which was not to be held as conveying the general sentiments of the meeting. Lord John said, that on such occasions great latitude of speech must be allowed, and that though there had been language somewhat stronger than necessary, the Duke of Richmond had gone as far in censuring it, as he himself would have done.

NARRATIVE OF LAW AND CRIME.

Two juvenile offenders were brought before the Middlesex Sessions on the 25th April; the one, Thomas Smith, aged fourteen, and the other, James Cook, aged ten. They had stolen twelve wine glasses. The judge said he had obtained the history of the younger boy, Cook, which would illustrate the operation of *Summary Punishments*. He found that though only ten years old, he had, during the last twelvemonth, undergone seven sentences of imprisonment and six whippings; yet here he was again. He had no home, and no means of subsistence. The Court could not, as the law at present stood, send him to Parkhurst, where he would have received an education which would have enabled him to have earned his future livelihood; and there was no other course than to send him again to a common prison. The sentence, therefore, was that each prisoner should undergo imprisonment and hard labour for six months.

On the 25th of April an application was made, in the Queen's Bench, for a *Criminal Information* against the Plymouth and Devonport Journal, for an alleged libel against Miss Sellow, the superior of the Sisters of Mercy, residing in Devonport. These ladies had presented a service of communion plate to the church of Stoke Damerel; and the above newspaper had stated that the plate would be paid for out of 14,000*l.* which the Sisters of Mercy had received from the public. They had complained to the proprietor, and he had answered that if they assured him that the statement was unfounded, he would immediately express his satisfaction in his paper. They conceived it necessary, however, to ask the protection of the Court. The application for a rule was granted; but the rule was subsequently discharged, by mutual consent, on payment of costs.

At the Mansion House on the 26th April, Maria Biscomb was committed to prison for three months with hard labour for obtaining five shillings from a gentleman by the *Feigned death of a Child*. This woman was well known as a notorious swindler, and had been continually in prison. On one occasion she applied to a lady for assistance, representing that she had a child lying dead, and was unable to bury it. The lady visited her house, and saw apparently the body of a child covered with a cloth. She gave the prisoner 10*s.*, but on going to a window she heard a voice from beneath the cloth exclaim, "Mother, how long am I to be dead?"

A case at the Thames Police Court on the same day produced a startling disclosure of *American Law respecting Persons of Colour*. A black man named Bowers claimed a balance of wages from Captain Waddington, master of the barque Mary Anne; and the claim was resisted on the ground that Captain Waddington had paid 20*l.* for the man's keep while he remained in gaol for two months at Charleston. It turned out that the vessel, on arriving at Charleston, had been boarded by the authorities, and Bowers taken out of her and lodged in prison, where he was kept all the time she remained in the harbour, simply because he was a man of colour. By the law of the State of South Carolina, it seems, no man of colour, not belonging to the State, is allowed to be at large; and all coloured men who come into the State are put in prison. Men found on board of vessels are taken out of them and kept in prison till the vessel sails; the master being charged so much a day for their support. The magistrate adjourned the case, and on the 29th expressed his opinion that, as the Captain, who was aware of the practice, had taken Bowers with him without any stipulation as to deduction from his wages in case of his being put in prison, Bowers was entitled to his full wages; and gave judgment accordingly. This matter, it will be observed, was brought before the House of Commons on the 29th of April.

The Court of Queen's Bench having, in the *Gorham Case*, refused the Bishop of Exeter's application to prohibit the Court of Arches from giving effect to the decision of the Privy Council, an application was made on the 2nd instant by the Bishop to the court of Common Pleas to grant a rule similar to that which the Court of Queen's Bench had refused. The Court gave judgment on the 27th. It was similar to the previous judgment of the Queen's Bench; deciding that the appeal from the Court of Arches was to the Judicial Committee of the Privy Council, and therefore refusing the application of the Bishop of Exeter.

An instance of the *Punishment of Crime in the Act of its Perpetration* occurred at Hove, near Brighton, on the 27th of April. On the previous day, a man entered the Ship Inn, ordered some refreshment, and engaged a bed for the night. Early next morning he was found lying in the street, under the inn windows, bleeding and insensible; and died in a few hours, never having spoken. A bedfellow filled with the landlord's bedding was lying by his side, and it appeared that he had fallen while endeavouring to escape with his booty. An inquest was held on his body, but nothing was known of his name or residence.

A well-dressed man, named Charles Stanley, was charged at Bow Street on the 29th April with defrauding Henry Louton of 10*l.* The complainant had answered *Advertisements* "for a Clerk and Messenger," and had consequently met Mr. Stanley, who took him into his employment under a written agreement, and required him to deposit 10*l.* in his hands as a security. The complainant soon found he had no real duties to perform, and that he could neither get the stipulated salary, nor restitution of his 10*l.* The magistrate said he could do nothing in such a case, the only recourse was to a County court. Such scandalous frauds were constantly committed, and it was impossible for the law to protect people who would not take the slightest pains to protect themselves by a little previous inquiry. The prisoner was consequently discharged amid the execrations of the people present. It was stated that a young man was in the Court who, duped by one of these advertisements, had come with his wife and children from a distant part of the country, had exhausted his entire means by paying his travelling expenses and

the deposit exacted from him, and was now quite destitute.

Charles Jopling was charged at the Marylebone police court, on the 30th of April, with having *Administered Chloroform* to Mary Ann Elton, with a criminal intent. Jopling was the girl's suitor, and on the previous evening she accompanied him to a singing-room at a public house near the Regent's Park, her brother-in-law being of the party. They walked homewards together, and, the brother having left them, he led her down a yard, and after attempting to take liberties with her, poured the contents of a phial on his handkerchief, which he applied to her nose and mouth. She called out, and gave him in charge to a policeman who came up. The prisoner was remanded upon bail, to afford time for further inquiry. On the 7th, the case was proceeded with, when, to the surprise of all present, a certificate was produced of the marriage of the complainant and the girl that morning at the church of St. Mary-le-Strand. Some of the girl's relatives came forward and alleged that she had been entrapped into this marriage, and she was closely questioned by the magistrate. But she steadily persisted in saying that it was with her free will, and added, looking lovingly at her bridegroom, "Oh, I am quite sure he will use me well, and that we shall be happy and comfortable." It was still insisted, however, that the marriage was a conspiracy to defeat the ends of justice; and the prisoner was again remanded for a week.

A young girl, named Catherine Morris, the daughter of a farmer at Clapham, threw herself into one of the basins in Trafalgar Square, on the night of the 30th of April; a passer-by saw the act, and managed to get her out when life was almost gone. The young woman was found to be *Insane from Religious Fanaticism*; she said she had been baptising herself in the pool.

A case of *Heartless Seduction* came before the sheriff's court, on the 2nd of May. Joseph Payne, a tradesman at Bedford, was left a widower with seven children, the eldest of whom was Emma, a girl of sixteen, on whom the care of his family devolved. Another tradesman of the town, Samuel Plowman, paid his addresses to the girl, and visited her with her father's sanction, professing the most honourable intentions. This continued for nearly two years, till the father discovered that Plowman had effected his daughter's ruin, and in December last she gave birth to a child. For some time the seducer promised to repair the injury by marriage; but, as he evaded fulfilment, the father urged him to keep his word, and received in answer the following letter:

"January 29, 1850.

"Sir—In answer to your request of last night, concerning either from me, or trying other means, I suppose by that you mean to bring it into court. If you have any regard for your daughter, you would not think of such an exposure. As it regards marrying, I decidedly shall not, and for this reason, I am too fond of a single life ever to think of such a thing. Without any further trouble on your part or mine, I propose to pay two-and-sixpence a week for the child.

"I am, Sir, yours,

"SAMUEL PLOWMAN.

"P. S.—An answer to-morrow, in writing, will oblige.

"To Mr. Payne."

The Jury gave the plaintiff 60*l.* damages, for the loss of his daughter's services.

In the Insolvent Court, on the 3rd, Josiah Wilson, the son of a farmer near Leeds, defended himself by means of *Defamation*. He was opposed by a young woman named Jane Dunn, who complained that after he had long paid his addresses to her, she had lent him 27*l.*, and that instead of fulfilling his engagement, he had married a new love in London. He denied the loan, and brought forward gross charges against the young woman's character, asserted that he had for years had an illicit connexion with her, and that she had robbed him of money at different times. The debt, however, was proved, and as he had no evidence in support of his imputations against the girl, the court refused his application for protection.

A case was decided in the Court of Exchequer, on the 3rd, involving an important question, as to the *Responsibility of Railway Companies for the acts of their servants*. Mr. Gay, a city merchant, took a third-class ticket at the Romford station of the Eastern Counties

Railway, for London. All the third-class carriages were full, and, as the train was starting, he was desired to get into a second-class carriage. At Shoreditch he was stopped, charged with riding in a second-class carriage with a third-class ticket, carried to the Worship Street police office, and placed at the bar; but the magistrate said that the proper course would have been to obtain a summons against him, and he was discharged. He was never summoned, and brought an action of trespass and false imprisonment against the Company. The defence was, that the superintendent at Shoreditch had no authority to act as he had acted, and the Company were not responsible. The Jury intimated their intention to find for the plaintiff. Baron Alderson interposed with some warmth, "Do you wish," he said to the jury, "that we should exchange functions—that you decide the law and I the facts? The law is clear. The Company are not to be responsible for their servant's acts, because they continue him in their service, unless those acts are authorised by them." The jury, after some hesitation, returned a verdict for the defendants, the plaintiff's counsel tendering a bill of exceptions, for a new trial.

Mr. Pulszky, a Hungarian gentleman residing in this country, applied to the Court of Queen's Bench on the 6th, for a criminal information against Mr. Murray, the publisher of the *Quarterly Review*, for libel. An article of that Journal had spoken of the Hungarian agents who had made common cause with the gabels and outcasts from Germany, France, and Poland, and accused them as participators in the Vienna rebellion, and in the murder of Count Latour, charging them with having scattered money among desperate men, and drowned their sense of humanity in intoxicating liquors; and it then went on to say, that among these guilty parties were those who were now members of clubs in this country, were received at the houses of our noblemen, nay, of our Cabinet ministers, and whose names were blazoned in the daily papers as their guests. Mr. Pulszky swore that he believed this libel to be directed against him, because he was a member of the Reform Club, and had visited at the houses of British noblemen, especially at the residence of Lord Lansdowne, and had had his name published in the papers as one of his lordship's guests. He showed that he had left Vienna before Count Latour's death, and denied any participation, directly or indirectly, in that nobleman's murder. The Court were of opinion that a sufficient case for interference had not been made out. They had not the smallest doubt of Mr. Pulszky's innocence and honour, and were satisfied that there was nothing in the article in question to point at him or do any injury to his character. On that ground alone they refused the application.

On the 6th, the Electric Telegraph Company applied to the Queen's Bench for a Criminal Information against Messrs. Wilmer and Smith, news-agents in Liverpool, for publishing a letter accusing the Company of *Favouritism in the Transmission of News*, and for using news for their own purposes. The defendants contended that by Act of Parliament the Company is precluded from using on its account the intelligence it transmits; and that, nevertheless, the Company had assumed the functions of regular news-agents. The Court refused the application, abstaining from any statement of reasons, as a civil action is pending between the parties.

Charleotte Lucy, near Stratford-upon-Avon, celebrated as the seat of Shakspeare's Justice Shallow, was *Broken into and Robbed* on the night of the 6th. The property stolen consisted chiefly of articles of jewellery; a ring, presented by Henry VIII. to his treasurer; a miniature of the celebrated Sir Thomas Lucy, of Shakspeare's day; a great number of gold coins and other property, to the value of several hundred pounds. One of the burglars was taken in Birmingham at his lodgings, and a great portion of the property was found upon him.

Two little children, whose heads scarcely reached the top of the dock, were charged at Bow Street on the 7th with *Stealing a Loaf* out of a baker's shop. They said, in defence, that they were starving, and their appearance showed that they spoke the truth. They were sentenced to be whipped in the House of Correction.

John and Ellen Griffin, who appeared to be mendi-

cants, were tried at the Central Criminal Court on the 7th instant, charged with receiving goods stolen by a young girl named Emma Ivor. The case showed the way in which children are *regularly trained to crime*. The girl, who was about fifteen, had run away from her father, a decent tradesman, and fallen into the hands of the Griffins, who promised to show her how to get a living, and took her home with them. She used to be sent out and directed by the woman to steal tea, sugar, bacon, meat,—whatever she could lay her hands on. She never got more than a halfpenny for what she brought home; if she brought nothing, she had no money nor anything to eat, and was obliged to go and pick up refuse in Spitalfields market to satisfy her hunger. At length she was found by her father, who took her home. The evidence was found insufficient to convict the husband, but the woman was sentenced to a year's imprisonment with hard labour.

An *Advocate for Flogging* delivered himself strongly from the bench at the Middlesex Sessions, on the 7th. G. Smith, a boy of twelve years old, was convicted of stealing seventeen and sixpence. His right arm was in splints, having been lately broken. He was of a respectable family, and a gentleman named Sharp promised to get him sent to sea at the expiration of whatever sentence the Court might pronounce, as he had been at sea already. One of the magistrates could not see the use of packing thieves off to sea, and thought the prisoner ought to have a "downright good flogging" in prison. "But," said the Judge, "consider, he has got a broken arm." "Oh!" rejoined his colleague, "I wouldn't mind if he had two broken arms, or a broken head, for the matter of that. He decidedly ought to be flogged." The learned judge, however, thought differently, and sentenced the boy to a month's imprisonment, directing him to be then given up to Mr. Sharp.

The "*Agapemone*" has again come under public notice. This, it will be remembered, is an establishment near Bridgewater, in which a number of persons reside together, with community of goods, and professing peculiar opinions. The founder, Mr. Prince, formerly in deacon's orders, having married a young lady of fortune, named Nottidge, and effected marriages between three of his disciples and her three sisters, brought the four ladies and their substance into the community. Considerable noise was made by certain proceedings at the instances of Mr. Prince's relatives, to establish her insanity, in which they failed. Her sister, who became the wife of a Mr. Thomas, not liking the way of life at the *Agapemone*, tried in vain to induce her husband and sisters to leave it; the consequence of which was that she was expelled the Society, and put away by her husband, when about to give birth to a child. She has since resided with her relatives; and her next of kin has applied to the Vice-Chancellor to appoint a guardian to the infant, now four years old, on the ground of its father's moral unfitness for its custody and education. The case was heard on the 7th and 8th, when, after the reading of affidavits and counter-affidavits, Mr. Thomas defended himself in person. The following description of life in the *Agapemone* was contained in the evidence of the Rev. Mr. Price, the husband of one of the sisters: "I married Harriet, Mr. Thomas married Agnes, and Mr. Cobbe married Clara. We were all married on the same day at Swansea. I and my wife dwell at the *Agapemone*, and Mr. and Mrs. Cobbe also. There are fifty or sixty living in the house. We have horses and carriages, and live in good style. I consider that all we do is to the glory of God. I consider that we glorify God when we eat and drink. Every one does as he pleases on the Sunday. We make no difference between that day and any other day. All play at hookey, males as well as females." Mr. Thomas vehemently denied the charges of irreligion and immorality, declaring that "our life is a pure and holy life, and the *Agapemone* a work of God, holy and religious." The Vice-Chancellor reserved his judgment. On the 23rd, after commenting in the severest language on the conduct of Thomas and his associates, his Honour ordered that the child shall remain in the care of his mother and maternal grandmother, and that the father and his agents shall be restrained from interference.

Alexander Moir, a baker, was tried at the Central Criminal Court, on the 8th, for *Murdering his Wife*. The man, though holding a decent station in life, was in the constant habit of beating and kicking the deceased. It was proved that he had threatened to murder her; he repeatedly said that he would not "murder her outright," but would "kill her by inches," so that the law should not be able to touch him, "he would cheat, the devil and the government." He accused his wife of being a drunkard, and it appeared that she was somewhat addicted to liquor, though the surgeon who examined the body said that the appearance of the viscera contradicted the assertion of habitual drunkenness. The jury found a verdict of manslaughter, adding their opinion that it was of the most aggravated kind. The judge concurred, and passed sentence of transportation for life.

An interesting case occurred at the Worship Street police office, on the 8th. Three sunburnt, modest-looking young country girls, whose clothes were drenched with rain, presented themselves before the magistrate to tell their story and ask his aid. They were natives of Wisbech in Cambridgeshire, and being orphans, had been sheltered for a considerable time in the Union Workhouse of that place. Anxious to get employment, and having heard of emigration and other benevolent establishments in London, they left the workhouse to go to London, without a farthing in their pocket or any knowledge of the road. In four days they walked the distance, nearly a hundred miles, and at length found themselves in the parish of Hackney, where they were lodged in the union for that night. During the whole of the last day's journey they had not tasted a morsel of food, and on being turned out that morning from the Hackney Union had wandered into Shoreditch, where they applied to one of the parish officers, who, on hearing their story, advised them to submit their case to the magistrate, who might be able to afford them some assistance. The magistrate expressed much compassion for the poor girls, and said he should inquire what could be done for them, and have them taken care of in the mean time.

Another case of swindling by means of a *Mock Agency Office* for providing young men with situations, occurred at Bow Street on the 10th, when Sidney Robert Sparks was charged with defrauding a young man, named Levy, of 50l. The prosecutor, a country lad, was brought to town by an advertisement in the usual style, and introduced to a confederate, who pretended to receive him into his employment, and took from him 50l. by way of security. He soon found that he neither got employment, nor could he recover his money. The landlord of the office which the prisoner had occupied, said that young men congregated there daily, bemoaning the loss of their money, and exclaiming against the way in which they had been deceived. The magistrate said that there were daily complaints made to him of such proceedings, and remanded the prisoner for further inquiry, refusing to take bail.

Walter Watts, late lessee of the Olympic Theatre, was tried at the Central Criminal Court on the 10th, on the charge of *Stealing a Cheque for 1400l.* from the Globe Insurance Company in whose employment he was. He was found guilty, on one of the counts of the indictment, of "stealing a piece of paper;" but the point of law was reserved, whether this is sufficient to constitute a criminal charge.

A barrister, named Kenealy, was tried at the Central Criminal Court on the 11th, on the charge of having committed an *Aggravated Assault on a Child of Six Years*, his natural son. The child was found, one day in February last, crying in the street, and taken to a police station, where it was found he had been cruelly beaten; his back, legs, and neck being covered with stripes and bruises. The child was afterwards taken to the West London Union, at whose instance this prosecution was brought. The defence was that the blows were given by way of parental chastigation, and that the father had really been very kind to the child, and careful of his education; which, indeed, was proved to have been the case. Lord Campbell was of opinion that no serious stain could attach to Mr. Kenealy's character. With respect to corporal punishment, he was rather inclined

to agree with Dr. Johnson, that if you abolish it, "what you gain at one end you will lose at the other." Mr. Kenealy appeared to have had a tender affection for the child, and to have treated him with the utmost care, but it was for the Jury to decide whether the chastisement had been excessive. The Jury found Kenealy guilty of a common assault.

On the same day, Louise Hartley was tried for attempting to *Poison her Father*. The circumstances of this case were mentioned in our last number. The proof rested almost wholly on the evidence of the father, who, it appeared, had treated his daughter so ill, and evinced so much malice towards her, that his testimony was not considered worthy of credit, and the girl was acquitted. It was stated that she would be taken under the care of the Ladies' Committee of the guild, and that some measures would be taken for her future welfare.

Cautley's Divorce Bill came before the House of Lords on the 10th and 13th. Lieut.-Col. Cautley, of the East India Company's Service, in the year 1838 married at Calcutta a young lady named Frances Bacon. In 1843, in consequence of the ill health of their child, Mrs. Cautley came to England, and was kindly received by her husband's family. In the end of 1845 Col. Cautley returned from India, and they lived together till June, 1846, when, having heard suspicious accounts of his wife's manner of life in his absence, he made inquiries, which confirmed his suspicions, and, reeking open her writing-desk, he found letters from a Major Cooper, which indicated a guilty connexion between them. Other circumstances transpired, and Col. Cautley obtained a divorce in the Ecclesiastical Court, and damages of 1000*l.* against Major Cooper. Col. Cautley then returned to India, where he still remains. On the days above mentioned a great deal of evidence was taken; and, their lordships considering the case to be proved, the Bill was read a second time and ordered to be committed.

The nuisance of *Penny Theatres* received a check at the Lambeth Police Court on the 14th. Several men and women were charged with performing at an unlicensed theatre; and a dozen others of the lowest grade, and some of them well-known thieves, were charged with being a portion of the audience. A police constable described a visit to the theatre. Accompanied by a friend, he went to the door, and each having paid his penny, they entered the place allotted to the audience, and saw the prisoners on the stage. They were dressed in character, and were performing in some play. During the performance, he saw one of the prisoners pick the pockets of three of the performers, and on each occasion he was cheered by the audience. Mr. Maud, addressing Captain Stiles, said, he was out of collar and wanted 500*l.*, upon which the Captain replied that he had no money to give him. Maud then said, "Then you must come and do a job with me to-night;" to which Captain Stiles replied, "Very well, I'll go with you, but it shall be the last time; we have committed many crimes together, but this shall be the last." The actors then arranged to commit a burglary and were preparing a scaling-ladder on the stage to enter a house, when the police rushed on the stage and secured the prisoners. The actors were sentenced to a penalty of 20*s.* each or fourteen days' imprisonment; and the audience portion of the prisoners were discharged with a severe caution. Immediately afterwards, several persons apprehended as performers and audience at another place of a similar description, but where the admission was only a half-penny, were dealt with in the same manner.

On Tuesday the 14th, Henri Joseph Stephan, a hornplayer in the orchestra of Her Majesty's Theatre, *Plunged from the top of the Duke of York's column*, and was killed on the spot. No special cause was assigned for the act, but it appeared that for some days preceding he had been gloomy and unsettled in his mind. At the inquest a verdict of "Temporary Insanity" was returned, the jury recommending that a railing should be placed round the top of the column. This has since been commenced.

Another *Savings Bank Defalcation* has transpired, showing the loose way in which these establishments have been managed. The Market Weighton Bank, a

branch of the Hull Bank, has been managed for fourteen years by Mr. Jeremiah Roantree, a draper in the place, an influential member of the Wesleyan Society, and a person whose character was beyond suspicion. The Hull Bank having resolved to investigate the affairs of its branches, sent a deputation to Market Weighton for that purpose on the 10th inst. Mr. Roantree requested them to defer the inquiry till the following week, which they declined; and he then admitted that out of 80000*l.* which has passed through his hands, there is a deficit of no less than 1000*l.* It appears from the books, that a system of entering fictitious names and abstracting sums of money has been carried on from the commencement of Roantree's connexion with the branch. Different sums, varying from 1*l.* to 5*l.*, had been abstracted at one time. It seems, also, that he had the entire management, and generally sat alone. He used occasionally to call in an old director, upwards of seventy years of age, and has admitted that he was afraid of calling in others lest the error should be detected. He had also appointed parties to be directors, and never intimated the fact to them. In addition to the defalcation at the Bank, his liabilities are said to be nearly 3000*l.*

In the bankruptcy of *Martin Luther Pritchard*, the Court, on the 15th, gave judgment, allowing the bankrupt's accounts to pass. The bankrupt was deputy-chairman of the South-Eastern Railway Company. He had been clerk to Mr. Forsyth, a Liverpool share-broker, who took him into partnership in 1839. In 1844, Forsyth retired, and Pritchard, having taken Dale, his clerk, into partnership, carried on business till the bankruptcy in 1849. The transactions of these ten years were very extensive and complicated; but it appeared from his statements, that during some period previous to his bankruptcy, the profits of his business had been above 7000*l.* a-year. The Court expressed no opinion as to his conduct as a trader, reserving that point for the question of the certificate.

Between one and two in the morning of the 16th, the house of Mr. Richbell, at Wickham St. Paul's, in Essex, was *Broken into by Thieves*, who forced open the front door, and the door of the parlour where Mrs. Richbell, who is infirm, was sleeping. One man broke open a bureau, while another endeavoured to stifle Mrs. Richbell's cries by holding his hand on her mouth. A servant girl who slept at the back of the house jumped out of the window, ran to a neighbouring cottage for help, and brought with her a labourer armed with a poker. Mr. Richbell, who slept up stairs, got up at the same time, and the robbers, finding themselves discovered, made off after a short scuffle, and escaped. The window from which the courageous girl jumped is more than twelve feet from the ground.

The case of *Edward Thomas Delafield*, lately lessee of the Royal Italian Opera, was again before the Bankruptcy Court on the 21st, when Mr. Lawrance was heard in opposition to his application for a certificate, and Mr. Cooke in support of it. The Commissioner deferred giving judgment. This case has been frequently before the public. Mr. Delafield entered upon the management of the opera with a fortune of 90000*l.*; and it appears that at present the amount of his debts is nearly 40,000*l.*, and of his assets, 1096*l.*

William and Mark Hutchins, and William Marsh, three boys of from 11 to 13 years old, the victims of *Infamous Parents*, were charged on the 21st, at Guildhall, with picking a boy's pocket. They said that they had been driven by necessity to commit the crime—their parents having turned them out of doors, to get their own living as they best could. It was ascertained by inquiries that they had obtained a lodging for the night previous to being taken into custody, for which they agreed to pay 4*d.* The mother of Hutchins preceded to the lodgings, and took the 4*d.* as well as the small stock of congreve matches by which the poor boys had hitherto obtained a living, since which they had slept under barrows and carts in Smithfield, and had been for days without tasting food, until they could no longer bear the pangs of hunger, and, as a last resource, committed the theft to obtain bread. They said they could maintain themselves by selling congreve, if their parents would not seize upon their stock and proceeds. Alderman Gibbs then directed the officer to take them to the East

London Union, and to request the relieving officer to take them in, and take care of them.

On the 22nd, Mr. and Mrs. Bereham, described as a "respectable" farmer and his wife, were tried at the Chelmsford Sessions for inhuman *Cruelty to a Work-house Child*, 10 years old, in their service. One night the farmer and his wife came home drunk. The child, worn out with fatigue, had lain down on a bed and fallen asleep, leaving the candle burning. The woman made her strip herself naked, when they both beat her so cruelly that her whole body was one mass of bruises and wounds, and so great was the injury that for several days her life was despaired of. The chairman, on the part of the magistrates present, expressed their horror and detestation of the cruelty to which this helpless child had been subjected, and fined the prisoners 5*l*.

S. Beamish was charged at the Marlborough Police Court on the 22nd with attempting to defraud the public by a *Begging Petition*. About two months ago he called at the house of Mr. Frankum, in Burlington-gardens, and introduced himself as a physician. He made himself quite at home, examining the ornaments on the mantel-piece, and making comments on them. He represented himself to be a great traveller; talked of his reminiscences of Rome, Naples, and other places in Italy. Mr. Frankum at length got tired of his visit, and pressed him as to the purport of it, when he told him he was in great distress and wanted some ready money, and in fact he was so much reduced, that half-a-crown would be a God-send. Mr. Frankum, suspecting him to be an impostor, sent for a constable and gave him in charge. The prisoner had previously given him a paper containing the names of Dr. Moore and other medical gentlemen, who, the prisoner stated, had relieved him with money. This paper the prisoner tried to burn, but was prevented. There were about twenty other gentlemen in the court who had been duped by the prisoner. The superintendent of the Dover police produced a warrant for the apprehension of the prisoner, who had absconded from his bail, having been charged at Dover with defrauding various persons there; and the magistrate gave him in charge to that officer, to be conveyed to Dover.

Mr. Robert Lindsay Mauleverer, a magistrate in the county of Londonderry, and an agent over extensive estates in the North of Ireland, was *Murdered* on the 23rd. He was travelling on an outside car to meet the train on the Dundalk and Enniskillen railway, when he was shot through the head and killed on the spot. He had been engaged of late in serving ejectment notices on a very extensive scale. Two persons have been arrested on suspicion.

In a *Fatal Phrenzy occasioned by love*, a young man named Cooper destroyed himself on the 25th. At the Inquest, which was held on his body, the chief witness was a young woman named Straker, with whom he was violently in love, but who was unable to return his passion. She said that his attentions had been more violent than agreeable, particularly during the last fourteen weeks, and on one occasion she was so much persecuted by him that she threatened to apply to a magistrate. On Saturday the 25th, Cooper called at her house, and when she opened the door he held a pistol at her, and said he would blow her brains out. She ran instantly up stairs, and called the landlord of the house. They afterwards heard the report of a pistol, and discovered the deceased lying in the parlour a corpse. The upper part of his head appeared to be blown to pieces, and a pistol was lying by his side. The police were called in, and the following letter, addressed to his father, in the handwriting of the deceased, was found in his pocket:—"Dear Father—When you receive this I shall be no more, for I have made up my mind to live no longer without Miss Straker. Her shadow is always following me, and my thoughts are constantly with her." The jury agreed to a verdict of "Temporary Insanity."

Charles and C. Machin, charged at Guildhall with obtaining various sums of money and a large number of law-books, from solicitors and other persons, *Under False Pretences*, were, on the 27th, fully committed to Newgate for trial.

NARRATIVE OF ACCIDENT AND DISASTER.

MUCH interest has been excited by the arrival at Liverpool of a large body of *Shipwrecked Emigrants*. They were poor people from the neighbourhood of Galway, who had sailed from that port in an emigrant ship, which foundered at sea in the middle of the Atlantic, but the passengers and crew were saved by Captain Purdy of the *Infanta*, of New York, who took them on board his vessel and brought them to Liverpool. Their ship had been struck by a heavy sea in a gale, on the 30th of March, and thrown on her beam ends, but the captain contrived to keep her afloat till the 16th of April, when she fell in with the American vessel. Two of the passengers died of injuries received when the ship was struck, and the people suffered inexpressible hardship, till they were rescued, when the ship was almost sinking. Several vessels passed near them, but paid no attention to their signals of distress. On the 26th of April, Captain Thomas, the master of the emigrant ship, applied at the Liverpool police court for relief to the destitute people, the greater number of whom were helpless women and children; and it was promptly afforded.

The Wyndham club-house in St. James' Square, *Narrowly escaped Destruction* by fire, on the night of the 10th. The fire broke out in the "strangers' room," a magnificent apartment, and the pictures and costly furniture were destroyed before the flames could be got under.

Mr. John Thomas, a druggist at Menai Bridge, was *Killed by an Explosion*, on the 25th of April, while making detonating powder. A piece of the mortar, in which he had been mixing the ingredients, penetrated the great artery of the thigh, causing almost instant death.

The *Lostwithiel Powder-works, near Liskeard, exploded* on the 26th of April. There were in store three or four tons of gunpowder, which went off in three different explosions. The premises were blown to pieces, and the bodies of the two watchers, Pengelly and Truscott, shockingly mutilated. Cottages, a quarter of a mile distant, were unroofed and the walls damaged.

A *Mysterious Death* took place at Clapham on Sunday the 28th of April. Mr. Maddie, a gentleman residing in Claremont place, went to church in the morning, leaving his housekeeper, Sarah Snelling, an elderly woman, alone in the house, desiring her as usual to lock the doors and gates. On his return he could not obtain admittance by ringing, but found the back garden gate unfastened, and discovered the housekeeper lying dead on the floor of the kitchen, with her head resting on a piece of carpeting, one foot without a shoe, and a coil of rope lying by her. The body presented no sign of violence. The house had been robbed, drawers and boxes forced open, and a number of articles carried off. The Coroner's inquest threw no light upon the affair. The examination of the body discovered no injury, either external or internal, to which death could be ascribed. Some suspicious-looking persons were observed in the neighbourhood of the house, but the police have been unable to trace them. It was supposed that the woman might have died from chloroform administered by the housebreakers; but, as the body exhibited no signs of the action of that drug, it seems more probable that she died from the effect of sudden terror.

One of the diminutive African savages, called *Bogiemans*, now exhibiting in the provinces, terrified the people assembled to see them in the Town Hall at Devizes on the 2nd of May, by a sudden outbreak of ferocity. Taking offence at some imaginary affront, he discharged an arrow at the head of the offender, which pierced his hat. He then sprang among the company with a terrific yell, and his companions were preparing to follow, when the keepers rushed forward and secured them, amid the screams of the women and a scene of general consternation. They had once before made a similar exhibition of fierceness.

Two Railway Accidents took place on the 6th. On the Durham branch of the York, Newcastle, and Ber-

wick Railway, the passenger-train ran into the luggage-train with a fearful crash, and every person in the train was more or less injured.—A labourer on the Midland Railway, at work near the Loughborough station, was knocked down by a train which came up before he could get out of its way, and so much hurt that he died in a few hours.

A Dreadful Loss of Life took place on Lake Erie on the 6th instant. The "Commerce" steamer, having on board a part of the 23rd Fusiliers, on her way from Montreal to London, Canada West, was run into by the American steamer "Dispatch," and sunk. Assistant Surgeon Douglas Grantham, four non-commissioned officers, twenty privates, eight soldiers' wives, and four children, perished.

Mr. W. Johnstone, the scene-painter of the Haymarket Theatre, *Died Suddenly* on the 8th. He was walking home from the theatre after the first performance of Mr. Jerrold's new play (the scenery of which was his last work) in company with Mr. Stirling Coyne, when, passing through Chandos-street, he fell in a fit, and almost immediately expired.

Captain Henry Whittingham was *Run Over by a Timber-Waggon* on the 20th, after having escaped the varied dangers of the deep for nearly half a century. He had been for many years in the service of the General Steam Navigation Company, and previously Commander of the Sir William Carter, a cutter, belonging to the late Mr. Rothschild, and used for the conveyance of specie to and from the continent. Captain Whittingham was passing Thornton-street, Bermondsey, when he fell under the hind-wheel of a heavily laden timber-waggon, and before the horses could be stopped, the wheel rested on his breast.

A fatal Experiment in Aerostation was made on Friday evening, the 24th. A monster balloon, fifty feet long, twenty-two in diameter, and capable of containing 15,000 cubic feet of gas, ascended from the Phoenix Gas-works, under the direction of Mr. Monro, the superintendent, and descended safely in the parish of High Laver, Essex; but a poor labourer, named Frederick Clark, while assisting to secure the balloon in its descent, was so dreadfully injured by the grapnel, that he died a few hours afterwards.

A Soldier was Rolled to Death on the 27th, at Portsmouth. A party belonging to the 28th Regt., while doing fatigue-duty on Southsea Common, were returning to quarters, drawing after them a very large iron roller, charged with iron shot, when, in descending the road to the centre of the glacis at a rapid pace to escape the ruin which was falling, one of the men fell. In an instant, the ponderous machine passed over him, and his head and body were so fearfully crushed, that instantaneous death resulted.

SOCIAL, SANITARY, AND MUNICIPAL PROGRESS.

An improvement in the sanitary condition of the country is shown by the Quarterly Returns of the Registrar General, which appeared at the beginning of this month, in the several divisions and counties. They comprise the births and deaths in the winter quarter ending 31st March last; and the marriages in the autumn quarter, ending 31st Dec., 1849. The marriages have been progressively increasing in the years 1847, 1848, and 1849. In the autumn quarter of 1849 they were 43,632; higher than in any autumn quarter since 1845. In the whole year 1849 they were 141,599. During the same period, the number of deaths has declined. The deaths in the first quarter of 1850 were less, by 21,066, than in the first quarter of 1847, and less by 21,414 than in the first quarter of 1848. In 1849 the deaths were 98,607, the births were 144,602. The decrease in the number of deaths is ascribed to various causes; to the comparatively healthy weather during the months of January, February, and March, and to the abundance of food. The high prices of 1847, when wheat was 70s. a quarter, induced farmers to extend the breadth of land in culture in 1848, especially in Ireland. Indeed, all over Europe the breadth of land under pota-

toes, wheat, and other cereals, in that year, was sufficient to yield, on average crops, enough of food to supply the markets. The crops were generally above an average. Cholera was fatal only in a very few cases during the quarter. "The annual rate of mortality in the first quarters of the eleven years 1840-50, was 2,764 per cent. in the districts comprising the chief towns, and 2,222 per cent. in the districts of small towns and country parishes. In 1850 the mortality in the first class of districts fell to 2,401 per cent, and in the second class to 2,067 per cent. In the most favourable winter quarter which has been experienced since 1846, the mortality of the inhabitants of towns exceeds the mortality of the rest of the country by 16 per cent." These facts show how much remains to be done, to improve the health of towns. In regard to the increase of population in England, the return states that the 144,602 births in 1849 exceeded the 98,607 deaths, by 45,995. 46,423 emigrants left the ports of the United Kingdom, at which there are government emigration offices; of these, 40,927 left the English ports, but probably great numbers were of Irish extraction.

The *Utility of Ragged Schools* has been fully developed at their several anniversary festivals this month. The eighth annual meeting of the supporters of the Field Lane Ragged School took place on the 1st inst. The Report, read by the Secretary, stated that 320 children had been received into the school during the last twelve-months; that the girls were well instructed in knitting and needlework, and that the boys would shortly be able to furnish shoes to the school at the cost price of the material. A collection was made, which, with some donations, amounted to 40l.

The sixth annual meeting of the Ragged School Union was held in Exeter Hall on the 14th, Lord ASHLEY in the chair. The Committee's Report contained many facts illustrative of the good done by the establishment of Ragged Schools, the number of which throughout the country, as well as in the metropolis, is rapidly increasing. The number added to the list during the year is 14. The schools now consist of 94 in all. The number of voluntary teachers was 1350; the children, on week days, 5174; week evenings, 5093; Sunday evenings, 10,366. The number of paid teachers is now 156. The scholars in the industrial classes are now about 1200. The subscriptions, which last year were 338l., now amount to 520l.; the donations, not including the fund raised for emigration, and a legacy of 1000l. left by the late James Grant, Esq., amount to 1,631l.

The annual meeting of the *Domestic Servants' Benevolent Institution* was held on the 1st. The report of the committee stated that there were upwards of 4000 subscribers belonging to the class of domestic servants, and that they possessed a permanent fund of 4200l. The total receipts of the last year were 1609l. 17s. 2d.; the pensions 17l. 10s. The investments were, for 1258l. 18s. 1d. & 3 per cent. consols, purchased in the year, 1180l.

At the annual meeting of the *Female Servants' Home Society*, on the 9th, it appeared that this society, since 1835, has given aid to 3800 servants. From the commencement of the registry system in 1844, 17,000 servants have placed their names on the books, and 5180 families have applied to be provided with domestics. During the past year 423 female servants have been received into the "Home," of whom 398 were provided with situations.

The thirty-fourth annual meeting in aid of the funds of the *Royal Infirmary for Children* was held on the 1st. This institution has relieved upwards of 170,000 children, and relieves, on an average, 400 every month. It is proposed to extend its utility by making it a hospital as well as a dispensary; and for this purpose 1077l. was subscribed in the course of the evening.

The *Artists' General Benevolent Institution* had its thirty-fifth annual Festival at the Freemasons' Tavern, on the 11th, under the presidency of Sir Robert Peel. Lord Hardinge, Colonel Rowdon, Mr. Cockerell, Mr. Hardwicke, and other gentlemen, took part in the proceedings. During the dinner, 718l. was received, including 100l. from the Queen, 50l. from Sir R. Peel, 50l. from the British Institution, and 20l. from Lady Chantrey.

The great usefulness of the *Governesses' Benevolent Institution* was fully shown at the annual meeting on the 3rd. Since its establishment, 775 ladies have received temporary assistance, to the amount of 3980l. 18s. 6d. During last year 942l. was expended in assisting 382 persons. During the same period eight annuitants have been added to the list, and there are now 45 ladies under the Society's care, including the occupants of the Asylum. "The Home" has, in the same year, received 212 contented and happy inmates, and may now, according to the report, be considered self-supporting, whilst the "free-registration," which occasions its apparent excess of expenditure, has proved of the utmost utility. In the past year 1506 have been registered, and of them 866 have been engaged, and this without expense either to the successful or unsuccessful candidates. The "Aged Asylum" is also reported to have answered its purpose well; and "the College" has, by the issue of its certificates, and the providing free evening classes, enabled the qualified governess to prove her value, and offered to many actually engaged in tuition the means of further gratuitous instruction.

A meeting, in aid of the building and permanent endowment of the *King's College Hospital*, was held in the hall of the College, Somerset House, on Wednesday the 15th, the Archbishop of Canterbury in the chair. Its object was to raise a fund for building and endowing a new hospital; the present, as was stated, having been barely sufficient in 1840, when there were only 4834 patients, and being now wholly inadequate when the number is 22,309. Among the speakers was Major Edwards, who mentioned that he had in his youth attended the theological lectures in King's College, and strongly recommended religious and moral discipline. The gallant officer was loudly cheered. In the evening, the annual dinner, at which Major Edwards was the Chairman, took place in the New Hall, Lincoln's Inn, and nearly 4000l. was subscribed to the fund.

There was a crowded meeting at the Whittington Club House, on the 13th, convened to support the *Metropolitan Interment Bill*. Lord R. Grosvenor was in the Chair. Mr. Mackinnon, M.P., moved the first resolution, "That in the opinion of this meeting the present system of burial in the metropolis is prejudicial to health, incompatible with decency and solemnity, demoralising in its tendency, and unnecessarily expensive," which was seconded by Lord Ebrington. The speakers were interrupted by clamour and hooting from a number of persons who were understood to belong to "the trade." When the resolution was about to be put, a Mr. Noddy got upon the platform, and declaring himself to be an undertaker, inveighed against the measure, which, he said, was a "dead set against their trade;" and another undertaker, Mr. Box, moved as an amendment, that the words "unnecessarily expensive" should be omitted. A number of hands were held up for this amendment, but the resolution was carried, amid great cheering, by an immense majority. Mr. George Cruikshank then rose to move the second resolution, but the opposing party raised a violent uproar. A rush was made at the platform; chairs and benches were broken; the room became a scene of confusion; and amid screams of women and calls for the police, the chairman found there was nothing for it but to adjourn the meeting.

The *Newsreaders' Benevolent Institution* held its eleventh annual meeting at Anderson's Hotel, on the 16th, J. Harmer, Esq., the President, in the chair. The report stated that the present position of the Society was satisfactory. In November last it had been decided to establish an annual festival. The first dinner was under the presidency of Mr. Charles Dickens, and the result had been very successful. The donations had exceeded 240l., the bulk of which was contributed by parties not connected with the trade, and the list of subscribers had considerably increased. The committee had thus been enabled to invest 2000l. in the Three per Cents., which raised the permanent fund to 12000l. Thanks were voted to Mr. Dickens for presiding at the annual dinner in November last, and for his efforts in favour of the Society.

PERSONAL NARRATIVE.

On Wednesday the 1st of May, at twenty minutes past eight in the morning the Queen gave Birth to a Prince. On the same day Prince Albert visited the Duke of Wellington to congratulate him on his eighty-first birthday, and stated from the Queen, that as a token of regard, she intended to have the royal infant baptised by the name of Arthur.—The foster-mother of the young Prince is Mrs. Jane Jones, a Welshwoman, the wife of an industrious workman on the Chester and Holyhead Railway.—Her Majesty's birthday was celebrated on Wednesday, the 15th, with every demonstration of affectionate loyalty both in the metropolis and the provinces.—On Tuesday morning, the 21st, the ceremony of churching the Queen was performed in the private chapel, Buckingham Palace, by the Hon. and Rev. Gerald Wellesley, Her Majesty's domestic chaplain.—Her Majesty and Prince Albert, with the royal children, left town on the 22nd for Osborne.

Lord Howden, it was announced in the *Gazette* of the 14th, has been appointed ambassador to Spain.

The Rev. Richard Dawes, M.A., has been nominated *Dean of Hereford*, in the room of the late Dr. John Merewether.—The Rev. Gilbert Elliot, M.A., has been nominated *Dean of Bristol*, in the room of the late Dr. John Lamb.

A banquet was given on the 22nd by the officers of the *Coldstream Guards* to celebrate the two hundredth anniversary of the enrolment of that distinguished corps by General Monk. Colonel Chaplin, the commanding officer of the regiment, was in the chair, supported by the Duke of Cambridge and the Duke of Wellington.—On the same day an entertainment was given to the non-commissioned officers and privates, in Portman-barracks. The Duke of Cambridge, colonel of the regiment, and all the officers were present. His Royal Highness took a seat among the privates, with whom he conversed with his wonted affability. The fare consisted of about 1400 lbs. of beef, with a liberal supply of pudding and beer. Later in the evening the men were permitted to admit their friends, and dancing and other amusements were kept up for some hours.

Lord John Russell on the 28th announced in the House of Commons the intention of the *Lord Chancellor to Resign his Office*, and that it is intended to put the Great Seal for a time into Commission. Lord Brougham alluded to these reports in the House of Lords on the 27th, denying at the same time the assertion which had been made, that there was a great accumulation of arrears in the Court of Chancery, and the appeal business of the House of Lords.

Obituary of Notable Persons.

JAMES THOM, the self-taught sculptor, author of "Tam O'Shanter and Souter Johnnie," died at New York on the 17th April, of consumption, in his 64th year.

The Right Hon. and Right Rev. LORD ROBERT PONSONBY TOTTENHAM, Bishop of Clogher, only brother of the Marquis of Ely, died at Woodstock, County of Wicklow, on the 26th April, in his 70th year.

M. DE BLAINVILLE, the successor of Cuvier in the chair of Comparative Anatomy in the Musée of Natural History at Paris, was found dead on the 1st inst. in one of the carriages of the night train on the Rouen Railway, while on his way to England. He was in his 72nd year.

M. GAY LUSAC, the celebrated chemical philosopher and peer of France, died at Paris on the 2nd, at the age of 71.

LORD WILLIAM HANVEY, second son of the Marquis of Bristol, and formerly Secretary to the British Embassy in Paris, died at Torquay on the 6th.

LADY ISABELLA ANNE BRYDGES, eldest daughter of the first Marquis of Waterford, and widow of the late Sir W. H. Bridges, died at Aylford, Sussex, on the 7th, aged 73.

PRINCESS JULIANE SOPHIE, a sister of the late King of Prussia, and widow of the late Prince Frederick William of Hesse-Philippsthal, died at Berlin on the 9th, in her 62nd year.

MRS. CHARLOTTE WILKES, widow of the late Lord Jeffrey, died on the 18th, at the residence of her son-in-law, Mr. Empson, at Halesbury College.

MISS JANE PORTER, the celebrated novelist, died at the house of her brother, Dr. Porter, of Bristol, on the 23rd. She was in her 74th year, and preserved to the last her vigour of intellect and cheerfulness of temper.

MRS. LABOURELLE, wife of the Right Hon. Henry Labouchere, President of the Board of Trade, died suddenly on the 25th. Premature labour is said to have been the cause of her death.

COLONIES AND DEPENDENCIES.

THE north-west frontier of India is still disturbed, nor is it likely that even an attempt will be made to reduce the insurgents during the present season. The passes between Kohat and Peshawar continue closed, and the last mail brings mention of another British officer and his servants assassinated by the Affreepees. A singular origin is now stated for the sudden rising of this wild tribe, who occupy, as the reader may discover who glances at the map, one of the most inaccessible and inhospitable heights in the whole mountain range of Asia. They are said to have been made rebels by the very species of tax (upon salt) which maddened the French peasantry some eighty years ago, and drew forth from the far-sighted father of Mirabeau the prophecy of the "general overturn." It will be best to satisfy justice in this matter, if injustice has been done, and not to content ourselves with simply putting forth the strong arm of retribution and revenge. The vicinity of Affghah may well remind us of what, some ten years ago, seemed but a silly local riot, and subsequently shook our Indian Empire. The news, commercial and political, from other quarters, is to be accounted favourable: notwithstanding a slight reverse to our arms in helping one of the friendly native princes, and the entire failure, for the present, of the enterprise of introducing railway communication into Bengal.

Our North American Colonies are quiet and tolerably prosperous; and the newspaper started six months ago in Upper Canada, to keep together and extend the annexation party, is become extinct. The active bishop of that province, we may add, is now in London; with the reported design of obtaining funds for the establishment of an Episcopal University at Toronto, on the plea that the late government interference, by which what is called the provincial university was thrown open to the various sects in the province requiring education, has left the Church without a field of educational exertion wherein it may be dominant and exclusive. These proceedings should be watched. There is no reasonable ground for another university endowment in Upper Canada.

A fourth detachment of sixty female emigrants sailed on Monday for Australia, equipped from the funds raised by Mr. Sidney Herbert; and the latest intelligence from these colonies is so generally satisfactory as to call for no remark. Frost has received a conditional pardon in Van Diemen's Land; Meagher of the Sword is become an active and successful cultivator of the soil; O'Donohue has started a newspaper; and Smith O'Brien continues to sulk. Let us merely add, for the hopeful future that seems to shape itself from such announcements, that the average annual emigration of the last three years has been lately ascertained to be not very far short of the whole annual increase of the population of the United Kingdom; the excess from Ireland being sufficiently great to leave England and Scotland with their usual proportions tolerably undisturbed. The most gratifying circumstance apparent in these three-years' returns is the steadiness which marks their gradual increase, and which would seem to imply at least a fair result to the adventurous enterprise of the earlier exiles.

The last *Overland Mail* brought dates from Bombay to April 17, from Calcutta to April 6, and from Hong Kong to March 29.

No further military operations have taken place against those during freebooters the Affreepees. But fresh outrages have been committed by them. On the 20th of March, Dr. Healey, attached to the 1st Punjab Cavalry, when on his way to Kohat with a small escort, was attacked near that place; two of his attendants were killed on the spot, and himself so wounded that he died immediately after reaching Kohat.

A singular circumstance took place at Wuzerabad on the 18th of March. The Commander-in-Chief, at the end of a review of the troops there, detained one regiment—the 34th Native Infantry—on the ground, and, addressing the corps through an interpreter, told them he had received an anonymous petition complaining of oppression by the commanding officer, and desired those who had complaints to come forward and state them. A number of the men did so; and then Sir C. Napier, addressing the commanding officer, said that he had nothing left but to order a court of inquiry into the charges. A court of inquiry, accordingly, was sitting at the date of the account.—Another characteristic trait of the Commander-in-Chief is related. In confirming the sentence of a court-martial held on a field-officer, who had entered into a correspondence concerning an order issued by a superior authority, instead of at once obeying it, Sir Charles remarked, "those who imagine this army is a debating society will find themselves very much mistaken."

The last *West India* mail brought dates from Jamaica to the 1st inst., Trinidad 20th, and Demerara 18th April. There is no remarkable intelligence. In Jamaica affairs were improving; owing to an increased demand for coffee, several estates that had fallen out of cultiva-

tion were to be re-worked. An important improvement in the manufacture of sugar had been discovered. Crops were very promising; that of sugar was estimated at 40,000 hids. At Bermuda the potato disease had made its appearance. A number of fires had taken place at Barbados.

There are *Accounts from Sydney* to the end of January.—The Colonial revenue was in a satisfactory state, the increase in the quarter, as compared with the corresponding period last year, being above 20 per cent. Such was the abundance of the last harvest that wheat was selling at 2s. 6d. to 3s. a bushel. The out-turn of wool also promised favourably. A new seam of coal had been discovered, and a further reduction in the price of coal was expected. Accounts had been received of the complete destruction of the settlement of New Caledonia, and there was reason to fear that many lives had fallen victims to the ferocity of the natives. An English vessel, which arrived there in December, had found the place deserted, and the buildings destroyed by fire. A letter was found, enclosed in a bottle, from the overseer of the settlement, Mr. David Miller, stating that he had been attacked by about 2000 natives, and though he had killed numbers of them, they continued at him day and night; and as his ammunition was getting short, and all the surrounding hills were covered with natives, and also as two of his men were badly wounded, he thought it advisable to take to his boats and proceed to windward, to a place called Balletto. Nothing further had been learned of their fate.

Advices have also been received from *New Zealand, Van Diemen's Land, Western Australia, Port Philip, and South Australia*. They are of a favourable complexion, but contain nothing of special interest. The

only remarkable circumstance is the death of Rasse-rauha, the famous New Zealand Chief, at the age of nearly eighty. He had a regular Christian burial, in the European manner, and conducted with the utmost decorum. The service was read by Mr. Ronaldson, a missionary teacher; and the large assemblage were hospitably entertained by Tamahana, the son and heir of the deceased.

PROGRESS OF EMIGRATION AND COLONISATION.

The first preliminary meeting of intending *Emigrants upon Mrs. Chisholm's Plan* took place on the 4th, for the purpose of the various families being formed in groups. Upwards of two hundred persons were present; and Mr. Sidney Herbert and other gentlemen explained to the emigrants the nature of the plan and measures to be adopted. Two thousand pounds have already been subscribed by the working classes, and there have been donations from Mr. Sidney Herbert of 200*l.*, Lady

Pembroke of 25*l.*, and Mr. Scott Russell of 5*l.* The first ship upon this plan is expected to sail next month.

There was another *Embarcation of Female Emigrants* on the 16th, consisting of the fourth detachment of young women sent out under the auspices of the Female Emigration Society, on board the William Stevenson, at Gravesend, their destination being Sidney and Adelaide. They were sixty in number, and their appearance, dress, and modest demeanour were very prepossessing; many of them were Irish. Besides these girls, there were two young ladies of excellent connexions, desirous of going to Australia, who had placed themselves under the protection of the Society for the voyage, paying their own passage. Mr. Sidney Herbert gave each girl a printed paper, conveying Mrs. Herbert's anxious wishes for their welfare, giving them some kind advice, and intimating that any of them, by remitting 6*l.* 10*s.*, will be entitled to name a female relative or friend for a passage, provided she be a fit person, and has a prospect of a place on her arrival.

NARRATIVE OF FOREIGN EVENTS.

ENGLAND has been unexpectedly dragged into a quasi collision with her most powerful neighbour, by the sudden recall of the French ambassador on the alleged ground of a want of proper consideration for French dignity and good offices in the affair with Greece. Pending the mediation at Athens, a friendly arrangement had been completed in London; but, before it reached the mediating parties, Mr. Wyse, acting on previous instructions, and considering that Baron Gros had thrown up his office of mediator, resumed a hostile attitude, and compelled King Otho's submission to the terms first demanded. The dispute between England and France turns wholly upon two questions: what Mr. Wyse's original instructions, communicated also to the French mediator, actually were; and in what specific terms Mr. Wyse received notice from Baron Gros of the supposed failure of his mission. Only the explanation of Mr. Wyse himself can finally settle these points; but there is not now much doubt that the settlement will be amicable, and the ultimate issue favourable to the wishes of those who see in the concord of France and England the only guarantee possible (however feeble it may hitherto have proved) against the unchecked predominance of despotism abroad. Meanwhile the explosion of Greek fire at Paris has proved a temporary diversion for our lively neighbours from dangers which threaten them more nearly in their electoral affairs. Momentarily stunned at the election of the Socialist candidate by a majority over his competitor of more than eight thousand votes, the party of "order" have been since engaged in a struggle for existence, the desperation of which is implied in their proposed immediate disfranchisement of large masses of the artisan-class by a law they have presented to the Assembly. This law has had the unhappy effect of temporarily ranging such men as Cavaignac and Lamartine on the side of what is called the Mountain, and it is impossible to foresee the issue. All the fiercest passions of France are flung into the debate, and the tribune has not witnessed such agitation since the momentous days of February.

German politics continue to be the profoundest of mysteries; another Congress of princes, and another conference of plenipotentiaries, having appeared and vanished, and left the horizon darker than ever. Meanwhile a desperate fanatic has done his best to deepen the gloom by attempted assassination of the only German prince in whom sensible men place hope for the future. The ray of present comfort in the lamentable prospect of affairs seems to us to come from the direction of Austria. Bound almost helplessly to Russia in her military and material interests, that misgoverned empire is now in gradual progress of surrender, morally and intellectually, into the hands of her own Roman Catholic clergy; and in proportion as she thus loses liberty of action and thought, her baneful influence against federative freedom must gradually be neutralised and destroyed.

The French have departed from Rome, but arrests continue, spies increase, and the opposition of the Romans grows more and more marked and significant. Signor Mazzini has arrived in England. From Spain we have intelligence of overtures which have ended in the re-establishment of diplomatic relations with the English Court; and we receive frequent descriptions of court incidents which resemble rather the intrigues of the middle ages than events of modern civilisation. The Emperor of China, Tso-Kouang, has departed this life; "mounting upwards on the dragon," in the language of the Chinese court-newspaper, "to be a guest on high;" and his son and successor, Yih-Chu, who proclaims through the same authority that his tears are of blood, and that he beats his breast and tears the ground in the fury of his grief, has very quietly mounted the throne.

The month's mails from America have brought generally good tidings. Sir Henry Bulwer's mission has been perfectly successful in removing that incipient rivalry of interests to which the representatives of both countries had somewhat indirectly committed themselves in Central America; and, as one of many indications of the better understanding growing up between ourselves and our republican cousins in mercantile policy, we have to record a proposal of the British minister for the opening of the navigation of the St. Lawrence to American merchant vessels, in exchange for the admission of Canadian produce to the United States on a footing of complete reciprocity, which is understood to have met with a favourable reception from the ministry of General Taylor. The home politics of America are at present in renewed agitation from what is called the Slavery Compromise, Mr. Webster's assent to it having alienated many of his supporters, and the Anti-Slavery party generally denouncing it as a treason to the non-slave-holding

States. The free men of Boston do not like the idea of being compelled to surrender any slave who may hereafter take refuge in their territory, which, by one of the clauses of Mr. Clay's proposal, giving practical effect to what has heretofore been an inoperative law, they will be now compelled to do.

The contest for the *Representation of Paris* terminated in the triumph of the Socialist and Democratic party. On the 2nd, the Prefect of the Seine publicly declared the result, which was: for M. Eugene Sue, the celebrated *litterateur*, who was the Socialist candidate, 127,812 votes; for M. Loclerc, the candidate of the Moderate party, 119,726. The votes of the army were: for Sue, 6674; for Loclerc, 6598. The funds fell 2 per cent. immediately afterwards, but partially recovered when the first rumours of a change of ministry subsided. This result led to a measure of the government for modifying the electoral suffrage. On the 1st, the Minister of the Interior brought in a bill, making a residence of three years (instead of six months), proved by the payment of taxes, a necessary qualification; declaring that one-fourth of the whole electors in a department (instead of one-eighth) shall be necessary to make an election valid; that the period for filling up vacancies shall be six months, instead of forty days; and that the votes of the army shall be confounded with those of the other classes so as to render distinction impossible. A vote of "urgency" having been moved, the "Mountain" opposed it, but it was carried by 453 to 197; Generals Cavaignac and Lamoriciere voting against the Government. M. Leon Faucher was appointed Reporter of the bill, and some clauses of it were modified; in particular the condition of being domiciled for three years in the same commune was departed from, it being declared sufficient if the elector has inhabited the same canton for that period even under different masters. Petitions against the bill, at the offices of the different opposition journals, have been signed by many thousand persons. The Mayor of one of the arrondissements, and all the officers of the National Guards who signed these petitions, have been dismissed.

The government has adopted *Stringent Measures Against the Opposition Press*. On the 14th, M. Boulc, the great printer of the Rue de Coq-Heron, was deprived of his license as a printer. He was the printer of the "*Voix du Peuple*," the "*République*," the "*Estafette*," and several other papers. The authorities seized all the presses, and placed seals on them. In consequence of this step, the Editors issued a joint letter explaining how their papers were prevented from appearing. The editor of the "*Voix du Peuple*" was brought again before the tribunals on the same day for attacks on the government. In the one case the sentence previously pronounced against him of a year's imprisonment and a fine of 4000f. for an attack on M. Fould's budget was confirmed, and for the other he was sentenced to a year's imprisonment and a fine of 5000f. Courtois and the Abbé Chatel have been convicted, by juries, of inflammatory speeches at electoral meetings. The former was condemned to a year's imprisonment and 1000f. fine, and two years' more imprisonment if the fine be not paid. The Abbé Chatel has a year's imprisonment and 600f. fine. It seems rather surprising that the government should obtain verdicts against the Socialists, considering how Socialism has spread in Paris.

The French Ambassador having been recalled from St. James's, General la Hitte, the Minister of War, read to the National Assembly on the 16th, a letter he had written to the French Ambassador at London, in consequence of infraction, by England, of the conditions on which France had agreed to act as mediator in the affairs of Greece. The letter, after a summary of the circumstances of the misunderstanding, and the demand that it should be set to rights, proceeded to say: "This demand not having been listened to, it has appeared to us that the prolongation of your sojourn at London is not compatible with the dignity of the Republic. The President has ordered me to invite you to return to France, after having accredited M. Marcescalchi in quality of Chargé d'Affaires," and concludes, "You will have the goodness to read this present despatch to Lord Palmerston." This announcement was received by the Right with loud acclamations, the Left, or Mountain party, remaining silent.

Lieutenant-Colonel Simonet, of the 11th Light Infantry, who was severely wounded by the *Falling of the Suspension-bridge at Angers*, has been promoted to the rank of Colonel, and appointed to the command of Brest. An investigation into the circumstances of that catastrophe is going on, and it has been ascertained that the fall of the bridge took place from the iron suspension cables having become rusted. The 11th regiment is to proceed to Algeria so soon as the loss of men in the 3rd battalion is made up.

The debate on the clauses of the Electoral Bill has commenced in the Assembly.

The *Erfurt Parliament*, having finished the revision of its proposed Constitution for the German Union, dissolved itself, and has been succeeded by two separate Conventions. The one is held at Frankfort, and consists of the representatives of the old Germanic confederation, convoked by the Emperor of Austria, with the object of re-organising that confederation. This conference includes all the secondary States of the old confederation except Oldenburg and Frankfort itself, though the assembly is held within its own walls. The other, held at Berlin, was assembled by the king of Prussia, and consisted of twenty-one heads of sovereign houses, with representatives of the three Hanse towns, Hamburg, Bremen, and Lubeck. This last convention has finished its sittings, and the members, previous to separating, were entertained by the king at a banquet on the 16th, when his majesty addressed them in a speech expressive of his satisfaction with their proceedings.

On the 22nd *An Attempt was Made on the Life of the King of Prussia*, by a serjeant of artillery named Sessologe, who fired a pistol at him as he was setting out for Potsdam, and wounded him slightly in the arm. The assassin was immediately apprehended.

The only political news from Spain during the month, related to some palace intrigues, in which the Queen, King-Consort, and General Narvaez were concerned. One evening in the last week of April the King suddenly notified to General Narvaez and the rest of the cabinet his intention of quitting Madrid in order not to be present at the *acoeuchement* of the Queen. After exhausting all means of persuasion to induce him to change his purpose, but which were of no avail, a council of ministers was held, in which it was decided to oppose by force the King's departure. His Majesty was placed under arrest. Sentries were stationed at the door of his apartment, and the King remained a prisoner during four hours, at the end of which time his Majesty capitulated, and even consented to accompany the Queen in an open carriage in her usual evening drive on the Prado.

After a *Drought of Five Years*, the province of Murcia has been visited by a copious rain. It was curious to observe the young children who had never seen rain in their lives, give as much alarm as if some frightful accident had happened. Rain also has fallen in the vast "Huerta," or garden-land of Valencia: the simple inhabitants of the villages, in the height of their joy, have carried their tutelary saints about the streets with bands of rustic music.

At about a league from Saragossa a *Powder-mill exploded* and many lives were lost. Parts of human bodies, remnants of clothing, and the remains of beasts of burden, were found scattered in every direction. The edifice was shattered to pieces.

Since the Pope has established himself in Rome, that capital has been very quiet. The French commandant, General Baraguay d'Hilliers, has returned to Paris, but the French troops remain.

The adjustment, at Athens, of the dispute with the Greek Government, mentioned in our last number, having failed of success, the negotiation was broken off.

on the 21st ult. and, by the direction of Mr. Wyse, the blockade of the Pirææ was resumed. The treaty was then resumed, and the Greek government having acceded terms with which our minister was satisfied, a convention was entered into, and Admiral Parker raised the blockade. Since then the relations between the British minister and the Greek government have been friendly. The Greek vessels damaged during their detention were repaired by order of Admiral Parker, and subscriptions were made among the officers of the English fleet, to supply the necessities of some of the masters and crews. On the 4th, Mr. Wyse had an audience of the king and queen, to announce the death of the queen dowager of England, and was treated with marked courtesy.

On the 25th of February, *The Emperor of China died*, having survived the Empress Dowager (whose death took place on the 23rd of January) only thirty-three days. He is succeeded by his eldest surviving son, a youth of nineteen, who will bear the title of Szehing. The Emperor's death is said to have been hastened by a fright he received in a conflagration within his palace.

The intelligence from *New York* comes down to the 17th inst. The public mind in the United States continues to be agitated by the slavery question, in connexion with the admission of California, New Mexico, and Texas, into the Union. A debate on this subject, in the Senate, on the 17th April, produced a *Disgraceful Fracas* between two of the leading members. In the heat of a violent altercation, General Foote drew a pistol from his pocket, cocked it, and coolly presented it at his opponent Colonel Benton. Several members

instantly rushed upon him and disarmed him, just in time, it would appear, to prevent a fatal catastrophe. An investigation was to take place into this scandalous affair.—The discussion of the question in the Senate ended in the appointment of a "Compromise Committee," consisting of seven members from slave-holding and six from non-slave-holding States; and this Committee has agreed to a report, prepared by Mr. Clay, which recommends, in substance, the admission of California and New Mexico, without any reference to slavery whatever, and recognising the right of Texas to be divided into four additional states, with or without slavery, as the people within them, whenever there is a sufficient population, may desire.

The wife of Professor Webster, now lying under sentence of execution for the *Murder of Dr. Parkman*, has made a strong appeal for mercy for her husband to the governor of Massachusetts. Her appeal is seconded by a considerable portion of the American press, who still doubt the guilt of the professor. His counsel have also taken out a writ of error, on the ground of some irregularity in the proceedings.

At Lowell, the *American Manchester, Several Cotton-Mills had Stopped*, whereby 3500 persons had been thrown out of employment. This is accounted for by the great increase of manufacture in the Southern States, which, annoyed at the northern attacks on their favourite institution of slavery, have resolved to manufacture as much as possible for themselves. In only four of the States—South Carolina, Georgia, Alabama, and Tennessee—there are at present 150 cotton-mills. A competition against the manufactures of New England is also begun in the West—in Ohio, Kentucky, Illinois, and Indiana.

NARRATIVE OF LITERATURE AND ART.

OUR glance at the leading publications of the present month comprises few save books of travel and compilation; but we have to record another step in advance on a subject of infinite importance to Education and Literature. Lord John Russell has officially conveyed to the governing bodies of both Universities his views and intentions in advising a Royal Commission of Inquiry into the state and revenues of Oxford and Cambridge. He desires to facilitate the reforms of study already begun at both places in the direction of general knowledge, the growth of modern literature, and the discoveries of physical and chemical science, by removing such local restrictions or obsolete endowments as are at present the bar to a proper extension of such reforms. He adduces, for example, the limitations of fellowship to particular schools and families; and with equal truth he might have instanced the diversion of large properties from purposes of education to uses which are become a mere abuse of the original endowments, and are often marked by the most flagrant departure from the founder's statutes, and the oaths sworn to support them. These are nevertheless the "higher purposes" than education which the Oxford authorities venture to plead in favour of the existing system; and use to support that denunciation of the injustice of meddling with trusts, and vested rights, and the interests of charity, of which their remonstrance is principally composed. But they do not explain why, as a part of the same argument, prayers do not continue to be publicly said, and the Bible to be read during dinner hours, in certain of the colleges; nor why non-residence is permitted and practised; nor why prescribed costumes have been laid aside; nor why particular masters have relieved themselves from celibacy; nor why (above all) masses are no longer performed for the souls of pious founders. The truth is, that all men now perceive the argument of vested rights to be wholly untenable. Of the eighteen colleges and five halls which constitute the University of Oxford, the whole of the latter and twelve of the former were founded before the Reformation; two colleges were established by the dominant Roman Catholics in Mary's reign; and only four are Protestant foundations. All the houses existing at the establishment of Protestantism in England, became, by the same power which before the Reformation had been used in the founding of Christ Church by Wolsey and his master, trusts for educational purposes; and the present design is to establish and extend their efficiency in this particular. Nor will its success be merely a boon to the highest interests of education. It will yet more explicitly serve the cause of truth and morality, in removing the scandal of oaths which are now daily sworn, to be daily violated, by clergymen and instructors of youth. When Mr. Ward was expelled some years ago for his disingenuous subscription to the Thirty-nine Articles, he protested against his condemnation by men who were in the habit of subscribing their statutes in a ten-fold more "non-natural" sense than that of his own subscription to the Articles. This home-thrust escaped the public reporters at the time, but has since been remembered and put in evidence by a distinguished Oxford scholar.

The books of highest pretension issued during the month are a *Selection of Modern State Trials* by the late Recorder of Maglesfield, and a republication of *Essays from the Edinburgh Review* by Mr. Henry Rogers.

We find it difficult to understand the title of the former book, seeing that it only comprises five state trials, properly so called; being those of Frost, Oxford, and Smith, O'Brien for high treason, of Daniel O'Connell and others

for conspiracy, and of the Mayor of Bristol for neglect of duty during the Reform Riots; and is otherwise composed of the trials of Mr. Stuart and Lord Cardigan for duelling, of those of Courvoisier, M'Naughten, and the Glasgow cotton-spinners, for murder; of the titihar Earl of Stirling, for forgery, of Lord Cochrane and the Wakefields for conspiracy, and of Mr. Ambrose Williams and Mr. Moxon for libel and alleged blasphemous publication. Mr. Townsend's professed object in the compilation (which fills two large octavo volumes) was to make it useful as well as entertaining, by popularising the respective subjects of inquiry in essays prefixed to each case; by directing attention, in notes and otherwise, to the principal points of jurisprudence and legal morality, discussed or decided; and by exhibiting, in the body of the reports themselves, the salient parts of cross-examination, the little passages of arms between the forensic combatants, and as it were the poetry of action in these legal dramas. Sometimes this is done fairly enough; but Mr. Townsend's selection of subjects is not always to be approved.

Mr. Rogers, an Edinburgh reviewer whose name has not been much before the public, has dealt chiefly with subjects of religious interest, or indirectly bearing upon religious philosophy. He occupies about the same relation to Sir James Stephen in these matters, as one might say that Arnold occupied to Bunsen and Niebuhr, or Hare and Maurice to Coleridge. He is less wide and comprehensive in his range, in expression less eloquent and original, but more practical in his views. He attacks the two extremes of Tractarianism and Scepticism; gives large and sound expositions of Dr. Whately's views of criminal jurisprudence; and attempts special biographical sketches, such as Fuller's, Luther's, Pascal's, and Plato's.

The reader who happens to encounter another and very different exposition of religious thinking, which it also falls within our present duty to indicate, but not to criticise, Mr. Newman's *Phases of Faith*, will do well to read it after a careful study of the essay on the claims and conflicts of reason and faith which is contained in one of Mr. Rogers's volumes. Mr. Newman appears to have begun life with a strong evangelical turn, to have betaken himself to the East in a mission to convert the Mahomedans, subsequently to have joined the Unitarians, and, finally, to have deposited himself in a sort of worship beginning and ending in the nature and will of man himself, without relation or submission to external and objective laws.

But the chief staple of the month's literary productions has been in the department of Voyages and Travels; and an indication of the routes taken or the subjects described, will suffice for information respecting them. Colonel Chesney has sent forth, in a very big book, the first portion of his narrative of the Government Expedition to the Euphrates; and a certain Count Sollogub has recorded his travelling impressions of Young Russia, in a lively little book called *The Tarantas*. An English artist, lately resident in America, has described his *Adventures in California*; a native American, named Baird Taylor, has given a description of the same region, and adventures in other directions of conquered Mexico, with the tempting title of *El Dorado*; the distinguished American poet, Mr. Cullen Bryant, has collected notes of things, made on journeys in different countries on both sides of the Atlantic, during the last sixteen years, in *Letters of a Traveller*; and Mr. Robert Baird, a Scotch invalid travelling for health, with strong party prepossessions, but shrewd observant habits, has published two volumes on the *West Indies and North America* in 1849. We have also had pictures of travel in the Canadas, in a book called the *Shoe and Canoe*, by the Secretary to the Boundary Commissioners, Dr. Digby; a very curious and complete revelation of Eastern life, in a *Two Years' Residence in a Levantine Family*, described by Mr. Bayle St. John; a peep into Nuremberg and Franconia, by Mr. Whitting; a summer ramble through Auvergne and Piedmont, by the intelligent Secretary of the Royal Society, Mr. Weld; the record of a brief holiday in Spain, *Gazpacho*, by a Fellow of Trinity College, Cambridge; *Notes from Nineveh*, by a clergyman who

has lately had religious duties in the East; and a satisfactory and compendious compilation called *Nineveh and Persepolis*, by one of the officials of the British Museum.

The Exhibition of the Royal Academy and that of the Society of Water Colours were opened to the public at the beginning of this month. They are both rich in works of merit, by the artists already known as the leading contributors to each of them, and by younger artists whose productions are beginning to attract public attention. In the exhibition of the Royal Academy there are 643 pictures, of which 86 are by Academicians, and 51 by Associates; 460 Drawings and Miniatures, of which 20 are by Academicians, and 17 by Associates; 189 Architectural pieces, none of which are by Academicians or Associates; and 161 pieces of Sculpture, of which 12 are by Academicians, and 2 by Associates.

The different Exhibitions at present open afford a remarkable proof of the industry of British artists. The Exhibition of the Royal Academy contains 1456 works of art, and above 1000 offered for exhibition were declined. At the Water-Colour Gallery 380 works are exhibited; at the New Water-Colour Gallery, 329; at the British Institution, 500; at the Suffolk-street Gallery, 735; and at the Portland Gallery in Regent Street, 373. Adding to these the number that may be set down as declined by these different exhibitions, we may estimate the number of works of art produced for exhibition during the year at not less than 5000; and this without taking into account the immense amount of portrait-painting, book illustration, and works produced in other branches of the art.

Philharmonic Concerts took place on the 6th and 20th. At the latter, Lindley, who for nearly half a century has maintained his position as the first English violoncellist, bade farewell to the public. He played in his old favourite Trio of Corelli, and retired amid the acclamations of the audience.

At *Her Majesty's Theatre*, several performers, new to this country, have lately appeared. Mademoiselle Ida Bertrand, a contralto, made her first appearance on the 27th of April, as the boy Pierotto, in "Linda de Chamouni." Madame Frezzolini, who has revisited England after an absence of seven years, appeared on the 21st, as "Lucrezia Borgia," with the most decided success.

At the *Royal Italian Opera*, an Opera entitled *Zora*, being Rossini's "Mose in Egitto," with the subject and characters changed, has been produced, but with little success, though it was splendidly "mounted" and skilfully performed. *Roberto il Diavolo* was produced on the 22nd, the part of Alice being taken, for the first time, by Grisi.

At the *Haymarket*, Mr. Douglas Jerrold's new Comedy, *The Catspaw*, was performed, for the first time on the 9th inst. with triumphant success, and has been nightly repeated ever since.

The other novelties at the English theatres have been a Comic drama at the Adelphi called *The White Serjants*, and a Farce at the Strand, entitled *Not to be Done*, both of which have been successful. Several holiday pieces, of the usual kind on such occasions, were produced on Whit-Monday; among others, the *Lyceum* brought out "Novelty Fair, or Hints for 1851;" and the *Strand*, a "Morality" called "The Philosopher's Stone," founded on the Californian mania.

Drury Lane closed prematurely on the 4th instant. Mr. Anderson, the lessee, in a valedictory address, ascribed his "partial failure" to "the great difficulty of converting this theatre into a temple of the legitimate drama, after the various uses to which it has been devoted; the opposition he has encountered in the shape of three foreign theatres; and the positive coolness of the public press, without one cheering word of encouragement." He announced, however, that he is to re-open the theatre at Christmas next.

COMMERCIAL RECORD.

BANKRUPTS

From the Gazette of April 26. WILLIAM CRITTENDEN, Church-st., Paddington, draper.—CHARLES VENERE, Tunbridge-wells, builder.—JOHN PAILLONSON, Liverpool, grocer.—JOHN STANFORD and HENRY BANNISTER, Hasleowen, brickmakers.—ALEX SPERS CORBICK, Bristol, timber dealer.—JOHN POWELL CLIBOW, Radnorshire, cattle dealer.

April 30. WILLIAM GEORGE CECIL, Poplar, cartman.—JAMES BRIGHTON, Gray's-lane-road, victualler.—THOMAS COLLINGSWOOD, Nuneham, Oxfordshire, innkeeper.—ANTHONY EDWARD CORVAN, Hampstead-road, baker.—JAMES GUEST, Birmingham, commission agent.—JOHN BUOY, Bristol, builder.—JAMES VILLAR, Cheltenham, maltster.—CHARLES PEARSON, Sheffield, victualler.—CONRAD GREENHOW, Newcastle-upon-Tyne, timber merchant.

May 3. CHARLES PENFOLD, Atundel, ironmonger.—FREDERICK TAPLEY, Slidmouth, linen draper.—RICHARD HEATLY, Limehouse, brassfounder.—GEORGE GRAY MASON, Underhill, Lancashire, cotton spinner.—GEORGE AUGUSTUS MUNRO, Liverpool, merchant.—JOHN WILSON, West Bromwich, iron manufacturer.—GEORGE PAGE, Wolverhampton, coal dealer.—JOSEPH CHILTON, Bath, apothecary.—RICHARD KEITLEY, Cheltenham, builder.—GEORGE WILSON, Wakefield, draper.—NOAH GEORGE BOND, Huddersfield, bookseller.—EDWARD WRAY, Hull, draper.—JOHN HOLLINGWORTH, Hull, shipowner.—JAMES PENNOCK, York, farrier.

May 7. JOHN BURGESS NUNY, Colchester, tailor.—GEORGE WOOLLAND TUCKER, Tottenham-court-road, furrier.—SAMUEL MEALEY, Walsall, butcher.—GASKELL JOHNSON, Liverpool, coal merchant.—FREDERICK DUGAN, Liverpool, merchant.—THOMAS SAMUEL BROWN, Manchester, patent agent.

May 10. RICHARD DART and JOSEPH BROWN, Bedford-st., Covent-garden.—EDWARD PARRATT, Park-village, West, Regent's-pk., advertising agent.—JOHN THOMAS HOLLAND, Coventry, builder.—WILLIAM HAYTHURST, Liverpool, coach proprietor.—MARGARET MINE, Manchester, grocer.—BUCKLEY RAYLE, Manchester, check manufacturer.—RICHARD WILSON, Hull, stone-mason.

May 14. GEORGE HEALEY WARD and BAILEY GRIFFITH, Bear-all-y, Farringdon-st., printers.—WILLIAM PARR, Broadway, Blackfriars, beer-shop keeper.—THOMAS SKEETON, Ipswich, tailor.—GEORGE COOPER, Northampton, linen draper.—EDWIN JACKSON GILL, Gloucester, auctioneer.—AGNES ASHCROFT, Liverpool, shipowner.—WILLIAM BRIDGES, Amerham, dealer in sheep.—WILLIAM HENRY ETHELL, Birmingham, saddler.—JOHN LAWRENCE and HENRY DIXON, Birmingham, military ornament manufacturers.—JOHN RYDER, Liverpool, victualler.—WILLIAM and JOHN PILK, Monkwearmouth, ship builders.

May 17. HENRY SCHOLFIELD, Clarn, Suffolk, chemist.—JOHN WINN, Charlotte-st., Blackfriars road, gas fitter.—THEODORE DE REMIGNY, St Mildred's-st., merchant.—JOHN MOODY, Aldersgate-st., stock manufacturer.—CLAXON SCARFE, Hall-st., City-road, timber merchant.—JAMES WOODS, Conduit-st., tailor.—WILLIAM WALFORD, Wolverhampton, brewer.—GEORGE BAILEY, Coventry, ribband manufacturer.—JAMES WENSTER, Leicester, engineer.—JOHN HILL, Junr., Malmesbury, innkeeper.—THOMAS COVILL, Bradford, Yorkshire, grocer.—WILLIAM PARNBORN, Leeds, tailor.—JAMES MELLOR, Manchester, haberdashur.—JOHN HAWLEY, Liverpool, confectioner.—JAMES HARRY, Liverpool, wine merchant.—GEORGE CHARNOCK, West Derby, Lancashire, baker.

May 21. ALFRED ALLEN SUTTERBY, Stoke-ferry, Norfolk, grocer.—JOHN TAYLOR, High-st., Sudwell, cheesemonger.—JAMES URRY, Landport, Hampshire, brewer.—EDWARD DURHAM BURNHILL, Piccadilly, coachmaker.—JAMES WOOLNUGH, (otherwise JAMES LEMAN WOOLNUGH), Chesham, Suffolk, cattle dealer.—GEORGE BURNETT ABRAHAM, Portsmouth, coal-merchant.—WILLIAM MANLES, Woolhope, Hereford, bark-merchant.—THOMAS BAILEY, Gloucester, saddler.—THOMAS HANFORD, Plymouth, tailor.

May 24. WALTER BATES, South Shields, builder.—WILLIAM CARMALT, Rodev, Hampshire, baker.—WILLIAM EALEY, Horsepath, Oxfordshire, butcher.—WILLIAM HAQUE, Manchester, small-ware dealer.—WILLIAM MEADOWCROFT, Rochdale, Lancashire, cotton-spinner.—EDWARD PARKER, Canterbury, shoe-manufacturer.—WILLIAM THREAPILL, Addingham, Yorkshire, cotton-spinner.—JOHN TOMLIN, Finchley-common, Middlesex, licensed victualler.—WILLIAM VARNAM, Ilstock, Leicestershire, draper.—JAMES WELCH, Westbury, Wiltshire, innkeeper.

THE STOCK AND SHARE MARKETS.

City, May 28.

The chief influencing cause of movement in the English Stock Market this month, has been the varying intelligence from France. At the beginning of the month Consols marked 95½, and the market showed much steadiness till the 18th, when the price touched 96½; but on this day was received the news of the recall of the French ambassador at London, and Consols fell at once to 95 in consequence. Since then, prices have been gradually creeping up again, and are now rather better than at the commencement of the month, Consols being quoted to-day at 96½.

The Railway Share Market has been characterised by a much

better tone during the month, and prices of all descriptions of stocks have experienced a rise. Within the last few days the public have begun to appear in the market as buyers, and this, added to improved traffic returns, has greatly aided in strengthening prices.

STOCKS.

	Prices During the Month.		
	Highest.	Lowest.	Latest.
Three per Cent. Consols	96½	95	96½
Three per Cent. Reduced	97½	94	95½
Three and a quarter per Cents.	87½	85½	87½
Long Annuities	84	84	84
Bank Stock	207½	205½	207
India Stock	269	265	269
South Sea Stock	106½	106½	106½
Exchequer Bills	71s. prem.	67s. prem.	70s. prem.
India Bonds	98s. prem.	87s. prem.	90s. prem.

RAILWAYS.

Paid.		Highest.	Lowest.	Latest.
50	Caledonian	8½	7	8½

CORN MARKET.

Mark Lane, May 27.

Not much fluctuation has occurred in the price of grain during the month, but the tendency of prices has been decidedly upwards till within the last week, when the improved appearance of the weather has caused buyers to hang back.

Subjoined are the London averages last announced:—

Wheat, per quarter, 41s. 7d.	Flour, Irish, Norfolk, &c., per sack, 27s. to 28s.
Barley, 24s.	" Town, 35s. to 37s.
Oats, 16s. 1d.	" American, per barrel, 21s. to 23s.
Rye, 22s. 10d.	
Malt, 42s. to 52s.	

PROVISIONS—LATEST WHOLESALE PRICES.

Bacon, per cwt.—Good Waterford, 48s. to 51s.; American, 30s. to 36s.	smoked, 40s. to 50s.; York and Cumberland, 40s. to 70s.; Westphalia, new, 51s. to 56s.
Beef, good, per 8 lbs., 2s. to 2s. 10d.	Lamb, per 8 lbs., 4s. to 5s. 2d.
Butter, Irish old, per cwt., 56s. to 70s.; Fine new Limerick, 70s. to 72s.; Fine weekly Dorset, 76s. to 78s.; Dutch, 56s. to 64s.; Fresh, per 12 lbs., 7s. to 10s.	Lard, Irish, in firkins and kegs, 40s. to 42s.
Cheese, per cwt.—American, 34s. to 43s.; Dutch (Gouda), 34s. to 41s.	Mutton, good, per 8 lbs., 2s. 6d. to 3s. 4d.
Eggs, per 100, 5s. to 8s.	Potatoes, per ton.—Yorkshire Regents, 120s. to 140s.; Scotch crush, 60s. to 75s.
Hams, per cwt.—American, 30s. to 36s.	Pork, fresh, per 8 lbs., 3s. 4d. to 4s.; American, per barrel, 54s. to 60s.
	Veal, per 8 lbs., 2s. 6d. to 3s. 4d.

GROCERY—LATEST

WHOLESALE PRICES.

Tea.—Cora. Congou, per lb. 34d. to 44d.; Souchong, ord. to fine, 10d. to 2s. 9d.; Cora. Hyson, 1s. to 1s. 3d.; Ditto, mid. to fine, 1s. 4d. to 3s. 6d.	good brown, 37s. to 38s.; Brazil, 32s. to 42s.
Coffee.—Good ord. Native Ceylon, per cwt., 40s.; Do. low to good mid. Jamaica, 47s. to 63s.	Cocoa, per cwt.—Trinidad, 35s. to 46s.
Sugar.—Lump, per cwt. 49s. to 51s.; Brit. West India,	Rice.—Bengal white, per cwt., 8s. 6d. to 11s.; Java, 7s. to 12s.
	Sago, Pearl per cwt., 19s. to 26s.
	Turkey Figs, per cwt., 11. 11s. to 12.
	Raisins, Valencia, 21. 7s.

Candles, per 12 lbs., 4s. 6d. to 5s.

OILS.

Pale Seal, per ton, good and fine, 291. 15s. to 317.	Whale, 311. 5s.
Colonial Sperm, 321. to 331. 15s.	Palm, per cwt., 30s. 6d. to 30s. 9d.

THE
HOUSEHOLD NARRATIVE
OF CURRENT EVENTS.

1850.]

FROM THE 29TH MAY TO THE 28TH JUNE.

[PRICE, 2d.]

THE THREE KINGDOMS.

THE principal event of the month contributes another illustration to Swift's Essay on the important ends which have had contemptible beginnings. A difference which mainly originated in the question of how much a certain ill-treated gentleman had lost by the loss of sundry wines and pickles, upholstery, china, jewels, and silver soup-ladles, has resolved itself into the question of whether England shall be governed by free-trade ministers opposed to despotic repression on the Continent, or by ministers committed against free-trade and in harmony with the cabinets of Vienna and St. Petersburg. It will form a curious chapter in some future history of parties, if, at the very time when such combinations were supposed to have lost all power, the force of party and personal influences on this particular question should succeed in investing that section of the House of Commons which is least influential in numbers, ability, popular sympathy, or official aptitude, with the power which a stronger section in that House had not been able to hold, though backed by the favour of the Sovereign and the good wishes of the people, and engaged in a series of highly-important measures.

The bill prohibiting Intramural Interments, and giving power to the Board of Health to buy up existing cemeteries, to establish new ones, and (with due regard to individual feelings and wishes) to regulate the general management and expenditure of burials, has passed the House of Commons without any material change. There has also been fairly brought before the country, in the form of detailed reports submitted to the legislature, a scheme for the establishment of a Metropolitan Cattle-Market, advising the total extinction of the ancient nuisances of Newgate and Smithfield; and a project for the Supply of Water to the Metropolis from the neighbourhood of Bagshot Heath, of which the realisation would place London, in respect to such advantages, above every past or existing city in the ancient or modern world. But to these benefits and promises of social legislation, present or prospective, we have some important set-offs to make in our record of the month's proceedings. The bill to provide instruction for such of the poorer classes of the people in England as are excluded from the advantages of all existing schemes of education, has been rejected by a very large majority; and a bill somewhat similar in its object with regard to Scotland, supported by the Free Church, and having in view the relief of parochial schools from general Church control, and the nationalisation (so to speak) of Scotch education, has been rejected by a very small majority. These divisions indicate the growing strength of a party which it somewhat misuses a noble historical name to call Puritan. To

"Compound for sins we are inclined to
By damning those we have no mind to,
Still so perverse and opposite
As if we worshipp'd God for spite"—

is to dishonour by the mere pretence of imitation the stern self-denial of the enthusiasts of the seventeenth century. They would not have voted with Lord Ashley to shut the post on a Sunday, yet hesitated with him to put an interdiction on Sunday travelling. They would not have struck from the poor all means of kindly and needful communication with their friends for nearly a third of every week, yet left it as a privilege to the rich to put carriages and messengers on requisition at their pleasure. The complaint of the leading Sabbatarian organ, that Lord Ashley's band of followers had been thinned by the attractions of Epsom, was an egregiously simple exposure of the real truth of the matter, side by side with that assumed cant of which rules the outward conduct of so many. But perhaps it will not ultimately be matter of regret that the chief experiment should have been made, even at the cost of all the discomfort it involves, and though it was clearly not the duty of a government to have yielded to what they knew to be evil, on the surest calculation that good might come of it. The House of Lords has meanwhile been emboldened to pass a bill for the prevention of Sunday trading, which will deprive the poor man of all access to articles of food or domestic requirement on a Sunday, with the exception of meat and fish up to nine o'clock for the four summer months, while it will insure to the rich man a morning delivery at his own house, all the year round, of whatever fish, meat, poultry, or game he requires; which will fine or imprison a barber who shaves after ten o'clock in the morning, and similarly punish a news-vender for selling anything that is not stamped, while it overlooks the news-vender who sells anything that is stamped, and leaves the publican and sinner to shave himself if he can. But it is hardly conceivable that a majority will be caught in the lower House for this ridiculous bill, even at the dangerous dinner-hour—when small knots of conspirators carry questions by sudden storm, and ministers are made to stand and deliver on every conceivable subject, from stamp acts and triennial parliaments to letter-carriers and British distillers.

The bill regulating the hours of Factory labour has passed the Commons un mutilated, and the Australian bill has narrowly escaped mutilation in the Lords, its most distinctive feature having been retained by an infinitesimal majority. The County Courts bill has reached the upper house in too weakly a condition to be able to make any very effective stand against the fate which is said to await it there. Another important measure has got into the clutches of a somewhat equivocal committee in their Lordships' house, and the Bishop of Salisbury is doing his best to nullify the Manchester Rectory bill. We have also to record that the Railway Audit bill, as amended by the Lords, has since been rejected by the Commons on the ground of interference with privilege; but, however unfortunate it may be that existing facilities for fraud

and evasion should continue unchecked any longer, the proposed bill was cumbrous and defective, and its rejection is not to be deplored. The sin of modern legislation is the want of simplicity. The object proposed in this Audit bill was missed in the machinery for effecting it; and hence generally comes that grievous scandal of the modern statute-book, which consists in its unending repetition of acts for the amendment of other acts that had themselves amended previous amending enactments, and which threatens to make one enormous pettifogging Nisi Prius of the laws of this lawyer-ridden country. From the opening of the session to the middle of the present month, no less than a hundred and thirty-two bills had been under discussion in the House of Commons, and not a few were measures of this kind.

Nor is it seldom that the bill amended would not be infinitely better without the bill amending it. The last news from Ireland, for example, brings mention of a very important sale of encumbered estates (in County Meath) realising upwards of sixty thousand pounds and an average of between eighteen and nineteen years' purchase; yet, on the same page which thus records the continued success of that admirable measure, we have also to mention a so-called improvement of it forced upon the Government by Lord Westmeath, the effect of which, unless the House of Commons interfere, will be to prevent the future sale of a certain class of estates for less than fifteen years' purchase. It was discussed amid such frantic complaints of "confiscation" by the "encumbered" legislators of the Upper House, that Lord Carlisle had nothing for it but to give way with signs of extreme reluctance. Meanwhile the terrible evil to which this measure is applying the only sure (though a necessarily slow) remedy, has had one more illustration of a very appalling kind, in the deliberate murder during open day, and almost within sight of the inhabitants of a country village in Armagh, of a land-agent remarkable for his harshness to the poor, who had been concerned in extensive evictions, and whose last act had been to refuse with a curse the prayer of a poor widow, offering him the last money she could scrape together for a favour he set no store by, and was quite ready to give to any one but the miserable wretch in want of it. It seems strange to have to mention, in the presence of such facts as these, two attempts by Irish members of the House of Commons, the one to effect what would be tantamount to a repeal of the poor law, and the other to render more swift and stringent the law of eviction. Both were happily defeated; but the existence of such desires and aims on the part of the landlord representatives of Ireland may help to account for the uncontrollable vehemence with which the question of what is called tenant-right continues to be agitated throughout the country, notwithstanding extreme and very absurd differences among its advocates as to what is really intended by the expression. The Parliamentary Franchise bill still lingers in the Lords; and in the Commons the Vice-royalty Abolition bill makes such feeble progress, in spite of a feeble opposition, that it seems doubtful if the present session will see it passed. Alarming reports have prevailed as to the re-appearance of the potato blight; but, for the most part, these would seem exaggerations, and already it is noticed that the blackening of leaves which had been mistaken for the blight has yielded to the sunny warmth of the later days of the month. The promises of harvest are everywhere abundant.

In England, too, where the weather has been sultry beyond precedent, the anticipations of harvest, the state of the markets, and the last returns of exports and imports published by the Board of Trade, are of a character by no means likely to furnish arguments for the restoration of protection. Yet the "farmer's friends" have not been inactive; either in the country, where parson McNeill, of Liverpool, came vainly to the rescue of the Chowlees and the Butts; or in the House of Commons, where a band of philanthropical free traders came as vainly to the help of the Stanleys and Disraelis, on a motion which, if successful, would have protected free labour as against slave-labour in sugar and coffee. Not inaptly have the protectionists had some small glance of comfort, however, to set off against their ill success, in the shape of a *beer* report, from a committee of the House of Lords, proclaiming the scandalous mismanagement of many of the free-trade beer-shops. But not a few of the conclusions come to in this report are confessedly exceptional, and one or two statements of a different tendency ought to be coupled with our mention of them. One of the witnesses examined, for instance, declared that he had begun the business eighteen years back with a capital of a shilling, that he now drove a trade of some sixty barrels a month, that he attributed much of his success to having never allowed swearing or smoking on his premises, and that he intends to retire from business next year, and live in a part of the country "where there are no ill-conducted beer-houses." The same witness protested that since Father Mathew visited London there had been more drinking than before he came; and with characteristic plain-speaking, undeterred by any fear of seeming to speak with an interested motive, Mr. Bouch added that there was a great deal of nonsense about the Reverend Father's preaching, for that temperance was a good, but teetotalism an evil, to the constitution; seeing that temperate people will drink a deal of beer, and "beer is very strengthening." We should add, in connexion with this subject, that its agitation has led to a somewhat lively attack on the monopoly of the brewing interest—the potentates of the vat, who are accused of setting at defiance the most elementary maxim of fair trade, by refusing to adjust their selling prices to the reduced cost of their raw material. No matter what may be the price of barley, they keep up the price of beer. A pot of porter or ale costs just as much, with barley at twenty-two shillings, as when barley was fifty-five; and the difference which has brought down the quatern loaf one half has made not the least difference to the autocrats of single and double X. Such is the advantage of the wealthy brewer over the needy baker. The consumer of bread profits by his poor tradesman, if the grower of corn does not; but neither the consumer of beer nor the grower of barley can cope with the wealthy brewer. Free trade and abundance has taken five millions from the landlord, but the brewer stops it *in transitu* and pockets it; for to him still, as in the days of Thrale and Johnson, the boiler and vat are but another name for "the potentiality of growing rich beyond the dreams of avarice." Nevertheless farmers' friends seem to be in no mind to agitate this question. They express themselves far more interested in the doings of Mr. Ferrand.

Mr. Busfield Ferrand has started a potable scheme of a Farmer's Wool and Flax Association, of which the object is to crush the factories of the Manchester spinners by erecting a spinning-wheel in every cottage! Wool and flax are to be substituted for cotton; and the execrable trade which has made Manchester what it is, by annually consigning a hundred thousand beings to hopeless bondage, and by directly occasioning a thousand murders a day (we quote the cautious description of the pious *Standard*, the organ of Lord Stanley's government that is to be, and the trusted exponent of its opinions), is to be forthwith destroyed. But Mr. Bright is apparently an obstinate man. He still thinks the article of cotton so likely to continue in request, that

he has actually proposed a Commission for Inquiry whether a Supply might not be brought from India to compete with that of the United States in the markets of Manchester; to which the government has responded by a negative.

For a very different object of inquiry new hopes have arisen. The possible safety of Franklin has been suggested by the report of the immense fields of crushed ice now rife in the North Atlantic Ocean. It is supposed that these vast fields are portions of the slowly released masses, the growth of many preceding winters, which were first broken two winters ago by the strong south-west and southerly gales over all the North Atlantic and North Pacific; but which, in consequence of their bulk and extent, were again condensed before they could be fairly swept into the Atlantic, and thus offered continual obstruction to the release of Franklin and his ships. Nor would this appear to be impossible, assuming detention in the ice to have been the only danger, and that continued means of subsistence were accessible. Meanwhile the accidents arising out of these floating masses of ice have been lamentable in the extreme,—a vast number of ships having perished, with the loss of more than a hundred thousand pounds in money, and, it is feared, some hundreds of men,—but are very justly less an object of surprise and alarm than such incidents on a well-known coast, in tranquil water, and under a clear summer sky, as the sudden wreck of one of the Glasgow and Liverpool steamers carrying two hundred souls. Inquiry is instituted into this event, and proceedings will be taken against the master and mate.

The Law Courts of the past month have supplied fewer interesting or important cases than usual; but rather a curious question has been tried in Dublin, where a verdict was given of which the effect is to affirm the validity of a bill of exchange already declared a forgery by an English jury, and which had consigned a money-lender to transportation. The English Exchequer has distinguished itself by granting Tactor Philpotts what the Queen's Bench and Common Pleas had successively refused, and, on the ground that it would be able to give judgment sooner after hearing the arguments on a rule than if it had no arguments to hear, has consented to a rule *Nisi*. This is doubtless some comfort for the Bishop under the defeat of his brother of London's bill in the Lords, which would fain have re-established, in the nineteenth century, spiritual pretensions and spiritual tribunals scouted in the seventeenth century by every intelligent Englishman. Another good act of their Lordships deserves praise, as the first instance of their granting a full divorce upon a petition *in forma pauperis*; but we have, as usual, to record legal proceedings less consonant with the spirit of the age, of which an instance offers itself in a bequest of money for an essay on natural theology, declared void on the ground of its not recognising formal Christianity. Perhaps this should be the place for noticing the sudden eruption of a sort of civil war between her Majesty's Customs and the London Dock Companies, originating in what are alleged to be unfair demands made by the Customs on the Companies for duties on goods already passed. Not only would her Majesty's Commissioners have their due payment on barrels of sugar, but a fresh payment on the sweepings thereof, before these undergo the metempsychosis of lollypop or hard bake. Our summary must not conclude without a mention of two strange arrivals that have furnished very notable attraction during the month to all kinds of sight-seeing people. A young Hippopotamus of more than ordinary ugliness from the Seventh Cataract, has divided interest and curiosity with a mission of more than Oriental magnificence from the most distant frontier of India.

NARRATIVE OF PARLIAMENT AND POLITICS.

On the 30th of May Lord BROTHAM called the attention of the House of Lords to a matter of *Privilege*. An article had appeared in the *Globe* and subsequently in the *Daily News*, containing absurd mis-statements respecting his conduct in the Earl of Lincoln's divorce case. He had filed an affidavit with a view to a criminal information against the *Globe*, but the proprietor had since made a sufficient explanation and apology. In regard to the *Daily News*, he should take till the next day to consider whether he should move that the printer be called to the bar. [On the following evening his lordship took no notice of the subject.]

On Friday the 31st Earl GREY moved the second reading of the *Australian Colonies Bill*, overruling Earl Fitzwilliam's wish to postpone it on account of the very thin attendance. The motion was not opposed; but several peers objected to particular points of the bill, especially the adoption of a single legislative chamber, instead of two separate chambers.

On Monday the 3rd inst. the Bishop of London moved the second reading of his bill for providing *A New Court of Appeal* in cases involving questions of Heresy. He explained that his supposed court was to consist of the bench of bishops, who were to be summoned whenever a case turning upon doctrinal points came before the Judicial Committee of the Privy Council, and their decision, as reported to the Committee of Council, was to govern the judgment of that body. He supported his measure by precedents and analogies; referring particularly to the courts of law, who remitted questions beyond their own immediate knowledge to arbitrators professionally qualified to determine them. These were questions so new to a lay tribunal that its members could not even understand the terms in which they were couched, while a prelate of the church would consider

them as the mere alphabet of theology. He concluded, with great solemnity and much emotion, by a devout aspiration that the House might be guided to a right conclusion.—The Marquis of LANSDOWNE considered the measure as perilous at the present moment, besides being objectionable in principle. It violated the prerogative of the Crown, which from time immemorial had been the final court of appeal in all cases, besides being the supreme head of the Church. There was no occasion for a new tribunal in matters of doctrine; the Judicial Committee of Council could only have to decide whether a certain doctrine was that of the Church, and this fact they were as competent to decide as the Court of Chancery to decide on a point of chemical science. Suppose the bishops were to decide by a bare majority, this would create instead of allaying controversy. He was, however, prepared to recommend that all the bishops should be *de jure* members of the Judicial Committee of the Privy Council, and that no dissenter, in that committee, should sit on ecclesiastical questions.—Lord BROTHAM opposed the bill, but suggested that a committee of bishops might be appointed, which should report their opinions on such questions; those opinions not to be binding, but to be of the nature of aid or advice.—Lord STANLEY denied that the bill interfered with the prerogative of the Crown. He should support the second reading, though he desired the measure to be modified, so as to make the bishops a court of arbiters in matters of doctrine, in the same manner as the judges are in matters of law.—The bill was supported by Lord Rodessdale, Lord Lyttelton, and the Bishop of Oxford; and was opposed by the Bishop of St. David's, Lord Campbell, the Earl of Chichester, and the Earl of Carlisle. On the division the second reading was negatived by 64 to 51.

On Thursday the 6th, the Marquis of LANSDOWNE moved the second reading of the *Irish Parliamentary Electors Bill*. A desultory discussion of some length

ensued, in which objections were made to the details of the bill, but it was read a second time without a division.

Several questions having been put to ministers, on Friday the 7th, respecting the *Expedition from America against Cuba*, Lords LANSDOWNE and GREY said, that it had been fitted out in defiance of the express prohibition of the American Government; but they declined to state whether any instructions had been sent to the commander of the British naval force on the station.

The second reading of the *Encumbered Estates Act Amendment (Ireland) Bill* was moved on Monday the 10th, by Lord WESTMEATH, who explained that its object was to fix 15 years' purchase as the minimum price below which no man's property should be sold under the act of last session, which he called a measure of confiscation; and also to exempt from the operation of that act estates which were only slightly encumbered. The motion was supported by the Duke of RICHMOND and the Earl of GLENCAIRN; the latter, however, vehemently denounced the whole measure, as being designed merely "to uphold some dirty theory of the Manchester School." The Earl of CARLISLE, on the part of the government, objected to a measure which would cripple the operation of the existing statute, but afterwards withdrew his opposition to the second reading of the bill, in order that it might go down to the House of Commons where it might be discussed in conjunction with another bill on the same subject, brought in by the Solicitor-General. The bill was accordingly read a second time.—The committee of the *Australian Colonies Bill* was opposed by Lord BROUGHAM and the Bishop of OXFORD; the former moved that certain petitioners against the bill should be heard by counsel at the bar; the latter, that the bill should be referred to a select committee. Both motions were negatived; the first by 33 to 25, the second by 34 to 21.

On Tuesday the 11th, the house went into committee on the above bill. Lord MONTEAGLE again brought forward the question of single or double chambers, by moving, as an amendment to the first clause, that there should be a legislative council and a representative assembly, in each of the colonies of New South Wales and Victoria. After a discussion containing a repetition of the old arguments on both sides, the amendment was rejected by 22 to 20. The Bishop of OXFORD also revived the ecclesiastical question previously disposed of, by moving the insertion of a clause enabling the Church of England in the colonies to lay down rules for its own internal government; but he withdrew his motion on an assurance that the government would inquire into the matter.

On Thursday, the 13th, Lord MONTEAGLE moved for copies of official documents respecting the issue of a *Commission of Inquiry as to the Universities of Oxford and Cambridge*.—He apprehended that the commission might interfere with improvements now in contemplation, and complained of the course adopted without previous communication with the authorities of the universities.—The Earl of CARLISLE said there was no objection to the production of the papers; and that the total absence of any hostile spirit on the part of the government would be shown by the nomination of the commissioners, who should be members attached to the universities, and able to co-operate beneficially with their own members.—Lord BROUGHAM objected to the commission *in toto*, and expressed astonishment at the letter which had appeared from Prince Albert, who, he said, had been placed in a false position by the mistaken zeal of his friends. The head of an university ought not to be connected with the Crown, and the Prince had fallen into the mistake of supposing that the royal commission spoke the sense of the parliament, a natural mistake for those who had lived in foreign countries where the legislature and the sovereign were one; but the royal commission would speak the sense of the Crown, and not at all that of the parliament.—The Duke of WELLINGTON expressed his satisfaction with Lord Carlisle's explanation of the way in which the commission was to be nominated, though he did not consider the measure necessary or desirable. The papers were ordered.

The consideration, in committee, of the *Australian Colonies Bill* resumed on Friday, the 14th. Lord

STANLEY objected to the 30th clause, which empowers the Queen in council to establish a General Assembly of the Australian Colonies, on petition by two or more of them; and moved the omission of that clause and the subsequent clauses depending on it.—Lord GREY defended the principle of the clause, but intimated, that in consequence of objections lately urged, he had prepared an amendment to the effect that the general colonial legislature so constituted should be "only for certain purposes." Lord STANLEY's amendment was negatived by 23 to 22; and Lord GREY then introduced his amendment, the discussion of which was postponed.—Lord BROUGHAM withdrew his *Court of Chancery Appeal Bill*, on account of the difficulties at present attending the arrangement of the duties of the Great Seal. He besought the government to proceed deliberately in their intended measure on this subject.

On Monday the 17th the expected debate of Lord Stanley's motion on the *Greek Question* attracted an unusual attendance both of peers and strangers. Before the business of the house began Lord BROUGHAM suddenly started up with an excited air, and said, that he had given notice that no person, peer or commoner, had a right to sit in the peeresses' gallery, but that a gentleman was now sitting there, and that, if he did not come down, he (Lord Brougham) would move the enforcement of the rules of the house. The gentleman's conduct (he added) was the more intolerable, as he had already excluded two peeresses, though he had a place assigned to him in the house. This oburgation, which produced much laughter, was levelled at the Chevalier Bunsen, who, with two ladies, was sitting in the peeresses' gallery, and kept his seat apparently unaware that he was the object of remark. Lord Brougham then hastened across the house and desired the usher of the black rod to "take him out." Sir A. Clifford went into the gallery, and immediately the Chevalier Bunsen rose and quitted it with his companions. This unpleasant scene over, Lord STANLEY proceeded to move his resolution. It was: "That while the house fully recognises the right and duty of government to secure to Her Majesty's subjects residing in foreign states the full protection of the laws of those states, it regrets to find, by the correspondence recently laid upon the table by Her Majesty's command, that various claims against the Greek government, doubtful in point of justice or exaggerated in amount, have been enforced by coercive measures directed against the commerce and people of Greece, and calculated to endanger the continuance of our friendly relations with other powers." Lord Stanley supported his motion at great length; entering minutely into the merits of the various causes of quarrel with the Greek government, which he maintained were paltry and contemptible; tracing the history of the negotiation between the governments, of our hostile measures of coercion, of the kindly mediation of France and our ungracious reception of it; blaming Lord Palmerston's negligence in not apprising Mr. Wyse of the convention which had been made in London; and accusing the government, through its foreign minister, of having insisted on exorbitant demands, oppressed the weak, and endangered the peace of Europe.—The Marquis of LANSDOWNE defended the government. He maintained that it was the right and the duty of the British government to protect its subjects resident in foreign countries; and brought forward a great many instances in which the British government had done so. It was no objection to the principle of a claim that it was urged in favour of an unworthy claimant, or that its amount was small; the most paltry amount might involve a principle of the highest importance. As regarded the dispute with France, Mr. Wyse had given explanations which showed that it was physically impossible that he could have had any knowledge of the terms of the London convention at the time that he was proceeding to enforce the arrangement entered into by himself; but a desire to return to the terms of the London convention was felt on both sides, and, as far as possible, those terms would be made the subject of a treaty. The resolution was supported by the Earl of Aberdeen, the Earl of Cardigan, Viscount Canning, the Earl of Hardwicke, and Lord Brougham: Lord Ward, Lord Beaumont, and Lord Eddisbury defended

the government. The resolution was carried by 169 to 132; a majority of 37 against the government.

The *Irish Encumbered Estates Bill* was read a third time on Tuesday the 18th. The Marquis of WESTMEATH moved the addition of a clause restricting the commissioners from selling any estate for less than fifteen years' purchase. It was opposed by the Earl of Carlisle, and supported by Earl Fitzwilliam, the Earl of Stradbroke, and Lord Stanley. On a division it was carried against ministers by 32 to 30. Another clause, to protect from arrest the proprietors of encumbered estates during the legal formalities preliminary to sale, was moved by the Marquis of WESTMEATH, and carried without a division, the Earl of Carlisle merely expressing his disapprobation of it. The bill then passed.

On Friday the 21st Lord BROUGHAM stated that he and other lawyers had grave doubts whether, by law, the Crown was able to give the directions, in reference to *Sunday Labour in the Post Office*, which the address from the House of Commons had prayed. The Marquis of LANSDOWNE said that the point should receive serious consideration.—The Marquis of LANSDOWNE moved for the appointment of a committee to take into consideration the accommodation of the diplomatic body as visitors of the house. After some explanations from Lord Brougham, and remarks from Lord Grey and other peers, the motion was agreed to.

The matter of the *New Post Office Regulations* was brought forward on Monday the 24th by Lord BROUGHAM, who insisted forcibly on the hardship and inconvenience they produced.—The Marquis of LANSDOWNE said that the Crown had the power to make regulations as to the transmission of letters, though he feared that the new scheme would tend greatly to the desecration of the sabbath.

On Tuesday the 25th, on the presentation of a petition against the Post Office regulations, Lord BROUGHAM returned to the subject. He had received a letter from a manufacturer who stated that his waggoner was killed on his road home to Derby on Saturday last, and in consequence of the recent postal arrangement he could not ascertain whether any goods had been stolen from his waggon without sending special messengers to Birmingham, Manchester, and other towns where it had stopped. Therefore, in this case, instead of sending letters quietly through the Post Office, this gentleman had been obliged to send men, who, of course, could not go to church, and the consequence was a greater desecration of the sabbath. The day before yesterday the sabbath had been compulsorily broken in every part of the kingdom. All over England this breach of the sabbath was going on, because the Post Office would not employ a few clerks on Sundays. In Liverpool, for instance, where commercial intelligence was of the highest importance, fifty or sixty clerks might be despatched by the railroad to obtain intelligence which might easily have been transmitted by letter; with the employment of only five or six persons.

The intended Resignation of Lord Chancellor Cottenham was announced by Lord John RUSSELL, in the HOUSE OF COMMONS on the Tuesday the 28th of May. His Lordship added that any person accepting the great seal must take it subject to the decision of parliament with respect to the amount of pension. As to the separation of the judicial and political functions of the office, that was a subject which required very serious consideration.—Mr. MILES moved a resolution that the government should take immediate steps to forward the emigration of orphan girls, inmates of workhouses in England and Wales, to Australia as apprentices.—Mr. STAFFORD moved, as an amendment, the substitution of the United Kingdom for "England and Wales," on the ground that such steps would be peculiarly beneficial to Ireland.—Mr. HAWES objected on the grounds, first, that there was no longer the same demand as formerly for female servants in the colonies; and next, that the available fund was too small. The discussion was proceeding when the house was counted out.

On Thursday the 30th the Commons met at 12 o'clock for the first time in their *New House*. The sitting being experimental, no important business was done.—

At the evening sitting, in the old chamber, Lord ASHLEY brought forward his motion for the suppression of *Sunday Labour in the Post Office*. Admitting that a good deal had already been done, he explained his object to be that all the provincial towns should be placed on the same footing as the Metropolis. He had no desire to interfere with the passenger traffic on Sunday; all he wished was to stop the transmission of the mail bags.—The motion was opposed by the CHANCELLOR of the EXCHEQUER, who observed that it was a curious illustration of the way in which subjects were sometimes taken up in England, that the measure which had caused all the agitation had, by temporarily employing 25 clerks in addition to the 27 previously employed on Sunday, relieved 8000 persons from all Sunday work, which would interfere with their religious duties. He conceived that what had been done should be accepted as a pledge of still further reduction, and would make every inquiry into its practicability. But he believed that the proposed change would produce much hardship to the great majority of the people, especially the poor, who have not the means to command express trains, electric telegraphs, and other expedients for speedy communication. The motion was carried by 93 to 68.

On Friday the 31st, Sir Edward BUXTON moved a resolution "that it is unjust and impolitic to expose the free-grown sugar of the British Colonies and possessions to unrestricted competition with the sugar of slave-trading countries." He took a review of the combined effect which negro emancipation, with the successive measures for throwing open the sugar trade, have had on the economic and social state of the West Indies; and contended that the steady and progressive increase of the trade of Cuba and Brazil, in consequence of the advantage of slave labour, is crushing the prosperity of our own colonies. To suppress the slave-trade had been found impossible, and the only protection for our colonies was the imposition of differential duties on foreign sugar.—Mr. HUME apprehended that the evil lay in the difficulties interposed by the British government to an adequate supply of free labour for our colonies from Africa and other places; and moved an amendment to that effect.—Colonel THOMPSON supported the original motion, in which he saw nothing inconsistent with the principle of free trade.—Mr. James WILSON denied that our recent free-trade legislation had done any injury to our colonies, and contended that, since that legislation, the production of sugar had increased in our own colonies at a greater rate than in Brazil or Cuba.—Mr. E. H. STANLEY (the son of Lord Stanley) in a maiden speech, much complimented for ability, described, from his own personal observation, the desolate state of the West India colonies, and ascribed their condition to their inability to contend with slave-holding countries.—Sir J. Pakington and Mr. Gladstone supported the motion; and the Chancellor of the Exchequer, Mr. Hutt, and Lord Palmerston, opposed it. On the division, it was negatived by 275 to 234.

The *Metropolitan Interventions Bill* was considered in committee on Monday the 3rd of June, a discussion having been previously raised on a motion by Mr. Lacy that the bill should be referred to a select committee. This motion was supported by the metropolitan members, who, however, expressed approbation of the principles of the measure; but the prevailing opinion was that the details of the bill could be best amended in a committee of the whole house.—Sir R. PEEL, supporting this opinion, enlivened the debate by a joke, "If the bill were sent to a select committee, it would be one of the most extraordinary cases of *Extra-mural Intervent* ever heard of."—Mr. Lacy's motion was lost by 159 to 57, and the house went into committee.—On clause 2, Mr. DUNCOMBE (whose appearance in the house for the first time since his long illness was hailed with acclamations) moved the omission of that and several of the clauses, for the substitution of provisions giving to the parish authorities of certain districts powers which, as the bill stood, would be given to the board of health. This amendment was negatived by 135 to 57, and Mr. Duncombe intimated that he would not offer any further opposition. The clauses up to 18 were then agreed to.

Resolutions respecting the *Irish Poor Law* were moved on Tuesday the 4th, by Mr. FRENCH. They were, in substance, that no permanent system of poor relief in Ireland can be beneficial unless founded on a strict application of in-door relief; that vice-guardians are unconstitutional; that the present administration of the poor is extravagant and demoralising; and that it is unjust to throw the chief burden on one kind of property.—In his statements as to the evils caused by the present working of the poor law he was supported by Lord NAAM, who described the demoralisation in the Irish workhouses as frightful. There are 119,000 children undergoing contamination by being mixed with a concourse including the most abandoned of each sex. In the South Dublin union, a multitude of young girls are thus drafted among a crowd of able-bodied women who are almost all prostitutes. They are necessarily perverted, and soon enter a vicious course, which keeps them travelling in a perpetual circle from the workhouse to the brothel and from the brothel to the workhouse. It is enough to bring a curse upon the country.—Sir W. SOMERVILLE affirmed that the recent introduction of out-door relief had been necessary to prevent the people from perishing of famine, and vindicated the vice-guardians from the charge of mal-administration and extravagance.—The resolutions, after being supported by Colonel Dunne and Mr. O'Flaherty, and opposed by Mr. W. Sharman Crawford and Mr. Poulett Scrope, were negatived by 90 to 65.

The debate of the second reading of Mr. Fox's *Education Bill*, adjourned from the 17th of April, was resumed on Wednesday, the 5th. Mr. ANSTEE supported the principle of the bill, without pledging himself to the details.—Mr. H. DRUMMOND drew a somewhat subtle distinction between education and instruction. Secular instruction might be given by the state, but education—the drawing forth of that which is good, and the non-drawing forth of that which is evil—is a work for the parents while the child is young, and afterwards for the Church.—Mr. PAGE WOOD took a review of what had been done by the Church in the cause of education; and, from what the Church had already done, he inferred that she was worthy to retain the trust.—Mr. MILNER GIBSON contended that if school attendance was made compulsory upon persons employed in factories, schools ought to be provided at the public expense, open to all religious denominations. The bill did not interfere with the present machinery for religious education. No less than ten millions was annually spent in England on what was called religious education—twice as much as in any other country. The bill did not touch this enormous sum, so that religious education was amply provided for; and what was now asked was provision for secular instruction within the reach of the people. Secular instruction was not the province of the Church; if it were, what a reproach would it be to the Church that forty in the hundred of the adult population of England and Wales could not write their names in the marriage registers!—Mr. FOX summed up the debate, and replied to several misrepresentations of the nature and objects of the measure. On a division, the bill was thrown out by 287 to 58.

On Monday, the 6th, the house went into committee on the *Factories Bill*. The proceedings were almost confined to the discussion of an amendment on the first clause, moved by Mr. ELLIOT, to the effect of legalising relays, provided that young persons and females should not be employed for more than ten hours daily, between half-past eight in the morning, and half-past eight in the evening, and provided that the relays should be absent from the factory for not less than three consecutive hours.—Sir G. GREY opposed the amendment as contrary to the whole spirit of the bill.—Mr. EDWARDS charged Lord Ashley, "the Champion of the Operatives," with having abandoned their cause by concurring in the government measure.—Lord ASHLEY replied, with great earnestness, "I never considered myself as their champion, but I did consider myself their friend; and I declare before God, that I have done that which appeared to me to be the best for their interests; and every successive hour, and all the intelligence I receive, convince me that, by God's blessing, I have been enabled to judge aright. I may be permitted to state,

solemnly and before this august assembly, that I have sacrificed to them almost everything that a public man holds dear to him; and now I have concluded by giving them that which I prize most of all—I have even sacrificed for them my reputation."—After some further debate, the amendment was rejected by 246 to 45.—Lord ASHLEY moved another amendment on the same clause, to the effect of giving children of tender years the same protection as that enjoyed by adult females and young persons, namely, that they were to work only from six to six o'clock.—This amendment was also negatived by 102 to 72, and the remaining clauses were agreed to.

The *Metropolitan Interments Bill* was then resumed in committee, and clauses, up to the 23rd, were agreed to. The principal points on which the discussion turned were; the power to remove bodies from the present burial-grounds with or without the consent of the incumbent, and subject or not subject to payment of fees; the suspicious absence of any schedule of fees in the bill, and the backwardness of government to give any pledge as to the amount of fees; and on the proper width of the space, or belt, which should be drawn round the cemeteries, and whereon no house may be built. Lord JOHN RUSSELL deprecated the fixing of a schedule of fees without further experience. It was at last agreed that the fixing of the fees shall be left to the board of health, subject to the approval of the secretary of state.

On Friday the 7th, Lord John RUSSELL announced that the Lord Chancellor intended to resign as soon as he had disposed of the causes heard by him; and that he (Lord J. Russell) had advised the Crown to put the great seal in commission.—Further progress was made in committee with the *Metropolitan Interments Bill*, the clauses up to 30 having been agreed to.

Her Majesty's answer to the address on the subject of *Sunday Labour in the Post Office* was communicated to the house on Monday the 10th by Sir G. GREY. It was as follows:—"I have received your address, praying that the transmission and delivery of letters may in future entirely cease on Sunday in all parts of the kingdom; also, that inquiry may be made as to how far, without injury to the public service, the transmission of the mails on the Lord's Day might be diminished or entirely suspended; and, in compliance with your request, I shall give directions accordingly."—Lord JOHN RUSSELL afterwards announced that no exception would be made in favour of foreign correspondence, it being the intention of government completely to carry out the vote.

The grant for the *New Houses of Parliament* then came under consideration. Mr. HUMPHREY moved that the amount should be 100,610*l.* instead of 103,610*l.*; his object being, by this retrenchment of 3000*l.*, to put an end for the present to the proceedings of the committee of taste, and prevent any further expenditure on pictures before they knew the cost of completing what was useful and substantial. He complained of the enormous expense created by incessant alterations, which had swelled the original estimate of 707,000*l.* into two millions.—The motion was opposed by Sir C. WOOD and by Sir R. PEEL, who taxed Mr. Hume with having himself been one of the main suggesters of the alterations of which he now complained; and made good his charge to some extent by reference to parliamentary documents, amid loud laughter.—Mr. OSBORNE supported the motion, observing that the house should be finished first and adorned afterwards. His opposition to the sum proposed to be granted for Mr. Landseer's pictures was grounded on his respect for that artist, and his unwillingness to see his works in so bad a position.—Sir R. PEEL explained that the place intended for these pictures had been assigned with the full concurrence of Mr. Landseer himself.—Lord JOHN RUSSELL defended all the parties concerned in the new building, and opposed the motion, which was negatived by 144 to 62.—Mr. HUMPHREY then moved for a select committee, which after a short discussion was rejected by 85 to 55.

The *Irish Lord Lieutenantcy Abolition Bill*, on the question of its second reading, was warmly opposed by several Irish members, Mr. Grattan, Mr. G. A. Hamilton, Mr. Maurice O'Connell, Colonel Dunne, and Mr. Grogan, who reiterated objections previously made to

the measure. It was supported by Mr. Roebuck, and Lord John Russell, and the debate was adjourned to Monday following.

On Tuesday the 11th, the house went into committee on the *Metropolitan Interments Bill*. On the reading of the 32nd clause, which provides compensation to the clergy for the loss of their present fees, Sir Benjamin HALL complained that in some parishes the clergy made a traffic of their burial grounds, and supported his complaint by some remarkable statements. "He would take the case of St. Giles's-in-the-Fields as an instance. What had been the conduct of the clergyman there?—a clergyman, too, who was very well off, for he had 1000*l.* a year as Canon of St. Paul's, in addition to 987*l.* as rector of St. Giles's. It had been the practice there to make a feint of covering the coffin whilst the mourners were present; but as soon as they were gone, the body and coffin were taken up, the head of the deceased was severed from his body, and cast into a hole, in order that putrefaction may speedily set in." This was done in order to afford more ground for burials, and to bring fees to the clergyman. In 1846, there were but 896 deaths in St. Giles's, yet there were 2,323 burials; in 1847, there were 1,298 deaths, and 2,877 burials; in 1848 there were 1,111 deaths, and 3,578 burials; and in the half-year of 1849, there were 571 deaths, and no fewer than 3,423 burials; making altogether 3,876 deaths, and 12,221 burials in the course of three and a half years. The body and coffin were wheeled away in a wheelbarrow; the head was severed from the body and thrown into a vault. Yet this man had the assurance to state in his evidence that the cemeteries of St. Pancras were in a satisfactory condition. He had a sort of square in the burial-ground where the more wealthy class of persons were interred; from whom he of course obtained a higher fee. All these abominations occurred not only under his own jurisdiction, but he had joined with him another clergyman as his sexton—a man who was first a soldier, then a parson, then a sexton, and afterwards, in the natural course of things, an undertaker and stone mason."—Sir G. GREY felt assured that the clergyman, Dr. Tyler, could not have any connexion with such doings. Mr. WAKLEY confirmed Sir B. Hall's statement; but he believed that Dr. Tyler was not aware at the time of what had been going on, for the funeral service was performed by the reverend sexton. The committee proceeded through the bill as far as clause 53 inclusive.

Lord NAAS moved that the house should go into committee to consider the present mode of levying the *Duty on Home-made Spirits in Bond*. He pointed out the unfairness of the present mode of levying, which, assessing the duty on home spirits as they are made, allows nothing for waste and leakage, as in the case of colonial spirits, which pay duty on the quantity measured when taken out of bond. Mr. WILSON and Sir Charles WOOD opposed the motion as disturbing the settlement of these duties made in 1846; but it was carried by 85 to 53, leaving the ministry in a minority, a result which drew loud cheers from the opposition. The house then resolved into committee, and resolutions in accordance with the previous vote were passed without further discussion.

Lord JOCELYN moved for papers respecting the proposed *Railway between Madras and Arcot*, and enlarged on the importance of facilitating railway communication in India. The papers were ordered.

In moving the second reading of the *Court of Chancery Bill*, on Wednesday the 12th, Mr. TURNER explained its objects and provisions. Instead of the present proceedings in the Court of Chancery, it provided that if the parties should concur in stating the question in the form of a special case, upon which the matter at issue should be heard and at once decided; this would do away with bill, answers, inquiries in the master's office, and all the load of preliminary proceedings. The second branch of the bill gave protection to executors and trustees, who, under the existing practice, after honestly fulfilling their trusts, and paying over the residue to the legatees, might nevertheless be sued at the end of twenty, or even forty years, by persons having interest under a settlement.—Some remarks, generally favourable to the bill, were made, by the SOLICITOR,

GENERAL and Mr. PAGE WOOD, and the bill was read a second time.

On Thursday the 13th, the *County Courts Extension Bill* was considered in committee. On the motion of the ATTORNEY-GENERAL, clauses were added to the following effect:—That the deputy judge shall not practise in districts where he acts as deputy; that the defendant may agree with the plaintiff about the debt, and enter a written agreement of the amount of the debt, on which the judge may adjudicate in the same manner as if he had tried the case in open court; that the clerk of each county court may select a jury when required, from a list of persons assessed for the poor at a rental of 20*l.*; that the treasury may have the power of ordering the judges, clerks, and other officers, to be paid by salaries instead of fees; also a clause to the effect that if a plaintiff or his attorney do not appear on the day of hearing, costs may be awarded to the defendant for his trouble.—A clause, proposed by Mr. CROWDER, to give the right of appeal in all cases exceeding 20*l.*, was rejected by 108 to 25.

Mr. BWAERT moved the committee of the *Public Libraries and Museums Bill*.—Colonel SMITHORP said that he would much rather support a bill to encourage the amusements of peg-top, foot-ball, and cricket, and moved that the bill be committed that day six months. After much desultory talk the amendment was negatived by 87 to 21, and the house went into committee, but the chairman reported progress without any progress having been made.—The *Marriages Bill* was then proceeded with in committee, and the clauses were agreed to. Some debate took place on a motion by Colonel CHATTERTON that the bill should not extend to Ireland, which was rejected by 132 to 114.

The *Factory Bill*, as amended in the committee, came under consideration on Friday the 14th. Lord ASHLEY moved a clause to prevent the labour of children from being taken at any other time of the day than between six in the morning and six in the evening.—This amendment was resisted by Sir G. GREY on the ground that the bill did not relate to the labour of children; by Mr. BRIGHT on the ground that it would throw great masses of children out of employment; and by Mr. HUME on the ground that it would interfere with machinery and capital.—It was supported by Mr. Edwards, Lord R. Grosvenor, and Mr. W. J. Fox; and negatived by a majority of one, the numbers being 160 to 159.—Lord John MANNERS moved another amendment, to the effect of restricting the labour of all hands to ten hours daily. After a debate of some length, in which the amendment was opposed principally by Sir G. Grey and Lord John Russell, it was negatived by 187 to 142.

On Monday the 17th, the adjourned debate on the *Abolition of the Lieutenantcy of Ireland* was resumed and concluded.—Sir R. PEEL expressed his willingness to support the measure as an experiment, though he had doubts as to its beneficial results. He advised the home secretary to take upon himself the functions of the proposed secretaryship for Ireland.—Mr. NAPIER opposed the bill, and said that Sir R. Peel's objections to the measure ought to have induced him to vote against the second reading of the bill, instead of for it.—Sir George GREY thought it desirable that the whole business of the secretary of state for home affairs should be managed by one man, and that the time might come when such an arrangement could be made, as in the case of Scotland, which for many years had a separate secretary of state; but this could not be accomplished at present.—Mr. SHRELL approved of the abolition of the vice-royalty, but contended that the government of Ireland ought not to be absorbed in the home office. The other speakers in favour of the bill were Mr. Sadleir, Lord Naas, and Colonel Thompson; against it, Mr. Roche, Mr. McCullagh, and Mr. Butler. The second reading was carried by 295 to 70.

On Tuesday the 18th, Mr. BRIGHT moved an address to the Crown, praying for the appointment of a commission to inquire into the means of promoting an increased growth of *Cotton in India*. He observed, that the cotton trade employed nearly two millions of British population, and had a greater capital engaged in it than any other trade in the United Kingdom; that India was peculiarly calculated for the

growth of cotton, and that a judicious cultivation of it would confer immense advantages both on India and Great Britain.—Mr. Milner Gibson seconded the motion, which was supported by Sir E. Colebrook and Mr. G. Thompson; and opposed by Sir John Hobhouse, Sir James Hogg, Mr. Newdegate, and Colonel Sibthorp. Mr. Bright withdrew the motion, conceiving that he had gained his object by the public attention being drawn to the subject.

Mr. FORSTER moved for leave to bring in a bill to repeal so much of the *Post Office Acts* as prohibit the transmission of letters on Sundays otherwise than through the Post Office. He observed that while the Post Office performed the duty, the restriction was necessary to protect the revenue, but that, the duty being no longer performed, the restriction ought to cease.—The CHANCELLOR of the EXCHEQUER and Lord John RUSSELL opposed the motion, which was negatived without a division.

On Wednesday the 19th, Mr. SOTHERON moved the second reading of the *Friendly Societies Bill*, the object of which is to consolidate the laws relative to these societies, and to give the members a control over their own funds, and protection against fraud. Some remarks were made by various members, all favourable to the bill, which was read a second time.

The *School Establishments (Scotland) Bill* was thrown out on the second reading by 100 to 94. It was supported by Lord Melgund and Mr. Fox Maule, but successfully opposed by Sir George Clark, Mr. Oswald, and Mr. G. Bruce, as interfering with the old established system of parochial schools.

On Thursday the 20th, Mr. ROEBUCK put the question to Lord John Russell whether the government would adopt any special course of conduct in consequence of the resolution passed in the House of Lords on the *Greek Question*.—Lord John RUSSELL had proceeded a little way in his answer, when he was called to order by Mr. D'ISRAELI, who said that a simple question had been asked, but the noble lord instead of giving a simple answer was entering upon a discussion.—Lord John RUSSELL replied that the question was a very general one, and that he must either make such a statement as should explain the line of conduct he meant to pursue, or remain altogether silent. Being loudly called upon to proceed, he said, in the first place, that the government were not going, in consequence of the resolution in question, to alter in any respect the course of conduct they had adopted in respect to foreign powers; and he went on to give his reasons for holding that the ministers were not called upon, in consequence of that resolution, to resign the government. Lord John added that if Mr. Roebuck wished to make a motion, he should have the earliest opportunity; and concluded, "So long as we continue the government of this country, I can answer for my noble friend (Lord Palmerston), that he will act, not as a minister of Austria, Russia, or France, or any other country, but as the minister of England." Lord John sat down amid general cheering. Some discussion ensued, in which Mr. D'Israeli and Mr. Roebuck took a part; and the result was that Mr. Roebuck gave notice of a motion on the subject, the debate on which was fixed for Monday following.

The *Mercantile Marine Bill* was read a second time, on the motion of Mr. Labouchere, though several members objected to proceeding with a bill on which so many alterations had been made at the eleventh hour. The second reading was agreed to on the understanding that the bill should be printed and re-committed.

The *Metropolitan Interments Bill* was read a third time and passed, after protests from Mr. Hume, Lord Dudley, Mr. Ellis, and Mr. G. Thompson, against the compensation provided by it for the clergy.

The *Factories Bill* was read a third time and passed, without a division, after some comments from several members on its details.

On the third reading of the *County Courts Bill*, Major Blackall moved a clause to enable Irish barristers of seven years' standing to be appointed judges of English county courts. After some discussion it was negatived by 111 to 58, and the bill was read a third time and passed.

Mr. G. A. HAMILTON, on Friday the 21st, moved an

address to the Queen praying for a modification of the existing system of *National Education in Ireland*. A debate of some length but little novelty followed. Mr. E. H. STANLEY defended with effect the system originated by his father, when Irish secretary, in 1831; and the existing system was also defended by Lord John Russell and Sir James Graham, the latter highly complimenting Mr. Stanley on his ability and eloquence. The amendment was negatived by 225 to 142.

On Monday the 24th, at the beginning of the evening, Sir Robert INGLIS noticed, in severe language, the "wanton if not premeditated insult" which his distinguished friend the Chevalier Bunsen had received in another place.—Lord John RUSSELL paid a warm tribute to the public and private character of the Chevalier Bunsen, but abstained from giving any opinion on the subject.

Mr. ROEBUCK then moved his resolution, "That the principles upon which the foreign policy of the government has been regulated have been calculated to maintain the honour and dignity of this country, and in times of unexampled difficulty to preserve peace between England and foreign nations." A government (he observed) when condemned by one branch of the legislature is unable to discharge its duties with honour, therefore it was necessary for the House of Commons to judge for itself, and express its own opinion. He went at great length into the foreign policy of England from 1790 to the present time, and proceeded to discuss the claims which gave rise to the dispute with Greece, contending that those claims were good and properly insisted on, and that the proceedings of the British government, for that purpose, had been correct and well-founded.—Sir F. THESIGER accused Mr. Roebuck of inconsistency, inasmuch as he had, in 1843, called Lord Palmerston a "lucifer match," while he now supported that minister's foreign policy. Sir F. Thesiger went over the different articles of the claims on Greece, contending that they afforded no ground for hostile aggression, and concluded by observing that Lord Palmerston had now been compelled to adopt the convention of London, which he had formerly repudiated, which was certainly not calculated to "maintain the honour and dignity of this country."—Mr. PAGE WOOD supported the motion.—Sir James GRAHAM criticised in great detail the foreign policy of Lord Palmerston, which he characterised as a course of minute interference with the affairs of our allies. He objected to the offensive tone of Lord Palmerston's despatches in the Greek affair, and contended that the London convention ought to have been adopted from the first, and England saved the mortification of having to adopt it after having repudiated it. He therefore refused to vote for the motion.

The debate was resumed on Tuesday the 25th. Mr. OSBORNE made some sarcastic comments on the conduct of Sir F. Thesiger and Sir James Graham, who for four years had not said a word against the system of policy they now affected to view with so much alarm. Sir J. Graham's professions of personal friendship for Lord Palmerston reminded him of those enormous serpents in South America who lubricated their victims with their slaver before devouring them. Tracing the history of the Greek kingdom, Mr. Osborne called it a contemptible state, which we had first to nurse and afterwards to teach good behaviour; and he put it to the house whether the inveterate hostility evinced towards Lord Palmerston was not owing to his being identified on the continent with responsible government and regarded as an advocate of liberal opinions. The dispute with Greece was a mere pretext: there was a company against Lord Palmerston which had extensive ramifications, and the reversal of his policy would cripple British commerce, arrest the progress of civilisation, and complete the humiliation of Great Britain.—Lord J. MANNERS denied both the propositions contained in the motion; and, taking a review of Lord Palmerston's policy in relation to various foreign states, contended that it had been injurious to the influence and the commerce of England.—Mr. ANSTREY said that as he neither entirely approved nor blamed our foreign policy, he would not vote either for or against the motion.—Lord PALMERSTON defended the foreign policy of the government in a speech of five

hours' length. He deemed the doctrine advanced on the other side, that British subjects in foreign lands were entitled to no protection but that of the laws and tribunals of the country in which they might happen to be, a doctrine on which no English minister had acted, and which the people of England would never suffer. He did not, however, mean that British subjects abroad were to be above the laws. They were bound, in the first place, to have recourse to the laws of the land in which they were; but there might be governments in which the tribunals were not of a character to inspire confidence. The present administration of government in Greece was full of abuses; the police inflicted revolting tortures upon both sexes, to which British subjects would be equally exposed, unless they had the protection of their own country. Lord Palmerston then detailed the injuries suffered by British subjects in Greece, and showed the reasonableness and moderation of the demands made for reparation. He entered very minutely into the dates and particulars of the recent negotiations connected with the question and the mediation of France, and corrected an erroneous impression which had got abroad that M. Gros had communicated to Mr. Wyse the convention of London, and that, with a knowledge of this convention, Mr. Wyse had renewed hostilities. He (Lord Palmerston) was sorry that the convention did not arrive at Athens until after the other arrangements had been made there; but this was not his fault, and the negotiations had not been put an end to by Mr. Wyse, but by M. Gros himself. The negotiations between the English and French government were now brought to a satisfactory conclusion, and such portions of the London convention as were still applicable would be adopted in place of the corresponding terms agreed to at Athens. Lord Palmerston then followed Sir James Graham over the wider field which had been taken, reviewing and vindicating the policy he had pursued, in relation to Belgium and Holland, Spain, France, Switzerland, and Italy, and concluded by challenging the verdict of the house, whether the principles which had guided the foreign policy of the government had been proper and fitting, and whether, as a subject of ancient Rome could hold himself free from indignity by saying, "Civis Romanus sum," a British subject in a foreign country should not be protected by the vigilant eye and the strong arm of his government against injustice and wrong.—The debate was then adjourned to Thursday.

The second reading of the *County Rates Bill* was moved on the 26th, by Sir Henry HALKETT, who justified it on the ground that the county rates although nominally paid by the occupier fell upon the owner, and that transferring them altogether to the owners would be a relief to the tenant farmers.—Mr. C. LEWIS and Mr. M. GIBSON opposed the bill on the ground that it would be unjust to the landlords. The bill was thrown out without a division.

On the third reading of the *Larceny Summary Jurisdiction Bill*, Sir G. STURCKLAND opposed the measure as too great an extension of summary jurisdiction. The house, he said, had already expressed its disinclination to go any further in taking away trial by jury from the people of this country.—Mr. MILNES and Mr. S. CRAWFORD also opposed the bill, which was supported by Sir J. PAKINGTON, Mr. RICE, Mr. BANKES, and Mr. AGLIIONBY. The third reading was carried by 119 against 25, and the bill passed.

Mr. AGLIIONBY moved the second reading of the *Copyholds Emfranchisement Bill*, and explained that its principle was to relieve copyhold lands from those incidents of the tenure, parts of the old feudal system, which were oppressive and created general dissatisfaction, due regard being paid to the rights and interests of the lord of the manor.—Mr. CHRISTOPHER opposed the bill as interfering with the rights of property.—Sir G. GREY concurred in the principle of the bill; but as there were many difficulties in the matter, recommended that it should be read a second time and referred to a select committee. After some further discussion, the second reading was carried by 103 against 84.

The second reading of the *Accidents on Railways Bill* was moved by Mr. NEWDEGATE, who said that it was designed so to alter the law relative to the compen-

sation for damage sustained through accidents on railways, as to render the companies more strictly liable for the acts of their servants. Mr. ELLIS said that the bill was founded on a single special case, in which the railway company had done all that was just under the circumstances, and moved the second reading that day six months. After a discussion in which the bill was supported by Mr. Adderley, Colonel Sibthorp and Mr. Spooner, and opposed by Mr. Labouchere, the Attorney-General, and Mr. Ricardo, the second reading was negatived by 108 against 53.

Mr. KEOGH brought in a bill to give further facilities to town commissioners for the improvement of towns in Ireland.

PROGRESS OF BUSINESS.

House of Lords.—May 28th. Court of Common Pleas Fees Bill read a second time.—Report on Masters Jurisdiction in Equity Bill brought up and agreed to.

30th.—Administration of Criminal Justice Bill committed and ordered to be printed.

31st.—Royal assent given to Alterations in Pleadings Bill, West India Appeals Bill, and Defects in Leases Act Amendment Bill.—Sunday Fairs Prevention Bill, and Distress for Rent (Ireland) Bill, read a second time.—Sheriff of Westmoreland Bill read a first time.—Sunday Trading Prevention Bill recommitted and considered in Committee.—Australian Colonies Government Bill read a second time.

June 3rd.—Process and Practice (Ireland) Act Amendment Bill read a second time.—Fees (Court of Common Pleas) Bill passed through Committee.—Ecclesiastical Appeals Bill thrown out on second reading.

4th.—Sunday Trading Bill report agreed to.

6th.—Fees (Court of Chancery) Bill, and Sunday Fairs Prevention Bill, read a third time and passed.—Parliamentary Voters (Ireland) Bill read a second time.

7th.—Administration of Criminal Justice Improvement Bill read a third time and passed.

10th.—Royal assent to Process and Practice (Ireland) Amendment Bill, Parish Constables Bill, Acts of Parliament Abbreviation Bill, and Sunday Fairs Prevention Bill.—Encumbered Estates (Ireland) Act Amendment Bill read a second time.

• 11th.—Australian Colonies Bill considered in Committee, and reported.

14th.—Court of Chancery Appeals Bill withdrawn by Lord Brougham.—Australian Colonies Bill considered in Committee, and reported.—Estates Leasing (Ireland) Bill, and Judgments (Ireland) Bill, passed through Committee.

17th.—Lord Stanley's motion on the Greek question carried against Ministers.—Judges of Assize Bill read a second time.

18th.—Encumbered Estates (Ireland) Act Amendment Bill passed.—Distress for Rent (Ireland) Bill read a second time.—Landlord and Tenant Bill, and Small Tenements Recovery Bill, read a third time and passed.

24th.—The Small Tenements Recovery (Ireland) Bill, Landlord and Tenant (Ireland) Bill, and Public-houses (Scotland) Bill, passed through Committee.—The Drainage and Improvement of Land Advances Bill was read a second time.

25th.—Royal assent given to a number of bills.—Sheriff of Westmoreland Bill read a third time and passed.—Leasehold Tenure of Land (Ireland) Act Amendment Bill considered in Committee.

House of Commons.—May 28th. Mr. Miles moved a resolution respecting the emigration of orphan girls.—House counted out.

30th (morning sitting).—Elections (Ireland) Bill read a third time, and clause added. (Evening sitting).—Exchequer Bills Bill read a third time and passed.—Lord Ashley's resolution for suppressing of Sunday Post Office labour carried.—Elections (Ireland) Bill passed.—Jews Oath of Abjuration Bill read a first time.

31st.—Sir Edward Buxton's resolution against exposing British colonial sugar to competition with slave-grown sugar negatived.—Court of Session (Scotland) Bill, and Police and Improvement (Scotland) Bill, read a third time and passed.

June 3rd.—Metropolitan Interments Bill considered in Committee.

4th.—Irish Poor-law, Mr. French's resolutions negatived.—Tenant's Recovery (Ireland) Bill thrown out on second reading.—Process and Practice (Ireland) Act Amendment Bill read a third time and passed.

5th.—Secular Education Bill thrown out on second reading.—Weights and Measures Bill committed *pro forma*.—Titles of Religious Congregations Bill read a third time.

6th.—Factories Bill, and Metropolitan Interments Bill considered in Committee.—Municipal Corporations (Ireland) Bill read a third time and passed.—General Board of Health Bill, and Judges of Assize Bill, read a second time.—Bill brought in for Census of the Population.

7th.—Drainage and Improvement of Land Advances Bill considered in Committee.—Metropolitan Interments Bill forwarded in Committee.

10th.—Sunday Labour in Post Office, the Queen's answer to address.—Mr. Hume's motion to reduce the vote for the New Houses of Parliament, and for a select committee, negatived.—Summary Jurisdiction (Ireland) Bill read a second time.—Census Bill read a first time.

11th.—Metropolitan Intermments Bill further considered in Committee.—Margate Harbour, motion for Select Committee carried.—Resolution as to levying duty on bonded spirits carried.—Bill to confirm Incorporation of Certain Boroughs, read a first time.

12th.—Landlord and Tenant Bill considered in Committee.—Court of Chancery Bill read a second time.

13th.—County Court Extension Bill, and Marriages Bill, considered in Committee and reported.

14th.—Factories Bill, Metropolitan Intermments Bill, and Orlan-
niages Bill, considered in Committee.

17th.—Lord Lieutenant (Ireland) Abolition Bill read a second time.—Landlord and Tenant Bill, and Borough Courts of Record (Ireland) Bill, reported.

18th.—Incorporation of Boroughs Amendment Bill (No. 2) read a second time.—County Courts Extension Bill went through Committee.

19th.—School Establishment (Scotland) Bill thrown out on second reading.—Friendly Societies Bill read a second time.

20th.—Mercantile Marine Bill read a third time, to be recom-
mended.—Metropolitan Intermments Bill, and Factories Bill, read a third time and passed.—Court of Exchequer (Ireland) Bill read a second time.—Charitable Trusts Bill considered in Committee.

—County Courts Extension Bill read a third time and passed.—
Railway Audit Bill laid aside, with a view of bringing in another.

24th.—The Prussian Minister's Residence Bill, as amended, was considered.—The General Board of Health Bill and the Court of Chancery Bill were read a third time and passed.

June 26th.—County Rates Bill thrown out on second reading.—
Larceny Summary Jurisdiction Bill read a third time and passed.—
Copyholds Enfranchisement Bill read a second time.—
Accidents on Railways Bill thrown out on second reading.—Bill for Improvement of Towns in Ireland, brought in by Mr. Keogh.

THERE was a grand *Protectionist Demonstration* at Liverpool on the 6th;—a meeting in the Royal Amphitheatre, attended by between 2000 or 3000 persons admitted by ticket. The Earl of Wilton presided; a number of well-known protectionist champions were on the platform; and there were delegates from counties and agricultural towns, from sea-ports and from manufacturing towns, by way of representing the various branches of industry. The oratory was abundant, the speaking having lasted eleven hours; but the speeches and resolutions were of the usual character on such occasions.

The *Tenant Right* movement is spreading in Ireland, and several large meetings on the subject have been held within these few weeks. At one of them, held at Navan, on the banks of the Boyne, on the 30th of May, ten thousand tenant farmers are stated to have been present, Protestant as well as Roman Catholic.

Another meeting of great importance was held at Belfast on the 12th inst. The Music Hall was crowded with substantial farmers from all parts of Ulster; and Presbyterian ministers joined with Roman Catholic priests in the business of the meeting. Resolutions were passed of which the leading points were: the rights of the tenantry to profit by their own improvements, past, present, and future; their right, founded on ancient custom, to a continued occupation of their lands at a fair rent; and the approval of the proposed tenant right conference in Dublin, and the formation of a tenant league for all Ireland.

The Roman Catholic Primate has received a communication from the Vatican declaring that Roman clergy cannot hold office in, or be instrumental in advancing the Queen's Colleges in Ireland, and prohibiting the Roman Catholic laity from sending their children to those colleges.

Some interesting parliamentary returns, relating to the convict system, have been printed. In England and Wales in 1847, 51 convicts were sentenced to death, 60 in 1848, and 69 in 1849, while in 1847, 2,896 were sentenced to transportation, 3,251 in 1848, and 2,844 in 1849. In Scotland only 11 were sentenced to death in the three years, 1,180 were sentenced to transportation, and 5,206 to imprisonment. In Ireland, in 1847, 25 persons were sentenced to death, 2,184 to transportation, and 11,221 to imprisonment. In 1848 the number in Ireland was 60 sentenced to death, 2,698 to transportation, and 12,968 to imprisonment; whilst in 1849 the number sentenced to death was 38, to transportation 3,050, and to imprisonment 15,443. In England and Wales the sums paid by the Treasury for food, &c., for convicts and misdemeanants in the year ending the 30th of Septem-

ber, 1847, amounted to 95,932l. 15s. 5d., in the following year to 81,954l. 1s. 1d., and last year to 76,167l. 16s. 1d., besides 19,553l. 6s. 4d. last year for transports in galleys. In Scotland the expense paid by the Treasury for food, &c., was 104,371l. 6s. 7d. last year, and in Ireland it was 9,792l. 3s. 1d.

A return has been printed, giving some useful information respecting *Savings Banks and Friendly Societies* as to the amount of "loss of interest sustained by the public." In the year ending the 20th of November, 1844, the excess of interest paid to the trustees of savings-banks and friendly societies by the National Debt Commissioners above that received by them, was 112,235l. 15s.; in 1845, 36,537l. 8s. 4d.; in 1846, 35,420l. 10s. 3d.; in 1847, 36,553l. 10s. 6d.; in 1848, 48,663l. 10s.; and in 1849, 57,592l. 14s. 10d. From the 20th of November, 1844, the rate of interest payable to savings-banks was reduced from 3l. 16s. to 3l. 6s. per cent. per annum.

Between the 15th and the 20th, thirty-one new *Petitions for the Sale of Irish Encumbered Estates* were lodged. Several of the inheritors in this list are petitioners in their own cases. The total number of petitioners is now 978. At this rate of progress, the commissioners, before the end of the summer, would have more estates to sell than they could dispose of in four years. They are, however, preparing for vigorous operations after the recess. Within the week ending on the 19th, no less than fifty-two conditional or absolute orders for sales were pronounced.

NARRATIVE OF LAW AND CRIME.

THE proverb "*Murder will out*," has just been strikingly illustrated. Stephen Carlin, a beast-jobber, residing near Skipton, in Yorkshire, was last seen alive at Pateley-bridge, in company with his partner (a cousin), eleven or twelve years ago. His cousin said that he had gone to America, but foul play was always suspected; and on Saturday the 25th of May, a digger of peat on Roggin-moor, near Pateley-bridge, found the body of the missing man, a few feet below the surface in such a state of preservation (owing to the antiseptic nature of the soil) that it was readily identified. A tailor, too, knew the clothes to be Carlin's; and a married woman, whom he had wooed in her maidenhood, recognised as her property a handkerchief and comb that were found in the pockets. The cousin, Jonathan Bland, was apprehended at Skipton two days afterwards.

The *Earl of Lincoln's Divorce Bill* was read a second time in the House of Lords, on the 28th of May. Lord Lincoln, the son and heir of the Duke of Newcastle, was married, in 1832, to Lady Susan Hamilton, only daughter of the Duke of Hamilton. They lived together up to August 1848, and had five children. In that month Lady Lincoln went to the continent without her husband's leave, but ostensibly to consult the German physicians about her health. On the continent it was soon found that she was constantly accompanied by Lord Walpole, eldest son of the Earl of Orford. While it was believed that her conduct amounted only to indiscretion, Mr. Gladstone, M.P., as the friend of both parties, went in search of her. After some time he discovered that she was living near Como, under the assumed name of Mrs. Lawrence, but found it impossible to obtain access to her. She gave birth to a son at Como, in August 1849, who could not have been her husband's, and was christened by the name of Horatio Walpole. These, and other circumstances, establishing her criminality, were proved by evidence before the house, and it was stated by her solicitor that she had given instructions that there should be no opposition to the bill.

In October 1848, a small deal box, labelled "Mr. Watson, passenger, Exeter," was found on the railway platform at Slough. No one applied for it, and after a time it was sent to London to the "lost property" department. On the 1st instant the box was opened, and was found to contain the *Mummy of a Child*, supposed to be a girl, about eighteen months old. The corpse was quite shrivelled up; round the neck was tied a cambric handkerchief; attempts had been made to separate the limbs, and there were other mutilations. No arsenic was detected by analysis. A coroner's jury

has returned a verdict of wilful murder against some person or persons unknown.

At the Surrey sessions, on the 1st instant, Lucy Fore, the wife of a respectable tradesman in good circumstances, was convicted of *Shop-lifting*. She had desired to be shown some silk handkerchiefs in a draper's shop, and endeavoured to secrete and carry away some pieces of silk, but was detected by the shopman. She was sentenced to four months' hard labour at Guildford.

On the 1st instant a labouring man of the name of Taylor, living at the village of Tushingham in Cheshire, *Murdered his own Son*, a boy of seven years old. Some of the man's younger children complained to the neighbours that their brother was ill, and that they were shut out and could not get to him. On looking through a window one of the neighbours discovered the boy lying on the floor weltering in his blood. An entrance was forced into the house, and it was ascertained that the skull of the child had been split with an axe. Taylor was found upstairs in bed, and immediately accused of the murder. He was sullen, but after a coroner's inquest was held, he confessed himself guilty, and was committed for trial. Although in very poor circumstances, it does not appear that absolute want drove him to commit the crime, nor did he assign any motive for it. His wife stated that he had for some time past carried a rope in his pocket for the declared purpose of hanging himself.

The proceedings of a coroner's inquest, held on the 3rd, at University College hospital, on the body of Ann Truscott, a young woman who had poisoned herself, were disturbed by the *Disgraceful Conduct of a member of Medical Students*. During the examination of the witnesses, they entered the inquest room in a body, and behaved so rudely that the coroner had to send for the police to clear the apartment. The students again forced their way into the room, and a repetition of the former scene took place. The coroner adjourned the inquest till the evening. When the jury reassembled there were about twenty students present, who, on the coroner's desiring strangers to leave the room, took their departure, but only to recommence a new course of annoyance, by constantly ringing a large bell in the room which communicated with the front door of the hospital. The jury added to their verdict an expression of their great disapprobation of "the gross conduct of a number of the students of University College hospital," and their wish that the fact should be made known to the heads of the institution.

A man of the name of Reynolds, who lived in Yarmouth, had been for some time separated from his wife. He met her accidentally on the 4th, and after some abusive words, attacked her savagely with a clasp-knife, cutting her on the neck, hands, and arms. She contrived to escape with life, on which he *cut his Throat* with the knife, and threw himself into the sea. An inquest on the body returned a verdict of *felo de se*, and the corpse was buried by torchlight.

The *Gorham Case* has now been brought before the Court of Exchequer. On the 6th Mr. Fitzroy Kelly, on behalf of the Bishop of Exeter, made the same application which had been successively refused by the Courts of Queen's Bench and Common Pleas—namely, a rule calling on Mr. Gorham to show cause why the Court of Arches should not be prohibited from proceeding further in giving him possession of the living of Bramford Speke. Mr. Kelly spoke for five hours in support of his motion.—On the 11th the Lord Chief Baron intimated that the court were by no means prepared to differ from the other courts to whom a similar application had been made; but, that so important a case might receive due consideration, they would grant a rule, *cause* to be shown on the 29th and from day to day till the case was disposed of.

In the Bankruptcy Court, on the 7th, *W. Chittenden*, a draper at Paddington, passed his examination. The bankrupt, a very young man, had been only about a fortnight in business. His debts were 2800*l.*, of which 2000*l.* owing to trade-creditors were secured by bills given by Mr. Tarlington, the landlord of the bankrupt's premises. This Mr. Tarlington was a retired tradesman, who had devoted his capital to building purposes, and had erected a number of houses that were known by the description of Tarlington-place and Tar-

lington-street, and the houses that the bankrupt had occupied. In consequence of the flourishing representations of the bankrupt, in October last, of his ability to establish a business on a monstrous scale, he had let the bankrupt five houses at a rental of 1050*l.* per year, on a lease for twenty-one years. To adapt the premises for such a business, Mr. Tarlington had expended between October 1849 and March 1850, a sum of 1000*l.* The bankrupt had represented to Mr. Tarlington that he had saved 100*l.* as a draper's assistant; that he was on the point of being married, and that his intended father-in-law would advance him 200*l.*; also that his father, who resided at Tenbridge, would become his security for 1500*l.* Mr. Tarlington, who had but a slight previous acquaintance with the bankrupt, was induced by these representations to assist him with his bills to the amount of 2000*l.* to purchase stock. In fact, as Mr. Commissioner Fane remarked, it appeared that the retired tradesman had retired from his senses. But Mr. Tarlington, soon having reason to suspect that all was not right, took steps that stopped the bankrupt's brief career. The bankrupt, who was opposed on the part of Mr. Tarlington, denied that gentleman's representations, and alleged that Mr. Tarlington had rather persuaded him to take the five houses and enter upon the monster business in the manner stated, than he had persuaded Mr. Tarlington. The commissioner said that, as Mr. Tarlington had conducted his business so loosely in treating with a boy like the bankrupt, he ought to be content to lie down under his own folly. He therefore passed the bankrupt's examination, reserving all questions of conduct for the certificate meeting.

Robert Kemp, a clerk of the Charing Cross coal company, *Committed Suicide* on the 8th, by throwing himself on the line of the South Western railway near Wimbledon, in front of the train from Southampton, which went over his body and dashed him in pieces. A verdict of temporary insanity was given.

Elizabeth Ann Chambers, a lady-like person of forty, was tried on the 8th at the central Criminal Court, for *Forging an Acceptance* to a 200*l.* bill, with intent to defraud. She had attached the name of her cousin, the Rev. Charles Randolph, to a bill which she got discounted. The evidence was conclusive. The prisoner had no counsel. She said that Mr. Randolph, though he had denied it, had given her permission to use his name. Verdict, "Guilty." A second indictment for forging a 200*l.* bill was not proceeded with; the convict would seem to have repeatedly offended. Mr. Baron Rolfe, in passing sentence of transportation for life, remarked, that the prisoner was no doubt well aware that a few years ago her life might have been forfeited for the act she had committed; but as the legislature had made the experiment of remitting the capital punishment in the expectation that the crime might be repressed without resorting to it, he considered that the law ought not to be trifled with, lest unhappily it might be found necessary to re-establish the former punishment affixed to the crime.

Richard McAllister, a man of rather shabby appearance, was charged at the Marylebone police court on the 10th, with having been near the house of Miss Bellew, Portrose-gill road, for an *Unlawful Purpose*. The man had been Miss Bellew's footman, and was in the habit of saying to his fellow-servants and others, that his mistress was in love with him. This coming to her ears, she discharged him, and since then he has persecuted her with importunities and threats of violence, pretending she owes him money, and that she had encouraged his passion. During the investigation, Miss Bellew, who told her own story, was in a state of great excitement, while McAllister insisted that the lady had promised to marry him and none but him, with more to the same purpose. He was held to bail to keep the peace to Miss Bellew and her household for a month and sent to prison in default of sureties. On hearing the decision, Miss Bellew exclaimed with great agitation, "I am surprised, sir, that you have only secured this man for a month—at the end of that time we shall all be shot."

In the Bankruptcy Court judgment was given on the 11th, in the case of *Edward Thomas Lefield*, the late lessee of the Royal Italian Opera. Mr. Commissioner Fane after detailing the circumstances of the case, which are

generally known to the public, observed that two charges, on public grounds, had been made against the bankrupt; recklessly extravagant expenditure, and undue preference given by him of the eve of bankruptcy. As to the first it appeared that Mr. Delafield's personal expenditure from November 1845 to July 1849, the time of the bankruptcy, was less than 5000*l.* a year; now that was not reckless expenditure in a person of 7000*l.* a year. In regard to the second charge, some allowance ought to be made for the bankrupt's extreme youth; some for the circumstance that he could hardly be deemed a trader; some for the deception of which he had been the victim, and some for the greatness of the ruin which had befallen him, and which was itself a punishment. The circumstances afforded no ground for withholding a certificate, or for attaching to it (as had been demanded) a condition that he should pay 10*s.* in the pound out of future assets. I confess (said the commissioner) I have no inclination to attach such a condition to a certificate in any case. I refused to do so in Julian's. The world of industry in which we live is one in which every man not living on accommodation is struggling for a subsistence. In that struggling it is difficult enough for any one to win his way, even with character clear and something to begin with. What, then, may be expected to be the fate of one who not only begins with nothing, but is weighed down by the stain of bankruptcy, and by an unpaid debt of 10*s.* in the pound on 33,000*l.*? I see nothing for a person so buffeted but to lie down in hopeless despair, and abandon all future exertion. Were the faults of this bankrupt far greater than they are, I would not condemn him to such a fate. It may be said that this bankrupt has rich relations. Perhaps he has; but if it were true, this argument is one which will never weigh with me. I will never be a party to the establishing of any such doctrine that rich relations are under any obligation to pay the debts of extravagant connections. A contrary doctrine is a far more wholesome one. It is better to lay it down that a creditor shall not have means of pressure, direct or indirect, upon rich relations, and thus check the giving credit to the young and foolish. On the whole, he concluded, I think, upon full consideration of all the circumstances, that I shall best discharge my public duty by granting the bankrupt a common certificate, without attaching any condition. I hope that the terrible lesson he has received may be of use to him in after life. An unconditional certificate was granted accordingly.

On the same day the application of William Ponnall, a silk manufacturer at Macclesfield, for a certificate, was opposed on the ground of fraudulent concealment of property; and the bankrupt admitted on examination that he had concealed several quantities of silk, with the object of enabling himself to offer a composition of 8*s.* in the pound. The bankrupt's certificate was suspended for two years, without protection, till he should have been six months in prison.

Two boys, named Hill and Kempton, said in the calendar to be fifteen, but looking much younger, were convicted on the 12th, at the central Criminal Court, of *Stealing a bowl with a quantity of Silver* from the bar of a publican at Greenwich. The charge was proved by the publican's daughter, an intelligent child, who had detected the theft and given the alarm. It appeared that this was Hill's sixth conviction for robbing tills, and he had just come out of Maidstone Gaol. The other boy also belonged to an organised gang. Hill was sentenced to transportation for seven years, with a view to his being admitted into Parkhurst prison, and Kempton was ordered to be imprisoned for three months and once whipped.

Charles Thorogood, a lad of about fourteen, and William Appleby, a respectable master-bootmaker, were tried at the central Criminal Court on the 13th; the former for *Stealing Two Heads of Broccoli*, valued at 1*s.* 6*d.*, and the latter for receiving the same. The 60 *sc.* who is in the employment of a market-gardener at 12, 96 *sc.* had sold from his master's cart the two heads of broccoli to Mr. Appleby, who bought and paid for it at his own door, without any concealment; nevertheless both parties were committed for trial by the mixed bench of magistrates. The jury acquitted both prisoners, and the Recorder said he should not allow

the expenses, as the county ought not to be at the expense of such a prosecution.

Colonel Craigie, a retired officer of the Bengal army, committed suicide on the 14th at his house in Exeter. Not appearing in the morning to breakfast, and not answering when called by Mrs. Craigie, his bedroom door was forced open, and he was found lying on the floor in a pool of blood, his throat cut, and with frightful wounds in his belly and both his legs. He was breathing when found, but died in less than an hour. No cause is assigned for this dreadful deed.

William Anderson, a hairdresser, pleaded guilty, at the central Criminal Court, on the 18th, of stealing thirty sovereigns, twenty half-sovereigns, and a 10*l.* note. He was sentenced to *Eighteen Months Imprisonment*. Unable to believe his ears, at an announcement so unexpectedly agreeable, he exclaimed, "Eighteen years, my lord?" "No; eighteen months," was the common serjeant's reply. The prisoner made a bow, and got out of the dock with great expedition.

Ashby's *Divorce Bill* was disposed of on the 18th, by the House of Lords. The Rev. Edward Queenby Ashby was married in 1842 to Elizabeth Sophia Palmer, then under age. They lived on affectionate terms at Mr. Ashby's living, in Buckinghamshire, till 1848, when they went to Madeira, in consequence of Mrs. Ashby's delicate state of health. Their fellow-passenger was Mr. Scudamore Stanhope, between whom, and the lady, a criminal intimacy took place. Though Mrs. Ashby's conduct had been the topic of conversation at Madeira, her husband did not ascertain the extent of her guilt till they were on their homeward voyage, still accompanied by Mr. Stanhope, when Mr. Ashby accidentally picked up a letter, which his wife had dropped, addressed to Mr. Stanhope. It commenced,—"My own, own, own, for ever devoted on, idolised, treasured treasure, treasured Henry;" and contained expressions which left no room for doubt. This discovery having taken place, Mrs. Ashby left the vessel at Cadiz, and Mr. Ashby proceeded to England. In a few weeks Mrs. Ashby arrived at Southampton, from whence she eloped with her paramour.—Sir George Cockburn, examined in addition to the evidence taken on previous occasions, deposed that before Mr. and Mrs. Ashby left Madeira, he had advised Mr. Ashby not to return in the same vessel with Mr. Stanhope; but that his advice had proceeded from rumours he had heard and not from his own knowledge of Mrs. Ashby's criminality; and the Dean of Ely, who was residing in the island at the time, stated that he was in habit of meeting Mr. and Mrs. Ashby, who lived upon affectionate terms, and that he was quite unaware that any improper intimacy existed between Mrs. Ashby and Mr. Stanhope.—Lord Brougham said, that though there was reason to suppose that Mr. Ashby's conduct had been too lenient, yet it had been shown that he had great affection for his wife, and was unwilling to drive her by any harsh means into the arms of her lover. On his lordship's motion, the bill was read a second time.

The gang of swindlers who have of late committed so many depredations by means of *Mock Agency Offices*, were tried at the central Criminal Court on the 18th. Their names are Sydney Robert Sparks, Charles Stanley, Edward Wright, and James Campbell, all young men, of the appearance called shabby-genteel. They commenced their joint operations about Christmas last, by opening an office in Upper Wellington Street, under the firm of "Wright & Co., Loan Office, General Registry and Investment Company, Auctioneers, &c.," and successively opened other places of the same kind, under different names, in Exeter Arcade, Brownlow Street, Adam Street, Great Queen Street, Kingsgate Street, and Cavendish Square. At these various places they were found acting in concert, and by means of advertisements, got many young men to place in their hands sums varying from five pounds to fifty. They then employed their dupes for a short time, by sending them long distances to inquire after houses, &c. to let; and the end was that the victim could neither get any money nor recover his money. Several of these victims were examined, and each had the same melancholy story to tell. They were found guilty. Edward Wright, the father of the prisoner in the previous case, was then put to the bar, along with one James, on a similar charge

to the preceding. This Edward Wright, sen., appears to have been the father of the system, which he has carried on for more than twenty years. He pleaded guilty, and James was convicted by the jury. Sentence was then passed on the whole. Wright the elder, James, Campbell, and Stanley, eighteen months imprisonment with hard labour; but as it appeared that Sparks had not taken any money, and that Wright, jun., had acted under the guidance of a bad father, the period of their imprisonment was limited to twelve months.

Lord Dunboyne was tried in the Court of Queen's Bench on the 19th, on the charge of making a False Statement in the Register of His Marriage. In August, 1842, Lord Dunboyne was privately married, at Faddington Church, to Mrs. Vincent Vaughan, a well-endowed young widow, with prospects of increased fortune, living at Bell Hatch, in the county of Oxford. The marriage was private because it was opposed to the wishes of Mrs. Vaughan's mother, to whose wealth she would succeed if she did not alienate her regards. The opposition made to Lady Dunboyne's marriage by her mother wore off, and the parties were married again at St. George's, Hanover Square, in December, 1843; and on this occasion, just as on the former one, the parties were described as widower and widow, though then man and wife. This false description was the offence. Lord Campbell instructed the jury, that they must be "satisfied that the representation had been made falsely, fraudulently, and corruptly;" a conclusion which there would be some difficulty in coming to, as the defendant had no motive to injure anybody by his act. Such marriages are highly irregular, but very common, especially among Roman Catholics: it is difficult to see how on a second marriage a man can describe himself except by his description before the marriage. The jury found a verdict of Not Guilty.

Walter Watts, tried at the Central Criminal Court on the 10th of May, on the charge of stealing a cheque for 1400*l.*, belonging to his employers, the Globe Insurance Company, was convicted on one of the counts of the indictment, of "stealing a piece of paper," the point of law being reserved whether this was sufficient to constitute a criminal charge. On the 22nd instant Lord Chief Justice Wilde delivered the judgment, *Affirming the Conviction*.

An action was tried in the Court of Common Pleas at Dublin, on the 22nd, at the instance of the London and Dublin Bank against Mr. Clements, a young military officer, for payment of a bill for 1000*l.*, purporting to be drawn by a person of the name of Joel and accepted by Mr. Clements. When this bill was afterwards discovered to be in the hands of the Bank, Mr. Clements pronounced it a *Forgery*, and Joel was subsequently tried at the Old Bailey in January last, convicted of the forgery and sentenced to transportation. Notwithstanding this, the Bank pursued Mr. Clements for payment of the consideration given by them for the bill. Judge Ball, in his charge to the jury, told them that they were not to be influenced by the fact which had come out in the course of the trial, that Joel had been found guilty by another tribunal of the forgery of the bill; and the jury found a verdict in favour of the Bank, for 700*l.*, with sixpence costs.

A deliberate suicide was committed on the 22nd, by a Child Seven Years old, the son of John Hanson, a waterman, residing at Newark. The boy having been beaten by his mother, had threatened that if she did so again he would drown himself, and carried his threat into execution, by walking resolutely into the Trent till the stream carried him away.

On Sunday the 23rd, early in the morning, a respectable-looking middle-aged man was observed to throw himself from the centre arch of Southwark bridge. In his fall his head was seen to strike against one of the abutments with a force which must have shattered his skull. His body has not been found.

An instance of the misery caused by the practice adopted by the Irish parochial authorities, of *Getting Rid of their Poor* by sending them to England in a destitute state, was exhibited at the Southwark Police Court, on the 25th, when three little Irish boys, found lying on the steps of a house in the Borough, were brought before the magistrate. They were almost unacquainted with

English, but the eldest of them was able to answer the magistrate's questions. Mr. A'Beckett (to the eldest boy): Where have you come from? From the county of Cork. What place? Dúnmalway. I was in the workhouse there. Mr. A'Beckett: Why did you leave that place? Boy: Because Mr. Hamilton, one of the gentlemen there, said that I would get plenty of work and victuals if I left the workhouse and came over to England. Mr. A'Beckett: Who paid for your passage? Boy: Mr. Hamilton, I believe, paid the money. Mr. A'Beckett: Were there any more boys sent away from the workhouse with you? Boy: Yes, Sir; there were 21 boys picked out, and we were all put on board the ship and brought over here as deck passengers. Mr. A'Beckett: Did they supply you with food while on board? Boy: Yes, Sir, we had some bread given to us, but nothing else besides water. Mr. A'Beckett: Where have you been living since you came to London? Boy: In no house, Sir. We tried to get work, but could not find any one to employ us, and so we have been wandering about the town, sleeping sometimes under the arches of the railway, and at other times on the steps of houses near the water-side. The magistrate, after commenting on the conduct of the Irish parish officers, directed that the boys should be taken to the workhouse of the parish in which they were found destitute, that they might be relieved and passed over to Ireland.

An *Atrocious Attack on Her Majesty* was made shortly after six o'clock on the evening of the 27th. The Queen, accompanied by a lady-in-waiting and the royal children, had been to inquire respecting the health of the Duke of Cambridge, at his residence, in Piccadilly. A man was observed loitering about for some time, keeping his eye directed towards the entrance at which the royal carriage would come out, when on reaching the end of the road from the house, the villain deliberately aimed a blow at her Majesty with a light cane, which he held in his hand, striking her on the cheek, and crushing her bonnet over her forehead, which caused a great sensation to the bystanders. The fellow was instantly seized by the persons on the spot, and the weapon wrested from him. Her Majesty then immediately proceeded to Buckingham Palace. The police were quickly on the spot, and took him in charge, and conveyed him to the Vine Street station. Upon being placed before Inspector Whall, he gave his name Robert Pate, 27, Duke Street, St. James's. He assigned no reason for the act; said he had been a lieutenant in the Tenth Hussars. The charge was then entered as follows:—"Charged with assaulting Her Majesty on leaving Cambridge House." He was then locked up. Her Majesty arrived at the palace perfectly safe, and apparently little alarmed at the outrageous assault that had been committed on her. In a short time, however, the news had spread to the various club-houses, and the noblemen and others there assembled instantly hastened to the royal residence to ascertain, if possible, whether Her Majesty had sustained injury. However, she appeared at the Royal Italian Opera in the evening, and presented herself in the front of her box perfectly unharmed. Her reception by the audience was something more than enthusiastic; it was affecting—many shed tears.

NARRATIVE OF ACCIDENT AND DISASTER.

MELANCHOLY accounts have been brought, by recent arrivals from the Atlantic, of the *Destruction of Ships by floating Icebergs*. One of these catastrophes was witnessed, on the 27th of April, by the *Oriental*, of Liverpool. The *Oriental* was then beset by ice, and saw another vessel a few miles off in a most perilous condition, stove in by the ice, and sinking. For two days she was seen in the same forlorn condition, when she suddenly disappeared, and very little doubt is entertained of every soul having gone down in the foundered vessel. Subsequently a great many bodies were seen intermingled with the ice, together with some portions of the cargo, from which it was discovered that she was from Londonderry bound for Quebec. The *Oriental* was eleven days before she got entirely clear of the ice.

Another similar catastrophe was witnessed on the 29th

of March, by the ship *Signet of All*. The vessel was apparently an English brig, heavily laden. She went down, and all on board perished. Among other vessels lost from the same cause, down to the middle of May, are, the *Orestes*, from Liverpool, for Quebec; the *Conservator* and the *Acorn*, both of Liverpool; the *Hibernia*, from Glasgow, for Quebec; the British schooner *Colleton*, from St. John's, Newfoundland, for London; the brig *Astree*, of Weymouth; the *Wilhelmina*, of Aberdeen; the *Goswell*, of Newcastle; the *Sylph*, of Leith, and three others, the names of which are unknown. With the exception of these last, the crews were saved. Most of the unfortunate vessels were heavily laden, and these losses in total are estimated at nearly 100,000.

A Remarkable Shipwreck is related in the West India papers. The sloop *Star*, Captain Robertson, was near Battawya, in the island of St. Vincent, on the 3rd of May, when it was discovered that a plank in her bottom had started, and that, notwithstanding every effort, she could not be saved from going down. The captain, a young gentleman named Bynoe, a Miss Webb, a Mrs. Gibbs with a boy, her nephew, were upon deck. Several of the sailors leaped overboard. Mrs. Gibbs clasped her young nephew to her breast, declaring loudly that he was the cause of her being there, and that if she was lost, he should go with her. The captain tried to induce Miss Webb to leap overboard with him, and took her hand; but she could not be persuaded to venture, and he jumped overboard alone, followed by Mr. Bynoe. The rest must be told in that young gentleman's own words:—"As soon as I quitted the vessel, which I did at the same time as the captain, and some two or three minutes after the others, I stuck out for the dog-house. The sloop instantly sunk; Miss Webb, Mrs. Gibbs and her nephew, going down with her. There was a little moonlight. A female passenger and her husband had hold of the dog-house. I observed a little boy floating, and I swam and took him to the dog-house. The current was strong and we made little progress, and I was obliged to go behind the dog-house to push it on. As this exhausted me and many hold on, I let go, which gave the others more room. I then laid hold of an oar and used it for a short time; but I thought I heard something blow beside me like a whale or porpoise, and I became alarmed and threw away the oar, determined to swim. Before leaving my companions in misery, I told them I would swim to Bequia and send them a boat, that if it came it would be a sign I was alive; if not, that I was drowned. They implored me not to leave them, because I cheered them up. I now undressed myself in the water, not keeping on a vestige of clothing, and struck out with the greatest confidence in my power of endurance and swimming. Battawya was at this time just discernible. We were about five miles from it, and fifteen or sixteen miles from Bequia. It was four o'clock in the morning. The captain called to me, and I replied. I have since heard that he called me an hour afterwards, and, as I did not reply, all gave me up as lost, as a very heavy sea was running at the time. I remained in the water until three or four in the afternoon, swimming all the time, at which time I reached Bequia. I was alongside the rock an hour before I could ascend it. The surf and heavy swells sometimes dashed me against the rock and at others drew me away from it. I twice despaired, and placed my hands on my head; but I could not sink. I was completely exhausted, and suffered much in trying to land. I remained fifty hours on the Bequia rock without food, water, rest, or clothes. I tried to eat a small shell-fish, but it made me sick. I was very thirsty, but I found relief in sea-bathing. Altogether I was sixty-two hours deprived of every necessary of life. While on the rock I hailed some vessels and boats, but was not heard. At length the *Caledonia* sloop passed by; I hailed her, and she sent a boat for me. I had determined to attempt the next day to that on which I was relieved to swim to Bequia harbour, rather than die slowly. The bruises and cuts you see I got in attempting to land on the rock. I feel no inward ill effects from my sufferings. I was like a skeleton when I landed. The crew and passengers of the *Star* who were saved were brought to St. Vincent by the *Emily Strath*, which picked them up." Much surprise and rejoicings were manifested at

St. Vincent when it was reported that Mr. Bynoe had been landed from the *Caledonia*.

On the evening of the 30th of May, Mr. Thomas Lang of Bristol *Nearly Perished while crossing the Dangerous Sands between Hayle and St. Ives*. The horse of his carriage suddenly disappeared in a quicksand, and he felt the carriage rapidly sinking. He sprang from his seat and with much difficulty succeeded in struggling to firm ground. The horse and carriage were rescued by the aid of about twenty men who had seen the accident from a distance. Had it happened after dark, or when the tide was flowing, escape would have been hopeless.

Mr. Robert Dundas Jones, a solicitor, *Poisoned Himself with prussic acid on the evening of the 30th of May*. It appeared, at the inquest, that he had several bills of exchange unpaid, and that one, of considerable amount, had been presented for payment on the morning of his death. The jury found that he had died from the effects of poison, but that there was not sufficient evidence to prove the state of his mind.

On June 5th, *Eleven Men and Two Boys were Killed* in the colliery of Little Usworth, near Washington, by the explosion of a quantity of gas accumulated in a natural reservoir or hollow. The accident was caused by firing a blasting charge of gunpowder.

As Mr. Samuel Rogers the poet was returning home, on the evening of the 6th, from dining with a friend, he was *Knocked down by a Cab in crossing the street*, and seriously injured, but has nearly recovered, we are happy to understand, from the effects of the accident.

On the 8th, Mr. Sibley, a schoolmaster at Highgate, alarmed by a cry for help from one of his pupils, who was bathing in the Hampstead ponds, plunged in to save the boy, and *Both Perished*. The youth was a son of Mr. Barnes, of Brecknock Villas, Camden Town. Mrs. Sibley had gone out to meet her husband, and the abrupt communication by one of the pupils of what had happened almost deprived her of reason. At the inquest on the bodies the coroner commented on the dangerous state of these ponds, and said that if some steps were not taken by the Hampstead Water Company to prevent similar accidents in future, an action could be brought against them for want of proper caution. The jury attached to their verdict of accidental death a strong recommendation that such steps should be taken.

A young man named Benjamin Tate was *Drowned in the Serpentine while bathing, on Sunday morning, the 9th*. At the coroner's inquest a servant of the Royal Humane Society who had found the body said that many fatal accidents occur on the north side of the Serpentine, which is very deep, with a great accumulation of mud and many holes. The jury requested the coroner to write to the Duke of Cambridge, urging the necessity of prohibiting persons from bathing there.

As Lieutenant Webber, son of the late Dr. Webber, Dean of Ripon, was *Handling a Loaded Pistol*, in Charterhouse Square, on the 9th, it accidentally went off, and the charge, passing through his hand, produced locked jaw, of which he died in a few hours.

Miss Seymour, of Bath, daughter of Lady Seymour, who had come to Oxford with a party of friends to be present at the commemoration, was *Killed by a Fall from her Horse*, while taking an airing, on the afternoon of the 11th, with several ladies and gentlemen. The horse stumbled, and threw Miss Seymour on her head. She was taken up insensible, and remained in that situation till the 14th, when she expired.

On the 12th, a young servant-girl was cleaning the attic windows of a house in Blackman Street, Borough, and, as usual, had placed herself on the window sill, when she lost her balance, and, falling into the street, was *Killed on the Spot*, her head being shattered to pieces.

On the 13th three workmen, employed upon the New Docks at Liverpool were *Killed by a Fall of a High Wall*, under the foundation of which they were making an excavation. When their bodies were dug out of the heap of rubbish, two were quite dead, and the third expired a few minutes after being carried to the hospital. Several other men narrowly escaped, by getting out of the way before the wall fell.

On the 15th, while several men were engaged in laying down what are called "turn-tables," or great cast-iron tubes weighing five tons each, on the Brighton

Railway, the tackle employed in hoisting one of them to the top of one of the arches, suddenly gave way, and the mass fell, bringing with it a quantity of the brick-work. One poor man, named George Lowe, was *instantly Crushed to Death*, and two others, John Hackett and George Howison, were injured, the former so dreadfully that he was not expected to survive.

A *Dreadful Fire* broke out on the morning of the 17th, in a house in Phoenix Street, a narrow thoroughfare leading out of Crown Street, Soho. A Mrs. Harding, who occupied a portion of the second floor, attempted to make her escape by the window, but, after holding on by her hand for some time, was compelled to drop on the stones beneath, and her death was almost instantaneous. Her son, who had made the most courageous efforts to save her, was so burnt as to be obliged to be removed to the hospital. One of the daughters of a Mr. Noland, whose family were also inmates in the house, was literally burned to a cinder. Every article of furniture and wearing apparel belonging to the different lodgers was destroyed before the fire could be got under.

On the night of the 17th, as Captain Peel, son of Mr. Yates Peel, and nephew of Sir Robert, was returning to Nenagh Barracks, in a car with three other officers, it was *Accidentally overturned*, and, falling above him, fractured his left thigh, and his right leg in two places, and dislocated his left shoulder.

Two children of Mr. Lewen, a visitor to Brighton, were playing on the bench on the 18th, when a bathing machine, on the wheels of which they had climbed, was suddenly put in motion, and threw them down. The one, a boy of seven, escaped with slight injury; but the other, a girl of nine, was *Killed on the Spot*, the wheel having passed over her head.

On the 19th, William Jones, a labourer in Messrs. Whitbread & Co.'s brewery, was *Suffocated by Foul Air*, in a vat into which he had descended for the purpose of cleaning its bottom. The coroner's jury found that no blame was attached to the firm, as it appeared that Jones had been frequently cautioned against entering vats to clean them without first allowing the carbonic acid gas, generated from the grounds, to escape.

The *Orion*, a large and fine steamer, plying between Liverpool and Glasgow, was wrecked on Tuesday the 18th, off Port Patrick, with an *Appalling Loss of Life*. About one o'clock in the morning, while most of the passengers were asleep, she struck on a sunken rock, and in five minutes went down in seven fathoms water. There was no time for the people, thus awfully roused, to dress; in the cabin the water was immediately up to their knees. Every one crowded on deck, which presented a scene of consternation and despair. The boats were launched with difficulty: the first, overcrowded, sank instantly, and almost all on board perished; the second, into which a number of ladies were put, reached the shore in safety. Meanwhile the vessel filled and sank, leaving the crew and remaining passengers floating on the surface. Some saved themselves by swimming or getting on pieces of the wreck, but many were drowned. As soon as the accident was discovered from the shore, a number of boats put off and picked up the persons still struggling in the water. To make the circumstance, if possible, still more distressing, the weather was calm and beautiful, and the sea as smooth as a mirror. It is said that there were above 150 passengers on board, many being of the superior class, and about 50 appear to have perished. Among them are, Professor Burns, of Glasgow; Mr. McNeill, of Colonsay, his wife and two daughters; Captain McNeill, brother of the Lord Advocate; and Mr. Splott with his wife and three daughters, who were about to proceed to Australia. The causes of the disaster are under investigation.

The following graphic and affecting details are extracted from the narrative of Mr. George Thompson, of Glasgow, one of the survivors:—

"It was about half-past one that I was awake by hearing and feeling a strange tearing sort of noise, as if some strong paper was torn. It was so gentle that I thought little of it and remained in bed, although all the other passengers in the cabin started at once to their

feet and rushed on deck. After a very brief interval one of my neighbours returned, and began with great trepidation to dress. I then apprehended danger, and jumped out of bed, and drawing on my trousers, went on deck, calling at the ladies' cabin, in passing, to tell my wife that she had better get up and dress although there might not be any immediate danger. On getting to the quarter-deck I found a large number of the passengers assembled in great alarm. The vessel by this time had settled somewhat by the head, and was lurching over a little to the starboard—that is, towards the land. I instantly went below to hasten my wife with her toilet, and put on a little more dress, and sought for a small trunk I had, and brought it to the middle of the cabin. My wife and I now went on deck, and as the vessel was dipping deeper and deeper into the water I calmly told her that I feared there was little hope, but that we would use every effort to save ourselves. By this time the water was over the bulwarks at the bow, and the 'heel' of the deck was becoming greater and greater. I then feared that all was over, and clasping my wife to my breast felt resigned to my fate. We then proceeded, at my wife's suggestion, to the stern of the vessel at the larboard side, and as the inclination of the deck became so great as to prevent our standing, I laid hold of one of the belaying-pins, and placing my wife between my breast and the bulwark, I there held on. A lady at this moment had got hold of my wife's shawl, but as it was not fastened at the throat it soon dropped off, and the unfortunate creature slid down the deck. On turning round I found the whole space within the bulwarks, and up to nearly the centre line of the deck, filled with a struggling multitude in the gurgling and seething waters, and most of these were very soon drowned. As soon as the water reached the companion, the pent air in the cabin forced off the skylights with a most horrid crash, and in an instant after we were under water, sucked down in the vortex of the sinking ship. When below the surface, I lost hold of my wife, and striking out found myself above water and in contact with one of the stays of the mizen-mast, which I laid hold of at once. I had hardly done so, when my wife rose also to the surface, and I at once took her hand and caused her to hold on by the same rope. I placed my legs round the rope, the better to secure my hold, and told her to rest herself on my knee, which she did. As soon as we had so far secured ourselves, the ship gave a heavy lurch to starboard, which immersed us under water, but swinging back she lurched again to port, and again we were under water. Gradually the lurches decreased in extent, and after a few more rolls the masts continued stationary. I had only my head above water, as I was supporting my wife; and I was afraid to elevate myself further, as I knew that in that case the weight would be increased. Above me, on the mast, a sailor was perched, who galled out in the most imploring accents to some persons in a boat to come, and take the people off. When the vessel ultimately sunk, the quarter-deck at the stern was clustered with human beings, like a beehive; and of these but few were saved, as the vortex absorbed them, and they were so numerous as to impede each other in their attempts to save themselves. On the shrouds of the mizen-mast, near where we were, there were several persons clustered, three women hanging off by one rope. At this time the companion cover floated off, and three persons contrived to keep up by it until they were rescued. After being about half an hour in the water, a shore boat came up and was about to pick me up, when I told the men to get a lady, who appeared much exhausted, in first; this was done, my wife was taken in next, and, as quickly as possible, all supported by the mast were speedily rescued. The boat then went to the main-mast, and took off the captain and another man or two, and then proceeded to the shore, where we were met by a little girl, who said we must come to her mammy's house, as they had a nice fire to warm us and would make us comfortable. Mr. McNeill, of Colonsay, his wife, two daughters, and two sons, were on board. The sons alone escaped. The eldest daughter, though alive when she was brought ashore, soon died. She was a handsome, joyous, happy creature, and walked the deck till a late hour in the health and joyousness of youth. Alas! how soon was

all changed, and ere a few hours elapsed she was a corpse. Mrs. Morrises, of Liverpool, had a little child about nine months old in her arms. When she was overpowered with the waters, she sank, and on rising to the surface, her baby was dead, and floated away out of her arms. The mother was saved; and when she recovered herself so far as to recollect her loss, she was bewailing her sad bereavement, when the body of the little innocent was brought into the house. The scene that ensued may be imagined. Mr. Tait, baker, of Glasgow, swam on shore with his little boy on his back most of the way, and both were saved. The Rev. Mr. Feugh, the Episcopal clergyman of Paisley, had a little child on board, about twelve years of age, which was given in charge to the stewardess. After the alarm was given, she proceeded to dress her little charge, and took her on deck, the poor child exclaiming, 'I know you will not leave me.' 'No, no! I never will,' exclaimed the noble woman; but, alas! heroism availed them not; the remorseless surge claimed them as its own. Nothing could exceed the kindness of the villagers to the wants of the survivors; their houses, their larders, their wardrobes—their all, were freely placed at our disposal. Nor should Dr. Douglas, the medical gentleman of the place, be omitted. He literally ran from one to another from the hour of the wreck, administering relief to those who required it, with a degree of kindness, skill, and perseverance, which must ever be remembered with gratitude by all. The night was beautifully clear and calm. There was a slight haze of fog crawling along the land, but the shore was quite visible and distinct; the lighthouse loomed close over the vessel when she struck. The distance between the rock and the shore did not appear above 150 yards, if so much, and would be about the length of the division of Argyll Street from Queen Street to Buchanan Street. The rock on which the Orion struck is well known to all the seamen and fishermen of the place, and is a very short distance from the mouth of the harbour."

Captain McNeill, of Colonsay, lost his life in endeavouring to save the lives of others. He was seen by several of the survivors clinging to a floating spar, guiding to safety, by his voice and exertions, the shrieking throng who struggled around him. His strength failing him, he was heard to say, "For God's sake save yourselves, I have done all I can;" and, before the boats which put off from the shore could approach him, the noble-hearted soldier was beyond the reach of succour.—The cook of the Orion, a man of colour and an excellent swimmer, was among the first to reach the shore, and left it in the first boat which made for the wreck. He leapt into the sea, and by pushing spars and boxes to those who were battling with the waters, succeeded in saving several lives. On the 23rd, instructions were received from the Lord Advocate to apprehend Mr. Henderson, the master of the Orion.

No less than *five fires* took place in different parts of London on the night of the 21st. Two of them, the one in the premises of the Messrs. Bowler, vellum-binders on Gurliek Hill, and the other in Red Lion Street, near the London Docks, were attended with great destruction of property, the inmates narrowly escaping with their lives. The others were at Wapping, Tabernacle Square, and Lisson Grove; but the damage done by them was comparatively small.

A young gentleman named John Bellowen, son of an extensive planter in Trinidad, was drowned on the morning of Sunday, the 23rd, while bathing in the Serpentine. This is the second loss of life at the north side of the Serpentine this season.

Mr. J. Smith, of Sheffield, a young man of 21, lost his life on the 24th from the *incautious Use of Chloroform*. He was found dead in his bed in the morning, with a handkerchief in his hand firmly pressed to his mouth and nostrils; and a bottle which had contained chloroform was found by him. He had been in the habit of inhaling chloroform to allay the pain of toothache.

A *Workshop suddenly Fell* on the premises lately occupied by the Philanthropic Society in St. George's Fields, on the 25th, while a number of French polishers were at work in it. One man named Wilson was crushed to death, and several others so much injured that they were conveyed to the hospital.

SOCIAL, SANITARY, AND MUNICIPAL PROGRESS.

The Society for Improving the Condition of the Labouring Classes had its annual meeting at St. Martin's Hall on the 6th; Lord John Russell was in the chair. The committee's report, read to the meeting, enumerated the various places where improvements had been effected in the dwellings of the poor, and the sums expended for that purpose. Referring to the buildings now being erected in the neighbourhood of Gray's Inn Lane, it stated that it was intended to receive, among others, 128 needlewomen, at a rent of a shilling a week, and that there would be healthy dwellings for from two to three hundred people. Attached to these buildings there would be a public washhouse. The cost would be 10,000*l.*, of which nearly one half was still to be raised, so that the society had need of assistance. The resolution adopting the report was about to be put by the chairman, when Mr. G. W. M. Reynolds came forward, and was vociferously cheered by a knot of persons at the bottom of the hall. Lord Ashley rose to order, observing that this was a meeting of a private society for the transaction of its own business, and could be addressed only by its members. "Then," cried Mr. Reynolds, "I'll make myself a member at once," and advanced with a purse in his hand, out of which he offered some money to the secretary, which was declined. A great deal of noise and confusion arose; Mr. Reynolds insisting on his right to pay his guinea and make himself a member on the spot; and Lord John Russell explaining that this might entitle him to address a future meeting, but that he could not be heard then. At length the resolution was put and carried, only three hands being held up against it. Lord Ashley then came forward to move the second resolution, when he was met by loud uproar on the part of Mr. Reynolds's friends, in the midst of which Mr. Reynolds once more rose from his seat, and advancing with air half-menacing, half-swaggering towards the chairman, exclaimed, "I appeal to your lordship whether you will allow the working classes to be insulted in this manner?" By this time he had come up to Lord Harrowby, who sat next Lord John Russell. Lord Harrowby put out his hand to stop his further progress, and exclaimed, "Go back, sir!" Mr. Reynolds still pressed forward, on which Lord Harrowby rose from his seat, took him by the shoulders, and pushed him back. Mr. Reynolds, without further resistance, slunk back to his seat, while the meeting resounded with cheering and cries of "Well done, Lord Harrowby!" Lord Ashley went on, and in the course of his speech assured his good friends below the rope that he had been in the habit of mixing with all classes, and that he even came from among the working classes with increased respect for them, and a determination to do all he could for their benefit. Mr. Reynolds exclaimed, "The Factory Act; the Ten Hours Bill! You have betrayed the working classes." Lord Ashley did not notice the interruption, and the remaining business of the meeting was quietly gone through. This meeting gave rise to some proceedings at Bow Street. Mr. Merriman was soon afterwards charged by Mr. Sealey, bookseller, with creating a disturbance at the meeting, and was held to bail. Mr. Reynolds becoming one of his sureties. At the same time Mr. Reynolds applied for a summons for assault against Lord Harrowby, whom he called "a ferocious fellow." The magistrate said he should require written information upon oath, which was promised by Mr. Reynolds. Two days afterwards he renewed his application, but it was refused by the magistrate, who held that he had no right to address the meeting, nor to approach the chairman, and that Lord Harrowby was justified in thrusting him back as an intruder.

The Great Flower Show of the Horticultural Society at Chiswick, on the 8th, was attended by above six thousand visitors, the Nepaulesc princes being among the number. The chief object of curiosity was the gigantic Victoria Regia Lily, grown in the gardens of Sion House. The still greater exhibition of a similar kind by the Royal Botanical Society, in the Regent's

Park, on the 12th, is said to have attracted no less than sixteen thousand persons. The magnificent collection of American plants was the principal feature of this exhibition.

A deputation on the subject of *Purifying the Serpentine*, consisting of several medical gentlemen, had an interview with Lord Seymour on the 8th. After having heard the statements made by the deputation, Lord Seymour replied that the condition of the Serpentine had not escaped his attention, and there could be no doubt as to the necessity of there being a constant stream passing through it. The only question in his mind was, as to the best mode of obtaining the necessary increased supply of water. He did not deny the necessity which was said to exist for thoroughly emptying the Serpentine of its mud, and also for rendering the river more safe, but it would be impossible to do so before the Great Exhibition of 1851 took place. He promised, however, that no time should be lost in affording the necessary increased supply of water.

A *Penny Bank for Savings* was opened at Cheshunt, on Monday evening, the 10th. A considerable number of depositors attended, and the promoters are sanguine of success.

The *New Church of St. Barnabas, in Pimlico*, was consecrated on the 11th, by the Bishop of London. The ceremony attracted more than ordinary attention, from the number of High Church Bishops, dignitaries, and clergy, who mustered in full canonicals, as well as from the number of aristocratic members of the High Church party; including the Earl of Carlisle, Earl Nelson, Lords Campden, Fielding, Castlereagh, John Manners, Mr. J. B. Hope, M.P., and Mr. Branton, M.P. The church, which from the style of architecture and the nature of its decorations has much the appearance of a Roman Catholic cathedral, is intended to be entirely free, without pews or paid seats. There is a college connected with the church, at which choristers and other youths will be educated. A Sisterhood of Mercy is also to be established, for parochial visiting.

The eighth anniversary festival of the *Brompton Hospital for Consumption* was celebrated on the 12th, at the Albion Tavern; Lord Faversham presiding. The institution continues to increase in usefulness. The report read by the Secretary mentions the number of in-patients during the past year as 260; being 78 more than in the previous years. Of this number 217 were relieved and discharged more or less benefited, 62 died, and there were 81 in the house when the report was drawn up. Since the opening of the new building, in 1846, 1036 in-patients had been admitted; of whom 760 were relieved and discharged, and 195 died. The number of out-patients treated during the past year has been 3176; being an increase of 371 over the number treated in the previous year. The report points out that many of these patients continue under treatment for months, and that during the year the number of prescriptions to out-patients alone has amounted to 26,956. The subscription after dinner amounted to 1500*l*.

A meeting of gentlemen connected with Wales was held on the 16th, in the Welsh Charity School, Gray's Inn Road, to promote *Secular Instruction among the Welsh* by means of their native language. The Earl of Powis presided, and the Dean of Bangor was among the persons present. It appeared from statements made at the meeting, that the population of Wales, by the census of 1841, was 1,045,753; of whom it was estimated that half a million either understand Welsh only or employ that language in their ordinary intercourse. Not only is public worship, in many parishes, conducted in Welsh, but periodical publications printed in that language have an aggregate circulation of 60,000 copies, and are probably read by 200,000 persons. All the speakers repudiated the notion that it was intended by this movement to perpetuate the Welsh language, but contended that the publication of books in that language was at present the readiest, if not the only means of diffusing information among the Welsh people. Donations were made to the amount of 116*l*.

The annual examination of the boys belonging to the model school of the *British and Foreign School Society* in the Borough Road, took place on the 19th. It was presided over by Sir E. N. Buxton, and the proficiency

of the children gave great satisfaction to a large assemblage. The object of the society is the scriptural education of the children of the poor, without distinction of sect or party; and this is accomplished by promoting the establishment of schools in the destitute districts of England and Wales. The model boys' school numbers at present nearly 700 children in daily attendance, and the girls' school 300; and since the establishment of the institution 52,828 children have been received and educated, and upwards of 3000 teachers have been selected and trained. At present the schools in connexion with the society in the immediate neighbourhood of London are 203 in number, and they contain 30,160 children.

The annual festival of the *Royal Free Hospital*, Gray's Inn Road, took place at the London Tavern on the 19th, the Hon. E. F. Stanley in the chair. The number of sufferers relieved by this institution during the last year, within and without the walls, was 28,130; and the receipts, in that period, amounted to upwards of 5500*l*. In the course of the evening subscriptions were announced to the amount of 1300*l*.

The following notice has been issued by the General Post-office:—

"General Post-office, June 1850.

"On and after the 23rd instant, there will be no delivery of letters throughout the United Kingdom on Sunday, nor will there be any collection of letters, whether by messengers, letter-carriers, receivers, &c., on that day.

"A collection, however, by means of boxes, will still be permitted on Sunday, as at present, at the receiving-offices, whether in towns or in the country, and at the chief offices in towns, &c.; it being clearly understood that letters deposited in the receiving-boxes shall remain unsorted and untouched until the Monday; and that there shall be no attendance of postmasters or their clerks at the window of the post-office on Sunday.

"The present practice of detaining letters addressed to the Metropolis itself, when posted on Saturday, until the despatch on Sunday, will not be disturbed with the exception that the bags containing such letters must be closed on Saturday night; and, as the mails will be transmitted on Sunday in the usual manner, it will be necessary that some person shall attend to despatch the bags alluded to, as well as to receive or forward those bags that have arrived from other offices.

"Postmasters taking upon themselves to deliver letters to any parties whatsoever in contravention of these orders, will be most severely punished."

On the 20th, a meeting was held in Peel's Coffee-house, of the proprietors of a large number of the London newspapers, to consider what measures ought to be adopted by them in consequence of the recent vote of the House of Commons, with reference to Sunday labour in the Post-office, and the subsequent concurrence of the Government in the principle of that resolution. Mr. Ingram, proprietor of the "*Illustrated London News*," was in the chair. The meeting was attended by representatives of all the weekly newspapers, whose interests will be chiefly affected by the alterations consequent upon the resolution of the House of Commons, and by some of the proprietors of the daily and monthly periodicals. A resolution was voted:—"That this meeting conceives that by the conduct of the Ministry, in stopping the use of the post to the weekly newspapers, in an address voted by only ninety-three members of the House of Commons, it has shrunk from its duty as a government." And a committee was formed "to take into consideration the general interests of the press, and especially as to all efforts to interfere with its circulation by Sunday bills or otherwise."

At a meeting of the Metropolitan Commission of Sewers, on the 21st, Mr. Peto explained the condition of the *Metropolitan drainage question*. The Commission has definitely resolved to carry out the principle of preventing the pollution of the Thames. The plans for the district South of the Thames are finally settled. No sewer at all will discharge itself into the Thames from Nine Elms to Deptford. Westminster can be drained, down to Percy Wharf, by natural falls. The plan for the rest of the northern part of London is still under consideration, and the same principle of non-pollution of

the Thames will there be carried out; but for this remaining part it will be impossible to do without mechanical aids.

The committee for the management of *Evening Classes for Young Men in London* had a supper at the London Tavern on the 26th, at which the Earl of Harrowby presided. This institution has been founded on the principle which the Committee of the Privy Council are endeavouring to introduce in all the schools under their control—that of founding a good secular education on a sound religious basis. The report for the past year stated that 24 classes had been established, which were attended by more than 600 students, whose general good conduct had secured the entire approbation of the teachers. 29 lectures had been given freely by gentlemen of talent and reputation, and 23 teachers had in the same spirit devoted nearly 400 evenings to the instruction of young men of a different class in society. The subscriptions received during the last year amounted to £2201., while the expenditure had not exceeded £1301., nearly half of which was provided by the students themselves.

The fourth annual meeting of the *Grotto-passage Ragged Schools and Refuge for the Destitute* was held on the 26th, at the Literary Institution, Edward Street, Portman Square—Lord Ashley in the chair. The Report stated that during the last year, 36 boys had been boarded, lodged, and educated there, 11 of whom had been convicted thieves; of this number 8 had been sent to Australia, 6 apprenticed to sea, 1 expelled, 1 removed by the parish authorities, 1 sent back to the workhouse, where he died, 3 had left of their own accord, and 2 had been enticed to leave. There were at present 15 in the Refuge, leaving 5 vacancies. In the Industrial School there had been an average attendance of 74—25 of whom were provided daily with a dinner. Mat-making, shoe-making, tailoring, and net-making are the trades in which instruction is given, and each is expected to earn his dinner before partaking of it. The evening and Sunday schools are both well attended; the number of scholars in the former, averaging 40, and in the latter, 143. Lord Kinnaird suggested the establishment of model lodging-houses on an extensive scale; and Mr. Arthur Hill expressed his persuasion that it was extremely necessary that the boys who had passed through ragged schools, and were intended as emigrants, should, previously to leaving this country, be subjected to a kind of rural training, in order to fit them for their new situation, a rural life being the only one which can at present be properly and advantageously pursued in the colonies.

PERSONAL NARRATIVE.

THE Queen, Prince Albert, and the royal children, returned on the 18th from Osborne to Buckingham Palace. On the 20th Her Majesty held the *first drawing-room* of the season; it was of extraordinary brilliancy, and the presentations were unusually numerous.

The *Baptism of the Infant Prince*, Her Majesty's third son, was celebrated on Saturday the 22nd, in the Chapel at Buckingham Palace. The sponsors were the Duke of Wellington, the Duchess of Kent his proxy for the Duchess Ida of Saxe Weimar, and his Royal Highness the Prince of Prussia (who had arrived only the same morning from the Continent). The royal procession entered the chapel about seven in the evening, the orchestra performing the *March in Handel's* occasional oratorio, followed by a chorale composed by Prince Albert. The ceremony was performed by the Archbishop of Canterbury, who named the royal infant "Arthur William Patrick Albert." There was afterwards a magnificent state banquet in the picture-gallery; and the evening was concluded by a brilliant assembly and concert, at which the Nepaulese princes, among many other illustrious personages, were present.

An *Embassy from Nepal* arrived at Southampton on the 25th of May. The Ambassador, General Jung Bahadoor Koorman Ranagee, is the Nepaulese Prime Minister; though only turned of thirty, he is said to be already a distinguished warrior, and the most influential statesman in Northern India. He brought a complimentary letter to the Queen, and presents stated to

be worth a quarter of a million sterling. An awkward affair took place on his arrival. The Southampton custom-house had orders to pass the presents without search, but not the ambassador's own luggage. When the officers were proceeding to examine it, his excellency (a Brahmin of high caste) declared that if an article was touched he would return to India by the first steamer, and posted a Hindoo guard, with a drawn sword, over the luggage. After an interchange of telegraphic messages the blunder was rectified, and the ambassador, with his suite, presents, and property, landed and proceeded to town. The ambassador and his two brothers (all three handsome young men) have been since their arrival the chief lions of the metropolis. They have gone freely into society, visited the chief places of public amusement, and accepted invitations to numberless fêtes and parties, public and private, enjoying every thing (except the creature comforts of the entertainment, of which they decline to partake) with infinite zest, and creating a very favourable impression by their intelligence, frankness, and good humour. They have their box at Her Majesty's Theatre, where they are seen every opera night, seemingly delighted with the performances, especially the ballet. The principal fête in their honour was that given by the East India Company on Saturday the 15th, at the London Tavern, and attended by a host of people of distinction, including several members of the government and of the diplomatic body. The Nepaules did not partake of the sumptuous banquet set before them, but, retiring into another room, had some fruit, and then rejoined the company. The ambassador, on his health being given, returned thanks in his own language, in a speech of excellent taste and feeling, which was translated to the company by Captain Cavanagh, an officer attached to the embassy.—On the 19th the ambassador and his brothers were presented to the Queen by the President of the Board of Control, whom his excellency delivered a letter to Her Majesty from his sovereign, and the presents, of which he was the bearer.

Prince Albert, as Chancellor of the University of Cambridge, has addressed a letter, dated the 27th of May, to the Vice-Chancellor, on the subject of the *Royal Commission of Inquiry*. After expressing his conviction that the proposed measure does not cast any slur upon the university, by implying want of confidence in their ability or inclination to carry out useful reforms, and that the government are anxious, by the selection of persons who are to compose the Commission, not to expose the university to needless hostility, his Royal Highness concludes by giving the following advice:—"Although I had hoped that the university would have been allowed to go on in their course of self-improvement without any extraneous interference, now that I find the Government irrevocably pledged to the issue of the Commission, I would recommend the authorities of the university not to meet it with opposition, but rather to take it as the expression, on the part of the Crown and Parliament, of a natural desire to be accurately informed upon the present state of institutions so closely connected with and of such vital importance to the best interests of the nation; and to take a pride in showing to those who have indulged in attacks against them, that they have conscientiously and zealously fulfilled the great task entrusted to them. Any hostility or opposition on the part of the university could not prevent the issue of the Commission by the present government; and, while it might add strength to the accusations of their enemies, would only lead to the result of the inquiry remaining incomplete, and, as based upon one-sided evidence, probably injurious to the universities themselves."

The *Freedom of the City of London* was presented to Lord Gough on the 30th of May, at a full Court of Common Council; and in the evening a grand banquet was given to him at the Mansion House. The Duke of Cambridge and a number of members of both houses of Parliament were among the three hundred guests.

At the *Oxford Commemoration* on June 12th, the degree of Doctor of Civil Law was conferred on the Indian warriors Lord Gough and Major Edwards. The same honour was conferred on Major Rawlinson the

Oriental scholar, Justice Alderson, and Dr. Paris, the President of the College of Physicians. The undergraduates were even more uproarious than usual; in consequence, seemingly, of an order, issued by the authorities, against practices which of late years had brought "great discredit on the University." Great cheers were raised for "the Duke" and Lord Brougham, on account of the sentiments they have expressed respecting the Royal Commission; while, for the same cause, loud groans were uttered at the names of Lord John Russell and Sir Robert Peel.

On Sunday evening, the 16th, the people of Pentonville were surprised by the spectacle of a *Mormon Baptism*. Two handsome carriages, containing several fashionable-looking ladies, drove up to the Pentonville Swimming Baths. They went into the boxes, and having put on bathing dresses, were thrice immersed in the water by a Mormon minister, who has a chapel in the neighbourhood, a number of people of the persuasion being present. The singing of a hymn closed the proceedings. The names of the fair converts did not transpire; but they appeared to belong to the higher orders of society.

The Duke of Wellington gave his annual banquet, on the 18th, the *Thirty-fifth Anniversary of the Battle of Waterloo*. Covers were laid for eighty guests, seventy-two of whom were the Duke's Companions in Arms on that memorable day. Most of these veterans are general officers, and the lowest in rank are lieutenant-colonels. Prince Albert and a few persons of distinction completed the company. The entertainment was in the usual style of magnificence. When the party broke up, about midnight, the gallant host, who had done the honours with great animation, ordered his carriage and went off to a ball.

About a hundred members of the House of Commons waited on Lady Palmerston on the 22nd, and presented to her ladyship a *full-length Portrait of her Husband*, painted by Partridge, in token of approbation of Lord Palmerston's public conduct.

Mr. Robert Hunt, an elder and only surviving brother of Mr. Leigh Hunt, has been nominated one of the *Poor Brethren of the Charter-House*. He is in his 77th year.

Mrs. Harriett Waghorn, the widow of the late *Lieutenant Waghorn*, has received a pension from the *Crews of 25*l.** a year, "in consideration of the eminent services of her late husband."

Donor Isturitz, the new *Ambassador from Spain*, arrived in London on the 5th, with a numerous suite.

The late Lord Chancellor has been created Viscount

Crowhurst, of Crowhurst in the county of Surrey, and Earl of Cottenham, of Cottenham in the county of Cambridge.

Letters have been received from Mr. Layard, our enterprising countryman, so late as April 16, and dated from Assan, on the River Khabour. The last accounts from this quarter mentioned Mr. Layard's purpose of penetrating into the Desert, which he has now done, and explored for three weeks, meeting with numerous traces of ancient population, though not so productive of antiquities as was hoped for. His present site, however, is richer in archaeological remains, and is important, as these are undoubtedly Assyrian, and thus establish the fact of the extent of that empire. Two winged Bulls and other fragments have been discovered among the ruins. Mr. Layard was desirous to examine the Khabour to its mouth; but the Arabs in that direction were hostile to those whom he ranked among his friends, and amid whose dromedaries, flocks, and tents he was located. The sheikh and all the tribe were kind and hospitable.

Obituary of Notable Persons.

The Hon. FRANCES GABRIELLE TALBOT, sister of Lord Talbot de Malahide, Countess of the Austrian Empire, and Canoness of the Royal Order of St. Ann of Munich, died at Vienna on the 28th April.

SIR GEORGE CREWTYN, Bart., for many years clerk of the Privy Council, died at Grendon Hall, Warwickshire, on the 24th May, in his 67th year.

MR. RICHARD WYATT, the eminent sculptor, died at Rome on the 20th May. He had resided there for the last twenty years.

Lieut.-Colonel P. CAMPBELL, C.B., died at Brighton on the 31st May. He served with great distinction throughout the War and at Waterloo.

Lieut.-Colonel Sir JOHN BUCHAN, K.C.B., died on 2nd inst. at his house in Harley Street. He entered the army in 1786; and served in the Mysore War, in Ceylon, the West Indies, and through the Peninsula campaigns.

His Royal Highness WILLIAM FREDERICK MAURICE, of the Netherlands, second son of the King, died on the 4th, at the age of six years and nine months.

MR. JAMES SMITH, of Deanston, the eminent agriculturist, whose practice and opinions have been so often referred to during the Protection controversy, died on the 10th at the house of his relative Mr. Buchanan, of Catrina, in Ayrshire. He is regarded as the inventor of the modern system of drainage.

LORD CANTHUPE, eldest son of the Earl of Delawarr, died on the 25th, of rheumatic fever, in his 37th year. He sat in Parliament for several years; first for Helston and afterwards for Lewes.

COLONIES AND DEPENDENCIES.

THE disturbances on the North-Western frontier of India have been quelled for the present, and the leading Affreeed chiefs have formally submitted. The passes between Kohat and Peshawur are nevertheless not considered safe, though nothing further can be conclusively done till the season for a regular campaign. Such other interests as appear to occupy the Indian newspapers, centre almost wholly in railways, which have also lately occupied the attention of the House of Commons, on the motion of Lord Jocelyn. Upon the whole, the prospects in this respect are not unfavourable; and it is curious, that, of all the apparently mad speculations originating in the fatal railway enthusiasm of five years ago, the companies which most bravely have weathered the panic are those for the promotion of railways in India.

From Canada we have news of a series of successes of the government party, the most remarkable of which is an amendment to the address raising the question of an elective upper chamber, defeated by a considerable majority. Another somewhat notable question started in the Assembly was embodied in an address to the Queen for the independence of the British North American provinces, and voted for by seven members. We may add, that one result of the London visit of the Bishop of Toronto, to which we formerly adverted, has declared itself in a vote of four thousand pounds by the Christian Knowledge Society towards the endowment of two additional bishoprics in Canada.

But bishoprics are quite the order of the day in Colonial matters, and episcopal sees are founded before even outlines of congregations are found. The proposition for what is called the Canterbury Settlement in New Zealand, for example, is based upon the reservation of a pound per acre for ecclesiastical purposes. The land is to cost ten shillings an acre, the public works are to engross another ten shillings, and a sum equal in amount to both is to be laid aside for episcopal endowments. We doubt if history contains a satisfactory example of a religion planted in this particular manner, or if the Canterbury Settlement is in any way likely to furnish the example needed.

The last *Overland Mail* has brought dates from Bombay to the 11th of May.

The kingdom of Oude has been much disturbed, and the British troops stationed there have met with a disaster in supporting the king against his rebellious subjects. A detachment under the command of Captain Wilson, sent against a refractory Zemindar who occupied a strong position, was repulsed on the 29th of March, with the loss of Lieutenant Elderton, who was killed, and seventy-five men killed and wounded. During the following night the enemy evacuated the fort, passing unharmed through the King of Oude's troops. The fort was taken possession of and destroyed.

The Governor-General had left Calcutta for Simla, for the benefit of his health, which had suffered much from the climate and from over exertion.

The practice of *Thuggism* is not extinct in India. It has recently been discovered that Lieutenant Brockman of the 50th regiment, who was missing after the battle of Moodkee, was murdered by a party of Thugs, who came upon him while he was resting himself by the side of a well, on his way to overtake his regiment.

A *Suttee* had occurred in the neighbourhood of Bombay. The husband was 60 and the widow about 22; yet, though they were of low caste, her self-sacrifice was not only voluntary, but in opposition to her family and friends. All who were known to be present were tried by the district judge, and nineteen or twenty people were sentenced to various terms of imprisonment, from ten to two years.

There are advices from the *West Indies* to the latter end of May.

The drought which had so long prevailed was giving way, and there had been seasonable rains in several of the islands. In Antigua, however, the drought continued, and it was proposed to hold a general fast and offer up prayers for the mitigation of the calamity. In Jamaica the cultivation of cotton was occupying much attention. In Trinidad considerable excitement has been caused by the discovery of gold in several parts of the island.

PROGRESS OF EMIGRATION AND COLONISATION.

We noticed in our last number the first preliminary meeting of intending *Emigrants on Mrs. Chisholm's Plan*. A second took place on the 1st instant, and was numerously attended by intending emigrants, whose intelligent and respectable appearance was highly gratifying. Mrs. Chisholm informed them that since the last meeting she had received communications from persons about to accompany them to the colonies, one of whom had a capital of 350*l.*, another 6000*l.*, another 4000*l.*, and five others having from 200*l.* to 400*l.*, each. To such persons the society could only afford assistance

in the way of advice, but she thought it right to mention the matter to the meeting, as these capitalists would no doubt be anxious to secure the services of persons seeking for employment who would be going out by the same ship. Mrs. Chisholm read some interesting letters from emigrants in Australia, and mentioned that many sums of money lent by herself and her friends to assist persons to emigrate, had been faithfully repaid.

On the same day a meeting was held at St. Martin's Hall, with the object of taking measures to *improve the Condition of Emigrants*, and to protect them in the voyage to the colonies south of the equator. The Earl of Harrowby took the chair; supported by the Bishop of Norwich, Lord Lyttelton, Mr. A. Stafford, M.P., Mr. Napier, M.P., the Rev. Dr. Mackenzie (vicar of St. Martin's), Rev. Dr. Childs, the Rev. J. Anderson, and other clergymen and gentlemen interested in colonisation and the general improvement of the condition of the poor. Resolutions were passed, to the effect that every body of emigrants should be accompanied by a chaplain or lay-teacher; that each ship should be furnished with books and maps, and with tools and materials for manual employment; and that all contributions for these objects should be confided to the committee of the Society for the Propagation of the Gospel, formed last year to provide a fund for the religious instruction of the emigrants.

A large party of *Young Female Emigrants*, sixty-one in number, sent out to Australia under the auspices of Mr. Sidney Herbert's Society, embarked on the 26th, in the Northumberland, bound for Port Phillip. They consisted almost entirely of needlewomen, and most of them have been inmates of the "Home," and have received certificates of good conduct while domiciled there. There were three who had paid for their passage, but went under the care and protection of the Society. The girls having been mustered, were presented with their credentials, with copies of the rules of the ship, and instructions and hints for their future conduct, drawn up on the part of the Society. The former arrangements as to needlework and instruction will be observed, and a supply of little articles of luxury, such as preserved milk, &c., similar to that provided on board the other ships, has been duly laid in. A whimsical piece of folly came to light during the muster. One girl was absent, and on her name being repeatedly called, a companion of hers, also an emigrant, came forward and informed the committee that although her friend had quite made up her mind to go, and although she had herself provided and packed her outfit, yet that at Blackwall she had changed her mind, because—the noise of the steamer frightened her! Most of the girls were deeply affected, but they soon recovered their cheerfulness. Altogether, both as regards the accommodation for the voyage, and the appearance and character of the girls themselves, we believe that the expedition appears to have departed with most favourable prospects.

NARRATIVE OF FOREIGN EVENTS.

THE new Electoral Law having been voted, and the Greek affair having subsided, France has been rehearsing all the month a political comedy called *Money*, without any of the wit or humour of its English namesake—in fact, an extremely dull affair. The President has been asking for more salary, and the Assembly has been disputing his claim; but what are called his services to the "party of order" have prevailed, and ten thousand pounds a month has been voted as "costs of representation" to the salary originally assigned him of twenty-four thousand pounds a year. The result had been doubtful up to the close of a long debate, when it was determined at last by a few short, sharp sentences, like the cuts of a sabre, from the ordinarily silent Changarnier. The beginning of the end would thus appear to have arrived.

A piratical expedition to Cuba, undertaken by a party of American adventurers, headed by a Spanish soldier of fortune, has been the single exciting event of transatlantic politics. But it turned out a somewhat absurd one. For the gallant Lopez and his two thousand companions, after storming and sacking a very small town, made off with all possible speed, as compactly as they could, and left the stocks and the gallows to pick up the stragglers. It is not impossible, however, that this contemptible affair may have some serious results in checking the friendly intercourse between America and Spain.

Germany does not better her deplorable condition. Prussia and Austria have been bidding for the favour of Nicholas, and Russia has signalised a reported success at St. Petersburg by a crusade against her liberal press at home. There is the same lamentable tale to tell of Italy. Completed outrages on property and person, throughout the Papal States, alternate with attempted outrages on mind and intellect; and whether

the allocations of the Pope or the assaults of the Brigands are more mischievous, it would be difficult to say. Meanwhile, a miracle has been got up at Rimini. A picture of the Madonna opens and shuts its eyes, whereas bishops and canons are in ecstasy, infidel Austrians and Romans are converted, cripples and blind people are cured, and "the Virgin by one glance of ineffable expression" is bringing back a most recalcitrant population into the Pope-loving ranks of the Faithful. The poor Pope has ordered a "judicial enquiry" to be made into this affair!

The *Electoral Law* was passed in the French Assembly on the 31st of May, after a long debate, but without a single alteration of any importance. On the 3rd inst. it was officially published in the *Moniteur*.

On the 4th a bill was presented by the Ministry to the Assembly for increasing the *Salary of the President* to 3,600,000 francs (144,000*l.* sterling) a year. The funds instantly fell from 96*½* to 94*½*.

The President went on the 9th with several of his ministers to inaugurate the *Opening of the Railway* from Creil to St. Quentin. He made some telling speeches, and was received with a great show of popular enthusiasm.

M. Emile Girardin, the eminent proprietor of the *Prose*, has been elected by the *Department of the Lower Rhine*, in opposition to the government candidate, by a majority of 30,000 votes to 20,000.

A *Dinner Party* given by the President at St. Cloud on the 15th had nearly been attended with a terrible disaster. The Count and Countess de Gouy d'Arcy were arriving in a carriage, when the President, who was riding in the grounds, galloped forward to meet them. Having chatted with them for a moment at the carriage window, he put spurs to his horse to meet some other guests. The Count's horse took fright, and dashed off at full speed along the edge of a ravine. In a few seconds the side wheels got off the path, and the carriage, to the horror of the spectators, was precipitated down the slope. Louis Napoleon was the first to reach the spot, and found the carriage smashed to pieces, the horse lying on his side, the young Countess with her bonnet in her hand arranging her hair, and her husband with equal composure shaking the dust out of his dress-coat. Neither had received the least injury, and during the evening they were the gayest of the party.

Several persons were arrested in Paris on the 18th and 19th, charged with the clandestine *Manufacture of Gunpowder*. A number of socialist agents have been sentenced by the Court of Assize of the Loire Inferieure to various terms of imprisonment, for having uttered blasphemous and atrocious cries in the streets, such as "A bas Dieu!" "Vive l'Enfer!" "A bas la Religion!" "Vive le Pillage!" "Vive la Guillotine!" and others equally infamous.

The committee on the bill for *Increasing the President's Salary* made a report, which was read to the assembly on the 21st. It rejects the ministerial measure, and proposes "that a credit of 1,600,000 francs be opened in favour of the Minister of Finance for the expenses incurred in 1849 and 1850, in consequence of the installation of the President of the Republic."

The subject was disposed of by the Assembly on the 24th. The question discussed was between the above-mentioned amendment on the bill, proposed by the majority of the committee, and another amendment which had been proposed by the minority and adopted by the government, viz., "That an extraordinary credit of 2,160,000 francs for the expenses of the President of the Republic be opened in the Ministry of Finance for 1850." And this last amendment was carried by 354 against 308, a majority of 46 for the government.

General Labitte announced to the Assembly on the 21st, that the question between the English and French governments was arranged; the English government having agreed to abide by the provisions agreed to at London, instead of those which had been arranged at Athens.

M. Thiers *Arrived from Paris* on the 13th. The same evening he visited the House of Lords, where he was cordially greeted by the Marquis of Lansdowne, Lord Brougham, Lord Palmerston, and several members of both Houses, with whom he remained a short time in animated conversation. He paid a visit to the ex-king of the French at St. Leonard's, and immediately afterwards returned to Paris.

A conspiracy on an extensive scale has been discovered in Oran, Algeria. The plan of the conspirators was to seize the Fort La Monne and the Treasury, and to establish a Provisional Government. Two Municipal councillors of Oran, a lieutenant of the 68th regiment of the line, and several *soldiers* have been arrested.

The Arab village of Ouldja has been burnt down, the inhabitants dispersed, and thirty people killed by the French troops, in consequence of their refusal to give up some Arabs who had killed a French soldier and wounded another.

The *Settlement of the German Constitution* makes little or no apparent progress. The Saxon chambers were suddenly dissolved on the 1st instant, to evade a discussion in the second chamber on an address to the sovereign, expressing dissatisfaction with the conduct of the government on the German question; and the second chamber broke up in solemn silence, withholding the usual cheers for the king. The Wurtemberg Diet, for a similar reason, was prorogued on the 4th instant.

The King of Hanover entered his eightieth year on the 5th instant.

The 1050th Anniversary of the Arrival of a Fragment of the True Cross was celebrated at Coesfeld on the 25th of May by a solemn mass in the cathedral. The city was visited during the days of the fête by 50,000 pilgrims.

The King of Prussia has Recovered from the Wound inflicted by the assassin Sefeloge. On the 9th he attended divine worship in the chapel of the palace of Charlottenburg; and on the morning of the 10th he was greeted with a grand musical performance under his window, as a congratulation on his full recovery.

A royal decree has been published at Berlin, curtailing still further the *Freedom of the Press*. The system of "caution-money" is re-established, with the government powers of cancelling the licence to sell newspapers, and of refusing conveyance by post to obnoxious journals; and certain offences against the press laws are "withdrawn from the competency of a jury."

Among the journals affected by the above decree is our own *Punch*, which has been proscribed in the city of Königsberg and its province, and placed on the list of journals that are no longer permitted to pass through the Post Office.

There are accounts from Madrid to the 20th. The Queen's accouchement was expected to take place in a few days. The daughter of the Duchess of Montpensier has received, by a royal decree, the rank and honours attached to the title of Infanta of Spain. It appears that the Duke and Duchess of Montpensier are not popular in Madrid. The feeling of the multitude was strongly expressed at a bull-fight a few days ago. The Duke and Duchess were present, and, according to the custom which prevails when any member of the Royal family assists at the spectacle, the chief of the Torreadors requested their permission to commence the fight on his bended knee. At this proceeding the entire assembly hooted and hissed. When the second bull was about to be led forth, the same ceremony was repeated with the same result, although the famous Montes, the conqueror in all his battles, was one of the Torreadors. On the third bull-fight being about to commence, the Torreador merely saluted the Duke and Duchess, without bending his knee. A shout of applause was immediately raised by the entire mob. The royal party, visibly affected, quitted their box after the death of the third bull. This manifestation, so spontaneous and so unanimously produced, surprised everybody, even those who took part in it. It is regarded as a political event of considerable importance.—It is said that some serious differences have arisen between the Minister of War and General

Cordova, the present Captain-General of Madrid. The cause of the quarrel is the refusal of the minister to grant the numerous favours requested for the troops who have returned from Italy.

In Italy *Superstition continues to Flourish*. An image of the Virgin, belonging to a woman of Possombrone, was observed by its owner and some of her female friends to move its eyes in a miraculous manner. The matter was taken up by the bishop, and a commission of theologians, appointed to examine the case, made a favourable report, in consequence of which the statue was transported to the cathedral, where it now cures the halt, the blind, the dumb, and the deaf. Immense sums have already been received for alms by the church.

A letter from Naples, of the 18th inst., mentions a *Terrible Catastrophe* in that city. The morning before, a part of the Grenaglio, an immense edifice, which the troops occupy as barracks, gave way and fell down, swallowing up in its ruins 400 or 500 persons. No details are given, but it is hoped that the number of the killed is exaggerated.

A letter of the 17th inst. from Semlin states that an insurrection against the Turkish government has broken out in the three Bulgarian districts of Widdin, Gurgisova, and Belgradaisza, and that the small fort of the latter place has fallen into the hands of the insurgents.

There is intelligence from Persia of the detection of a conspiracy at Tabriz, the capital of Aderbijejan. Five of the conspirators were beheaded on the 21st May, and their bodies exposed, each with the head under the left arm, over the gates of the town. Nine were executed previously. Salar, the chief of the rebellion in Khorassan, and uncle of the Shah, has been taken prisoner and put to a cruel death, both his eyes having been torn from his head before decapitation.

The advices from the United States come down to the 13th instant.

A *Buccannering Expedition to the Island of Cuba* sailed from New Orleans on the 8th of May, under the command of General Lopez, a Creole soldier of fortune, and consisting of about 600 men. The preparations were so secretly made, that they did not transpire till after the adventurers had sailed, when President Taylor sent orders to all the out-ports to pursue and capture them if possible. The invading force landed from the steamer Creole at Cardenas, in Cuba, on the 19th of May, and after a short struggle obtained possession of the town, making the governor and his officers prisoners. The same evening, a Spanish force having arrived from Matanzas, the pirates were driven on board their vessel, after a severe conflict, in which they lost 60 men, while the Spaniards lost 150. On the 25th, Lopez arrived at Savannah, when he was arrested under orders from the President, and brought before the District Court, but immediately liberated, no evidence being brought to justify commitment. He was conducted to his lodging, amid the cheers of the "sympathising" multitude, whom he addressed, declaring his determination to persist in the liberation of Cuba under every difficulty and at all hazards. He was, however, again arrested and

taken to New Orleans, where he was held to bail in 3000 dollars.

An application for a writ of error in the case of *Professor Webster*, lately convicted of the murder of Dr. Parkman, was under the consideration of the Supreme Court of Boston.

The convention between Great Britain and the United States for the settlement of their common interests in Central America, and for the perpetual neutrality of the inter-oceanic line of communication by ship canal or otherwise through the state of Nicaragua, has now received the approval of the Senate of the United States, and the ratifications will in all probability forthwith be exchanged. The most important article of this treaty is the first, which runs as follows:—"The governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal; agreeing that neither will ever erect or maintain any fortifications commanding the same or in the vicinity thereof, or occupy or colonise, or assume or exercise, any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor will either make use of any protection which either affords, or may afford, or any alliance which either has, or may have, to or with any State or people, for the purpose of maintaining or erecting any such fortifications, or of occupying, fortifying, or colonising Nicaragua, Costa Rica, the Mosquito Coast or any part of Central America, or of assuming or exercising dominion over the same." With respect to the construction of the canal itself, another article of the convention provides that the British and American governments will give their support and encouragement to such persons or company as may first offer to commence the canal with the necessary capital; and a year from the date of the ratifications is to be allowed to give such company a right of priority, and to enable it to complete its arrangements and present evidence of sufficient capital.

The latest accounts from California state that during the year preceding the 27th of March last upwards of 1000 vessels of all countries had arrived there, having on board 46,285 passengers. Several rich deposits of gold had been discovered. At one place two men dug out twenty-eight ounces in a single morning, besides a lump weighing more than a pound, of pure gold. Among these adventures the tone of society is sufficiently ferocious, and fatal encounters are not unusual in their "hells" or gaming-houses. Two men, named White and Helm, having got into a dispute in a game of cards, White drew a revolver and shot Helm through the neck, killing him instantly. He then turned on Helm's brother, who had taken a part in the dispute, and presented another pistol; but before he could fire, Helm seized his arm and stabbed him several times in the side, causing his instant death. No notice was taken of the affair.—A Chamber of Commerce, Exchange, and Reading-room have been established at San Francisco.

Accounts from Rio de Janeiro of the 5th of April state that the deaths from yellow fever in that city, since the 1st January, had been nearly 10,000, and that the malady still continued to rage there. At Bahia and Pernambuco the disease had abated.

NARRATIVE OF LITERATURE AND ART.

THE publications of the month have been numerous, and in some instances of more than usual pretension in respect of subject. The University Commission lingers still unappointed, but a new and gratifying proof of the sincerity of ministers in regard to it has been offered by the letter of the Prince-consort, in his character of Chancellor at Cambridge; wherein, replying to an appeal from the authorities of the University, he states that he had not been advised with by the Premier before the issue of the Commission was resolved upon, but that, finding Government irrevocably pledged to it, he would recommend the Heads of Houses not to meet it with opposition, but to co-operate in rendering it complete. For this sound advice the Prince has been severely taken to task by an eccentric Ex-Chancellor, who has somewhat fiercely warned his Royal Highness of his "false position" in being husband to the Queen yet aspiring to be anything else; has promised him a "great unpopularity" in consequence; has denounced "Germanism" of all kinds and forms; and has given

practical effect to this denunciation by selecting one of the most distinguished scholars of Germany for a public and gross insult, which he was permitted to administer unrebuked in the highest assembly of gentlemen known in England. This eccentric Ex-Chancellor, it need hardly be added, is also a Chancellor, being the head of a University specially called into existence twenty years ago, by himself, as a practical contrast and defiance to the older educational institutions which he had then both all his life denouncing as obsolete, but in which he now sees nothing to remove, nothing to inquire into, no exclusiveness, no sacerdotalism, nothing to impede the extension of knowledge, and nothing that does not tend to widen the circle of educated, thoughtful, large-minded men.

The class of literature to which the largest additions have been made during the past month, is that of biography. Mr. Edmund Phipps has published extracts from the diaries and literary remains of the author of *Tremaine*, with biographical and critical comment, under the title of *Memoirs of the Political and Literary Life of Robert Plumer Ward*; and the book has been made more interesting than the subject would have seemed to promise, by the fact of Mr. Ward's intimate connexion, both in private and public life, with the leading Tory statesmen of the administrations of Addington, Perceval, and Liverpool. The political and administrative characteristics of the Duke of Wellington have probably never had such vivid illustrations. Mr. Leigh Hunt has published his *Autobiography, with Reminiscences of Friends and Contemporaries*, some of it the republication of a former work, but the greater part original, or at least so changed by interpolations, recantations, or additions, as to produce the effect of novelty. The Reverend Mr. Field, an enthusiast for the separate and silent system, has published a new *Life of Howard*, dedicated to Prince Albert, of which the design appears to be to counteract the evil tendency of a recent memoir of the philanthropist, remarkable for what the reverend enthusiast calls "the advocacy of democratic principles, and the aspersion of a godly prince." Each in a goodly-sized volume, we have had a sort of general biographical notice of *Celebrated Etonians*, and of *Speakers of the House of Commons*, the first by an able man, quite competent to the subject. Miss Pardoe has edited the first volume of a series of *Memoirs of the Queens of Spain*, of which the author is a Spanish lady, resident in America. An ingenious northern antiquary has published memorials of one of the old border mansions, called Dilton Hall, which amounts in effect to an interesting *Memoir of the Earl of Derwentwater*, who suffered in the Jacobite rebellion. And, finally, Mr. Andrew Bisset has done good service to both history and biography by a very careful publication of the *Memoirs and Papers of Sir Andrew Mitchell*, Lord Chatham's ambassador at the court of Frederic the Great, and one of the very ablest of English diplomatists.

To the department of philosophy a somewhat remarkable contribution is to be noticed under the title of *The Progress of the Intellect as exemplified in the religious development of the Greeks and Hebrews*. The writer is Mr. Robert William Mackay, a name not likely to remain uncelebrated (whether for good or ill) after the publication of such a work. Its design is to explain by a rationalistic process all the religious faiths and beliefs which have exerted the greatest influence over man, and to refer them exclusively to moral and intellectual development. In this design the writer may, or may not, have succeeded; but it is certain, making all drawbacks on the score of what has probably been borrowed from German investigation, that the book has high pretensions to eloquence and research, and reminds us of a time when publication was less frequent than now, and a single book might embody the labour of a life. For its antidote in respect of opinion and purpose there has been published not inopportunistly, after a peaceful slumber of nearly two centuries in the library at Wotton, *A Rational Account of the True Religion*, by our good old gentlemanly John Evelyn. Here the design is, by all possible arguments and authorities, to confirm our faith in Christianity.

We must speak very summarily and briefly of the publications in general literature. Of books of travel and adventure the most attractive and interesting in point of subject is *Five Years of a Hunter's Life in the Far Interior of South Africa*, by Mr. Roualeyn Gordon Cumming, a kin-man of

the Chief of Argyll, in whom a love of deer-stalking seems to have gradually expanded, into dimensions too gigantic to be satisfied with anything less than the stalking of the lion, the elephant, the hippopotamus, the giraffe, or the rhinoceros. The book is filled with astonishing incidents and anecdotes, and keeps the reader very nearly as breathless with excitement as the elephant and lion-hunter himself must have been. Mr. Aubrey de Vere has published some very graceful *Picturesque Sketches of Greece and Turkey*; and the brave and high-minded old General Pepe has given the world a *Narrative of Scenes and Events in Italy from 1847 to 1849*. Mr. Johnston, the distinguished geographer of Edinburgh, has issued the most complete *General Gazetteer of the World* that has yet been comprised in a single volume; and as part of the republication of the treatises of the *Encyclopædia Metropolitana*, in separate and portable volumes, we have to mention an interesting volume on Greek Literature by Mr. Justice Talfourd, the Bishop of London, and other accomplished scholars. In poetical translation, we have had a new version of *Æschylus* by Professor Blackie, of Aberdeen; and in poetry, with the title of *In Memoriam*, a noble and affecting series of elegies to the memory of a friend from the pen of Mr. Alfred Tennyson.

The thirty-seventh annual Exhibition of the *British Institution* was opened to the public on the 8th. There are 171 pictures, lent by a variety of owners. Among them are works by Guercino, Velasquez, Rubens, Rembrandt, Titian, Guido, Vandyck, Tintoretto, Domenichino, Holbein, and some of the painters of the Dutch School. Of the English School there are specimens by Reynolds, Wilkie, Wilson, Gainsborough, Beechey, Liversidge, Stuart, Newton, Callcott, and others: the whole forming a very interesting collection.

Verdi's "Nabucodonosor," produced a few years since at *Her Majesty's Theatre* under the title of "Nino," was brought out at the rival house on the 4th, with another change of name, being now called "Anato." It proved a failure, as might have been expected.

"La Tempesta," an opera founded on Shakespeare's "Tempest," the libretto written by Scribe and translated into Italian, and the music composed by Hâlevy, was performed for the first time at *Her Majesty's Theatre* (for which house it was written and composed) on the 8th, with the most triumphant success. The character of Miranda is sustained by Madame Sontag, Prospero by Coletti, Ferdinand by Baucarde, Caliban by Lablache, and Ariel is danced by Carlotta Grisi.

"Le Prophète" of Meyerbeer was re-produced at the *Royal Italian Opera* on the 20th, and was performed in the same manner as last season, the only change of any moment being the substitution of Madame Castellan for Miss Hayes in the part of Bertha, and of Formes for Marini in Zacharias. The opera was received with undiminished enthusiasm.

A three-act play, called "Power and Principle," by Mr. Morris Barnett, was produced at the *Strand Theatre* on the 10th, and favourably received. It is an abridged and simplified version of the "Kabul und Liebe," of Schiller.

The eighth *Philharmonic Concert* took place on the 17th, closing a remarkably successful season.

Jenny Lind has just given six concerts at Stockholm in aid of the pension fund for the widows and orphans of the performers at the Theatre Royal of that city. The clear profit has amounted to upwards of £1000 sterling.

COMMERCIAL RECORD.

BANKRUPTS.

From the Gazette of May 28. THOMAS CROFT, Whitechapel-rd., stable keeper.—JOAN CROSSLEY, and JONATHAN CROSSLEY, Bangor, Carnarvonshire, wine merchants.—WILLIAM ESELY, Hornepath, Oxfordshire, butcher.—THOMAS HUGHES, Newport, Monmouthshire, ship-owner.—GEORGE THORNELOE, High-st., Poplar, grocer.

May 31. SAMUEL ADAMS, Birmingham, gun manufacturer.—WALLIS JAMES GARRETT, Bath, grocer.—AUGUSTUS KRAEPEL MOLMAN, Wortley, Yorkshire, cloth manufacturer.—JOHN JACKSON, Mark-lane City, eatinghouse keeper.—JOHN PARKS, Cross-st., Islington, furrier.—FRIEND WESTOVER, Lewisham, Kent, cheesemonger.

June 4. WILLIAM CHANCEY, Bath, innkeeper.—THOMAS JEYS EDWARDS, King-st., Bloomsbury, dressing-case maker.—CHARLES FRANCIS, Liverpool, grocer.—TOMAS GOODE, Hereford, chemist.—WILLIAM HIGGS, Wolverhampton, iron dealer.—SAMUEL HOGG, and HENRY JAMES LOGG, Landport, Hampshire, auctioneers.—GEORGE HORNSBY, and ROBERT PORTER MOULD, Newcastle-upon-Tyne, builders.—WILLIAM FOSTER NEWTON, Dover-st., Piccadilly, milliner.—THOMAS KING PIRKE, High-st., Notting-hill, bookseller.—JOSEPH JOHN MONK MASON SCOTT, Liverpool, wine and spirit merchant.—HENRY THURSTAN, Cheltenham, innkeeper.—CHARLES WILLIAM WILLIAMSON, Birmingham, baker.—GEORGE WOODWARD, Doncaster, Yorkshire, gun-maker.

June 7. JOSEPH AWFORD, Stroud, Gloucestershire, mealman.—PATRICK ADAIR BLACK, and JOHN WHITTINGHAM, Liverpool, provision and general brokers.—HENRY BOLTON, Luton, Beds, straw hat manufacturer.—WILLIAM THOMAS HEARN, Portsmouth, licensed victualler.—GEORGE HENRY HOBSON, Cornhill, ironmonger.—HENRY AUGUSTUS HOPK, Trinity-sq., Surrey.—WILLIAM GEORGE MOSS, High-st., Peckham, licensed victualler.—ROBERT THOMPSON, Notting-hill, builder.

June 11. THOMAS BAYENDALE, Bolton-le-Moors, Lancashire, grocer.—ROBERT CAMPING, Norwich, haberdasher.—GEORGE HAINES, Northampton, grocer.—JONAS HANNO, Macclesfield, silk dyer.—MAURICE JARVAS, Leeds, wool merchant.—GEORGE KILNER, Kirkheaton, Yorkshire, coal merchant.—THOMAS SMITH, Liverpool, cheesemonger.—JOHN WARRING, Liverpool, draper.

June 14. WILLIAM JACKSON, Liverpool, wine merchant.—JAMES KAYE, Bridge-row-Wharf, Pimlico, coal and slate merchant.—JOHN M'GIBSON, and ARTHUR ALD GARDREATH, Hull, traders.—THOMAS SMITH, Liverpool, cheesemonger.—FREDERICK STOKESSIDE, Birmingham, Jeweller.—WILLIAM WALKER, George-yd., Soho, carriage spring maker.

June 18. BENJAMIN BROWN, Newtown, Montgomeryshire, coach builder.—WILLIAM JAMES BUCK, Shrubland Cottages, Queen's-rd., Dalston, dealer.—JOHN CALLIS, Noble-st., Wood-st., City, victualler.—JAMES DOMING, Sea, Somersetshire, currier.—WALTER GEE, Murray-st., Hoxton, straw hat manufacturer.—OWEN GRAY, Great Tower-st., City, builder.—NATHANIEL HEDDER, Bath, silversmith.—CHARLES O'NEIL, Golden-sq., picture dealer.—ASHBE PRION, and WILLIAM PRION, Tonbridge-pl., New-rd., ironmongers.—HENRY WOOLLEY, Newton-heath, Lancashire, oil and grease manufacturers.

June 21. BENJAMIN BRUNTON BLACKWELL, Verulam-buildings, Gray's-inn, coffee-house keeper.—RICHARD COPLAND, Union-street, Whitechapel, heneader.—SAMUEL GGLATT, Chapel-street, Grosvenor-square, builder.—WILLIAM HENRY GRIFFITHS, Newtown, Montgomeryshire, ironmonger.—WALTER JAMES BRADFORD, Breconshire, provision dealer.—WILLIAM MUNDUCH, Bristol, draper.—JOHN MURRAY, Sunderland, ship chandler.—THE GENERAL COMMISSION, SHIP, LOAN, and INSURANCE COMPANY.—HENRY, WILLIAM, and JAMES WELCH, Great Distaff-lane, City and Mile-end, builders.

June 25. JAMES NEWLAND BAKER, Alton, Herts, auctioneer.—JOHN BARKER, Manchester and Salford, victualler.—JOHN HARNARD, Stamford-rivers, Essex, baker.—HUGH HUGHES, Portmadoc, Carnarvonshire, shipowner.—JOHN HUNT, Middleton, Lancashire, silk manufacturer.—T. CHEADWOOD JONES, Blackfriars-road, heneader.—ELIZABETH APPEYTON PEAKONS, Princes-street, Cavendish-square, saddler.—CLEMENT PRETTY, Leicester, grocer.—JOHN RICHARDSON, Edgeware-road, ironmonger.—SAMUEL TAYLOR, Staines, Middlesex, grocer.—WILLIAM TTYHEN, Birmingham, tallow-chandler.—JOHN WHITE, Dudley, Warwickshire, innkeeper.

BANKRUPTcies ANNULLED.

May 25. DANIEL BISHOP, York-street, St. James's-square, wine merchant.

June 5. JOHN MOODY, Aldersgate-street, City, stock manufacturer.

June 8. WILLIAM HARRIS, and HENRY HARRIS, Wrexham, Denbighshire, paper manufacturers.

June 19. THOMAS CROFT, Whitechapel-road, stable keeper.

THE STOCK AND SHARE MARKETS.

City, June 27.

The English Stock Market has been very buoyant in tone during the month, and prices have experienced a considerable rise, notwithstanding the anxiety caused, till within the last few

days, by the unsettled state of our relations with France. Consols were quoted on the 29th of May at 96½, and went gradually up to 97½, at which they shut for the dividend. They are at present quoted 96 to 96½ with the dividend off.

Railway Shares, notwithstanding some degree of depression which has occasionally been shown in the market, have continued firm during the month, and, for the principal stocks, an advance has been established over last month's prices. Much animation prevailed during the first part of the month, but the market is now quiet and inactive.

STOCKS.

	Prices during the Month.		
	Highest.	Lowest.	Latest.
Three per Cent Consols	97½	96	Shut.

CORN MARKET.

Mark Lane, June 27.

A steady business has been done in English and foreign wheat and other grain during the month, and prices have been firmly supported, but without any important variation from last month's rates. The London averages last announced are as follows:—

Wheat, per quarter, 43s. 4d.	Flour, Town made, delivered, per sack, 32s. to 38s.
Barley, 24s. 4d.	" American, per barrel, of 196 lbs., 20s. to 27s.
Oats, 18s. 2d.	

PROVISIONS—LATEST WHOLESALE PRICES.

Bacon, per cwt.—Waterford, 44s. to 60s.; Belfast 40s. to 42s.	dried, 34s.; Limerick, 61s. to 70s.; Belfast, 58s. to 64.
Beef, per 8 lbs., mid. to prime, 2s. to 2s. 10d.	Lamb, per 8 lbs., 3s. 8d. to 4s. 6d.
Butter, per cwt., Carlow, 1st, 68s. to 68s.; Waterford, 1st, 63s. to 68s.; Leer, 56s.	Mutton, per 8 lbs., mid. to prime, 3s. to 3s. 6d.
Cheese, per cwt.—American, 34s. to 43s.; Dutch (Gouda), 34s. to 41s.	Potatoes, per ton.—Yorkshire P. Regents, 60s. to 100s.;
Eggs, per 100, 4s. to 8s.	Scotch cups, 60s. to 70s.;
Hams, per cwt.—American, 44s. to 48s.	Belgian Whites, 55s. to 61s.
	Pork, per 8 lbs., 2s. 4d. to 3s. 8d.;
	American, new, per barrel, 40s.
	Veal, per 8 lbs., 2s. 8d. to 3s. 8d.

GROCERY—LATEST WHOLESALE PRICES.

Cocoa, per cwt.—Trinidad, 35s. to 48s.	Sugar, per cwt., Loaves, 48s. 6d. to 50s.;
Coffee.—Good ord., Native Ceylon, per cwt., 42s. to 43s.;	good Jamaica, 35s. 6d. to 38s. 6s.;
good ord. West India, 37s. to 40s.	Brazil, 32s. to 42s.
Sago, per cwt., Pearl, 19s. to 26s.	Ten, per lb. (duty 2s. 1d.), ord. Congou, 10d. to 10½d.;
Rice, per cwt., Bengal white, 9s. to 11s. 6d.;	Souchong, com. to fine, 10d. to 2s. 8d.;
Java, 11s. to 12s.	ord. to fine Hyson, 1s. 1d. to 3s. 6d.;
	Imperial, 1s. 1d. to 2s. 5d.

Candles, per 42 lbs., 4s. 6d. to 5s. | Coals, per ton, 11s. to 15s. 9d.

OILS.

Pale Seal, per ton, 31l. to 31l. 10s.	Cod, 36l.
Sperm, 84l. to 90l.	Palm, 90l. to 81l.

THE
HOUSEHOLD NARRATIVE
OF CURRENT EVENTS.

1850.]

FROM THE 29TH JUNE TO THE 27TH JULY.

[PRICE 2d.]

THE THREE KINGDOMS.

SIR ROBERT PEEL was frequently reproved by his party-friends, while he lived, for his eager wish to merit posthumous fame. It was said to be little better than the aspiration of a heathen; and on one occasion of his avowal of it, in connection with his support of mechanics' institutes and reading-rooms for working men at Tamworth, he was denounced as the confessed disciple of a school of philosophy not accepting Christian principles as the guide of life. Posthumous fame proves, nevertheless, no unimpressive or un-Christian example to the generation which profited by Sir Robert Peel's statesmanship, and now deplures his death; nor has any incident in the general sorrow been more note-worthy than the eager offerings from working men, exhibiting them mindful of the services and sacrifices of a statesman who had a steady regard for their mental as well as material welfare, who always upheld the duty of providing them with the means of recreation and manly amusements, and who would have carried instruction and knowledge, as he had already brought unwonted plenty, to the humblest homes. Perhaps our age has never given so good a proof of the capacity of good that is in it, as by this unexampled and all-pervading feeling of regret for Sir Robert Peel. Every class, from the throne to the cottage, has expressed it; it has not only found a voice in our own but in foreign legislatures; the most bitter enmities have been laid aside in its presence; and, throughout all the leading cities of England, there has been but the generous contention of doing most honour to the dead. In no respect more fitly could have closed a career unusually marked by vicissitudes of opinion and esteem, but very generously felt at length to have been animated by nothing so much as by the common welfare and regard to justice. Nor have we, in this case, to apply the sarcastic remark of Bacon, that "Good things never appear in their full beauty till they have turned their backs and are passing away;" for Sir Robert Peel had lived down his detractors, and become conscious of his reward. His last legislative triumph had cleared up questionable motives in his previous course; and few candid or intelligent men any longer doubted that his public changes had been a series of progressive developments, prompted by duty, guarded as well as justified by experience, and forming a character, on the whole, nobly consistent in its apparent inconsistencies. If we would really estimate what we owe, in the way of moral as well as political example, to the man who began life in the service of the aristocracy and ended it in that of the people, we have but to contemplate the opposite picture of a people's advocate closing his career as the champion of aristocratic privilege. Sir Robert Peel's last injunction was that his children should not receive titles or pensions for any supposed services their father might have rendered. Lord Brougham's latest speech was a cry of alarm for the safety of society, should titles, salaries, or pensions be in the least abated, in number or amount.

The least worthy of these two examples would nevertheless appear to have been followed in the ministerial proposition to give twelve thousand a year to the son of the deceased Duke of Cambridge, irrespective of any income from his father's savings, or from his own present enjoyment of a colonelcy and prospective hopes of a field-marshalcy. Homely people are disposed to put this matter in a mathematical form, and to ask, If the grandsons of a king are now entitled to as much as the sons of a king until now received, what in fairness should the children of a queen have in future, when their turn for a vote shall come? But an immense majority of the House of Commons were more eager to give the sum demanded than to discuss its expediency or justice. They have also persisted in the extravagance of the African blockade; and, in the teeth of proof that slave exports have more than doubled in amount, and that even the horrors of the middle passage have been aggravated, during our thirty years' costly experiment against both, have flung away an additional ten thousand pounds upon the purchase of five miserable Danish forts, for trial of whether a blockade by land will help our powerless blockade by sea, and whether the command of a hundred and fifty more miles of pestiferous swamp and jungle will enable us to do what with a sweep of seventeen hundred miles on the same murderous coast we have hitherto failed to accomplish. Nor has the House of Commons had much hesitation in renewing the very great present charges for the very distant future advantages of Labuan; though the senators who have hitherto upheld Sir James Brooke as a model of exalted superiority to all sordid considerations, must have been somewhat startled by revelations in the debate as to his eager desire for the "baronetcy" which was supposed to have been forced upon him, his anxiety for the support of the "press" to which his friends had described him loftily indifferent, his contempt for the "long-eared philanthropy" which so extravagantly petted him at starting, his denial to the mercantile community of those "generous and disinterested motives" which on trust they had so freely conceded to himself, and his scorn of the Oxford "bigots and bookworms" who glorified him into a D.C.L. when he was last in England. It would trench too gravely on our space to specify such other questionable outlays as Committees of Supply have voted during the past month; but it remarkably proves with how much more facility, in matters of this kind, an absurd custom may be supported, than a rational change can be effected, that the vote of seventeen hundred a year which began to be voted for the support of three hundred dissenting ministers a century and a quarter ago, is still carried against the scornful protest of every leading dissenter in the country as well as the House of Commons, who repudiate such a grant as an insult. It is the same precisely with the Regium Donum in Ireland. Nor do the majorities which deal thus freely with the public money appear to be more careful of the manner in which it is got than of that in which it goes; for, of the thirty-five classes of persons subject to the licensing duty, they selected the other day the attorneys as alone or pre-eminently deserving of some-

date relief from taxation, and it was only after a hard struggle, and two defeats, that the Chancellor of the Exchequer reversed that decision.

These things are not without their use, however, in clearing the way for a correction of the present reform bill, which, judging by the tone taken on a motion to equalise the franchise in counties and boroughs by giving the right of voting in the former to occupiers of tenements of the annual value of ten pounds, cannot be far distant. The chief ministerial objection taken to a proposition so reasonable as that of thus giving the franchise to men of property and intelligence in country places who happen to be independent of the landlords, was its having been made too late in the session for a practical result; but the House of Lords had found it meanwhile not too late to send the Irish Franchise bill back to the Commons so mutilated in its best provisions that the measure will have in all probability to be rejected, unless the compromise of a rating less than fifteen pounds can be come to, and the righteous as well as needful clause restored by which a man might be placed on the register when really entitled to the franchise, without the necessity of any further effort. In conclusive proof of the fairness of the eight pound rate, so scornfully rejected by the Upper House, it has been shown that of the three hundred and twenty-one cases of process served for rent in the transaction which led to Mr. Mauleverer's murder, there were only three tenants whom the proposed rate would have enfranchised; yet the men who now reject that rate do so with affected protestations of a desire to see both countries equal! But, unconsciously, one of the same party in the Lower House, not many days after, gave a whimsical proof that the sort of equality desired is one that should not make Ireland better, but England worse. He complained that if comparison were made of the proportion of bishops and clergy in the Church of Ireland (even deducting Lord Stanley's ten abolished bishops) with the like proportion in the Church of England, the remarkable fact would become apparent that in order to place the two countries on an equal footing the number of bishops in the English Church must be raised to a hundred and seven! This was in the debate on the Ecclesiastical Commission bill; and the speaker appeared to be quite ignorant that while thus exhibiting the episcopal enjoyments of a Roman Catholic country, he was also displaying the monstrous injustice of overlaying it with a Protestant establishment. The discussions on this bill, and the propositions of Mr. Gladstone and Mr. Sidney Herbert, respectively, to create a supplementary bench of suffragan bishops and to re-organise and re-vivify cathedral establishments, have been chiefly curious for their proof of the weakness of the church party (if it may be called so) in parliament which talks so big out of doors. But that even the out-of-door talking portends very little, was made manifest in a recent gathering of some fifteen hundred agitators against the Gorham decision, when, out of all the blustering protests and denunciations indulged, the only positive object declared essential was the re-animation of Church Synods long defunct, and certain to be never again inflicted on the English people! One declaration was indeed made, to the effect that the clergy must be prepared, if need were, to give up their emoluments, and the laity must be prepared, if need were, for increased self-denial to make up the deficiency; but this proposition for an English Free Church fell from a layman, and none of the clerical agitators seconded it in the least. Its establishment, therefore, will doubtless be postponed *ad Græcos Kalendas*; or, as the Bishop of Exeter has quite as clearly expressed it in his final appeal against the institution of Mr. Gorham, "to the sacred Synod of this nation when it shall be in the name of Christ assembled as the true Church of England by representation." This, we do not doubt, will be the exact date of the bishop's surrender of his benefice, and of the institution of the Free Kirk of England.

Meanwhile the collegiate chapter of Manchester have been compelled more promptly to surrender their gross and glaring mal-appropriation of ecclesiastical wealth, by an excellent act of parliament formerly described in this Narrative, and of which the success may encourage other reformers throughout the kingdom, more bent than Mr. Sidney Herbert and Mr. Gladstone on the real reform of church abuses, to expose and correct the enormous abuses existing in cathedral corporations. The Manchester Rectory Division bill has been more successful than other measures which had as hard a struggle in both houses. The County Courts bill, for example, after escaping the shoals and quicksands of a committee in the House of Lords, and weathering the more open danger of some half-dozen amendments, and coming out in a not much more mutilated state than Sir John Jervis had already reduced it to in the Commons, received a sudden side-blow at the third reading from Lord Brougham, which, seconded heartily by the new Lord Chancellor, fairly knocked out all the little breath that remained in its body, and left it so many empty words. Lord Brougham carried an amendment giving a concurrent jurisdiction to the superior courts in actions for sums above twenty pounds. This practically makes the attorney arbiter in the action; and how many attorneys will be satisfied with two pounds costs in a lower court, when to go into an upper court will secure fifteen! The bill is substantially defeated; and might as well have been at once consigned to that limbo of dropped or defeated measures which during the last month has received the Jewish Relief bill, the Irish Vice-Royalty Abolition bill, the Railway Audit and Woods and Forests bills, the Merchant Seamen's Fund bill, the Irish Landlord and Tenant bill, and (more to be deplored than any of the rest) the Security for Advances bill.

The delay of the latter measure, which would greatly have assisted the operation of the Irish Encumbered Estates act by facilitating the advance of money on landed securities, is of evil omen for Ireland; and rumours of the probable partial failure of the harvest and potato crops have added to the gloom prevailing there. Even in England we have a less favourable report in this respect than prevailed last month; though there appears to be a certainty of average crops, and still the possibility of abundant ones, while of the general good condition of the country and its prospects there exists ample and most favourable testimony. Whether tested by the quarterly returns of the Revenue, by the monthly reports of the Board of Trade, by the stock of bullion in the Bank, by the apparent overflow of capital in all directions, or by the more humble but not less satisfactory details of the second annual Poor Law report which has been lately issued, we have the same happy and uniform results. Greater abundance of food and employment has decreased the number of able-bodied adults receiving in-door and out-door relief by nearly thirty-two thousand beneath the returns of last year. The increase in the whole income of the year over that of its predecessor is not far short of a million and a quarter. And comparing the exports of the month of May with those of the same month in even the railway years of exaggerated and unreal prosperity, we have the prodigious increase of something more than a third. Perceiving such results from free trade, it may well be matter of congratulation that the result of the debate on Lord Palmerston's foreign policy should have secured the continuance of a free trade government by a sufficiently decisive majority; and Mr. Ferrand's continued denunciations of the "blood-stained serpents" of

Lancashire, by which he means Mr. Cobden and Mr. Bright, will probably be received by those gentlemen with nothing graver than a good-natured smile. The hair-brained agitator having enlisted Lord Downshire in his "wool-gathering" league against the cotton "fiends," this worthy pair have perambulated the country districts with the most surprising statements,—such as that the cotton trade necessitates the murder of three hundred negroes in America every year; that tens of thousands of people in Manchester subsist on a penny a-head per day; that the manufacturing population is obliged to pawn its night-clothes to redeem its day-clothes, and to pawn its day-clothes to redeem its night-clothes; and that the misty clouds of free-trade theories are shrinking away and disappearing before the advancing blaze of protectionist day! It will nevertheless require statements more surprising even than these to enforce belief that the power-looms of Manchester can be smashed by a few old women's spinning-wheels; and, meanwhile, not only have the House of Commons refused, by a majority of two to one, to repeal the malt-tax, but the town of Chester has declined, by nearly the same majority, to send a protectionist to the House of Commons; and the other busy and thriving places vacated by the late legal appointments have not even allowed an opposition to show itself to the re-election of their free-trade representatives.

A few words upon leading matters of social legislation will suffice to complete our summary of the past month's doings. The Commons have passed the bill legalising marriage with deceased wives' sisters, but it has been dropped in the Lords. The Lords have passed the Sunday Trading bill condemned in our last Narrative, and the Commons seem disposed to accept it. Mr. Ewart has failed in his annual effort to abolish capital punishment; but, in the man's conviction and transportation who struck the Queen, the administration of criminal law has exhibited the improved example of rejecting a plea of insanity on proof of the accused's power of discrimination between right and wrong in the special matter under investigation. At the same time it is impossible to dismiss this case without a passing remark on the ill-considered and mischievous passage in Mr. Baron Alderson's address to the prisoner, informing him that he would not be whipped because of his station in life, and the "respect" the court had for his family and for him, if he had none for himself. The Lords have passed the Factory bill without alteration; and not only have both Lords and Commons refused to sanction any change of the Hyde Park site for next year's grand exposition, but the Attorney-General has refused his sanction to a petition for trying its legality before the Chancellor. There is no change, as yet, in those postal arrangements by which an active minority of Sabbatarians have inflicted pains and penalties on the great mass of their less active fellow-citizens; but a committee has been named to report as to the means of reducing Sunday labour without altogether stopping the transmission of letters, and meanwhile the Sabbatarians are relaxing nothing of their energy in following up the advantages they have gained. This makes it matter of graver concern than it otherwise might have been if the Sunday Trading bill shall succeed in getting through the Commons. Such things are easier done than undone, and the screw once inserted is with difficulty withdrawn. The present measure may be less objectionable in form than many of its predecessors; but a thing bad in substance is not bettered by the show of being less bad than it really is, and even this pretence will be dropped when it has served its turn. The more penalties affixed to the offences of trading, operating unequally between the rich and poor offender, will have the effect of the most monstrous injustice; and the bill sanctions, quite as much as its worst precursor, the gross and intolerable hypocrisy of interfering with one kind of Sunday labour, and leaving another kind, far more extensive and involving more hardship to the poor, entirely unchecked and uncared for.

NARRATIVE OF PARLIAMENT AND POLITICS.

ON Thursday the 27th of June in the HOUSE OF LORDS the Marquis of LANSDOWNE brought up the Report of the Committee on the subject of providing *Accommodation for Foreign Ministers*; which was to the effect that the lower portions of the Peers' galleries should be set apart for that purpose. The Duke of WELLINGTON expressed his satisfaction with the Report, which was received.

On Monday the 1st of July, the house went into committee on the *Parliamentary Voters (Ireland) Bill*. The Earl of DYSART moved that 15*l*. should be substituted for 8*l*. as the minimum qualification for tenants, contending that an 8*l*. qualification would give an undue preponderance to the town populations. The Marquis of LANSDOWNE opposed the motion, enlarging upon the necessity of placing the representation of Ireland on a real and substantial basis.—Lord STANLEY affirmed that an 8*l*. qualification would throw into the scale the weight of numbers against property, and place one-fifth of the representation of the United Kingdom in the hands of demagogues and agitators.—Lord BROUGHAM maintained that the people of Ireland who would be admitted to the franchise by an 8*l*. qualification are not on the same footing with the similar class in England and Scotland in the qualities necessary for its due exercise. After some further discussion, the 15*l*. qualification was carried against the government by 72 to 50.

The Earl of HARROWBY, on Tuesday the 2nd, moved for the appointment of a select committee to inquire into the *Expenditure of the Public Money for purposes of Education*. Reviewing the controversy between the National Society and the Committee of Council on Education, he argued that by the present

system of supervision the education of the people was checked, and the privileges of the church invaded.—The Marquis of LANSDOWNE affirmed, from official knowledge, that the system of inspection worked well, and that its advantages were more and more generally acknowledged. He objected besides to the appointment of a select committee at so late a period of the session that it could have no practical result. After a discussion in which the motion was supported by the Bishops of Salisbury and Oxford, and by Lord Stanley, and opposed by Lord Kinnaird and the Earl of Carlisle, it was negatived by 31 to 26.

The *Death of Sir Robert Peel* occupied the house at its meeting on Thursday the 4th. An eloquent tribute to his memory was paid by the Marquis of LANSDOWNE, whose sentiments were warmly echoed by Lord Stanley, Lord Brougham, the Duke of Wellington, and the Duke of Cleveland.—The Duke of WELLINGTON (who was affected to tears) mentioned the love of truth as the strongest feature in the character of his friend "In the whole course of my communication with him," said the Duke, "I never knew an instance in which he did not show the greatest attachment to truth, and I never saw in the whole course of my life the smallest reason for doubting that he stated anything which he did not firmly believe to be the fact."—Lord CAMPBELL presented a petition against the *Selection of Hyde Park as the site of the intended Exhibition* from an architect who had built a number of houses in the neighbourhood and affirmed that they would be rendered unsaleable.—Lord BROUGHAM objected to the proposed site on the ground of the destruction of property, and the consequent inconvenience that would be caused, to the public. There are (he said) 70,000 or 80,000 persons in London who have no visible means of subsistence; add to these the thousands from every great town in the empire, with

some good specimen of socialists and men of the red-colour, whose object it will be to ferment the mass; and how will property be safe without 1000 or 2000 additional police? and how are they to be trained and disciplined in time? It is impossible to believe that the beautiful pillars, the elegant arcades, the magnificent dome, and the ornamental architecture, will be removed as a whole when once put up; but even if it were, to put it there for months, and to cut down groves of elms forty years old, is too monstrous an interference with the rights of the public. He referred to Justice Creswell's opinion (quoted by Lord Campbell) that the proceeding would be illegal; recommended Battersea fields as a proper place, and moved that the petition should be referred to a select committee.—Lord GRANVILLE opposed the motion; and made a statement of the reasons for choosing Hyde Park, founded on a letter of the Exhibition Commissioners to the Treasury. Eventually Lord Brougham withdrew his motion.

On Friday the 5th, the house went into Committee on the *Parliamentary Voters (Ireland) Bill*. Lord STANLEY moved an amendment to the effect that all persons entitled to claim the franchise should have an option either to be placed on the register or not. The Marquis of LANSDOWNE, in opposition, contended that the franchise was a trust, and that those who were entrusted with it should use it. After a discussion the amendment was carried by 53 to 39.

On Monday the 8th, on the question of the commitment of the *General Board of Health Bill*, the Earl of LONSDALE moved that the bill be referred to a select committee to inquire whether the provisions in the Public Health act, relative to confirming provisional orders, had been observed.—The Earl of CARLISLE opposed this amendment, which was negatived by 47 to 18, and the bill was committed.—In moving the second reading of the *County Courts Extension Bill* Lord BEAUMONT adverted to the success of the County Court system, and said that he would defer considering the objections to particular clauses in the new bill till it was in committee.—Lords BROUGHAM and CAMPBELL approved generally of the measure, with some qualifications. The bill was then read a second time.

When the house met on Tuesday the 9th, the Marquis of LONDONDEERY moved an adjournment as a mark of respect to the memory of the Duke of Cambridge.—The Marquis of LANSDOWNE opposed the motion, as interfering with the proposal he was about to make, that addresses of condolence should be presented to Her Majesty and the Duchess of Cambridge.—The Marquis of LONDONDEERY withdrew his motion, and the addresses of condolence were agreed to.

On the 15th, the house went into committee on the *Factories Bill*. The Earl of HARROWBY moved the insertion of a clause limiting the labour of children to the extent proposed in the case of women and young persons. It was opposed by Lord Granville and Lord Stanley, and negatived by 58 to 25.—The Duke of RICHMOND moved an amendment, to the effect of limiting the hours of labour, in the case of women and young persons, to ten hours a day. He denounced the compromise proposed to be effected by the bill, and declared his intention of undertaking the charge of the measure, should it be abandoned by the government, in consequence of the adoption of his amendment.—The Bishop of ELYON opposed the bill and supported the original ten hours act.—Lord FEVERSHAM also opposed the bill, and called upon Earl Grey to say whether he was prepared now, as on a former occasion, to support the Ten Hours bill.—Earl GREY explained the circumstances under which he had supported the original bill—circumstances which did not at all prevent him from giving his adhesion to the present measure.—Lord Stanley supported the amendment, and the Bishop of Manchester and the Marquis of Lansdowne opposed it. It was negatived by 62 to 32.

Lord BROUGHAM gave notice, on the 16th, of a motion for a return of the amount of Savings in the Civil List, since 1833. He complained of intended reductions in diplomatic and judicial salaries whereby, he said, the ruin of our home service would keep pace with that of our foreign affairs. He mentioned the case of a lady of the highest rank who had been reduced to the

necessity of advertising for necessary employment; he was of opinion that the aristocracy would be degraded.

Lord FORTEMAN moved the second reading of the *Landlord and Tenant Bill*, and Lord BEAUMONT moved, as an amendment, the second reading in six months. The amendment was carried without a division, and the bill consequently lost.

On the 19th, the Earl of CARLISLE moved the third reading of the *Inspection of Coal Mines Bill*.—Lord BROUGHAM objected to it as interfering with the employment of capital and labour.—The Earl of CARLISLE said the measure was justified by the specialities of the case, its object being to prevent the recurrence of the appalling accidents which had taken place. The bill was read a third time and passed.

The Earl of EGLINTON moved that the parties concerned in affixing fictitious signatures to petitions respecting the *Liverpool Waterworks Bill*, should attend at the bar of the house on Monday.

On the third reading of the *Factories Bill* the Earl of HARROWBY moved the insertion of a clause, restricting the labour of children within the same hours as those fixed for women and young persons. It was negatived by 40 to 24, and the bill passed.

On Monday the 22nd, Joseph Byrne, Joseph Hinde, and Duncan M'Arthur were placed at the bar of the house charged with *Breach of Privilege*, in having been engaged in getting up fictitious signatures to petitions respecting the *Liverpool Waterworks bill*. The evidence taken on this subject before the committee of the house having been read, the parties were examined and admitted the facts laid to their charge. The Lord CHANCELLOR moved that they were guilty of a high breach of privilege, and that they should be committed to the custody of the Usher of the Black Rod; which was ordered. It was then agreed on the motion of Earl GREY that a select committee be appointed to inquire whether the parties who got up the petitions were cognisant of the fraud.—On the following day, the 26th, the prisoners Byrne, Hinde, and M'Arthur, were brought to the bar, reprimanded by the Lord Chancellor, and discharged.

The *County Courts Extension Bill* having been read a third time, Lord BEAUMONT moved an amendment to the effect that certain clerks of county courts who had given up freehold offices and held their present offices by a similar tenure, should be irremovable under the bill. This amendment was opposed by Lord BROUGHAM, but the Lord Chancellor was favourable to it; and it was carried by 19 to 13.—Lord BROUGHAM proposed to strike out some words which would have the effect of giving a concurrent jurisdiction in the superior courts for sums between 20*l.* and 50*l.*; which, after some discussion, was agreed to. The bill then passed.

An address was unanimously voted to Her Majesty, on Tuesday the 23rd, in reply to the royal message relative to a provision for the Duke and Princess Mary of Cambridge.—A number of bills were then read a third time and passed.—The Marquis of LANSDOWNE, in reply to a question, intimated that it was not the intention of government to renew the *Alien Act*. The present state of the country did not render it necessary, though he was far from saying that it might not be necessary hereafter.

On Thursday, the 25th, the Earl of ST. GERMAN moved that the order of the day for the second reading of the *Marriages Bill* should be discharged. He said that the bill would be withdrawn for the present session, and that he hoped the members would calmly consider the subject before they met next year. After some discussion on what was understood to be the state of public opinion with respect to this measure, the order of the day was discharged.—A petition was presented from the persons committed to Newgate for *Breach of Privilege*, expressing contrition; and Lord BEAUMONT gave notice that he should move next day that the prisoners be brought to the bar, admonished, and discharged.

On Thursday, the 27th of June, in the House of Commons, the adjourned debate on Mr. Roebuck's resolution expressive of Confidence in the Foreign Policy of the Government, was resumed by Sir John WALSH, who regarded Lord Palmerston's speech, though a great

force of eloquence and mental power, insufficient to justify his course of foreign policy. The motion was also opposed by Sir Henry Verney. Sir Robert Inglis would have felt more difficulty as to his vote had the question been confined to our policy with regard to Greece; but he was compelled to withhold his support from a resolution which gave unqualified praise to the foreign policy of the government. The Marquis of GRANBY opposed the motion. The talents and patriotism, he said, of Lord Palmerston were admitted and admired; but the greater those talents the greater the danger of their misapplication. Admit his desire to promote the peace, dignity, and honour of England, still his mode of effecting his object had insulted every nation, alienated all our allies, and left us without a friend on the continent of Europe. Sir William Molesworth reminded the house that it was sitting as a court of solemn appeal to confirm or reverse the judgment of the Peers. If the vote of confidence were given, the ministers would be required to persevere in the present policy and the people would be pledged to support them. He held it to be a vague and dangerous principle that the protection and shield of England is to be extended to her wandering sons who are carried by commerce, pleasure, or necessity, over the world. The true rule rather was, that if a British subject think proper to wander where pleasure or profit may tempt him, he must take the consequences, and the more despotically, or the worse governed a country might be, the less entitled should the British subject be to expect that the Secretary for Foreign Affairs should be at hand to protect him. Sir W. Molesworth objected to interference with the internal affairs of foreign states; he objected to instructing ambassadors to become the chiefs of foreign political parties, to sending envoys as wandering lecturers on the principles of constitutional government. Such things caused us to be looked on as an officious meddling nation, and to be hated by all parties in all nations alike. Many condemned the foreign policy, but feared that if the motion were lost the ministry would resign. If they did resign, he did not believe that men qualified to take their places could not be found among the liberal party; but, supposing the disagreeable alternative of the gentlemen opposite coming into power, he did not believe that they who have so large a stake in the prosperity of the country—that the landed gentlemen under leaders of the abilities of Lord Stanley and Mr. D'Israeli, would pursue a policy leading to confusion, revolution, and destruction of property. Liberal opinions were not to be upheld by sacrificing convictions to avert a political inconvenience. If there was a dissolution of parliament, why not? Many of them desired triennial parliaments, and the three years had expired. But some of them would lose their seats: so much the better, the assumption being that they did not represent their constituents. Sir William concluded by avowing himself a cordial supporter of the domestic policy of the government; but he had protested ten years ago against their foreign policy. His views were unchanged, and, therefore, without hesitation though with regret, he should vote against the motion.—Mr. ADAM supported the motion, and affirmed that our foreign policy, from its beneficial effects, was agreeable to the commercial, manufacturing, and middle classes generally, and that if there was any one point on which the movement party would support the government, it was their foreign policy.—Mr. Sidney HENBERT, in opposing the motion, dwelt chiefly on the affairs of Italy; ascribing the violent and revolutionary scenes in that country to the mission of Lord Minto, and other propagandist proceedings of the English government.—Mr. GLADSTONE blamed the prime minister for sitting down under the censure of the House of Lords, and leaving to Mr. Roebuck the task of vindicating the policy of government. He described in great detail the various points of the Greek question, and objected to the course pursued by Lord Palmerston in that dispute, and in the transactions connected with the mediation of France. On the subject of our conduct towards other nations, he affirmed that Lord Palmerston's policy had been that of constant interference. No one could deny that on fit occasions British influence might be beneficially used to extend institutions from which we derive so much advantage;

but we were not to make occasions and become propagandists of political doctrines, even though they might be sound. Adverting to Lord Palmerston's allusion to the condition of a Roman citizen to the triumph with which he could say, "Civis Romanus sum," Mr. Gladstone asked, what was a Roman citizen? A Roman citizen was the member of a privileged order, of a victorious and conquering nation, of a nation that held all others bound down by the strong arm of power—which had one law for him and another for all the rest of the world, which asserted in his favour principles which it denied to all others. Was such the view of the noble lord as to the relation of the English towards all the rest of the world? Did he claim for us that we are to stand on a platform, as it were, high above all other nations? It was clear from the whole, not merely expression, but spirit, of the noble viscount's speech, that such is his impression; that he thinks we are to be the censor of the vice and follies of all the peoples of the world, the teacher of the nations, and that all who do not think proper to admit the assumption, must have diplomatic war declared against them. And certainly, if the business of a Foreign Secretary was merely to carry on diplomatic war, all must admit the perfection of the noble lord in the discharge of his functions. But it was not the duty of a Foreign Minister to be like a knight-errant, ever pricking forth, armed at all points, to challenge all comers, and lay as many adversaries as possible sprawling, or the noble lord would be a master of his art; but to maintain that sound code of international principles which is a monument of human wisdom, and a precious inheritance bequeathed by our fathers for the preservation of the future brotherhood of nations.—Mr. Henry DRUMMOND disapproved equally of the foreign policy of Lord Palmerston, and of his immediate predecessors, but he would not join in a run against him to serve the purpose of a fiction. He would not vote against the motion, to gratify Lord Stanley and Sir James Graham.—The debate was then adjourned.

On Friday the 28th the debate was resumed.—Mr. COCKBURN said that the question consisted of two parts, the interference of government in the affairs of Greece, and their policy with regard to other foreign states. They interfered with Greece to obtain redress of certain wrongs admitted to have been sustained by British subjects, and it was their bounden duty to do so. In the cases of Messrs. Finlay and Pacifico it had been found impossible to obtain redress from the Greek authorities, and under such circumstances the British government would have failed in its duty had it not insisted on justice being done.—Mr. COCKBURN then adverted to Lord Palmerston's policy in relation to Spain, Italy, Austria, and other states, following up the arguments previously urged by Lord Palmerston himself. He referred to the evident compromise between Sir K. Peel and the Protectionists, observing, that whatever honesty there was in it belonged rather to them than to him, and concluded by saying, "I believe the policy which Her Majesty's government have hitherto carried on to be essential to the prosperity of commerce and trade—essential to the best interests of the country, to the welfare of the people, and, above all, essential to secure a steady and abundant supply of the food which preserves the famishing; and that if I were to oppose the resolution of the honourable and learned member for Sheffield, I would be betraying the best interests of the people of this realm, and betraying the best interests of the nations of Europe—believing that I would be retarding the progress of civilisation, of humanity, and the best interests of mankind, I shall cheerfully and unhesitatingly vote in favour of the resolution."—Mr. Walpole opposed the resolution, and Mr. M. Milnes supported it.—Mr. CONDON denied the charge of a cabal against the government, and denied that he had more sympathy with Russia, or less sympathy with the Italians and Hungarians than the warmest supporters of the government.—Sir R. PEEL said that Mr. Cockburn, in speculating upon his motives, seemed to have forgotten that a vote might be given conscientiously, and without reference to political combinations. So far from his having made any compromise with the protectionists, he was every day

more convinced that the domestic policy of the government was the only true one. He also partly approved of their foreign policy, but as he did not approve of the whole of it he could not vote for Mr. Roebuck's resolution.—Lord John RUSSELL, after discussing in considerable detail the various topics of the question, made some general observations on the principles of foreign policy. He acknowledged that it was a just rule of policy not to interfere in the domestic affairs of other nations; but that rule had not been strictly observed even by Lord Aberdeen, and it must be relaxed in cases of exigency, for an unbending rule might be the cause of war. Though, besides the general interest of mankind, it was the particular interest of this country that freedom should be extended, yet our best influence was by affording at home an example of the good effects of liberty; but it ought to be understood in Europe that we took part in neither of the extreme parties into which it was divided—neither the wildness of democracy nor the iron rule of despotism; and he begged the house to beware, lest, in censuring a government which had held that middle course, it declared in favour of one of those parties.—Mr. DISRAELI said that it was absurd to lay down a rule, that, in countries like Greece, every person calling himself a British subject might look for redress to a British admiral. Admitting the claims of Finlay and Pacifico, though exaggerated in amount, they were not better founded than a multitude of other claims which had not been enforced by line-of-battle ships. On the general topic he contended that the policy of ministers had not been calculated to sustain the honour of England, and that, so far from preserving peace, there would have been no war in Europe but for their interference. On the division, the resolution was carried by 310 against 264; majority in favour of Government, 46.

The *Site of the Exhibition of 1851* was the subject of a conversation, on Monday the 1st instant, occasioned by questions from Col. Sibthorp and other members. The ATTORNEY-GENERAL explained the state of the legal question, stating that Hyde Park was the property of the crown, and at each accession was vested in the commissioners of woods and forests, as trustees for the public, who had a right to cut down all trees, whether mature or immature, with the sanction of the crown, but had no right to grant leases for permanent buildings. A full discussion of the subject was arranged for Thursday.

Mr. ANSTEE moved for an inquiry into the *Treatment of Mr. Smith O'Brien*, and the circumstances under which a letter from that gentleman to Mr. Anstee himself had been intercepted and opened in the colony by the local authorities.—Sir George GREY opposed the motion, and stated that the course adopted was invariably pursued towards convicts who refused tickets of leave, and that Mr. O'Brien was treated with as much lenity as circumstances would admit. The motion was negatived by 45 to 17.

The house then went into a *Committee of Supply*, and various sums were voted, chiefly for educational purposes. The vote for the British Museum caused a good deal of conversation, and severe comments were made on the management of that institution, especially in regard to the library.

When the house met on Wednesday the 3rd, Mr. HUMPHREY, after referring briefly, but with great feeling, to the *Death of Sir Robert Peel*, moved an immediate adjournment without proceeding to any business. The motion was seconded by Mr. GLADSTONE, as being the only member present who had been officially connected with Sir R. Peel. Every heart, he observed, was much too full to allow them to proceed so early to the consideration of the amount of the calamity with which the country had been visited in the premature death of his friend. "I will say, the premature death of Sir Robert Peel; for, although he has died full of years and full of honour, yet it is a death that in human eyes is premature, because we had fondly hoped that, in whatever position, by the weight of his ability, by the splendour of his talents and by the purity of his virtues, he might still have been spared to render us most essential services. I will only quote, as deeming them highly appropriate, those most touching and most feeling lines which were

applied by one of the greatest poets of this country to the memory of a man even greater than Sir Robert Peel.

"Now is the stately column broke,
The beacon-light is quenched in smoke;
The trumpet's silvery sound is still,
The warder silent on the hill."

In the absence of a member of the Cabinet—Sir Lord John Russell had gone out of town and the motion seems to have come on unexpectedly—Sir W. SOMERSET expressed his concurrence; and the house adjourned.

On Thursday the 4th when the house assembled for the evening sitting, Lord John RUSSELL renewed the subject. When he rose to address a very full house, the members uncovered with one accord, and a solemn silence prevailed. Lord John was deeply moved—speaking with a voice faltering and at first scarcely audible. In a strain of deep sympathy he touched upon the prominent features of the public character of Sir Robert Peel—his long and large experience in state affairs, his profound knowledge, his oratorical powers, and his copious yet exact memory; and he noticed the candour and kindness evinced by him towards a political opponent in his last act in that house. Slightly glancing at his political career, and the spirit which had guided his political conduct, Lord John remarked that by the course Sir Robert had taken after the passing of the reform bill, between 1832 and 1841, he had rendered a great public service. The example of such a man, who, with a love of literature and a taste for the arts, had devoted all his energies to labour for the sake of his country, would not, he hoped, be lost upon the people of that country. The harmony which had prevailed for the last two years, and the safety which this country had enjoyed during a period when other nations were visited by calamities, had been greatly owing to the course which Sir R. Peel had thought it his duty to pursue. He concluded by saying that, if it should appear to the friends of the departed statesman desirable to take the course adopted on the death of Mr. Pitt, he should give his willing support to a motion for a public funeral; or if it should be thought that the course taken in the case of Mr. Grattan should be followed, he was ready to concur in it.—Mr. GOULBURN, on the part of Sir R. Peel's family, declined, with deep gratitude, the proposition of a public funeral. He read a testamentary memorandum, written on the 8th of May, 1844, in which Sir Robert said—"I desire that I may be interred in the vault of the parish church of Drayton Bassett, in which my father and mother were interred, and that my funeral may be without ostentation or parade of any kind." And, not more than six weeks ago, he had pointed out to Lady Peel, on an inspection of the church, the spot in which he wished his body to be laid. Mr. Goulburn then suggested that the subject should drop, but Mr. HERBERT finished the conversation by expressing his belief that no remembrances of diversity in public opinion should mingle in the profound respect and sorrow which pervaded the house at the loss of one of its greatest ornaments.

Lord John RUSSELL then made an announcement respecting the *Public Business* for the remainder of the session. The lord-lieutenancy abolition (Ireland) bill, the securities for advances (Ireland) bill, the merchant seamen's fund bill, the woods and forests bill, and the railway audit (No. 2) bill, it was intended to abandon for the present session; and he did not intend to go beyond the second reading of the landlord and tenant (Ireland) bill. Amongst the bills which it was proposed to persevere with were the stamp duties bill, the agricultural commission bill, the mercantile marine (No. 2) bill, the oath of abjuration (Jews) bill, and the charitable trusts bill; to which the Chancellor of the Exchequer added the savings' banks bill.

The *Site for the Exhibition of next Year* was then brought under discussion by Colonel SMITHSON, who moved that the report of the commissioners be referred to a select committee, and that, before any further proceeding of the commissioners, the members of the house be given. He characterised the report as most unsatisfactory, and inveighed against the conduct of the commissioners. He pronounced the exhibition to be

be desecrated, the greatest trash, the greatest fraud, the greatest imposition ever attempted to be palmed upon the people of this country—intended to bring down prices, and pave the way for the cheap and nasty trumpery system. When all the bad characters were attracted to the park, he advised people living there to keep a sharp look-out after their silver forks and spoons and servant-maids. The building would cost 200,000*l.*, and be prejudicial to the best interests of the country.—Sir Benjamin HALL moved, as an amendment, an address to the Queen, praying her to stay the erection of a building in Hyde Park. A desultory conversation followed; in the course of which Mr. R. STEPHENSON, a member of the royal commission, stated that he was at first in favour of Battersea fields as a site, but a personal examination had entirely altered his opinion; and Mr. LABOUCHERE said that the commissioners had fully stated the reasons which had induced them to deprecate any change in the existing arrangements, and that he considered the credit of the country with the nations of the world as being deeply involved in that decision. Ultimately Sir B. Hall's amendment was negatived by 166 to 47; and Colonel Sibthorp's motion was negatived by 166 to 46.

The house then, in committee of supply, discussed the proposed vote of 125,000*l.* for *Public Education*. The compulsory adoption of the management clauses of the committee of Privy Council was condemned by Mr. Miles, Lord J. Manners, Mr. Wood, Mr. Roundell Palmer, and defended by Sir G. Grey and Lord John Russell, who intimated that there should be no opposition to an inquiry into the whole matter next year in either house. The vote was agreed to.

On Friday the 5th, Mr. CAVLEY moved for leave to bring in a bill for the *Repeal of the Malt Tax*. He enlarged on the distress of the agriculturists and their claims to relief, and contended that the measure could be effected with safety to the national credit, especially as it was not proposed to bring it into operation till the 5th of April next. The CHANCELLOR OF THE EXCHEQUER called upon the house to consider the consequences of sacrificing a great amount of revenue for which they would be unable to find a substitute.—Mr. DISRAELI said that, as agriculture was now the only unprotected interest, it ought to be relieved of those burdens which pressed upon it exclusively, and that the repeal of the malt-tax would be a relief not only to that interest, but to the labouring classes generally.—Lord John RUSSELL observed that Mr. Disraeli's opinion was at variance with Lord Stanley, the head of the protectionist party, who had declared that he could not support the repeal of the malt-tax with a due regard to the finances of the country. On a division, the motion was negatived by 247 to 123.

On Monday the 8th, on the question of the *Mercantile Marine Bill* going into committee, Mr. MORFATT opposed the principle of the measure. He reviewed the general difficulties of British shipping, reminded ministers that when they repealed the navigation law they promised the removal of those difficulties, and endeavoured to show that those promises had not been fulfilled; nothing having been done to relieve shipping of the burdens of lighthouse and pilotage dues, nor to cure the evils of the present system of manning the navy.—Mr. LABOUCHERE contended that the bill had been approved of by all the seaport towns in the empire except London; he said that the bill had three objects, the securing an adequate amount of skill in the masters of merchant vessels, the withdrawal of their certificates in case of incapacity, and the prevention of the wholesale deceptions which now took place. He stated his intention, next session, of consolidating in a single act the whole law relating to the mercantile marine service, and expressed his hope that there might be no obstruction to the measure to the present measure. Mr. MORFATT having withdrawn his motion, Lord John RUSSELL moved that the bill be referred to a select committee, which was negatived by 120 to 34, and the bill was committed.

The bill then went into committee on the *Episcopal Bishops' Bill*, and Mr. HORSMAN moved for leave to bring in a bill to the effect that the

responsible officers, and that the fifty-two present *ex officio* members of the board should be removed. He supported his motion by a brief recapitulation of matter brought forward by him on former occasions, to show the inefficient and injurious working of the present establishment. He said, among other things, that if the committee which he demanded some time ago had been granted, he should have been able to show, from authentic evidence, that the Bishop of London now receives an income of 50,000*l.* a year. The motion was supported by Sir B. Hall, and opposed by Lord John Russell and Sir G. Grey, and negatived by 60 to 22.—Mr. E. DENISON then moved that three of the commissioners should be paid, but withdrew his amendment.—On clause 13, Lord John RUSSELL moved an amendment, striking out what had been inserted in the upper house, and substituting words to unite the episcopal fund and the common fund, and to make the joint fund available for all the purposes that each has served, with some additional purposes, such as the endowment of new bishoprics.—Mr. GLADSTONE complained of the cavalier manner in which the amendment of the House of Lords was thrown overboard, and charged Lord John Russell with a covert intention to abandon the pledge he had given to found three new bishoprics; for, if the two funds were blended, that pledge could not be fulfilled.—Mr. Sidney Herbert also opposed the fusion of the two funds.—Lord John Russell's amendment was supported by Mr. Henley, Sir T. Dyke Acland, and Mr. Page Wood, and carried by 163 to 11.

On the question of the *Home-made Spirits Bill* going into committee, the CHANCELLOR OF THE EXCHEQUER moved that the house go into committee that day six months; and on a division the bill was thrown out by a majority of one, the numbers being 121 to 120. Colonel SIBTHORP demanded to know if the ministers dared, after such a vote, to carry on the government of the country? and the house laughed heartily.

On Tuesday the 9th, addresses of condolence on the death of the late Duke of Cambridge were voted to Her Majesty and to the Duchess of Cambridge.—Mr. LOCKE KING then brought forward the subject of the *Amendment of the County Franchise*, by moving for leave to bring in a bill to make the franchise of counties in England and Wales the same as in boroughs, by giving the right of voting to all occupiers of tenements of the annual value of 10*l.* He supported his motion briefly, insisting chiefly on the fitness and safety of giving the franchise to the class in counties who already enjoy it in boroughs, and challenging the protectionists to show the sincerity of their belief, that the great body of the people cling to protection, by giving them the opportunity to vote accordingly.—Mr. HUMS in seconding the motion, reminded Lord John Russell of his admission that he is prepared to go beyond the Reform Bill of 1832, and asked him in what other direction besides this, could he make the advance with less danger.—Sir De Lacy EVANS, who had given notice of an amendment, withdrew it, that he might not peril the original motion. The motion was supported by Mr. G. Thompson, and also by Mr. DRUMMOND, who said that, as he had often advocated a similar measure, he should not now oppose it, little as he liked the quarter whence it came.—Lord John RUSSELL censured the practice of bringing forward such large and important questions in the month of July; merely admitting bills to be laid on the table, with no intention of going on with them, was unworthy of the House of Commons. He commented on the general schemes of the parliamentary reformers, and called upon them, the next time they came forward, to show that the changes they advocated are consistent with the maintenance of the monarchy, the House of Lords, and the House of Commons, which are fundamental parts of our constitution, enjoying the thorough attachment of the people of this country.—Mr. KING replied: the independent members were most curiously treated, for whenever they brought forward a motion they were sure to be told it was not the time for it. He was happy to find, however, that Lord John Russell had not adduced one argument to prevent his hereafter bringing forward a measure which would even go to the extent desired by Mr. Hume. It seemed as if the noble lord only said "No" that he might

be pressed a little warmly, and refused the overture that he might yield to a stronger embrace.

"Et fugit ad salutes et se capit ante videri."

There were two parties in the house, and the noble lord was puzzled between them. On the one hand were the reformers, and on the other the anti-reformers. The noble lord turned from one to the other, and, like Captain Macheath, sang:—

"How happy could I be with either
Were I other dear charmer away,—
But, while you both teaze me together,
To neither a word will I say."

Though, the debate was thus closed, Mr. GRATTAN addressed the house on the necessity of a reform of the franchise in Ireland; and Mr. DISRAELI made Mr. Grattan's speech the occasion for attacking at great length the views of the reformers. On a division the motion was negatived by 159 to 100.

Mr. LOCKE then moved an address to Her Majesty praying for an inquiry whether the amount of *Sunday Labour in the Post Offices* might not be reduced without completely putting an end to the collection and delivery of letters, &c., on Sundays; and praying that, pending such inquiry, Her Majesty would give orders that the collection and delivery on Sundays should be continued as heretofore. He observed that the government had not received due credit for the extent of reductions of Sunday labour which they had already effected in the post-office. Those great reductions, and others in contemplation, were in the act of being silently and satisfactorily made, when the house decided on a total suspension of all Sunday deliveries, in the vain hope that all labour would be dispensed with on that day. But there would be no real diminution in the amount of Sunday labour; and he adduced evidence that there would be merely a shifting of labour consequent on the distribution of letters and newspapers being transferred from the post-office to private hands. He showed the delay, the losses, and the embarrassments which the suspension of postal communication on Sunday would create; and asked why the suspension of labour should be limited to the post-office. The measure was a narrow, partial, and indefensible assertion of a far wider principle. Why did it not comprehend every public and every private department? Because the country would not for an instant stand the entirety of its mischief.—Mr. ROEBUCK seconded the motion, dividing the question into two distinct questions, religious and political. With the first the House of Commons had nothing to do. The Sabbath was unknown in the Christian religion; and none of the Jewish curses against a breach of the Sabbath could be directed against acts done on the Christian Sunday. The great fathers of the church, from Luther and Calvin downwards, tell us that Sunday is a "feast-day," having nothing to do with the Judaical dispensation, but set apart for human observance by human wisdom, for human purposes, on human grounds. Turning to the political question, he admitted the great benefits to man of a day of rest. The true principle was to afford relief to the greatest number; but, by interrupting the arrangements of the post-office, labour would be multiplied five-fold. The post-office, by its cheap, easy machinery, called for a small quantity of labour from the poor man; it contributed to his education and in many ways to his mental and moral amelioration; and much of its special influence was exercised on his Sunday of labour. On the ground of religion, he concluded, there was nothing to stand upon; on that of political expediency there never was a grosser blunder than the closing of the post-office on Sunday.—Lord ASHLEY insisted that the closing experiment had not been a fair trial; it had been but twenty in operation, and nothing had been alleged to justify a reversal of the decision of the house.—Sir R. BARTIS opposed the motion, which in his opinion involved the honour of the sovereign.—Lord J. RUSSELL reminded the house that the proposition of closing the post-offices on Sunday did not meet with the support of ministers, and that they had no option but to present to Her Majesty the address of the house, which was not like a simple resolution that might be reconsidered the next day. He concluded by wishing that the question had not come

on again so soon. ~~His~~ consideration; though on the general question, he could not get over the circumstance, that here was a public department which was charged with the business of carrying the letters, and armed with the powers of the state to prevent other persons carrying them—which took upon itself to be charged exclusively with this duty—which conveyed a letter on the Saturday evening from London, informing a daughter that her father was so dangerously ill that unless she got out immediately she might never see him again or receive his blessing; and that letter, arriving in a provincial town early on the Sunday morning, was there detained twenty-four hours in the post-office, the daughter perhaps knowing of the father's illness, and suffering all the agonies of protracted anxiety during those twenty-four hours. There was the case of the Duchess of Sutherland, whose father was dying at Castle Howard; it was generally thought a very barbarous thing that she was not permitted to enter the railway carriage to arrive in time to see her father before his death. The circumstance attracted great attention owing to the rank of the two parties concerned; but that circumstance, which shocked a great many people—preventing a daughter from seeing her dying parent—we might have repeated every Sunday. There were poor families, families that could pay a penny for a letter, but could not send a telegraphic message or a parcel by the railway; and this might be occurring in fifty, or a hundred, or three hundred instances, every time we detained the letters. He concluded by proposing the omission of the last clause of the resolution, which suggested a resumption of Sunday deliveries pending the inquiry. Mr. GLADSTONE proposed the further omission of the preamble of the resolution, referring to the great public inconvenience which had arisen. Lord JOHN RUSSELL concurred in this proposal; and the resolution, reduced by those omissions, to a simple prayer for inquiry, was put as an amendment. The house divided on the original motion, which was negatived by 233 to 92; and the amendment was then carried by 195 to 112.

On Wednesday the 10th, Mr. STUART WORTLEY moved the third reading of the *Marriages Bill*, and Mr. WALPOLE moved its third reading that day three months.—Some debate ensued, in which there was no novelty, and the third reading was carried by 144 to 134.—A motion, by Mr. OSWALD, that the bill should not extend to Scotland, was negatived by 137 to 130.

Mr. EWART brought forward his annual motion for the *Abolition of the Punishment of Death*, on Thursday the 11th. Without entering into the statistics of the question, he contended, on general grounds, that this punishment was inconsistent with the great object of all punishment—certainty—inasmuch as juries often acquitted the criminal solely through abhorrence of the penalty. He combated the objections urged against him last year by Sir G. GREY, and contended for the substitution of secondary punishments.—Sir G. GREY went over the old grounds of opposition to the motion, which, after being supported by Mr. BRIGHT and Mr. ADAIR, was negatived by 46 to 40.—Mr. F. O'CONNOR then brought forward his motion, that the house should adopt the principles embodied in the *People's Charter*, and was speaking in support of it when the house was counted out at half-past eight, there being only twenty-nine members present.

On Friday the 12th, Lord JOHN RUSSELL moved an address to Her Majesty for a monument in Westminster Abbey, to the *Memory of Sir Robert Peel*, with an inscription expressive of the public sense of so great and irreparable a loss; and, in doing so, pronounced a warm eulogy on the character and services of the departed statesman. The motion, being put by the speaker, was carried by acclamation.—Mr. HURDIS moved an address to Her Majesty, praying for a commission to enquire into the causes of the naval and military operations on the coast of Borneo, which had caused a lamentable loss of life among certain of the native tribes. The debate which ensued turned chiefly on the conduct of Sir James Brooke, which was severely censured by the mover, Colonel THOMPSON, and Mr. CYPDEN, and defended by Mr. PLOWDEN, Sir H. VERNEY, and Sir F. BARING. The motion was negatived by 169 to 29.

The second reading of the *Attorneys' Certificates Bill* was moved on the 16th, by Lord R. Grosvenor, who reminded the house of the circumstances under which the introduction of the bill had been carried against the government, and hoped that the house would adhere to its former resolution.—The CHANCELLOR OF THE EXCHEQUER, on moving the rejection of the bill, adverted to the shutting out of doors, and observed that if the house was prepared to repeal taxes to the amount of 100,000*l.*, there were many other taxes much fitter for remission. The general charges of the profession would not be lowered by the repeal of this duty, so that the public would derive no benefit from it.—Mr. Mullings and Mr. Muntz spoke in favour of the bill; and Mr. Bass and Mr. Goulburn against it.—Mr. Bright said that though he had formerly voted in favour of the bill, yet, as a general revision of taxation must take place next session, which would be the fittest time to consider all taxes of this character, he should at present vote with the government. The second reading was carried by 239 to 122; a majority of 17 against the government.

On the 16th, at the end of the morning sitting, Mr. F. Scott moved that the house should adjourn till the following day in token of respect to the memory of the late Duke of Cambridge. After some hesitation on the part of Mr. Labouchere, the motion was agreed to.

The *Copyhold Emancipation Bill* was considered in committee on the 17th. Before going into committee, a motion by Sir G. Strickland, that the bill be committed that day three months, was negatived by 49 to 40. In committee, several amendments were agreed to, and the chairman reported progress, in order to give Mr. Aglionby an opportunity of revising the measure; leave being given to sit again on Wednesday next.

On the motion for the second reading of the *Landlord and Tenant (Ireland) Bill*, Mr. S. CRAWFORD moved the second reading that day three months, and described it as "one of several bills sent down from the other house, the object of which might be described as being to facilitate extermination; and this at a time when the tenantry of Ireland were calling for a just measure of relief and protection, which would not be granted." The bill was also opposed by Mr. Bright, Mr. Anstey, and Mr. Hume.—Sir W. SOMERVILLE defended the bill against the charge of being a landlords' measure. The present system of fraudulent removal of crops called for a remedy, but he was willing to modify, in committee, any part of the bill which might be thought harsh to tenants. The debate was interrupted at six o'clock, by the SPEAKER adjourning the house.

The debate on Mr. Heywood's motion for an address, praying the issue of a Royal Commission of Inquiry into the State of the Universities, adjourned from the 23rd of April, was resumed on the 18th.—Mr. R. PALMER contended that there was no necessity for such a commission. There was no foundation for the assertion that the statutes of the colleges prohibit the introduction of new courses of study; and with regard to the birth preferences and local preferences in the election of fellows, &c., a just and liberal interpretation of the statutes would generally carry out the purpose of the founders. It ought not to be forgotten what the colleges themselves had already done in this respect. In the University of Oxford, within the last twenty or thirty years, no fewer than twelve out of the nineteen colleges had spontaneously adopted a sounder and more liberal interpretation of the wills of their founders and had opened the colleges to merit of every description; and the others, if a spirit of resistance were not created by ill-judged interference, would soon follow their example. The crown, without any commission or legislative interference, had a right as visitor of the colleges, to introduce improvements and correct abuses; but this power had fallen into abeyance through the neglect of the advisers of the crown.—Sir G. GREY defended the course which the government intended to pursue, and which had been announced by Lord John Russell. The government would advise the crown to issue a commission of inquiry, though they could not support Mr. Heywood's motion.—Mr. J. STUART moved "an amendment to the effect that any advice to issue a royal commission of inquiry into the management of any colleges not of royal foundation was illegal and uncon-

stitutional.—Mr. H. DRUMMOND disapproved of the commission: if the crown or the house assumed the power to inquire how corporations used their property, what was to protect the queen from an inquiry how the queen used her property? He admitted that the universities had been negligent of their duties, but this was not the way to remedy the evil.—Mr. GARDNER was certain that any investigation into the state of the universities would redound to their honour, but any commission to that effect would violate the principle of local freedom to which Englishmen owed their capacity for self-government. Supposing that the colleges had lagged behind the age, state interference should be delayed until the fact had been established, and then the only proper interference was an act of parliament.—Lord John RUSSELL argued for the legality and expediency of a royal commission, and concluded by saying that if the house refuse to permit the crown to make this inquiry, it will do much to keep back the universities in the course of improvement, which they themselves are willing to adopt. After some further debate Mr. Stuart withdrew his amendment.—Sir G. GREY then moved that the debate be adjourned for three months, which was carried by 160 to 138; the vote being in effect in favour of the commission.

On the order for committing the *Attorneys' Certificate Bill*, the CHANCELLOR OF THE EXCHEQUER moved that the committee be deferred for three months; but the motion was negatived by 105 to 103. The bill then went through the committee, several amendments being carried after considerable discussion.

On the 19th in answer to a question from Mr. Foster, whether the *Post Office Inquiry* had commenced, Lord John RUSSELL said that it had, and that it was conducted by Lord Clanricarde, Mr. Labouchere and Mr. Grey.—The house went into committee on the queen's message respecting a *Grant to the Family of the late Duke of Cambridge*.—Lord John RUSSELL, after a variety of explanations, proposed to allow the present Duke of Cambridge the sum of 12,000*l.* per annum, and that the Princess Mary of Cambridge should have 3000*l.* per annum.—Mr. HUME objected to the amount of the allowance to the Duke of Cambridge, and moved that it should be 8000*l.* Mr. Bright concurred with Mr. Hume. The original proposition was supported by Mr. Disraeli, the Marquis of Granby and Sir H. Inglis; and the amendment was negatived by 206 to 53.—Mr. HUME then moved that the grant should be 10,000*l.*, which was negatived by 177 to 55, and the resolution was agreed to. The house then went into a committee of supply and various sums were voted. The vote of 24,080*l.* for the *Civil Establishments on the Western Coasts of Africa* met with considerable opposition. It was objected to by Mr. CORDEN, as being an unnecessary extension of our colonial establishments and a further outlay on a fresh fruitless plan for exterminating the slave trade. Mr. Cobden was supported by Mr. Hume, Mr. M. Gibson, Mr. Hutt, and Mr. Jackson; the vote was supported by Lord Palmerston, Mr. Forster, Mr. Cardwell, and Sir E. Buxton. On a division it was carried by 138 to 42.

On Monday the 22nd, Lord John RUSSELL intimated that he did not intend to proceed this session with the *Oath of Abjuration (Jews) Bill*, the state of the business of the house not admitting of it, but that he meant to go on with it at the earliest possible period next session.

On the motion for going into a committee of supply, Mr. HUME moved for the production of all *Despatches from British Guyana*, since May last. He produced many allegations of grievance on the part of the colonists, which he traced to the constitution of the colony, where the casting vote given to the governor rendered him independent of local control.—Lord John RUSSELL declined to enter into statements founded on despatches not yet officially received, but denied the truth of the allegation that the governor by his casting vote constantly defeated motions for reform. The motion was then negatived.

In the committee of supply a number of votes belonging to the colonial, the consular and the civil services were disposed of. The vote of 6914*l.* on account of the settlement of *Labuan*, gave rise to a long discussion, in which the conduct of Sir James Brooke was impugned by Mr.

Hume and Mr. Cokien, and defended by Mr. Aglionby, Mr. Drummond, and others. Mr. COCKEN objected to the vote for the consular establishments in China, and moved an amendment, which was negatived by 166 to 24. Mr. C. LUSHINGTON objected to the vote of 1,666, to distressed dissenting ministers, which was repugnant to the dissenting body itself. Lord John RUSSELL said this was an extraordinary statement, seeing that the dissenters had been in the habit of receiving it ever since 1723. On a division the vote was agreed to by 147 to 72.

The House having resumed, the *Ecclesiastical Commission Bill* was read a third time and passed, after some discussion on certain additional clauses.

On the motion for the third reading of the *Attorneys' Certificates Bill*, the CHANCELLOR OF THE EXCHEQUER moved the third reading that day three months, which was carried by 113 to 84, and the bill consequently thrown out.

On Tuesday the 23rd, the *Medical Charities (Ireland) Bill* was considered in committee, and several amendments were agreed to.

Colonel DUNNE moved for leave to bring in a *Bill to amend the Irish Poor Law*, explaining, that the principal design of the measure was to limit the power of giving out-door relief. Mr. P. Scrope and Major Blackall opposed the motion, and Mr. French supported it. Sir G. GREY consented to the bill being brought in, guarding himself from being supposed, on the one hand, to be wholly against the principle of out-door relief, or, on the other, to recommend the resumption of public works on a large scale, such as were formerly commenced during the pressure of famine. Mr. STAFFORD, in supporting the motion, expressed his regret that there was little room to doubt the failure, to a considerable extent, of the present year's potato crop in Ireland. After some further observations, leave was given to bring in the bill.

Colonel SIBTHORP moved a resolution that the *Income Tax on Tenant-farmers* should be removed after the present year. The CHANCELLOR OF THE EXCHEQUER said that the cause of the farmers should not be separated from that of other industrial classes. The motion was supported by Mr. Buck, Mr. Newdegate, Mr. Wodchouse, and Mr. Disraeli. Mr. BRIGHT adhered to his general objections to the income tax, but saw no special grievance in the case of the farmer, and looked upon the motion as a mere topic for agitation. The motion was negatived by 50 to 32.

Mr. ADAIR, having moved, on the 21th, the second reading of the *Poor Relief (Cities and Towns) Bill*, was prevailed upon not to press his motion at this period of the session; it having been stated by Mr. Baines and Sir G. Grey that the whole subject was under the consideration of the Poor Law Board, and would undergo the careful consideration of government during the recess.

In moving the second reading of the *Compound Householders Bill*, Sir W. CLAY explained that its object was to remove a grievance affecting a numerous class of householders. At present, if the owner of a house compounded with the parish officers for the payment of the parochial rates, the overseers had no power to return the name of the occupants to the returning officer as entitled to vote in the election of members to serve in parliament. The tenants of proprietors who, under local acts, compounded for their rates, though they occupied tenements to a higher value than 10l., were not allowed to be placed upon the register only after payment of the existing rate; consequently after every rate they were obliged to make a fresh application. The effect of this system was that great numbers of persons in the metropolis and other places who, according to the spirit of the reform bill, were entitled to be upon the register were disfranchised. This bill would obviate the necessity of parties so placed making incessant claims; in short it would place them, in this respect, upon a par with county voters who, having once substantiated a claim, were not under the necessity of renewing it so long as they remained in the occupation of the same house. They were, however, relieved from none of the conditions of residence or payment of rates which were required by the reform act. Mr. Newdegate, Mr. Spooner, and Sir H. Willoughby, opposed the

bill as opening a door to fraud. Sir G. GREY said the bill came within the scope of the reform act; and Sir H. Willoughby also opposed it. The bill was read a second time, by 50 against 24.

The third reading of the *Navvies' Training Convention Bill* was moved by Mr. C. PASSENER, who said that the measure was not intended for the rich or the middle class, but for the working poor, whose day of rest it guaranteed from interruption, and saved them from the hardship of giving seven days' labour for six days' wages. He admitted that some of the details of the bill were objectionable, but they could be struck out in committee. The bill was read a second time.

On the 25th, Mr. BAILLIE went at some length into a statement respecting certain proclamations alleged to have been issued by Captain Watson during the disturbances in Ceylon, the signature to which had been declared by him to be a forgery; and asked Lord John Russell to lay on the table a report received from the commissioners appointed to inquire into this matter, who had pronounced the signature to be genuine. Lord John RUSSELL said that the report of the commissioners was hurried and incomplete, but was to be followed by a fuller report accompanied by documents. When this was received the whole would be produced.

Lord NAAS moved an address, praying Her Majesty to order measures to be taken to insure immediate *Steam Communication with Australia*, and adverted to the great inconveniences of the present length of the voyage, generally 120 or 130 days, while by steam it could be accomplished in 70. The CHANCELLOR OF THE EXCHEQUER could not consent to the motion, though he admitted the importance of the object. Government had been anxious to make an arrangement with the East India Company, but it had not been accomplished. The Peninsular and Oriental Company had made a tender to extend the steam communication to Singapore, Hong-Kong, and Australia, but the East India Company who were parties to the existing arrangement, had declined to ratify the arrangement proposed, which could not, therefore, be effected till the termination of the existing contract. Sir J. HOOG complained that this statement was unfair to the East India Company. After some further discussion the motion was negatived.

Mr. HUME called the attention of the House to the present restrictions on the *Admission to St. Paul's Cathedral*, and observed that a more liberal system had been adopted in Westminster Abbey. Sir G. GREY said that this subject was under consideration, with a view to the removal of these restrictions.

In committee of supply a number of votes were agreed to.

The third reading of the *Charitable Trusts Bill*, after opposition from Mr. Turner and Mr. Goulburn, was carried by 96 to 53, and the bill, with some amendments, passed.

On the 26th, in consequence of the general understanding that it was the intention of Baron Rothschild to present himself at the table of the House of Commons and require to be allowed to take his seat as one of the members of the City of London; long before twelve o'clock the lobbies of the House of Commons were crowded to excess by members of the Jewish persuasion, anxious to witness the arrival of the Baron. This anxiety was also manifested on the part of the members, who flocked in crowds to the house in order to be present at the novel ceremony of one of the Jewish nation presenting himself at the table of the house as one of its members, and desiring to be sworn on the Old Testament. Baron Rothschild appeared in the lobby at twelve o'clock, and was loudly cheered. The SPEAKER took the chair at twelve o'clock, when there was an unusually full attendance of members. Baron Rothschild appeared at the bar of the house, introduced by Mr. Page Wood and Mr. John Abel Smith. As he advanced up the floor of the house to the table he was loudly cheered by members on both sides. The clerk at the table placed the customary oath in his hands and was about to swear the honourable gentleman upon the New Testament, when he was interrupted by Baron ROTHSCHILD, who said in a loud and clear voice, "I desire to be sworn on the Old Testament." Sir R. H. INGLES said I protest against that. Baron Rothschild was then

ordered to withdraw, and withdrew accordingly amid the cheers of the house. Sir R. H. B. then moved, as a resolution, that it had been the practice of this country ever since it had been Christian, to regard all the members of its supreme legislature, whether Lords or Commons, as bound by Christian obligations; and, therefore, when any one approached that table to take part in the deliberations of that house, he ought not to be permitted to take such part without first having taken upon him the obligations of a Christian solemnity. Mr. HUMPHREY asked if the honourable baronet would have any objection to embody in his motion the words, that Baron Rothschild had been chosen and elected by the citizens of London. This question gave rise to considerable uproar, in the midst of which Sir R. Inglis's reply, if he made any, was lost. A debate ensued which was adjourned to the Monday following, and Mr. B. OSBORNE gave notice that on resuming the debate, he should move, as an amendment, that Baron Rothschild, one of the members for the City of London, having presented himself at the bar of the house, and having requested that an oath should be administered to him on the Old Testament, the form which he believed to be most binding on his conscience, that the clerk of the house be directed to administer to him the oaths of allegiance and supremacy upon the Old Testament.

PROGRESS OF BUSINESS.

House of Lords.—June 27th. Crime and Outrage Act Continuance Bill read a third time.

29th.—Drainage and Improvement of Lands Advances Bill read a third time and passed.—Australian Colonies Bill reported.—Metropolitan Interments Bill and Board of Health Bill read a second time.

July 1st.—Parliamentary Voters (Ireland) Bill considered in committee; Lord O'Swain's amendment carried against ministers. 2nd.—Educational Grants, motion for select committee negatived.

4th.—Metropolitan Interments Bill referred to a select committee.—Larceny Summary Jurisdiction Bill read a second time.

5th.—Parliamentary Voters (Ireland) Bill in Committee; amendment carried against ministers.—Australian Colonies Bill read a third time and passed.

8th.—General Board of Health Bill passed through Committee.—Court of Chancery (Ireland) Bill, Factories Bill, County Courts Extension Bill, and Benefices in Plurality Bill, read a third time.

9th.—Parliamentary Voters (Ireland) Bill reported.—Electors (Ireland) Bill and Inspection of Coal Mines Bill, read a second time.—Metropolitan Interments Bill considered in Committee.—General Board of Health Bill read a third time and passed.

11th.—Benefices in Plurality Bill read a third time.—Inspection of Coal Mines Bill committed pro forma.—Larceny Summary Jurisdiction Bill passed through Committee.

12th.—Court of Chancery Bill, Metropolitan Interments Bill, and Parliamentary Voters (Ireland) Bill, read a third time and passed.—County Courts Extension Bill referred to a Select Committee.

15th.—County Rates Extension Bill reported.—Factories Bill considered in Committee.

16th.—Landlord and Tenant Bill thrown out on second reading.—Elections (Ireland) Bill reported.—Municipal Corporations (Ireland) Bill read a third time and passed.

18th.—Elections (Ireland) Bill read a third time and passed. County Courts Extension Bill considered in Committee.

19th.—Inspection of Coal Mines Bill and Factories Bill read a third time and passed.

22nd.—Breach of Privilege; parties committed to Newgate.—County Courts Extension Bill read a third time and passed.

23rd.—Population Bills and Militia Ballot Suspension Bill read a third time and passed.

25th.—Marriages Bill withdrawn for this session.

House of Commons.—June 28th.—Vote of Confidence; Mr. Roebuck's motion carried by 210 to 204.

July 2nd.—Landlord and Tenant Bill read a third time and passed.

4th.—Business of the Session.—Site of Exhibition; Colonel Stothert's and Sir B. Hall's motions negatived.—Home-made Spirits in Bond Bill read a second time.

5th.—Repeal of Malt Tax; Mr. Cayley's motion negatived.—Railways Abandonment Bill read a third time and passed.

8th.—Mercantile Marine Bill (No. 2) and Ecclesiastical Commission Bill considered in Committee.—Population Bill passed through Committee.—Home-made Spirits Bill thrown out on second reading by 121 to 120.

9th.—Mercantile Marine Bill in Committee.—Mr. Locke King's motion on the County Franchise negatived.—Mr. Locke's motion on Sunday Post-office Labour negatived, and amendment carried.

10th.—Marriage Bill read a third time

11th.—Convict Prisons Bill read a third time and passed.—

Poor Relief Bill passed through Committee.—Mr. Ewart's motion against Death-punishment negatived.

13th.—Medical Charities (Ireland) Bill considered in Committee.—New walls for Towerhill, Southampton, and Devonport.—Monument to Sir R. Peel.

16th.—Mercantile Marine Bill (No. 2) considered in Committee.—Attorneys' Certificate Bill read a second time.—Ecclesiastical Commission Bill considered in Committee.—Marriages Bill passed.

18th.—Mercantile Marine Bill considered in Committee.

17th.—Copyhold Enfranchisement Bill considered in Committee.—Smoke Prohibition Bill thrown out on second reading.

18th.—Mercantile Marine Bill further considered in Committee.—Royal Commission of Inquiry into the Universities; adjournment of debate carried by 160 to 128.—Attorneys' Certificate Bill; motion for commitment carried against ministers; passed through Committee.

19th.—Mercantile Marine Bill further considered in Committee.—Provision for family of the late Duke of Cambridge.—Committee of Supply; vote for establishments on Coast of Africa carried.

22nd.—Mercantile Marine Bill passed through Committee.—

Jews Oath of Allegiance Bill laid aside this session.—Committee of supply.—Ecclesiastical Commission Bill read a third time and passed.

Attorneys' Certificate Bill thrown out on third reading. 23rd.—Medical Charities (Ireland) Bill considered in Committee.—Irish Poor Law Amendment Bill brought in.

24th.—Poor Relief (Cities and Towns) Bill withdrawn.—Compounded Householders Bill, and Sunday Trading Prevention Bill, read a second time.—Copyholds Enfranchisement Bill thrown out.

25th.—Mercantile Marine Bill, and Medical Charities (Ireland) Bill considered in Committee.—Committee of supply.—General Board of Health Bill and Charitable Trusts Bill read a third time and passed.

AN illustration of the abuse in the exercise of the *Right of Petition* is to be found in a parliamentary document just issued. The Liverpool Corporation Water-Works Bill, now pending before the House of Lords, has been keenly opposed, and a petition, purporting to proceed from 18,000 rate-payers, was presented against it. In consequence of some suspicious appearances, this petition was referred to a select committee, who have reported that a great number of the names attached to the petition are spurious, and that the petitioners have no *locus standi*, and are not entitled to be heard. The following facts are extracted from the minutes of evidence:—Mr. Uriah Phipps, a law-stationer, swore that from 900 to 1000 of the signatures were in the handwriting of some copying clerk who had been employed in his own office. Mr. Arnaud, the keeper of a spirit vault, described the proceedings of five agents employed to procure signatures. He stated that these persons did their day's work in his premises. They filled up the required number of sheets with the first names that came into their heads; and then took the sheets into the yard, and threw a bucket of water over them, and over their own hats, to make it appear that they had been out, carrying the papers from place to place in the rain. Between forty and fifty agents were employed at 4s. 6d. a day each, and a diligent agent was expected to bring in three sheetsful of names in a day. One of these men was in the habit of going to the first house in a court, ascertaining the names of the inhabitants and putting them all down; another avowed that he never troubled himself about getting rate-payers to sign after the first day: "When I found the thing was so slightly slurred over, I thought it would be useless to take so much trouble." This man, whose name is M^r Arthur, also gave evidence, which showed that his employers could scarcely have been ignorant of his mode of proceeding. This appears from the following extract:—"When you have been employed in getting signatures for other petitions in Liverpool, have you acted in the same manner as this case?—Yes; it is quite a common custom. To draw upon your imagination?—Yes. It is a common custom, when you are employed in Liverpool to get signatures to a petition, to retire to a public-house, and make out an imaginary list?—Yes. The parties employing us expect a physical impossibility. If they do not know that, common sense ought to teach them." The Lords' committee conclude their report by saying that "they were imperatively called upon to take measures that might have a tendency to deter, for the future, such shameful practices as would inevitably (if continued) render the right of petitioning

(so valuable to the subjects of this empire) a perfect force." It will be seen in our parliamentary narrative that this matter was taken up by the House of Lords on the 23rd.

A deputation of London weekly newspaper proprietors waited on the Marquis of Clanricarde, the Postmaster-General on the 3rd, to induce the government to rescind the last *Post Office Regulations as to Sunday Deliveries*. In reply to their representations the marquis said that his own opinion and that of the government was, that the arrangements in question would be inconvenient, yet there were objections to the crown opposing the wishes of the people, as expressed by their representatives; that though it might be said that the vote did not really represent the feeling of the country, yet it had not been hastily brought forward, and there had been sufficient time to oppose it; that, however, he believed the matter would be again brought forward on an early day, and if the House of Commons chose to reverse its decision, he individually, and he took it for granted, all the other members of the government, would agree that the original arrangement should at once be reverted to.

The *Criminal Tables for the Year 1849* have been laid before both Houses of Parliament. The prefatory explanation and calculations, by Mr. Redgrave, of the Home Office, the compiler of the tables, contain much curious and important matter. Among a number of other statements we find the following:—"Of the persons committed for trial in the last year there were—Acquitted and discharged, 6786; acquitted on the ground of insanity, 18; found insane, 11; convicted, 21,001; total committed, 27,816. Of the persons convicted last year 1 in 318 was sentenced to death; and 1 in 8 to transportation. But the leniency of the administration of the law is forcibly exhibited, when it is shown that embracing all the serious offences for which persons were convicted, the sentence of three-fourths were for periods of six months and under; of one-half for three months and under; and that the sentences of above one-third were for periods of two months and under. There has been no execution since 1841, except for murder of 19 persons convicted last year of this offence, 15 were executed, the crimes of several being marked by circumstances of peculiar atrocity. Five of these persons were females; one for the murder and robbery of her mistress, one for the murder of her husband by poison, who was also charged with and confessed the murder of her two adult sons, and the attempted murder of a third; one for the murder of her infant by poison, suspected to have been the eighth or ninth similar offence; another for the murder of her husband by poison; and the fifth was (with her husband, who was also executed) convicted of a deeply-laid plan of murder and robbery. Of the males, one was convicted of murder who was also charged with a second murder, and the attempted murder of two other persons, in furtherance of extensive forgeries and fraud; one was convicted of the murder of four persons, and robbery; one of the murder of his mother; one of the murder of his child; one of the murder of a young girl, supposed from motives of revenge; another of the murder of a female, the motive not being made apparent; and three of separate cases of murder in connection with burglary and theft. In the commitments last year for murder, the number of females equalled the number of males; and it appears that the recent increase in the commitments for murder is attributable solely to female crime.

A great *Tenant-right Meeting* of the county of Louth took place at Dundalk on the 29th of June. The proceedings were unanimous, and the important object of cementing the union of the North and South, for promoting the interests of the tenant farmers, was materially forwarded.

There was a meeting at Reading on the 6th, got up by Mr. Ferrand, to gain recruits for his "*Wool League*," a combination to put down the cotton manufacture by abstaining from the use of that article. About 300 persons were present. The meeting was addressed by Mr. Ferrand in his usual strain, and also by the Marquis of Downshire, the character of whose speech may be gathered from the following specimen:—"I did not come here this day to do things by halves; no, I came here to speak out, and to call things by their proper names. And I now declare that I wish this agitation

to be considered as a war *d'outrance* on the part of the farmers against the Manchester cotton manufacturers. Now mark my words—I will stand by them—and if there be a penalty attached to them, on my head let it fall. I recommend you and all Englishmen to abstain from dealing in a single ounce of these blood-stained cotton goods." These sentiments, and the noble marquis's recommendation that his hearers should "give their custom only to those whom they knew to be their friends, and who, they were sure would vote the right way," were received with vociferous cheers.

The question of *Smithfield Market* is under discussion in the Court of Common Council. The Secretary of State having transmitted to that body the report of the royal commission, which recommended the discontinuance of that market and the establishment of a new cattle market in a place without the City; and having desired to know whether the corporation were willing to construct the new market and undertake its supervision; this communication was referred to the market improvement committee. At a special court on the 11th, the report of this committee was brought up. It objects, at great length, to the recommendation of Her Majesty's commissioners, and concludes as follows:—"Under all these circumstances, therefore, and upon every consideration, as well for the benefit of the public at large, as of the citizens of London in particular, your committee cannot but express their firm and unaltered opinion, that the suggestion for the removal of Smithfield market is, without any adequate reason, founded upon public considerations for the present, or any certainty as to its effect for the future." A debate ensued, which after adjournment, was terminated on the 23rd, when the report was agreed to.

Conciliation Hall has been finally closed. On the 15th the weekly rent was only 4*l.* 10*s.*; on which Mr. John O'Connell moved that the association should adjourn *sine die*, as they were in debt, and had lost all control over the hall. The motion was carried in solemn silence, and the meeting (a very small one) broke up.

The annual dinner of the *Society for the Reform of Colonial Government* took place at Greenwich on the 17th. Lord Montagu presided; and the principal speakers were Sir W. Molesworth, the Bishop of Oxford, Mr. Hume, Mr. Adderley, and Mr. Lowe, of New South Wales.

The *Royal Agricultural Society* held its annual meeting this year at Exeter. The principal day was Thursday the 18th, when there was a great show of cattle and other farm stock and machinery, followed by a dinner, at which the chair was occupied by the Marquis of Downshire, the President of the Society. Among the numerous company were the French and American ambassadors, who both addressed the meeting, expressing their admiration of the state of agriculture in England.

The *National Reform Association* held a great meeting on the 17th at Wymondham, in Norfolk. It was estimated that 5000 persons were present, comprising many belonging to the agricultural classes. The Sheriff of Norfolk presided. The principal speakers were Sir Joshua Walmesley, Mr. G. Thompson, Mr. A. Mackay, and Mr. T. McEnteer, who formed the metropolitan deputation, and two local members, Sir Thomas Beever, and Mr. Tillett, of Norwich.

A meeting—described as an aggregate meeting of the clergy of the Church of England and the lay members of her communion—was held in St. Martin's Hall, Long-Acre, on the 23rd. Its object was to protest against the decisions of the several courts of law in the *Gorham Case*; to address the Archbishop of Canterbury, and to take other steps to prevent the order of the Court of Arches to induct Mr. Gorham to the vicarage of Bramford Speke from being carried into effect. It is estimated that about 2000 persons were present. The chair was occupied by Mr. J. G. Hubbard; and the Bishop of Bath and Wells, Archdeacon Wilberforce, Archdeacon Thorpe, Archdeacon Bartholomew, Archdeacon Manning, Viscount Feilding, Earl Nelson, Lord John Manners, and the Rev. Dr. Pusey, were among the persons on the platform. The meeting was addressed at great length by the chairman, the Bishop of Bath and Wells, Archdeacon Wilberforce, and others; and resolutions in accordance with the objects of the meeting were unani-

mously adopted.—Owing to the overflow of St. Martin's Hall, a supplementary meeting was held in Freemasons' Hall, over which Viscount Feilding presided. Dr. Pusey addressed the meeting, and the same resolutions as those proposed in St. Martin's Hall were adopted.

The late Henry Robertson Hartley, Esq., of Southampton, has left the Bulk of his Fortune, amounting to 80,000*l.*, to the corporation of that town, to be applied in such manner as may promote the study of natural history, astronomy, antiquities, and classical and oriental literature, by forming the requisite institutions for those purposes. It is to be regretted that, from the inaccurate preparation of the will, a suit in Chancery will be necessary to give it effect.

The building committee for the Exhibition of 1851, has accepted the tender of Mr. Paxton to erect in Hyde Park a building chiefly of iron and glass. It is to be of wood-work to the height of eighteen feet, and arrangements have been made to provide complete ventilation and secure a moderate temperature. The building is to be made in Birmingham and the neighbourhood. Messrs. Fox, Henderson, and Co., of the London Works, at Smithwick, have the contract for the iron framework. Messrs. Clance, of Spon Lane, will supply the enormous quantity of glass required; and the tubes are also entrusted to a firm in the district. These three materials constitute, in fact, the entire building.

A meeting of *Electors of the City of London* was held on the 25th, summoned by Baron Rothschild, to consider what course ought to be adopted by him in consequence of the Parliamentary Oaths bill being laid aside for this session. After considerable discussion, in which Baron Rothschild himself, Mr. J. A. Smith, Mr. P. Taylor, Lord D. Stuart, Mr. Anstey, Mr. Wire, and others took part, it was unanimously resolved "That Baron Rothschild proceed to-morrow to the House of Commons to claim his seat."

NARRATIVE OF LAW AND CRIME.

Mr. Wayse, a draper of Oxford Street, was summoned before the Marlborough police court on the 29th of June, for *Assaulting a Customer*. Mrs. Denning and a female friend, seeing a ticketed mantle in his shop-window, went in to buy it, reading the price to be one guinea. The mantle was produced, and a guinea and a half asked for it; on the lady's demurring, a ticket was shown, with one guinea in large print, and a very small & subjoined, which, they believed, had just been written. High words ensued, and the tradesman pushed the customer out of the shop. A shopman deposed that he had put the ticket—one guinea and a half—on the mantle; and the master declared that he had used no unnecessary violence, but was provoked by the accusation of cheating. The magistrate commented on the impropriety of exhibiting tickets so written as to mislead the public, and fined the draper twenty shillings.

A respectably dressed young man, who refused to give his name, was charged at Guildhall, on the 3rd, with uttering seditious language in a public-house. Several papers were found upon him. One consisted of hints to those who thought of suicide, urging that they might as well be hanged—or take the chance of it with the alternative of a comfortable provision for life—as drown themselves; and that they might manage this by killing a policeman, a duchess, or a countess; and then pleading insanity. Another paper said the writer would like to kill five hundred of the aristocracy, and a third contained a plan of setting fire to ladies' dresses in Kensington Gardens, at a time "when the aristocracy are congregated to hear the band play." Before the alderman the prisoner admitted that these writings were by him, and said that merely to explain how an unlawful act might be committed, was no offence. He was remanded that inquiries might be made. He was brought up again on the 10th, when Mr. Maule, the solicitor of the Home Office, was in attendance, who requested the alderman to deal summarily with the case by binding the prisoner over to keep the peace. He seemed much disappointed that he was not to have a regular trial, and made a nonsensical speech about his plan for thinning the numbers of the aristocracy. The

alderman cut short his oratory;—"You are one of three things, insane, mischievous, or seeking notoriety; I believe you are the two latter." He was ordered to find bail and removed in custody.

The Court of Queen's Bench gave judgment, on the 6th, in the *Case of Barber*. This gentleman, it will be remembered, was tried in 1844 on several charges of fraud and forgery, in conjunction with a person of the name of Fletcher, and sentenced to transportation for life. In 1848, after enduring great hardships in Norfolk Island, he received a free pardon, in consequence of enquiries made into his case, and returned to England. He applied to the Court of Queen's Bench to be allowed anew to take out his certificate to practise as an attorney; but this being opposed by the Law Society, a rule nisi was granted, and the matter was fully argued before the court. In giving judgment, Mr. Justice Patteson, after taking a review of the various transactions in which Barber had been implicated along with Fletcher, said in conclusion, that looking at all the circumstances of all these cases, and endeavouring to make all reasonable allowances for the difficulties in which Mr. Barber was placed in explaining his conduct, the court regretted to say that it could not but see such proofs of complicity with Fletcher as rendered it an imperative duty to decline complying with the application for the renewal of his certificate to practise as an attorney of this court. The rule was therefore discharged.

In the Court of Queen's Bench, on the 6th, an action of *Slander* was tried, at the instance of Mr. Barry, the architect, against Dr. Reid, the ventilator of the new Houses of Parliament. It appeared that in 1845 there were meetings between the plaintiff and defendant, at one of which the defendant admitted that his principle of ventilation would not act in accordance with the plaintiff's arrangement that the Houses of Parliament should be fire-proof. A Mr. Meesom, who was present at the meeting on the part of Mr. Barry, reported, by the directions of the plaintiff, Mr. Reid's admission to the Commissioners of Woods and Forests. At a subsequent meeting, at which Meesom was present, Dr. Reid refused to proceed, saying, "I'll transact no business in a meeting in which Mr. Meesom is, because he and Mr. Barry sent in a forged document to the Commissioners of Woods and Forests." These were the slanderous words complained of. The Chief Justice said that the plaintiff had no case, because the communication was privileged, and suggested that the matter should be settled, a suggestion which was adopted.

An Irishman named Fahy attempted to *Rob the House* of Mr. Swetenham, near Congleton, on the afternoon of Sunday the 7th, while the family was at church, but was prevented by the intrepidity of Ann Tranter, the maid servant. The man pretended to be deaf and dumb, and begged for alms; the servant gave him some bread; then he attempted to push past her into the house; on the girl resisting his entrance, he assailed her with a stick; she took it from him; then he beat her with his fists; the girl grappled with him, and, being tall and stout, managed to throw him on the ground, and kept him there for some time. When the man succeeded in overpowering her, and rose, she ran to a bell and pulled it to give an alarm. Again she baffled Fahy's attempts to enter the house, pushed him into the stable-yard, and locked him out. The bell had attracted a gamekeeper's notice, and he hurried to the house; where he found the courageous girl in a fainting state. The keeper seized Fahy on the road a short distance from the place, and had him committed on a charge of assault with intent to rob. The Congleton magistrates highly commended Ann Tranter for her conduct.

The Court of Exchequer gave judgment in the *Gorham Case* on the 8th. This is the third decision of precisely the same question in three different courts of law. The Bishop of Exeter first applied to the Court of Queen's Bench for a rule to prohibit the Court of Arches from giving effect to the decision of the privy council in favour of Mr. Gorham. On its being refused, the bishop made a similar application to the Court of Common Pleas, by whom also it was refused, and he then brought the matter in the same form before the Court of Exchequer.

After the question had been argued at great length, for several days successively, the Court of Exchequer found, as the two other courts had done, that the appeal from the Court of Arches was to the Judicial Committee of the Privy Council, and refused the bishop's application, with costs.

At the Central Criminal Court on the 9th, two men named Bayley and Lawler, were convicted of *Conspiring to Cheat Thomas Bland, a butcher, of 58l.* The prisoners are what is called "skittle-sharpers." They got into conversation with their dupe at a public-house, and induced him to go to a skittle-ground. Lawler and Bayley began to play for money; Bayley seemed quite drunk and ignorant of the game. He lost every game, and eventually Bland was tempted to bet against him. Bayley then began to improve amazingly, and won from the butcher; but the spirit of gambling was roused within him. He lost all his money, and when he had no more, went to a friend and borrowed 45l., which he lost also. He then began to find that he had been cheated, and gave his fellow-gamblers into custody. They were sentenced to a year's imprisonment.

The Court of Exchequer, after a trial of several days, decided on the 9th an action on a *Policy of Insurance* effected with the Albion Company on the life of a Captain Clayton. The claim for the sum insured was resisted on the ground that Captain Clayton was of drunken and intemperate habits, while he had been represented when the policy was obtained as being of sober and temperate habits. The case turned entirely upon the question, what constituted intemperate habits. An enormous quantity of evidence on this point, of the most contradictory kind, was taken; the most opposite accounts of Captain Clayton's habits being given by different witnesses. The result was a verdict against the assurance company for 539l., the amount of the sum in the policy, with interest. In charging the jury, the Lord Chief Baron said that it would have been far better for the Albion Company to have lost the sum at stake than to have contested the point in a court of justice. On this trial the Times made the important remark, that "the only mode in which absolute security can be obtained by the public must lie in the general adoption by assurance offices of the plan of protecting themselves in every case by due inquiries before the granting of the policy, and of afterwards assuming the full responsibility for the completeness of such inquiries by holding themselves precluded from raising any future question."

At the Westminster Police Court on the 9th, Eliza Medland, a woman with half a dozen aliases, was charged with endeavouring to *Obtain Money by False Pretences, from Prince Albert.* She had written to the Prince as "M. A. Purkess," setting forth that she had a child suffering from a disease of the spine, for which sea-bathing was ordered, and soliciting 5l., on the score of having been wet nurse to the Princess Alice Maude. The name of the wet nurse was Perkins, not Purkess; and Col Phipps, the Prince's Secretary, detected the applicant as an impostor. She was remanded, there being other charges against her, and brought up again on the 13th, when it was proved that she had endeavoured to extract money from the Marchioness of Londonderry, by representing herself as Mrs. Macbride, a poor woman with a husband out of work, a dead child, and no means to bury it. She tried to get off by promising amendment for the future, but the magistrate sent her to the House of Correction for three months, remarking, "if you have formed any resolution of amendment, you can carry it into effect when you come out."

Henry Page and Emma Clarke, whose case was mentioned in last month's *Narrative*, were tried on the 10th at the Central Criminal Court, for *Bigamy*. The evidence, however, failed to substantiate the charge, and they were both acquitted.

At Devises Assizes on the 10th, Abraham Hicks was tried for *Cutting and Wounding* Elizabeth Henley with intent to murder or do her grievous bodily harm. The woman, who is married and has a family, was walking homewards when she came up with Hicks, a married man, and offered him a pint of beer to give her a lift in his cart. He took her in, and began to take improper liberties with her; she resisted, and his brutal passions

being aroused, he foused her frightfully, kicking and beating her almost to death, and then throwing her out of the cart. She was found lying insensible on the road, and had suffered injuries from which she can never recover. The man was convicted, and sentenced to transportation for life.

Robert Pate, late lieutenant in the 10th hussars, was tried in the Central Criminal Court on the 11th, for *Striking the Queen on the Face with a Cane.* The assault (the circumstances of which were adverted to in our last number) was fully proved, and the prisoner was defended only on the plea of insanity. This was sought to be established by a variety of evidence. Several of his brother officers proved that his character became changed in 1844, after the loss of three favourite horses, which were destroyed in consequence of having been bitten by a mad dog. He had previously been an exemplary officer; but he then became subject to strange delusions, forsook the mess, neglected his person and his duty, and at length left the regiment without leave and went home to his father, by whom he was sent back. He was allowed to resume duty without punishment in consideration of the weakness of his mind, but ultimately a communication was made to his father advising his retirement from the regiment, and he sold his commission. His habits were proved to be eccentric in the extreme. He rose at seven and bathed in water containing whiskey and camphor, shouting and singing all the while; he never received company, and always had his blinds down. A cab-driver stated that he attended him every day, in all kinds of weather, for eighteen months, and drove him exactly the same drive, over Putney Heath and Barnes Common; he always alighted at a particular spot near a pond, and after looking into the pond for some minutes, returned to the cab. In the cab he sat flourishing his stick as if he were repelling an attack, and people used to ask the cabman if the gentleman was right in his mind. He regularly paid a fare of nine shillings, every shilling turned with the face up and looking one way; for the turnpikes he always had a sixpence and a large penny-piece, which his servant had regularly to provide. Mr. James Starren, surgeon, of Savill Row, had formerly noticed the prisoner in Kensington Gardens, and cautioned his wife not to attract his attention, as he was obviously a "poor lunatic"—"dangerous." Afterwards he casually became acquainted with the prisoner, and communicated with his father on the state of his mind. Mr. Pate, the prisoner's father, stated many facts proving that he had always felt that his son must go into an asylum; but under Dr. Conolly's advice, he had postponed taking measures, because in London his son had not been so bad as when first he left Ireland. The O'Gorman Mahon, M.P., avowed his belief that the prisoner would be the last man in the world to do a dishonourable or disloyal act. Inspector Squire stated, that the police had long observed the prisoner's eccentric gait and wild gestures in the street; he was known to them by the name of "Cut-and-thrust," from his mode of flourishing his cane as he rushed along. The Reverend Charles Driscoll saw him on the afternoon of the assault on the queen; he stood near Cambridge House for a short time, and then started off in a more excited manner than usual to him, so as to induce Mr. Driscoll to notice him more attentively. Dr. Conolly and Dr. Munro gave their opinions distinctly, that the prisoner was *non insane*; not under any specific delusion, and knowing right from wrong in conversation, but liable to act under sudden and uncontrollable impulses, which he might even know to be wrong. Dr. Munro concluded his evidence by saying that from all he had heard, to-day, and from his own personal examination, he was satisfied that the prisoner was of unsound mind. The learned doctor was sharply taken up by the judge, Baron Alderson. "If you can give us," he said, "the results of your scientific knowledge on the point, we shall be glad to hear you; but I will not permit any medical witness to usurp the functions of the judge and the jury." Dr. Munro apologized, and said he considered that he had only answered the question put to him. Baron Alderson, in summing up, corrected a grievous delusion in the minds of medical men, that a man is unpunishable because he is insane. The only insanity

which exculpates is the special insanity which prompts to the act alleged. A man with a delusion that another will kill him, may be acquitted, if, under that delusion he kills in supposed self-defence; but a man with a delusion that he has a glass head has no similar excuse for such an act. Doubtless, abundance of eccentricity had been proved; but was eccentricity to excuse a man for striking the queen? The impulse was no excuse if the prisoner knew right from wrong: if a man knows that what he does is wrong, and still has an irresistible impulse to do it, the law will have an irresistible impulse to punish for the act. There must be proof of a formed disease of the mind—a disease existing before the act was committed, and one which makes the person incapable of knowing that the act he is about to do is wrong. Unless the jury could say that the prisoner knew not right from wrong, they could not acquit him on the ground of insanity. The jury, after consulting for four hours, returned a verdict of *Guilty*, and the judge sentenced the prisoner to transportation for seven years. He heard the sentence without apparent emotion, and, bowing to the court, turned round and left the dock without uttering a word.

The Anniversary of the 12th of July has passed over in Ireland more quietly than usual. There was, however, an unfortunate collision on that day in Belfast between the police and the people. A small party of police having prevented an Orange procession from forming, and arrested a lad who was beating a drum, were followed to their barracks by a crowd who pelted them all the way with stones. The barracks were then assaulted, the windows smashed, and the shutters on the ground-floor nearly forced. The police fired in self-defence, and several of the rioters were wounded: one was carried off by his comrades, and another was conveyed to the hospital, where it was found necessary to amputate his leg.

Walter Watts, who had been convicted at the Central Criminal Court, of *Stealing a Cheque* belonging to the Globe Insurance Company, was brought up on the 12th to receive judgment, and was sentenced to be transported for ten years.

On the following night he *Committed Suicide* in Newgate. Being in bad health, he had been placed in the ward infirmary, along with several other prisoners; about three in the morning the prisoner who slept next him observed that he had left his bed, and suspecting the truth, went to the water-closet, where he found that the unfortunate man had hanged himself to the bar of the window by a piece of rope and his cravat. The surgeon of the prison was called, but it was found that he had been dead for some time.

Daniel Donovan, a smith, was tried on the 12th at the Central Criminal Court, for *Throwing his Wife out of a Window*, with intent to murder her. They were both intoxicated, and having quarrelled, the husband, after beating the woman savagely, opened the window and threw her into the yard. From the injuries she received her life was long in danger. The charge was proved by the evidence of the woman and the prisoner's two children, who were present. Judgment of death was recorded, the judge saying that he would recommend the prisoner's life to be spared, but no more. He was re-conveyed to gaol and placed in the cell allotted to prisoners after trial; about three o'clock it was discovered that he had *Hanged Himself*, and was quite dead.

The *Spirit of Litigation* was strongly exhibited in two trials on the Oxford circuit. At Abingdon, on the 12th, an action of ejectment was tried, in which the parties were old men of 75 and 89, and the subject matter was a piece of land six yards long and four yards wide. An immense body of evidence—ancient documents, aged witnesses, &c.—was brought forward on both sides, and a verdict was given for the plaintiff. The expense of the trial, it was stated, was, at least, a hundred times the value of the piece of land. The other case was between two members of the same family, who had gone to law in consequence of cutting down a few trees on a farm. The plaintiff himself had only valued the trees at 14l., and after long and intricate proceedings in the Court of Chancery, that court had sent the question of damages to be tried by a jury. In summing up the case to the

jury, the judge desired them to assess the damages to which they thought the plaintiff entitled, if the court above should say that the verdict ought to be for him. The jury said they were not aware that he had suffered any damage. The damages were at length contingently assessed at *one farthing*, and the case returns to the Court of Chancery to proceed accordingly.

A respectable-looking young man named Garret, was charged at the Hammermith Police Court on the 13th by Miss Parkinson, a lady residing at Notting hill, with *being in her House for an unlawful Purpose*. While absent from home she had heard from a friend that a young man was in the habit of coming to her house and staying till a late hour at night. On this she came home unexpectedly that morning, bringing a policeman with her, and finding a man in the house with the servants she at once gave him into custody. She had not, however, missed anything. The prisoner, in a strong north-country dialect, told his story. He was a farmer's son, just come from Newcastle to prove his father's will. He had fallen in with Elizabeth, who was cook to Miss Parkinson, and "made known his mind to her;" but her brother had objected to the match, until he was satisfied of his respectability, and he had gone to the house to arrange meetings between his solicitor and the brother of Elizabeth for that purpose. On this occasion he had gone there to take the ring and name the day, when Elizabeth ran in out of breath, and said, "Oh, here's Missus come with a policeman to take you away," and he said, "Never mind lass; I have neither stolen anything nor eaten anything, so let them take me." He then explained the matter as well as he could to the lady, but she would give him into custody. Miss Parkinson said she considered the cook had most grossly misconducted herself in admitting persons to her house against her orders, and she should dismiss her at once. Defendant: Oh, please ma'am, let me stop here until you see if you have lost anything, but don't throw suspicion on the character of Elizabeth till you find you have. The magistrate said, that Miss Parkinson had been too hasty, though the servant was wrong in receiving visitors against her orders. He therefore dismissed the prisoner, who left the court in the direction of Notting-hill, no doubt to receive his Elizabeth, should she be turned out of the house by her mistress.

A coroner's inquest was held on the 13th, on the body of a poor bonnet-maker, named Susan Ansell, who lived in the New Kent Road, and who, it appeared from the evidence, *Died of Starvation* in consequence of insufficiency of means to procure food. She had been advised to apply to Newington Workhouse for relief, but declared that "she would rather die in a ditch."

At the Greenwich Police Office, on the 16th, John Edward Spooner was charged with *Attempting to Drown* Captain Alexander Sheriff, the Superintendent of the East Country Dock. Spooner had been employed as a labourer at the dock; Mr. Sheriff, for particular reasons directed that he should be so no longer; on the day of his dismissal, Spooner accosted Mr. Sheriff, who refused to hold any converse with him; whereupon the prisoner pushed Mr. Sheriff into the water of the dock. The fall to the surface was eight feet, the depth of water eighteen; any one not a swimmer would probably have perished under such circumstances; but Mr. Sheriff, though seventy-five years old, managed to keep afloat till he was rescued. The prisoner was committed for trial.

At the Winchester Assizes, on the 16th, Sophia Winter was tried for *Bigamy*. It appeared by the evidence that the prisoner, who is an interesting looking young woman, was married in 1837 to William Winter, a respectable tradesman at Portsmouth. She lived very happily with her husband for some years, and had several children by him; but he received an appointment which took him abroad. There he remained some years, when she became acquainted with Alfred Dodswell, the son of a lieutenant in the navy, residing at Portsmouth. He became much attached to her, and eventually persuaded her to marry him, telling her that the first marriage was not a legal one, as she was a minor when it was contracted, and under that idea she consented to marry him. This was in 1848. They lived together up to May last, when William Winter, the first husband

returned. She was then made to understand that her first marriage was a perfectly legal one, on which she refused to live any longer with Woodswell, but returned to her first husband, and Woodswell instituted the present prosecution. It was contended that she had married the second husband without any felonious intent, under the belief that the first marriage was illegal. The judge said that it was to be regretted that this prosecution had been brought, but still it was his opinion that the legal offence of bigamy had been made out. The jury, however, acquitted the prisoner, and the judge refused to allow the costs of the prosecution.

At Chelmsford Assizes, on the 18th, John Ager was tried for the Murder of Charles Piper. Whilst walking home at night, Piper put his arm round a girl who was Ager's sweetheart; when Ager exclaimed against this, the other young man answered offensively; then Ager stabbed him with a knife. The case was clear; and the prisoner's counsel could only plead for a verdict for the lesser offence of manslaughter. The jury acceded to this view; and the prisoner was sentenced to be transported for life.

A Child of Eight years old, named Willis, was brought before the sitting magistrate at the Mansion House, on the 19th, charged with having attempted to stab a boy of his own age with a knife, and with having wounded another boy so seriously in the eye that he was likely to lose it. It appeared that the prisoner had been brought up in utter ignorance of moral responsibility, and that his father, on hearing of his apprehension, had said that he had a good right to use a knife in his own defence. The magistrate said he could not commit a child of such tender years to Newgate, but would require security for his good behaviour for a year. He was then locked up in the cage, uttering screams and curses.

In the Arches Court, on the 20th, in the *Gorham Case*, the Bishop of Exeter presented his answer of obedience to the monition of the court, tendering a protest along with it. The court received the answer, but rejected the protest. Mr. Gorham's immediate induction follows as a matter of course.

At the Lewes Assizes, on the 23rd, Mary Hardwick, a miserable-looking creature, was indicted for attempting to Murder her Child. On the Saturday preceding she was seen standing with a child in her arms near the custom-house at Brighton, when she suddenly ran down to the sea, threw the child into the water, and then jumped in herself. The woman and child were dragged out in a state of insensibility, but both recovered. A man was on the spot, who appeared to be the woman's husband, who, after she was recovered, abused her violently, and expressed a wish that she had drowned herself. The poor woman, during the trial, seemed hardly aware of what she had done. She was convicted, but recommended to mercy, and judgment was deferred.

Numerous *Evictions from Land* still take place in Ireland. A Galway paper says:—"Notices have been served upon the relieving officers by the managers of the Martin estate, of their intention to evict a vast number of unfortunate creatures now residing on this property. The number of houses from which the inmates are to be cast out is 276; but on account of the previous evictions in the same quarter, several families reside in many instances under the same roof, so that we conceive it is a moderate calculation to estimate the number of individuals about to be subjected to all the tortures of extermination, at 1,500."

The Attorney-General has refused to sanction an application for an *Injunction* against holding the great Industrial Exhibition of 1851 in Hyde Park:—"I have in this matter a duty of a judicial nature to perform. The object of the information is to call in question the exercise of the discretion of the Woods and Forests in the management of a part of the property of the Crown. The information states that what the Commissioners of Woods and Forests are about to do is illegal, and injurious to the public. The information states no facts, which, in my opinion, establish either of these propositions. But even if there were a question as to the illegality, the Attorney-General is bound to judge whether it is for the interest of the public to litigate the question. Cases may

be conceived, and indeed not unfrequently arise, in which the letter of the law has been violated, and in which the court has, nevertheless, required the Attorney-General to consider whether he would allow an information to proceed complaining of such violation, even where the Attorney-General had already in his discretion allowed the information to be filed, and where, if the information had proceeded, the court could have done no other than enforce the strict right. The discretion of the Attorney-General is interposed to prevent this mischief; and his exercise of that discretion is purely an exercise of a judicial function, and as such I have exercised it to the best of my ability. In the present case the sense of what is for the interest of the public, with relation to what the Commissioners of Woods and Forests propose to do, has been unequivocally expressed by a vote of the House of Commons. It would, in my opinion, be an improper measure on the part of the Attorney-General, if, in the exercise of his discretion, and acting on behalf of the public, he were to sanction a proceeding directly at variance with that vote. If any private right were affected by my decision it would be a different matter; but I have the satisfaction of knowing that no private right of any individual or individuals can be withdrawn from the consideration of any court, or in any manner affected by my refusal to sanction this information."

NARRATIVE OF ACCIDENT AND DISASTER.

INTELLIGENCE has been received from Madras of the *Loss of an Indiaman*, the Sulimary, from Bombay, bound to England. She was riding at anchor off the coast, and encountered, on the 24th of May, a dreadful gale of wind, in the height of which she parted from her anchors, and was driven on shore, when she speedily became a complete wreck. An attempt was made to save the passengers, of whom there were several, by means of the boats. They were, however, quickly destroyed by the fury of the sea, and upwards of forty, including the captain, his wife, and thirty-three seamen, perished. Another Indiaman, named the Guna, was driven ashore on the same coast, about the same time, and became a wreck. The crew of this vessel were more fortunate; they all escaped. The loss of both vessels is said to exceed 50,000*l*.

The French republican war-brig *L'Aigle* was *Lost* between Port de France and Trinidad on the 10th of June. She was suddenly overtaken in a heavy squall, and almost instantly capsized and went down. Her officers and crew, sixty in number, perished excepting only two.

On Saturday night, the 29th of June, a skiff containing six gentlemen, proceeding up the river, was run down by a steamer, near Westminster bridge, and two of them—Mr. W. Hawtrey and Mr. Needham—were *drowned*. One swam ashore, and the others were saved by a boat that was passing.

On Saturday evening, the 29th of June, Mr. Green, the aeronaut, ascended with a friend from Vauxhall Gardens, and the balloon *fell into the Thames*, near the Nore. Their lives were saved by the people in a revenue cutter that was passing, but Mr. Green was hurt on the head and face. The balloon was secured with difficulty, the gas being liberated by volleys of musketry from the cutter.

A lady named Martin lost her life, on the 4th, by *Walking on the York and Scarborough Railway*. A train was approaching, and the engine-driver gave the alarm by his whistle. Seeing her danger she attempted to escape by running back; but she was struck down in a moment, and the whole train of seventeen carriages, passed over her body, which was literally torn in pieces. This should be a *Reason* against an imprudence often committed.

A case of *Death through the use of Chloroform* at Guy's Hospital, was investigated by a Coroner's Inquest, on the 5th. The patient was Alexander Scott, a police-

man, aged thirty-four, and the operation was the removal of a part of his hand, which had been bitten by a man about a year before. The bone and nerves were diseased, producing great pain in the arm and side, otherwise the man was strong and healthy. He desired that chloroform should be administered, though Mr. Cock, the operator, endeavoured to dissuade him. The operation did not last above a minute and a half, but by the time it was finished, it was found that the patient had expired. Mr. Cock said that he always objected to the use of chloroform, for it never could be given without some degree of danger. In this instance a very small quantity had been used, not a tenth part of what had been administered in other cases. He could not account for the deceased dying, and was certain there was no disease about him. So strong and powerful an agent was chloroform, that it could not be administered without some amount of risk and danger, and the penalty the public must pay for the alleviation from pain would be a death occasionally. A similar death occurred about twelve months since at St. Thomas's Hospital, and many other deaths might be recorded. It might be used one or two thousand times or more, successfully, and was of great assistance to the operator. The public ought to know the danger attending its administration.

On the evening of the 8th, Lieutenant Gale ascended in a *Balloon from Shoreham*, was carried across the channel, and landed on the beach near D. ppe. He was at first arrested by a gendarme as a suspicious person, but, on explanation, he was kindly treated and his balloon secured for him.

A *Frightful Tragedy* occurred at Wilnot, Annapolis County, in the United States, on the 9th ult., when a Mrs. Miller, of Handley, after her husband had gone to church, walked out with her four youngest children, and having tied them to her dress, plunged with them from a cliff, and all were drowned. Her mind has been slightly deranged, but on that day she appeared unusually well. She left nine other children.

On the 15th, while the two daughters of Mrs. Stoner, of Ringrone House, and nieces of Lord Camoys, were walking among the rocks of the seashore at Salcombe, they were overtaken by the flowing tide, when one of them was *Drowned*. Her sister held on by the rocks and was saved by the coast guard, whose services are described as being highly commendable.

There have been violent *Thunder Storms* in various parts of the country. At Bristol, on the 15th, many buildings in the town and ships in the harbour were struck by lightning, and several persons were injured, but there was no loss of life. On the following day Manchester and its neighbourhood were visited by a storm. At Bury, a boy was riding on a horse, with a number of milk-cans; the lightning struck them, and both boy and horse were killed. Two men were ascending the shaft of a mine, when the lightning damaged the rope; it broke, and the miners were precipitated to the bottom, very seriously hurt.

A *Dreadful Accident* happened on Sunday the 21st on the South Western Railway. An immense number of persons left the Waterloo station in the morning, in the excursion trains to Southampton. One of the trains left a quarter of an hour before another, and was overtaken by the latter some distance down the line. As there appeared scarcely sufficient power in the engine of the first train to keep it ahead of the second, the latter assisted in propelling the former along. When near Basingstoke the first train shot ahead a little of the second, but was again overtaken by the latter, and although the concussion of their coming in contact was very slight, it was sufficient to throw a man out who was improperly sitting on the outer rail of an open third class carriage, without any roof, which was the fourth from the last carriage of the first train. The man fell across the rail, and the whole of the four last carriages of the first train went over his head and arm. His head was cut to pieces, and his brains scattered over the line. He was of course killed by the first wheel which went over him. He moaned after he fell out of the carriage. He was respectably dressed, and it was stated that he resided somewhere in the neighbourhood of Ludgate-hill. It is said that no blame was attributable to the

driver of the engine of the second train, because the concussion of coming in contact with the first train would not have done any damage, if the unfortunate man who met with the fatal accident, had not been sitting where he had no business to sit.

On the morning of the 21st, the butler of H. Cooper, Esq., of Manor-house, Brixton, who had been out shooting the birds which destroyed the wall-fruit, left his loaded fowling-piece on the hall table whilst answering his master's bell. Mr. Henry Cooper, aged 16, entered the hall, and taking up the weapon presented it at his sister who was along with him. Mrs. Evans, the housekeeper, who had followed them, was in the act of remonstrating with him on the foolishness of his conduct, when the piece exploded, and both females fell with a loud shriek. Miss Cooper received the chief contents of the charge (No. 6 shot) in her neck and face, and, should she recover, will be disfigured for life. The housekeeper is so dangerously injured, that no hopes are entertained of her recovery. The occurrence was purely accidental.

A calamitous *Steamboat Explosion* took place at Bristol on the 22nd. The Red Rover steamer left the Hotwells about eight in the evening, and was about to proceed to Bristol, full of passengers, when she suddenly blew up with a noise which shook the neighbourhood, and was heard at the distance of miles. The engines and machinery were torn to pieces; her funnel, the plates of her boiler, and the other portions of her machinery being hurled into the air. The bodies of some of the passengers were thrown by the shock high above the houses; others were cast into the water; and almost every passenger was more or less injured. The vessel almost immediately sank, going down by the head, her stern fortunately remaining long enough above the water to enable some of the passengers to be taken out of the after-cabin windows. Such was the force of the explosion, that some of the plates of the boiler of the steamer were thrown with considerable violence on to the roofs of the houses in Avon Crescent and Pawling's Yard, more than one hundred yards from the spot where the explosion took place; and one piece, upwards of one and a half hundred weight, was thrown into Messrs. Henneft's timber-yard, at fully as great a distance. A little girl, named Jefferies, was hurled by the explosion with such violence as to be thrown completely across the lock to the road on the opposite side, where her bruins were dashed out against the wall. The most prompt assistance was given, and a number of persons, alive and dead, were picked up. Six dead bodies were found, and many, carried to the hospital, were so dreadfully injured, that their recovery could hardly be expected. On the following day an inquiry into the cause of the accident commenced before the coroner.

A *Frightful Accident* occurred on the 23rd in one of the coal-pits belonging to Mr. Snoden, situated at Commonade, in the immediate neighbourhood of Airdrie. The miners, to the number of twenty, descended to their work as usual about six o'clock, when, it is said, the foreman accompanied them, and went forward to ascertain the state of the air in the pit. All of a sudden a terrific explosion occurred, which instantly killed nineteen out of the twenty, and shattered and destroyed all the implements and machinery in the pit. Only one man escaped. He was standing near the bottom of the pit when he heard the explosion, and suddenly threw himself down to allow the fiery storm to pass over. On rising he found the buckets which communicated with the surface shattered; but finding a piece of wood, he inserted it into one of the links of the chain, and giving the signal, was pulled up to the pit-head. The accounts of the cause of the accident given by this man are exceedingly imperfect, and it is not likely that the actual circumstance connected with this calamitous event will ever be known. *The Men had not Davy Lamps.* Fifteen of the bodies were recovered up to the last account, leaving still four in the pit. They are almost all dreadfully charred and disfigured from the effects of the explosion, which is one of the most severe that has occurred in the west of Scotland for many years. The deceased are mostly young men, but a few of them have left widows and children.

SOCIAL, SANITARY, AND MUNICIPAL PROGRESS.

A MEETING of the subscribers to the *Establishment for Gentlewomen, during illness* took place on the 10th, for the purpose of receiving a report of the progress of the institution. The Earl of Carlisle presided. From the report made by the managers and read to the meeting, it appeared that the liberal assistance afforded to the undertaking had been such as to induce the committee to take premises upon a small scale for a period of three and a half years, at No. 8, Chandos Street, Cavendish Square. The total amount of subscriptions already received exceeded 2000*l.*, the balance in the hands of the bankers amounting to 403*l.* The number of patients admitted since the opening of the institution had been thirteen, of whom six were at present inmates of the establishment. The services of a most efficient medical staff had been obtained. The success of the institution had been fully equal to the most sanguine expectations of its founders, and the committee stated that their further inquiries had confirmed them in the belief that the institution would be the means of affording relief hitherto unattainable in many most distressing cases, the helplessness and increasing number of which was attributable not to the fault or providence, but rather to the circumstances and sex of the sufferers.

The half-yearly general meeting of the Governors and Directors of the *Royal Humane Society* was held on the 10th. It was reported that the number of persons rescued from the ice, in the three parks, during the last skating season, amounted to 79. The number of bathers in the Serpentine during the present year has been estimated at 178,000. Five persons have been rescued from drowning during the same period, two of whom were taken to the receiving house of the society. Four attempted suicides have been prevented, and five rescued. Various new regulations have been made for the direction of bathers, and all unsafe parts have been forbidden, by which there can be no doubt many accidents have been prevented. Among the cases in which the Society's silver medal was awarded, that of Miss Harriet Atkinson, for the rescue of Elizabeth Hudson, who had fallen into a deep moat at Starston, in Norfolk, excited peculiar interest. This young lady on witnessing the accident, hastened to the spot, accompanied by a female friend and a man. The latter, however, was too terrified to render any assistance, when she immediately dashed into the water, swam to the sinking girl, and brought her safely to shore. It appears that Miss Atkinson, who was in a delicate state of health, had been residing a short time at Yarmouth, where she had learned to swim. "An ingenious invention of Lieutenant Halket, R.N., was brought before the meeting. It is a boat-cloak which may be worn, like a common cloak, on the shoulders. It can be inflated by means of a bellows in three minutes and a half, when it forms a kind of boat, capable of supporting six or eight persons, which it is almost impossible to overturn. The meeting determined that an experimental trial should be made of its efficacy.

A meeting of the governors of the *Seamen's Hospital* was held on the 12th, Mr. J. Wild, the vice-president, in the chair. The following extract from the report read to the meeting will show the magnitude and importance of this institution. The total number of patients relieved since the first establishment of the hospital in 1818 was 62,100; of whom there were 36,014 Englishmen, 7474 Scotchmen, 5537 Irishmen, 226 Frenchmen, 820 Germans, 762 Russians, 1191 Prussians, 195 Dutchmen, 834 Danes, 1934 Swedes and Norwegians, 554 Italians, 469 Portuguese, 268 Spaniards, 1024 East Indians, 1055 West Indians, 804 British Americans, 1123 United States, 126 South Americans, 368 Africans, 16 Turks, 49 Greeks, 29 New Zealanders, 29 New South Wales, 179 South Sea Islanders, 37 Chinese, and 128 born at sea. Of these 3038 were in Her Majesty's service, 1797 in the Hon. East India Company's service, and 56,415 were from merchant vessels of different nations. The ordinary expenditure for the last three months amounted to 1568*l.* 1*s.* 5*d.*

PERSONAL NARRATIVE.

THE Royal Family left town for Osborne on the 18th accompanied by their visitor Prince Leopold of Saxe Coburg and Gotha.

Sir Thomas Wilde has been appointed Lord Chancellor, and raised to the peerage by the title of Baron Truro, of Bowes, in the county of Middlesex.

Sir John Jervis has been appointed Chief Justice of the Common Pleas; Sir John Romilly, Attorney-General; and Mr. Cockburn, Solicitor-General.

Mr. Cockburn, the new solicitor-general, was re-elected on the 17th for the borough of Southampton. On the same day Sir J. Romilly, the attorney-general, was re-elected for Devonport.

On the 19th, Sir Robert Peel, Bart., was returned for the borough of Tamworth, vacant by the death of his late father.

The members of the Reform Club, on the 20th, gave a splendid *Banquet to Lord Palmerston*, to express their confidence in his policy, and to commemorate his late triumph in the House of Commons. The number of guests was limited to two hundred, as many as the grand dining-room could hold. Mr. Bernal Osborne was in the chair. Speeches were made by Admiral Sir C. Napier, Gen. Sir de Lacy Evans, Lord Palmerston, Lord James Stuart, the Attorney-General, the Solicitor-General, and other distinguished persons present.

The East India Company has granted an allowance, during life, of 100*l.* per annum, to the gallant Major Herbert Edwardes, in consideration of his eminent services and the loss of his right hand.

The ceremony of the *First Communion of the Court of Paris* took place on the 20th at the French Catholic Chapel, in King Street, Portman Square. Dr. Wiseman, the Roman Catholic Bishop of London, officiated in person, assisted by the Abbé Maily and the Abbé Guille, and himself administered the communion to the young Prince. The Ex-King, the Queen Marie Antoinette, the Duchess of Orleans, and all the members of the Royal family, were present, as well as a considerable number of devoted friends and adherents, many of whom had come from France especially to testify on this occasion their sympathy and respect for the illustrious exiles. Many English ladies were also present at the ceremony, among whom were the Duchess of Leinster, Lady Granville, Lady Shelburne, Lady Jersey, Lady Clementina Villiers, Hon. Miss Foley, Lady Harriette d'Orsay, Lady Tankerville, &c. On leaving the chapel the ex-King and Queen and the Duchess of Orleans were received with every demonstration of respect by a numerous assemblage, both French and English, who had not been able to obtain admittance within the church. At 2 o'clock a mass was again celebrated in the presence of an equally distinguished and numerous assemblage.

Obituary of Notable Persons.

A deplorable accident has caused the death of SIR ROBERT PEEL. He was riding up Constitution Hill about five o'clock on Saturday evening the 20th of June, when his horse shied at some passing object, and threw him over its head. He fell on his face, and mechanically kept hold of the rein, which brought down the animal upon him, its knees striking him between the shoulders. He was immediately lifted up; and being recognised by several gentlemen who were passing, was conveyed home in the carriage of Mrs. Lucas, of Bryanstone Square, which had come up at the time, attended by Sir James Clarke, the Queen's physician, who had observed the accident. Several eminent medical men were assembled, who ascertained that Sir Robert had suffered a fracture of the collar-bone and a severe injury of the shoulder. This was announced to the anxious public in a bulletin, which expressed a hope that he had received no internal injury. It was at first believed that he was going on favourably, and the bulletin of Monday morning stated that he had enjoyed refreshing sleep; but in the course of that day the symptoms became more and more alarming. In the evening he became delirious, and continued in that state during the greater part of the night. In his wanderings his thoughts were with his friends, and the names of Hardinge and Graham were frequently upon his lips. On Tuesday morning he again had a sound sleep, from which he woke with his mind quite composed. Towards evening it was evident that he was sinking fast, and that recovery was hopeless. The last offices of the Church were administered to him by Dr. Tomlinson, Bishop of Gibraltar, and about

eleven o'clock that night (the 2nd of July) he expired, blessing with his latest breath the afflicted family, and friends who surrounded his death-bed. After his death it was found that the fifth rib on the left side was broken; a discovery which could not be made sooner, as he was unable to bear the torture of a minute examination. This was probably the mortal injury; though, the faculty being disclaimed to a post-mortem investigation, the precise cause of death was not ascertained.

The death of no public man has ever excited more general and unmingled sorrow, not only in the metropolis, but in every part of the country. During his illness the public anxiety was unbounded. The Queen, Prince Albert, and the most distinguished individuals of every political party, were incessant in their inquiries; and the neighbourhood of his house was thronged by multitudes, eager to catch every gleam of hope. When the fatal result was known, the general feeling was strangely manifested. During the following day, in the neighbourhood of Whitehall, every window was closed; and in the City the same mark of respect was shown by a great number of mercantile establishments, and a great part of the shipping in the river hoisted flags half-mast high. We have recorded elsewhere the tributes paid to his memory by both houses of parliament; and many others, equally heartfelt, have been paid by corporate and public bodies in all parts of the kingdom. Such testimonies have not been confined to this country. At the opening of the sitting of the French Assembly on the 6th, it was agreed, on the proposition of M. Dupin, the president, to record on their minutes a token of regret and esteem for a statesman "who, during the whole course of his long and glorious career, has never expressed any sentiments towards France but those of kind feeling and justice, and whose language has always been that of courtesy towards the government."

On the 9th, Sir R. Peel's remains were deposited, according to his own desire, in the family vault of the parish church of Brayton Bassett. His obsequies were plain and simple, befitting the condition of a large landed proprietor, but nothing more. He was followed to the tomb by a few chosen friends, and the great mass of mourners consisted of the inhabitants of Tamworth and the rural districts round. The present Sir Robert Peel (who had arrived from Geneva the day before) was chief mourner, accompanied by Capt. J. Peel, Mr. F. Peel, Mr. A. Peel, Capt. W. Peel, R.N., the Dean of Worcester, Lord Villiers, Mr. Lawrence Peel, Colonel Peel, the Dean of York, the Right Hon. G. R. Dawson, Captain Peel, son of the Right Hon. W. Y. Peel, Sir J. Floyd, Mr. R. Peel, son of the Dean of Worcester; Captain E. Peel, son of Edmund Peel; Captain Charles Leux Peel, Archibald Peel, son of Colonel Peel; the Lord Harley, Robert Peel Dawson, General Yates, Sir Hume Campbell, the corporation of Tamworth two and two, and the two Messrs. Rhoades. The pall-bearers were—Sir James Graham, Lord Aberdeen, Lord Hardinge, Sir Francis Lawley, Mr. Goulburn, Mr. B. Denison, Sir George Clerk, and Mr. Bonham. Arrived at the church, the Bishop of Gibraltar read the funeral service, and when it was concluded, the sons of the deceased advanced to the mouth of the vault, and each in his turn took a last farewell. At Tamworth, during the whole day of the funeral, business was completely suspended, the shop doors and windows closed, and the whole inhabitants in mourning. At Birmingham, Manchester, Liverpool, Derby, Wolverhampton, Bristol, and many other large towns, similar marks of respect were paid to the memory of the departed.

Several monuments are to be raised to the illustrious statesman. The House of Commons have addressed the Queen, praying her sanction to a monument in Westminster Abbey. A great meeting took place at the Mansion House on the 15th, when the preliminary measures were taken for the erection of a monument in the city. And a subscription has been set on foot for a testimonial to be called "The Working-Man's Monument," at first limited to a penny, but now unlimited in amount, from a penny upwards. Mr. Colclen, in a letter to the news-

papers, has suggested that this monument shall bear, as an inscription, the words with which Sir R. Peel closed his last speech as minister: "It may be that I shall leave a name sometimes remembered with expressions of goodwill in the abode of those whose lot it is to labour and to earn their daily bread by the sweat of their brow, when they shall recruit their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice."

His Royal Highness the DUKE OF CAMBRIDGE died on the 8th. He had had an attack of cramp in the stomach on the 18th of June, but it had passed away and no further danger was apprehended. He came rapidly debilitated, however, during some days before his death, and expired somewhat suddenly and without suffering. He was in his 77th year, having been born on the 24th of February, 1774. He entered the army at an early age, and in 1794 attained the rank of Colonel. In 1803 he was made a General; in 1806 Colonel of the Coldstream Guards; and, in 1813, a Field Marshal. In 1801 he obtained his Ducal rank. In 1816, after the French had been expelled from Hanover, he was appointed viceroy of that State till 1837 when, by the death of William the Fourth, the succession opened to the Duke of Cumberland—he married, in 1818, the Princess Augusta Wilhelmina Louisa of Hesse Cassel, by whom he has left three children, Prince George of Cambridge, the grand Duchess of Mecklenburgh Strelitz, and the Princess Mary of Cambridge.—The late Duke enjoyed the unqualified esteem and good-will of the nation from the kindness of his disposition, his active benevolence, and blameless purity in every relation of life.

On Tuesday the 16th His Royal Highness's remains were deposited in the parish church of Kew, with as little pomp and parade as could possibly attend the funeral of a royal personage.

Captain OWEN STANLEY, R.N., son of the late Bishop of Norwich died on the 13th March off Sydney in New South Wales. He was a distinguished officer, and was employed in surveying the dangerous seas between Australia and the Indian Isles.

GEORGE CRANSTON LORD CORNBROUGH, formerly one of the Judges of the Court of Session in Scotland, died at Corehouse on the 26th of June. He was called to the bar in 1793, and raised to the bench in 1826. In consequence of a shock of paralysis he resigned his office in 1839.

MR. ROBERT DUDON BROWN, Member of Parliament for the county of Mayo, died on the 1st inst. in the 39th year of his age.

The Earl of Donoughmore died at Palmerston-house near Dublin on the 3rd. He distinguished himself by the part he took, along with Sir Robert Wilson, in the liberation of General Lyautey from the prison of the Conciergerie. He is succeeded in his title and estates by his eldest son, Lord Viscount Sutrute.

LORD PERES died at his house in Mansfield Street on the 3rd, in his 57th year. He is succeeded in his title and estates by the Hon. W. Peres.

The Rev. W. KIRBY, the Entomologist, died at Batham, in Suffolk, on the 4th, in his 91st year.

ALEXANDER MUNRO, Esq., died at Edinburgh on the 6th at the age of 90. He was brother of Sir Thomas Munro, late governor of Madras, and was Commissary-General of the Indian army during the administration of the Marquis Wellesley.

The Right Hon. Lord DUNBOYNE, died at the Chateau Eichlingen, Pas de Calais, on the 6th, in his 70th year.

General ROYER, ex-president of the Republic at Hayti, died at Paris on the 6th.

MR. ROBERT STREMESSON, the celebrated Engineer, died at Edinburgh on the 12th, at an advanced age.

Mrs. GLOVER, the celebrated actress, died on Tuesday the 16th, in her 89th year. She had taken her farewell benefit on the preceding Friday, and had played her favourite part of Mrs. Malaprop. Probably the excitement of this trying scene on her aged and enfeebled frame had the effect of hastening her death. Her maiden name was Letterton, and she was a descendant of the great actor of that name who flourished in the early part of the last century.

COLONIES AND DEPENDENCIES

THERE is little to remark of the Colonial news of the month, but that the West Indians are making their usual complaints, and (we rejoice to add) more than their usual exertions. It is pretty plain that they see, though they have not the courage or candour as yet to confess, that their panacea must ultimately be found in the steady application of skill and science to better and more ample cultivation. It is rather curious (and a striking corroboration of this view) that the governor of St. Lucia should now express his strong conviction of the necessity for some such measure applied to the West Indies generally as that of the Irish Encumbered Estates Act.

The New Zealand Company has committed suicide. This act does not appear to create much concern, and may probably be taken for a not unhealthy indication that it is better to keep quite separate the duty of governing a colony and the hope of making a mercantile profit out of it. It is, at least, obvious that the Colonial Office has now a clearer field for its exertions, than when this Company ran the race of government along with it; and all who are interested in colonial affairs will have a right to demand that this greater power be warily and discreetly exerted in Downing Street. There is now a better opportunity for a colonial minister who thoroughly understands his duties, than has existed at any previous period of the English history.

The *Overland Mail* has brought dates from Bombay to the 2nd of June, Calcutta to the 1st of June, Madras to the 10th of June, and Hong-Kong to the 23rd of May. There is no political news from India or China of any importance. The Governor-General of India had arrived at Simla on the 2nd of May, and his health was so much improved by removal to a cooler climate, that it was no longer believed that he would leave India before the expiration of his term of service.

A tremendous accident happened at Benares on the 1st of May. A fleet of thirty boats, containing ordnance stores, was destroyed by the explosion of 3000 barrels of gunpowder with which they were freighted. Four hundred and twenty persons were killed on the spot, about 800 more were wounded, and a number of houses were levelled with the ground. The cause of the disaster remained unexplained, as not a human being was left alive who could tell the tale.

The famous oriental diamond the *Koh-i-noor*, or Mountain of Light, was presented to the queen at the levee on the 3rd, by the chairman and deputy-chairman of the East India Company; it had arrived from India a few days before under the custody of Colonel Mackesson, political agent, and Captain Ramsay, military secretary of the governor-general. This unrivalled jewel was discovered in the mines of Golconda, just three hundred years ago, and first belonged to the Mogul emperor Shah Jemaurp, the father of the great Aurangzebe. Its subsequent transmissions have attended the revolutions of empires. When the Mogul empire was destroyed in 1739, by Nadir Shah, it was the most precious of the spoils carried off by the Persian conqueror. It afterwards became a trophy of the Affghan conquests; and from the sovereign of Cabul it passed in a similar way into the hands of the famous Runjeet Singh, the "Lion of Lahore." Its last transference was into the hands of England, in consequence of the issue of the Sikh war; and it is now the richest ornament of the British crown. It is of the shape and size of the pointed half of a hen's egg, and its value, calculated in the way employed in estimating diamonds, is stated to be two millions sterling.

The advices from Hong-Kong state that the City of Canton and the neighbouring towns are affected with a malignant fever, which has proved very fatal to the natives. It had not, however, made its appearance in the European factories.

In *Cambodia* and *Cochin-China* the cholera was raging fearfully, and at the date of the latest accounts, March last, it was feared that the same calamity would again visit the neighbouring country of Siam; where, during last year, it had carried off nearly one-fourth of the population. Commercial and agricultural operations were in a great measure suspended, and the sufferings of the inhabitants were augmented by a drought which was destroying the crops of rice and sugar.

On the 1st of May three pirates were hanged at West Point, Hong-Kong. Through some mismanagement they were kept on the scaffold for more than half-an-hour with the cords round their necks. The bolt could not be drawn, and after shaking the gallows violently, the police sent to the naval stores for a lummer, with which they knocked back the bolt. Two of the criminals fainted, and were held up until the bolt was forced back; the third kept calling "fidee, fidee;"—"be quick, be quick." The scene was very disgusting.

The *Overland mail* has brought news from Ceylon to the 11th of June. The commissioners, sent to Kandy to inquire into the circumstances connected with Captain Watson's proclamations, had closed their proceedings, but the result was not made public.

Accounts from *Batavia*, of the 25th of May, mention an insurrection in the district of Bantam; which, though suppressed for the time, gave much uneasiness to the Dutch government. It is attributable to a foreign agent having been placed in power whom the natives refuse to acknowledge. The disturbances broke out during the native festivities in the month of April. The insurgents attacked the town of Anjeer, in the Straits of Sunda, and succeeded in burning the houses in the outskirts; but they were at length beaten by the military, and retired into their fastnesses, leaving many dead and wounded.—An earthquake had taken place at Amboyna,

followed by an epidemic which carried off nearly all the European population. The governor and most of the civilians had died, and the garrison was reduced to seventeen men.

The *West India* Mail brings papers from Jamaica to the 22nd June. The only event which engaged public attention, was the early meeting of the legislature, which had been called by proclamation to assemble on the 25th of June. The principal business was to remove some defects from the bill, passed last session, for raising a loan to liquidate the island debts. The weather was favourable, and the island healthy. From Barbadoes, Tobago, St. Vincent, Dominica, and Grenada, the weather is described as favourable to agriculture. On the 31st of May, Tobago was visited by a severe squall, which blew down some labourers' houses, and did considerable damage to the grounds.

The advices from *Corfu* state that, on the 12th of June, Sir Henry Ward, the Lord High Commissioner issued a proclamation proroguing the House of Assembly to the 12th of December, and at the same time sent a special messenger to England with despatches to the Colonial Office.

The latest accounts from *Malta* state that the cholera, which had appeared in the island, was declining. From the 9th of June to the 10th of July there had been—of the population, 122 attacks and 89 deaths; in the fleet, 32 attacks and 18 deaths; in the garrison, 19 attacks and 19 deaths. Total cases, 173; total deaths, 126.

The Court of Policy of British Guiana, on the 13th of June, on considering a petition of the inhabitants for a reform in the existing institutions of the colony, passed a resolution to the effect, that the legislative institutions of British Guiana are unsuited to the existing state of society, and that a house of assembly and an elective legislative council should be established in their stead. It was further resolved, that the governor be requested to transmit copies of the foregoing resolution and petition to the Secretary of State for the Colonies.

There are advices from *Toronto* to the 5th of July. The Canadian Assembly had agreed, by a large majority, to an address to the queen, expressive of their attachment to the crown and government of Great Britain, and their determination to maintain the connexion with the mother country unimpaired. It is stated, however, that many who voted for this address are in favour of making the second branch of the legislature elective. Some local measures of importance were engaging the attention of the house, particularly a school bill, and a bill for enabling municipal corporations to purchase railway stock. A bill has also been introduced to permit the introduction of foreign reprints of British copyright books on the payment of a duty of twenty per cent. Two calamitous accidents had taken place. On the 16th of June the steam-ship *Griffith*, running between Buffalo and Toronto, was destroyed by fire, and out of 326 persons on board, only 40 were saved. A fire at Montreal, on the 15th of June, destroyed the church of St. Amis, and upwards of 200 houses.

A large portion of the table rock of the Niagara Falls has fallen away. A carriage was on the rock at the time, in which there were a man and a boy; they escaped, but the carriage went down. The effect of the crash was felt for miles around.

PROGRESS OF EMIGRATION AND COLONISATION.

A meeting of influential members of both Houses of Parliament took place on the 8th, to devise the best course of proceeding in order to induce Her Majesty's government to approximate the Australian colonies by *Means of Steam*, to Great Britain; when it was resolved that steps should be immediately taken to bring the whole subject under the attention of both Houses of Parliament. As a preliminary course, it was arranged amongst other measures, that an address to Her Majesty should be proposed in the House of Commons by Lord

Naas, M.P., praying for the immediate establishment of steam communication with the Australian colonies. It was also announced that petitions to the legislature on behalf of the object were in course of signature.

At the annual meeting of the *New Zealand Company* on the 4th, it was resolved to resign the charter and dissolve the company, on the ground that their means were exhausted, and that the proceedings of the government had rendered them unable to carry on the work of colonisation. It was also resolved to address a letter on the subject to the colonial secretary. Another meeting was held on the 16th, with Mr. Aglionby in the chair. He stated that no answer had been received to the letter addressed to Earl Grey; that the company still existed as a corporate body, as the proprietors had as yet only expressed their readiness to resign the charter, and the surrender had not actually been accepted; and that no expenditure would be allowed but such as was necessary for winding up the affairs of the company; but, he added, all this would depend on the answer received from the colonial office.

The sixth party of *Female Emigrants*, sent out to Australia by the society lately formed under the auspices of Mr. Sidney Herbert, embarked, on the 19th, on board the *William Hyde*, to proceed to Port Adelaide. This party is comparatively small, only twenty-one in number. It is the last that will be sent to Australia this season; it being the wish of the committee to obtain some intelligence of the success of the first party that went out in the *Culloden* some months ago, before they send more to that quarter of the world.

A parliamentary paper just issued, gives some useful information respecting the *Australian Colonies*. The population of the colonies (omitting New Zealand) in 1839 was 170,676, and in ten years (1839 to 1848) it had reached 338,761, being an increase of 168,085. The imports had decreased in the ten years, having been 3,376,673*l.* in 1839, and 2,578,442*l.* in 1848. There was an increase in the exports in the ten years of 1,908,887*l.* They amounted in 1839 to 1,845,428*l.*, and in 1848 to 2,854,315*l.* The shipping inwards was 267,353 tons in 1839, and 353,321 in 1848, being an increase of 86,068, whilst the shipping outward was 267,133 tons in 1839, and 341,583 in 1848, showing an increase of 74,450 tons.

Another of Mrs. Chisholm's *Family-group Meetings of Emigrants* was held off the 16th at the Royal British Institution, City Road. The hall was crowded, and all the persons of distinction, who co-operate with Mrs. Chisholm in her benevolent plans, were present. The meeting was of the same character as those which preceded it, but on a much larger scale. In the course of the evening the following information was given as to the intended proceedings of the society. It is proposed to send out 25,000 emigrants, for which purpose loans will be required to the amount of 50,000*l.* The whole number of 25,000 is to be spread over four years: in the first year 8300; in the second, 6000; in the third 6500; and in the fourth, 4200. The loans towards the passage will be repaid at or before the expiration of two years; and the groups, consisting of families and single individuals, will pay a proportionate forfeit if any one of the group should prove a defaulter.

NARRATIVE OF FOREIGN EVENTS.

THE French kaleidoscope changes again. The variable and very brittle atoms misnamed "order," in the Assembly and the Elysée, have been thrown into a quite new combination with the bit of rusty but resolute iron called Changarnier, and people will still be found to admire and be hopeful, till the wretched toy takes another shape, and the Elysée or the Tuileries receives another tenant. The attitude of all parties at present is that of waiting for a *coup d'état*, which no party has the courage or even the means to attempt. Meanwhile the press is gagged; and from the committee of permanence which as it were holds the power and authority of the chamber during the term of prorogation, the partisans of the President have been carefully and scornfully excluded. There does not seem to be a doubt, that, like the horses of Duncan, and perhaps maddened, like them, by the near prospect of the violent dissolution of their respective masters, all the various despotic sections which have for the past year done their best to make a military barracks of France, are now preparing to devour each other. It is too much to hope that a moderate and rational republican government should finally arise in their place. No one can reasonably anticipate any present realisation of constitutional government in France.

That worst of all nuisances, a war between two small states, involving the inconvenience, and likely at last to compel the re-interference, of more important neighbours, has arisen from a precipitate ratification of peace between Denmark and Prussia; the latter somewhat shabbily withdrawing the troops she had sent to the help of the Schleswegers and Holsteiners. It is said at the dictation of Russia. The gallant and obstinate little duchies have again in consequence challenged Denmark to the field; and the result of the struggle, whichever way it turn, will yet more gravely complicate that most inextricable of all complications, the "German question." The disgrace of Haynau is a signal example of retribution; though the Nemesis (as frequently happens in such cases) falls from a quarter least looked to or expected. The civilian tools of despotism had become weary of the arrogance of their too capable military instrument.

The sudden, and much to be lamented, death of the President of the United States, has lifted an obscure man to the presidency, who will probably (as Mr. Tyler did) fall into the hands of abler and less scrupulous men. Violent party advice had already sadly worried poor General Taylor, and is not likely to meet with much sober or statesmanlike resistance in President Fillmore.

The French Assembly, on the 29th of June, received the report of the committee on the proposed bill for restricting the *Liberty of the Press*. The debate on this measure commenced on the 8th inst., and gave occasion to a violent scene. M. Rouher, the Minister of Justice, had described the Revolution of February as a "disastrous catastrophe;" the opposition exclaimed loudly against the expression as an indignity to the Republic, and called on the President, M. Dupin, to censure the speaker. M. Dupin refused, saying that "he would not be forced by clamour to call a minister to order." M. Girardin entered the tribune pale with excitement, declared he would not sit in an assembly where such language was permitted, and exhorted the opposition to *sign en masse*. This appeal being received with laughter by the Right, he came down and wrote some-

thing which was supposed to be his resignation. In the evening there was a meeting of above 200 of the opposition, who agreed to a protest which was handed in by M. Cœmieux at next day's sitting, but the President refused to receive it. The debate then proceeded on the first article of the bill, which enacts that proprietors of journals shall lodge in the treasury a *cautionnement* or security, varying in amount according to the population of the town in which the journal appears, and the frequency of its publication. M. Victor Hugo made a powerful speech against the bill; and several amendments were made and rejected. On the 10th, M. Tingué moved an amendment that all articles in journals should be signed by their writers. It was violently opposed, and, after a stormy debate, was unexpectedly carried by 313 to 281. Much agitation ensued, and, the sitting

having been suspended for a short time, an amendment was brought forward by the committee, confining the writer's signature to the original manuscript; but, on the following day this amendment was rejected by 378 to 255; and, on the 12th, the provision that articles should bear the signature of the writers was adopted as an article of the law. On the 15th, an amendment, by M. de Riany, that newspapers publishing *feuilletons* with novels or romances should pay a supplementary stamp of one centime beyond the ordinary stamp duty, was carried, after violent opposition by 351 to 252. On the 16th, the bill was finally passed by a majority of 390 to 265.

On the 18th, M. Lamartinière, the editor of the *Pouvoir*, was brought before the assembly to answer for an article in that journal reflecting severely on the proceedings of that body. The charge against him consisted of two counts, an offence against the assembly and an attack on the constitution. The result of the ballot was, on the first count 273 for condemnation, 154 for acquittal. On the second count the assembly declared itself incompetent to judge. The assembly condemned M. Lamartinière in the maximum penalty of 5000 francs.

The President made an excursion on the 11th to Compiègne, where he was received by the authorities, the military, and the inhabitants, with demonstrations of unbounded enthusiasm. The artillery fired salutes, triumphal arches were erected, and flags floated from every housetop. He performed some popular acts, such as witnessing a wedding in humble life and giving the young couple a handsome present, visiting the bedside of an old sergeant of hussars, whose leg had been broke by a fall from his horse, and speaking so kindly that the old man swooned with delight. The shouts among the crowd were, "Vive le Président!" "Vive Louis Napoleon!" "Vive l'Empereur!" The President returned to Paris the following night, much gratified, doubtless, with his reception.

A youth of seventeen, named George Walker, a compositor in Galignani's printing-office, was arrested on the 5th, close to the door of the *Elysée*, for having declared his intention to *Assassinate the President*. A loaded pistol was found on him. He belongs to a respectable family, but his own conduct had been dissolute, and he had frequented socialist clubs and read socialist writings. On his examination it was found that he was evidently insane, and he was conveyed to the *Bicêtre*.

On Sunday the 7th, a person named Poitevin ascended on *Horseback in a Balloon* from the Champ de Mars, in the presence of thousands of eager spectators. He descended in safety about eight leagues from Paris.

The prorogation of the assembly being about to take place, it has become necessary to appoint a "committee of permanence" consisting of twenty-five members, who have the right of convoking the assembly in case of urgency during the prorogation. The ballot for this committee began on the 22nd and was not closed at the time of the last accounts; but it exhibited the effects of the coalition between the mountain and the ultra-legitimists.

Public attention in Germany is chiefly occupied by the treaty of peace entered into between Prussia and Denmark, and the renewal of hostilities between Denmark and Schleswig Holstein. On the 14th, the troops of the Duchies, under General Willisen, advanced into Schleswig, and two days afterwards the Danish forces also entered Schleswig at various points. An immediate collision between them was expected.

General Haynau has been dismissed by the Austrian government, in consequence of having brought to trial a number of the Hungarian deputies involved in the late insurrection, and afterwards pardoning them on his own responsibility. The general, who is known to be a natural son of the reigning Elector of Hesse's grandfather, is to take up his residence in Cassel.

Little progress seems making towards the *German Confederation*. The congress of plenipotentiaries continues sitting at Frankfort, but little is known of their proceedings. It is said that, expecting nothing from the attempts at coming to an agreement between Austria and Prussia, they see no reason for delaying longer the

business that has brought them together, viz., forming the basis of the establishment of a central power.

The *Queen of Spain* was delivered on the 12th inst. of a son, who died a few minutes after birth. The queen has recovered her health.—The Count de Montemolin, son of Don Carlos, was married on the 10th, at the royal palace of Caserta, near Naples, to the Princess Caroline, sister of the king. On the same day the Spanish ambassador quitted Naples.

Accounts from Lisbon, of the 29th, state that an American squadron had arrived in the Tagus to enforce the claims of the United States against the Portuguese government. The commander of the squadron had given twenty-one days for consideration.

The intelligence from New York comes down to the 11th instant. General Zachary Taylor, the President of the United States, died at Washington on the night of Monday the 8th. His illness first became known the day before his death, when he was said to be suffering from an attack of diarrhoea. He was in his 64th year. He is succeeded by Mr. Fillmore, formerly Vice-president, who was sworn into office on the 10th. The cabinet, as a matter of course, had resigned, and several changes were spoken of. The late President's funeral was fixed for the 13th.

The cholera has re-appeared in several of the western cities. At Cincinnati there have been sixty-three fatal cases in one day.

A great sensation has been produced by the confession by Professor Webster of the murder of Dr. Parkman. It is of great length, and the statements are consistent and plausible. Dr. Webster declares that Dr. Parkman went to his room by appointment; he (Webster) wishing to explain his inability to pay up immediately the money he owed, and to throw himself upon his creditor's indulgence; that Parkman would not listen to him, but provoked him beyond endurance by taunting reproaches and opprobrious epithets, and that, in the heat of passion thus raised, he dealt Parkman a blow with a piece of wood lying at hand, which instantly killed him; that the thought of proclaiming the deed and explaining the circumstances never entered his head, but that his only impulse was to take means for concealment; and that, accordingly, he dismembered the body and endeavoured to put it out of the way in the manner which transpired at the trial. He concludes by solemn asseverations that he never for a moment premeditated the murder, which was entirely the result of uncontrollable passion. Doubts were entertained whether this confession would have any effect in saving his life. The governor and council of the State were engaged in considering the case and in examining many petitions in his favour.

The City of Albany had been visited by a thunder-storm of unexampled violence, which had done much damage. Several bridges had been swept away. Among others, a bridge on the Utica railway was carried away just before a passenger train reached the spot. Part of the train was precipitated into the swollen stream, and several persons perished.

The Governor of Cuba has declared that all the American prisoners belonging to Lopez's expedition shall be surrendered in due time to the American authorities; thus avoiding a rupture between the United States and Spain.

Congress continued to be occupied with the Slavery question, but the debates had not yet been attended with any result.

The intelligence from California contains the account of a fearful conflagration at San Francisco on the 4th of May, which had destroyed one-fourth of the city. It was supposed to be the work of an incendiary, and a reward of 5000 dollars was offered for his apprehension. —A party of miners at North Fork had been attacked by a numerous band of savages; several of the miners were killed, but the assailants were at length beaten off with great loss. —Extravagant stories are told of the quantities of gold found at a place called Tuolomo Placer, near Columbia city. Two large masses of pure gold, the one above ten, and the other above twenty pounds' weight, had been dug up there.

NARRATIVE OF LITERATURE AND ART.

VERY few books of any mark or character, with one exception, have been published during the past month; but university reform has made greater progress than the apparently unsatisfactory result of the renewed debate would seem to indicate, and in this important question is involved not only the better training of men to the service of literature, but to that of legislation and public life. The steady persistence of Government in the proposed University Commission has had its due effect, and the furious outcry of illegality has dropped to a very urgent plea of inexpediency. Thus *cadit questio*. The leading advocates of the universities are now fain to confess that there are "many most extensive and important improvements" which they trust to see effected by the universities themselves, if the Government will only be quiet. But the Government is too far pledged to recede; and, if it would test what is likely to be done by *désarmé- faire* in the coming half-century, it has but to note what advances the last fifty years have made, by observing the perfect applicability to the existing state of the universities, of what was written of them, at the commencement of the century, by the poet Wordsworth. This curious revelation, which the writer's recent death has caused to be made opportunely, is remarked upon below. Nor will we hesitate to add that the course already taken by university authorities on questions of education quite apart from their own institutions, should in itself be held quite decisive against their claim to have the settlement of this great reform entrusted to them. They have contributed to the general educational discussion its bitterest and most narrow-minded opponents; and it is to them we chiefly owe that still disgraceful obstruction of the efforts of the Privy Council to extend the blessings of instruction to the people, which rests on no better plea than their hatred of admitting laymen to any share in the management of schools connected with the Church, however assisted those schools may be by the public money of the State. Priestly arrogance has rarely ventured further even in the times and countries most degraded and enslaved by it.

The most prominent and interesting publication of the month has been that of Wordsworth's autobiographical poem of *The Prelude*; or, *Growth of a Poet's Mind*. It consists of fourteen books, is of larger bulk than *The Excursion*, and is written in blank verse, in the style of that poem. It is addressed to Coleridge; and, though its auto-biographical details have till now withheld it from publication, appears to have been written at the opening of the century. Wordsworth had then retired to his native mountains with the hope of being enabled to construct a literary work that might live; and, desiring to ascertain how far nature and education had qualified him for such employment, he undertook to record, in verse, the origin and progress of his own powers, as far as he was acquainted with them. *The Prelude* was the result, as he has himself long ago explained in his preface to *The Excursion*; and adopting his own illustration, it will be found to bear something of the same relation to the more complete developments of its author's mind and genius as the ante-chapel of a Gothic church has to the body of the edifice. The portions of it which will probably strike most readers, and will certainly be read with peculiar interest just now, are those descriptive of his residence at Cambridge, and its unfavourable effect upon him. He condemns the trivial influences to which youths not naturally given to hard work are exposed; he speaks unfavourably of the kind of struggles elicited by the competition of hard-working students; he denounces compulsory chapel-attendance as of most evil tendency; and, in many passages of eloquent beauty, doing delightful homage to the great names and time-honoured associations connected with both universities, he sighs for the adoption of improvements which might see them once more the kindly and hospitable retreats of destitute scholars, and the truly quiet, meditative nurseries of knowledge and religion.

Another note-worthy poem of the month, also a posthumous publication though written some years ago, is a dramatic piece attributed to Mr. Beddoes, and partaking largely of his well-known eccentricity and genius, called *Death's Jest-Book or the Fool's Tragedy*. A republication of Mr. Cottle's twenty four books of *Alfred*, though the old pleasant butt and "jest-book" of his ancient friend Charles Lamb, hardly deserves even so many words of mention. Nor is there much novelty in *A Selection from the Poems and Dramatic Works of Theodor Körner*, though the translation is a new one, and by the clever translator of the *Nibelungen*. To this brief catalogue of works of fancy we may, perhaps, properly add the mention of two somewhat clever tales in one volume, with the title of *Hearts in Tortmain and Cornelia*, intended to illustrate the

working of particular phases of mental emotion; and another by Mrs. Trollope, called *Petticoat Government*.

In the department of history we have nothing more important to notify than a somewhat small volume with the very large title of the *Correspondence of the Emperor Charles V. and his Ambassadors at the Courts of England and France*; which turns out to be a limited selection from letters existing in the archives at Vienna, but not uninteresting to English readers, from the fact of their incidental illustrations of the history of our Henry the Eighth, and the close of Wolsey's career. Two books of less pretension have contributed new facts to the history of the late civil war in Hungary; the first from the Austrian point of view by an *Eye-witness*, and the second from the Hungarian by *Mar Schlesinger*. Mr. Baillie Cochrane has also contributed his mite to the elucidation of recent revolutions in a volume called *Young Italy*, which is chiefly remarkable for its praise of Lord Brougham, its defence of the Pope, its exaggerated scene-painting of the murder of Rossi, its abuse of the Roman Republic, and its devotion of half a line to the mention of—Mazzini!

Better worthy of brief record are the few miscellaneous publications with which we shall conclude our summary; and which comprise an excellent new translation of *Rocheport's old's Maxims*, with a better account of the author, and more intelligent notes, than exist in any previous edition;—most curious and interesting *Memoirs of the Empire of Japan in the Sixteenth and Seventeenth Centuries*, which Mr. Rundell of the East India House has issued under the superintendence of the Hakluyt Society, and which illustrate our English relations with those Japanese in a manner not so satisfactory as is exactly desirable;—an intelligent and striking summary of the *Antiquities of Richborough, Reculver, and Lympne*, written by Mr. Roach Smith and illustrated by Mr. Fairholt, which exhibits the results of recent discoveries of many remarkable Roman antiquities in Kent;—and a brief unassuming narrative of the Hudson's Bay Company's *Expedition to the Shores of the Arctic Sea* in 1846 and 1847, by the commander of the expedition, Mr. John Rae.

Mademoiselle Rachel terminated on the 26th her engagement at the St. James's Theatre, which has lasted the greater part of the month. Besides performing a round of her principal characters in the tragedies of Corneille and Racine, she appeared as the heroine of Scirbe's drama *Adrienne Lecouvreur*—a part which made an immense impression on the public. With Rachel's departure this theatre closed for the season.

COMMERCIAL RECORD.

BANKRUPTS.

From the Gazette of June 28.—JOSEPH BOYCOT, Kidderminster, draper.—GEORGE HOLMES and HENRY HOLMES, Derby, ironmongers.—WILLIAM JONES, Bristol, stationer.—JOSEPH MOORE, Hanover Street, Islington, victualler.—MOSES WRANGLE, Boston, Lincolnshire, cabinet-maker.

July 2.—JOHN BULL, South-Audley Street, ship-owner.—JAMES CORRETT, Ilanillo, Perthshire, Monmouthshire.—THOMAS EDWARDS, Newport, Monmouthshire, ironfounder.—SAMUEL LAVINGTON, Devizes, grocer.—JOSEPH JONES, Manchester, warehouseman.—THOMAS LUCKER, Exeter, provision dealer.—CLEMENT NUTTALL, Bading, Lancashire, innkeeper.—WILLIAM RUBLE, Cowlesley, Yorkshire, contractor for public works.—EDWARD BRYAN THOMAS, Leominster, wine-merchant.

July 5.—JOSEPH BOYCOT, Kidderminster draper.—THOMAS BRIDGEMANT, Halifax, Yorkshire draper.—SARAH DAY, Coventry, ribbon manufacturer.—GEORGE FULLER, Foultry, City, auctioneer.—JOSEPH NASH and THOMAS NEALE, Reigate and Dorking, Surrey, bankers.—ROBERT HADOMAN PARKINSON, Manchester, warehouseman.—JOHN RYAN, Mark-lane, City, and Manor-lane, Bermondsey, manufacturing chemist.—JAMES THOMPSON, Manchester, cement and gunpowder-dealer.

July 9.—NELLIE BROWN, Hounslow Heath, licensed victualler.—THOMAS DALTON, Coventry, silk dyer.—GEORGE WILLIAM LAIR, Landport, Hampshire, auctioneer.—JOHN BRIDGE SPARKS, Torquay, Devonshire, hatter.—JOHN TAYLOR, jun., Littleworth, Gloucestershire, licensed victualler.—JOHN WALLACE, Carlisle, grocer.—WILLIAM GEORGE DENNETT WALLIS, Grove-pl., Lissongrove, hill-broker.

July 12.—WILLIAM CLARIDGE, Bromley St. Leonard, Middlesex, butcher.—CHARLES GARLICK, Charterhouse-sq., Manchester, warehouseman.—JAMES HENRY GILL, Plumber's-row, City-rd., grocer.—JOHN JONES, Brynmawr, Breconshire, coal merchant.—GEORGE WILLIAM LAW, Landport, Hants, auctioneer.—THOMAS ROLLAND, and WILLIAM BURMAN, Birmingham, glass and china dealers.—BIRNBOY WIRCOCKS, ANTHONY SLEIGH, Bedford-st., Strand, and Thurlow-sq., Brompton, newspaper proprietor.—SAMUEL WILKINS, Birmingham, clock-dial maker.—JOSHUA WOODWARD, Loxley, Yorkshire, paper manufacturer.

July 16.—EDWARD ROBSON ARTHUR, North Shields, ship-owner.—GEORGE COLSTON BAYLIS, Cardiff, dealer in flour.—FRANCIS BLANCHARD and WILLIAM PASSMORE, Leeds, tailors.—THOMAS DALTON and THOMAS EDWARDS, Birmingham, ironfounders.—HENRY HART DAVIS, Battersea, Surrey, builder.—WILLIAM DAYMONT, Christian-st., St. George's in the East, tailor.—GEORGE KNIGHT, Worthing, Sussex.—SAMUEL NICHOLSON, York, trader.—JOHN VANDERLUTSE SCANTLEBURY, Conduit-st. East, Paddington, carpenter.—JOHN SCORIAN, Pontefract, Yorkshire, seed-merchant.—JOHN SHARROCK, Tuxthorpe Park, Lancashire, licensed victualler.—JOHN WELCH, Ashby-de-la-Zouch, Leicestershire, draper.—SAMUEL WILKES, Birmingham, clock-dial-maker.—THOMAS WILLIAMS, Trowbridge, Wilts, auctioneer.—WILLIAM MINTER WOOD, Dover, hosier.

July 19.—TIMOTHY BOURNE BOURNE, Liverpool, cotton-broker.—THOMAS DYSON, Hardinge-terrace, Newington, railway-contractor.—GILBERT FINLAY GREDWOOD, Malda-hill, chemist.—GEORGE SUPPHEARD, Modbury, Devonshire, linen-draper.—July 23.—ROBERT DAY BUNT, Reading, Berkshire, auctioneer.—WILLIAM WARD EVANS, Ludlow, Shropshire, butcher.—EDWARD FOWLER, Chester, Cambridgeshire, agricultural machinist.—RALPH HAMMOND, Macclesfield, inn-keeper.—WILLIAM HASTAM, Hertford, chemist.—JOHN HAYWARD, Hilsand, Shropshire, scrivener.—EDWARD ROUND and WILLIAM ROUND, Tipton, Staffordshire, timber-merchants.—RALPH NUTTALL, Macclesfield, silk manufacturer.

July 26.—THOMAS BUCKS, Brunswick-place, Blackheath, dealer in Berlin-wool.—CHARLES BURNARD, Mark-lane, City, seedman.—ROBERT FAIRLEY, Sunderland, chemist.—GEORGE GARRARD, Saxmildham, Suffolk, ironmonger.—DICK HORATIO HALEY, Lodge-road, Birmingham, ironfounder.—WILLIAM RAYHAM, Ladbroke-road, Notting-hill, builder.

BANKRUPTCIES ANNULLED.

July 16. WILLIAM BRANSCOMBE, Blandford, Dorsetshire, common carrier.

THE STOCK AND SHARE MARKETS.

City, July 27.

The English Stock Market has been very quiet during the month, but the tone has been very firm, and an improvement of nearly one per cent. has been established. Our last monthly review left Consols at 99 to $\frac{1}{2}$ ex. div.; from this point they moved steadily upwards till the 5th inst., when the price touched 97; but a few days after, the unsettled aspect of the question pending between Denmark and the Duchies began to exercise an influence on the market, causing some degree of flatness. Prices have since rallied, however, and Consols are now quoted 99 to $\frac{1}{2}$.

The Railway Share Market has not been so steady this month, the prices of all descriptions having receded, to a greater or less

extent, from the quotations previously ruling. Within the last three or four days, however, more firmness has been apparent, accompanied with a decided tendency to better prices.

CORN MARKET.

Mark Lane, July 27.

The tendency of prices in this market has been decidedly upwards, principally owing to the unsettled state of the weather during the greater part of the month, and a large business was transacted previous to the 12th inst. at gradually improving rates. The tone of the market is at present very firm. The London averages last announced are as follows:—

Wheat, per quarter, 46s. 7d.	Flour, Town made, delivered, per sack, 36s. to 38s.
Barley, 24s. 4d.	" American, per barrel, of 196 lbs., 20s. to 22s.
Oats, 18s. 5d.	
Beans, 25s. 11d.	
Pears, 27s.	

PROVISIONS—LATEST WHOLESALE PRICES.

Bacon, per cwt.—Waterford, 44s. to 68s.; Belfast, 40s. to 42s.	Hams, per cwt.—American, dried, 31s.; Limerick, 64s. to 70s.; Belfast, 58s. to 64s.
Beef, per 8 lbs., mid. to prime, 2s. to 2s. 10d.	Lamb, per 8 lbs., 3s. to 4s.
Butter, per cwt., Fresh, 8s. to 12s. per 12 lbs.; Carlow, 1st, 66s. to 68s.; Waterford, 1st, 63s. to 66s.; Dutch Friesland, 66s. to 68s.; Leer, 56s. to 60s.	Mutton, per 8 lbs., mid. to prime, 3s. to 3s. 6d.
Cheese, per cwt.—American, 34s. to 43s.; Dutch (Gouda), old, 32s. to 38s.	Potatoes, per ton.—Kent and Essex, 65s. to 80s.; Kent and Essex Regents, 60s. to 90s.
Eggs, per 120, 4s. 6d. to 7s.	Pork, per 8 lbs., 2s. 4d. to 3s. 8d.; American, new, per barrel, 40s.
	Ven, per 8 lbs., 1s. 8d. to 3s. 4d.

GROCERY—LATEST WHOLESALE PRICES.

Cocoa, per cwt.—Trinidad, 35s. to 46s.; Brazil, 27s. 6d. to 28s. 6d.	Sago, per cwt., Pearl, 18s. to 24s.
Coffee.—Good ord., Native Ceylon, per cwt., 43s. to 43s. 6d.; good ord. West India, 37s. to 40s.; Pine Mocha, 55s. to 72s.	Sugar, per cwt., Loaves, 50s. to 51s. 6d.; good Jamaica, 37s. 6d. to 38s. 6d.; Brazil 31s. to 42s.
Rice, per cwt., Bengal white, 9s. to 12s.; Java, 11s. to 12s. 6d.	Tea, per lb. (duty 2s. 1d.) ord. Congou, 10d.; Souchong, com. to fine, 11d. to 2s. 6d.; ord. to fine Hyson, 1s. 2d. to 3s. 6d.; Imperial, 1s. 2d. to 2s. 6d.

Candles, per 12 lbs., 4s. 6d. to 5s. Coals, per ton, 18s. to 16s. 6d.

OILS.

Pale Seal, per ton, 32l. 1	Palm, 28l. to 29l.
Sperm, 84l. to 86l.	Olive, all sorts, 43l. to 44l.
Cod, 35l.	

THE
HOUSEHOLD NARRATIVE
OF CURRENT EVENTS.

1850.]

FROM THE 28TH JULY TO THE 28TH AUGUST.

[PRICE 2d.]

THE THREE KINGDOMS.

MR. STANLEY held all kinds of swearing to be bad, and would have been confirmed in this opinion if he had lived to hear the debates on Baron Rothschild's claim to sit in the House of Commons. Scriptural precept never received holier warrant than in the wisdom of the inspired injunction, Swear not at all. If swearing does not tend to utter indifference in the matter of oaths, it certainly tends to distinctions between what is sworn and what is unsworn, very fatal to the sanctions of truth in half the affairs of life. Nothing can be necessary to truth in the witness-box, or at the table of the House of Commons, which elsewhere is not necessary to it; or the observance of which in the one case, does not to a certain extent damage its non-observance in the other; nor is there any argument producible for oaths which is not directly drawn from their own effects upon society, or which would not yield to the higher and better influence of an enactment restoring solemnity to truth on all occasions, and excusing its laxity in none. In this respect the case of a Member of Parliament is the same as that of a common witness; and the distinctions attempted to be taken in the debate, between oaths of verity and of this promissory, were properly scouted. The Jew is excluded from the legislature for his respect to an oath, by men who sit there in very right of their indifference to one; just as the law shuts out of the witness-box a man whose scruples are honest, and listens to him whose conscience is accommodating. Rabelais contains few greater absurdities than these swearing debates will be to the readers of another century. Here it suffices to mention that the greater part of them turned upon the question of whether any words of an oath could be omitted as immaterial, at the swearer's discretion; that the first of the two principal divisions affirmed Baron Rothschild's seat as not full, the second declaring it to be not empty; and that they left the matter, on the whole, somewhat worse than they found it.

The Session was afterwards brought to a close with a great deal of hard work, making up as usual for wasted time; but failing to overtake some important Irish bills, and one very important English one. The Savings' Bank Bill never reached its second reading; and the compromise of ten shillings in the pound offered to the Cuffe Street depositors, will be but a sorry satisfaction to many other bodies of the most important class of men in any country, poor, honest, industrious, frugal, saving men, whose danger from dishonest actuaries and irresponsible trustees ought much earlier to have been the care of a government which can have no safer or more reliable support. Nor will it be inappropriate to add, while on the subject of savings, that, manifold as Lord Brougham's subjects of scandal have been during the last month, he has discovered the greatest scandal of all in the fact that the savings from the Queen's Civil List are kept by herself, and not paid into the public treasury; which would be just as reasonable as that his own savings, out of his pension of five thousand a year, secured in like manner by statute, should go to the removal of public nuisances, or in alleviation of the expenditure on lunacy. The Queen, admitting that no more than what was just was settled upon her at her accession (which Lord Brougham at least must admit, since at that time he anticipated nothing less than a royal insolvency as the result of the arrangement), has been honourably careful in pecuniary matters, and, out of her own income of sixty thousand a year, and the balance of three hundred and twenty-five thousand on the other five departments of the Civil List, has managed, during the past year, to show an unexpected surplus of thirty-eight thousand pounds: whereupon Lord Brougham rushes off into the city to tell his old Whig friends the fishmongers, who used to cheer him when he denounced the profligacy and tyranny of the Court thirty years ago, that they have lost all spirit because they don't cheer him when he does the same thing now; and rushes back to the House of Lords to fall foul of his old Whig friends there, for having basked in Court smiles till they have no relish for popular abuse; and finally accuses both Houses of Parliament of an absolute prostration of the understanding, when such a thing as even the word *Prince* happens to be mentioned in the country. But all this, thrown out, in intervals of abuse of newspaper editors, and other oddities of a similar kind, seem to pass for nothing that may not easily be pardoned to the extravagant and erring spirit which all are glad to remember so capable of better things. Her Majesty's appearance on the prorogation day showed certainly no sign of temper ruffled by anything displeasing. She entered with her usual dignified ease, greeted Lords and Commons with her accustomed grace, and, as she occupied the throne, so picturesquely arranged her person and robes of state as to give an admirable "sitting" to Mr. Gibson the sculptor, who had been placed for that purpose exactly opposite royalty, and whose plain black coat seemed oddly out of place in a scene glittering with diamonds and gold lace, epaulettes and plumes. And so the speech was read, in tones that no peer of Parliament can make so audible or clear in that gorgeous chamber; and Lords and Commons were sent packing to their private affairs.

Thus Parliament is up (to express it in other words, one might say the Sea-Serpent has reappeared in the newspapers), and everyone, heartily sick of the subject, is prepared to listen to all kinds of abuse of it, for which there is no lack of providers. But Lord Lyndhurst, who used to spend all the session in obstructing what the Whigs wanted to do, and they abuse them at the end of it for doing nothing, has had no worthy successor in his ingenious art; and there is now as much dullness in finding fault with the thing as in the thing itself. The Premier's plea had best be admitted, therefore, that the House of Commons has really been very busy for the last six months, and has done a better stroke of work than any other legislative assembly going. But granting this; conceding also Mr. Bright's illustration, that the two hundred really working members have worked harder during the summer than any equal number of manual labourers in any parish of the land; and not questioning in any manner the return obtained by Sir Benjamin Hall, making it manifest that a thousand and

fifty-two hours have been consumed in a hundred and fifty-three sittings, on an average of ten hours and a half every day for four days of the week, and that at least a hundred and eleven bills have been passed into law, out of the two hundred carried through a first reading; still the question is to be settled of the value of the work done, and this unhappily is quite independent of the number of bills enacted or the hours consumed. The vice of too much legislation is the unavoidable result of careless legislation. That bills "No. 1," "No. 2," and "No. 3," should indicate the blunders of a session discovered in time for remedy, would import little; but it matters much more that each successive session should supply a supplement of correction to the blunders of its predecessor so large, that the statute book is loaded past the limit of endurance, the efficacy of every kind of legislation obstructed, and the future administration of our laws rendered more and more confused. Judged, however, simply by its predecessors, the session has been of average utility. The Woods and Forests are still mismanaged, the Window Tax unrepealed, the Jew disqualified, needless Oaths insisted upon, Savings Banks unprotected, the Law of Settlement unsettled, Railway Audits mismanaged, the English Franchise not extended, the Stamp Acts little better than they were, Ceylon still a mystery, the Ionians unredressed, Chancery not reformed, Smithfield not abolished, and the people unprovided with Education; though the new Duke of Cambridge has been provided with twelve thousand a year, and the young Prince of Wales has got five thousand pounds for stables nine years before he wants them. But these are not worse than the average no-doings and misdoings of a session; whereas there is unusual merit in the Extramural Interments Bill, in the Bill for Australian Self-government, in the principle of the yet imperfect Bill for extending County Court Jurisdiction, in the intention of the somewhat crippled Bill for a reconstruction of the Ecclesiastical Commission, in the Bill for correction of scandalous Church Abuses in Manchester, in the Brick Duties, Charitable Trusts, and Mercantile Marine Bills, in the disincorporation of the Sabbatarians as to Sunday trading and Sunday letters, in the greater facilities given for the establishment of popular Museums and Libraries, and in the issue of the Royal Commission for taking evidence as to the state of the Universities.

The failures of the session most to be deplored are in the still hapless direction of Ireland. The Bill for the Elective Franchise has indeed been passed, by the exact compromise anticipated in our last Narrative, but so far maimed in a very vital member; and though six desperate attempts in the Lords to strengthen the hand against the peasant, in so many bills introduced by Irish landlords, have been defeated in the lower house, yet not the least advance to a better system has been made in the all-important direction of landlord and tenant; while the working of the Encumbered Estates Bill is still hampered by the delay of the Security for Advances Bill, and the power and authority of the Lord Lieutenant has received a serious check in the premature disturbance and unsettlement of the question of the Irish Viceroyalty. Nor while these mistakes of Parliament are recounted, does any set-off appear in the condition of the country itself, or in the policy of agitation there. There seems no apprehension of a less than average harvest; but the most dreadful evictions continue, as well as the savage murders they occasion; and though it is impossible to doubt the importance of a movement which enlists the resolute Presbyterian of the north in a co-operative league with the ardent Catholic of the south, it is to be said of what has hitherto transpired of the Dublin conference on the subject of Tenant Right, that a series of more manifestly impracticable propositions could hardly have been looked for out of Bedlam. Nor is this the only Irish conference from which evil is just now to be apprehended. A Catholic Synod is assembled (while we write) in the Tipperary market town of Thurles, not simply for the purpose of reviving gorgeous Catholic ceremonies unwitnessed in these islands for centuries, but with the more grave intention of restoring stricter monastic observances, of reimposing canonical practices and saints-day observances, of forbidding marriages between Protestant and Catholic, of separating the two persuasions in burial and fast as well as in festival and marriage, and finally of pouring out the vials of Papal wrath on the Government colleges lately built and endowed in the hope of educating Catholic and Protestant together. Let not the reader smile as he reads this, and dismiss it as an amusing piece of insolence. A glance at what the last month has elsewhere brought forth will not be inappropriate here, and will enable him the better to understand what is now proceeding in Ireland.

In truth, by far the most remarkable feature of the time, and that which, sooner or later, will lead to the most decisive results, is the unblushing revival, abroad and at home, of the most insolent claims of the Roman Catholic Church. While political parties on the continent have been tearing each other to pieces, dominant priests have been quietly reprieving pretensions shattered even centuries ago; and now that the laymen are exhausted with their struggle, the churchmen are carrying off the spoils. The Jesuits have again got admission to the schools in France; the Prussian priests, not long ago, had the insolence to refuse the oath to the constitution; advantage has been taken of the helplessness of Austria to obtain such safe guarantee for popish domination as the right to punish priests, to impose ecclesiastical deprivations, to receive the dictates of the Pope, and to compel the observance of Catholic saints' days, independently of the civil power; and a quarrel now rages in Piedmont wherein the whole question is stirred to its foundations.

In that kingdom, till within a few months exclusive clerical jurisdictions existed, irresponsible of the civil tribunals; but one of the first acts of the new king, and his new representative chamber, was to abolish this injustice, and make all Piedmontese without exception subject to the regular law. Upon this the Archbishop of Turin, Cardinal Franzoni, refused obedience; was imprisoned for fourteen days; and since his release has vented denunciations against the civil power from every Sardinian pulpit, in the shape of appeals to Austria, and invocations of Rome. In the midst of these the minister Santa Rosa, most obnoxious for his support of civil rights against ecclesiastical privilege, was seized the other day with mortal illness; when Franzoni forbade the clergy of his parish to administer the dying rites without previous confession of penitence for his acts as a minister, and Santa Rosa, declaring with his dying breath that he knew how to reconcile his duty to his country with his duty to his God, died unshriven: whereupon, by the same interdict of Franzoni, the rites of burial were refused, and then the people, suddenly awaking to the monstrous tyranny, rose in a mob against the recalcitrant convent, compelled one priest to perform the burial offices, drove out the rest, and made the show of popular wrath so formidable that Monsignor Franzoni was next day under escort to a distant fortress, and his too obedient monks under sentence of banishment from Turin. Then came, at that very instant, the answers of Austria and Rome to Monsignor's original appeal: Austria demanding prompt banishment of a moderate newspaper editor opposed to Franzoni, and Rome declaring broadly that no Catholic state has a right to alter its domestic institutions, so far as education or worship is concerned, without previous assent from the Holy See!

In other words, this is precisely the claim now set up by Irish Franzonis against what they call Peel's Godless Colleges; and it is the claim which will have to be conclusively settled before the world is much older. That all civil restrictions must be votations to a church which ere this has placed kingdoms under interdict, absolved peoples from their allegiance, and hurled kings from their thrones, is, of course, quite manifest; and it is deserving of remark that under whatever form the demands of this church are advanced, they are always substantially the same. What is now rehearsing in the Vatican at Rome, is also under rehearsal in the village of Thurles, in Ireland; and what Catholicism can, in the one case, openly impose as a right, she is taking as effectual means, in the other, of secretly obtaining as a favour. She has tyrannised over the world; she has been the tool of tyrants, when herself without strength for the vile office; and now, allowing no other worship than her own within the walls of the city where she sits supreme, she is clamouring everywhere else for freedom from all restrictions as opposed to the spirit of the age. But the most liberal statesmen will have to awaken to the truth, that the rights of such a church are incompatible with the equal rights of every other; that her organisation is such as to give her instant predominance, where equal privileges are accorded; that even in such apparently trivial concessions as the titular dignities and dresses of her priests, a mistake has been committed; and that the existence of an assumption now prevailing, that every Catholic in Ireland must submit to this Thurles Episcopal Synod, radiant though it be in mitres dazzling with precious stones, in copes of embroidered crimson, in soutanes of purple, in crosses, croziers, and robes of gold, is a defiance to the Settlement of these realms in 1688 too impudent to be tolerated much longer. It is clear, at the same time, that the colleges raised at so much cost and capable of such inappreciable blessings, will have to sink meanwhile under the very weakness of their supporters, unless means be found to strengthen the independent lay element in the Roman Catholic population of Ireland. The mere approach of the Synod armed with powers against the education of the people, has been already signalled by a cowardly submission of the authorities to whom that charge is entrusted. The professor of modern languages in the College at Cork having published a book on Christian Civilisation in no respect connected with his teaching, and this book (a very innocent one, a sort of supplement to Guizot, embodying the religious eclecticism of that statesman, very reverent in its tone, and containing even a formal protest against a teaching founded on infidelity) having been denounced by the bigots of the Roman Catholic press as deliberately adverse to religion, and dangerous to the faith and morals of the Roman Catholic pupils, M. de Vericour has been suspended by the Board without a hearing, and a recommendation for his dismissal forwarded to Lord Clarendon. Lord Clarendon, it is to be hoped, will know how to deal with it.

Returning to England, matters involving doubt and difficulty are not left behind. A dispute between employers and employed which has the effect of throwing one of the greatest lines of railway communication into a dangerous, if not impassable state, concerns the public too nearly not to excite much public anxiety; and, without affecting to pronounce decisively on the differences which have led to the resignation of nearly two hundred drivers and firemen on the Eastern Counties Railway, it seems manifest that the men, whose efficiency in their special duties is admitted both by the superintendent and issue with them (who had been in office three weeks) and the superintendent he replaced (who had been in office four years), cannot be held justly responsible for the general want of discipline which the system of the new superintendent seems to have been meant to correct, and which could hardly, after existing unchecked for so many years, be checked without unreasonable harshness in as many weeks. Too much was suddenly imposed upon the men, who in turn as quickly demanded too much; and since mutual concession can alone conclude such a dispute with fairness, it will become the Company to remember that for any ill effects resulting from laxity of discipline they are themselves directly responsible, in the first degree. In connection with such strikes, by the bye, a statement worthy of mention appeared the other day in a report on the Mining Districts, to the effect that the famous strike of the colliers six years ago involved a loss to the owners of two hundred thousand pounds, and to the pitmen of three hundred thousand pounds in wages alone.

Another report, out of the many lately presented to both Houses, will justify mention here, for its sensible rebuke to certain wild and selfish Protectionist schemes of which a good deal was heard some months ago, in connection with the alleged pressure of "local taxation." The Lords' Committee on parochial assessments have reported that the present system is susceptible of material improvement; but that, in their judgment, stock in trade should still be exempted from the rate, and the general maintenance of the poor should not be provided for out of the consolidated fund; nor do they feel justified in recommending any general system of union rating, or any plan for the assessment of personal property in aid of real property. In other words, they don't think Mr. Disraeli a conjurer, or take flight with Mr. Christophoro into the cloudy regions of farmer's finance: but content themselves with a few practical, intelligent, and desirable suggestions for improving the present irregular assessments, for repealing certain awkward technicalities, and for reducing the inordinate amounts at which railways are assessed. This is a great slap in the face, to the Protectionists; who have in other respects also suffered sorely of late, and were fain to let the session expire without a sign. They cannot even hope that a bad harvest should make opportunity for them now; for though prospects in this respect have unfortunately clouded during the last three weeks, and a somewhat poor average of corn is to be feared, yet no unhealthy tampering with the markets is observable, nor is the winter contemplated with any painful anxiety. The repeal of the laws limiting our supply of food to this island has effectually cured us of such fears and dangers; and John Bull now not only knows to what extent he has a reliance against unavoidable chances of the seasons, but with what reasonable arguments he can abate the pressure of importunate creditors. Others of his family, it is to be regretted, get into the Bankruptcy Court with apparently less ability to get out of it; and a report appearing not many days since excited not a little apprehension, from points of startling resemblance to the head of the family himself.

The name was also John Bull; and Mr. Bull appeared in the Bankruptcy Court, not very creditably we regret to say. He was said to have a vast number of sharking relations; and having been accused of playing into their hands too much, his certificate is adjourned. He tried to throw all his misfortunes on the fact that a certain firm "had had a sort of millstone or national debt fixed round his neck for a very long period," but his statements as to this did not seem to obtain unlimited credence; and the counsel against him, charging him with unaccountable and improper delays during the last two years, pointedly remarked that "the year 1848 would certainly have been the proper time for Mr. Bull to have come to that court." This very

obstinacy, however, may yet be the means of redeeming Mr. B.; for certainly the old rival of his family, M. Jean Crapaud of Paris, who went much too easily into bankruptcy that year, would have come off better by holding up his head a little longer. So Mr. Bull is not yet to be despaired of; and such other social illustrations of the condition of his friends and connexions in various parts of the country as other law cases of the month supply, must not be too exclusively interpreted to the general disadvantage of his family. They are often only isolated cases; though it is right not the less to fix attention on the special injury involved, and demanding special redress.

Thus in Scotland, or under the interpretation of Scotch law by our highest English tribunal, it would appear that a man who gets possession of his wife as part of a pecuniary transaction with her father, may afterwards count upon the law's co-operation in sordidly completing what has been thus sordidly begun. The law will suffer him, without a reason assigned against the unhappy wife, to cease holding intercourse of any kind with her, three months after the marriage; will countenance his refusing to speak or sit with her, living in the same house; will view with the utmost unconcern, his treating her with the extremes of insolence and contempt before her servants; will sanction his cruel interdict against her either receiving visits, or paying them; and will allow him, in temporary absences from home, even to leave her without necessary means of existence;—and then, when this wretched woman, whose "good and kind disposition" her tormenter freely confesses, no longer able to bear the burden of a life of such unutterable misery, returns to her father's house and implores for separation and alimony, which the Scotch judges pronounce her entitled to, the English Law from its higher seat proclaims, that, inasmuch as direct personal violence is not alleged, and adultery has not been committed, the wife has no remedy whatever, nor even a title to the costs of her application; and somewhat jocosely the law adds, through the mouth of its exponent Lord Brougham, that "it might as well be said the husband ought to pay for any other luxury which his wife, after separation, might think proper to indulge in, as well as the luxury of a lawsuit." Their lordships present laughed, and it is to be hoped that poor Mrs. Patterson may derive some little comfort from the joke. Nor is it perhaps less desirable that, in the other cases of the month throwing light upon the marriage laws, a joke should if possible be made of them, seeing that they certainly fail of any graver sources of satisfaction.

There is the case of a woman who had married again after her first husband had many years deserted her, prosecuted by her worthless second husband to rid himself of the children she had borne him, dragged from her bed to the dock, exciting the sympathies of every one in court, and getting off with seven days' imprisonment. There is another case of a moustachioed fine gentleman who squandered the fortune of a young wife and left her penniless, to marry another fortune with a middle-aged lady attached to it, and who had not the additional good fortune to excite any sympathy; but who nevertheless escaped transportation (perhaps because of his moustachios), and is sent to Bridewell for twelve months. There is a young Donald Macdonald of one of the islands of the Hebrides, who carries off his young Jessie by main force from her own bed-room, in spite of an obstinate father who had provided and set his heart on a quite other son-in-law, notwithstanding a meddlesome uncle who darted out of sleep and stood shivering in his nightclothes at the youth's Lochinvar-like audacity, and in defiance of a lidless-eyed dragon of an aunt keeping guard in the very bed of the maiden; who is nevertheless triumphantly acquitted even of an attempt at wrong doing, and carried home in a popular triumph. There is a simple German who tries as hard to get free from a young wife as the Highlander to get fastened to one, but though he has a case that should have entitled him to easy redress, the magistrate can only refer him to the Consistorial Court with a polite hope that he has the means to go there, and so send him mystified away. Meanwhile a somewhat similar case, the sexes only being reversed, had been taken in charge by Lord Brougham before the House of Lords; and, for the first time in that assembly, an uncompleted marriage has been dissolved on the petition of the wife, and proof that the husband had contracted a second marriage abroad; which certainly seems the strangest contrast possible, in point of "luxury" as of every thing else, to the result in the unhappy case of Patterson. But let us not conclude these notices of legal history without approval of the legal judgment delivered a few days afterwards in Norris and Cottle, also by Lord Brougham, and conclusively settling a question which has cost more in anxious litigation than any other in modern time, that of the non-liability of provisional committee-men.

At last a plan of sewage is about to be tried on a tolerably extensive scale, and at a cost of a quarter of a million sterling. Up to the point of what is to be done with the sewage when collected and drawn off, there seems little reason to question the feasibility or efficacy of this plan; but the doubtful point is an all-important one, for the notion of discharging the sewage at Woolwich must have been formed in ignorance of the tide. A dead dog launched at Woolwich would never get to sea. A fallacy is founded on the fact that the ebb-tide at any given spot runs more than six hours; but things carried down by the ebb, meet the flood so as to bring it within the six hours; and things floated up by the flood will have a tide of more than six hours, seven or even eight with an easterly wind. This is a danger which will have to be guarded against when the scheme is so far completed.

With indication of a danger of another kind, as imminent to the comforts and lives of her Majesty's lieges, our month's summary may be completed. The wreck of an iron steamer full of holiday makers off Southport, on her way to the Menai and Tubular bridges, has created little sensation because only two lives were lost; but it was something not far short of a miracle that more than fifty lives were not sacrificed; and the case is another flagrant example of the outrageous neglect of the surveyors of steamboats, which the result of the coroner's inquest at Preston makes it the more necessary not to overlook. At that singular inquiry no one seems to have been examined that was not in some way responsible for the mischief done; while, on the other hand, not a subpoena was sent to a single passenger; and of the many who attended to give evidence voluntarily, the worshipful "crown" declined to examine one. It has nevertheless since transpired that the steamer was manifestly unseaworthy, that her pilot was not a licensed one, that there was no register or certificate of her having been duly inspected, that she had no life-boat, only one life-buoy instead of two, only one punt instead of four punts and boats, that her only pump was out of order, and that all her fittings were crazy and rotten! The comfortable set-off is the two lives lost instead of fifty; the accident not being "graced with decent horror" to make inquiry interesting, or worth while. In like manner, about three weeks before, an old steamer plying on the River Tamar exploded at Devonport, just as she was getting up her steam to convey an entire dissenting congregation on a day's excursion to the Morwell Rocks; and, because the dissenters did not go in, the air with the boilers, the affair passed off without excitement. Only out-of-the-way people (who don't wait

for conflagrations to read acts of parliament by) seem to be at all aware, on these occasions, that owners of steamships are bound, by a recent act, to transmit to the Board of Trade yearly certificates from approved surveyors of their sufficiency and good condition; or were thus induced to take any notice of the startling fact elicited in this particular case, that the required certificate had been actually signed, with a perfect knowledge on the part of the surveyor that the machinery whose safety it guaranteed was in a notoriously unsafe condition. Unhappily the subject cannot be left without one more example, horrible enough to force inquiry, if not to compel redress. By the Bristol steamboat explosion mentioned in our last Narrative, some score of people have been killed, and another score mutilated and dismembered; so that investigation has been unavoidable; and its result shows that surveyors, under the act for the safety of steamboat travel, will not scruple to certify the soundness of boilers that are well known to be cracked, that have had their cracks stopped by "a barrow-full" of dirt suitable to the purpose, that are deposed to have had a look-as if made of old iron, and not to have been "safe to trust a cat with." It is surely, then, high time for the Board of Trade to declare, either that due precautions in these matters are really unattainable, or that such an example shall be made as is likely to enforce their observance.

NARRATIVE OF PARLIAMENT AND POLITICS.

ON Monday the 29th of July in the House of Lords, the Royal Assent was given by Commission to a great number of Bills.

On Tuesday the 30th, the Marquis of LANSDOWNE moved an address in answer to her Majesty's message respecting the appropriation of *Marlborough House to the Prince of Wales*; explaining, that while it was necessary to secure that mansion as a future residence for the Prince, it would be appropriated in the meantime for the exhibition of the Vernon pictures. The address was agreed to.—On the motion of the same noble lord, a resolution was agreed to expressing the concurrence of the House in the suggestion of the Committee, recommending a reform in the *Fees of the officers of the House*.

On Thursday the 1st of August, in answer to questions from the Earl of St. GERMANS, respecting pay and promotion in the *Money Order department of the Post Office*,—the Marquis of CLANICARNE, Postmaster-General, said that the situation of the clerks had been lately improved in regard to pay and leave of absence; and though he thought they should be still better paid, he could hold out no hope of any immediate change.

Lord BROUGHAM, on Friday the 2nd, brought forward the subject of the *Civil List*. He contended that all savings on that head should accrue to the nation and not to the royal privy purse; as it was not the genius of the Constitution that the Sovereign should have means of a private character, but that he should be dependent on Parliament; and intimated that early next session he would make a motion relative to the amount of savings in the Civil List since 1838.—The Marquis of LANSDOWNE said he should have the greatest objection to such a motion. It would be the greatest evil and indecorum to be examining such details in Parliament, as much as it would be to be examining into the personal expenditure of any private gentleman.—The Duke of WELLINGTON held that Parliament is precluded by law from such inquiries.—Lord MONTEAGLE concurred in these opinions, and deprecated such questions and conversation in the House.—Lord BROUGHAM rejoined with great bitterness. According to Lord Montecagle the Crown might dispense with as many officers as it pleased, and save their salaries; and yet Parliament have no alternative but to vote the gross amount of all the salaries, as if they continued to be paid as heretofore. But then it was said, that the inquiry which he suggested would be indelicate. Oh! his old Whig friends were mightily changed since they had tasted the sweets of office and basked in the smiles of the Court. Why, when he was in the House of Commons he made motions for inquiry into the revenues of the Crown for which his friends who now displayed such extreme sensitiveness voted without a word of objection.—The Marquis of BREADALBANE made a short speech, at the end of which he said he considered Lord Brougham had "entitled" himself to the censure of the House and of the public.

—Lord BROUGHAM, who was talking earnestly with Lord Chancery, on hearing the word "censure," turned abruptly, and, pointing to the Marquis, exclaimed, "Is he moving a vote of censure?"—The Marquis of

BREADALBANE: "No; but I say you have entitled yourself to the censure of the House and the public."—Lord BROUGHAM in very hurried accents and with vehemence—"Oh! I have no fear of this House or the public." He then ran out of the House amid much laughter. In the same evening Lord BROUGHAM made an attack on the Attorney-General for his refusal to sign the application for an injunction against proceeding with the *Building in Hyde Park*, and concluded with a sarcasm against the House for its deference to royalty, which created some sensation. "When I lately brought forward the subject," he said, "dead silence there was within your lordships' walls—dead silence there was within the walls of the House of Commons; showing most painfully that absolute prostration of the understanding which takes place, even in the minds of the bravest, when the word 'Prince' is mentioned in this country."

On Monday the 5th, a petition presented by Lord TALBOT gave rise to some conversation on the subject of *Steam Communication with Australia*, in the course of which Earl GREY said that the Government were fully sensible of the advantages of such communication; but that up to the present time objections had been raised by the East India Company to one of the proposed routes, though he hoped the time was not far distant when these objections would be removed.

On the consideration of the Commons' amendments on the *County Courts Bill*, Lord BROUGHAM and Lord REDFORD objected to the clause which gave power to take possession of town-halls for the purpose of the County Courts. The house divided on this clause, when it was carried by 13 to 14.

The alterations made on the *Parliamentary Voters (Ireland) Bill* by both houses, were brought under consideration by the Marquis of LANSDOWNE, who advised the house to accept the modification of the franchise by the Commons, and to concede the restoration of the registry clause.—Lord STANLEY advised the Peers to stand by their own amendments, and attacked the Romish priesthood in Mayo for their conduct in the late election. He moved, in particular, that the house should insist on the 15th franchise. The house divided: content, present 62, proxies 53—115; non-content, present 56, proxies 70—126. Majority in favour of the 12th franchise 11. Lord STANLEY made some sarcastic remarks on the report of ministers to proxies when they are outnumbered by present peers, and advised the Earl of Desart not to divide the house on the question of the Commons' registration amendment. The Marquis of Lansdowne retorted Lord Stanley's sarcasms; the Earl of Desart unwillingly withdrew his opposition to the registration clause, and the whole of the Commons' amendments were ultimately agreed to.

On Thursday the 8th, the Marquis of LANSDOWNE moved the adoption of the Commons' amendments on the *Ecclesiastical Commission Bill*. The Archbishop of CANTERBURY moved an amendment in the 13th clause, as amended by the Commons, which was negatived on a division by 37 to 22.

On Friday the 9th, the greater part of the sitting was occupied by a long and miscellaneous speech from Lord BROUGHAM, in which he discussed the proceedings of the commissioners appointed to prepare a digest of the criminal law, the recent report of the select committee

of the Commons of official salaries, and various other topics. His speech produced no remark.

On Saturday the 10th, the *Marlborough House Bill*, and the *Duke of Cambridge's Annuity Bill* were respectively Committed.

On Monday the 12th, the *Duke of Cambridge's Annuity Bill*, and, the *Mercantile Marine Bill* were read a third time and passed. On the third reading of the *Summary Jurisdiction (Ireland) Bill*, the Earl of LUCAN proposed a clause for including the illegal removal of growing crops among the offences to which this bill is applicable; but the clause was opposed by the Marquis of LANDOWNE, and negatived upon a division.

The matter of the *Forged Signatures to the Petition against the Liverpool Waterworks Bill*, was again brought forward on Tuesday the 13th, by Lord MONTAGUE, who moved resolutions deciding that Mr. C. Cream and Mr. M. A. Gage, the presenters of the petition, had been guilty of a gross breach of privilege. These resolutions having been carried unanimously, Mr. Cream and Mr. Gage were called in and asked if they had anything to say in explanation or extenuation. They both protested their innocence, and Mr. Gage said that the charge was the result of a deep laid conspiracy in Liverpool to defeat the petition. They were ordered to be imprisoned for a fortnight in Newgate.—The Earl of ROSEN put a question to ministers respecting certain alleged *Persecutions of Protestant Members in Ireland*. The Marquis of LANDOWNE ascribed the disputes alluded to by Lord ROSEN to persons who, no doubt actuated by zeal, had endeavoured to give the religion they professed what was called in Scotland an "aggressive" character, and had carried religious debates into places where the majority of the inhabitants were of a different persuasion. The Irish Government uniformly discountenanced everything in the shape of annoyance or persecution for religious opinions; and instructions had been issued to the magistracy, directing them to cause the arrest of all persons offending against the law in this respect. If the noble Earl should think proper to move for extracts from the reports of the Police with the view of showing what had occurred in the particular cases referred to, and copies of the instructions issued by the Government thereupon, he would not oppose the motion. The Lord Lieutenant would continue to give his attention to the subject; but any attempt on the part of the Government to put an end to the irritation which prevailed would be abortive unless the reverend persons by whose proceedings that irritation was caused exercised forbearance and caution as regarded their language. Lord ROSEN made the motion suggested, and it was agreed to.

On Wednesday the 14th, Lord CAMPBELL took occasion to express his satisfaction with the report of the commissioners on the *Postal Regulations*, and his belief that the recommendations now made would go far to remove the evils which had been so much felt. He begged leave, as one of the judges of the land, to state that the late regulations had a tendency, with respect to the administration of criminal justice, to obstruct works of necessity and mercy. While the late assizes were going forward it was often of the greatest importance that communication should be made to the judges respecting cases that were coming on for trial, and also with respect to cases that had been tried; but, in consequence of the recent regulations, all communications of that sort for twenty-four hours were entirely cut off. He and his colleague, Mr. Justice Williams, thinking that a dispensation might be granted by authority in the case of her Majesty's judges, made an application to that effect; but the Postmaster refused to make any exception, stating that he had received positive orders that no letters should be delivered to any one. He (Lord Campbell) honoured him for his strict obedience to the commands he had received. But it might have happened that in consequence of this refusal persons whose cases were coming on for trial were deprived of evidence that was material to show their innocence; and that persons who had been convicted were cut off from receiving that mercy to which they were entitled.

The *Prorogation of Parliament* by the Queen in person took place on Thursday the 15th, with the usual ceremonies. The ceremonial was exceedingly splendid,

and attended by a numerous assemblage of peers, foreign ambassadors, peers, and other persons of distinction. The Speaker of the House of Commons, with a large body of members, appeared at the bar and made the customary address, giving an account of the proceedings of the house and tendering the last bill of supply; and the Queen then read the following speech:—

"MY LORDS AND GENTLEMEN"

"I have the satisfaction of being able to release you from the duties of a laborious session. The assiduity and care with which you have applied yourselves to the business which required your attention merit my cordial approbation." The act for the better government of my Australian colonies will, I trust, improve the condition of those rising communities. It will always be gratifying to me to be able to extend the advantages of representative institutions, which form the glory and happiness of my people, to colonies inhabited by men who are capable of exercising, with benefit to themselves, the privileges of freedom. It has afforded me great satisfaction to give my assent to the act which you have passed for the improvement of the merchant naval service of this country. It is, I trust, calculated to promote the welfare of every class connected with this essential branch of the national interest. The act for the gradual discontinuance of interments within the limits of the metropolis is in conformity with those enlightened views which have for their object the improvement of the public health. I shall watch with interest the progress of measures relating to this important subject. I have given my cordial assent to the act for the extension of the elective franchise in Ireland. I look to the most beneficial consequences from a measure which has been framed with a view to give to my people in Ireland a fair participation in the benefits of our representative system. I have observed with the greatest interest and satisfaction the measures which have been adopted with a view to the improvement of the administration of justice in various departments, and I confidently anticipate they will be productive of much public convenience and advantage.

"GENTLEMEN OF THE HOUSE OF COMMONS."

"The improvement of the revenue, and the large reductions which have been made in various branches of expenditure, have tended to give to our financial condition stability and security. I am happy to find that you have been enabled to relieve my subjects from some of the burdens of taxation, without impairing the sufficiency of our resources to meet the charges imposed upon them.

"MY LORDS AND GENTLEMEN,"

"I am encouraged to hope that the treaty between Germany and Denmark, which has been concluded at Berlin under my mediation, may lead, at no distant period, to the restoration of peace in the north of Europe. No endeavour shall be wanting on my part to secure the attainment of this great blessing. I continue to maintain the most friendly relations with foreign powers, and I trust that nothing may occur to disturb the general peace. I have every reason to be thankful for the loyalty and attachment of my people; and while I am studious to preserve and to improve our institutions, I rely upon the goodness of Almighty God to favour my efforts, and to guide the destinies of this nation."

Parliament was then prorogued in the usual form to the 25th of October.

On Friday, the 26th of July, in the HOUSE OF COMMONS, at the morning sitting, Baron Rothschild came forward to *Take the Oaths* as a member for the City of London as mentioned in last month's Narrative. At the evening sitting, in reply to a question from Mr. Scholfield respecting certain proceedings which had taken place with regard to *Unstamped Periodical Publications*; Mr. C. LEWIS said that though it was easy to state what in the eye of the law was a newspaper, yet there was sometimes considerable difficulty in drawing the line, especially in the case of publications which lay on the confines. There were several publications of this description; among the rest one called the *Household*

Narrative of Current Events published by Messrs. Bradbury and Evans. The Board of Stamps had come to the conclusion that that publication came under the designation of a newspaper, and a communication was made to the publishers requiring them to submit to the stamp regulations. A correspondence took place, one part of which stated, on the part of Messrs. Bradbury and Evans, their wish to have the whole question tried by a special case to be submitted by arrangement. The Commissioners had acceded to that arrangement, accepting the offer of a judicial decision, and reference was requested to the solicitor of the parties.—In committee of supply a number of sums were voted for *Army Estimates*. On the vote of 41,000*l.*, half the sum required for the yeomanry corps; Mr. H. BURKLEY contended that the yeomanry were an unconstitutional, useless, and dangerous force—they were defended by Mr. Fox MAUL and others, and the vote was affirmed by 147 to 25.

On Monday, the 29th, the adjourned debate on Baron Rothschild's claim to take his *Seat for the City of London* was resumed. A preliminary discussion took place on points of form; and a motion by Sir Charles WOOD, that Baron Rothschild having demanded to be sworn on the Old Testament, he should be called to the table and desired to state why he demanded to be sworn in that form, having been carried, Baron Rothschild was called to the table, and the questions being put to him by the Speaker, answered, "Because that is the form of swearing that I declare to be most binding on my conscience."—Another motion, by Mr. WORTLEY, that the Speaker should ask Baron Rothschild whether he was willing to take the oaths required by law to be taken by members of Parliament before admission to their seat, was negatived by 118 to 101.—The adjourned debate then proceeded; Mr. HUMPHREY moved as an amendment, that Baron Rothschild having presented himself at the table and requested to be sworn on the Old Testament, declaring that form to be most binding on his conscience, the clerk be directed to swear him on the Old Testament accordingly.—Sir F. THESIGER objected to this course, but objected also to Sir R. Inglis' resolution, there being no necessity for a resolution in affirmation of the practice of the House. He therefore recommended that the resolution should be withdrawn, and Mr. Hume's amendment discussed as a substantive motion. The question depended upon the law of the land, and according to existing statutes, a member could not be sworn upon the Old Testament. In courts of justice, indeed, Jews were sworn as witnesses and jurymen, but there was no form prescribed for such judicial oaths. The question now related, not to judicial but to promissory oaths; and the three oaths in question were required by a series of acts of Parliament to be taken in the Christian form. The early acts declare that the oaths of allegiance and supremacy are to be made on the Holy Evangelists, and the later acts imply the continuance of the form of administration; while the act of George I., which sets forth the oaths as they are now taken, requires the oath of abjuration to be taken on the true faith of a Christian. Great stress had been laid on the Act 1 and 2 Viet., but it was merely a declaratory act to affirm the law as it no doubt existed. Baron Rothschild, as a Jew, could not take the oath of abjuration as it stood, and the house had no authority to alter it.—Lord John RUSSELL agreed with Sir F. Thesiger that the question should be treated judicially. He believed that the ancient practice of the legislature did not prescribe oaths to its members, and he doubted the policy of such oaths. Baron Rothschild had offered to take the oath in an unusual way, and there was no precedent for refusal; he found from the authority of Lord Hardwicke that a Jew who had been sworn on the Holy Evangelists might be indicted for perjury, the Old Testament being the Evangelium of the Jew. Sir F. Thesiger had argued that the oaths had always been taken in the Christian form, and that it was so by positive statute, but he had failed to make this out, and unless some statute could be pointed out the house ought not to insist on a form which excluded a gentleman duly elected. In regard to the words, "on the true faith of a Christian," in the oath of abjuration, it had been maintained that they were not of the essence of the oath; but he did not think the house had the power to

dispense with those words, and he should be compelled to vote against omitting them; though he was in favour of the admission of Jews to the house, he thought that no opinion of this kind ought to induce the house to take a step which might produce serious evils. In conclusion, he was of opinion that Baron Rothschild should be allowed to be sworn on the Old Testament, but was not willing to alter the terms of the act of abjuration without the authority of an act of parliament.—After some further remarks from Sir H. Inglis and Mr. Osborne the debate was adjourned till the evening; it was then resumed, the speakers being Mr. Anstey and Mr. Page Wood in favour of Baron Rothschild's claim, and Mr. Stuart Wortley against it.—The sense of the house was then taken; first, on the point whether the words of Sir R. Inglis' motion should stand part of the question put. It was resolved, without division, that they should not. The amendment moved by Mr. Hume was then carried by 113 to 50; and it was ordered that the clerk should swear in Baron Rothschild on the Old Testament, the ceremony being deferred till the following day.

The house, in committee, considered the proposed appropriation of *Marlborough House for the Prince of Wales*, during the joint lives of the Queen and himself, and the provision of a coach-house and stables out of the crown land revenue.—Mr. HUME objected that the arrangement was premature, the Prince being only nine years old.—Lord John RUSSELL reminded the house of the arrangement respecting the *Vernon pictures*, and said it was thought right to make the appropriation now, lest it should afterwards be thought that the pictures had so long occupied the house that it would be wrong to give it to the Prince without having settled it before.—Lord SEYMOUR explained that by the arrangement as to the stables the crown revenues would be benefited 800*l.* a year. After further remarks, in opposition to the measure, from Mr. Hume, Mr. Henley, and Alderman Sidney, it was carried by 68 to 46.—In committee of supply on the vote of 731,200*l.* for *Half-pay and Retirement to Officers of the Navy and Marines*, Mr. HUME moved that it should be reduced by 3000*l.*, the select committee having stated that there are 150 admirals, and having recommended that they should be reduced to 100 by promotion of only one as often as three vacancies occur.—Mr. Cobden, Sir James Graham, and Mr. Henley supported the amendment, which was opposed by Sir F. Baring and the Chancellor of the Exchequer, and negatived by 128 to 72.

At noon on Tuesday the 30th, Baron Rothschild presented himself at the table, and a copy of the Old Testament was handed him by the clerk. He audibly repeated, after the clerk, the oaths of allegiance and supremacy; and, at the close of each, put on his hat, kissed the book, and said "So help me God." In the oath of abjuration; he repeated the words till the phrase "on the true faith of a Christian," when he said "I omit these words as not binding on my conscience," and concluded as before. The Speaker then desired him to withdraw. There were cries of "no, no," and "seat, seat!" but he withdrew.—Mr. HUMPHREY rose to order; the Member for London, he said, had taken the oaths in accordance with the vote of the preceding day, and he moved that he should now take his seat.—The SPEAKER said that the honourable member had been directed to withdraw, because he had not taken the last words of the oath prescribed by act of parliament. Sir F. THESIGER moved for a new writ, and Sir R. Inglis seconded the motion.—Mr. Page Wood contended that the oaths having been duly taken there was no vacancy. Even if Baron Rothschild had not taken the abjuration oath he had not forfeited his seat, though he might by act of parliament be liable in certain penalties. But that oath had been taken; the words omitted were not a portion of the oath itself—not words of abjuration but of adjuration. He argued these points at great length, and moved that the seat of Baron Rothschild, as one of the members for London, was full.—The ATTORNEY-GENERAL said he had always voted for the admission of Jews into the House, but he could not as a Judge decide that Baron Rothschild had taken the oath of abjuration. Once admit the principle that this or that portion of a legislative direction might be dispensed with, to meet

the particular notions of individuals, and there would be an end of the force of law. Baron Rothschild had objected to certain words in his particular oath, his reason being that he did not deem them binding on his conscience; admit his objection, and who could say what other portion of the oath somebody else might not object to on the same ground.—Mr. HUME contended that Baron Rothschild, having taken the oaths in the required way, was entitled to his seat.—Sir G. GREY was prepared to vote against the amendment which declared the seat full, but could not say that Baron Rothschild had refused to take the oath.—Sir F. TUESDAY considered the omission of the words amounted to a refusal to take a substantial part of the oath; but he desired to know what was the Baron's intention.—Mr. P. WOOD, on the part of the Baron, said that he distinctly refused to use the words in question.—Mr. ROEBUCK cautioned the House against supposing that the Baron's refusal went beyond pronouncing the words in question. He contended that the oath had been properly taken. On a division, Mr. Page Wood's amendment was negatived by 221 to 117. A desultory conversation then took place, and Lord John RUSSELL moved the adjournment of the debate till 12 o'clock on Thursday; adding, "the Attorney-General will then propose such a resolution as he and I shall think most conducive to the dignity and usages of the house."—Sir F. TUESDAY expressed his willingness to withdraw his motion or to allow it to be negatived without a division, which was done, and the house adjourned.

At the evening sitting, Lord John RUSSELL brought before the house the Lords' amendments on the *Parliamentary Voters' (Ireland) Bill*, and explained his views respecting them. The Lords had raised the franchise from 8*l.* to 15*l.*, and he should fix it at 12*l.* The 15*l.* rating would place the franchise in the hands of only 8 per cent. of the male population of Ireland, whereas the 12*l.* rating would confer it on 10 per cent. He adverted to the Mayo election, just over, at which it appeared that, after a severe struggle, the whole number of electors who could be brought to the poll for one of the most important counties of Ireland was under 250; and this he adduced as an instance of the reduced state of the Irish electoral body, and as a proof of the necessity of such a measure as this. He would assent to the Lords' omission of clause 2, and would dissent from their lordships' omission of clauses 18, 19, and 21. He strongly objected to the Lords' insertion of words requiring the electors to demand to be placed on the register; indeed, he considered this a far more important alteration than that of the amount of rating. After some observations by Mr. French, Sir W. Somerville, Mr. Moore, and Colonel Rawdon, Mr. BRIGHT strongly objected to this concession on the part of government. Lord John Russell (he said) should be cautious how he allowed small majorities in another place to override the majorities of the house of Commons and the ministers of the Crown on this question; he ought to have stood by his bill as he had brought it in if he was satisfied it was right, instead of recurring to his perpetual but unavailing attempt to make the two houses work together—a thing which, under the present constitution, they neither would nor could.—Lord John RUSSELL censured Mr. Bright for advancing doctrines tending to destroy the balanced constitution of the country. He defended the aristocracy from the charge of being an exclusive body, and justified his conduct in making a compromise with the house of Lords by means of a plan which would add 170,000 to the electoral population. After a discussion, in which Lord John Russell's compromise was supported by Mr. M. O'Connell and Sir G. Grey, and opposed by Mr. Shiel and Mr. Disraeli (who announced his intention to support the alterations introduced by the House of Lords) the house divided on the franchise clause, carrying the 12*l.* rating by 213 to 91. A second division took place on the question of the restoration of the compulsory registration, when such registration was carried by 179 to 109. The remaining amendments were agreed to.

On Wednesday the 31st of July, Mr. Alcock's motion for going into committee on the *Sunday Trading Prevention Bill* was met by an amendment, moved by Mr. ANSTAY, that the bill should be committed that day

three months.—Sir G. GREY desired that the bill should be proceeded with, but it was so strongly opposed that Mr. Alcock proposed to withdraw the bill. This arrangement was not agreed to, and Mr. Anstey's amendment was carried without a division; the bill being thus thrown out.—The adjourned debate on the *Landlord and Tenant (Ireland) Bill* was resumed, and enlivened by a few personalities among the Irish members.—Sir H. W. BARRON accused Mr. Reynolds of uttering what was false; the SPEAKER intimated that such language was not in accordance with English Parliamentary usage; Sir W. H. BARRON retracted, and Mr. Reynolds said that it was not safe to use such language in that place, as the Speaker was sure to interfere. The bill was opposed by Mr. R. M. FOX as worse than that of the government; and by Sir G. GREY as conferring advantages on tenants without giving corresponding ones to landlords. The debate was again adjourned.

The Lords' amendment on the *Australian Colonies Bill* were taken into consideration on Thursday, the 1st of August. In the outset Mr. SCOTT inquired whether the government had received from New South Wales a memorial in favour of a double chamber which had appeared in a Colonial newspaper.—Mr. HAWES answered in the negative.—Lord John RUSSELL recapitulated the Lords' amendments and asked the house to agree to them. As to the omission of the confederation clauses, the defects in them the more easily induced ministers to abandon them, as at all events they were not expected to come into operation for some years. Whether the provision allowing votes to the wealthy class of squatters would give satisfaction to the colonists, he certainly was not able to say. The restriction put on the legislative councils, from constituting a single chamber consisting of wholly elective members, he the more readily agreed to, as if such alteration had been attempted by the legislative councils he should have hesitated in advising the crown to assent to it.—Mr. GLADSTONE thought the bill a very unsatisfactory measure. Its great defect arose from the amendment of the Lords which deprived the legislative council of New South Wales of the power to alter its own constitution, and thereby adjusting the balance of power between the crown and the colonists. He protested against a measure which while it professed to give free institutions maintained the control of the crown over the legislation of the colonies, and introduced into that legislation uncertainty and uneasiness.—Mr. ROEBUCK also protested against the measure, and said his only hope was, that when the bill arrived in the colony it would create such discontent, that parliament would be obliged to reconsider the subject. The amendments were then agreed to.—Mr. F. O'CONNOR asked the Secretary for the Treasury whether it was true that a person named Somerville, whom Mr. O'CONNOR described as having been dismissed from the army, had received any remuneration out of the public money for attending to give evidence in reference to the *National Land Company*.—Mr. HAYTER said that Mr. Somerville had not been dismissed from the army, but was at least as respectable a person as Mr. O'CONNOR. He had offered certain information connected with the inquiry, which exhibited Mr. O'CONNOR's character in a light which he (Mr. Hayter) should not take upon himself to describe; but Mr. Somerville had not been paid out of the public money for his loss of time, but out of his (Mr. Hayter's) own pocket.—Mr. HUME bore testimony to the character of Mr. Somerville, and the matter dropped. In answer to a question from Mr. Hume, Lord PALMERSTON explained the nature of the *British Claims on Tuscany* for injuries sustained by British subjects after the revolt of Leghorn, and the occupation of that city by an Austrian corps acting as auxiliaries to the Grand Duke. After all resistance was over, that corps plundered a number of houses, and among them, houses belonging to British residents and conspicuously marked as such by the British Consul. The amount claimed was 1530*l.*, and it was hoped that Tuscany would see the justice of the demand.

On Friday the 2nd, on the motion for the second reading of the *Crime and Outrage Act Continuance (Ireland) Bill*, Mr. J. O'CONNELL said that as it

involved pains and penalties, it ought to have originated in the Commons, and not in the Lords.—The SPEAKER pronounced the objection well founded; the bill was accordingly laid aside, and Lord John RUSSELL moved for leave to bring in a new one, stating that he would be quite satisfied if the house would consent to its re-enactment from the 31st of December next to the end of the next session of parliament, instead of four years, as originally proposed.—Mr. CRAWFORD moved an amendment in opposition to the re-introduction of the bill. After some observations from Mr. Reynolds and others, the debate was adjourned.—In answer to an inquiry, Sir G. GREY informed the house that the *Report of the Committee on Smithfield Market* had been sent to the Corporation of London, who had, in reply, refused to adopt its recommendations, as being against the rights and privileges of the Corporation.—The house then went into *Committee of Supply*. On the vote of 1650*l.* for the repairs of Holyrood Palace, to which Mr. Hume objected, Lord J. RUSSELL explained that Her Majesty expressed a wish to occupy the sleeping apartments on her visit to Edinburgh, and the vote was then agreed to.—On the vote of 8900*l.* for experiments and alterations in the new House of Commons, the CHANCELLOR OF THE EXCHEQUER, in answer to Sir D. NORREYS, said it was not intended to pull down the old House of Commons.—Mr. HUME stigmatised the whole affair as a disgrace to the parties concerned in the erection of the new Houses of Parliament, and more especially the architect; and Mr. STAFFORD complained of the difficulty of ascertaining who was to blame, and on whom the responsibility rested. The new house was a disgraceful failure.—The CHANCELLOR OF THE EXCHEQUER observed, that the money now required would be sufficient to make the house suitable. After some further discussion the vote was agreed to.—Considerable time was devoted to discussion of the vote of 30,000*l.* proposed by the CHANCELLOR OF THE EXCHEQUER as a "charitable donation" to the depositors of the Cuffe Street Savings' Bank, Dublin, rendered necessary through the "gross neglect, if not worse," of the trustees of that bank, and the lax supervision of government.—Sir James GRAHAM opposed any vote of public money as a charity, and in the absence of all information urged its postponement till next session.—He was defeated by 118 to 39, and the vote was agreed to.

At the morning sitting on Monday the 5th, the ATTORNEY-GENERAL moved the resolutions which he had prepared in the *Case of Baron Rothschild*. They were, first, that Baron Rothschild is not entitled to sit and vote in that house until he shall take the oath of abjuration in the form appointed by law; and secondly, that the house will next session take into consideration the form of that oath, with a view to relieve Her Majesty's subjects professing the Jewish religion. The Attorney-General said that having considered the subject more carefully than he had done when he formerly spoke, he had come to the conclusion that Baron Rothschild's seat was not vacant in consequence of his refusing to take the oath; it would be void if he should presume to vote, but not till then. The consequence was, that by an idle form of oath abjuring allegiance to a family now extinct, Baron Rothschild's constituents were deprived of the benefit of his services in parliament. It was incumbent on the house to pledge themselves at the earliest opportunity next session to pass a bill for altering a law so monstrous and absurd. The course he proposed was beneficial to Baron Rothschild himself; for, if he were admitted by the authority of that house alone, it would create difficulties in the other house, and he believed that no lawyer earning 500*l.* a-year would advise Baron Rothschild that he could take his seat without incurring the serious penalties imposed by the act of the 1st of George I. He concluded by expressing his high sense of the propriety, firmness, and moderation manifested by Baron Rothschild in every stage of the difficult and unprecedented matter.—Mr. HUME said he had no doubt as to Baron Rothschild's legal right to take his seat; but, if there were doubts, the house ought not to pre-judge the question, as the Attorney-General's resolution did, by declaring that the Baron was not entitled to sit and vote.

He accordingly moved, as an amendment, "that the clerk having, as directed by the house, administered the oaths to Baron de Rothschild upon the Old Testament, being the form he declared most binding upon his conscience, and the Baron having so sworn to the oath of abjuration, with the omission of the words 'upon the true faith of a Christian,' and doubts having arisen as to the legal effect of his so taking the oath, it is expedient next session that a law should be introduced to declare the law, and that the house will then take into consideration the subject of the oaths with reference to the changes since their enactment."—Mr. ANSTET supported this amendment.—Mr. DISRAELI said, that as the question had hitherto been of a strictly legal character, he had hitherto refrained from joining in the debate; but the resolutions of that day departed from that limited character. He contended that the government was to blame for the present position of the house; the bill which had been brought into the house having been delayed and abandoned, instead of being sent up to the House of Lords after Baron Rothschild's re-election. As to the resolutions now before the house, deeming the first of them not extremely constitutional, and the second not extremely politic, he should vote for neither. He should leave the law as he found it, and if a change was necessary let it be made in a constitutional manner. The removal of the remaining disabilities of the Jews had received his unvarying support, and he hoped that full justice would speedily be done to the descendants of a race acknowledged to be sacred, and who professed a religion acknowledged to be divine. After some further debate in which the speakers were Sir R. Inglis, Mr. Roebuck, Mr. Wood, the Solicitor-General, Mr. Bright, and Mr. Goulburn, the house divided; when Mr. Hume's amendment was negatived by 163 to 101; the first resolution of the Attorney-General was carried by 166 to 192, and the second by 142 to 106.

At the evening sitting, in committee on the *Stamp Duties Bill*, the CHANCELLOR OF THE EXCHEQUER stated some changes proposed by him in consequence of finding the increase of the revenue greater than he had expected. He proposed to reduce the duty on conveyances altogether to one-half per cent. instead of one per cent., and to postpone the commencement of the act till October. The loss on the revenue by the whole remissions would be about 500,000*l.* a-year. The bill was reported: and the *Customs Bill* and the *Marlborough House Bill* were afterwards severally reported.—On the third reading of the *Duke of Cambridge's, &c., Annuity Bill*, Mr. HUME moved that the Duke's annuity should be 8000*l.* instead of 12,000*l.*, which was negatived by 111 to 52.—Mr. BRIGHT then moved that the annuity should be reduced in proportion to any accession of income which the Duke might receive from public sources.—Lord John RUSSELL objected, on the ground that it was most inexpedient to say that, whatever services, military or otherwise, the Duke might render, he should receive no additional income—in other words, that he should not render any such services to the country. The amendment was rejected by 108 to 39, and the bill passed.

The house having gone into committee on the *Customs Bill*, Sir James GRAHAM objected to a clause whereby it was proposed to give the Board of Customs unlimited powers of making rules and regulations in lieu of the limited powers now entrusted to it by statutes. After a discussion, the CHANCELLOR OF THE EXCHEQUER allowed the clause to be struck out of the bill, on the understanding that it should be reconsidered in the Report.

The adjourned debate on the *Crime and Outrage Act* (Ireland) *Continuance Bill* was resumed on Tuesday the 6th. The measure was opposed by Mr. Moore, Mr. Scully, Mr. M'Cullagh, Mr. R. M. Fox, Mr. P. Scrope, and Mr. Hume. Col. Rawdon, Major Blackall, Sir Denham Norreys, and Col. Chatterton, were inclined to the bill, in the confidence that Lord Clarendon would execute it discreetly. The motion for leave to bring in the bill was carried by 84 to 24; and it was brought in and read a first time.—On the order for going into committee on the *Landlord and Tenant* (Ireland No. 2) *Bill*, Mr. BRIGHT intimated his intention to oppose it in every stage, and moved to defer the

committee for three months. A protracted discussion took place, and some motions of adjournment were made, till at length, Lord Palmerston, seeing no hope of any result that night, proposed an adjournment of the debate which was agreed to.

On Wednesday the 7th, Mr. G. A. HAMILTON moved the second reading of the *Encumbered Estates (Ireland) Bill*, the principal object of which was to provide that the Commissioners should sell no estate for less than fifteen years' purchase.—The ATTORNEY-GENERAL moved the second reading that day three months, objecting both to its principle and its details. It proceeded on a misapprehension of the act of last session; assuming that the sales of estates by virtue of that act were at an under value, whereas hitherto no sale had taken place at an under value. The bill was an attempt at one-sided legislation; he regretted that such a bill had been sent down from the House of Lords, and above all that it had emanated from Irish landlords, since it afforded encouragement to proprietors to let their lands at extravagant rents in order to evade contracts and defeat their creditors.—Mr. FRENCH warmly defended the Irish landlords.—Mr. STAFFORD thought the best course was to let the act of last session work its way.—Mr. BRIGHT enumerated various bills passed by the other house this session, the main object of which was to benefit the landlords by enabling them to get rid of the occupiers and seize what they have for the landlord's rent. The present bill was to give them more power of getting rent, and to prevent the payment of their just debts. After some further discussion, Mr. Hamilton declined to press the question to a division; the amendment was agreed to, and the bill consequently is lost.

On the third reading of the *Consolidated Fund Appropriation Bill*, on Thursday the 8th, Mr. BERNAL raised a conversation on the defective state of the regulations for the *Immigration of Africans into the West India Colonies*. He observed that, at present, contracts were limited to a year; but that in the first year, from sickness, and the immigrant's not being injured to labour, there was frequently a loss to the employer; an evil that might be remedied by making the contract for three years.—Mr. HAWES said that Lord Grey had already sanctioned contracts for three years in British Guiana and Trinidad, and would, of course, be quite prepared to do so in Jamaica. The immigration of free labour from Africa had proved a failure; but this was not the case with the immigration of Coolies. Many requests had been made to renew it, and arrangements had been made to comply with those requests. Arrangements had also been made, in consequence of communications with Dr. Gutzlaff, for introducing free Chinese immigrants into Trinidad.

On the second reading of the *Crime and Outrage Act (Ireland) Continuance Bill*, Mr. SHARMAN CRAWFORD, denouncing it as an unconstitutional measure, moved the second reading that day three months. He was seconded in his opposition by Mr. ARCTY, Mr. R. M. FOX, Mr. REYNOLDS, Mr. HUME, and Mr. ROCHE. Sir G. Grey defended the bill, and the second reading was carried by 89 to 26.

Sir G. GREY inquired if Mr. Hamilton intended to persevere with his *Landlord and Tenant (Ireland) Bill* this session, intimating that the government could not agree to it even after considerable amendment. Mr. Hamilton yielded, and on the motion of Mr. Reynolds the order for second reading was discharged.

On the third reading of the *Customs Bill*, the CHANCELLOR OF THE EXCHEQUER reproduced the clause which he had allowed on Tuesday to be provisionally struck out.—Mr. Hume objecting, the house divided, and the clause was carried by 50 to 14. The bill then passed.

The CHANCELLOR OF THE EXCHEQUER announced, with expressions of much regret, the withdrawal of the *Savings' Banks Bill*, there being no hope of being able to carry it through this session.

On Friday the 9th, the motion for going into committee on the *Crime and Outrage Act (Ireland) Continuance Bill* was opposed by Mr. REYNOLDS, who moved its commitment that day three months. This led to another debate on the merits of the measure; after which the house resolved to go into committee by 82

against 34.—In committee, Mr. MOORE moved, as an amendment to the first clause, that the duration of the bill be limited to one year.—Some discussion ensued, in the course of which Lord John RUSSELL said that this was a bill for the discouragement of murder, and its continuance for a somewhat longer period than a year was requisite in order to have a beneficial effect in repressing that horrible crime. On a division the amendment was negatived by 76 to 34.

The house resumed the debate on Mr. Hume's motion for a Royal Commission of Inquiry into the proceedings of Sir Henry Ward as governor of the Ionian Islands. The motion was supported by Lord Dudley Stuart, Mr. BRIGHT, Colonel Thompson, and Mr. Anstey, who denounced Sir Henry Ward's conduct in strong language. He was defended by Mr. Hawes, Lord John Russell, Col. Dunne, Lord Claude Hamilton, and Sir De Lacy Evans, and the motion was negatived by 84 to 13.

Mr. MACKINNON informed the house, that five of its officers had been seriously indisposed by complaints such as usually arise from *Exhalations from Drains or Graveyards*. He asked if a stop was to be put to the escape of effluvia from the drains opened in the vicinity of the house?—Lord ERINGTON said it was unfortunately true that eight of the officers of the house had been seized with diarrhoea; but that ailment was general in the metropolis, and he believed the drain had nothing to do with it. He hinted that St. Margaret's Churchyard contained the source of the evil.

On Monday the 12th, Sir B. HALL took a retrospect of the *Business of the House* during the session, founded on returns lately made in consequence of his motion to that effect. He entered into many details respecting the number and length of the sittings, the quantity of time occupied by a variety of bills which had been withdrawn or abandoned, and contrasted the amount of time and labour bestowed by the house, with the comparatively small amount of business actually done. Much of this evil he ascribed to the manner in which the government measures were conducted; and he hoped that means would be taken for remedying it. He concluded formally with a motion for further papers. Lord JOHN RUSSELL defended both the house and the government, and thought it matter of some surprise that so many important measures had been accomplished this session.—Mr. BRIGHT and Mr. STAFFORD made some remarks, and Sir B. Hall withdrew his motion.—Mr. HUME moved that the evidence taken before the *Crylon Committee* be printed.—Mr. HAWES opposed the motion, on the ground that the proposition of printing the evidence had been rejected by the committee itself; and moved that the evidence be referred to the colonial secretary and the members of the Government.—Sir James HOGG supported the amendment, deprecating incidental remarks on Lord Torrington's conduct when that subject was not fairly before the house.—Mr. HUME, in reply, stated that the first step he should take next session would be to bring this subject again before the house; and he should persevere in carrying out his threat to direct the Attorney-General to prosecute Lord Torrington. With this understanding, he would not divide the house upon his present motion.—Mr. Hawes's amendment was therefore carried without division.

On Wednesday the 14th, Mr. LABOUCHERE stated, in answer to a question, that the *Report of the Committee on the late Post Office Regulations* had just been printed and laid on the table, but that the government could not take any measures respecting it till they had duly considered its contents.

Mr. LABOUCHERE, on the following day, Thursday the 15th, gave further information on the above subject. He explained that the report recommended that the late regulations suspending the transmission and delivery of letters on the Sunday should be repealed, and that the Post Office should revert to the transmission and delivery of letters on Sunday, with such alterations as might ensure to persons in the employ of the Post Office as much time to themselves on Sundays as should be found consistent with a due regard to the paramount interests of the public. He could not say precisely what course the Treasury would adopt, but he anticipated that the Treasury would be ready to carry the recommendations of the committee into effect.—Mr. LOCKE

expressed his gratification at the announcement, and hoped that the Treasury would act upon the report at the earliest practicable moment.—The yeoman Usher of the Black Rod having informed the house that her Majesty commanded their attendance in the House of Peers, the Speaker repaired thither accompanied by all the members present. He returned with a copy of Her Majesty's speech, which he read, and the members separated.

PROGRESS OF BUSINESS.

House of Lords.—July 29th. Royal assent to a number of Bills.

30th.—Address in answer to the Queen's message respecting Marlborough House.

August 2nd.—Mercantile Marine Bill read a second time.

5th.—Royal assent to a number of Bills.—Public Libraries and Museums Bill passed through Committee.

6th.—Parliamentary Voters (Ireland) Bill, as altered by the Commons, agreed to.

8th.—Ecclesiastical Commission Bill, Commons' amendments agreed to.—Mercantile Marine (No. 2) Bill considered in Committee.

9th.—Prince of Wales' Provision Bill read a second time.

12th.—Medical Charities Bill read a second time and withdrawn.—Summary Jurisdiction (Ireland) Bill read a third time and passed.

13th.—Crime and Outrage (Ireland) Bill (No. 2) read a first time.—Friendly Societies Bill read a second time.—Mercantile Marine Bill, and Duke of Cambridge's Annuity Bill read a third time and passed.

13th.—Breach of privilege, Messrs. Cream and Gage committed to Newgate.—Crime and Outrage (Ireland) Bill (No. 2) carried through remaining stages and passed.—Friendly Societies Bill passed through Committee.

14th.—Royal assent given to a number of public and private Bills.

15th.—Royal assent to various Bills.—Queen's speech proroguing parliament.

House of Commons.—July 26th. Baron Rothschild claimed his seat for London.—Poor Relief Bill read a third time and passed.

29th.—Baron Rothschild, oaths administered, and proceedings thereon.—Parliamentary Voters (Ireland) Bill, Lords' amendments on the Franchise negatived by 213 to 91; on the Registry by 179 to 109.—New writ for Lambeth.

31st.—Sunday Trading Prevention Bill thrown out.

August 1.—Australian Colonies Bill, Lords' amendments agreed to.—Landlord and Tenant (Ireland) Bill read a second time.

2nd.—Crime and Outrage Act (Ireland) Bill withdrawn, and new one brought in.—Committee of Supply.—Inspection of Coal Mines Bill read a second time.

5th.—Baron Rothschild, Attorney-General's resolutions carried.—Stamp Duties Bill and Customs Bill in Committee.—Duke of Cambridge's Annuity Bill read a third time and passed.—Public Health (Ireland) Bill withdrawn.—Customs Bill in Committee.

6th.—Crime and Outrage Act (Ireland) Continuance Bill read a first time.—Landlord and Tenant Bill, debate on going into Committee.

7th.—Encumbered Estates (Ireland) Bill thrown out on second reading.—Stamp Duties Bill and Marlborough House Bill read a third time and passed.—General Board of Health (No. 3) Bill read a second time.—Bill to facilitate transfer of Loans for Irish Improvements brought in by the Chancellor of the Exchequer.

8th.—Crime and Outrage Acts (Ireland) Continuance Bill read a second time.—Landlord and Tenant (No. 2) Bill abandoned by Mr. Hamilton.—Administration of Criminal Justice Improvement Bill, Chief Justice Salaries Bill, and Savings Banks Bill, withdrawn by ministers.—Customs Bill read a third time and passed.

9th.—Crime and Outrage Act (Ireland) Continuance Bill in Committee.—Ionian Islands, Mr. Hume's motion for Inquiry negatived.

12th.—Crime and Outrage (Ireland) Bill (No. 2) read a third time and passed.—Ecclesiastical Commission Bill, Lords' amendments considered and agreed to.—Copyright of Designs Act Amendment Bill read a third time and passed.—Improvement of Towns (Ireland) Bill read a second time.—Union of Liberties with Counties Bill read a third time and passed.

15th.—Report of Sunday Post Office Committee presented.—Prorogation of Parliament.

15th.—Report of Sunday Post Office Committee presented.—Prorogation of Parliament.

15th.—Report of Sunday Post Office Committee presented.—Prorogation of Parliament.

15th.—Report of Sunday Post Office Committee presented.—Prorogation of Parliament.

of letters on the Sunday should be resumed, subject to certain restrictions calculated to diminish the amount of Sunday labour. It is provided that there shall be only one delivery and one collection, and that the delivery be made at such a time as shall not interfere with the hours of Divine Service, especially of morning service.

A parliamentary paper has been issued, containing a statement by the commissioners for the Sale of Encumbered Estates in Ireland, of their proceedings under the act. It appears that they have sold more than half-a-million's worth of property, and of that sum they hope to distribute the entire in their court, with the exception of 25,000*l.*, which may be transferred to the Court of Chancery. About 100,000*l.* has been already distributed. The commissioners hope without any assistance from any other court to distribute 200,000*l.* before vacation, and 200,000*l.* more in the month of October; they add, "that there is no part of their practice which gives the public such satisfaction as the readiness with which payments are made when the rights of parties are correctly ascertained."

The sittings of the great Tenant Right Conference in Dublin commenced on the 6th, in the City Assembly House. The attendance of delegates from the various parts of Ireland was very numerous, including many Roman Catholic priests and Presbyterian clergymen. Dr. M'Knight, the Editor of the Banner of Ulster, was called to the chair. Resolutions were passed affirming the following general principles: "That a fair valuation of rent between landlord and tenant in Ireland is indispensable. That the tenant should not be disturbed in his possession, so long as he pays the rent fixed by the proposed law. That the tenant should have a right to sell his interest, with all its incidents, at the highest market value. That when the rent has been fixed by valuation, no rent beyond the valued rent shall be recoverable by any process of law. That cases of minors, and other exceptional cases, be considered hereafter, on any measure to be introduced into parliament. That an equitable valuation, of land for rent should divide between the landlord and tenant the net profits of cultivation, in the same way as profits would be divided between the partners in any other business, when one of them is a dormant partner and the other the working capitalist who takes upon him the whole risk." At the second day's meeting, on the 7th, a long discussion took place on the principle of a compulsory valuation. The following resolutions were affirmed: "That the valuation, when once made, shall be permanent. That every seven years there may, on the demand of either landlord or tenant, be a re-adjustment of the rent, payable under the valuation, according to the rise or fall of the prices of agricultural produce." The closing meeting was held on the 8th, when it was resolved that a Tenant League should be formed, to hold its meetings in Dublin.

A great Synod of Roman Catholic Prelates and Clergy has assembled at Thurles, and commenced its proceedings on the 22nd, with a splendid ceremonial in the Roman Catholic Cathedral of St. Patrick. In the sermon preached by the right Rev. Dr. Blake, the objects of the Synod were described to be, "to hold council together for the settling of controversies, for the extirpation of abuses, for the improvement of morals and discipline, for devising and establishing whatever means can tend to the greater glory of God, the better education of the people, the peace and harmony of society, and the salvation of souls." The next general meeting was fixed for the 29th, the bishops and divines being engaged in the meantime in the discussion of the subject submitted to them, and having subdivided themselves into committees for that purpose.

The engine-drivers and firemen employed on the Eastern Counties Railway, have Resigned in a body; having previously held a meeting, at which it was resolved, before taking this step, to state their grievances to the directors. They complained of the conduct of Mr. Goode, the new locomotive superintendent, as arbitrary and unjust, and demanded his dismissal. The directors refused compliance, and, on their resignation, replaced them with new hands. The matter was brought before the half yearly general meeting of shareholders on the 22nd, when Mr. Betts the chairman

The commissioners appointed to inquire into the Regulations respecting Sunday Labours in the Post Office have made a report to the Treasury, in which, after pointing out the grave inconveniences caused by the late suspension of all Sunday deliveries, they recommended, with regard to the London post-office, that the system which was in force at the time of the recent order, and was not been affected by it, should be continued; and that, with regard to the provincial post-offices, a delivery

made a statement justifying the conduct of Mr. Gooch, imputing to the men an intention to overbear the company's authorities by preconceived combination, and accusing them of attempting by various devices to impede the working of the engines by the new men. The general, if not unanimous sense of the meeting, was in favour of the conduct of Mr. Gooch. Immediately after the meeting, about thirty of the late engine-drivers, who had attended it, held a meeting in the neighbourhood in order to canvass Mr. Betts's statement. They indignantly denied the charge of obstructing the working of the engines by their successors, and resolved that details properly vouched should be forwarded to Mr. Betts in support of their case.

A *Dinner* was given by the Fishmongers' Company to her Majesty's ministers on the 1st instant. The leading members of the cabinet were prevented from attending, and the principal speaker was Lord Brougham, who gave the company some old reminiscences:—"Whether it has come to pass that you are better than in former years—as good as you were in 1820—I know not; but I care a great deal. I hope you are better—I hope that you are now as I remember you in 1820. Now, I put this case to you. If you now applaud what I am going to say, you will be as in 1820; if not, you are corrupted with Court influence. I was made a Fishmonger in 1820—I glory in the reason why I was made one. Don't be ashamed of your good deeds; don't look back with shame upon the brightest period of your history; be not courtiers because your friends are in office; don't be ashamed of what you did in favour of an oppressed queen against an aggressive king and his minions of ministers. . . . Ah, I see; you are far from having the same feeling you had in 1820. *Honour corrupt manners—that is an old proverb; being in power is a dangerous thing to public virtue." The latter part of this effusion produced much laughter.

A return has been printed by order of the House of Commons, of the number of persons, male and female, tried in the United Kingdom for *Murder by Poison*, from the year 1839 to 1849, both inclusive. The number of persons so tried in England and Wales during the ten years was 154, viz., 69 males, and 85 females; the number of convictions on either charge was 66. The number of trials, male and female, in 1839, was 13, and the convictions 4; and in 1849 they were respectively 14 and 5. In Scotland the trials for murder by poison, since 1839, have been only 9, 2 males and 7 females; the convictions were 3. The trials for attempts to murder were 6, 3 males and 3 females; convictions 4. In Ireland the trials amounted to 56; 25 males and 31 females, and the convictions were 13. In 1839 there occurred only one conviction in Ireland for murder by poisoning; in 1841 there were 6 convictions against 10 persons accused. In 1849 the number of indictments was 13, 7 males and 6 females, and the convictions 3.

NARRATIVE OF LAW AND CRIME.

WILLIAM ROSS, a youth of nineteen, was tried at the York Assizes, on the 20th of July, for the *Murder of his Wife by Poison*. He had quarrelled violently with his wife's relations, and had vowed vengeance against all the family; and, on the 16th of May last, he bought five ounces of arsenic at Ashton-under-Lyne. Mrs. Ross was entered in two burial-clubs: from one, a penny club, 4l. would be paid at her death; from the other, a club at the mill where she worked, 6l. 6s. On the 17th of May, Ross quarrelled with his wife, and was heard to say to her, "Thou's worth more dead than quick;" On the 28th of May, the wife was taken very ill with the symptoms of poisoning, and she died on the 30th. The prisoner would not let a doctor be fetched, but said he would go himself; then he reported that the doctor was not at home, but that he had left a message for him—the fact was, Ross never went to him. He removed his wife from one room to another, and cleared away all traces of the matters he had thrown off her stomach. Immediately after her death, he sent to inquire about the burial-club money. He had talked of going to America if his wife died. When arrested, he made varying statements. A post-

mortem examination showed a large quantity of arsenic in the viscera. The jury soon found a verdict of Guilty. The prisoner exclaimed, "Not guilty, my Lord! not guilty, my Lord!" The judge told him that his protestations of innocence were useless; his guilt had been but too clearly proved—"all who have heard the evidence in the case must have in their minds the conviction that you were the hand which administered the fatal draught, and I am as much persuaded of the fact as if I had seen it with my own eyes." The prisoner paid the greatest attention to the judge, and again loudly exclaimed, with extended arms, "I am not guilty, my Lord! I am not guilty of the crime!" In consequence of circumstances which seemed to throw doubts on his guilt, petitions were presented praying for further inquiry, and a week's reprieve of execution was granted for that purpose. But the result was not favourable; and the criminal was executed at York on the 17th.

At the same Assizes, on the 26th of July, William Chadwick, a potter, was tried for the *Murder of Samuel Tunncliffe*. The prisoner had married the grand-niece of Tunncliffe, who was a hale old man of 70, possessed of some freehold property. The couple persuaded the old man to come and live with them. Chadwick employed a neighbouring attorney to prepare a deed of gift of the old man's property in favour of him and his wife. He bought sugar of lead, saying it was to cure his mother's bad leg, though he had no mother; he afterwards bought arsenic, and he and his wife went together into a shop and bought croton oil and linseed oil. The old man was taken ill; and a neighbour summoned to his bed-side, found him dead with a pen in his hand and the deed of gift before him. At the inquest Chadwick made a statement in which he charged his wife with the act of poisoning the old man admitting his knowledge of them. At the trial the jury found him guilty as accessory before the fact, and recommended him to mercy. The judge demanded upon what ground? The foreman said that they considered there was some conspiracy with the wife, the wife getting the poison with the husband's assistance and administering it with his knowledge. His Lordship told them that they must find him guilty of murder if they thought he advised the giving of poison. They brought in a verdict of Guilty accordingly; and the judge passed sentence of death. His execution was fixed for the 17th; but he received a reprieve during pleasure.

A distressing *Suicide* was committed on the 29th of July, at Shipston-on-Stowe, by a lady named Elizabeth Rees, who had lately opened a seminary for young ladies with excellent recommendations. On the morning of the above day, a servant, going into an out-house, discovered her hanging, and quite dead. An inquest was held on her body, when it appeared that she had lost a considerable sum of money by unfortunate railway investments; and this, with some disappointments in regard to the opening of the school, had doubtless impelled her to commit the awful act. It also appeared that her friends had, in the course of Friday or Saturday, posted a letter addressed to her and calculated to ease her mind regarding her future prospects. This letter, however, owing to the stoppage of postal communication on Sunday, did not arrive in Shipston until late on Monday. Its timely arrival might have saved her life. The jury found a verdict of Temporary Insanity.

In the House of Lords, on the 30th of July, Lord Brougham gave judgment in the case of *Paterson v Paterson*, appealed from the Court of Session in Scotland. It was a suit of separation *à menâ et thoro*, at the instance of a wife against her husband. A young man named Paterson, in possession of a good estate being in difficulties, applied to a Mr. Russell for assistance, offering, at the same time, his hand to Mr. Russell's daughter. Mr. Russell lent Mr. Paterson 2000l., and Mr. Paterson married the young lady. The marriage, almost from the outset, was unhappy. The husband treated his wife with coldness and neglect, making no complaint of her conduct, but blaming himself to her family for their unhappiness; attributing it "exclusively to his fixed and unconquerable depression of spirits, and consequently, to the neglect of those attentions which a wife has an undoubted right to expect from the man to whom she is united." This candid view of his own con-

duet had no effect in inducing him to amend it; on the contrary, it got worse and worse. He ceased to hold any kind of intercourse with her, never entered her apartment, and never spoke to her. He treated her in the most insolent and contemptuous manner before the servants; prevented her from visiting or being visited by any of her acquaintances or neighbours; and frequently left home for weeks together without leaving her a farthing to provide necessaries. The poor wife, secluded from society, treated, as she says, with utter want of affection, subject to harshness and cruelty from her husband, and to scorn, contempt, or pity, from her servants, found her life in Scotland insupportable, and felt herself compelled to quit her husband's house, which she did in April, 1844, little more than eight months after her marriage. It does not appear that the husband ever made the least attempt to induce her to return. In May, 1844, her friends instituted a suit in the Session Court of Scotland, praying for a decree of separation *à mensu et thoro*, and for a suitable alimony. The judges commenting most severely on the conduct of the husband, found and decreed as follows:—"That she may have full liberty and freedom to live separately from the said Duncan Campbell Paterson, and to separate herself from him, *à mensu et thoro*, in all time coming; also they decreed and ordained the husband to make payment to the pursuer of the sum of 300*l.* sterling yearly, or such other sum as should be found reasonable for support and aliment to her." Against the decision of the Scottish Court the husband appealed to the House of Lords. Mr. Paterson's counsel urged "that a want of sympathy between a husband and wife was not, by the law of Scotland, sufficient ground to warrant the granting a divorce *à mensu et thoro*." It was contended on the other side, that "an excess of cruelty was proved which fully justified the whole decree." Lord Brougham, however, held that the circumstances established on the part of the wife, though extremely painful to her, did not amount to acts of cruelty sufficient to warrant a separation *à mensu et thoro*, and therefore decided in favour of the husband, reversing the judgment of the Scottish Court.

At the Newcastle Assizes, on the 31st of July, Patrick Forbes was tried for the *Murder of his Wife*. He was a labourer, with a wife and four children. Both were of intemperate habits, and, when drunk, the husband had often been heard to threaten his wife's life. On the 22nd of March last, the couple got drunk together, in which state they went to bed. During the night the family, and a neighbour who was in the house, were alarmed by a cry; and the woman was found dead, murdered by her husband in a manner too shocking for description. The case being fully proved, the prisoner was convicted and sentenced to death. While the jury were deliberating, a great sensation was produced by a dispute between the judge (Mr. Justice Wightman) and some of the county justices. His Lordship, wishing to consult his colleague Justice Crosswell, who was sitting in the other court, found that the door of communication between them was locked. This door leads into the grand jury room, which is situated between the two court-rooms. A meeting of justices was sitting in the grand jury room, and they refused to allow the door to be opened. His Lordship ordered the High Sheriff to open the door, and break it open if necessary. The door then opened, and several gentlemen entered the court through it. The foremost, who was stated to be Sir Charles Monck, addressing the judge, told him that the justices were sitting on county business in the grand jury room, and could not have the door opened; he added that the judges had not by statute any particular place assigned to them, and might be removed to a public-house if necessary. The following dialogue then took place:—His Lordship. At present, I being one of the Justices of Assize for the county of Northumberland, as well as for the town and county of Newcastle, propose to have sufficient access to this court, and I propose to have that door open. Sir C. Monck. We can't have it open. His Lordship. But I will have it open; and I will find any one who opposes its being opened. Sir C. Monck. Then we must leave it to your lordship's discretion to find us. We can't have it opened. His Lordship. Then I desire that that door be left open. Sir C. Monck. We

can't have it, my lord—we are using it ourselves. We can't have it. The Queen's justices are using it. His Lordship. But I supersede your authority. Sir C. Monck. We can't have it—we are sitting in petty sessions. His Lordship. Then I shall order the High Sheriff to open that door. I am here on the county business under the Queen's commission. Sir C. Monck. That room can't be made a lobby or a passage. His Lordship. Suppose I wish to consult with my brother Crosswell, as I do, on this case? Sir C. Monck. There is a way out round. (Pointing to the ordinary passages of the court, which were densely crowded.) His Lordship. Oh! round there. I cannot enter into this unseemly dispute. You will at your own peril refuse what I have requested. Sir C. Monck. We did not raise the dispute. His Lordship. Yes, you are doing so. Sir C. Monck. Well, if you choose to exercise your own authority, you must do so. His Lordship. I do so. Sir C. Monck. If you choose to break through what subordinate authority we have, you must do so. His Lordship. Then, perhaps, the better way would be, instead of your raising the unseemly noise of the High Sheriff breaking open the door by my order, that you should now make all the protest you can and retire. Sir C. Monck. Oh, no; that won't do; we are using the room. His Lordship. I wish at this moment to pass through. Sir C. Monck. Specially we will permit it. His Lordship. Is the High Sheriff here? The High Sheriff here stepped forward, and preceading his lordship, immediately led the way through the disputed door, followed by his lordship. This unseemly altercation, in the middle of a trial for murder, the wretched criminal in the dock having fallen back almost insensible while his fate was depending on the deliberation of the jury, excited the strongest feeling of general disgust.

Hall's Divorce Bill was read a third time in the house of Lords on the 2nd. This case was of a peculiar character. The divorce was sought by the wife. She had been clandestinely married. Her husband left her the same day, and went abroad with another woman, with whom he cohabited for some time, and afterwards married her. Lord BROUGHAM, in moving the third reading of the bill, said that the House of Lords had adopted the course of not granting divorces upon the petition of the wife except in cases where very peculiar circumstances existed; but that divorce was granted because of the very unusual circumstances, by which the case was distinguished—namely, that a young lady had been led into a clandestine marriage with a young man who had returned her to her home and left her on the day of the marriage; that there had been no consummation of the marriage; and that the husband had, without any further interview or any further communication with that young lady, contracted another marriage, thereby depriving his first wife of all the comforts and of all the enjoyments of domestic life which a young lady in the marriage state had a right to look for. If that husband had committed this felony upon this side of the Channel he would most undoubtedly have been tried, convicted, and punished.

The Birds, man and wife, who were some months since tried for the murder of the poor workhouse girl, Mary Anne Parsons, by cruel usage when in their service, and acquitted of that charge, were again tried at Exeter Assizes, on the 6th, for the minor offences of *Wounding* with intent to do grievous bodily harm, and of a common assault. The plea of their previous acquittal was brought forward in defence, it being contended that the present charges had been included in the indictment on the previous trial. On the other hand it was maintained, that the assaults now charged were not identical with the murderous assaults of which they had been acquitted. A verdict was given for the crown, the judge having reserved a point of law in the prisoner's favour. But he refused to admit them to bail while the decision of this point is pending.

At the Stafford assizes, the trial of a cause, Bainbridge versus Bainbridge, occupied the court five days, and its complicated circumstances might furnish matter for a novel. It was to try the *Validity of a Will*, alleged to have been made by an insane person under circumstances of fraud. Mr. Thomas Bainbridge, the testator, was a gentleman of ancient family, and large

estates. An early disappointment in love affected his mind and drove him into a life of seclusion. He was a man of intellect, taste, and polished manners, but eccentric in his conduct. An illicit connexion with his housekeeper brought him a daughter, to whom he became much attached: his housekeeper proved faithless, and she was banished; but the child was educated in a costly manner, and as she grew up was introduced to society, and well received, as his own daughter. At her age of thirteen, he made a will, bequeathing her estates on her and her issue; but at sixteen she went astray with the coachman, to her father's excessive but not unrelenting indignation. A child was born in 1803, in her father's house; received the name of Marianne, and soon secured his eccentric affections. But two years after, his daughter made a second *faut-pas*; became pregnant by Arnold, a young farmer, clopped with him, and married him: Arnold's father was one of Bainbridge's tenants, and there was an inveterate quarrel between them on the subject of game. He made a fresh will, in which he cut off Mrs. Arnold without a shilling, and resettled all his estates on her first daughter Marianne, who was brought up under his roof. In 1815, when he lived in Derby, he had a fall from his horse, the consequence of which was that his eccentricity became almost insanity. From having been a man of elegant exterior, with a most precise as well as a sumptuous household, he became neglectful of his person even to filthiness, and his household arrangements became revolutionised. The carriage in which he drove out was covered with the dirt of fowls that roosted in it; his driver was a labourer in a smock, immediately from the farm-yard and dung-heap; he carried home the carcase of an ox on the roof of his carriage; pigeons gained access to his library, and built among costly books—"a capital place for them," said he; and a horse that offended him he tried, convicted and sentenced to transportation, but, by commutation of the punishment, kept it in solitary dark confinement seven years. His granddaughter Marianne was taught the most depraved language and obscene conduct, and encouraged by him to exhibit this in public—her notoriety giving him great delight, and eliciting the remark that she was "a chip of the old block." Nevertheless, during the height of this extravagant and almost maniacal conduct, it was proved by his brother magistrates that he was a keen and sagacious magistrate, and to all appearance, in their society, no more than an extravagantly eccentric gentleman. So matters continued till the 15th of June 1818, when an excessive indulgence in brandy-drinking, to which he was addicted, brought him to his death-bed; and Mr. Blair, his solicitor, a man of high professional station and character, was sent for to make his will. This gentleman drew a testament which gave the reversion of the estates—to the prejudice of the testator's nephew and heir-at-law, to persons whom the testator had regarded with the utmost aversion, namely—after the death of his granddaughter Marianne and her issue to the sons of his daughter Mrs. Arnold. Marianne like her mother, had run away at sixteen, and had two children; but she and her children were dead, and the question of succession arose between the testator's heir-at-law and the family of the Arnolds in whose favour the will had been made. It was declared by some of the attesting witnesses, that the testator was never conscious from the day he took to his bed, on Monday the 16th of June, till his death on the next Saturday; and that Mr. Blair guided his hand to sign the will, when he was in a state of dying stupor. Mr. Blair himself took advantages under the will, and the testator's relations were kept from seeing the deceased during the whole of his last illness. After the death, when the will was read over, the youngest brother of the deceased, then Captain now Major-General Bainbridge, saw the original full of blanks and pencil interlineations: when, after years of foreign service, he came home and went to Doctors' Commons, he found the original will so different a document in appearance, that he believed it to be one substituted for that which was read over to the relatives in 1818. On the other hand, respectable clerks, who were in Mr. Blair's employment when he drew the will, swore to having written the original document, and to the identity of the original

with the one now in Doctors' Commons. Lord Campbell's opinion in summing up was favourable to the good faith of Mr. Blair, and the validity of the will; but the verdict of the jury was in favour of the plaintiff, the heir-at-law.

In the Archies Court on the 6th the *Rev. Mr. Gorham* was formally admitted into the Vicarage of Bramford Speke.—The society called the "Metropolitan Church Union" had prepared an address to the Archbishop of Canterbury, praying him to prevent Mr. Gorham's institution to the living, and had requested his grace to permit a deputation to wait upon him for its presentation; the Archbishop returned an answer to the effect, that as the address proposed that he should assume to himself the authority of reversing the sentence of the legitimate tribunals, and that he should deny to Mr. Gorham a right to which he is declared to be legally entitled, he (the Archbishop) could not receive the address, and must decline naming a time for its presentation.—On Sunday the 11th, Mr. Gorham was inducted into the living in the presence of a numerous congregation; and thus has terminated the celebrated *Gorham Case*. It may, however, be revived; for the Bishop of Ely has written a letter to the church-wardens of Bramford Speke, in which, after denouncing the doctrines of Mr. Gorham, he concludes:—"You have, already, too strong reason to apprehend that your new vicar may endeavour to spread the poison of heresy among his people by denying the efficacy of the holy sacrament of baptism to baptised infants; and, therefore, I now charge you, if you ever hear such false doctrine flow from him, that you note his words accurately, and report them to me, or to the archdeacon, without delay."

At Monmouth Assizes on the 7th, two young Irishmen named Murphy and Sullivan were convicted of the Murder of Jane Lewis on the 3rd of April. She was a poor old woman, and was murdered on her way home from market, the ruffians having apparently mistaken her for another woman who had been receiving money there. They were apprehended near Gloucester, immediately after they had robbed an old gentleman named Meredith on the highway, and beaten him till they left him for dead. They were condemned to death, and heard their sentence unmoved.

In the Court of Bankruptcy, on the 9th, judgment was given on the application of Mr. Alaric Watts, a gentleman well known in the literary world, for a *Certificate*. A first-class certificate was granted; Mr. Commissioner Fane expressing his sense of the perfect integrity and propriety of Mr. Watts's conduct. The Commissioner quoted an interesting trait of the generosity of Sir Robert Peel from a statement made by Mr. Watts. After mentioning that Sir Robert Peel had, without any application from him, appointed his son to a place under Government, Mr. Watts added, "A few months only before his death, having been induced to make inquiries respecting me, from having been told by Mr. Christie that my portraits of Mrs. Siddons by Sir Thomas Lawrence, and of Sir Walter Scott by Leslie (portraits well known by amateurs), were for sale, he wrote me a letter, which he despatched to me in the Queen's Bench, by the hands of his private secretary, conceived in a spirit of the most delicate generosity, offering me any pecuniary aid which might tend to alleviate the discomfort of my situation."—"I could not resist," said the Commissioner, "the pleasure of giving publicity to this additional proof of the private virtues of our great statesman, and I do so the more because I hope that the opinion so implicitly given by so great a man, in favour of Mr. Watts, may come in aid of the judgment I am now pronouncing, which is, that Mr. Watts is better entitled to a first-class certificate than any bankrupt that ever came before me."

Mr. Thomas Paull, a young man of respectable station, was tried at Wells Assizes on the 10th for *Setting Fire to a Wheat Stack*, near Ilminster. The stack belonged to his mother, and was destroyed by fire, just as the mother and her sons had quitted the occupancy of the farm. The chief witness was John Harris, a man who had been in the service of Mrs. Paull. He asserted that Thomas had spoken to him about setting fire to certain mows, as the contents were bad, with the object of at once getting money for them from an insurance

office; after the fire, Thomas gave Harris a sovereign, and promised him more money if he did not tell anything; but a reward of 50*l.* had been offered, and Harris tried to get it by detailing his story of Thomas's guilt. In cross-examination, the witness repeated his narrative of long conversations word for word: it was evident he had got it by rote. The prisoner's counsel asked the jury whether they could believe Harris, and whether it was necessary for him to call witnesses. The jury said they did not require to hear more. Mr. Justice Coleridge observed, it was quite evident that the story must have been written by Harris himself, or by some one more wicked than himself, and then learnt off by repeated readings. No motive whatever could be assigned for the prisoner committing such an act. The jury gave a verdict of not guilty, which was received with a burst of applause.

A singular case of *Assault* was tried at the Inverness Sheriff's Court, on the 10th. Donald Macdonald, of North Uist, was charged, with several others, with violently entering the house of J. R. Macdonald, of Harris, and putting the inmates in bodily fear. The prisoner's defence was, that his object was to obtain the lady, now his wife, from whom he had been separated against their mutual wishes. It turned out that the young gentleman and Miss Jessie Macdonald were lovers, but her father had provided another match for her, and they resolved to elope together. Accordingly, the young chieftain, with a party of friends and dependants, arrived at her father's house, on the sea-shore, at midnight, in a stormy night, made their way into the house, and even into the young lady's bed-room, and carried her off in triumph, as it was proved, with her full consent and concurrence. The jury returned a verdict of acquittal, and the young couple left the court-house amid the cheers of a great concourse of people.

Two cases of *Juvenile Crime* were disposed of at the Mansion House on the 12th. The culprits were boys of about twelve years old. The one had stolen a blanket in which a sleeping infant was wrapped, and the other had stolen a leg of mutton from a butcher's stall near Duke's Place. This last crime has become very common, being committed by small children under the direction of experienced thieves. In both these cases it appeared that the boys had homes and parents to take care of them. The sitting magistrate (Alderman Gibbs) said that in such cases a prison was a very improper place to send a child to. Parents were bound by law to protect their children, and he was determined not to sanction the practice of filling the prisons with children of such tender age. He therefore ordered the boys to be well whipped and taken back to their parents, with an intimation that if they were found again in a similar condition the parents should be called to a severe account for their negligence.

Elizabeth Bubb, a woman of forty, was tried at Gloucester Assizes, on the 12th, for the *Murder* of Maria Hook, a child of four years old, by withholding from it necessary food and clothing. It was a horrid case of inhuman cruelty. Hook, a woodman, lived at Churchham, near Gloucester; two years since his wife died, leaving three children, of whom Maria was the youngest. Soon after her death, Bubb, her sister, who had two children of her own, came to keep house for Hook. Hitherto Hook's children had been healthy-looking, and had been well attended by the mother. Now a sad change occurred to them: they were neglected, ill-treated, starved. While Bubb and her children were well fed, the other children literally collected, from hunger, the crumbs that fell from the table. The little girl Maria suffered the most. Many witnesses described how she had been misused. She was covered with filth, and almost naked—looked stupefied from ill usage, was afraid to cry out, and was reduced to a skeleton. The woman abused any one who interfered in behalf of the child; swore at her, threatened her, and exclaimed "Damn thee, thee wilt never die, and nothing will ever kill thee!" At length the child died in convulsions, and it was clearly proved that she had literally been starved to death. Proof was given that Hook, the father, was not in want, and that his house contained an ample store of provisions at the time of his child's death. The jury found the prisoner guilty of "aggravated manslaughter,"

and she was sentenced to be transported for life. Richard Hook, the father, was then tried for manslaughter, in neglecting to give the child proper food, and clothing. But it appeared that the treatment of the child was much better when he was at home than when he was absent; and he was therefore acquitted.

Hannah Curtis was tried at Gloucester Assizes, on the 13th, for the *Murder* of her husband, Thomas Harris, by poison. He was a hale man, but became suddenly ill of violent pains in the stomach, and died ten days afterwards. Grounds of suspicion having occurred, his body was disinterred, and a large quantity of arsenic found in his stomach and bowels. His wife had bought arsenic, ostensibly to kill cats; had told her neighbours that a gipsy had foretold that her husband would die suddenly, but that she would not be long a widow; and had married another man about three weeks after her husband's death. On the other hand, the purchase of the poison had been without concealment; it was shown that she had always treated her husband kindly. The jury after some deliberation found her guilty, and sentence of death was pronounced. She left the dock protesting her innocence. She was to have been executed on the 24th, but has received a reprieve during pleasure.

A young girl, named Amelia Snowsall, murdered the child of her sister, Mrs. Cooper, an infant of eighteen months old, at Gravesend, on the 14th. The infant had been put to bed along with another child, when the girl went into the room with a knife and cut its throat. She then returned to her sister and said, "I have killed her now, and she is happy." She had always been affectionate to the child, but had lately shown symptoms of mental derangement. She was committed for trial.

William Bennison, who was committed to prison at Leith, in April last, (see "Household Narrative" for that month) on the charge of poisoning his wife, has been tried before the High Court of Justiciary and convicted of the crimes of *Bigamy and Murder*. It was a case of singular atrocity. Some years since, when resident in Ireland, he married an Irishwoman; but soon deserted her, and coming home to Scotland, married there a woman remarkable for her meek virtue and her devotion to himself: he left his second wife, returned to his first wife in Ireland, and soon after she died suddenly. He then once more returned to his second wife, and gave her the garments of his first wife as those of a deceased sister—"a sister in the Lord." He was distinguished for his gift in prayer, and at last was every evening at the prayer-meeting. Here his eye fell upon one whom he resolved to make his third wife. Six weeks after his acquaintance with this girl, his second wife died: it was proved that six weeks before her death he bought arsenic, and with that poison frequently administered he took the unfortunate woman's life. Her deathbed strikingly exemplified his resignation and trustful attachment to her husband. With a climax of hypocrisy, immediately after her death, he exclaimed at her bedside, "Thank God, she is gone to glory! I have seen many a death-bed, but never a pleasanter one than my wife's." The wretch was found guilty on both charges. Sentence of death was passed, and he was removed protesting his innocence of the murder: but he afterwards confessed. He was executed on the 17th.

A young German sought advice at the Worship Street Police-office, on the 17th. He had married a young lady who appeared attached to him, but for six months refused him all *Marital Rights*; so they separated, she insisting on his allowance to her of a weekly maintenance. After a twelvemonth of separation, his wife came to his house one night and insisted on remaining; he received her, and consented that she should again live with him; but for three months more she persisted in her original eccentricity of wifely relation. This state of things was once more put an end to, and arrangements were made for a final separation; but the young lady came back to him a third time, and she now followed him about, and importuned him in a manner no longer to be endured. Mr. Hamill regretted that he could give no help. He advised the applicant to institute a suit in the Consistorial Court for a divorce, if he had the means of so doing; the German left the court in a state, apparently, of perfect doubt and mystification.

At the Central Criminal Court, on the 21st, a very fashionable looking gentleman, named William Augustus Shean, was tried for *Bigamy*. On the 23rd of June he married Miss Cecilia Charlotte Fréchal, a lady of good fortune, and on the 2nd of February, his first wife being still alive—ruined and deserted on the continent—he married Miss Mary Whittaker Greene, on whom a fortune of 15,000*l.* was settled. In 1849 his second wife discovered his nefarious character, and left him; he resorted to annoyances, and threats of criminal accusation against her, and her friends instituted this prosecution for bigamy. He was found guilty, and sent for twelve months to Bridewell.

Mary Fitzgerald was indicted and convicted for *Bigamy*; but many extenuating circumstances being proved, and the object of the prosecutor (her second husband) being merely to get rid of the burden of her support, she was only sentenced to seven days' imprisonment.

The appearance of a person named John Bull before the *Bankruptcy Court*, to pass his last examination, elicited some singular circumstances. The bankrupt was in the coal trade, and Messrs. Colson, in the same trade, were his creditors to the amount of 792*l.* He afterwards took a lodging-house, and fitted it up at an expense of 148*l.*, the furniture having afterwards been seized by the landlord. He afterwards made an assignment to his daughter, and lastly came before the *Bankruptcy Court*, the petitioning creditor being his own nephew. The bankrupt asserted that he had borrowed the money from his daughter to fit up the lodging-house, which was the cause of the assignment to her, and that the debt to his nephew was a real debt. The commissioner observed that the accounts were very unsatisfactory; that he had reason to believe that the bankruptcy had been concocted for a family purpose; and that the examination must be adjourned.

Lord Brougham delivered judgment in the appeal of *Norris v. Cottle*, confirming the decision of the Court of Exchequer, and settling finally the *Non-liability of Provisional Committees*.

NARRATIVE OF ACCIDENT AND DISASTER.

On the 29th of July, a portion of Brinkway Mill, a large cotton factory recently erected at Stockport, *Fell*, burying ten of the work-people in the ruins. It was the dinner hour, and most of the people were absent, otherwise the destruction of life would have been much greater. The part of the building that fell was where a large water-wheel was about to be erected; for which purpose a larger space than usual was without an iron pillar to support the upper floors, a long iron beam bearing the weight, and it appeared that this beam had given way. The inquest on the bodies found that the floors had been supported by a cast-iron beam of an imperfect construction and of an improper calculation, considering the weight it had to bear.

A fire broke out at midnight, on the 1st inst., at the New Model Prison for juvenile offenders at Parkhurst, of a serious description. One of the principal wings, containing 200 cells, was totally destroyed, besides damage to other parts of the prison. It has been found that the prison was fired by some of the elder convicts, to enable them to effect their escape.

A dreadful *Railway Accident* happened at Glasgow on the 1st inst. A special train left Perth in the morning, by the Scottish Central Railway, to convey a large party of excursionists to view the Highland Society's exhibition in Glasgow. On approaching the city, the train was divided into two sections; when the first went forward it was detained by another train being on the line at Cowairs. While thus stationary, the second portion of the train suddenly approached at a great speed, and dashed into the first train. Two cattle-trucks, in which were twenty or thirty persons, were smashed to pieces, and the other carriages were damaged. Five persons were killed, and several others were dangerously, if not fatally, injured.

On Sunday, the 3rd, the *Prince Arthur* steamer, while

on a pleasure excursion from Preston to Bangor, and crowded with holiday passengers, was *Wrecked* near Formby. Having sprung a leak, and being in a sinking condition, she was run ashore, and the passengers saved with the utmost difficulty, but the two firemen perished. The vessel, an old boat, fitted for river navigation, went to pieces almost immediately after striking.

Gravesend has suffered from a terrible and destructive *Fire*, which broke out early on the morning of Sunday the 11th, and destroyed no fewer than twenty-nine houses, and damaged eleven others. Several engines were obtained, but they did not prove very efficient, and the fire in a great measure burnt itself out. It is said that there was a difficulty in getting people to work the engines, the authorities not having paid those who gave their assistance on a former occasion. The magistrates held an inquiry into the origin of the disaster, but nothing decisive was elicited.

On the morning of the 20th, the *Minerva* steamer, plying between Liverpool and Kingston, *Ran down* a merchant brig, called the *William Rushton*, laden with mahogany, from Mexico. The vessel sank immediately; four of her crew were saved by the *Minerva's* life-boat, but the remaining seven perished. The accident happened about one o'clock in the morning, during a hard gale; and the brig was not seen from the steamer till it was too late to avoid the collision. The steamer was so much damaged that it was necessary to run her into Beaumaris, where the passengers for Kingston were landed.

On the afternoon of the 21st, the roof of the Bricklayers' Arms Station of the South Eastern Railway, in the Old Kent Road, *Fell in*, burying in the ruins several men and a number of first and second class carriages. Happily there was no passenger train at the station, and most of the workmen were saved from death by the carriages round them. One man, however, named Ryan, was killed, and several others were seriously injured. About six years ago, the roof of a portion of this station fell in with loss of life, and was afterwards reconstructed on a new plan, supposed to be perfectly safe.

SOCIAL, SANITARY, AND MUNICIPAL PROGRESS.

THE Registrar-General has made his *Quarterly Return of Marriages, Births and Deaths*; comprising the Births and Deaths registered by 2189 registrars in all the districts of England during the Spring quarter ending June 30th, 1850; and the Marriages in more than 12,000 churches or chapels, 2869 registered places of worship unconnected with the Established Church, and 623 superintendent-registrars' offices, in the quarter which ended March 31st, 1850.

The *Marriages* were 30,425 in the quarter that ended on March 31st, 1850; the marriages in the corresponding quarters of 1847-8-9, were 27,480, 28,398, 28,270. The number of marriages in the first quarter of 1850 was only once exceeded in the 11 corresponding quarters of 1839-49; and the proportion of marriages to population is shown to be much higher in the first quarter of 1850 than in any corresponding quarter since 1839, except in the March quarters of 1845, 1846, when the labouring classes were in full employment.

The *Births* registered in the quarter that ended March 31, 1850, were 144,602; in the quarter that ended June 30, 155,727. Births are always more numerous in the first than in the second half of the year; and from 1840 to 1845 the births registered in the first quarters were more numerous than those registered in the second quarters of the six years; but in 1846-8-9-50, a change has taken place, and the excess of births has been thrown upon the June quarters. The number of births in the June quarter of 1850 is the greatest ever registered in England in the same time. The annual rate of births is obtained by comparing the number of children born in a given time with the corrected population. It was in the last June quarter 3489 per cent., which is the same as the rate in the corresponding quarter of 1849; and less than that in the June quarter of 1846; but

much more than in any other June quarter of the years 1839-1850.

The *Mortality* is now, it is gratifying to report, much below the average. It has not been so low in any of the corresponding quarters since 1837, when the new system of registration commenced, except in the quarter ending June, 1844. The rate of mortality per cent. per annum in the quarter was 2.084. At this rate one in 192 persons died in the last three months; in 1847, one in 161 persons died in the same time. This shows clearly how much the risk of life has declined. The average chance of living through the three months, April, May, June, among persons of all ages is 179 to 1. 93,005 deaths were registered in the quarter ending June; while the deaths in the corresponding quarters of the four previous years were 90,231, 106,718, 90,730, 102,249. The improved state of the public health has been general; the eastern is the only division in which the deaths of 1850 slightly exceeded the deaths in the corresponding June quarter of 1849. The most considerable decrease is observed in London, and in the north-western division, comprising Cheshire and Lancashire. The improvement in the public health is not confined to the parts which were visited by the epidemic cholera of 1849. A further examination is required before the causes of this improvement can be eliminated; but it may be safely affirmed that they act generally, and have been by no means confined to districts decimated previously by the epidemics either of cholera or influenza. The registrars in their notes refer to sanitary measures, to the state of employment, and to other circumstances which affect the social condition of the people, as probable causes of the happy improvement in the public health. The registrar of Llanelli refers to the depressed state of the iron trade in his district; but this is a solitary case; and the general tone of the notes is, as expressed by the registrar of Kingston, that "the people are employed, and feel the great blessing of cheap and plentiful provisions."

Although *Vaccination* is actively promoted by the Poor-law board, is now performed at the public expense, and affords almost complete immunity from small-pox, it is still neglected to a great extent by the ignorant classes of society. Some of the objections to it are excuses for negligence; others are based on a sort of fatalism; but such cases as the registrar of Nottingham records are criminal, and it is to be feared spring from the same cruelty as leads to the sacrifice of children's lives in other circumstances. A woman there who had lost a child by disease, assured the registrar that "she would rather lose half a dozen children by it than fly in the face of Providence in having one vaccinated."

The *Report of the Railway Commissioners* for 1849, just published, gives some general results of much interest. One is the increase of railway communication during the last year. In the course of 1849, the board sanctioned the opening of 869 miles of new railway—viz., 630 miles in England, 108 miles in Scotland, and 131 in Ireland—"making the whole extent of railway communication, at the end of the year, 5996 miles; the proportion for England being 4656 miles, for Scotland 846 miles, and for Ireland 494 miles." Of the general character of the extensions made within the past year, the report informs us that they largely consist of "small branches and short lines," which were required as "links to complete important communications." The next point of interest is the extent of railway, authorised by parliament, which yet remains to be constructed. It is in length 6030 miles, and a further sum of 126 millions is demanded for it; but though the powers are in force for raising it, the progress of the new construction is, happily, proceeding at a slower rate than heretofore. On the 30th of June, 1849, only 1501 miles were in actual course of construction, as compared with 2958 in progress on the 1st of May, 1848; and according to returns already presented to parliament, "all work has ceased on about 350 miles of lines which were returned as being in progress in 1848, and which for the present may be considered as abandoned & postponed until more prosperous times." Moreover, the Commissioners infer, from the data before them, "that no great length of new line has been commenced since last year, and that probably, only about 1000 miles out of the

6030 miles which still remain to be opened at the end of 1849 were in progress of construction at that time." This diminution of the rate of progress has been attended with a very serious diminution in the amount of employment for labour. It is a matter for grave consideration that "the reduction in the number of persons employed in the construction of lines has been very considerable, amounting to 84,361 persons, against an increase of only 3280 employed upon lines open for traffic;" and this reduction, added to that of 1848, and to further reductions which may be expected to take place during the current year, will, we are informed, "make an aggregate of upwards of 200,000 persons, who may be considered as having been temporarily withdrawn from other occupations by the stimulus which railways received in 1845 and 1846, and who must now seek a livelihood in other ways." The rate of profit on capital invested in railways has undergone great reduction. The 6996 miles in actual operation represent, we are told, a capital of about 197,600,000*l.*, yielding a gross annual revenue of 11,806,000*l.*—from which, if the working expenses be deducted at the rate of 43 per cent., there remains a net available profit of about 6,729,420*l.* being at the rate of 3.40 per cent. on the investment. We call the special attention of railway shareholders to the very significant, though obvious, remark which follows:—"It therefore appears," say the Commissioners, "that all sums raised at a higher rate of interest than this must reduce the aggregate revenue available for the original proprietors." On the important topic of railway accidents, the Report shows that the danger of this mode of travelling is reduced to a very trifling amount. During the year 1849 only five passengers were killed "from causes beyond their own control;" that being little more than half the number (nine) of such accidents during the previous year: while, on the other hand, the number of passengers for 1849,—63,841,539,—shows an increase of ten per cent. on the preceding year; facts which speak most favourably of the management of railway conveyance.

The *Post Office Returns* for 1849, presented to the House of Commons, exhibit some very remarkable results. In the year 1839, before the establishment of the new system, the number of letters delivered in the United Kingdom was 82,470,596. In the following year, 1840, the number rose to 168,768,244; and in 1849 the number was 337,065,867. In 1839 the net revenue, after paying the cost of management, was 1,633,764*l.*; in the following year it fell to 500,789*l.*; and in 1849 it was 840,787*l.* The cost of management, which, in 1839, was 756,999*l.*, amounted in 1849 to 1,324,562*l.* The number of Money Orders issued in 1839 was 188,921 for an amount of 313,124*l.* In the following year the number was 587,797 and the amount 960,975*l.*; and in 1849 the number was 4,248,891 and the amount 8,152,643*l.* The total expense of the Money Order Office for the United Kingdom in 1849, was 70,248*l.*, and the amount of commission received was 70,570*l.*; so that the cost of this department was 322*l.* less than its receipts.

The Poor Law Board has made a 'Return' to the House of Commons, which presents some gratifying results respecting the condition of *Pauperism* at the present time, as compared with the corresponding period of last year. It is divided into two heads; the first gives the total number of paupers (in-door and out-door) in receipt of relief on the 1st of July, 1849, and on the 1st of July, 1850, in 605 unions and parishes under Boards of Guardians in England and Wales. The second head shows the numbers of adult able-bodied paupers receiving in-door and out-door relief at the same two periods in the same unions and parishes. Under the first head it appears on the 1st of July last, the total number of persons receiving relief was 829,708; on 1st July, 1849, the number was 885,737; being a decrease of 56,029, or 6.3 per cent. Under the second head it is stated, that on 1st of July last, the number of adult able-bodied paupers receiving relief was 138,575; on 1st July, 1849, the number was 164,559; being a decrease of 25,984, or 15.8 per cent. Of the 52 counties of England and Wales, there has been a decrease on 40. On the remaining twelve (which are Kent, Lincoln, Norfolk, Northumberland, Rutland, Stafford, Suffolk, Westmoreland, Anglessea, Brecon,

Merioneth, and Pembrokeshire) there has been an increase varying from a half to 4 per cent., excepting the Isle of Anglesea, on which the increase has amounted to 23·9 per cent.; a remarkable circumstance which requires explanation.

From a separate Parliamentary Return relative to Ireland it appears that the total number of paupers receiving in-door relief in that country during the week ending July 27th, 1850, was 235,793, the number for the corresponding period in 1849 having been 205,104. The number of persons who received out-door relief during the week ending July 27th, 1850, was 101,486, while the number during the corresponding week of 1849, was 723,530. The cost of the out-door relief for the week in this year was 2,354*l*.; for the week last year it was 19,819*l*.

The *Metropolitan Interments Act*, recently passed, will be speedily enforced in "the metropolitan burial district," which comprises the city of London, Westminster, Southwark, and numerous parishes set forth in one of the schedules annexed. The provisions of the act are to be executed by the Board of Health. The board may provide new burial-grounds, and her Majesty, on a report of the board, in council, may order the discontinuance of interments in churchyards and other places. Regarding the removal of poor persons to reception-houses to be provided, it is enacted by the 30th section, that the board may, at any time after the passing of the act, appoint medical or other officers, who, in the case of death within the district, may, "where the persons having the direction of the funeral of the deceased may so desire," cause the body to be decently removed to one of the houses for the reception of the dead. Among the provisions is one under which the Board of Health may "contract" for funerals at fixed charges, so that there are likely to be "three classes" of funerals, according to the means of the parties. The salary of the additional member of the Board of Health (to which office Dr. Southwood Smith has been appointed) is not to exceed 1200*l*. a-year.

The *British Association for the Advancement of Science* has held its meeting this year at Edinburgh. It commenced its proceedings on the 31st of July. Many distinguished foreigners were present; including Dr. Struve from the Observatory of Pulkova, Dr. Kupffer from St. Petersburg, and Professor Hitchcock from Amherst College, United States. Sir David Brewster officiated as President. The transactions were of the usual character, and the meeting broke up on the 7th. The meeting of next year is to be held at Ipswich; and Professor Airy, the Astronomer-Royal, is the President-elect.

At one of the above meetings, Dr. Strang, Chamberlain of Glasgow, read a paper on the recent *Progress of Glasgow* in population, wealth, commerce, and manufactures. In 1801 the population was 77,000; in 1821, 147,043; 1831, 202,426; 1841, 282,131; and in 1850 it was estimated to amount to 367,800. The population had thus quintupled itself in 50 years, and doubled itself in 20 years. In 1800 the streets and roads within the parliamentary bounds of the city extended to 30 miles; at present the formed and paved streets alone extend to 96 miles. In 1800 there was little or no sewerage in Glasgow. At present there are 42 miles of main sewers, 21 of which have been formed during the last six years, at a cost of 1200*l*. per mile. The customs duties in Glasgow, in 1801, were 469*l*.; in 1820, 11,000*l*.; in 1830, 59,013*l*.; in 1840, 468,974*l*.; and in 1850, 640,568*l*. The letters put into the Post-Office in 1840, were 54,522; while in 1850 they were 111,504. Cotton-spinning was first introduced into Glasgow in 1792, and at present there are 1,800,000 spindles, which annually consume 45,000,000 lbs. of cotton. The increase that has taken place in the assessment for the poor over the whole of Glasgow cannot be determined; but some idea may be formed of it from the state of matters in the old burgh of Glasgow. In 1784, it was 1082*l*.; in 1816, 12,378*l*.; and in 1850, 47,787*l*. Taking the whole parliamentary bounds of the city, the annual assessment for the poor at present is 80,000*l*.

From a statement lately published, it appears that there are 11,000 *Enrolled Friendly Societies* in the United Kingdom, having 1,600,000 members, an annual revenue

amounting to 2,800,000*l*., and an accumulated capital of 6,400,000*l*. A still greater number of Friendly Societies are not enrolled, and do not possess the privileges and means of self-protection enjoyed by the former class. It is estimated that there are 83,223 unenrolled Societies, in the United Kingdom, having 3,052,000 members, an annual revenue of 4,980,000*l*., and with funds amounting to no less than 11,360,000*l*. These immense amounts are derived from the savings of the purely industrial classes. Indeed, half of the labouring male adult population are members of Friendly Societies.

The *Highland and Agricultural Society of Scotland* had its great show of prize stock and implements at Glasgow in the last week of July. This society has been formed by the junction of two associations formerly separate, the one representing the landlord and the other the tenant class; and the magnitude and quality of this exhibition showed how well the two bodies work together.

At a Court of Commissioners of Sewers, on the 13th, the scheme of Mr. Frank Forster, the engineer of the Commission, for the *Drainage of the Metropolis* on the south bank of the Thames, was adopted. The main features of the scheme are, that it proposes to collect the ordinary drainage of the southern part of the Metropolis by four great principal arms, confluent at different points, and which ultimately form a single trunk at Deptford, near Collier Street. Here the stream is "lifted," by steam power, a height not exceeding twenty-five feet; and from this new elevation it will gravitate afresh to a point eight miles below London Bridge; where will be formed "a double reservoir, capable of holding at least twenty-four hours' drainage" covered over, and elevated to such a height as to discharge the whole of its contents (into the Thames) at high-water, delivering them by means of pipes near the middle and at the bottom of the river. The sewerage will be lifted into the reservoir at this point (by means of an engine) from the main sewer; the invert of which is proposed to be at about mean low-water, and ten feet below the surface of the marshes. The "estimate" of these works is estimated by Mr. Forster at 241,297*l*.

PERSONAL NARRATIVE.

On the 6th, the birth-day of Prince Alfred, the Queen and Prince Albert gave a fête to the servants of the royal household, the labourers employed at Osborne, with their wives and families; and the seamen of the royal yacht. They were all entertained at an excellent dinner in a spacious marquee in the grounds; and the evening was gaily spent in dancing, and a great variety of English athletics and other sports. At seven o'clock the Queen and Prince Albert, with the royal family and guests, who had greatly enjoyed the sports of the afternoon, retired amid the cheers of the hundreds assembled.

The Queen left Osborne on the 22nd for a short visit to the king of the Belgians at Ostend. The flotilla consisting of the Victoria and Albert and the Fairy steam-yachts, and two war steamers, arrived a little before noon, and her Majesty with Prince Albert and the royal children were met, on landing, by the king, who had arrived to meet them. An immense concourse of people received the illustrious visitors with more than Flemish enthusiasm. The Queen remained at Ostend till the next day, but as the palace there is very small, the royal party slept on board their yacht. They returned on the evening of the 23rd to Osborne.

His Royal Highness Prince Albert completed his *Thirty-First Year* on the 26th, and the anniversary was held with the usual demonstrations of loyalty.

Her Majesty left town on the 27th for Scotland. Lord Gough received the *Freedom of the City of Edinburgh* on the 5th, as an acknowledgment of his eminent military services. He is now enrolled a citizen of the capital of the three kingdoms.

The Duke of Wellington has been appointed *Ranger of St. James's and Hyde Parks*, in the room of the late Duke of Cambridge.

The late Sir Robert Peel has left directions in his will for the early publication of his political memoirs, and

has ordered that the profits arising from the publication shall be given to some public institution for the education of the working classes. He has confided the task of preparing these memoirs to Lord Mahon and Mr. Cardwell. The will has been proved, and duty paid on personal property under 500,000l.

Sir William Gomm, K.C.B., has been appointed *Commander in Chief of the Presidency of Bombay*. A grand banquet was given by the East India Company in honour of his appointment on the 10th, at the London Tavern.

Sir George Anderson has been appointed *Governor of Ceylon*, in the room of Lord Torrington, who is recalled; and Sir George is to be succeeded in the Government of the Mauritius by Mr. Higginson, now Governor of the Leeward Islands.

Her Majesty has appointed Mr. Henry Hardwick, architect, to be *Treasurer of the Royal Academy*, in place of Sir Robert Smirke, who has resigned in consequence of ill health.

Dr. Nicholas Wiseman having been elected a *Cardinal*, and on the eve of proceeding to Rome to be installed in his new dignity, delivered a farewell sermon at St. George's Cathedral in Westminster Road on Sunday the 11th. A great concourse of the Roman Catholic nobility and gentry were present in the morning, when high mass was celebrated, and the cardinal elect delivered an address, expatiating on the success of Romanism throughout the world, and extolling the zealous labours of the clergy in his own district. In the evening he delivered a second sermon, when many clergymen of the Church of England were present.

Accounts have been received at the Admiralty, from Captain Austin, commander of the *Arctic Expedition*, dated on board the *Resolute*, Whale Fish Islands, 23rd of June. No information had been obtained respecting the missing vessels; and the expedition was about to proceed northward to pursue the search. Each ship was provided with provisions, stores, and warm clothing, for fully three years, and the tenders had on board coals to the amount of 310 tons each. The dispatch concludes: "The vessels composing the expedition may be considered in every way efficient; and it is with much pleasure and satisfaction that I report, that excellent health and spirits, goodwill, and unanimity prevail throughout."

The election for the *County of Mayo* terminated on the 27th of July, when Mr. Ouseley Higgins was returned by 141 votes; his competitor, Mr. Isaac Butt, polling 93.

On the 6th the *Election for Lambeth* terminated in the return of Mr. William Williams, by 3,834 votes. His competitors, Sir Charles Napier and Mr. Hinde Palmer polled the first 1182, and the second 585 votes.

Mr. Fox Maule was elected, on the 1st instant, one of

the *Governors of the Charter-house*, in room of Sir Robert Peel. Mr. Maule was educated at that seminary.

Obituary of Notable Persons.

LOUIS PHILIPPE, the ex-king of the French, died at Claremont on the 26th. He had been made aware on the preceding day of his approaching dissolution, and died with great calmness and Christian resignation. A little before his death he dictated a conclusion to his Memoirs, which illness had compelled him to suspend for some months. He was born on the 6th of October, 1773, and was the eldest son of Philippe, Duke of Orleans, known by the name of *Egalité*. During his youth he struggled with adversity, and was for some time a teacher in an academy in Switzerland. By the revolution of 1830 he obtained the crown of France, which he lost by the revolution of 1848. He has ever since lived in retirement in England.

CAPTAIN NEWBOLD, one of the most distinguished of our Indian geographers, died at Mahabuleswar on the 20th of May.

LIEUT.-COL. T. ROBINSON, the political agent at Meywar, died at Neemuch on the 18th of June, in his 63rd year.

SIR JOHN FRISTON MILBANK, BART., died on the 27th ult., at Halmby, in Yorkshire. He was son of Mr. J. Milbank, (second son of the fifth baronet), and was born on the 20th of August, 1775. In March, 1826, he succeeded his uncle, Sir Ralph, whose only daughter married Lord Byron.

THE EARL OF DUNRAVEN died on the 6th inst., at Adare Abbey, county Limerick, in the 69th year of his age. His lordship's malady was chronic suppurative disease of the windpipe. He is succeeded by his son, Viscount Adare, M.P. for Glamorganshire.

SIR JAMES OTT SHAWS, LL.D., Vice-Chancellor of England, died on the morning of the 10th, in his 71st year. His death was caused by an attack of paralysis, under which he laboured for a month.

THE HONOURABLE CHARLES EWAN LEE, Recorder of the City of London, died on the 13th, in his 84th year. He was the second son of the first Lord Ellenborough, and brother to the present Earl. He had represented the University of Cambridge in parliament for seventeen years.

PERCIVAL WILKIN JAMES, M.A., barrister-at-law, died on the 13th. He was a man of much accomplishment, of great taste in literature, to which (in the various periodicals of the last fifteen years) he had largely contributed, and he was making progress in his profession.

MR. J. H. BALZAC, the popular novelist, died at Paris on the 18th. MR. ROBERT HENRY HUNT, the elder brother of Mr. Leigh Hunt, died on the 26th, at his apartment in the Charterhouse. He had lately received Her Majesty's nomination to the brotherhood of that foundation, and had only resided there for a few weeks. He was in his 77th year, and had for some time been quite helpless, owing to his having been accidentally run over about a year ago.

SIR MARTIN ANGERER SHREY, President of the Royal Academy, died, at Brighton, on the 19th, in his 84th year. He was elected to the above office in 1830, on the death of Sir Thomas Lawrence, when he received the honour of knighthood. He retired in 1845 from the active duties of the office, which have been since performed by Mr. Turner.

MR. J. H. LEY, Clerk of the House of Commons, died on the 21st. He was appointed an assistant-clerk of the house in 1801, and raised to that of principal clerk in 1821; so that he has been in the service of the House of Commons without intermission for forty-nine years. He was a Bench of the Middle Temple, and a magistrate for the County of Devon.

COLONIES AND DEPENDENCIES.

HARDLY any thing of interest transpires from India or the Colonies this month, except that Sir Charles Napier returns home in October, and that the Canadian House of Assembly has adopted a series of resolutions against the Clergy Reserves Act. The effect of them, if carried out, will be to separate Church and State in Canada. They affirm the equal religious rights of all classes; denounce the influence of Church Establishments and Ecclesiastical Endowments; and declare the necessity of an immediate resumption by the State of the Clergy Reserves, and their appropriation to the general education of the people, or other useful secular purposes. This is a noticeable colonial fact in connection with the new Canterbury Settlement proposed by a batch of settlers to New Zealand, who have consented to pay three times as much for their land as is paid in the Government colonies, that they may have the peculiar satisfaction of forming an inalienable fund for the support of a regular Church out there, and of taking across seas with them a full-fledged bishop.

The *Overland Mail* has brought dates from Calcutta, July 2nd; Madras, July 9th; Hong-kong, June 23rd; and Alexandria, August 7th. The most remarkable article of intelligence is the resignation of Sir Charles Napier, the Commander in Chief, who is to leave India in October. The cause is said to have been a misunderstanding with the Governor General. Sir Charles had issued some general orders respecting military arrange-

ments without previously consulting the government; a dispute ensued which ended in the Commander in Chief's resignation. It is supposed the matter will be brought before parliament. Both the Governor General and Sir Charles Napier were at Simla.—The whole of British India remains quite tranquil; and the public attention in all presidencies is much occupied with the subject of railways; various new lines being in agitation.

—The inquiry into the catastrophe at Benares has proved unsatisfactory, the cause of explosion still remaining a mystery. The lowest estimate of the number of persons killed is 400.

The accounts from Canton state the export of last seasons tea is 54 millions of pounds. The export of the previous year was 57 millions; there being thus an increase of 7 millions. The import trade at Canton was in a most depressed state.

Several cases of cholera had occurred both at *Alexandria* and *Cairo*; and another visitation of the disease was apprehended. The Viceroy fled from *Cairo* as soon as the cholera appeared: he proceeded down the Nile to *Damietta* and thence embarked for *Rhodes* on the 5th inst. The Nile was rising more slowly than usual. Cotton had risen to 14 dollars per cantar, but there was little business doing, many people were leaving the country from fear of the cholera.

The accounts from the *West Indies* reach the end of July. In *Jamaica* there had been heavy rains, but the effects of a previous drought had shown themselves. In *Trelawny*, a great agricultural parish, fears were entertained for the crop on the ground. In other districts they looked more cheerful.—In *Demerara* the weather had been rather dry and auspicious for the planters. The question of *Colie* immigration chiefly occupied public attention, and three bills had been introduced by the Attorney General into the Court of Policy to regulate immigration.—A disastrous hurricane had visited *Barbadoes*, *St. Kitt's*, *St. Martin's*, *Dominica*, *Antigua*, and *Martinique*. A vast deal of property was destroyed, and many vessels with valuable cargoes totally lost.

Accounts of recent dates have been received from the *Australian Colonies*. At *Sydney* there was much dissatisfaction with the home government for its neglect to carry into operation a system of steam communication.

From *Port Philip* the most prominent article of news is the discovery of an extensive field of coal at *Western Port*. It appears from a survey just completed that the coal measures present a continuous section for ten miles, to the river *Bourne*, and re-appear six miles along the coast, at *Cape Patterson*, where the coal rises to the surface.—About the middle of March a great meeting was held at *Melbourne* for the promotion of German immigration, at which *Prince Frederick of Augustenburg* was present; his highness had been visiting the surrounding country, and the formation of a large German settlement was expected.—From *Van Dieman's Land* it is stated that the convicts from the *Cape of Good Hope* had been landed at *Hobart Town*, to the great disgust of the inhabitants, who were preparing to make a strong demonstration against convict importation. *Mr. Smith O'Brien* was to be removed from *Maria Island* to *Port Arthur*, where preparations were making for his reception. He was to continue under the strictest surveillance.—In *South Australia* considerable sickness had prevailed, especially at *Adelaide*; it is ascribed to the impurity of the water. The great government stores at the *Emu Plains* had taken place, and a large sum

was realised. The financial accounts are very favourable. From an official return of the revenue for the quarter ending 31st March last, it appears that the receipts were 52,828*l.*; and that, although the expenditure is charged with 11,500*l.* remitted to England for payment of interest and in reduction of principal of the bonded debts, still there was a surplus of 10,000*l.* of revenue over expenditure during the quarter. Coal has been discovered at *Kangaroo Island*.—In *West Australia* there had been considerable discussion as to the justice of inflicting the punishment of death on natives for crimes committed among themselves. Three natives (brothers) of a tribe distant forty miles from *York* were convicted and sentenced to be hanged. The execution was fixed for April 12th. On the evening of the 11th, in consequence of a memorial addressed to the governor on the inconsistency of executing men for crimes to which, among themselves, no turpitude attached, and suggesting that the execution of one would satisfy the ends of justice, his excellency assured the memorialists that he fully concurred in their suggestion and accordingly reprieved two of the culprits. On the following day the elder native was executed in the presence of his two brothers, and shortly after the hangman proceeded to place the rope on the necks of these men; they resisted violently, but being overpowered by the sheriff's assistants, the fatal cord was adjusted and the bolt about to be withdrawn, when the governor's secretary rode up hastily to the sheriff, and presented him with a letter commanding a reprieve. The wretched culprits were wholly at a loss to understand the procedure. The effect of this melodramatic scene on the natives is described as by no means favourable; it being calculated to impress them with the notion that fear more than humanity dictated the reprieve.

There are advices from *Toronto* to the 10th. On that day the provincial parliament was prorogued by *Lord Elgin*, to the 19th of September. His excellency complimented the members on their zeal and diligence, and congratulated them on the improvement in the revenue and the promise of an abundant harvest.

PROGRESS OF EMIGRATION AND COLONISATION.

The *Canterbury Association* gave a farewell breakfast on the 30th of July to the first body of colonists now about to emigrate to *New Zealand*, on board the ship "*Randolph*," lying in the *East India Docks*. More than three hundred guests were elegantly entertained, among whom were *Lord Iyettlen* (who did the honours as host), the *Bishop of Norwich*, *Lord and Lady Wharnccliffe*, *Lord Nelson* and *Lady Susan Nelson*, the *Countess Grey*, the *Marchioness of Drogheda*, *Miss Burdett Coutts*, *Lady Shelley*, *Lady Caroline Sterling*, and other persons of distinction. Several interesting speeches were made, and the tone of the meeting was animated and hopeful.

The *Female Emigration Society*, who have during the present year sent out six parties of young women to *Sydney* and *Port Philip*, dispatched their first party for *Canada*, on the 3rd inst., by the barque "*Elspeth*."

NARRATIVE OF FOREIGN EVENTS.

TIME was when the death of *Louis Philippe* would have agitated the Continent from one end to the other, but his importance passed away with his power; and the only interest now awakened is that which attends the disappearance of a man who has played by far the most memorable part on the theatre of the modern world, and has supplied its most sorrowful and most instructive lesson of human vicissitude.

Louis Napoleon has been travelling in search of a throne, and appears to have failed in obtaining any reasonable prospect of the object of his quest. He started in great spirits, and in the first city he visited, which was *London*, told the people very frankly that they knew what he wanted; but in the second, which was *Lyons*, he saw the expediency of so far altering his tone as to say, that what he wanted he was also quite ready to surrender if the people did not want it; in the third, which was *Besancon*, he found it necessary to make his escape from a popular hall pretty nearly as soon as he had entered it; and in the fourth, which was *Strasburgh*, even the *Moniteur* is forced to confess that there was no "enthusiasm." In short, it is quite clear that the prince's chances of the Empire are become infinitesimally small, however reasonable even yet may be his chances (in the poverty of other competitors) for one more term of the Presidency.

The quarrel of the Danes and the Schleswig-Holsteiners has resulted in a great battle and a small protocol; the battle bringing some seventy thousand men into the field, sacrificing lives by thousands, and settling nothing; the protocol wasting but an ordinary-sized sheet of paper, requiring but the signatures of England, France, and Russia, and bidding fair (for the present at least) to settle everything. For, though Prussia and Austria withhold their assent to the protocol, there is every reason to believe that the gallant little duchies must now submit; and no doubt their fate will point a moral and adorn a tale for Mr. Cobden, General Haynau, and the other members of the Universal Peace Congress now assembled to specify at Frankfort.

America has received a new and apparently satisfactory batch of governing ministers from Mr. President Fillmore, who makes Mr. Webster, a man of genius, his principal secretary of state; but the hope of any amicable settlement of the slavery dispute has again received a decisive check. Spain is in great grief for a famous bull-fighter, lately tossed and mangled by a fierce Andalusian bull; and a daily bulletin is issued.

The French Assembly broke up on the 10th, without any formal prorogation. On that day there was "no house," there being only 230 present instead of 376, the number required by law: so the assembly closed its session by being "counted out." It re-assembles on the 11th of November. The committee of *surveillance* is to sit during the recess, and a majority of its members are to be always resident in Paris.

On the 12th, the President set out on an extensive tour through the Provinces. He had previously given several military banquets, which, from their imperial aspect, and the political spirit manifested by the guests, created a great sensation. On one of these occasions, a dinner to the officers of a portion of the garrison of Paris, it is told, that after the company left the table, they adjourned into the garden to smoke their cigars; and there Louis Napoleon, seeing a musket (probably put there on purpose), took it up, and went through the manual exercise with great dexterity, to the great delight of the sergeants and corporals, who shouted "Vive le petit Corporal!" (the Emperor's pet-name among the soldiers) with great enthusiasm.

The French Journals are filled with accounts of the President's journey; but their details are of a very monotonous kind; descriptions of triumphal entries into towns; receptions and harangues by the authorities right royally responded to; reviews; balls, and visits to theatres; every movement attended by shouting crowds generally testifying great enthusiasm for the name of Napoleon, and the memory of the Emperor, not unfrequently mingled, however, with manifestations of republicanism; and it is singular enough, the existing government being a republic, that the republican cries have the air of proceeding from disaffected malcontents. The President has been liberal in his distribution of *ordres* of the Legion of Honour, sometimes accompanied with gratuities in money to old officers, and soldiers of the Imperial Army. At Dijon he thus decorated, adding a present of 500 francs, an old soldier who had served under the Emperor in Egypt and had lost his feet, frozen in the retreat from Moscow.

At Lyons the President's reception was peculiarly favourable, and the day he spent there the most brilliant of his journey. He was entertained at a splendid breakfast in the *Jardin d'Hiver*, got up by subscription, and attended by an immense assemblage, full of enthusiasm. At noon there was a grand review of troops. He then visited many of the manufactories in the *Faubourg des Croix Blanches*, the most turbulent quarter of the city, into which he went with scarcely any escort. Afterwards he was entertained at a grand dinner by the Chamber of Commerce, where the scene was quite sentimental *à la Française*. On his health being toasted with immense acclamations, he made a speech in acknowledgment, which he concluded thus:—

"On the eve of bidding you farewell, permit me, I pray you, gentlemen, to remind you of certain expressions that have been celebrated. But, no! I cannot go on, it would be too much vanity on my part to say to you as the Emperor said, 'People of Lyons, I love you.' You will, however, I trust, allow me to say to you, which I do from the bottom of my heart, 'Lyonnais, I pray you love me.'" These words, spoken with some emotion, produced an electrical effect on the audience; every man stood up, and a triple round of applause responded to the petition preferred by the President of the Republic, and cries of "Oui, oui, nous vous aimons!"

The evening was concluded by a visit to the theatre. As he entered his box the whole house rose with the cry of "Vive le Président! Vive Napoleon!" On three different occasions a solitary voice from the upper gallery cried, with all the force of his lungs, the more earnest that it was not responded to, "Vive la République!" It is scarcely necessary to say that the house was crammed from top to bottom.

On several subsequent occasions the President was more roughly received, particularly at Basançon, when a ball, given to him, became the scene of a violent disturbance. A torrent of the populace burst into the room, shouting "Vive la République!" and causing the utmost terror and confusion. Amid the shrieks of ladies, the company and the President himself, hastily abandoned the room, leaving it in possession of the rioters; but General Castellane, who, sword in hand, had protected the President's retreat, ordered a charge of cavalry on the mob in the street; and at the same time the room was cleared at the point of the bayonet. At another ball, in the theatre, he was well received. He afterwards proceeded to Strasburgh, where, and throughout Alsace, his reception was of a chequered kind; acclamations of multitudes mingled with strong marks of disaffection. At Strasburgh a conspiracy against his life was detected and several arrests took place in consequence. On the 23rd, the President left Strasburgh for Nancy, and Metz.

There has been a sort of Congress of Legitimists at Wiesbaden, assembled round the Count de Chambord, who assumes a royal state, keeping a sort of court, and giving formal receptions and audiences to his adherents, with whom the little town has been filled. Among them were M. Berryer, General de St. Priest, and M. de la Rochejaquelein.

Little progress in the German Question has as yet been made by the Congress at Frankfort. At a meeting on the 8th, at which Count Thun, the Austrian plenipotentiary, presided, it was decided that Austria should formally invite all the members of the Bund to assemble at Frankfort on the 1st of September next. A circular note of the 18th of August, in which the Minister-President reiterates the assurances so solemnly given in the circular of the 19th July, that it is the earnest wish of Austria to make such reforms in the Act of Confederation as may be required by the recent change of circumstances in Germany, and may conduce to the unity of the common fatherland, was accordingly despatched with the Frankfort summons to the different courts on the 15th. It remains to be seen whether Prussia and the League will accept this proposal.

In Piedmont a great sensation has been produced by a collision with the papal power. The Sardinian Minister of Finance, the Cavaliere Santa Rosa, who had supported the ministry in passing the law which rendered the clergy amenable to the civil courts, being on his deathbed, was refused the sacrament by the monks, under the direction of Franzoni the Archbishop of Turin. At his funeral such excitement was manifested by the people, that to avoid an actual outbreak, the monks were ordered to leave the city, and the possessions of their order were sequestered. In the search through their house, documents were found which incited the Archbishop Franzoni himself, and he was consequently arrested and imprisoned in the fortress of Fenestrelles. Both Austria and Rome, however, have

interfered; and, in consequence, the editor of *L'Opinion*, a liberal journal, has been banished from the Sardinian States.

A continuance of heavy rain in Belgium on the 15th, 16th, and 17th has produced disastrous inundations in various parts of that country. At Antwerp there was a tremendous storm of rain, wind, and thunder. The lightning struck several buildings; many of the streets were under water; and large trees were uprooted in the neighbouring country. At Ghent a large sugar manufactory was destroyed by lightning, and people were killed by it in different places. A great part of the city of Brussels and the neighbouring villages were under water for nearly two days; and many houses were so much damaged that they fell, and a number of persons perished. Near Charleroi all the fields were submerged, and the injury done to the crops was immense. At Valenciennes the Scheldt overflowed, inundating the neighbouring country, and causing vast devastation. The damage done to the crops has produced a rise in the price of flour. Many bridges have been swept away, and the injury done to the railways has been immense.

The commencement of the *War between Denmark and Schleswig-Holstein*, was marked by a bloody battle on the 25th of July, at Idstedt, a place near the town of Schleswig, which the Danish army, under General Krogh defeated the Schleswig-Holstein troops under General Willese. The battle lasted for two days, and was desperately fought. It appears that General Willese lost from 2,500 to 3,000 men, including a large proportion of officers. The loss of the Danes was even greater, as they did not pursue the worsted army. It included General Schleppegrell, the second in command, and several other officers of rank. After the battle General Willese took up a strong position near Sehestedt, and issued a proclamation on the 27th, declaring that the spirit of the army was unbroken, and that in a few days, it would be stronger than before. Another engagement, but neither extensive nor decisive, took place on the 8th, between the Danish and Holstein forces, at Sogoruck near Rendsburg. On the previous day a frightful catastrophe occurred at Rendsburg, in the explosion of the laboratory of the artillery, whereby the whole building was destroyed, with the loss of nearly a hundred lives, and a great quantity of military ammunition.

The King of Denmark has contracted a morganatic marriage with Lola Rasmussen, a person of low degree, and formerly a milliner. She has great influence over the king, and has obtained from him the title of Baroness Banner.

Advices from New York have been received to the 16th inst.—The "Compromise Bill," introduced into the senate by Mr. Clay, for the purpose of conciliating

the differences between the northern and southern states, was nominally passed, but substantially defeated, on the 31st of July. The bill originally contained provisions for the admission of California, the settlement of the Texas boundary, the admission of New Mexico and Utah as territories, and provisions to reclaim fugitive slaves from free states. All the provisions except the admission of Utah were struck out by amendments brought forward by Mr. Dawson of Georgia and Mr. Pearce of Maryland. This result has created a deep secession throughout the country.

A treaty has been concluded with Mexico for a route from the Atlantic to the Pacific, across the isthmus of Tehuantepec. It is provided that the United States may send forces for the protection of the work, if necessary; that both governments are to maintain neutrality on the route, and ten leagues on each side thereof, in times of war as well as of peace; and that Mexico is to maintain full sovereignty over the route and over the territory designated as neutral. The distance from sea to sea in a direct line is 135 miles, but the length of the projected line is 198 miles; the summit level to be overcome is 650 feet.

A desperate affray occurred at New York on the 5th inst., between the police and a mob composed of tailors, in which some lives were lost. The disturbance was caused by the tailors attacking the house of a man who was said to be working at prices below those usually charged.

The demonstration recently made at Lisbon is not likely to be attended by any serious result. It is now stated that the presence of two United States ships of war at Lisbon was not meant to denote any hostile intent; and that a certain number of days having been allowed to the Portuguese Government to reply to the United States demands, merely meant that if the reply should not be made, or not made in a satisfactory manner, the President, General Taylor, intended to lay the matter again before Congress, for further action.

Sir H. Bulwer arrived at New York on the 27th of July.

The California State Bill passed the senate on the 13th inst. by a majority of 34 to 18. Mr. Pearce's bill for the settlement of the boundary dispute between Texas and New Mexico had passed on the 9th by a majority of 30 to 20. The bill establishing a territorial government of New Mexico was sanctioned on the 15th inst.

Intelligence had been received from Havanna relative to the remainder of the Cuba prisoners. Seven of them are to be liberated in the course of the month; the other three are to have eight years of the chain gang. This is the wind-up of Lopez's piratical invasion of Cuba.

President Fillmore's new administration is constituted as follows:—Secretary of State, Mr. Webster; Secretary of the Treasury, Mr. Corwin; Secretary of the Navy, Mr. Graham; Postmaster-General, Mr. Hall; Secretary of the Interior, Mr. McKennan; Secretary of War, Mr. Conrad; Attorney-General, Mr. Crittenden.

NARRATIVE OF LITERATURE AND ART.

THOUGH "the publishing season" is at an end, some items in our appended summary will show that books are still published occasionally which can never be unseasonable. But it is a dull time; and French novel readers will think it all the gloomier for having brought the death of Balzac. He was a writer of undoubted genius. Whatever English taste might find to object to in him, it remained undeniable that the author of *Père Goriot*, *Le Peau de Chagrin*, *Eugenie Grandet*, and the *Recherche de l'Absolu*, took rank with the highest masters of fiction. Victor Hugo spoke at his grave, and well remarked that nothing more distinctly impresses us with our divine destiny than to stand in the presence of the illustrious dead. Nor, beside the memory even of a man of genius so unquestionable as Balzac, will a word of regret be inopportune for one of the most delicate female writers in the modern literature of America. Margaret Fuller perished in the great storm off the American coast at the close of last month; and with her has departed a clear and just intellect, an exact and beautiful perception of the niceties of art and poetry, and a courage true and fearless, which our American friends can ill spare. She had married the Count d'Ossoli during a somewhat prolonged residence in Europe, and was returning home with her husband and child. Other calamities affecting not less the humanising influence of the arts, though mixed up with no personal regrets, are to be found in such incidents as the dispersion or destruction of great picture-galleries. The Hague has lost its noble collection of paintings; and all its famous master-pieces of the Italian, Flemish, and Dutch schools, are now on their way to the public galleries of St. Petersburg or Paris, with the exception of such isolated specimens

as Lord Hertford may bring home for the walls of his private mansion, or Mr. Dominic Colnaghi may have purchased for his wealthy patrons in Pall Mall East. No commissioner from the National Gallery of England stood in the sale-room beside those from the capitals of Russia and France; and Englishmen have the additional mortification of reflecting that among the rarest and most choice possessions of the gallery thus dispersed, was the collection of Italian drawings made by Sir Thomas Lawrence, and forming originally but a part of that priceless general collection which our government refused some fifteen years ago to purchase, at a sum less than has since been demanded for portions of it only, illustrating particular schools. Thus the fiction of the Sybil's books has come literally true in this deplorable matter. It may be said that the Dutch at least have not the advantage of us; but their poverty and not their will consents. The gallery of the Hague was mortgaged some years since to the Emperor of Russia; and the cause of its present dispersion is the belief of the Dutchmen that it was worth more than the mortgage-money. This turns out to have been well founded. Among the prices given was six thousand guineas for two portraits by Van dyke!—a sum, we believe, without example.

As Wordsworth's *Prelude* and its attack on the Universities opened our last month's summary, this month's may open with Professor Sedgwick's *Discourse on the Studies of the University of Cambridge*, of which the fifth edition has just appeared with a new preface four hundred and thirty pages long. Considering that the discourse itself occupies something less than a hundred pages, this preface may be pronounced a somewhat remarkable achievement. It is principally devoted to an onslaught on the principles of the author of *Vestiges of Creation* in reference to science and philosophy, and on those of the authors of the *Traacts for the Times* in regard to religion and belief. Professor Sedgwick thinks the middle way apparently the safest in most matters; and in this spirit remarks also on the proposed commission of inquiry into the Universities. He protests against Wordsworth as an authority in favour of its necessity, on the one hand; but is not less disposed, on the other, to reject such authorities against it as Lord Brougham or Mr. Stuart.

Of books in the higher departments of publication, we have to notice the appearance of an elaborate work on *Tubular Bridges* by Mr. Edwin Clark, with a striking folio of illustrative drawings and lithographs. Also of an Essay in two goodly octavos on *Ancient Egypt under the Pharaohs* by Mr. Kenrick, full of learning, yet full of interest, because grafting on the ascertained old history all the modern elucidations of travellers and artists, critics and interpreters. It appears to be but a portion of a contemplated work comprehending a complete history of those countries of the East whose civilisation preceded and influenced that of Greece; and to our proper understanding of which, the discovery of the hieroglyphic character, and such researches as those of Mr. Layard, have lately contributed an entire new world of information. Another book remarkable for the precision and completeness of its knowledge, is Doctor Latham's *Natural History of the Varieties of Man*, a very important contribution to the literature of ethnology; and with this we must connect in subject, though certainly not in any other kind of merit, an eccentric fragment on the *Races of Man* by Doctor Robert Knox.

Mrs. Jameson has published a second series of her *Poetry of Sacred and Legendary Art*, in a volume of *Legends of the Monastic Orders*, ably illustrated; and nothing can be more graceful than this lady's treatment of a subject which has not much, to our thinking, that is graceful in itself. She clips its claws and makes it fit for drawing-room society; but essentially, the theme is odious, though the institution had its uses, after the fashion of all things that have existed for any time in the world. To understand and feel the temper in which they should be judged in the present day, let the reader, however, study such books as *Sermons on some of the Subjects of the Day* by the new dean of Bristol, on which the true Christian spirit of modern life is impressed, in vivid contrast with the dangerous assumptions of Tractarianism.

To biography, a new volume of the *Life of Chalmers* has been the most interesting addition. The life of *Benjamin Elliott*, by his son-in-law, possesses also some interest; and, with a little less of the biography and more of the biography, would have been yet more successful. In English fiction, a semi-chartist novel called *Alton Locke*, full of error and earnestness, and evidently a university man of the so-called Christian Socialist

school, is the most noticeable work of the kind that has lately appeared. The other romances of the month have been translations from the German and French. The *Two Brothers* is somewhat in the school of Miss Bremer; and *Stella and Vanessa* is a novel by a graceful French writer very agreeably translated by Lady Duff Gordon, of which the drift is to excuse Swift for his conduct to Mrs. Johnson and Miss Vanhomrigh. The subject is curious, and the treatment (for a Frenchman) not less. Nothing painful or revolting is dwelt upon, and if it does not satisfy it fails to offend. Dates spoil the author's arguments and inferences; but the countrymen of Swift have reason to be grateful to the gentlemanly purpose and intention of M. Leon d'Ywailly.

The *Barbarigo Gallery* at Venice, celebrated for ages for its rich collection, especially of the works of Titian, has been purchased by the court of Russia for 560,000 francs, or 22,400*l.* sterling.

The great *Collection at the Hague*, belonging to the king of the Netherlands, has been sold by auction, the sale occupying many days. The pictures having been chiefly purchased by private individuals, are thus scattered over the world; comparatively few have come to this country, and none have been purchased for behoof of the English public.

The fine *Collection of Pictures*, the magnificent gift of the late Mr. Vernon to the nation, have been removed from the National Gallery to Marlborough House; and the works of English artists, which were previously in the National Gallery, have been added to it. These last, however, are kept apart from the Vernon pictures. The ground floor of the building is appropriated to this purpose. It contains a suite of rooms, the first two of which are devoted to the works of English artists, and the remainder to the Vernon Collection.

Both the *Italian Opera-houses* have brought their respective seasons to a close. The last performance at Her Majesty's Theatre was on Saturday the 24th; and the same night concluded the season at Covent Garden. But there were several extra performances, at reduced prices, during the following week.—The only operative event of any interest as been the appearance at Her Majesty's Theatre, of Madame Fiorentini, who performed the parts of *Norma* and *Donna Anna* with extraordinary success. She is a native of Seville, and married to Mr. Jennings, an English Officer. She received her musical education in London, and made her first public appearance at Berlin only twelve months since. She is engaged by Mr. Lumley for next season. Madame Sontag and Lablache are re-engaged; the latter for three years.

Jenny Lind sang at two concerts at Liverpool on the 16th and 17th; the Philharmonic Society of that place availing themselves of her visit for the purpose of embarking for America, having offered her a thousand pounds for those two performances. The first concert was miscellaneous; the second consisted of the *Messiah*, and its proceeds were appropriated to the benefit of the Toxteth Hospital. The popular enthusiasm manifested at these concerts, and when Mdlle. Lind embarked on the 21st, was, even in her own case, quite unprecedented.

(ORN MARKI

Mark Lane Aug 26

There has been very little movement in the prices of sugar since our last review. The tendency of the market has been only part of the month was rather upwards but this has since received a check from the improved appearance of the weather. Prices at present are put at just a shade above the level which ruled at the end of July. The London weekly averages last mentioned are as follows:

Wheat per quarter 4s 10d	Flour 7 w n mal d liverd,
Oats 20 6d	per 280 lb 9s 1 40s
